This course introduces students to computer graphics technology as it applies to art and design. Students will study the history and theory of the reproduced image while gaining practical experience with raster- and vector-based technologies.

Students will further develop their critical thinking skills by engaging in critique of their own work and the work of their peers.

Student Learning Outcomes

1. Recognize different file types and when/how to use them.
2. Navigate, understand, and use basitools in Photoshop®, Illustrator, and InDesign
3. Create print ready documents
4. Produce a printed product

FDMA 2534. 3-D Modeling Sculpture

Course Description

Students in this course learn and practice 3-D modeling as a tool for visualization and critical making. 3-D printing, laser cutting, CNC milling, and other rapid prototyping may be used. 3-D modeling is the main focus of this course to sketch, invent and produce both virtual 3-D renders and physical projects. Study of concepts, aesthetics, procedures, and practice of sculpting on the computer with 3-D modeling tools for the generation of form, environment, and character as related to your conceptual inspirations.

Student Learning Outcomes

1. To capture what is in our imagination and make it real in the world
2. Produce conceptually interesting and formally compelling artwork
3. Understand the principles of 3-D computer modeling and sculpture
4. Have fun and accept learning and creativity as your primary asset on his competitive planet
5. Relate traditional sculpture principles of form, material, and site and utilize 3-D modeling to virtually give rise to installation or sculpture
6. Develop original ideas and concepts in the spirit of a research one university
7. Apply methods of rapid prototyping output from your 3-D models utilizing automated processes such as laser cutting, rapid prototyping and or CNC.
8. Use this knowledge to advance your 3-D Animation and physical computing and game art studies.

FDMA 2535. Digital Illustration

Course Description

Introductory course examining traditional artistic expressions and translating visual art experiences into a digital art medium to enhance visual storytelling. Students acquire basic principles of drawing and painting through hands-on experience manipulating tonal value, composition, form development, light and shadow, color theory, rendering realism, and graphic design.

Student Learning Outcomes

1. Be familiar with the CMI computer system, facilities, equipment and policies.
2. Appropriately utilize the various media technologies available at CMI for digital illustration.
3. Understand the different roles and areas of digital illustration.
4. Understand and apply some basic techniques of digital illustration.
5. Understand and apply some basic processes of creating pleasing images based on knowledge of traditional art principles.
6. Begin to apply some basic strategies for developing and creating aesthetically pleasing images.

FDMA 2540. Introduction to Non Linear Video

Course Description

This course is an introduction to digital video editing using Adobe® Premiere. Students will learn how to create simple and complex video sequences in a non-linear video editing system. Video projects will be optimized for web, eBook, mobile devices, and DVD distribution

Student Learning Outcomes

This course will introduce the following in Adobe® Premiere:

1. Differences with video formats PAL and NTSC (L, T, C), (I)
2. Understanding of digital video Codecs and compression (L, T, C), (I)
3. Discussion of frame rates for video, film and animation (L, T, C), (I, II)
4. Concepts of layering video, audio, text and graphics (L, T, I, A), (II, III)
5. Overview of the work area and how to customize work space (L, T, I, A), (II, III)
6. Typography as it relates to video (L, T, I, A), (II, III)
7. Understanding FCC broadcast safe video levels (L, T, I, A), (I, II)
8. Introduction to timelines and working in time (L, T, I, A), (II, III)
9. Chroma effects how to use blue and green screen techniques. (L, T, I, A), (II, III)
10. How to use the software to sync and unsync audio and video clips. (L, T, I, A), (II, III)
11. Applying transitions between video, audio, text and graphic clips. (L, T, I, A), (II, III)
12. Use techniques to minimize the amount of disk space consumption when digitizing analog and digital footage. (L, T, I, A), (II, III)
13. Integrating layered image files into video compositions. (L, T, I, A), (II, III)
14. Embed markers in video for future use in DVD creation. (L, T, I, A), (II, III)
15. Exporting files to final distribution formats. (L, T, I, A), (II, III)
16. Using scopes to analyze video and color levels. (L, T, I, A), (II, III)

FDMA 2550. Print Media III (Desktop Publishing III)

Course Description

Refinement of skills needed to prepare a variety of documents for print and the service bureau.

Student Learning Outcomes

1. To become more proficient with InDesign in preparing a variety of documents including CD covers, flyer and long documents.
2. To refine design process in laying out various documents.
3. To increase knowledge of paper creation and relevant paper choices for specific projects.
4. To increase knowledge of color and file formats.
5. To prepare files for service bureaus, presentation and critique.
6. To create portfolio-ready pieces.

FDMA 2560. Screenwriting II

Course Description

A second level course exploring the feature length screenplay. Students will learn the techniques of marketing a script, pitching ideas, and finding and working with a Hollywood agent.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Apply the components of film writing to complete a producible screenplay for film or television
2. Explain market and pitch a script or idea
3. Creating a business plan for marketing or producing a script

FDMA 2570. Creative Media Studio

Course Description

A studio environment where students specialize in creating film-festival quality and portfolio-ready projects under the supervision of faculty.

Student Learning Outcomes

1. Students will work together to create portfolio-quality work in a studio environment.
2. Through classroom discussion and reporting the students will collaborate to produce a professional quality “vertical slice” game concept within a defined timeline and financial budget.

FDMA 2610. Directing I

Course Description

Introduction to the creative process of a film director. Students will participate in hands-on workshops and develop stories for motion media, create screenplays and work with actors in short scenes using current technologies in film, television and web-based media production.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Create a screenplay from a story concept
2. Work with performers to tell a story
3. Breakdown a script
4. Use proper terminology to manage a film set.

FDMA 2620. Directing II

Course Description

A second level course in directing techniques used in film, television and web-based productions. Designed for students with some acting and directing training. Students participate in hands-on workshops and create, direct and act in short films using current technologies in film, television and web-based media production.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use movie set terms in direction and performance
2. Collaborate with a film production crew
3. Perform script breakdown and character analysis
4. Direct and produce a short scene.

FDMA 2625. Animation Dynamics

Course Description

The course covers the structure and physical characteristics of 3-D animated objects.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Analyze and critically interpret Animation Dynamics choices: I.E. rigid bodies, soft bodies, partials, rendering, fluid effects, etc.
2. Demonstrate a firm understanding of the Maya program and palette(s).
3. Explain the process of how the artist/designer made the specific piece and or decisions on final submissions.
4. Recognize and articulate specific Maya filters: Particle Clouds, Fluid Effects, Lighting, Glow, etc.
5. Articulate personal ideas and thoughts on various artistic information.

FDMA 2630. Principles of Design II

Course Description

This course builds upon the tools taught in Principles of Design I and dives into their practical application. Students will be introduced to a wide array of real-world design opportunities and explore the scope of what constitutes a Graphic Designer.

Student Learning Outcomes

1. Apply the principles taught in Principles of Design, such as content, composition, client, and context
2. Create a design system

3. Demonstrate knowledge about the graphic design profession
4. Gain confidence through interactions and industry exposure
5. Apply the fundamentals of design

FDMA 2635. Design in the Real World

Course Description

Real world process of planning, developing and designing a client project from cold call to design presentation. Topics include project planning, managing client and content needs, time and scope management. Review of graphic and layout fundamentals, wire-framing, and composition are also covered. Final projects include graphic proposals for a web site or print project. Knowledge of Photoshop® or equivalent graphic program is highly recommended.

Student Learning Outcomes

1. Plan and execute a graphic or web design project.
2. Demonstrate the ability to meet client needs.
3. Design a web page mockup or graphic design proposal for print.
4. Demonstrate the use of wire framing and layouts.

FDMA 2640. Introduction to Visual Effects

Course Description

An introduction to the use, history, and production methodologies of visual effects. Fundamental visual effects techniques explored through practical effects, compositing exercise, motion capture technology and visual effect projects.

Student Learning Outcomes

1. Compose shots using forced perspective
2. Analyze and discuss historical and contemporary uses of visual effects in film
3. Demonstrate and apply animation techniques
4. Demonstrate and apply rotoscoping techniques
5. Produce simple composited shots using chroma keying.

FDMA 2710. Beginning 2-D Animation

Course Description

Students will learn the basics of digital 2-D animation by working through a variety of exercises, creating an original storyboard, and animating five or more shots utilizing industry standard software.

Student Learning Outcomes

1. The student will demonstrate an overall knowledge of computers as a tool of the animation artist and be able to produce simple animations using the techniques learned in class.
2. Use major software tools with ease.
3. Manage timelines through key frames.
4. Build storyboards.
5. Demonstrate knowledge of 2-D and animation terminology.
6. Produce actions, set environments and constraints for 2-D animation.
7. Render full animation.

FDMA 2713. 3-D Animation

Course Description

Students will be introduced to 2-D computer animation software involving shape creation and manipulation, and sequence rendering. Students will explore motion graphics and visual effects using appropriate software. Students will also learn the basics of integrating animated images and title sequences with live action.

Student Learning Outcomes

The student will demonstrate an overall knowledge of computers as a tool of the animation artist and be able to produce simple animations using the techniques learned in class. Upon completion of the class students will be able to:

1. Use major software tools with ease
2. Manage timelines through keyframes
3. Build storyboards
4. Demonstrate knowledge of 2-D and animation terminology
5. Produce actions, set environments and constraints for 2-D animation
6. Render full animation

FDMA 2714. Introduction to Animation**Course Description**

This course will be entirely focused on laying the foundation of animation around the twelve principles of animation as defined by Disney master animators Frank Thomas and Ollie Johnston.

Student Learning Outcomes

1. Demonstrate in-depth working knowledge of the twelve principles of animation
2. Demonstrate knowledge of the workflows used in major feature-film animation studios and game companies
3. Demonstrate an approach to work in a manner reflecting an actual production environment.

FDMA 2715. Special Effects**Course Description**

Creating advanced virtual special effects for both rigid and soft bodies. Using MEL, dynamic principles, mixing nodes, and advanced particle systems. How to drive particles over surfaces, add texture to flow, create surface tensions, and use collision events to drive texture. Study of integrating computer-generated images with real-life video and audio

Student Learning Outcomes

Not Available

FDMA 2720. 3-D Animation**Course Description**

Overview of the essentials and principles of 3-D animation; creative methods for using industry standard tools to produce the illusion of movement for storytelling. Topics include key frame and curve animation, kinematics, cycle animation, camera animation, deformers, and constraints.

Student Learning Outcomes

1. Clearly describe the role of an animator in cinema, gaming and related fields.
2. Recognize leading animators and their methods.
3. Demonstrate knowledge of advances in contemporary animation.
4. Utilize current industry standard animation tools.
5. Apply fundamental animation processes and techniques.

FDMA 2725. Rigging for 3-D Animation**Course Description**

This course will introduce principles and practices of current rigging techniques for 3-D animation. Students will develop fundamental methods necessary to create character rigs. Students will learn aesthetic, technical, and optimization concepts as they apply to organic and mechanical designs. Topics will include: hierarchies, constraints, deformation rigging, skeleton creation, skinning, forward and inverse kinematics, controls, and body and facial rigging.

Student Learning Outcomes

By the end of the course, the goal is that as a rigging artist you will:

1. Understand what Rigging is and the role it plays in the world of cinema and video games.
2. Be familiar with industry professionals and their techniques and approaches to rigging.
3. Understand and be able to apply the fundamentals of rigging to industry standard applications.
4. Demonstrate ability to rig basic to intermediate machines, bipeds and quadrupeds.

FDMA 2730. Advanced Character Animation

Course Description

Focus on complex rigging techniques as well as utilizing advanced animation functions to blend multiple animations into complex animations.

Student Learning Outcomes

Upon completion, with 80% accuracy, 80% of the students who complete this course, will be able to:

1. Create skeletal riggings for use with a 3-D model
2. Attach riggings to a 3-D model using Smooth and rigid binding and refine the bindings so that they are properly weighted
3. Animate a 3-D model using skeletal and vertex animation techniques

FDMA 2735. Advanced 3-D Animation Workshop A

Course Description

Program capstone: students utilize the skills learned in the program to produce their final animation. Group integrated projects are strongly recommended to emulate a real-work animation studio environment.

Student Learning Outcomes

Upon Successful completion of this course, 75% of students will be able to with 75% accuracy, assessed through projects and quizzes:

1. Define the duties and skills sets required for a career in 3-D Modeling.
2. Understand the Maya interface, the uses for all of the major modes and menus of the interface and be able to describe how to access the tools, actions and the options of those tools and actions.
3. Complete and compile a multi shot animated short.

FDMA 2740. Advanced 3-D Animation Workshop B

Course Description

Program capstone: students utilize the skills learned in the program to produce their final animation. Group integrated projects are strongly recommended to emulate a real-work animation studio environment

Student Learning Outcomes

Upon Successful completion of this course, 75% of students will be able to with 75% accuracy, assessed through projects and quizzes:

1. Define the duties and skills sets required for a career in 3-D Modeling.
2. Understand the Maya interface, the uses for all of the major modes and menus of the interface and be able to describe how to access the tools, actions and the options of those tools and actions.
3. Complete and compile a multi shot animated short.

FDMA 2745. Light, Shade, Render

Course Description

This course will explore the theory and practice of 3-D lighting and rendering methodologies. Techniques covered will implement cameras, lighting sources, textures, surface-mapping and algorithmic rendering to produce stylized and photo realistic images. Topics covered will include direct and indirect lighting, shaders that simulate physical substances and effects, rendering multiple passes and simulating physical lens effects.

Student Learning Outcomes

1. Understand the role of lighting and surfacing to tell a story.
2. Be familiar with leading lighting artist and their approaches.
3. Utilize the software implemented in the entertainment industry.
4. Understand and apply fundamental lighting and rendering techniques.
5. Demonstrate ability to create successfully rendered scenes from concept through production.

FDMA 2747. Advanced Film Lighting

Course Description

Advanced course in film lighting skills for the professional motion picture and television industry. This course covers general electrical concepts, cabling, generators, electrical power stations, and on-set safety. Student focus on both studio and location lighting. Students gain practical experience through use of industry standard equipment, including tungsten, HMI, LED and natural lighting.

Student Learning Outcomes

1. Identify general electrical concepts
2. Demonstrate safe set-up and operation of generators and power stations
3. Demonstrate safe operation of Tungsten, HMI and LED lights
4. Demonstrate concept of studio and location lighting
5. Demonstrate electrical and lighting safety

FDMA 2750. Digital Sculpting

Course Description

Introduce students to the 3-D Sculpting programs which are the industry standard sculpting programs. Students will learn how to create complex high polygon sculpts and normal maps and transfer the models into 3-D studio Max and Autodesk

Student Learning Outcomes

1. Demonstrate communication skills through written critiques and explanations.
2. Students will demonstrate visual communication skills through critiques, written explanations, and storyboarding.
3. Demonstrate a working knowledge of Brush's interface.
4. Demonstrate a working knowledge of Zpheres and how they are best used to create sculpts.
5. Demonstrate a working knowledge of painting a mesh using Spotlight.
6. Demonstrate a working knowledge of retopologizing and exporting the mesh.
7. Demonstrate a working knowledge of integrating the full Zbrush pipeline into Unity and Unreal.

FDMA 2755. Drawing for Animation

Course Description

Introductory study of the human body and animal form in relation to animation. Students learn fundamentals and exaggeration of the figure, as related to proportion, rhythm, mechanics and motion. Areas of focus are basic form, proportion, shape, contour, gesture, anatomy, portraiture, perspective, clothing effects and drawing from observation.

Student Learning Outcomes

Lectures and demonstrations will be given. . Specific learning objectives are listed in each unit. By the end of the course, the goal is that as an artist you will:

1. Students will have an opportunity to gain hands on experience using industry standard state of the art animation software
2. Understand what the basics of drawing the human form.
3. Have a general understanding of human anatomy as needed for the artist.
4. Be able to design the human form from imagination.

FDMA 2760. Personal Character Development

Course Description

Focus on the development of personal character(s), from sketch to render. Develop complete biographies of character, then build, skin and animate with as many personal attributes as possible.

Student Learning Outcomes

Not Available

FDMA 2765. Anatomical Character Design

Course Description

Focus on building anatomy-based 3-D characters. Advanced study in NURBS, subdivisions, and polygon modeling techniques used to create fully functional and realist models.

Student Learning Outcomes

1. Understand the flow of character anatomy.
2. Model polygon, NURBs, and subdivision objects.
3. Gain a better understanding for geometry flow on characters.
4. Gain general knowledge of anatomical character techniques.
5. UV texture an anatomical character correctly.
6. Create anatomical characters more efficiently.
7. Sculpt detail into a character to add to its' realism.

FDMA 2768. Introduction to Game Development

Course Description

In tandem with innovations of modern computing machines, people have been devising ways to "play" with these systems through programming games on these devices. Video games have matured into an expressive medium rooted in using algorithms as the means for constructing interactive experiences. Building these games requires an understanding of the principles of interactive design, computer science, and storytelling.

Student Learning Outcomes

1. Exhibit knowledge of fundamentals of game engine architecture.
2. Demonstrate fundamental skills in game design concepts and game mechanics.
3. Demonstrate an understanding of business and career pathways for game development.
4. Demonstrate ability to use specified industry development tools.

FDMA 2770. Critical Game Studies

Course Description

Focus on creating a complete design document utilizing techniques and standards used in the industry today.

Student Learning Outcomes

1. Develop a comprehensive game design document that adheres to industry standards, incorporating elements such as gameplay mechanics, narrative structure, and user interface design.
2. Critically analyze existing game design documents to identify strengths, weaknesses, and areas for improvement.
3. Apply advanced game design techniques to create innovative and engaging game concepts.
4. Evaluate the ethical and cultural implications of game design choices and their impact on diverse audiences.
5. Collaborate effectively in a team setting to produce a cohesive and well-documented game design project.
6. Present and defend game design concepts and documents to peers and industry professionals, demonstrating clear communication and critical thinking skills.

FDMA 2775. Game Tools and Techniques

Course Description

Focus on the different engines and gaming technologies that power the games of today

Student Learning Outcomes

1. Students will develop rapid prototyping techniques.
2. Through classroom exercises the students will gain competency in industry-standard game creation engines and tools and learn to work together in groups to create rapid prototypes.
3. This includes creating art, sound and music, and creating basic scripts within an engine.

FDMA 2780. Gaming Platform and Standards

Course Description

Focus on the different gaming platforms and their corresponding gaming demographics and standards.

Student Learning Outcomes

1. Break down the different types of bugs found in alpha and beta versions of games.
2. Learning how to write and submit bug reports using current industry requirements.
3. Communicate clearly within a team environment.
4. Learn how each of the major platforms receive game submissions as well as the requirements for each platform.

FDMA 2785. Level Design Concepts

Course Description

Focus on the design and creation of video game levels. Dealing with the challenges and pitfalls of different video game genres.

Student Learning Outcomes

1. Students will develop level design skills.
2. Through classroom exercises the students will gain a comfortable competency with designing levels both on paper and digitally.
3. This includes creating first person shooter levels, third person levels, multiplayer level design, and more.

FDMA 2790. Game Design Concepts

Course Description

Instruction in prototyping and designing individual concepts for video games. Topics include how to craft, demonstrate, and refine multiple projects, including characters and environments. With instructor's approval, design medium(s) are students' choice. Feedback and instruction are provided through lecture, student presentations, peer interactions, and one-on-one interaction with the instructor.

Student Learning Outcomes

1. Create concepts based on overall subject(s) suitable for a personal professional portfolio
2. Create designs based on instructor direction and audience and team feedback
3. Craft, refine, and finalize concepts within the student's selected medium(s) of choice
4. Present levels -of concepts to the class, explaining the steps and thought process that were developed, from start to finish.

FDMA 2820. Producing and Directing the Independent Film

Course Description

The study of pre-production, production and post-production processes needed to produce and direct the independent motion picture. Students will complete a script breakdown, shooting schedule, budget and design a distribution roll-out plan. Students will discuss and analyze contractual, film unions and crew management.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Produce a schedule and budget for a short motion picture

2. Breakdown and evaluate a script
3. Create distribution roll-out plan

FDMA 2823. Film Making in Science

Course Description

Students will examine, study and practice filmmaking as an essential skill in scientist's toolkit. They will: explore how the art and history of filmmaking is similar to practices within the history of science and technology; examine the relationships between data collection, documentation, interpretation and presentation. They will explore the technical nature of film and video and become aware of how dependent film and video are upon developments in science and technology. They will study ways to popularize science to lay persons and how to use film and video as a career building, promotional and fundraising art.

Student Learning Outcomes

1. Students will learn ways to popularize scientific work to lay audiences and funding agencies.
2. Students will study techniques of filmmaking to collect and interpret data.
3. Students will consider varying approaches for varying audiences and purposes.
4. Students will evaluate the effectiveness of their expression and that of others.

Communication:

5. Students will learn ways to popularize scientific work to lay audiences and funding agencies.
6. Students will study techniques of filmmaking to collect and interpret data.
7. Students will consider varying approaches for varying audiences and purposes.
8. Students will evaluate the effectiveness of their expression and that of others.

Critical Thought:

9. Students will evaluate the bias and accuracy of their creations and data collection and those of others, mindful that bias is ever present, even among scientists.
10. Students will grapple with how to be objective at the crossroads of science and art.

Cultural Sustainability:

11. Students will embrace the power and responsibility of media production and learn skills--including respect for other researchers and the search for scientific truth--to help others communicate their opinions and findings.

Information Competency and Research:

12. To document and interpret the world, students will use current technology: such as digital cameras; editing workstations and software; and the basic machinery and technology of filmmaking.

FDMA 2825. Making a Documentary

Course Description

Hands-on documentary production intensive in which students learn development of proposals, shooting fundamentals, ethical considerations, financing/producing, legal considerations and distribution.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Perform basic production and direction skills
2. Create a documentary film proposal
3. Utilize production process model for development of a documentary

FDMA 2830. DFM Forum

Course Description

Meets four times during the semester to facilitate cooperation and communication between students and keep them involved with filmmaking projects. Together with the preproduction and production courses, this course is designed to give all students a program overview and an opportunity to share their work and to learn from the efforts of their colleagues as well as the faculty.

Student Learning Outcomes

Not Available

FDMA 2840. Advanced Film and Television Pre-Production

Course Description

This course is part one of the Film and Television advanced project. This course focuses on the pre-production phase. Students will complete a short screenplay. Also students will do production design, script breakdown, budgeting, casting, and crowd funding. Students will also film an advanced project trailer.

Student Learning Outcomes:

1. Complete a finished screenplay for a short film
2. Develop the production design and pre-visualization for film and media
3. Complete script breakdown for short film
4. Complete final filming budget and casting for short film
5. Develop crowdfunding campaign

FDMA 2845. Advanced Film and Television Production

Course Description:

This course is part two of the Film and Television advanced project. This course focuses on the production phase. Students will complete their Crowd funding and develop a day-by-day filming schedule. Students will also film a short capstone film during this semester and begin the post-production.

Student Learning Outcomes:

1. Understand directing techniques for the short film
2. Understand visual storytelling for film and media
3. Complete a day-by-day filming schedule for film
4. Develop management skills for film and media productions

FDMA 2850. Blogging as a Tool

Course Description

This course is designed to provide students with a fundamental working knowledge of the technical, aesthetic, and conceptual aspects of blogging and how to join the media outlets in our Web 2.0 bubble to further career and education. Students will investigate many aspects of blogging using various tools and software, including WordPress, Tumblr, and others. These tools will be the platforms for further discussing various topics of interest - education in a social media world, the state of the digital communication networks, social networking, RSS feeds, social bookmarking, photo sharing, video sharing, security and, most notably, how to contribute your own content freely yet cautiously. Lectures, demonstrations, online discussions in class and blog postings and participation will introduce various issues associated with the tools, media, and their content. Assigned projects and other online activities will assist in grasping a critical view of our online universe, better preparing the student for further study in higher education and beyond.

Student Learning Outcomes

1. Demonstrate Excel[®]ent understanding of the foundations of various online communication platforms and contributing thoughtful, meaningful content to its pages.
2. Demonstrate and Excel[®]ent grasp of using online blogging platforms, managing a blog, and providing meaning online content.

2. Develop a critical appreciation for the state of the digital world today and as it has evolved and be able to use the syntax associated with debating and reviewing it.
3. Demonstrate a good working knowledge of the concepts of visual principles and design in relation to online page layout.
4. Enhance your ability to discuss and defend your work choices in relation to concepts, ideas, techniques, processes, and experiences.
5. Understand the limitations and opportunities offered by these various media tools and apply security principles to navigating them.

FDMA 2855. Social Media Marketing Tools

Course Description

In today's rapidly-evolving media landscape, social media has not only become a fundamental tool for communication, but a must-have skill in a multitude of industries. With the right amount of practice and social media education, students and professionals are empowered with a competitive edge in their studies, careers and communications.

Student Learning Outcomes

1. Understand social media fundamentals
2. Understand basic social media etiquette
3. Create a social media strategy
4. Publish social media updates and engage with a community
5. Apply social media best practices to enhance a personal brand
6. Drive traffic to a blog using social media
7. Create a content marketing calendar
8. Understand social media advertising
9. Manage social media using the HootSuite dashboard
10. Measure site traffic using Google Analytics
11. Create and follow a social media policy

FDMA 2860. Business of Film

Course Description

A study of the business of filmmaking focusing on how to produce an independent film. Students explore budgeting and script breakdown, setting up a Limited Liability Corporation (LLC), taxes, roll-out plans, union and non-union productions, contracts, deal memos and general entertainment law. This course also covers filming permits, production insurance and production agreements.

Student Learning Outcomes

1. Create a budget based on a script breakdown
2. Describe Limited Liability Corporations and taxes
3. Create a production roll-out plan
4. Analyze union versus non-union labor
6. Create contracts and deal memos based on entertainment law
7. Create filming permits, production insurance, and production agreements

(FALB)**FALB 2110. The Business of Being an Artist****Course Description**

This course is designed to provide an introduction for students who may be entrepreneurially-minded and/or desiring a successful career in the arts or as a practicing creative or innovator in any of the many complementary arts professions. Through video lectures, readings, exercises and assignments the course will introduce students to fundamentals of business planning and career development strategies. Students will be guided through a personal/professional strategic planning process as a basis for developing their own career. Students will explore the financial and legal requirements of starting an arts business including an introduction of branding and marketing basics. The course will conclude with students having created their own arts career plan as a platform for entering the creative sector.

Student Learning Outcomes

At the conclusion of this course, students should be able to:

1. Identify basic financial requirements for starting an arts-related business;
2. Develop tools for promoting professional competencies in the arts;
3. Identify components for a successful arts career.

FALB 2120. Making the Promotional Video**Course Description**

This course takes a “hands-on” approach to introduce students to contemporary strategies for creating short, eye-catching promotional video content for distribution on social media, websites, or TV. In this class, you will employ writing, design, audio and video production skills to develop a digital marketing campaign for the organization, business, product, cause, or entity of your choice. Videos may be produced in various formats and will be intended for a variety of distribution platforms. Successful projects will require thoughtful planning, execution, and revision. Assignments will consist of writing, presentations, physical production and editing of visual content. You will present your work for screening and analysis in class.

Student Learning Outcomes

1. Evaluate strategies for creating promotional videos
2. Identify key messages that reach and engage your audience
3. Develop tactics to ensure your message gets through
4. Conceive, produce, and edit engaging promotional content

First-year Experience (FYEX)**FYEX 1010. Foundational Math****Course Description**

This course is designed to prepare students for college-level mathematics courses by strengthening key mathematical concepts. It addresses the transition from high school to college and incorporates strategies needed for problem solving.

Student Learning Outcomes

1. Students in this class will learn to use algebraic skills in both computational and applied problems in preparation for taking Intermediate Algebra.

2. Students will learn to understand material using standard mathematical terminology and notation when presented either verbally or in writing.
3. Students will improve their skills in describing what they are doing as they solve problems using standard mathematical terminology and notation.
4. Students will practice the habits that exemplify academic responsibility in a self-paced learning environment.

FYEX 1020. Math Learning Strategies

Course Description

This course is designed to help increase awareness of math-based structures in day-to-day life, interpret and evaluate information presented in graphical and visual formats, and use problem-solving tools and concepts to analyze information and arguments.

Student Learning Outcomes

Students who successfully complete Math Learning Strategies: Observation and Application will

1. Increase their own awareness of math-based structures in their day-to-day life,
2. Interpret and evaluate information presented in graphical and visual formats, and
3. Use problem-solving tools and concepts to analyze information and arguments.

FYEX 1030. Critical Text Analysis

Course Description

This course presents the reading process including study reading, critical thinking and analysis. It addresses the transition from high school to college and incorporates strategies needed for problem solving.

Student Learning Outcomes

At the end of this course, students will be able to do the following:

1. Recognize reading as a process.
2. Take effective notes, organize information and summarize text in standard written English
3. Demonstrate ability to write effectively.
4. Develop a strategy to find solutions to a problem.
5. Apply critical thinking techniques and analyze an author's intent

FYEX 1110. First-Year Seminar

Course Description

This course is designed to help students achieve greater success in college and in life. Students will learn many proven strategies for creating greater academic, professional, and personal success. Topics may include career exploration, time management, study and test-taking strategies to adapt to different learning environments, interpersonal relationships, wellness management, financial literacy, and campus and community resources.

Student Learning Outcomes

1. Recognize the ways in which s/he is responsible for her/his own experience in education.
2. Identify, locate, and utilize available campus resources essential for academic success.
3. Create long- and short-term goals associated with student success and career planning.
4. Implement time management techniques to organize the semester's workload.
5. Develop strategies to use individual strengths to succeed and reflect upon coursework and course progress in multiple classes to alter academic behaviors and create deeper meaning and learning.
6. Apply the skills essential for analyzing and solving problems in her/his academic, professional, and personal life, which may include financial literacy and wellness management.
7. Develop and apply essential skills such as reading, taking notes, studying, memorizing, taking tests, and self-management skills necessary for college success.
8. Identify and revise self-defeating patterns of behavior, thought, and emotion as well as unconscious limiting beliefs.

9. Develop supportive relationships with members of the campus community.
10. Develop essential reading, writing, and critical thinking skills used in study and in research.
11. Demonstrate understanding of how to use the computer for academic purposes, including learning management systems, email communications, research databases, degree audit, and other online resources.

FYEX 1111. Introduction to University Studies

Course Description

An introduction to the theory of interdisciplinary studies. The course focuses on exploring common pathways and connections among disciplines. It enables students to develop a personal theory of interdisciplinary studies and culminates in a detailed plan for an individualized major.

Student Learning Outcomes

Not Available

FYEX 1112. The Freshman Year Experience

Course Description

An introduction to the university and its resources; emphasis on development of academic and personal skills that enable freshmen to become successful learners.

Student Learning Outcomes

1. Appreciate the goals, methods, and values of higher education
2. Expand intellectual development and self-direction
3. Establish a faculty mentor relationship
4. Enhance knowledge and practice of collaborative learning principles
5. Establish a familiarity with campus resources and student services
6. Develop public speaking, critical thinking, library research, and study strategies
7. Evaluate talents and interest in relation to selecting a major and career planning
8. Examine and clarify values
9. Acknowledge and enhance respect for diversity

FYEX 1113. Academic Literacy

Course Description

This course introduces specific reading techniques to aid students in developing reading skills in the content areas in order to meet college reading demands. Students move from a literal perspective to an interpretive and critical analysis of textbooks and college-level materials.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Develop and apply essential skills such as reading, taking notes, studying, memorizing, taking tests, and self-management skills in multiple classes necessary for college success.
2. Develop essential reading, writing, and critical thinking skills used in study and in research, with emphasis on APA style formatting and citations.
3. Apply the skills essential for analyzing and solving problems in her/his academic, professional, and personal life, which may include financial literacy and wellness management.
4. Recognize the ways in which s/he is responsible for her/his own experience in education.
5. Demonstrate understanding of how to use the computer for academic purposes, including learning management systems, email communications, research databases, degree audit, and other online resources.
6. Identify, locate, and utilize available campus resources essential for academic success.
7. Create long- and short-term goals associated with student success and career planning.

8. Implement time management techniques to organize the semester's workload.
9. Develop strategies to use individual strengths to succeed and reflect upon coursework and course progress in multiple classes to alter academic behaviors and create deeper meaning and learning.
10. Increase knowledge and practice of collaborative learning principles.

FYEX 1114. Experiential Learning Seminar

Course Description

Research Methods. Gain research experience through literature searches, reading papers, and constructing well-posed questions.

Student Learning Outcomes

Not Available

FYEX 1115. Transition from Military to University

Course Description

Making a positive transition from military to civilian life is key to success. This course will cover a variety of topics ranging from time management to critical thinking. This course is designed to assist military and veteran students in becoming more effective learners through self-awareness, effectiveness study & learning strategies, and interpersonal skills. Skills and techniques for managing military to civilian readjustment transition issues are discussed and examined.

Student Learning Outcomes

1. Demonstrate skills necessary to transition from a military to academic environment
2. Analyze acquired military skillsets and connect to academic major and career
3. Understand and demonstrate effective time management, test-taking strategies, stress management, and other key college success skills
4. Identify and utilize campus resources and student services

FYEX 1116. Managing Your Money

Course Description

Principles and strategies for effective money management. Includes financial goal setting, both short and long term. Explores the relationship between career and income earning potential. Explores issues of credit and debt management and prevention of identity theft.

Student Learning Outcomes

1. Demonstrate understanding of the psychology of money and how it relates to personal financial decisions.
2. Create realistic short- and long-term financial goals and a personal budget.
3. Comprehend and manage college finances, including types of financial aid.
4. Appreciate the importance of the Free Application for Federal Student Aid (FAFSA).
5. Describe the financial aspects of career development and how they apply to their own lives, including resume, taxes, salary, benefits.
6. Apply principles of student loan management.
7. Demonstrate use of credit reports in the prevention identity theft.
8. Identify essential elements of smart spending and borrowing.
9. Recognize debt and repayment costs.
10. Explain the basics of saving and planning for the financial future.
11. Create focused, developed, clear discussion posts and other written work for this class.

FYEX 1117. Financial Literacy Money Matters

Course Description

This course will cover a variety of financial literacy topics ranging from budgeting to student loan repayment. This course is designed to assist students in becoming more financially literate.

Student Learning Outcomes

1. Master effective strategies and other skills related to financial literacy
2. Establish a familiarity with campus resources designed to foster financial literacy and wellness
3. Exhibit intellectual development and self-direction in relation to financial literacy and wellness
4. Identify financial literacy skills which best support individual financial well-being
5. Demonstrate skills and knowledge that allows the student to make informed and effective decisions with all of their financial resources.

FYEX 1120. College Success

Course Description

This is an introduction to college life and surveys topics from policies and procedures to career exploration. This course outlines strategies the student can use to achieve a successful college experience. The emphasis is on the attainment of superior personal and academic skills.

Student Learning Outcomes

By the end of this College Success course, students should be able to:

1. Recognize the importance of success skills in their life.
2. Gain insight into how their own learning is best achieved through a learning skills inventory.
3. Develop a time management system that will allow them to balance all aspects of life and reach the goals which they have set.
4. Improve memory techniques and apply them to all aspects of one's life.
5. Improve reading skills by becoming an active reader.
6. Discuss note taking skills and develop a system that works for them.
7. Discover the art of test taking and improve one's performance on tests.
8. Improve their critical thinking skills in order to enhance learning.
9. Recognize the importance of effective communication and other personal skills like money management and good health.
10. Recognize the value of diversity that comes in many forms throughout academics and life.
11. Increase awareness of available student services at NMJC.
12. Determine their own personal academic/career goals and set a course to achieve them.

FYEX 1130. Academic Skills for Mathematics

Course Description

Emphasis on study skills for success in math, up to the calculus level, tailored to meet individual student needs. Topics include test preparation strategies, efficient time management and practice methods, and introduction to and practice with learning software. Consent of instructor required.

Student Learning Outcomes

Not Available

FYEX 1131. Personal Learning Skills I

Course Description

Individualized programs for self-improvement in skill areas necessary for academic success in the university environment. Each course to bear an appropriate subtitle

Student Learning Outcomes

1. Synthesize the importance of critical thinking through self-reflection and self-exploration.
2. Analyze and apply critical thinking skills using the eight intellectual standards.

3. Describe the common barriers to critical thinking and construct problem solving strategies.
4. Evaluate information and knowledge to determine misinformation and inaccuracies.
5. Demonstrate information literacy by recognizing when information is needed and being able to efficiently locate, accurately evaluate, effectively use, and clearly communicate the information in various formats and mediums.

FYEX 1132. Academic and Personal Effectiveness

Course Description

Learn academic self-analysis skills through the application of study and learning techniques to current course demands. Exposure to a variety of topics which enhance university and life-long learning.

Student Learning Outcomes

1. Students will demonstrate mastery of time management, stress management, test taking, and other skills through completion of activities, quizzes, discussions, and more.
2. Students will be able to identify campus resources, including their services, location, and contact information.
3. Students will exhibit intellectual development and an improved self-direction through participation in the course.
4. Students will be able to identify and adopt those management skills which best support academic and career choices.

FYEX 1133. Academic Reading and Study Skills

Course Description

Introduction to and practice with strategies for effective reading and studying at the college level.

Student Learning Outcomes

1. Use reading strategies to synthesize texts.
2. Identify rhetorical elements of texts.
3. Identify and apply different study methods.
4. Recognize the role of student support services for student success.
5. Identify and practice effective time management skills.
6. Demonstrate proficient computer skills.
7. Write an effective summary.

FYEX 1134. Speed Reading

Course Description

Introduction to strategies and techniques for increasing reading rate and comprehension related to academic areas.

Student Learning Outcomes

1. Demonstrate an understanding of speed-reading strategies and eye movement drills
2. Expand vocabulary and reading comprehension
3. Improve reading rates and develop reading techniques
4. Demonstrate an understanding of skimming techniques and scanning strategies.

FYEX 1140. Career Exploration

Course Description

Survey of careers possible with community college associate degrees. Information on how to make a career choice.

Student Learning Outcomes

1. Desired career and lifestyle.
2. Areas of interest.
3. skills and abilities.
4. Personal values.

5. Programs that match the student's interests, abilities, and values.
6. Three careers that match the student's interests, abilities, values, and personality.

FYEX 1141. Career Explorations and Planning

Course Description

This course is designed to increase the likelihood that individuals will successfully navigate the challenges they face when making college major and related career choices. Restricted to Las Cruces campus only.

Student Learning Outcomes

Not Available

FYEX 1150. Diversity at the University

Course Description

In this course students will engage in discussions about diversity at the university, what it means in today's society and local community, and build on its complexity at the college or university.

Student Learning Outcomes

1. Acknowledge and enhance sensitivity and respect for diversity
2. Recognize and gain insight to diversity issues on college campuses
3. Analyze and interpret information about cultural differences, cultural rules, and cultural biases in their own society or about non-dominant or marginalized groups.
4. Articulate ways in which social identities such as race, class, and gender intersect to
5. influence individual life experiences and/or perspectives on and off campus.
6. Integrate, synthesize, and apply knowledge of other cultures in both a broad and focused context.

FYEX 1160. Tutorial

Course Description

Development of specific skills required for college courses, such as note-taking, listening, and test-taking. To be taken in conjunction with a regular designated college course.

Student Learning Outcomes

Upon completion of this course, the student will be able to exhibit the following behaviors:

1. Demonstrate the ability to organize their time in order to improve study habits.
2. Apply pre-reading strategies to improve reading concentration and comprehension.
3. Demonstrate basic understanding of the systems of the body.
4. Identify techniques to improve personal concentration and comprehension skills.
5. Identify and demonstrate listening skills.
6. Identify effective study and note taking skills.
7. Identify and demonstrate effective test-taking skills.
8. Identify critical thinking skills used in nursing.
9. Demonstrate knowledge of key terms.

FYEX 1170. NMSU Gospel Choir

Course Description

Students will gain performance experience and exposure to urban contemporary gospel music. Open to all majors. May be taken for unlimited credit. Restricted to: Main campus only.

Student Learning Outcomes

1. Comprehended the foundation related to singing in a gospel choir setting.
2. Demonstrate an understanding of the difference between the musical treble and bass clef.
3. Expand vocabulary and reading comprehension of gospel music terminology.

4. Improve the speed and accuracy of music sheet and sight reading

FYEX 1995. Preparing for Cooperative Education & Internship

Course Description

The Cooperative Education Course provides students with a comprehensive overview of career-related topics designed to assist with securing Cooperative Education and Internship employment. Students learn about philosophies and approaches to resumes, cover letters, interviewing, job searching, networking, and professionalism. A primary focus of the course is on experiential learning where students have opportunities to practice and implement course concepts including interviewing, networking, job searching, and document creation. In addition to exploring topics related to Cooperative Education and Internship, the course is designed to provide students with tools and strategies for successfully navigating the transition from student to employee.

Student Learning Outcomes

1. Demonstrate skills related to securing experiential learning experiences.
2. Demonstrate knowledge related to the philosophies and approaches to resumes, cover letters, interviewing, cooperative education and internship search, and networking.
3. Comprehend the importance of experiential learning experiences in relation to career development.
4. Evaluate experiential learning opportunities and demonstrate comprehension of the skills and strategies necessary to transition from student to career.

FYEX 1996. Topics in First Year Experience

Course Description

Covers specific study skills and critical thinking topics. Specific sub-titles to be listed in the Schedule of Classes.

Student Learning Outcomes

Varies

FYEX 2111. Critical Thinking Skills

Course Description

Introduction to critical thinking processes. Develops higher order thinking necessary to evaluate clearly, logically, and accurately one's academic and life experiences. Practical emphases on assertive thinking and perspectives.

Student Learning Outcomes

1. Students will raise vital questions and problems, formulating them clearly and precisely.
2. Students will gather and assess relevant information, using abstract ideas to interpret it effectively, come to well-reasoned conclusions and solutions, and them against relevant criteria and standards.
3. Students will think open-mindedly within alternative systems of thought, recognizing and assessing assumptions, implications, and practical consequences.
4. Students will communicate effectively in figuring out solutions to complex problems.

Fish, Wildlife, Conservation Ecology (FWCE)

FWCE 1110. Introduction to Natural Resources Management

Course Description

This class covers historical and current issues affecting the management of renewable natural resources with an emphasis on water, soil, rangeland, forest, fish, and wildlife resources. An emphasis is placed on the scientific method and critical thinking. In the laboratory students collect and analyze field data on topics covered above and write up each unit as a laboratory report.

Student Learning Outcomes

1. Students should be able to recall, describe and explain the laws, treaties and acts that have led to our current management of natural resources in the United States.

2. Students should recognize or explain what ecological processes are, the importance of ecological processes in maintaining ecosystem function and how human activities change ecological processes and the ecosystems dependent on those processes.
3. In each of the six course and lab modules (water quality, soils, forestry, rangelands, wildlife and fisheries) students should be able to recall, describe and explain basic terminology, fundamental ecological principles and management techniques and challenges.
4. Students should be able to interpret data presented graphically and in tables from class exercises and lectures.
5. Students should be able to solve problems scientifically through field data collection, laboratory analyses and the use of quantitative methods (basic statistics, tables and graphs).
6. Students should be able to communicate results from laboratory exercises (6 lab modules) orally and in writing.
7. Students will learn to apply scientific thinking to real world problems through in class discussion and short essays based on material from case studies presented in class and guest speakers.

FWCE 1120. Contemporary Issues in Wildlife and Natural Resources Management

Course Description

Ecological, socioeconomic, and political issues surrounding the management of our natural resources with an emphasis on fish and wildlife resources.

Student Learning Outcomes

Not Available

FWCE 2110. Principles of Fish and Wildlife Management

Course Description

Basic principles of fish and wildlife management including history, ecology, economics, and policy. Emphasis on wildlife and fisheries. Uses an ecosystem approach integrating living and nonliving resources.

Student Learning Outcomes

1. The goal of this course is to provide a firm foundation in the principles of wildlife and fisheries management.
2. Material will include a background in biological principles geared towards animal populations, characteristics and management of the habitats utilized by fish and wildlife, techniques used to study and manage animals and their habitats, and aspects of the human dimension involved in wildlife and fisheries issues.
3. This course serves as a core requirement for degrees offered in the Department of Fish, Wildlife and Conservation Ecology and as a required course for degrees in other departments such as Rangeland Resources.

Food Science and Technology (FSTE)

FSTE 1110. Introduction to Food Science and Technology

Course Description

An introductory course in the scientific study of the nature and composition of foods and their behavior during all aspects of their conversion from raw materials to consumer food products.

Student Learning Outcomes

At the conclusion of this course, the student will be able to:

1. Define the scope and interdisciplinary nature of food science and technology
2. Describe the chemical nature of foods, including important reactions and functional properties of food component such as water and acids, and the basic analytical procedures used to assess the chemical nature of foods.
3. Describe the microbiological nature of foods, including pathogens, spoilage organisms, foodborne illnesses and fermentation, and methods used to assess food microbiology properties.
4. Describe the color, flavor and texture of foods and the objective and sensory procedures used to evaluate those properties.
5. Discuss food laws and regulations and agencies involved in enforcing those laws.

FSTE 1120. ACES in the Hole Foods I**Course Description**

Food production activities related to operation of ACES in the Hole Foods, a student-run food company that will give FSTE majors hands-on experience in all aspects of developing, producing and marketing food products.

Student Learning Outcomes

1. Apply basic scientific principles, procedures, techniques and standards in the production of food products.
2. Apply principles of sanitation and safety to the production of food products.
3. Assist in the development and evaluation of new and/or existing food products made for human consumption.
4. Prepare a resume and portfolio

FSTE 2110. Food Science I**Course Description**

The scientific study of the principles involved in the preparation and evaluation of foods.

Student Learning Outcomes

At the conclusion of this course, the student will be able to:

1. Explain basic scientific principles involved in the preparation of high-quality food products.
2. Utilize scientific inquiry in the experimental investigation of factors influencing the chemical, physical and sensory properties of food products.
3. Apply basic scientific principles, procedures, techniques and standards in the preparation of all types of high-quality food products.
4. Use basic methods of quantitative analysis to critically evaluate quality characteristics of food.
5. Use sensory science techniques and terminology to critically evaluate acceptability and quality characteristics of food.
6. Describe high quality characteristics of a variety of food products using appropriate terminology.
7. Apply principles of sanitation and safety to food preparation.

FSTE 2120. ACES in the Hole Foods II**Course Description**

Food production activities related to operation of ACES in the Hole Foods, a student-run food company that will give FSTE majors hands-on experience in all aspects of developing, producing and marketing food products.

Student Learning Outcomes

1. Apply basic scientific principles, procedures, techniques and standards in the production of food products.
2. Apply principles of sanitation and safety to the production of food products.
3. Assist in the development and evaluation of new and/or existing food products made for human consumption.
4. Prepare a resume and portfolio.

FSTE 2130. Survey of Food and Agricultural Issues**Course Description**

Same as AEEC 2130.

Survey of food and agricultural issues, including geography of food production and consumption; human-agricultural-natural resource relations; agriculture in the United States and abroad; modern agribusiness; food safety; food, agriculture, and natural resources policy; ethical questions; role and impact of technology.

Student Learning Outcomes

1. Understand of global agriculture including production techniques used in various geographical regions, consumption trends, and political and social constraints.
2. Synthesis information about agricultural issues and make informed arguments

3. Articulately discuss modern issues in agriculture
4. Write coherent arguments relative to personal beliefs regarding agricultural issues.

FSTE 2996. Topics in Food Science and Technology

Course Description

Specific topics and credits to be announced in the Schedule of Classes.

Student Learning Outcomes

Student learn objectives vary based on topic.

Forestry (FORS)

FORS 1010. Humans and Ecosystems

Course Description

A survey of environmental and ecological sciences with an introduction to the ways humans interact with and change ecosystems. The course introduces students to ecological and environmental concepts that bear on environmental issues, current practices and management strategies utilized to preserve and sustain ecosystems, and examples of solutions to environmental and natural resource problems.

Student Learning Outcomes

The primary objectives of this course are to:

1. Review and reinforce basics of quantitative reasoning and mathematical analyses and their application to real-world problems. (Mastery of content knowledge and skills, critical and reflective thinking skills)
2. Through hands-on labs and field trips, use a variety of strategies to measure physical objects and employ dimension analysis to solve problems. (Mastery of content knowledge and skills, quantitative reasoning).
3. Critically read and write about a popular press book on a natural resource/environmental management (Mastery of critical and reflective thinking skills, reading and writing)
4. Develop and interpret graphs using spreadsheet software. (Mastery of content knowledge and skills, effective communication skills, critical and reflective thinking skills, effective use of technology)
5. Discuss and evaluate scientific methods and interpret evidence. (Mastery of content knowledge and skills, effective communication skills, critical and reflective thinking skills,)
6. Gather research from scientific journals in the library and on the internet, interpret and present key findings on a particular topic (Effective communication skills, critical and reflective thinking skills, effective use of technology).
7. Apply dimension analysis techniques to evaluate a variety of natural resource problems through weekly problem sets and lab exercises. (Mastery of quantitative reasoning skills)
8. Work effectively in collaborative groups to address current environmental issues (Effective communication skills, critical and reflective thinking skills)
9. Incorporate practice with spreadsheets, word processing and presentation software into class, lab and homework assignments (Effective communication skills, effective use of technology)

FORS 1310. Introduction to Wildland Firefighting I

Course Description

The course provides students entry-level wildland firefighter skills including operational leadership, communications, tactical decision making, situational awareness, the LCES system, wildland fire behavior, fire lines, and factors affecting the start and spread of wildfires. Successful completion of the course leads to US Forest Service Certification S-130, S-190 (Red Card)

Student Learning Outcomes

Students will:

1. Demonstrate an understanding of their responsibilities to work effectively in a team operating in a high-risk work environment;

2. Describe the purpose of the Standard Firefighting Orders and Watch Out Situations;
3. Describe what the Lookouts, Communications, Escape Routes, and Safety Zones (LCES) system is and how it relates to the Standard Firefighting Orders;
4. Describe the standards, tools and equipment, and various methods used in fireline construction;
5. Describe the methods for extinguishing a fire with or without the use of water;
6. Demonstrate the ability to construct fireline to required standards using various methods, tools and equipment, and techniques;
7. Describe the basic terminology used in wildland fire;
8. Identify and discuss the fire triangle;
9. Identify and discuss key characteristics of the primary wildland fire environment components - fuels, weather, and topography;
10. Identify critical fire weather factors that, combined with receptive fuels, may result in extreme fire behavior; and
11. Recognize how alignment of fuels, weather, and topography can increase the potential for extreme fire behavior.

FORS 1510. Introduction to Wildland Firefighting II

Course Description

Builds on Wildland Firefighting 1, this introductory course provides context for incident command systems within initial emergency response. Students examine personal leadership styles and are introduced to the concept of situational leadership, team cohesion, and team management and will develop a basic understanding of National Incident Management System concepts, principles, and components. Includes a career development component (i.e. USAJobs)/Federal resume building.

Student Learning Outcomes

Students will:

1. Demonstrate the ability to use an incident command system to manage an event;
2. Describe the National Response Framework and core roles and responsibilities for responders;
3. Describe how to reduce the threat to public health and safety during wildland fires;
4. Identify responsibilities and demonstrate the ability to apply the principles of operational leadership;
5. Describe how to incorporate and maintain open lines of communication with appropriate personnel;
6. Demonstrate the ability to apply tactical decision making;
7. Demonstrate an understanding of fundamental leadership principles; and
8. Understand individual traits and motivation for entering into a leadership role.

FORS 2010. Forestry Field & Safety Practices

Course Description

This course is an intensive summer experience in which various forest types in New Mexico are visited. Forest management practices, harvest systems, and natural catastrophes will be assessed by students for their ecological repercussions. Measurement methods used in forestry will be introduced throughout the session. This course provides training to students in the Occupational Safety and Health Administration's heavy equipment and field operations regulations, safe practices for field workers, and risk management and liability issues surrounding field work.

Student Learning Outcomes

1. Students will be able to use various types of forestry equipment typically used by practicing professionals.
2. Students will learn, discuss, and practice common safety measures in the field to minimize the potential for injuries and to align with common practices in the profession.
3. Students will be able to apply a variety of ecological forestry methods to assess and measure vegetation and forest stand conditions and use these skills to evaluate possible forest treatments.
4. Students will gain skills and abilities in effective collaboration, specifically working in groups and teams.

5. Students will hone communication skills, including written and oral skills, and improve their quantitative and analytical skills through the analysis of data collected in the field.

FORS 2020. Terrestrial Ecology

Course Description

The ecology of natural and artificial groups of terrestrial organisms used in the production of goods and services is the focus of this course. Topics include biological productivity, vegetation dynamics, biodiversity, range ecosystems, forest ecosystems, and pest populations.

Student Learning Outcomes

1. Identify, define, and disseminate the basic concepts of terrestrial ecology.
2. Discuss and understand the relationships between and among key concepts.
3. Use quantitative reasoning skills to address issues and experiments in terrestrial ecology.
4. Apply the scientific method to test ecological concepts.
5. Incorporate practice with data spreadsheets, word processing, and presentation software into class, lab and homework assignments.
6. Gather research from scientific journals in the library and on the internet, interpret and present key findings on terrestrial ecology.
7. Communicate ecology appropriately in oral and written format to multiple audiences.
8. Integrate the cases of study to daily life and future life.
9. Work effectively in collaborative teams to address current environmental issues.

FORS 2030. Water Resources

Course Description

This course will explore the social, economic, environmental, historical, and technological forces that have led to our current methods of water distribution, management, and policy throughout the world. A strong historical context will be used throughout the course with a focus on New Mexico, Colorado, and the West. While the course will focus on the West, other areas of the U.S. and world will be examined as appropriate.

Student Learning Outcomes

1. Review and analyze within a geographical perspective the formation, use, conservation and management of water resources (mastery of content knowledge and skills, critical and reflective thinking skills).
2. Develop a working knowledge of the hydrologic, water quality, legal, economic, political and societal factors that determine water availability, hazards, use, demand and allocation (mastery of content knowledge and skills, reading and writing).
3. Critically discuss the basic principles of water resources management, including surface and groundwater hydrology, water quality and water law (mastery of content knowledge and skills, qualitative and quantitative reasoning).
4. Acquire experience in accessing and interpreting hydrological data and using this data to apply this in-depth knowledge of hydrology and water resources to solve a series of problems associated with the science, management, socioeconomics, and politics of water (mastery of content knowledge and skills, effective communication skills, critical and reflective thinking, effective use of technology).
5. Become competent in analyzing regions of water resources conflicts, and discuss underlying issues related to conflicts through class presentations and discussions (mastery of content knowledge and skills, effective communication skills, critical and reflective thinking skills).
6. Improve report writing skills and communicate results of class assignments to various audiences including classroom peers and local NRM practitioners' (effective communication skills, effective use of technology, critical and reflective thinking).

FORS 2310. Technical Skills in Fire Management I

Course Description

Provides knowledge and skills to develop fire behavior and prediction knowledge and skills to manage wildland fire including management of potable water delivery systems and firefighter safety and tactical operations in the wildland-urban interface. Designed to prepare the prospective fireline supervisor to undertake safe and effective fire management operations. Students who successfully complete the course will gain USFS S-211, S-290 certifications. First course in a series that collectively serves to develop fire behavior prediction knowledge and skills.

Student Learning Outcomes

1. Students will demonstrate knowledge and skill to design, set up, operate, troubleshoot, and shut down portable water delivery systems.
2. Students will
 - a. be able to identify and describe the characteristics of fuels, weather, and topography influencing fire behavior.
 - b. describe the interactions of fuels, weather, and topography on fire behavior, fireline tactics, and safety.
 - c. describe the causes of extreme fire behavior conditions (long-range spotting, crown fires, fire tornadoes, fire whirls); and
3. Students can interpret, communicate, apply, and document wildland fire behavior and weather information.

FORS 2320. Intro to Geospatial Technology

Course Description

Introduction to Geospatial Technology describes concepts and applications of Geographic Information Systems (GIS), Global Navigation Satellite Systems/Global Positioning Systems (GNSS/GPS) and remote sensing. Hands-on exercises that reinforce basic concepts of geospatial information and its practical applications using Google Earth and ESRI's ArcGIS Online. Participants will also learn how geospatial technology is used in business, industry, and government. This course is designed to give students the skills and knowledge they need to apply geospatial technology to their other studies and builds a foundation for continued study in the geospatial sciences.

Student Learning Outcomes

1. List and define the major technological systems that the geospatial industry relies upon (Geographic Information Systems, Global Navigation Satellite Systems, Remote Sensing) and their components. [Student Outcomes Trait: Mastery of content knowledge and skills]
2. Explain the characteristics and appropriate uses of common coordinate systems, projections, datums, and ellipsoids. [Student Outcomes Trait: Mastery of content knowledge and skills]
3. Identify how features are modeled and represented in geographic information systems. [Student Outcomes Trait: Mastery of content knowledge and skills]
4. Identify the basic concepts of spatial analysis. [Student Outcomes Trait: Mastery of content knowledge and skills]
5. Solve spatial problems and prepare cartographic outputs. [Student Outcomes Trait: Use of technology, Critical and reflective thinking]
6. Summarize basic concepts of remote sensing and use of imagery. [Student Outcomes Trait: Mastery of content knowledge and skills]
7. Demonstrate how to display imagery and query basic imagery properties using ArcGIS Online [Student Outcomes Trait: Use of technology]
8. Unit Level Educational Outcomes:
 - a. Unit 1: What is Geospatial Technology?
 - i. List and define the major technological systems that the geospatial industry relies upon (Geographic Information Systems, Global Navigation Satellite Systems, Remote Sensing) and their components. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - ii. Give examples of uses of geospatial technology. [Student Outcomes Trait: Mastery of content knowledge and skills]

- iii. Summarize professional opportunities and careers within the geospatial technology industry. [Student Outcomes Trait: Critical and reflective thinking]
 - iv. Identify the major software applications and their uses. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - v. Use geospatial technology to explore a location and identify geospatial relationships. [Student Outcomes Trait: Use of technology]
- b. Unit 2: Location Systems and Global Positioning
 - i. Explain how the earth is modeled to provide a reference framework for deriving coordinates and measurements. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - ii. Explain the characteristics and appropriate uses of common coordinate systems, projections, datums and ellipsoids. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - iii. Demonstrate the use of common geospatial coordinate systems, such as geographic (latitude and longitude), UTM and State Plane Coordinates. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - iv. Demonstrate how to describe the location of a parcel of land using the Public Land Survey System. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - v. List the GNSS systems and identify important concepts of how they work and their uses. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - vi. Use a GPS receiver and a webapp to collect GIS data in the field. [Student Outcomes Trait: Use of technology]
- c. Unit 3: Geographic Information Systems
 - i. Identify how features are modeled and represented in geographic information systems. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - ii. Identify the basic concepts of spatial analysis. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - iii. Add and view data in different models for a GIS application. [Student Outcomes Trait: Use of technology]
 - iv. Create, query, edit, and maintain geospatial data contained in databases and other formats. [Student Outcomes Trait: Use of technology]
 - v. Solve spatial problems and prepare cartographic outputs. [Student Outcomes Trait: Use of technology, Critical and reflective thinking]
- d. Unit 4 Remote Sensing
 - i. Summarize basic concepts of remote sensing and use of imagery. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - ii. Summarize the basic concepts of the electromagnetic spectrum. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - iii. Identify the common characteristics and sources of remotely sensed image data. [Student Outcomes Trait: Mastery of content knowledge and skills]
 - iv. Demonstrate how to display imagery and query basic imagery properties using ArcGIS Online [Student Outcomes Trait: Use of technology]

FORS 2510. Technical Skills in Fire Management II

Course Description

Provides context for the use of chainsaws and their tactical wildland fire application and fire operations in the wildland-urban interface (WUI). Students who successfully complete the course will gain USFS S-212 and USFS S-215 certification. Designed to prepare the prospective fireline supervisor to undertake safe and effective fire management operations. The second course in a series that collectively serves to develop fire behavior prediction knowledge and skills.

Student Learning Outcomes

Students will:

1. Be able to define and apply chainsaw safety standards as required by OSHA and agency handbooks, manuals, directives, and owner's manuals;
2. Identify and demonstrate basic chainsaw operation, troubleshooting, maintenance, and safety features;
3. Demonstrate the tactical application of chainsaws in fireline construction and mop up operations;
4. Operate safely and effectively in a wildland urban interface incident using situational awareness, performing structure triage, using pre-planning tools; and
5. Demonstrate basic understanding of fire behavior and using strategy and tactics unique to the WUI environment.

French (FREN)

FREN 1110. French I

Course Description

Intended for students with no previous exposure to French, this course develops basic listening, speaking, reading, and writing skills aiming toward the ACTFL novice-high level. This is an introductory course designed to teach the student to communicate in French in everyday situations and to develop an understanding of French and Francophone cultures through the identification of cultural products and practices, of cultural perspectives, and the ability to function at a survival level in an authentic cultural content. This course will also develop the student's sense of personal and social responsibility through the identification of social issues.

Student Learning Outcomes

1. Students can communicate and exchange information about familiar topics using phrases and simple sentences, sometimes supported by memorized language.
2. Students can usually handle short social interactions in everyday situations by asking and answering simple questions
3. Students can write short messages and notes on familiar topics related to everyday life.
4. Students can often understand words, phrases, and simple sentences related to everyday life.
5. Students can recognize pieces of information and sometimes understand the main topic of what is being said.
6. Students can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.
7. Students can sometimes understand the main idea of what they have read.
8. Students can identify beliefs, behaviors and cultural artifacts of the French-speaking world.
9. In English, students will engage with social issues confronting the French-speaking world to develop their sense of personal and social responsibility.

FREN 1120. French II

Course Description

A continuation of French 1, students will develop a broader foundation in skills gained during the first semester, including understanding, speaking, reading and writing French aiming toward the ACTFL intermediate-low level. This course is designed to increase student fluency in French as applied to everyday situations. Students will also learn to recognize and understand various French and Francophone products, practices, and perspectives, identifying common cultural patterns, describing basic cultural viewpoints, and further developing their sense of personal and social responsibility through the investigation of cultural issues.

Student Learning Outcomes

1. Students can participate in conversations on a number of familiar topics using simple sentences.
2. Students can handle short social interactions in everyday situations by asking and answering simple questions.
3. Students can write briefly about most familiar topics and present information using a series of simple sentences.

4. Students can understand the main idea in short, simple messages and presentations on familiar topics.
5. Students can understand the main idea of simple conversations that they overhear.
6. Students can understand the main idea of short and simple texts when the topic is familiar.
7. Students can describe and make comparisons between decisions about beliefs, behaviors and cultural artifacts of the French-speaking world.
8. Students will engage with social issues confronting the French-speaking world to continue to develop their sense of personal and social responsibility.

FREN 1130. French Conversation

Course Description

This course is to provide students with practice in speaking French at a beginning level. It is designed to give students basic conversational skills while reviewing previously studied structures and vocabulary. The main focus is to provide students with the confidence and language necessary to get along in French-speaking environment, as well as expose them, in a more in-depth way, to various aspects of Francophone culture.

Student Learning Outcomes

The following are based on the national standards for foreign language learners:

1. COMMUNICATION: Communication in languages other than English
 - 1.1 Students engage in conversations, provide and obtain information, express emotions, and exchange ideas.
 - 1.2 Students understand and interpret written and spoken language on a variety of topics.
 - 1.3 Students present information, concepts, and ideas to an audience of listeners or readers on a variety of topics.
2. CULTURES: Gain knowledge and understanding of other cultures
 - 2.1 Students demonstrate an understanding of the relationship between the practices, products, and perspectives of the culture studied.
3. CONNECTIONS: Connect with other disciplines and acquire information
 - 3.1 Students reinforce and further their knowledge of other disciplines through the foreign language.
 - 3.2 Students acquire information and recognize the distinctive viewpoints that are only available through the foreign language and its cultures.
4. COMPARISONS: Develop insight into the nature of language and culture
 - 4.1 Students demonstrate an understanding of the nature of language through comparisons of French, and French-speaking communities, and their own.
 - 4.2 Students demonstrate understanding of the concept of culture through comparisons of the cultures studied and their own.
5. COMMUNITIES: Participate in multilingual communities at home and around the world
 - 5.1 Students begin to show evidence of their ability to use French to participate in various communities.

FREN 1130L. French Language Lab

Course Description

Student Learning Outcomes

Not Available

FREN 1140. Intensive French I

Course Description

This is an intensive accelerated combination of FR1 and FR2.

Student Learning Outcomes

1. Converse and write on topics related to immediate personal needs, greetings, farewells, introductions, personal data, likes and dislikes, obligations and desires, daily routines, the home, working, basic food, body, health, weather, professions, the media, studies, travel, and so on.
2. Comprehend both artificial and authentic written and aural texts of short to moderate length on familiar topics.
3. Use a basic core vocabulary of about 2,000 words.
4. Use essential grammar concepts.
5. Attain an ACTFL proficiency level of at least Novice-high in all four skills: speaking, listening, reading, writing
6. Identify key concepts, persons, and places important to French speakers.
7. Explain basic concepts and facts of everyday French life and social patterns.

FREN 1150. Accelerated Elementary French

Course Description

This is an intensive accelerated combination of FR1 and FR2.

Student Learning Outcomes

Not Available

FREN 2110. French III

Course Description

In this third semester course, students will continue to develop a broader foundation in skills gained during the first year, including understanding, speaking, reading and writing French aiming toward the ACTFL intermediate-mid level. This course is designed to teach the student to communicate in a more sustained way in areas of personal interest and in everyday situations. Students will engage in and analyze various French and Francophone products, practices, and perspectives, as well as continue to develop their sense of personal and social responsibility through comparison and contrast of cultural perspectives.

Student Learning Outcomes

1. Students can participate in conversations on familiar topics using sentences and series of sentences.
2. Students can engage in short social interactions in everyday situations by asking and answering a variety of questions. Students can usually say what they want to say about themselves and their everyday life.
3. Students can write on a wide variety of familiar topics using connected sentences.
4. Students can understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
5. Students can understand the main idea of conversations that they overhear.
6. Students can understand the main idea of texts related to everyday life and personal interests or studies.
7. Students can analyze beliefs, behaviors and cultural artifacts of the French-speaking world, and discuss the nature and value of French and Francophone products, practices, and perspectives.
8. Students will engage with social issues confronting the French-speaking world to continue to develop their sense of personal and social responsibility.

FREN 2120. French IV

Course Description

In this fourth semester course, students will continue to broaden and refine skills gained during previous semesters, including understanding, speaking, reading and writing French aiming at the ACTFL intermediate-high level. This course is designed to teach the student to communicate in a more sustained way in situations that go beyond the everyday. Students will evaluate various French and Francophone products, practices, and create ways to demonstrate their sense of personal and social responsibility through participation in cultural interaction.

Student Learning Outcomes

1. Students can participate with ease and confidence in conversations on familiar topics. They can usually describe people, places, and things. They can usually talk about events and experiences in various time frames.
2. Students can handle social interactions in everyday situations, sometimes even when there is an unexpected complication.
3. Students can write about topics related to school, work, and community in a generally organized way. They can write some simple paragraphs about events and experiences in various time frames.
4. Students can easily understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
5. Students can usually understand a few details of what I overhear in conversations, even when something unexpected is expressed. The student can sometimes follow what they hear about events and experiences in various time frames.
6. Students can understand the main idea of texts with topics related to everyday life, personal interests, and studies, as well as sometimes follow stories and descriptions about events and experiences in various time frames.
7. Students can analyze beliefs, behaviors and cultural artifacts of the French-speaking world, and recognize and discuss the representations and controversies of French and Francophone products, practices, and perspectives.

FREN 2135. Frontier and Border Crossings in the French-Speaking World

Course Description:

An exploration of frontiers and borders in the French-speaking world: geographical, linguistic, cultural, and symbolic.

Student Learning Outcomes:

1. Articulate the diversity of boundaries (geographical, literal, gender, cultural, symbolic) and the role they play in negotiating cultural identities in the Francophone world.
2. Critically analyze and communicate orally and in writing the nuances of frontiers, border crossings, and their expressions in the course texts.
3. Describe, through the study of French and Francophone borders and frontiers, how cultural contexts and human practices influence individuals and societies.
4. Apply the knowledge and skills gained through the study of boundaries in the francophone world to analogous settings and to students' personal academic goals.
5. Demonstrate information literacy and technological skills in researching and presenting themes related to the readings and to the films screened
6. Reflect on the effects of geographical, social, linguistic, and symbolic boundaries and crossings as expressed in the course content on individuals.

FREN 2140. Intensive Intermediate French

Course Description

An intensive accelerated combination of FR3 and FR4.

Student Learning Outcomes

FREN 2993. Workshop in French

Course Description

Varies

Student Learning Outcomes

Varies

FREN 2996. Topics in French**Course Description**

Varies

Student Learning Outcomes

Varies

Future Studies (FUTR)

FUTR 1110. Introduction to Future Studies**Course Description**

Introduces an interdisciplinary approach to thinking about and planning for futures. Includes basic concepts and methods for building scenarios of possible futures.

Student Learning Outcomes

1. Describe the field of Futures Studies.
2. Define and explain basic concepts of Futures Studies and futures thinking.
3. Explain how signals and drivers of change are clues to possible futures.
4. Develop scenarios of possible futures of real-life problems or topics.

Genetics (GENE)

GENE 1110. Experimental Systems in Genetics**Course Description**

Survey of molecular, biochemical, organismal, and computer science based approaches to investigate how genes determine important traits. Historical development and topics of current interest will be discussed.

Student Learning Outcomes

1. To give the students a historical perspective on the field of genetics.
2. To familiarize the students to introductory concepts and vocabulary to the field of genetics.
3. Introduce experimental systems within the field of genetics and to give perspective to current genetic research.
4. As this course is designed for beginning students as an overview of faculty and research labs on campus. The students majoring in genetics are encouraged to meet with faculty and to explore opportunities available to them on campus

Geography (GEOG)

GEOG 1110. Physical Geography**Course Description**

This course introduces the physical elements of world geography through the study of climate and weather, vegetation, soils, plate tectonics, and the various types of landforms as well as the environmental cycles and the distributions of these components and their significance to humans.

Student Learning Outcomes

1. Define, describe, illustrate, distinguish among or explain the use of maps, map scale, globes, map projections, and remote sensing.

2. Define, describe, illustrate, distinguish among or explain the various elements of the earth's atmosphere, earth's relation to the sun, incoming solar radiation, the ozone layer, the primary temperature controls, and the unequal heating of land and water.
3. Define, describe, illustrate, distinguish among or explain the weather makers (air temperature, air pressure, humidity, clouds, precipitation, visibility, and wind [including pressure gradient, the Coriolis force, and friction]).
4. Define, describe, illustrate, distinguish among or explain air masses, pressure systems, the various fronts and associated types of storms, weather symbols, monsoons, the various forms of precipitation, along with causes and effects of lightning.
5. Define, describe, illustrate or explain the hydrologic cycle, the characteristics and influences of the oceans and continents on the weather, the Southern Oscillation (i.e., El Nino), the effects of land/water distribution, and climates and their global distribution.
6. Define, describe, illustrate or explain the biosphere, including organisms (flora and fauna), food chains, ecosystems and relationships. Define, describe, illustrate or explain soils in terms of soil-forming processes, components, properties, and classification.
7. Define, describe, illustrate or explain the structure of the earth, the internal processes, weathering and mass wasting, fluvial processes, characteristics and processes of arid regions, processes of coastal and Karst topographical regions, the processes and characteristics of glaciation (mountainous and continental).
8. Define, describe, illustrate, distinguish among or explain specific impacts by humans on weather, climate, and on the ecosystem at large.
9. Perform tests and collect data to analyze and classify weather, climate and landforms characteristics, processes, and impacts both quantitatively and qualitatively. This includes reading and extracting basic information from maps, diagrams, remote sensing devices, graphs, and tables.
10. Apply critical thinking skills such as inductive, deductive, and mathematical reasoning to solve problems using the scientific method. This includes interpreting maps, graphs and photos.
11. Recognize and discuss the effect of human activity on climate, climate change, the greenhouse effect, and on landforms at large.
12. Synthesize information from external, current sources and personal observations and discuss their relationships to class material.

GEOG 1110L. Physical Geography Lab

Course Description

This laboratory course introduces the physical elements of world geography and the study of climate and weather, vegetation, soils, plate tectonics, various landforms, the environmental cycles and the spatial distributions of these components through the use of maps, aerial photographs, and laboratory specimens. Students explore the earth's biophysical environment and learn to identify and describe the physical geographic patterns that exist across earth's surface and about the processes that help create these patterns.

Student Learning Outcomes

1. Describe basic meteorological processes such as climate and weather patterns.
2. Describe the processes operating in the development of landforms.
3. Interpret and use topographic maps in the lab and field.
4. Identify and describe various components of the Earth's environmental spheres.
5. Identify and analyze the physical, chemical and biological processes that continue to shape the surface of the Earth.
6. Identify primary atmospheric, geologic, hydrological, and biological patterns of the earth's surface.
7. Identify the primary physical processes that produce spatial variation on the earth's surface.
8. Gain a basic understanding of map projections, including their limitations and capabilities.
9. Describe the rock, hydrologic, and atmospheric cycles and how they impact the geography of the Earth.

GEOG 1115. Maps and GIScience

Course Description

Explore the principles of Geographic Information Science (GIScience) and its applications in solving human, natural, and socio-environmental challenges. Learn to evaluate geospatial data and technologies; analyze their significance, implications, and applications; and communicate insights effectively. Topics include map use, spatial data analysis, Geographic Information Systems (GIS), remote sensing, and Global Navigation Satellite Systems (GNSS).

Student Learning Outcomes

1. Explain key concepts and methods of geographic information science (GIScience).
2. Articulate the significance of geographic information in decision-making processes that address human, natural, and socio-environmental challenges.
3. Evaluate the ethical, socio-environmental, and legal implications of geospatial data, technologies, and applications.
4. Evaluate spatial and aspatial data to assess human, natural, and socio-environmental problems, as well as potential solutions.
5. Communicate effectively in written and oral formats.

GEOG 1115L. Maps and GIScience Laboratory

Course Description

Gain hands-on field and laboratory experience with geospatial tools, including Geographic Information Systems (GIS), remote sensing, and Global Navigation Satellite Systems (GNSS). Manage, collect, analyze, interpret, and visualize spatial data to solve real-world problem, and develop your own GIScience research report.

Student Learning Outcomes

1. Collect spatial and aspatial data using various web and mobile apps.
2. Apply spatial and aspatial quantitative methods for data management, visualization, analysis, interpretation, and spatial problem-solving.
3. Create functional and aesthetically pleasing maps.
4. Develop a GIScience research report.
5. Communicate effectively in written and oral formats.

GEOG 1120. World Regional Geography

Course Description

Overview of the physical geography, natural resources, cultural landscapes, and current problems of the world's major regions. Students will also examine current events at a variety of geographic scales.

Student Learning Outcomes

1. Identify, describe, illustrate, distinguish among or explain the basic concepts of geography, the major world regions, area differences and similarities, the processes that shape geography natural and human, the use of maps, and the key topics of geographical interpretation (e.g., location, world importance, population, political status, resources, etc.).
2. Identify, describe, illustrate, distinguish among or explain the regional groups of Europe, its historical background, its languages and religions, major features, the diversified economy, political structures, and impact on globalization.
3. Identify, describe, illustrate, distinguish among or explain the regional groups of Russia and its satellite nations, its historical background, their languages and religions, major features, their diversified economies, political structures, current problems, and impact on globalization.
4. Identify, describe, illustrate or explain the regional nations of Middle East, their historical background, their languages and religions, the major features, the diversified economies and political structures, the current problems.

5. Identify, describe, illustrate, distinguish among or explain the regional groups of Asia, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
6. Identify, describe, illustrate, distinguish among or explain the regional groups of the Pacific World, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
7. Identify, describe, illustrate, distinguish among or explain the regional groups of Africa, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
8. Identify, describe, illustrate, distinguish among or explain the regional groups of Latin America, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
9. Identify, describe, illustrate, distinguish among or explain the regional groups of Anglo-America, their historical background its languages and religions, major features, the diversified economy and political structures, current problems, and impact on globalization.
10. Collect data to analyze or classify the region various historical developments and trends relating to globalization
11. Apply critical thinking skills in predicting future developments and impacts in economics, cultural diversity, and political stability globally.
12. Recognize and discuss current political “hot spots,” their causes, and potential results with regards to globalization.
13. Synthesize information the data into a comprehensive worldview.

GEOG 1130. Human Geography

Course Description

This course serves as an introduction to the study of human geography. Human geography examines the dynamic and often complex relationships that exist between people as members of particular cultural groups and the geographical “spaces” and “places” in which they exist over time and in the world today.

Student Learning Outcomes

1. Locate on maps, globes, and other technologies various geo-political spaces and places around the world, including in the United States.
2. Describe the primary concepts, theories, methods and terms prevalent in the field of human geography.
3. Apply core geographic concepts to the spatial patterns demonstrated in real-world scenarios.
4. Identify the relationships that influence human-environment interaction in a specific location at a specific time.
5. Define and utilize key concepts to explain human social and cultural change over time and across geographical space.
6. Explain the geographic context of a current event or conflict.
7. Identify a current event that illustrates a core cultural geographic concept.
8. Think critically, discuss, and write about the relationships of the natural world to human geography.

GEOG 1140. Humans’ Role in Changing the Face of the Earth

Course Description

This course is a survey of social and scientific aspects of environmental issues related to the degradation of land, air, and water resources from global, regional and local perspectives.

Student Learning Outcomes

Upon completion of this course students will be able to:

1. Survey major environmental issues facing humankind on global, regional and local scales.
2. Evaluate the scientific method and its role in societies across the globe as it applies to the conflict between environment and society.

3. Explain environmental systems and the services they provide for humans and other organisms.
4. Evaluate economic worldviews and their impact on the environment.
5. Analyze the concept of sustainability and its implications in both urban and rural settings.
6. Develop effective communication skills over major environmental issues.

GEOG 1150. Introduction to Environmental Studies

Course Description

Survey of environmental issues related to the degradation of land, air and water resources.

Student Learning Outcomes

The goals of the course are:

1. To survey the major environmental issues facing humankind.
2. To access the conflict between society and the environment.
3. To evaluate the relationship between environmental degradation and economic development.
4. To analyze potential solutions; and
5. To develop clear and effective communicators skills.

GEOG 1155. Geography of the Southwest

Course Description

An examination of the impact of geography on the cultures and history of the Southwest

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Locate a large number of places and features on a regional map of the Greater Southwest.
2. State an understanding of how geography has molded Southwestern history and culture.
3. Understand the regional economies of the Southwest.

GEOG 1160. Home Planet: Land, Water, Life

Course Description

Not Available

Student Learning Outcomes

1. Identify the basic atmospheric, geological, hydrological, and biological processes that shape Earth's landscapes.
2. Explain physical geographic variation across the Earth's surface over time.
3. Identify and analyze the current and historical physical processes responsible for shaping specific landscapes.
4. Use spatial identification systems and geographic technology to locate specific physical features on Earth's surface.

GEOG 1160L. Home Planet Laboratory

Course Description

This class complements Geography 1160: Home Planet, which introduces the study of the Earth's biophysical environment. In this course, you will learn practical skills professional geographers and others use to identify and describe the processes that change the Earth's surface, and the spatial patterns these processes have produced.

Student Learning Outcomes

1. Identify the primary processes that produce spatial variation on Earth's surface.
2. Predict likely environmental impacts of possible human activities within specific landscapes.
3. Infer the historical physical processes responsible for shaping specific landscapes.
4. Use spatial identification systems and geographic technology to collect and analyze physical geographic information.

GEOG 1165. People and Place

Course Description

By focusing on issues of globalization, this course provides an overview of core concepts from human geography, including systematic analyses of economic, political, and cultural geography.

Student Learning Outcomes

1. Apply core geographic concepts to the spatial patterns demonstrated in a real-world scenario.
2. Identify the relationships that influence human-environment interaction in a specific location at a specific time.
3. Explain the geographic context of a current event or conflict.
4. Identify a current event that illustrates a core geographic concept.

GEOG 1175. World Regional Geography

Course Description

The regional geography of the world. Both physical and human aspects are studied along with current economic and political problems.

Student Learning Outcomes

By the end of the semester, it is my goal for every student in this class to be able to:

1. Identify major environmental and cultural features of the world's regions on a map.
2. Identify and explain patterns of cultural, economic, political and environmental change in the world's regions.
3. Describe the cultural and historical links among two or more regions of the world.
4. Analyze and critique a culturally significant movie or novel that addresses cultural or historical geographies of a region.
5. Explain how globalization processes have impacted diverse peoples and landscapes in at least three of the world's regions.
6. Analyze cultural and environmental conflicts from multiple perspectives.
7. Assess your own historical-geographic position within the web of interconnected world regions.

GEOG 1960. Geography of Food

Course Description

This course will explore the geographic culture of food and its reflection of societies around the world. We will cover the origins of the food we eat, its geographic role in human history, and its cultural importance in societies, as well as the effects of the environment on food, and the impact of our food on the environment. We will look at the state of our food, its production and availability in the world today, in the U.S. vs. the rest of the world, its relevance to the economy, its impact on the environment, its sustainability, and its effect on nutrition.

Student Learning Outcomes

Upon successful completion of the course, students will be able to:

1. Analyze the impact of food history on human history including the geographical components of food origins, trade, and societal influences.
2. Recognize the cultural relevance of food and eating practices in other societies, as well as their own.
3. Identify the implications of changing food production systems and the impacts on food nutrition, availability, economics, and on the environment.
4. Recognize environmental and health effects of different consumption habits
5. Will be more informed consumers.

GEOG 1970. World of Beer

Course Description

This course will explore the complex contemporary and historical geography of beer. It examines the functions of beer and brewing from unique and sometimes overlapping spatial perspectives. At the same time, this course provides an introduction to the discipline of Geography and its many different methods, theories, and technologies. After taking this

course, students should have a good understanding of both beer AND geography, preparing them well to take other geography courses or to explore courses about alcohol/food in other disciplines.

One of the most unique features of the course is that it relies on a wide variety of guest lectures from the Department of GES and from the New Mexico brewing community. These speakers will highlight various perspectives that help us understand beer production as an expression of the human-environment relationship.

Student Learning Outcomes

By the end of the semester, it is my goal for every student in this class to be able to:

1. Understand that beer production reflects a fundamental human-environment relationship.
2. Identify cultural and historical links between major regions, as they relate to the production of beer.
3. Identify the fundamental environmental factors in beer production.
4. Appreciate the significance of place in the production and consumption of beer.
5. Explain various cultural, economic, legal, and environmental patterns that have been produced by historic and modern beer production.
6. Understand the role of beer and brewing in the Albuquerque community; and
7. Communicate clearly and effectively about beer and its spatial relationships.

GEOG 1996. Topics in Geography

Varies

Student Learning Outcomes

Varies

GEOG 2110. Introduction to Maps and Geospatial Information

Course Description

This course covers the basic history of map-making and various projections and introduces basic concepts and techniques for the manipulation, analysis, and graphic representation of spatial information. The course also includes the processing, compilation, and symbolization of spatial data and the application of related statistical techniques.

Student Learning Outcomes

Students will learn to, among other things:

1. Have an understanding of geographic information, and why is it important.
2. Learn the different kinds of decisions that make use of geographic information.
3. Develop familiarity with a variety of geospatial data and methods.
4. Learn how to identify the appropriate tool for digital data viewing and analysis.

GEOG 2110L. Maps and GIScience Laboratory

Course Description

Not Available

Student Learning Outcomes

Not Available

GEOG 2115. Information Design in Science and Society

Course Description

How should scientists visually communicate complex information? This course is an introduction to information design in science. In this course, you will learn to communicate scientific data via infographics, and to analyze infographics that others have produced. Infographics are devices that combine visual portrayals of data and written explanations of those data; maps, graphs, and tables are common examples. You will build theoretical knowledge in fields such as data science, graphic design, cartography, and science communication, as well as applied skills using software that can be used to produce

infographics. This course builds information literacy and will improve your ability to communicate complex information clearly in an increasingly data-driven society.

Student Learning Outcomes

Students who successfully complete this course will be able to:

1. Explain how infographics can be designed to create narratives, and to produce relationships among facts and between people.
2. Explain how human perception and cultural diversity both affect the capacity of people to understand infographics.
3. Identify effective practices of combined graphic and written communication of scientific data, in different situations and with diverse people.
4. Design effective infographics based on scientific data, using common software applications.
5. Evaluate published infographics to assess

GEOG 2120. Maps and Geospatial Information

Course Description

Not Available

Student Learning Outcomes

Not Available

GEOG 2130. Map Analysis and Analysis

Course Description

Exploration of the cartographic medium. Development of critical map analysis and interpretation skills, and map literacy. Comprised of traditional lecture, labs and map use projects.

Student Learning Outcomes

Students will be able to demonstrate the ability to

1. Use appropriate map categories, symbols, and spatial reference systems to effectively and accurately portray, read, analyze, and interpret geographic data.
2. Accurately measure bearings and distances on maps.
3. Read and analyze terrain and landform maps to then interpret basic physical and cultural spatial patterns portrayed on maps.
4. Use map, compass, and GPS for land navigation.

GEOG 2140. Economic Geography

Course Description

Concentrates on economic patterns. The course introduces several theories of economic activity: general theory of land use, agricultural location theory, plant location theory, central place theory; with emphasis on cultural-economic relationships.

Student Learning Outcomes

1. Explain the free market economy and its place in the global economy (NMMI Obj. 1,2,3,8,10)
2. Demonstrate knowledge of micro and macro-economic issues affecting allocation decisions (NMMI Obj. 2,3)
3. Categorize the factors of production and factor markets; (NMMI Obj. 2)
4. Support the four types of market structures, the conditions necessary for each to exist and the behaviors of each within the market; (NMMI Obj. 2)
5. Define an economic landscape.
6. Explain sectors of the economy and identify locations on the earth's surface and give examples where each sector is important to an economic system.
7. Define, explain and apply central place theory to systems of cities and local tertiary activities.

8. Define and modify von Thuen's land rent model so that it may be used to analyze an urban landscape.
9. Explain the interaction of resources and population on the spatial location of economic activities.

GEOG 2170. Energy, Environment, & Society

Course Description

A look at the social, ethical, and environmental impacts of energy use both now and through history. A survey of renewable energy and conservation and their impact on environmental and social systems.

Student Learning Outcomes

By the end of this course, students will be able to demonstrate knowledge of:

1. the socio-economic issues related to energy production,
2. the political issues related to energy production,
3. the economics of power generation,
4. scientific theory and observations of global warming,
5. individual energy footprint through a personal energy audit.

GEOG 2210C. Introduction to Drone Mapping/Modeling with Laboratory

Course Description

This course introduces the use of unmanned aerial vehicles (UAVs) and drone technology for environmental monitoring, mapping, and modeling. Students will learn UAV operation, flight planning, safety and regulations (FAA Part 107), data acquisition, and geospatial analysis using GIS. Practical labs and field exercises include drone flights, topographic mapping, and generation of orthomosaics, digital elevation models (DEMs), and 3D site models.

Student Learning Outcomes

1. Understand UAV types, capabilities, and limitations in environmental applications.
2. Demonstrate knowledge of FAA regulations, flight planning, and safety protocols.
3. Conduct aerial data collection for environmental sites.
4. Process aerial imagery to generate orthomosaics, DEMs, and 3D site models.
5. Integrate UAV-derived data into GIS for environmental analysis and decision-making.

GEOG 2510. Meteorology

Course Description

An introduction to the composition of the Atmosphere, energy flows, and large-scale weather systems and climate processes. Radiation and climate, role of the oceans, greenhouse effect, atmospheric dynamics, global circulation, thunderstorms, hurricanes, mid-latitude weather systems, weather and climate forecasting.

This course is designed to provide students with a fundamental understanding of basic meteorology, essential background for further studying changes in weather and climate. The topics to be discussed in this course include atmospheric structure, energy transfer, water balance, wind systems, global circulation, air pollution, climate and climate change. Lectures will be supplemented by discussions on live weather conditions and forecasting and severe weather events.

Student Learning Outcomes

Upon successful completion of the course, students will be able to:

1. Analyze, describe, and diagram the basics of major atmospheric processes including energy, pressure, wind, precipitation, air masses, fronts, and storm systems.
2. Perform basic calculations pertinent to these processes (fundamental algebra skills assumed).
3. Describe and diagram how these processes are linked in a system.
4. Analyze, describe and diagram the spatial patterns of weather systems.
5. Describe some of the impacts of weather on human activity.
6. Make use of sophisticated weather information to assist in planning your daily life.
7. Develop a 24-hour forecast based on naked-eye observations.

8. Develop an appreciation for the beauty and power of weather.

Geology (GEOL)

GEOL 1101. Earth Science as a Profession

Course Description

Introduction to field methods, laboratory & field safety, applied and basic research in Earth Sciences, professional development & professional certificates and other topics.

The intent of this course is to introduce Earth Science undergraduates to the department, and the department to the students, to help better integrate undergraduates into the department community. This course will show the students they are at the beginning of a pathway that can lead to a rewarding career in the Earth Sciences. **Student Learning Outcomes**

1. Be aware of diverse potential careers in the Earth Sciences, and be better prepared to be competitive in the job market when they graduate
2. Be able to prepare a CV, and how to obtain important skills that most employers are looking for in a resume.
3. Know how to obtain internships and other work experiences both on and off campus.
4. Know some field basics including how to use a Brunton compass, read a map, how to locate themselves in the field.
6. Know many of the professors in the department, and be aware of the research that is being done by being done by Earth Science faculty, researchers, and graduate students.

GEOL 1110. Physical Geology

Course Description

Physical Geology is an introduction to our dynamic Earth introducing students to the materials that make up Earth (rocks and minerals) and the processes that create and modify the features of our planet. The course will help students learn how mountains are formed, how volcanoes erupt, where earthquakes occur, and how water, wind, and ice can shape the landscape. Students will also develop a basic understanding of the ways humans have altered the planet including our impact on natural resources and global climate change.

Student Learning Outcomes

1. Recall, describe or explain geologic vocabulary.

2. Identify or explain aspects of the geologic time scale and compare the uses and limitations of relative and absolute dating.
3. Recognize or explain the evidence used to support the theory of plate tectonics. Describe or identify how plate tectonics is related to the structure and features of the Earth.
4. Describe the formation of, and describe, compare, and classify minerals.
5. Identify or describe the three main rock types, how each forms in the context of the rock cycle and what each indicates about its environment of formation.
6. Recognize or explain the fundamentals of surface and groundwater hydrology and discuss the impact of human activities on water quality and quantity.
7. Describe or discuss the processes that are responsible for specific geologic hazards (e.g., earthquakes, volcanic eruptions, mass movement, flooding, etc.).
8. Recognize or describe the geologic processes involved in the formation and concentration of geologic resources.

GEOL 1110L. Physical Geology Laboratory

Course Description

Physical Geology Lab is the laboratory component of Physical Geology. Students will learn to identify rocks and minerals in hand samples, work with topographic maps, geologic maps, and geologic cross-sections, and apply stratigraphic principles to explore geologic time.

Student Learning Outcomes

1. Use physical properties to identify mineral specimens.
2. Describe, classify, and identify igneous, sedimentary, and metamorphic rocks and their textures.
3. Utilize the principles of stratigraphy to provide an explanation of the geologic history portrayed in a photograph or cross-section.
4. Explain how contour lines are used to represent topography, use map scales to measure distances on the ground, and construct topographic profiles.
5. Identify landforms from images and topographic maps.
6. Interpret geologic maps and construct geologic cross-sections.
7. Acquire and communicate scientific data, ideas, and interpretations through written, oral, or visual means. Examples may include creating and describing graphs, maps and photos.
8. Apply critical thinking skills such as inductive, deductive, and mathematical reasoning to solve geological problems.

GEOL 1110C. Physical Geology Lecture and Laboratory

Physical Geology is an introduction to our dynamic Earth introducing students to the materials that make up Earth (rocks and minerals) and the processes that create and modify the features of our planet. The course will help students learn how mountains are formed, how volcanoes erupt, where earthquakes occur, and how water, wind, and ice can shape the landscape. Students will also develop a basic understanding of the ways humans have altered the planet including our impact on natural resources and global climate change.

In the laboratory component of Physical Geology students will learn to identify rocks and minerals in hand samples, work with topographic maps, geologic maps, and geologic cross-sections, and apply stratigraphic principles to explore geologic time.

Student Learning Outcomes

1. Recall, describe or explain geologic vocabulary.
2. Identify or explain aspects of the geologic time scale and compare the uses and limitations of relative and absolute dating.
3. Recognize or explain the evidence used to support the theory of plate tectonics. Describe or identify how plate tectonics is related to the structure and features of the Earth.
4. Describe the formation of, and describe, compare, and classify minerals.

5. Identify or describe the three main rock types, how each forms in the context of the rock cycle and what each indicates about its environment of formation.
6. Recognize or explain the fundamentals of surface and groundwater hydrology and discuss the impact of human activities on water quality and quantity.
7. Describe or discuss the processes that are responsible for specific geologic hazards (e.g., earthquakes, volcanic eruptions, mass movement, flooding, etc.).
8. Recognize or describe the geologic processes involved in the formation and concentration of geologic resources.
9. Use physical properties to identify mineral specimens.
10. Describe, classify, and identify igneous, sedimentary, and metamorphic rocks and their textures.
11. Utilize the principles of stratigraphy to provide an explanation of the geologic history portrayed in a photograph or cross-section.
12. Explain how contour lines are used to represent topography, use map scales to measure distances on the ground, and construct topographic profiles.
13. Identify landforms from images and topographic maps.
14. Interpret geologic maps and construct geologic cross-sections.
15. Acquire and communicate scientific data, ideas, and interpretations through written, oral, or visual means. Examples may include creating and describing graphs, maps and photos.
16. Apply critical thinking skills such as inductive, deductive, and mathematical reasoning to solve geological problems.

GEOL 1115. Earth Resources

Course Description

This course explores the history of resource usage through time and the economics, extraction, processing and use of Earth resources. A systematic review of fossil fuel, metallic, and nonmetallic resource formation and usage is a central theme. At the end of this course students will understand how resources have impacted the history and development of civilization from ancient times to today. Students will also understand the processes by which different types of resources are formed, extracted, processed, and utilized by modern society.

Student Learning Outcomes

1. Recall, describe or explain geologic vocabulary related to resources.
2. Describe aspects of resource usage from ancient to modern times.
3. Recognize or describe the basic processes involved in the formation of different types of resources including how they are classified.
4. Recall, describe or differentiate methods of resource extraction and processing.

GEOL 1115L. Earth Resources Laboratory

Course Description

This laboratory course is an introduction to mineral resource identification and data analysis. The course begins with developing the basic techniques of mineral and rock identification. Students will then explore energy units and conversions, the identification of energy resources and how exploration data is used in the search of petroleum resources. Subsequent labs will explore the identification and use of a wide variety of metallic and nonmetallic resources. An important component of this lab is the analysis of resource data (reserves and production).

Student Learning Outcomes

1. Implement the use of physical properties to identify minerals, rocks and energy resources.
2. Use mathematical reasoning to solve problems using energy units and mineral composition.
3. Interpret stratigraphic data to construct a geologic cross-section and locate petroleum traps.
4. Describe the primary uses of various resources.
5. Examine, organize and compare mineral resource data and report the results.
6. Construct and describe graphs using mineral resource data.

7. Compare and contrast information about resource reserves and production.

GEOL 1115C. Earth Resources/Earth Resources Laboratory

Course Description

Combined course GEOL 1115 and GEOL 1115L

GEOL 1120. Environmental Geology

Course Description

This course is a survey of environmental geology with an introduction to problems of pollution, population, human relations to the environment, resource use, geologic hazards and environmental problems. The course covers the major components of the Earth system, i.e. atmosphere, lithosphere, hydrosphere, and biosphere, and how they are related. Environmental Geology addresses the mechanisms that drive these Earth processes, how different parts of the Earth are connected, how matter and energy flow through our environment, and how humans fit into the environmental systems. Emphasis is placed on the use of the scientific method and the development of critical thinking skills in understanding environmental issues.

Student Learning Outcomes

1. Apply the scientific method to the field of environmental geology and differentiate between facts and opinions.
2. Recognize or describe natural cycles, for example the rock cycle, hydrologic cycle, and carbon cycle.
3. Discuss and explain the role humans play in environmental problems and in solutions to those problems; relate environmental geology to your life and its portrayal in the media.
4. Recognize, discuss or explain geologic hazards and their impact on humans and how these impacts can be minimized.
5. Recognize or explain a holistic approach to sustainability (mineral, energy, water and soil resources) on local to global scales while minimizing negative impacts on the environment.
6. Recognize, discuss or explain global environmental issues, including climate change, and the varied responses to these issues.

GEOL 1120L. Environmental Geology Laboratory

Course Description

Environmental Geology Laboratory is the lab component of Environmental Geology. This course is an introduction to geologic materials and processes as applied to the human environment. Included are practical exercises with rocks, minerals, topographic and geologic maps, and water, mineral and energy resources. Hazards associated with natural processes will be evaluated.

Student Learning Outcomes

1. Apply the scientific method to the field of environmental geology.
2. Identify or describe stream processes and features as part of the hydrologic cycle.
3. Describe, classify, or identify minerals.
4. Describe, classify, or identify igneous, sedimentary, and metamorphic rocks.
5. Identify and discuss the importance of Earth resources.
6. Obtain measurements and make calculations that lead to the graphical display and interpretation of data.
7. Communicate (written and/or oral) interpretations of quantitative and graphical data to evaluate environmental problems.
8. Interpret features on topographic maps.

GEOL 1122. Introduction to Environmental Science

Course Description

Introduction to Environmental Science presents an overview of Earth's environmental problems as a result of human interactions with the natural world and discusses possible solutions. The topics explored in this class include: environmental

interrelationships, philosophical and economic issues, principles of ecology, sources and use of energy, impact of human activities on natural ecosystems, and the major types of pollution.

Student Learning Outcomes

1. The student will understand the step-by-step process of the scientific method; understand the relationship between environmental science as well as other social and scientific disciplines; and understand sustainability science as demonstrated by scoring 70% or more on a faculty prepared assignment. The student will:
 - a. Define the terms hypothesis, theory, law, and scientific method.
 - b. Identify and explain the components of the Berkeley scientific process.
 - c. Identify the relationship between environmental science and other social and scientific disciplines such as: philosophy, geology, geography, anthropology, biology, political science, ecology, economics, and physics.
2. The student will understand the chemistry, energy, of the environment; as well as the structure of the Earth's atmosphere and structure as demonstrated by scoring 70% or more on a faculty prepared assignment. The student will:
 - a. Identify the chemical symbols of common elements.
 - b. Explain how the isotopes of an element differ from each other.
 - c. Describe the chemical properties of water and how they are important to organisms and ecosystems; and describe the pH scale.
 - d. Distinguish between elements, atoms, and molecules.
 - e. Distinguish between kinetic and potential energy in a system.
 - f. Identify the characteristics of the three main layers of Earth.
3. The student will identify issues related to popular perceptions about population biology, including mutations, unregulated population growth, and evolution in natural as demonstrated by scoring 70% or more on a faculty prepared assignment. The student will:
 - a. Explain Darwin's theory of evolution by natural selection.
 - b. Compare the three forms of natural selection—stabilizing, directional, and disruptive.
 - c. Define carrying capacity.
 - d. Explain how birth rate, death rate, immigration and migration affect the population growth rate.
4. The student will understand human population growth as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:
 - a. Describe the characteristics and dynamics of populations.
 - b. Describe the consequences of human population growth.
5. The student will understand interactions among organisms that compete for shared resources as well as the concept of the "web of life" as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:
 - a. Describe the two methods by which organisms compete with each other, (exploitation and interference) and give examples of each.
 - b. Describe the differences between Herbivores, predators and parasites.
 - c. Describe the pyramid of energy and the "web of life".
6. The student will describe fundamental ecosystem principles that are essential to the biogeochemical cycles of the Earth (Rock Cycle, Hydrologic Cycle, Carbon Cycle, Nitrogen Cycle, Phosphorus Cycle and Sulfur Cycle) as demonstrated by scoring 70% or more on a faculty prepared lab assignment.
7. The student will understand the history, causes, and consequences of global warming as demonstrated by scoring 70% or more on a faculty prepared lab. The student will:
 - a. Identify the main greenhouse gases and describe their role in heating Earth's atmosphere.
 - b. Compare the effect of different levels of human action on future levels of greenhouse gas emissions.
 - c. Compare the melting glaciers and ice sheets to the rising of sea levels.
8. The student will understand the Earth's biomes as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:

- a. Identify the locations of the tropical, temperate, and polar zones
 - b. Classify Earth's biomes into one of the three climatic zones and identify the patterns of air circulation associated with each climatic zone.
 - c. Contrast the characteristics of maritime and continental climates and explain the cause of these differences
9. The student will understand biodiversity and the importance of conservation as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:
 - a. Describe the differences between landscape, community and population biodiversity.
 - b. Describe the treats to biodiversity, including: habitat loss, overharvesting, introduction of invasive species, pollution, and climate change.
10. The student will understand the global water budget as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:
 - a. Identify the major fluxes and pools in the global water budget and their relative sizes.
 - b. Define evapotranspiration and explain how hydrologists can estimate the rate of evapotranspiration in a watershed.
 - c. Identify environmental factors that affect regional water.
 - d. Identify how human use of water impacts aquatic ecosystems.
11. The student will understand the economic and environmental advantages and disadvantages associated with the use of electric power, coal, oil, natural gas, and nuclear power as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:
 - a. List advantages and disadvantages of various nonrenewable energy sources.
 - b. Describe the benefits and risks of nuclear energy.
12. The student will understand the economic and environmental benefits and challenges associated with energy conservation and with the use of the major sources of renewable energy as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:
 - a. List advantages and disadvantages of various renewable energy sources.
 - b. Compare the overall environmental impacts of nonrenewable energy sources with those of renewable energy sources.
13. The student will be able to describe the kinds and sources of water pollution and the methods of water management.as demonstrated by scoring 70% or more on a faculty prepared lab assignment. The student will:
 - a. Describe the five primary air pollutants and outline expected environmental changes by global warming.
 - b. Describe the methods of waste disposal and how to reduce solid waste.
 - c. Describe the risks of hazardous wastes.
14. The student will design and execute a research project based on accepted standards in the field. The student will:
 - a. Write a statement outlining the problem that will be researched.
 - b. Write a statement identifying the goals of the research project.
 - c. Present a plan for the research project including tasks to be undertaken, identifying clear assignments for each team member, and giving a timetable with definite deadline for each task.
 - d. Gathering an appropriate amount of high-quality data to address the problem of the research project.
 - e. Analyze the data using method appropriate to the nature of the data.
 - f. Interpret the data and present a coherent conclusion.

GEOL 1125. The Planets

Course Description

A study of the eight planets in our solar system, with emphasis on geologic and atmospheric processes. Topics include the study of faults and tectonic features, impact craters, evolution and internal structures, atmospheres, meteorites, comets, asteroids, and analysis of spacecraft images.

Student Learning Outcomes

1. Understand and practice the scientific method -- make observations, form hypothesis, test hypothesis, accept, modify, or reject hypothesis, communicate information, and develop theory.
2. Develop skills for observing and interpreting features of the Solar System.
3. Comprehend the processes responsible for formation of the planets.
4. Build scientific writing skills. These Student Learning Outcomes relate the NMHU Core Curriculum Traits as follows: Mastery of content knowledge and skills are demonstrated through successful completion of in-class activities, homework assignments, laboratory exercises, and examinations. Effective verbal communication skills are demonstrated through active participation in classroom dialogue and in-class activities and effective written communication skills are demonstrated through homework assignments, laboratory reports, and a term paper. Critical and reflective thinking demonstrated through applying geologic principles and knowledge to explain various observed natural phenomena occurring on planetary bodies and within the Solar System.

GEOL 1130. Dinosaurs and Their World

Course Description

Dinosaurs and Their World is a survey of the fossil record, evolution, paleobiology and extinction of dinosaurs, and the animals with which they shared the Earth.

Student Learning Outcomes

1. Demonstrate a basic understanding of stratigraphy, sedimentology, taphonomy, fossils, and fossil collecting.
2. Describe aspects of the Mesozoic Era including plate tectonic settings, paleo environments, atmospheric/oceanic circulation systems, and paleoclimates.
3. Define “dinosaur” and list key evolutionary traits.
4. Summarize, analyze or critique research concerning the question of whether dinosaurs were warm- or cold-blooded.
5. Explain the difference between the major dinosaur groups.
6. Summarize the origin and early evolution of birds.
7. Analyze, compare or critique hypotheses surrounding the end-Cretaceous mass extinction.
8. Analyze or discuss the media representation of dinosaurs and compare with factual information presented in class.

GEOL 1140. Geological Disasters

Course Description

This course will incorporate an overview of the geological processes that result in natural disasters and the input humans have on the amplification or mitigation of these natural disasters. We will examine past catastrophes and discuss the probability of such disasters occurring again. Hazards investigated will include, but not be limited to earthquakes, volcanoes, tsunamis, hurricanes, floods, landslides, and astronomical events such as meteor and comet collisions with Earth. We will investigate the data obtained from recent disasters and explore the costs in human and economic terms.

Student Learning Outcomes

Discuss the relationship between plate tectonics and geological processes that result in disasters.

1. Identify or discuss the impacts of major earthquakes.
2. Identify or discuss the impacts of major volcanic eruptions.
3. Identify or discuss the impacts of major landslides.
4. Identify or discuss the impacts of major floods.
5. Identify or describe mass extinctions and the processes that may have been responsible for them.
6. Discuss the ways in which humans can increase or decrease the impacts of geological disasters.

GEOL 1150. Introduction to Rocks and Minerals

Course Description

This course is an introduction to the characteristics and the formation of the three main types of rocks, the rock-forming minerals, and important ore minerals. An outline of Plate Tectonics (Continental Drift) will give students the basis to

understand how many of these rocks and minerals form. In laboratory exercises, students will gain practice in describing and identifying hand-specimens of the main types of rocks and minerals.

Student Learning Outcomes

1. The student identify the main rock-forming minerals from each mineral group as demonstrated by scoring a total of 70% or more on the relevant laboratory exercise component. Studying minerals, the student will:
 - a. Identify the main silicate minerals in hand specimens.
 - b. Describe the environments in which these minerals form.
 - c. Identify the rock types in which these minerals are found.
 - d. Identify the main carbonate minerals in hand specimens.
 - e. Describe the environments in which these minerals form.
 - f. Identify the rock types in which these minerals are found.
 - g. Identify the main sulphide minerals in hand specimens.
 - h. Describe the environments in which these minerals form.
 - i. Identify the rock types in which these minerals are found.
 - j. Identify the main sulphate minerals in hand specimens.
 - k. Describe the environments in which these minerals form.
 - l. Identify the rock types in which these minerals are found.
 - m. Identify the main halide minerals in hand specimens.
 - n. Describe the environments in which these minerals form.
 - o. Identify the rock types in which these minerals are found.
 - p. Identify the main oxide minerals in hand specimens.
 - q. Describe the environments in which these minerals form.
 - r. Identify the rock types in which these minerals are found.
 - s. Identify the main native elements in hand specimens.
 - t. Describe the environments in which these minerals form.
 - u. Identify the rock types in which these minerals are found.
2. The student will understand the structure, composition, and genesis of rocks by identifying the principal igneous, sedimentary, and metamorphic rocks, as demonstrated by scoring a total of 70% or more on the relevant laboratory exercise components.
3. Studying rocks, the student will:
 - a. Define the principal igneous processes and features, identify the most common igneous rocks and their constituting minerals in hand specimens, and discuss their origin and interpretation.
 - b. Describe the principles of sedimentary processes and features, identify the most common sedimentary rocks in hand specimens, and discuss their origin and interpretation.
 - c. Describe the principles of metamorphic processes and features, identify the most common metamorphic rocks and constituting minerals in hand specimens, and discuss their origin and interpretation.

GEOL 1155. Introduction to Museum Science

Course Description

This course presents an overview of museum organization and function with a particular emphasis on natural history museums. Major themes will be the basic functions, organization and management of a museum, the main divisions of a museum and their functions, the collection, conservation and curation of natural history specimens and the theory and construction of exhibits.

Student Learning Outcomes

1. The student will demonstrate an understanding of the basic functions, organization and management of a museum, and the main divisions of a museum and its functions, as demonstrated by 70% of the students scoring 70% or higher in assignment(s) given by the instructor. Students of the history and diversity of museums will:

- a. Describe the principal terms of museums.
 - b. Describe the principal definitions of museums.
 - c. Describe the history of museums.
 - d. Describe the characteristics of modern museums.
 - e. Outline organization and support of museums.
2. The student will demonstrate an understanding of the collection, conservation and curation of natural history specimens, as demonstrated by 70% of the students scoring 70% or higher in assignment(s) given by the instructor. Students of the collection, preparation and curation of natural history specimens will:
 - a. Describe the main methods of collection of natural history specimens.
 - b. Identify and apply the principal methods for the preparation of natural history specimens.
 - c. List the principles of collections management.
 - d. Describe and apply the main methods of conservation of natural history specimens.
 - e. Define the theory and practice of museum registration.
 - f. List the principles of use and security.
3. The student will demonstrate an understanding of the theory and construction of exhibits, as demonstrated by 70% of the students scoring 70% or higher in assignment(s) given by the instructor. Students of exhibits will:
 - a. Describe the philosophy of exhibits.
 - b. Identify the main aesthetic features of exhibit design.
 - c. List the most important features of exhibits with regard to visual and physical accessibility.
 - d. Explain the principles of exhibit construction.
 - e. Identify the principles of permanent and temporary exhibits.
 - f. Describe the role and practice of education in exhibits.
4. Students of the museum architecture will identify the main components and uses of the museum architecture.
5. Students of historic museums and site preservation will describe the principles of designation and preservation.
6. Students of laws and future of museums will:
 - a. Outline the principal components of museum legislature.
 - b. Describe modern trends and the future of museums.

GEOL 1160. Introduction to Field Paleontology

Course Description

This course introduces the basic field and laboratory techniques utilized in study of fossils (paleontology). Students gain extensive practical experience of collecting and processing fossils with an emphasis on vertebrate fossils. Laboratory and curatorial work will be conducted at the Mesalands Community College's Dinosaur Museum.

Student Learning Outcomes

1. Studying introduction to field paleontology, the student will:
 - a. Describe the history of collecting fossils.
 - b. Identify the main types of fossils.
 - c. List the principal ways of classifying fossils.
 - d. Explain the basic tenets of taphonomy.
 - e. Describe the methodology of biostratigraphy.
2. The student will demonstrate competency in the basic field techniques of excavating, jacketing, and screen washing specimens as evidenced by performing tasks in a faculty-monitored field project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying basic field techniques in paleontology, the student will
 - a. Describe the main excavation methods.
 - b. Construct a plaster jacket.
 - c. Describe the use of hoists and pulleys.
 - d. Identify the main forms of mechanized excavation.

- e. Explain the principles of screen washing.
3. The student will demonstrate competency in data recording at a paleontological site by accurately recording information on two fossils on Specimen Field Cards during collection. Studying recording paleontological data, the student will:
 - a. Explain the collection of map data.
 - b. Describe the collection of stratigraphic data.
 - c. Identify the principles of collecting taphonomic data.
4. The student will demonstrate competency in the basic laboratory methods in paleontology as evidenced by performing tasks in a faculty-monitored laboratory project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying basic laboratory methods in paleontology, the student will:
 - a. List the main manual preparation tools.
 - b. Operate an aircscribe.
 - c. Describe the principles of the use of the air abrasive.
 - d. Explain how to prepare a plaster jacket.
 - e. Explain how to sort screen wash.
5. The student will know the principal curatorial methods, as demonstrated by performing tasks in a faculty-monitored collections project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying the principal curatorial methods, the student will:
 - a. Describe the numbering of specimens. Explain the principles of cataloguing.
 - b. List the main factors involved in storage.

GEOL 1170. Spaceship Earth

Course Description

Study of Earth as an immense system composed of a gigantic rocky mass, a planet dominating ocean, an active atmosphere, and an abundance of life. Consideration of subsystems interacting across time and space. Discussion of possible mechanisms that may control this mega system including controversial topics, e.g. co- evolution, homeostatic feedback mechanisms, and the Gaia Hypothesis.

Student Learning Outcomes

GEOL 1180. Introduction to Petroleum Geology

Catalog Description

This course will study various aspects of petroleum geology and fossil fuels. Content will include formation and classification of regional sedimentary rocks, geologic history of various regions, and formation, detection, and extraction of oil, natural gas, and coal. This class includes a field trip.

Student Learning Outcomes

1. Describe the formation and classification of sedimentary rocks linked to hydrocarbon formation and storage.
2. Understand the geologic history the local region and what led to hydrocarbon and coal deposits.
3. Understand the formation, exploration, and extraction of hydrocarbon resources.
4. Understand the formation, classification, and extraction of coal.
5. Understand the geologic cross-section for well placement.
6. Recognize and classify clastic sedimentary rocks.
7. Identify local sandstones that serve as reservoir rocks.
8. Describe the types and structures of various hydrocarbons.
9. Explain the viscosity and volatility of hydrocarbons.
10. Understand the hypotheses of the formation and evolution of hydrocarbons.
11. Describe the characteristics of reservoir rocks, including porosity and permeability.

12. Recognize the various types of hydrocarbon traps.
13. Recognize the tools used in oil and natural gas exploration and recovery.
14. Describe alternative reserves of hydrocarbons.
15. Explain the formation of coal.
16. Identify the grades of coal, including samples from local formations.
17. Understand the formation and extraction of coalbed methane.
18. Describe the world's capacity for production of oil, and the volume of remaining reserves.
19. Explain environmental issues regarding fossil fuel resources.
20. Understand geologic cross-sections and the legal description process.

GEOL 1185. Water in the Rise and Fall of Civilizations

Course Description

A survey of how water resources have nurtured the rise of civilizations and how changes in, or misuse of, these resources have led to their demise. The impact of hydrologic extremes such as floods and droughts on social sustainability will also be examined. Case studies from the ancient to the modern world will be considered in the context of the underlying hydrological processes and their environmental and social ramifications.

Student Learning Outcomes

Not Available

GEOL 1210C. Introduction to Hydrology Lecture and Laboratory

Course Description

Introduces principles of hydrology with emphasis on surface water and groundwater processes, watershed dynamics, and hydrologic measurement techniques. Students will gain practical experience in monitoring precipitation, stream flow, and groundwater levels.

Student Learning Outcomes

1. Describe the hydrologic cycle and associated processes.
2. Apply methods to measure stream flow, soil moisture, and groundwater.
3. Use hydrologic models to analyze flow and transport.
4. Evaluate human impacts on hydrologic systems.

GEOL 1310. Paleontology Field Expedition

Course Description

This class is conducted in cooperation with the Cottonwood Gulch Foundation, Albuquerque, and designed for students between 15 and 19 in age. Students will live at a scientific base camp in the wilderness while excavating fossils and learning about ancient environments and their inhabitants. The course introduces the basic field techniques utilized in study of fossils (paleontology) and rocks (geology). Students will gain extensive practical experience of collecting and processing fossils, with an emphasis on vertebrate fossils. They will also engage in a variety of independent field and research projects, such as prospecting techniques for fossils, studying preservation of fossils, studying rocks and interpreting their formation, or constructing and interpreting maps.

Student Learning Outcomes

1. Studying the introductory concept modules in field paleontology, the student will:
 - a. Explain the processes that result in the principal types of fossil preservation and identify these types in the field.
 - b. List the basic principles of taphonomy.
 - c. List the basic principles of classification.

2. The student will demonstrate competency in prospecting for fossils as evidenced by performing tasks in a faculty-monitored field project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying prospecting for, the student will
 - a. List and correctly use prospecting materials and equipment.
 - b. Identify fossil bone and distinguish them from petrified wood and sedimentary structures in the field.
 - c. Locate fossils in the field by applying the basic principles of prospecting.
 - d. Collect surface fossils.
3. The student will demonstrate competency in the basic field techniques of excavating, stabilizing and safely collecting specimens as evidenced by performing tasks in a faculty-monitored field project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying excavation techniques in paleontology, the student will
 - a. List and correctly apply safety measures in the field.
 - b. Explain the use of field materials and use the appropriate manual excavation tools with 'Excel®lent' or 'acceptable' results.
 - c. Demonstrate the main excavation methods with 'Excel®lent' or 'acceptable' results.
 - d. Protect specimens for removal from the field, including stabilization of fragile fossils and construction of plaster jackets with 'Excel®lent' or 'acceptable' results.
 - e. Remove specimens safely from the field.
4. The student will demonstrate competency in data recording at a paleontological site by accurately recording information on three fossils on Specimen Field Cards during collection. Studying recording paleontological data, the student will:
 - a. Explain the collection of basic field data and keep field notes.
 - b. List the data included in topographical and geological maps and use both map types for orientation in the field.
 - c. Use GPS to record locality data.
 - d. Identify and collect stratigraphic data in the field.
 - e. Identify and collect taphonomic data in the field.
 - f. Create visual documentation of specimens (photographs, sketches) with 'acceptable' information content and construct or modify quarry charts in the field.
5. The student will know the principal anatomical features of the major fossils occurring in the study area as demonstrated by correctly identifying at least 3 characteristic features of a given specimen or a fossil. Studying the anatomy and functional aspects of the dominant vertebrates and invertebrates in the field area, the student will:
 - a. Name the body regions of tetrapods and identify landmark osteological features for a given skeletal element.
 - b. Correctly identify vertebrate specimens (osteological element, taxonomic group) in the field area by listing three characteristic features.
 - c. Correctly identify invertebrate specimens in the field area by listing three characteristic features.
 - d. Correctly identify plant fossil specimens in the field area by listing three characteristic features.
6. Studying stratigraphy and depositional environments in the field, the student will
 - a. Identify common fossil-bearing sedimentary rocks in the field area.
 - b. Identify common sedimentary structures in the field area.
 - c. Identify features indicative of the depositional environment of a given strata in the field area.
 - d. Explain the principles of lithostratigraphy and biostratigraphy, and apply the methods in the field area in a faculty-monitored project.

This course provides a week-long experience of excavating fossils and processing them in a museum. Student will prospect for and learn to excavate dinosaur-age vertebrates in the Quay County area. Basic laboratory methods and preparing field specimens will be studied in the Natural Science Laboratory at Mesalands Community College's Dinosaur Museum. Students will learn about the local rocks and age determination, and they will also study the major groups of fossil vertebrates found in this area.

Student Learning Outcomes

1. Studying paleontological concept modules, the student will:
 - a. Explain the principal taphonomic processes.
 - b. Name the body regions of tetrapods and identify landmark osteological features for a given skeletal element.
 - c. List the basic principles of phylogenetic reconstructions and outline the phylogenetic relationships of Triassic archosauriforms.
2. The student will demonstrate competency in data recording at a paleontological site by accurately recording information on two fossils on Specimen Field Cards during collection.
3. Studying recording paleontological data, the student will:
 - a. Explain the collection of basic field data and keep field notes.
 - b. Create and maintain locality files.
 - c. Identify and collect stratigraphic data in the field.
 - d. Identify and collect taphonomic data in the field.
 - e. Create visual documentation of specimens (photographs, sketches) with 'acceptable' information content and construct or modify quarry charts in the field.
4. The student will demonstrate competency in the basic field techniques of locating, excavating, stabilizing and safely collecting specimens as evidenced by performing tasks in a faculty-monitored field project with 100% 'acceptable' result or better, as scored by applicable rubrics.
5. Studying basic techniques in paleontology, the student will
 - a. List and correctly apply safety measures in the field.
 - b. Explain the use of field materials and use the appropriate manual excavation tools with 'Excel®lent' or 'acceptable' results.
 - c. Demonstrate the main excavation methods with 'Excel®lent' or 'acceptable' results.
 - d. Protect specimens for removal from the field, including stabilization of fragile fossils and construction of plaster jackets with 'Excel®lent' or 'acceptable' results.
 - e. Remove specimens safely from the field.
6. The student will demonstrate competency in the basic laboratory techniques in paleontology as evidenced by performing tasks in a faculty-monitored laboratory project with 100% 'acceptable' result or better, as scored by applicable rubrics.
7. Studying basic laboratory methods in paleontology, the student will:
 - a. List and correctly apply safety measures in the laboratory.
 - b. Record preparation data on Specimen Laboratory Cards and process field data.
 - c. Use the appropriate manual preparation tool in a laboratory project with 'Excel®lent' or 'acceptable' results.
 - d. Use a power-operated preparation tool in a laboratory project with 'Excel®lent' or 'acceptable' results.
 - e. Use the appropriate air-pressure-operated preparation tool in a laboratory project with 'Excel®lent' or 'acceptable' results.
 - f. List the advantages and disadvantages of various consolidants and adhesives, and use consolidants and adhesives to assemble a fossil specimen with 'Excel®lent' or 'acceptable' results.
 - g. Demonstrate at least one preparation method.
8. Studying stratigraphy and depositional environments in the field, the student will
 - a. Identify common fossil-bearing sedimentary rocks and sedimentary structures in the field area.

- b. Identify features indicative of the depositional environment of a given strata in the field area.
 - c. Explain the principles of lithostratigraphy and apply the method by correlating strata in the field area in a faculty-monitored project.
 - d. Explain the principles of biostratigraphy and apply the method in the field area in a faculty-monitored project.
- 9. The student will know the principal anatomical features of the major fossils occurring in the study area as demonstrated by correctly identifying at least 3 characteristic features of a given specimen or a fossil.
- 10. Studying the anatomy and functional aspects of the dominant vertebrates and invertebrates in the field area, the student will:
 - a. List three characteristic features and correctly identify trace fossil specimens in the field area.
 - b. List three characteristic features and correctly identify plant fossil specimens in the field area.
 - c. List three characteristic features and correctly identify invertebrate specimens in the field area.
 - d. List five characteristic features and correctly identify phytosaur specimens in the field area.
 - e. List five characteristic features and correctly identify aetosaur specimens in the field area.
 - f. List three characteristic features and correctly identify rauisuchid, poposauroid, and crocodylomorph specimens in the field area.
 - g. List five characteristic features and correctly identify dinosaur specimens in the field area.
 - h. List three characteristic features and correctly identify metoposaur and basal archosauromorph specimens in the field area.

GEOL 1330. Paleontology Field Exploration

Course Description

This course presents a seven-day overview of the basic field, laboratory and museum methods used in the study of fossils. Students will follow the whole process from searching for a fossil and excavating it from the ground, through cleaning and stabilizing it, to cataloging it in Mesalands Community College's Dinosaur Museum. Included are a trip to a site rich in dinosaur footprints, and hands-on experience in molding and casting fossils.

Student Learning Outcomes

1. Studying introduction to paleontology, the student will:
 - a. Identify common fossil-bearing sedimentary rocks and recognize their depositional environments.
 - b. Identify common types of fossils.
 - c. Classify fossils to Phylum and Class level.
 - d. Explain taphonomic processes.
 - e. Describe the principles of biostratigraphy.
2. The student will demonstrate competency in the basic field techniques in paleontology as evidenced by performing tasks in a faculty-monitored field project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying basic field techniques in paleontology, the student will
 - a. Explain how and where to locate fossils.
 - b. Demonstrate excavation methods.
 - c. Protect specimens for removal from the field.
 - d. Remove specimens safely from the field.
3. The student will demonstrate competency in data recording at a paleontological site by accurately recording information on two fossils on Specimen Field Cards during collection. Studying recording paleontological data, the student will:
 - a. Explain the collection of basic field data.
 - b. Describe the collection of taphonomic data.
 - c. Identify the principles of constructing quarry charts.

4. The student will demonstrate competency in the basic laboratory methods in paleontology as evidenced by performing tasks in a faculty-monitored laboratory project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying basic laboratory methods in paleontology, the student will:
 - a. List and use the main manual preparation tools.
 - b. List and use some mechanical preparation tools.
 - c. Explain how to make and open a plaster jacket.
 - d. Demonstrate the construction of a mold and cast.
5. The student will know the principal curatorial methods, as demonstrated by performing tasks in a faculty-monitored collections project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying the principal curatorial methods, the student will:
 - a. Demonstrate competency in cataloguing specimens.
 - b. Create locality files.
 - c. Safely curate and store specimens.

GEOL 1990. Triassic Vertebrate Practicum

Course Description

This course provides an introduction to excavating fossils and processing them in a laboratory setting. Student will prospect for and learn to excavate vertebrate fossils from the Upper Triassic in eastern New Mexico. Basic laboratory and preparation methods for field specimens will be practiced in the Natural Science Laboratories at Mesalands Community College's Dinosaur Museum. Students will explore aspects of the anatomy, systematics, evolutionary relationships, and paleobiology of the principal groups of Late Triassic vertebrates.

Student Learning Outcomes

1. The student will demonstrate competency in the basic field techniques of locating, excavating, stabilizing and safely collecting specimens as evidenced by performing tasks in a faculty-monitored field project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying basic techniques in paleontology, the student will
 - a. List and correctly apply safety measures in the field.
 - b. Explain the use of field materials and use the appropriate manual excavation tools with 'Excel®lent' or 'acceptable' results.
 - c. Demonstrate the main excavation methods with 'Excel®lent' or 'acceptable' results.
 - d. Protect specimens for removal from the field, including stabilization of fragile fossils and construction of plaster jackets with 'Excel®lent' or 'acceptable' results.
 - e. Remove specimens safely from the field.
2. The student will demonstrate competency in the basic laboratory techniques in paleontology as evidenced by performing tasks in a faculty-monitored laboratory project with 100% 'acceptable' result or better, as scored by applicable rubrics. Studying basic laboratory methods in paleontology, the student will:
 - a. List and correctly apply safety measures in the laboratory.
 - b. Record preparation data on Specimen Laboratory Cards and process field data.
 - c. Use the appropriate manual preparation tool in a laboratory project with 'Excel®lent' or 'acceptable' results.
 - d. Use a power-operated preparation tool in a laboratory project with 'Excel®lent' or 'acceptable' results.
 - e. Use the appropriate air-pressure-operated preparation tool in a laboratory project with 'Excel®lent' or 'acceptable' results.
 - f. List the advantages and disadvantages of various consolidants and adhesives, and use consolidants and adhesives to assemble a fossil specimen with 'Excel®lent' or 'acceptable' results.
 - g. Demonstrate at least one preparation method.
3. The student will know the principal anatomical features of the major groups of Triassic vertebrates occurring in the study area as demonstrated by correctly identifying at least 3 characteristic features of a given specimen or a fossil. Studying the relationships, anatomy and functional aspects of the dominant Triassic vertebrates, the student will:

- a. List three characteristic features and correctly identify metoposaur specimens.
- b. List five characteristic features and correctly identify phytosaur specimens.
- c. List five characteristic features and correctly identify aetosaur specimens.
- d. List three characteristic features and correctly identify rauisuchid, specimens.
- e. List three characteristic features and correctly identify poposauroid specimens.
- f. List three characteristic features and correctly identify crocodylomorph specimens.
- g. List five characteristic features and correctly identify dinosauriform specimens.
- h. Outline the phylogenetic relationships of Triassic archosauriforms.

GEOL 1996. Topics in Geology

Student Learning Outcomes

Varies

GEOL 2110. Historical Geology

Course Description

This course reviews the major geological and biological processes and events over the Earth's 4.6-billion-year history. Students will learn about the formation of the Earth and its development through time including changes in the lithosphere, atmosphere, hydrosphere, and biosphere. The interrelationships between the physical aspects of Earth history and biological origins, evolution of species, and causes of extinctions will be explored.

Student Learning Outcomes

1. List the major principles of stratigraphy and biostratigraphy and discuss their significance.
2. Recognize or explain how sedimentary rocks can be used to interpret ancient environments.
3. Recognize or explain how plate tectonics has affected the distribution of life, climate, and sea level.
4. Describe the process of Darwinian evolution.
5. Demonstrate a basic knowledge of biodiversity.
6. Recognize and explain taphonomy and the biases inherent in the fossil record.
7. Discuss the major mass extinctions recorded by fossil evidence including potential causes and organisms affected.
8. Compare relative versus absolute time and explain how geologists determine the ages of rocks, fossils, and the Earth.
9. Discuss the development of the geologic time scale.
10. Recognize or explain the history of life on Earth during major time periods and describe major biological innovations through time.
11. Recognize or explain the physical geologic evolution of Earth over time.

GEOL 2110L. Historical Geology Laboratory

Course Description

Historical Geology Laboratory is the laboratory component of Historical Geology. This course applies geologic principles and techniques to reconstruct the history of Earth. Students will explore key concepts of geologic time and stratigraphy, identify

fossils and use fossils to make stratigraphic correlations. Students will employ actualism to determine past depositional environments.

Student Learning Outcomes

1. Explain or discuss geologic time and how the geologic time scale was developed.
2. Recognize or explain how geologic time is measured.
3. Describe and use the basic principles of stratigraphy and explain how stratigraphy can be used to interpret sedimentary environments.
4. Describe and use the basics of paleontology and how fossils can be used to interpret ancient sedimentary environments.
5. Identify fossils in hand samples and explain how organisms are preserved in the fossil record.
6. Identify, explain, or interpret geologic structures on geologic maps.
7. Reconstruct the history of geologic events using geologic maps and cross-sections.
8. Construct cross-sections, fence diagrams, and isopach maps from stratigraphic sections and thickness data.

GEOL 2120. Introduction to Oceanography

Course Description

This course covers aspects of geology, chemistry, physics, climatology, environmental science, and biology as they apply to the oceans. Oceanography explores the ocean in the Earth system with special emphasis on the flow and transformation of weather and energy into and out of the ocean, the physical and chemical properties of seawater, ocean circulation, marine life and its adaptations, interactions between the ocean and the other components of the Earth system, and the human/societal impacts on and response to those interactions. This course provides the foundation needed for students to intelligently participate in important societal discussions that involve environmental issues.

Student Learning Outcomes

1. Recognize, describe or explain vocabulary, principles and methods relative to the science of oceanography.
2. Recognize, describe or compare Earth's components, especially the physical and chemical properties of seawater, marine sediments, and ocean life.
3. Recognize, describe, or explain the interrelationships of oceans with other Earth systems and the influences of physical processes on the ocean floor and coastal features.
4. Evaluate and interpret basic information from maps, diagrams, remotely sensed images, graphs and tables.
5. Apply critical thinking skills to solve problems.
6. Recognize or discuss the effects of human activity on marine environments and ecosystems.

GEOL 2125. Environmental Physical and Chemical Processes

Course Description

You will study basic general, analytical, organic, and polymer chemistry from an environmental perspective: the pollutants of air, water, and land; the rudiments of toxicology, and an introduction to green chemistry. You will learn about chemical processes in industry and nature, physical transport, risk, and aspects of human impacts and policy.

Student Learning Outcomes

1. Have a basic understanding of environmental chemistry of water, air, and soils.
2. Understand and remember major principles of stratospheric chemistry, in particular ozone and the impacts of associated with air pollution
3. Understand and remember physical processes occurring at multiple scales (local, landscape, and global) that impact environmental chemistry
4. Understand and remember the chemistry of ground-level air pollution
5. Understand concepts in energy and climate change—with emphasis on the greenhouse effect
6. Understand concepts in water chemistry and water pollution, including topics in purification of water

7. Understand concepts in solid state chemistry—with emphasis on determination of soil and sediment contamination, disposal and minimization
8. The student will learn to evaluate diverse information for analysis of data relevant to the biological and physical sciences especially in natural resource management
9. The student will demonstrate how to access different sources of data, demonstrate the process of creating data, and discuss the fundamental concepts of data quality.
10. Be able to use computer software (for a publication, presentation, or research project, etc.)

GEOL 2125L. Environmental Physical and Chemical Processes Laboratory

Course Description

You will study basic general, analytical, organic, and polymer chemistry from an environmental perspective: the pollutants of air, water, and land; the rudiments of toxicology, and an introduction to green chemistry. You will learn about chemical processes in industry and nature, physical transport, risk, and aspects of human impacts and policy.

Student Learning Outcomes

1. Have a basic understanding of environmental chemistry of water, air, and soils.
2. Understand laboratory safety principles for analysis of water, soil and air samples
3. Understand use of spectrometer, colorimeter, and titration equipment
4. Understand and remember major principles of stratospheric chemistry, in particular ozone and the impacts of associated with air pollution
5. Understand and remember physical processes occurring at multiple scales (local, landscape, and global) that impact environmental chemistry
6. Understand and remember the chemistry of ground-level air pollution
7. Understand concepts in energy and climate change—with emphasis on the greenhouse effect
8. Understand concepts in water chemistry and water pollution, including topics in purification of water
9. Understand concepts in solid state chemistry—with emphasis on determination of soil and sediment contamination, disposal and minimization
10. The student will learn to evaluate diverse information for analysis of data relevant to the biological and physical sciences especially in natural resource management
11. The student will demonstrate how to access different sources of data, demonstrate the process of creating data, and discuss the fundamental concepts of data quality.
12. Be able to use computer software (for a publication, presentation, or research project, etc.)

GEOL 2130. Introduction to Meteorology

Course Description

Introduction to Earth's atmosphere and the dynamic world of weather as it happens. Working with current meteorological data delivered via the Internet and coordinated with learning investigations keyed to the current weather; and via study of select archives.

Student Learning Outcomes

1. Recall, describe, or explain the various elements of the Earth's atmosphere, Earth's relation to the sun, incoming solar radiation, the ozone layer, the primary temperature controls, and the unequal heating of land and water.
2. Recall, describe, or explain weather variables and parameters.
3. Recall, describe, or explain air masses, pressure systems, the various fronts and associated types of storms, weather symbols, monsoons, the various forms of precipitation, along with causes and effects of lightning.
4. Recall, describe, or explain the hydrologic cycle, the characteristics and influences of the oceans and continents on the weather, the Southern Oscillation (i.e., El Nino), and the effects of land/water distribution.
5. Recall, describe, or explain specific impacts by humans on weather, climate, and on the ecosystem at large.
6. Evaluate and interpret information from maps, diagrams, remote sensing devices, graphs, and tables.

7. Apply critical thinking skills such as inductive, deductive, and mathematical reasoning to solve problems using the scientific method.
8. Recognize and discuss the effect of human activity on climate, climate change and the greenhouse effect.
9. Synthesize information from external, current sources and personal observations and discuss their relationships to class material.

GEOL 2140. Geology of New Mexico

Course Description

This course is a tour of the geologic history and natural places of New Mexico. Students will explore the materials (rocks and minerals) that make up New Mexico and the processes that created and continue to shape our state. Students will learn about mountains, rivers and seas that have come and gone, and New Mexico's rich fossil heritage. Students will discover where and why volcanoes erupted, and where natural resources are found and extracted.

Student Learning Outcomes

1. Identify or describe New Mexico's physiographic provinces.
2. Reconstruct and interpret New Mexico's geologic history using geologic maps.
3. Identify and describe New Mexico's orogenic provinces and explain the state's orogenic history.
4. List, describe, or explain major periods of igneous activity in New Mexico's history.
5. Describe how magma types relate to rock types, plutonic bodies, volcanic landforms, and eruptive processes.
6. Describe when, where, and why ancient seas covered portions of New Mexico and explain what the sedimentary rock record tells us about these seas and their inhabitants.
7. Identify or interpret unconformities and their significance.
8. Explain the changes in New Mexico's flora and fauna over time as revealed in the fossil record.
9. Recognize or describe the geologic processes involved in the formation and concentration of our natural resources.

GEOL 2145. History of Life

Course Description

This course presents an overview of the evolution and diversity of life on Earth. Students will study the main features of the evolution of the principal organisms on Earth (including plants, animals and microorganisms) and the evolution of ecosystems.

Student Learning Outcomes

1. The student will understand the relevant geological background for this course as demonstrated by scoring 70% or more on a faculty prepared examination. Studying the geological background, the student will:
 - a. Describe the formation of the Solar System.
 - b. Identify the stages hypothesized for the origin of life.
 - c. Describe the diversification of life into three Domains.
 - d. Describe the Precambrian evolution of the oceans and the atmosphere.
 - e. List the features and interpret geological and faunistic evidence for terrestrial and marine paleo environments.
2. The student will understand the basic paleontological concepts as demonstrated by scoring 70% or more on a faculty prepared examination. Studying paleo biological concepts, the student will:
 - a. Describe the nature of the fossil record.
 - b. Explain the fundamental taphonomic processes.
 - c. Characterize species concepts and variation within and between species.
 - d. Identify and apply the principles of Systematics.
 - e. Describe the evidence for and the processes of evolution.
 - f. Describe the evidence for and the processes of extinction.
 - g. Describe the principles and uses of biogeography.

- h. Describe the principles and uses of biostratigraphy.
 - i. List the principles of functional morphology.
 - j. List the principles of paleoecology.
3. The student will describe the anatomy and interpret the paleobiology, paleoecology, and fossil record of the following groups, as demonstrated by scoring a total of 70% or more on 5 relevant laboratory exercises or assignments. Studying the Domains Bacteria and Archaea, the student will:
 - a. Identify the origins and diversity of these Domains.
 - b. Describe the fossil record of these Domains.
 - c. Domain Eukarya.
 4. Studying the Kingdom Protista, the student will:
 - a. Interpret the paleobiology, paleoecology and fossil record of Sarcodines (Foraminifera and Radiolaria), and identify specimens typical for the group.
 - b. Interpret the paleobiology, paleoecology and fossil record of Chrysophyta (Diatoms, Coccoliths, and Silicoflagellates), and identify specimens typical for the group.
 - c. Interpret the paleobiology, paleoecology and fossil record of Pyrrophyta (Dinoflagellates), and identify specimens typical for the group.
 - d. Interpret the paleobiology, paleoecology and fossil record of acritarches, and identify specimens typical for the group.
 5. Studying the Kingdom Plantae, the student will:
 - a. Describe the origin of plants.
 - b. Interpret the paleobiology, paleoecology and fossil record of early land plants, and identify specimens typical for the group.
 - c. Interpret the paleobiology, paleoecology and fossil record of gymnosperms, and identify specimens typical for the group.
 - d. Interpret the paleobiology, paleoecology and fossil record of angiosperms, and identify specimens typical for the group.
 6. Studying the Kingdom Fungi, the student will:
 - a. Describe the origin of fungi.
 - b. Interpret the paleobiology, paleoecology and fossil record of fungi, and identify specimens typical for the group.
 7. Studying invertebrates, the student will:
 - a. Describe the origin of animals
 - b. Interpret the paleobiology, paleoecology and fossil record of archaeocyathans, and identify specimens typical for the group.
 - c. Interpret the paleobiology, paleoecology and fossil record of porifers, and identify specimens typical for the group.
 - d. Interpret the paleobiology, paleoecology and fossil record of cnidarians, and identify specimens typical for the group.
 - e. Interpret the paleobiology, paleoecology and fossil record of bryozoa, and identify specimens typical for the group.
 - f. Interpret the paleobiology, paleoecology and fossil record of brachiopods, and identify specimens typical for the group.
 - g. Interpret the paleobiology, paleoecology and fossil record of arthropods, and identify specimens typical for the group.
 - h. Interpret the paleobiology, paleoecology and fossil record of molluscs, and identify specimens typical for the group.

- i. Interpret the paleobiology, paleoecology and fossil record of echinoderms, and identify specimens typical for the group.
- 8. Studying vertebrates, the student will:
 - a. Describe the origins and fossil record of chordates, and identify specimens typical for the group.
 - b. Outline the origins of vertebrates.
 - c. Interpret the paleobiology, paleoecology and fossil record of fish, and identify specimens typical for the group.
 - d. Interpret the paleobiology, paleoecology and fossil record of amphibians, and identify specimens typical for the group.
 - e. Interpret the paleobiology, paleoecology and fossil record of sauropsids, and identify specimens typical for the group.
 - f. Interpret the paleobiology, paleoecology and fossil record of synapsids, and identify specimens typical for the group.
- 9. Studying trace fossils, the student will:
 - a. Identify the main types of invertebrate trace fossils.
 - b. Identify the main types of vertebrate trace fossils.

GEOL 2150. Geobiology

Course Description

Consideration of life and its impact on the Earth System over the course of Earth history including its preserved geochemical and fossil remains, study of the observable geological effects of life processes and in turn the impact of geological, hydrological, and atmospheric effects on the origins and subsequent evolution of life. Field trips.

Student Learning Outcomes

Not Available

GEOL 2155. Theory and Praxis of Museum Science

Course Description

This course presents a broad spectrum of theories and practices used by museum professionals. The major theme of the course is to introduce students to useful methods for care, preparation, and conservation of museum collections. The course also considers the importance of knowledge of federal and international laws that govern museums; professional ethics; the importance of collection management; exhibitions and interpretation; and museum curatorship. All topics include practical assignments conducted in conjunction with Mesalands Community College's Dinosaur Museum and Natural Sciences Laboratory.

Student Learning Outcomes

1. The student will demonstrate an understanding of the basic functions, organization and management of a museum, and the main divisions of a museum and its functions, as demonstrated by 70% of the students scoring 70% or higher in assignment(s) given by the instructor. Students of the history and diversity of museums will:
 - a. Describe the principal terms of museums.
 - b. Describe the principal definitions of museums.
 - c. Describe the history of museums.
 - d. Describe the characteristics of modern museums.
 - e. Outline organization and support of museums.
2. The student will demonstrate an understanding of the collection, conservation and curation of natural history specimens, as demonstrated by 70% of the students scoring 70% or higher in assignment(s) given by the instructor. Students of the collection, preparation and curation of natural history specimens will:
 - a. Describe the main methods of collection of natural history specimens.
 - b. Identify and apply the principal methods for the preparation of natural history specimens.

- c. List the principles of collections management.
 - d. Describe and apply the main methods of conservation of natural history specimens.
 - e. Define the theory and practice of museum registration.
 - f. List the principles of use and security.
3. The student will demonstrate an understanding of the theory and construction of exhibits, as demonstrated by 70% of the students scoring 70% or higher in assignment(s) given by the instructor. Students of exhibits will:
 - a. Describe the philosophy of exhibits.
 - b. Identify the main aesthetic features of exhibit design.
 - c. List the most important features of exhibits with regard to visual and physical accessibility.
 - d. Explain the principles of exhibit construction.
 - e. Identify the principles of permanent and temporary exhibits.
 - f. Describe the role and practice of education in exhibits.
 4. Students of the museum architecture will identify the main components and uses of the museum architecture.
 5. Students of historic museums and site preservation will describe the principles of designation and preservation.
 6. Students of laws and future of museums will:
 - a. Outline the principal components of museum legislature.
 - b. Describe modern trends and the future of museums.

GEOL 2160. Introduction to Mineralogy

Course Description

An introduction to minerals, including identification in hand samples and thin sections, crystal structures, physical properties, chemical compositions, occurrences and uses. Lab will focus on mineral identification by physical and optical properties.

Student Learning Outcomes

Upon successful completion of the course, the student will have:

1. Practical ability to identify with confidence minerals in hand samples focusing on rock-forming minerals including the silicates and others (carbonates, sulfates, phosphates, oxides, sulfides, etc.).
2. Gained a solid understanding of the building blocks of minerals and how they affect their chemical and physical properties.
3. Skill to identify symmetry and forms in crystals (i.e., crystallography) and understand how they relate to their structure and properties.
4. Gained an overview of mineral occurrences, formation conditions, classification and industrial uses.
5. Basic understanding of the chemical composition of minerals and how it relates to the formation of earth materials and different geologic rock types.
6. Basic skills to identify silicate minerals in thin sections using an optical microscope.

GEOL 2160L. Introduction to mineralogy Laboratory

Course Description

Laboratory to accompany GEOL 2160L. Lab will focus on mineral identification by physical and optical properties

Student Learning Outcomes

Upon successful completion of the course, the student will have:

1. Practical ability to identify with confidence minerals in hand samples focusing on rock-forming minerals including the silicates and others (carbonates, sulfates, phosphates, oxides, sulfides, etc.).
2. Gained a solid understanding of the building blocks of minerals and how they affect their chemical and physical properties.
3. Skill to identify symmetry and forms in crystals (i.e., crystallography) and understand how they related to their structure and properties.

4. Gained an overview of mineral occurrences, formation conditions, classification and industrial uses.
5. Basic understanding of the chemical composition of minerals and how it relates to the formation of earth materials and different geologic rock types.
6. Basic skills to identify silicate minerals in thin sections using an optical microscope.

GEOL 2210. Geology of Southwestern New Mexico and Western Texas

Course Description

This course will introduce students to some of the basic elements of geology and vertebrate paleontology. Students will receive an orientation followed by a field trip through southwestern New Mexico and western Texas. Geological topics examined on the field trip will include Karst phenomena at Carlsbad Caverns, the structure, sedimentology and paleontology of a Permian reef complex (Guadalupe Mountains), Precambrian through Mesozoic sedimentology and stratigraphy of the El Paso area, an introduction into dinosaur tracks, the structure of an intrusion (Cerro de Cristo Rey) and maar volcanology at Kilbourne Hole.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Students of Karst geology (Carlsbad Caverns) will:
 - a. Outline the formation of Karst caves and list the peculiarities in the formation of Carlsbad Caverns.
 - b. Identify and explain the formation of stalagmites, stalactites, columns, drapes, and the types of dripstones found in Carlsbad Caverns.
2. Students of the anatomy of a Permian reef complex (Guadalupe Mountains) will:
 - a. List the Upper Permian formations and outline the paleogeography in the of southwestern New Mexico.
 - b. Describe the sedimentological and topographical features of lagunal, reef crest, reef body, and reef slope deposits.
 - c. Identify and describe Permian reef-building organisms and associated shallow marina faunas.
3. Students of andesitic intrusion into Cretaceous sediments (Cerro de Cristo Rey) will:
 - a. Identify and characterize an andesitic plutonic rock.
 - b. List the characteristic features of different plutonic bodies.
 - c. Characterize and explain the metamorphic processes that form hornfels.
4. Students of introduction to dinosaur footprints and tracks will:
 - a. Describe the types of preservation of vertebrate footprints.
 - b. Describe the consistency of the sediment and draw conclusions on the depositional environment on the basis of Cretaceous dinosaur track preservation.
 - c. Describe features of and identify dinosaur footprints on the basis of print morphology.
5. Students of dinosaur eggs will:
 - a. Outline the succession of discoveries and interpretations of dinosaur egg finds.
 - b. Describe the basic shapes and features of the ultrastructure of various dinosaur eggs and identify the egg layer.
 - c. Outline conclusions on dinosaur behavior on the basis of evidence from nests.
 - d. List allometric and isometric growth patterns in dinosaur embryos and hatchlings.
6. Students of maar volcanology (Kilbourne Hole) will:
 - a. Describe vesicular basalts and explain the origin of their texture and chemical composition.
 - b. Characterize features of pyroclastic surge deposits and describe the processes involved in pyroclastic eruptions.
 - c. Characterize and explain the significance of xenolithic mantle material
7. Students of Precambrian and Paleozoic beds of the Franklin Mountains will:
 - a. List and characterize the main stratigraphic units present in the Franklin Mountains.

- b. Describe and explain the formation of the Proterozoic plutonic rocks (Red Bluff Granite, felsic dikes) and contact metamorphic limestones and shales (Castner Marble).
- c. Describe and explain the deposition of Paleozoic sedimentary rocks (Bliss Sandstone, Fusselman Dolomite).
- d. Characterize the post-Paleozoic tectonic events that shaped the landscape of West Texas and describe the resulting geologic structures.

GEOL 2220. Triassic Vertebrates from the American Southwest

Course Description

Students are introduced to the principal fossil vertebrate groups from the Late Triassic by means of original material and replicas plus scientific publications, and they will explore their anatomy, systematics, evolutionary relationships, and paleobiology. Students will also learn about age correlations of strata based on physical properties of rocks and based on fossils. The course may include field and museum excursions.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Studying principles of systematics the student will:
 - a. Explain the basic rules of biological nomenclature.
 - b. List the formal requirements of a valid taxonomic description.
 - c. Illustrate and discuss the above rules and requirements using examples among Triassic vertebrates.
2. Studying anatomy, phylogeny and functional analysis of Late Triassic vertebrates the student will:
 - a. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of Late Triassic ganoid fishes and lungfishes.
 - b. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of Late Triassic metoposaurs.
 - c. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of Late Triassic procolophonids.
 - d. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of Late Triassic prolacertiforms and drepanosaurids.
 - e. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of phytosaurs.
 - f. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of aetosaurs.
 - g. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of rauisuchids.
 - h. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of poposaurids and chatterjeeids.
 - i. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of Late Triassic sphenosuchians.
 - j. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of Late Triassic dinosaurs.
 - k. Characterize the main anatomical features, outline the phylogenetic relationships and describe aspects of the functional anatomy of Late Triassic synapsids.
 - l. Characterize the main anatomical features and discuss the phylogenetic relationships of selected Late Triassic vertebrates of uncertain relationships.
3. Studying the phylogeny of archosaurs the student will:
 - a. Outline the principles of the cladistic method.
 - b. Outline the phylogenetic relationships among Triassic archosaurs and list features in support of the phylogenetic hypotheses.

4. Studying the lithostratigraphy of the Triassic in the Southwest the student will:
 - a. List and employ the principles of stratigraphic correlations.
 - b. Name and characterize the five major lithostratigraphic units of the Upper Triassic in New Mexico and name the correlatives in the American Southwest.
5. Studying the biostratigraphy of the Triassic in the Southwest the student will:
 - a. Explain the principles of biostratigraphy.
 - b. Characterize the suggested Land vertebrate faunachrons of the Upper Triassic.
 - c. Discuss critically the values and theoretical and practical problems associated with the postulated continental Triassic biostratigraphy based on vertebrate fossils.

GEOL 2230. Dinosaurs of Colorado

Course Description

This course will introduce students to some of the basic elements of geology and dinosaur paleontology, in the classroom and on a four day trip through southwest Colorado. The field trip will include visits to dinosaur quarries, footprint sites, and paleontology museums.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Students of the Mesozoic geology of southwestern Colorado will:
 - a. Understand the tectonic setting and sedimentary environments during the Triassic.
 - b. Understand the tectonic setting and sedimentary environments during the Jurassic.
 - c. Understand the tectonic setting and sedimentary environments during the Cretaceous.
2. Students of the role of dinosaurs in Mesozoic terrestrial vertebrate communities will:
 - a. Identify the principle terrestrial vertebrates and types of dinosaurs during the Triassic in the southwestern USA.
 - b. Identify the principle terrestrial vertebrates and types of dinosaurs during the Jurassic in the southwestern USA.
 - c. Identify the principle terrestrial vertebrates and types of dinosaurs during the Cretaceous in the southwestern USA.
3. Students of terrestrial taphonomy will:
 - a. Understand the preservation potential of different terrestrial vertebrates.
 - b. Describe the principal depositional environments in which terrestrial vertebrates are likely to be preserved.

GEOL 2240. Dawn of the Age of Dinosaurs – Triassic Geology and Life in the Texas Panhandle

Course Description

This course will introduce students to some of the basic elements of geology, stratigraphy, and vertebrate paleontology. Students will receive a pre-trip lecture/orientation followed by a four day trip through east-central New Mexico and the Texas panhandle. The field trip will include visits to geological sites at Palo Duro Canyon State Park, several fossil quarries and an oil field in the Post area, archeological sites, the Grace Museum (Abilene), and the Museum of Texas Tech University (Lubbock).

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Students of the stratigraphy and depositional environment in the Permo-Triassic of east-central New Mexico and Texas will:
 - a. Outline the stratigraphy and depositional environments of the Permian.
 - b. Describe the stratigraphic units of the Triassic.
 - c. Describe the types of sediments and depositional environments in the Triassic.
2. Students of the morphology and ecology of Triassic vertebrates will:

- a. List features and their ecological interpretations of metoposaurs.
 - b. List features and their ecological interpretations of small non-archosaurian reptiles.
 - c. List features and their ecological interpretations of phytosaurs.
 - d. List features and their ecological interpretations of aetosaurs.
 - e. List features and their ecological interpretations of rauisuchids.
 - f. List features and their ecological interpretations of poposaurids.
 - g. List features and their ecological interpretations of dinosaurs.
3. Students of terrestrial taphonomy will:
 - a. Understand the preservation potential of different terrestrial vertebrates.
 - b. Describe the principal depositional environments in which terrestrial vertebrates are likely to be preserved.

GEOL 2250. Volcanoes and Dinosaurs in Northeastern New Mexico and Colorado

Course Description

This course will introduce students to some of the basic elements of geology and vertebrate paleontology. Students will receive an orientation followed by a field trip through northeastern New Mexico and southern Colorado. Geological and paleontological topics examined on the field trip will include morphology and volcanology of a cinder cone (Capulin Mountain), an introduction into dinosaur tracks and visits of mega footprint sites (Mosquero, Dinosaur Ridge), the K-T boundary of the Raton basin, and visits to paleontology and natural history museums in central Colorado.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Students of cinder cone morphology and volcanology will:
 - a. List the types of volcanoes.
 - b. Describe the morphology of cinder cones.
 - c. Identify and explain the formation of lavas and volcanic rocks associated with cinder cones.
2. Students of the Cretaceous-Paleogene (Tertiary) K-T extinction event will:
 - a. Outline the characteristics of mass extinctions and the magnitude of the K-T extinction event.
 - b. List and describe evidence for an impact at the K-T boundary.
 - c. Discuss pros and cons of the impact versus the volcano theory of the K-T extinction event.
3. Students of introduction to dinosaur footprints and tracks will:
 - a. Describe the types of preservation of vertebrate footprints.
 - b. Describe the consistency of the sediment and draw conclusions on the depositional environment on the basis of Cretaceous dinosaur track preservation.
 - c. Describe features of and identify dinosaur footprints on the basis of print morphology.
 - d. Interpret paleontological evidence gathered from Mega track sites.
4. Students of the survey of Jurassic dinosaur groups will:
 - a. Describe and interpret the anatomy of the principal forms of predatory dinosaurs.
 - b. Describe and interpret the anatomy of the principal forms of sauropodomorph dinosaurs.
 - c. Describe and interpret the anatomy of the principal forms of ornithopod dinosaurs.
 - d. Describe and interpret the anatomy of the principal forms of thyreophoran dinosaurs.

GEOL 2260. Geology of the American Southwest

Course Description

This course familiarizes the student with an overview of the geology of the southwestern United States. Students learn about the geological processes that led to the development of the American Southwest and also about the fossil record of this region.

Student Learning Outcomes

1. Studying the principles of geology, the student will:

- a. Describe the structure of the Earth.
 - b. Identify the principal kinds of rocks and minerals.
 - c. Explain the main surficial processes.
 - d. List the principles of stratigraphy and sedimentology.
 - e. Explain the main features of volcanoes and earthquakes.
 - f. Describe the main features and kinds of fossils.
 - g. Explain the process of metamorphism.
 - h. List the methodologies utilized in study of geologic time.
2. The student will understand the basic structure of Precambrian rocks and strata in the Southwest as demonstrated by scoring 70% or more on a faculty prepared examination, and by scoring a total of 70% or more on a relevant laboratory exercise component.
 - a. Studying the Precambrian, the student will:
 - b. Describe Precambrian tectonics.
 - c. Explain patterns of Precambrian sedimentation.
 - d. Describe Precambrian rocks of the Grand Canyon.
 - e. Identify Precambrian rocks in New Mexico.
3. The student will understand the basic structure of Paleozoic rocks, strata, and fossils in the Southwest as demonstrated by scoring 70% or more on a faculty prepared examination, and by scoring a total of 70% or more on a relevant laboratory exercise component.
 - a. Studying the Paleozoic, the student will:
 - b. Describe Paleozoic paleogeography and tectonics.
 - c. List and describe the main components of Paleozoic life.
 - d. Describe the main features of Early Paleozoic oceans.
 - e. Describe the main features of the Permian reefs.
 - f. Describe the main features of Paleozoic red beds.
4. The student will understand the basic structure of Mesozoic rocks, strata, and fossils in the Southwest as demonstrated by scoring 70% or more on a faculty prepared examination, and by scoring a total of 70% or more on a relevant laboratory exercise component.
 - a. Studying the Mesozoic, the student will:
 - b. List the main features of Mesozoic paleogeography and tectonics.
 - c. List and describe the main components of Mesozoic life.
 - d. Identify the principal features of Triassic seas and red beds.
 - e. Describe the main features of Mesozoic deserts.
 - f. Identify the main features of post-Triassic seas.
 - g. List the main features of Cretaceous swamps and river environments.
5. The student will understand the basic structure of Cenozoic rocks, strata, and fossils in the Southwest as demonstrated by scoring 70% or more on a faculty prepared examination, and by scoring a total of 70% or more on a relevant laboratory exercise component.
 - a. Studying the Cenozoic, the student will:
 - b. Explain the origin and process of the Rocky Mountain orogeny.
 - c. List the types of intermontane basins.
 - d. List and describe the main features of Paleogene and Neogene life.
 - e. Explain the processes and timing of rifting and volcanoes.
 - f. Explain the principal features of Neogene environments.

Introduction to earth systems. Geology and the solid earth, geologic time and earth history, water and the world oceans, atmosphere and weather, the solar system. Community Colleges only.

Student Learning Outcomes

1. To understand how scientific knowledge is created and evolves in the Earth sciences.
2. To construct opinions based on limited geologic facts, scientific theories and various models of the Earth.
3. To evaluate what scales of measurement should be used when making observations of nature and situations in everyday life.
4. To identify the core facts related to describing the oceans and atmosphere (e.g., rock types, plate boundaries, types of clouds).

GEOL 2320. Earth Surface Processes and Landforms

Course Description

A study of the interactions between the atmosphere and the internal heat of the Earth which result in the development of landscapes observable at the Earth's surface today. Topics will include atmospheric circulation, climate, fluvial processes, and the record of paleoclimate contained in the landscape.

Student Learning Outcomes

Students will become familiar with the main processes acting on the surface of the Earth (e.g., weathering, erosion, sedimentation, and soil formation), the driving forces for these processes (including climatic and tectonic events), and their influence on both landscape features and geological deposits.

GEOL 2330. Sedimentology, Stratigraphy, and Structural Geology for Petroleum Engineers

Course Description

Overview of sedimentology, stratigraphy, and structural geology, emphasizing material relevant to petroleum engineers and other petroleum industry careers. Topics include sediment types, sediment transport, deposition, diagenesis and lithification, controls on porosity and permeability; fault and fold types and classification; structural controls on sedimentary deposition; basic structural and stratigraphic traps; fault-zone structure and fluid flow; and elements of low-temperature geochronology.

Student Learning Outcomes

1. Describe sedimentary rocks, textures, structures and classifications; their resource potential, controls on porosity and permeability, and the geological history needed for formation of oil and gas.
2. Describe geologic contact types, introductory structural geology, including 3D geometry of lines and planes as used in geology, basic geologic map interpretation, cross-section construction, classifications of faults and folds, architecture and development of extensional and contractional orogens, structural controls on sedimentary basins, effects of faulting on permeability and porosity.
3. Explain processes required for existence of petroleum systems, basic types of conventional hydrocarbon traps.
4. Explain the basis of isotopic dating methods and basics of their application.

GEOL 2340. Introduction to Whole Earth Structure and Composition

Course Description

Introduction to geophysical and geochemical methods used to study the deep Earth. Formation, composition and internal structure of the Earth, plate tectonics, gravitational and magnetic fields, heat flow and thermal history, earthquakes, and interaction of Earth systems with emphasis on the crust, mantle and core. Introduction to mantle convection, geochemical reservoirs, and mantle plumes. Field trips.

Student Learning Outcomes

By the end of this course, students will be able to:

1. Understand the methods used in studying the Earth's interior
2. Understand the composition and structure of the crust, mantle, and core.

3. Understand how plate tectonics works and characterize major tectonic settings on Earth.
4. Understand the origin of Earth's magnetic field and how that field is manifest at Earth's surface.

GEOL 2410. Mineralogy

Course Description

A study of elementary crystallography. Topics covered include description, chemistry, determination, and occurrence of minerals that form common rocks and ore deposits. This class includes a field trip.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Understand mineral properties and occurrences, including classification, optical mineralogy, and crystallization.
2. Understand basic crystallography, including three-dimensional symmetry and atomic structure.
3. Identify and describe the major rock- and ore-forming minerals.
4. Discuss the importance of minerals, bonding, and major elements used in formation of minerals.
5. Discuss crystallization, including imperfections like defects, compositional zoning, and twinning.
6. Identify minerals using basic properties such as luster, color, streak, fracture, cleavage, hardness, specific gravity, and etc.
7. Understand the interaction of light and crystals
8. Discuss composition of igneous rocks, crystallization of magmas, and recognize major silicate minerals found in igneous rocks.
9. Discuss weathering, transportation, deposition, lithification, and precipitation of the major sedimentary minerals.
10. Discuss the formation of metamorphic rocks, including changes in composition and crystal form of metamorphic minerals.
11. Describe the formation of typical ore deposits and other economic minerals.
12. Describe crystal morphology and symmetry, including crystal forms and Miller indices.
13. Identify and describe the basic silicate subclasses (e.g., framework, sheet, chain, ring, paired tetrahedral, and isolated tetrahedral silicates).
14. Identify and describe other common rock- and ore-forming minerals (e.g., sulfides, halides, oxides, hydroxides, carbonates, etc.)

GEOL 2410L. Mineralogy Lab

A laboratory-based introduction to mineral identification and classification. Students practice observing and recording physical and optical properties, applying crystallographic techniques, and using standard mineralogy tools to analyze hand samples and thin sections. Emphasis is placed on relating mineral properties and associations to rock-forming processes.

Required Lab for GEOL-2410

Student Learning Outcomes

1. Observe and record physical properties of minerals (e.g., luster, color, streak, hardness, cleavage, fracture, specific gravity) and use these properties to identify unknown samples.
2. Use a petrographic microscope to examine and identify minerals based on optical properties, including birefringence, extinction, pleochroism, interference colors, and relief.
3. Apply crystallographic techniques such as analyzing crystal morphology, symmetry, and Miller indices to describe mineral forms.
4. Classify and distinguish silicate subclasses and non-silicate mineral groups through hands-on identification of representative samples.
5. Interpret mineral associations in hand samples and thin sections to infer rock-forming processes (igneous, sedimentary, metamorphic, or hydrothermal).
6. Use standard mineralogy tools and reference resources (e.g., hand lens, streak plates, hardness kits, petrographic microscopes, mineral ID charts/databases).

GEOL 2420. Petrology

Catalog Description

The origin, classification, and identification of igneous, sedimentary, and metamorphic rocks. This class includes a field trip.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Understand the structure, texture, composition, classification, and formation of igneous rocks, including both volcanic and plutonic forms.
2. Understand the structure, texture, composition, and classification of sedimentary rocks, including weathering, transport, deposition, provenance, diagenesis, and types of sedimentary environments.
3. Understand metamorphism and metamorphic texture, composition, and classification of metamorphic rocks.
4. Differentiate structures in extrusive vs. intrusive igneous rocks
5. Recognize and identify textures in igneous rocks
6. Recognize major igneous minerals, and classify igneous rocks based on their composition
7. Use igneous phase diagrams and the phase rule
8. Identify and describe igneous rocks using appropriate rock names
9. Recognize and describe sedimentary structures and textures
10. Recognize major sedimentary minerals for both clastic and chemical rocks
11. Describe the products of weathering, the transportation of sediments, and diagenesis
12. Describe the major continental, transitional, and marine environments, along with their characteristic sedimentary deposits
13. Identify and describe sedimentary rocks using appropriate rock names
14. Describe the agents and types of metamorphism, including pressure, temperature, and chemically active fluids
15. Recognize metamorphic textures and structures
16. Recognize major metamorphic minerals, and apply the metamorphic facies concept
17. Use metamorphic phase diagrams
18. Describe metamorphic environments and identify and describe their characteristic metamorphic rocks

GEOL 2420L. Petrology Laboratory

Course Description

This lab course focuses on the identification and classification of igneous and metamorphic rocks in hand sample and thin section. Students apply petrographic techniques, interpret phase diagrams, and analyze mineralogical and textural features. Laboratory reports emphasize professional-quality descriptions that integrate observational and analytical data. Required Lab for GEOL-2420.

1. Identify and classify igneous rocks in hand sample and thin section based on mineralogy, composition, and texture.
2. Identify and classify metamorphic rocks in hand sample and thin section based on mineral assemblages, textures, and structures.
3. Recognize and describe diagnostic igneous and metamorphic textures and structures using both hand sample and petrographic microscope.
4. Apply petrographic techniques (e.g., optical mineralogy, mineral proportions, fabric analysis) to describe and interpret igneous and metamorphic rocks.
5. Interpret phase diagrams and experimental data in the context of observed rock samples.
6. Construct detailed rock descriptions and classifications that integrate mineralogical, textural, and petrographic observations into professional-quality lab reports.

GEOL 2430. Volcanoes!

Course Description

Types of volcanoes and eruption products, role of volcanism in planetary evolution, volcanoes as sources of geothermal energy and mineral deposits, volcanic hazards and disasters, environmental effects of volcanic eruptions.

Student Learning Outcomes

Not Available

GEOL 2510. Introduction to Computational Methods of Geosciences

Catalog Description

An introduction to modern computational methods, techniques, and best practices as they apply to the geosciences. The course will be organized around several case studies in which students apply computational tools to understand fundamental Earth processes that are relevant to the department curriculum and industry.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Develop basic computing skills, such as how to set up spreadsheets and python programs to store, analyze and visualize various Earth science. Data.
2. Proficiency with using these tools to solve simple problems and research-related tasks.
3. Utilize best practices when writing software, including documentation and version control.

GEOL 2910. Research in Natural Sciences I

Course Description

The purpose of this course is to give students exposure to authentic laboratory environments and the practical application of the scientific method. Students will design and conduct a research project and present the results in a professional venue. Research topics may be selected from any area of STEM-H (Science, Technology, Engineering, Mathematics and Health). GEOL 2910 also includes study of scientific literature, applying the case study method in scientific research, practical use of software for research and presentation (Photoshop®, PowerPoint, Excel®), studying of topics relevant to the area of study, and practicing oral and written presentations.

Student Learning Outcomes

1. The student will understand the step-by-step process of the scientific method as demonstrated by scoring 70% or more on a faculty prepared assignment. Studying the scientific method, the student will:
 - a. Define the terms hypothesis, theory, law, and scientific principle and give two examples of each.
 - b. Identify and explain the four components of the Berkeley model of the scientific process in an example of a given scientific research project.
2. The student will understand the structure and components of a scientific article as demonstrated by presenting an abstract, material and method section, descriptive section, conclusion and reference list in a poster based on accepted standards in the field. Studying scientific writing, the student will:
 - a. List the structural components of a scientific article and describe the content of each component.
 - b. Evaluate the completeness and correctness of the structural components of a given scientific article.
 - c. Correctly cite in-text and construct a reference list according to a given standard.
 - d. Identify and present evidence for plagiarism in a given example.
 - e. Outline the steps from manuscript to published article.
3. The student will understand the scientific process by correctly identifying the steps in a given case study.
4. The student will design and execute a research project based on accepted standards in the field. Studying designing and conducting a research project, the student will:
 - a. Write a statement outlining the problem that will be researched.
 - b. Write a statement identifying the goals of the research project.
 - c. Present a plan for the research project including tasks to be undertaken, identifying clear assignments for each team member, and giving a timetable with definite deadline for each task.

- d. Gathering an appropriate amount of high-quality data to address the problem of the research project.
 - e. Analyze the data using method appropriate to the nature of the data.
 - f. Interpret the data and present a coherent conclusion.
5. The student will design and execute a research project based on accepted standards in the field. Studying communicating research, the student will:
- a. Produce an informative illustration which includes photos, drawings, or graphs with annotations using the software Photoshop®.
 - a. Present, list, or process data using the software Excel®.
 - b. Construct a poster of the research project using the software PowerPoint and present the results at a scientific venue.
 - c. Construct a PowerPoint presentation and communicate his research orally in class or at a scientific venue.

GEOL 2920. Research in Natural Sciences II

Course Description

This course is the second part of a research course designed to give students exposure to authentic laboratory environments and the practical application of the scientific method. Students will continue to conduct and finalize a research project, prepare a written or oral presentation, and present the results in a professional venue. Course also includes basic statistics, study of topics integral or related to the area of study, application of computer programs relevant to the area of study and the medium of presentation and practicing oral or written presentations.

Student Learning Outcomes

1. The student will execute a research project based on accepted standards in the field. Studying conducting a research project, the student will:
 - a. Write a statement outlining the problem that will be researched.
 - b. Write a statement identifying the goals of the research project.
 - c. Present a plan for the research project including tasks to be undertaken, identifying clear assignments for each team member, and giving a timetable with definite deadline for each task.
 - d. Gathering an appropriate amount of high-quality data to address the problem of the research project.
 - e. Analyze the data using methods appropriate to the nature of the data.
 - f. Interpret the data and present a coherent conclusion.
2. The student will demonstrate proficiency in relevant software by scoring at least 70% in a faculty-prepared practical exercise. Studying the application of software packages for research, the student will:
 - g. Demonstrate literacy with the basic capabilities of the GIS software, as evidenced by a score of 70% or better on a faculty assigned exercise.
 - h. Be able to set up, conduct, and interpret the results of a parsimony analysis using PAUP and associated software packages, as evidenced by a score of 70% or better on a faculty assigned exercise.
3. The student will demonstrate proficiency in relevant scientific concepts by scoring at least 70% in a faculty-prepared assignment. Studying scientific concepts relevant to the research project, the student will:
 - i. Use basic statistics on a given set of data as relevant to the research project.
 - j. Use computer modeling on a given set of data, as relevant to the research project.
 - k. Describe the principles and limitations of a phylogenetic analysis.
 - l. List the basic principles of taxonomy and zoological nomenclature.
 - m. List the main anatomical features of selected osteological remains, as relevant to the research project.
 - n. The student will demonstrate proficiency in written/visual, and well as oral communication by scoring at least "proficient" in all categories of a writing and oral communication rubric when presenting research. Studying communication research, the student will:
 - o. Construct a poster of the research project using the software PowerPoint and present the results at a scientific venue.
 - p. Construct a PowerPoint presentation and communicate his research orally in class or at a scientific venue.

GEOL 2990. Earth Science Practicum**Course Description**

This course provides instruction and practice in computational methods used to solve Earth science problems. This course introduces simple ways to describe physical processes mathematically and approximate them numerically. Students will utilize spreadsheet, mapping, and graphics programs, and in the process get to review basic math and statistics.

Student Learning Outcomes

The Student Learning Outcomes of the Earth and Environmental Science program are that students will be able to:

1. Understand and apply the facts and concepts central to Earth science (e.g., geological processes and materials, Earth history, application of quantitative physics and chemistry to Earth processes).
2. Demonstrate a working knowledge of the skills and methods necessary to collect, analyze and report data relevant to the discipline (e.g., rock identification, field mapping, geophysical methods).
3. Conceptualize, abstract and solve both qualitative and quantitative problems in the discipline.
4. Integrate and synthesize disparate geoscientific information into a coherent understanding. All four of these Student Learning Outcomes will be addressed in this class with content focused principally on developing experience with tools to collect, analyze, and report data.

German (GRMN)

GRMN 1110. German I**Course Description**

Intended for students with no previous exposure to German, this course develops basic listening, speaking, reading, and writing skills aiming toward the ACTFL novice-mid level. This is an introductory course designed to teach the student to communicate in German in everyday situations and to develop an understanding of German cultures through the identification of cultural products and practices, of cultural perspectives, and the ability to function at a survival level in an authentic cultural content. This course will also develop the student's sense of personal and social responsibility through the identification of social issues.

Student Learning Outcomes

1. Students can communicate on very familiar topics using a variety of words and phrases that they have practiced and memorized.
2. Students can write lists and memorized phrases on familiar topics.
3. Students can recognize some familiar words and phrases when they hear them spoken.
4. Students can recognize some letters or characters.
5. Students can understand some learned or memorized words and phrases when they read.
6. Students can identify beliefs, behaviors and cultural artifacts of the German-speaking world.
7. In English, students will engage with social issues confronting the German-speaking world to develop their sense of personal and social responsibility.

GRMN 1120. German II**Course Description**

A continuation of German 1, students will develop a broader foundation in skills gained during the first semester, including understanding, speaking, reading and writing German aiming toward the ACTFL novice-high level. This course is designed to increase student fluency in German as applied to everyday situations. Students will also learn to recognize and understand various German products, practices, and perspectives, identifying common cultural patterns, describing basic cultural viewpoints, and further developing their sense of personal and social responsibility through the investigation of cultural issues.

Student Learning Outcomes

1. Students can communicate and exchange information about familiar topics using phrases and simple sentences, sometimes supported by memorized language.
2. Students can usually handle short social interactions in everyday situations by asking and answering simple questions.

3. Students can write short messages and notes on familiar topics related to everyday life.
4. Students can often understand words, phrases, and simple sentences related to everyday life.
5. Students can recognize pieces of information and sometimes understand the main topic of what is being said.
6. Students can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.
7. Students can sometimes understand the main idea of what they have read.
8. Students can describe and make comparisons between decisions about beliefs, behaviors and cultural artifacts of the German-speaking world.
9. Students will engage with social issues confronting the German-speaking world to continue to develop their sense of personal and social responsibility.

GRMN 2110. German III

Course Description

In this third semester course, students will continue to develop a broader foundation in skills gained during the first two semesters, including understanding, speaking, reading and writing German aiming toward the ACTFL intermediate-low level. This course is designed to teach the student to communicate in a more sustained way in areas of personal interest and in everyday situations. Students will engage in and analyze various German products, practices, and perspectives, as well as continue to develop their sense of personal and social responsibility through comparison and contrast of cultural perspectives.

Student Learning Outcomes

1. Students can participate in conversations on a number of familiar topics using simple sentences.
2. Students can handle short social interactions in everyday situations by asking and answering simple questions.
3. Students can write briefly about most familiar topics and present information using a series of simple sentences.
4. Students can understand the main idea in short, simple messages and presentations on familiar topics.
5. Students can understand the main idea of simple conversations that they overhear.
6. Students can understand the main idea of short and simple texts when the topic is familiar.
7. Students can analyze beliefs, behaviors and cultural artifacts of the German-speaking world, and discuss the nature and value of German products, practices, and perspectives.
8. Students will engage with social issues confronting the German-speaking world to continue to develop their sense of personal and social responsibility.

GRMN 2120. German IV

Course Description

In this fourth semester course, students will continue to broaden and refine skills gained during previous semesters, including understanding, speaking, reading and writing German aiming at the ACTFL intermediate-mid level. This course is

designed to teach the student to communicate in a more sustained way in situations that go beyond the everyday. Students will evaluate various German products, practices, and create ways to demonstrate their sense of personal and social responsibility through participation in cultural interaction.

Student Learning Outcomes

1. Students can participate in conversations on familiar topics using sentences and series of sentences.
2. Students can engage in short social interactions in everyday situations by asking and answering a variety of questions. Students can usually say what they want to say about themselves and their everyday life.
3. Students can write on a wide variety of familiar topics using connected sentences.
4. Students can understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
5. Students can understand the main idea of conversations that they overhear.
6. Students can understand the main idea of texts related to everyday life and personal interests or studies.
7. Students can analyze beliefs, behaviors and cultural artifacts of the German-speaking world, and recognize and discuss the representations and controversies of German products, practices, and perspectives.
8. Students will engage with social issues confronting the German-speaking world to create ways to demonstrate their sense of personal and social responsibility.

GRMN 2140. Intermediate German Conversation

Course Description

An intermediate German conversation course designed to achieve two primary goals: 1) to provide students of German additional experience speaking and listening, and 2) to offer an overview of current social, cultural and political topics relevant in Germany today.

Student Learning Outcomes

1. Students will recognize and use common word patterns and idiomatic expressions in German.
2. Students will communicate and comprehend narratives and descriptions of a factual nature in German.
3. Students will be able to communicate effectively in conversational situations in German.
4. Students will be able to distinguish the salient features of the cultures associated with German in historical and contemporary contexts.

GRMN 2227. Sickness, Insanity and Transgression in German Literature and Film

Course Description

In this course students will explore the concepts of physical and psychological health and happiness by analyzing the ways in which sickness, insanity and social transgression appear in a range of cultural records from the late 19th and early 20th centuries in Germany. We will review these concepts by looking at a range of cultural records, including literary texts, medical, psychological and contemporary scientific writings and films.

Student Learning Outcomes

1. Students will explore and discuss how diverse societies and cultures create social meaning in a historical context, and relate that to contemporary contexts.
2. Students will explore and explain the role played by different forms of cultural expression in the creation of communities of inclusion and exclusion.
3. Students will analyze cultural artifacts and design ways of understanding diverse human experiences in a historical context, and relate these to contemporary contexts.
4. Students will organize and write essays of cultural criticism, supporting arguments with appropriate quotations from primary and secondary texts, and using digital resources for their research.

Greek (GREK)

GREK 1110. Greek I

Course Description

This course serves as an introduction to the fundamentals of the historic Greek language and culture. The aims of this course are to acquire basic skills in reading, writing, and comprehension in order to read authentic Greek texts with the help of a dictionary. Students will also study the history of the Greek language, texts, and culture.

Student Learning Outcomes

By the end of this course, students will:

1. Have a basic sense of the history of the Greek language
2. Have a basic understanding of Greek grammar
3. Have learned a basic vocabulary of Greek words
4. Be able to use a lexicon to find appropriate meanings of Greek words within basic authentic Greek texts
5. Be able to read (aloud) and understand short, basic passages from authentic Greek texts
6. Be able to translate short, basic passages from authentic Greek texts
7. Be able to analyze the grammar and syntax of short, basic passages from authentic Greek texts
8. Be able to write short and basic sentences in Greek that are grammatically correct
9. Be able to discuss cultural behavior or issues related to the Hellenic world.

GREK 1120. Greek II

Course Description

This course continues the study of the historic Greek language and culture. The aims of this course are to continue to build basic skills in reading, writing, and comprehension in order to read authentic Greek texts with the help of a dictionary. Students will also continue to study the historical factors behind the developments of the Hellenic world and its texts.

Student Learning Outcomes

1. Build upon a basic knowledge of Greek grammar.
2. Build upon a basic-level Greek vocabulary.
3. Read and understand short, basic, and authentic Greek texts.
4. Accurately translate short, basic, and authentic Greek texts.
5. Develop knowledge of grammar and vocabulary to analyze authentic Greek texts.
6. Obtain an enhanced understanding of the historical development of the Greek language.
7. Identify patterns of cultural behavior or customs in the Hellenic world.
8. Be able to discuss a variety of issues related to the Hellenic culture.

GREK 2110. Greek III

Course Description

This course is the continuation of Greek II. The aims of this course are to develop skills in reading, writing, and comprehension in Greek. These include the grammar and vocabulary needed in order to read and understand authentic Greek texts with the help of a dictionary.

Student Learning Outcomes

Upon completion of the course,

1. Students should have a deeper understanding of Greek grammar
2. Students should have learned a wider vocabulary of Greek words
3. Students should be able to read (aloud), with understanding, passages from authentic Greek texts of moderate difficulty
4. Students should be able to translate accurately and analyze Greek sentences and passages from authentic Greek texts of moderate difficulty
5. Students should be familiar with the use of lexica and other aids for the study of Greek texts
6. Students should be able to discuss the cultural setting of selected Greek words

GREK 2120. Greek IV

Course Description

This course is the continuation of Greek III. The aims of this course are to develop skills in reading, writing, and comprehension in Greek. These include the grammar, vocabulary, and exegetical tools needed in order to read and understand Greek texts of moderate difficulty and complexity.

Student Learning Outcomes

Upon completion of the course,

1. students should have a deeper understanding of selected Greek texts relating to Western Civilization
2. students should have learned a wider vocabulary of Greek words
3. students should be able to read (aloud), with understanding, selected Greek texts of moderate complexity and difficulty
4. students should be able to translate and analyze Greek sentences and passages from selected Greek texts of moderate complexity and difficulty
5. students should be familiar with, and able to use effectively, lexica and other resources for the study of the Greek language and texts.
6. students should be able to write and/or word-process grammatically correct sentences in Greek
7. students should be able to discuss the cultural setting of selected Greek words and texts

Health Education (HLED)

HLED 1110. American Heart Association Heartsaver® First Aid & CPR/AED

Course Description

A video-based, instructor-led course that teaches students critical skills needed to respond to and manage an emergency until emergency medical services arrives. Skills covered in this course include first aid; choking relief in adults, children, and

infants; and what to do for sudden cardiac arrest in adults, children, and infants. Upon successful completion of the course, students will become eligible for AHA Heartsaver® First Aid & CPR/AED certification.

Student Learning Outcomes

1. Demonstrate the skills necessary to efficiently perform one (1) and two (2) rescuer CPR for adult, child, and infant victims of cardiac arrest at the Basic Life Support level.
2. Demonstrate the skills necessary to safely and effectively operate an automated external defibrillator (AED).
3. Demonstrate the skills necessary to intervene and care for an adult, child, or infant choking victim and be able to administer first-aid to this population.

HLED 1111. CPR First Aid and Safety

Course Description

This 2-week course is designed to prepare students with no or limited medical background experience and serves as the initial introduction and training in the areas of: BLS CPR training for the Health Care Provider, Heartsaver First Aid, Bloodborne Pathogens, Infection Control, Health Information Privacy and Accountability Act (HIPAA), and Fire Safety. This class prepares students for clinicals and work in the community setting. This is a 1 (one) credit hour course and is financial aid eligible.

Student Learning Outcomes

1. Demonstrate the skills necessary to efficiently perform 1 and 2-rescuer CPR for adult, child, and infant victims of cardiac arrest at the Basic Life Support level with all skills contained therein
2. Demonstrate the skills necessary to safely and effectively operate an automated external defibrillator (AED)
3. Demonstrate the skills necessary to intervene and care for an adult, child, or infant choking victim
4. Apply fundamentals knowledge of the basics of First Aid per the American Heart Association's Heartsaver First Aid course:
 - a. First Aid Basics
 - b. Medical Emergencies
 - c. Injury Emergencies
 - d. Environmental Emergencies

HLED 1112. Community First Aid and CPR

Course Description

A video-based, instructor-led course that teaches students how to recognize and manage a sudden accident or illness until emergency medical services arrive. Skills covered in this course include basic first aid, cardiopulmonary resuscitation, and automated defibrillation. Upon successful completion of the course, students will receive certification in each skill area.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. Possess the ability to recognize and react appropriately to an emergency situation.
2. To understand a citizen's role in the emergency response system.
3. Identify signs and symptoms of a breathing emergency and how to provide appropriate care.
4. Recognize the signs and symptoms of a cardiac emergency and how to provide appropriate care.
5. Identify signs and symptoms of shock and how to minimize its effects.
6. Identify signs and symptoms of sudden illness and know the proper method of care.
7. Demonstrate proficiency in the techniques of providing CPR to infant, child, and adult victims.
8. Demonstrate the ability to utilize an automated external defibrillator for an infant, child, or adult victim.
9. To meet the minimum standards for certification as established by the certifying organization.

HLED 1113. First Aid/CPR

Course Description

Not Available

Student Learning Outcomes

Not Available

HLED 1115. American Heart Association CPR

Course Description

The gross anatomy and physiology of the heart, electrical pathway, and respiratory system are discussed in preparation for CPR. Includes primary assessment and evaluation of the C-A-B sequence. Successful completion of this course will result in American Heart Association CPR certification.

Student Learning Outcomes

To train participants to save lives of victims in cardiac arrest through delivery of high-quality CPR.

HLED 1116. Survey of Health, Wellness and Public Safety

Course Description

This course will introduce the students to the programs in the School of Health, Wellness & Public Safety. Students will explore related careers through research, guest speakers and hands-on experiences in laboratory settings. Strategies to enhance college success will be explored and critical thinking will be emphasized throughout the course/

Student Learning Outcomes

1. Demonstrate familiarity with the various programs of study offered in the School of Health, Wellness & Public Safety.
2. Demonstrate familiarity with the various programs of study offered in the School of Health, Wellness & Public Safety.
3. Identify and articulate individual learning styles. Identify and apply strategies to enhance college success.
4. Research career options and identify the educational requirements and technical skills needed for success in the workplace.
5. Develop and apply critical thinking skills through experiential learning exercises.

HLED 1117. Clinical Preparation

Course Description

Designed to prepare students for their clinical experience in the health discipline they have chosen to study. The course will provide training in CPR, Blood Borne Pathogen, HIPAA, Fire Safety and First Aid. Be advised that CPR certification must be renewed every 2 years. Bloodborne Pathogen and HIPAA certifications must be renewed annually.

Student Learning Outcomes

1. Demonstrate the skills necessary to efficiently perform 1 and 2-rescuer CPR for adult, child, and infant victims of cardiac arrest at the Basic Life Support level with all skills contained therein
2. Demonstrate the skills necessary to safely and effectively operate an automated external defibrillator (AED)
3. Demonstrate the skills necessary to intervene and care for an adult, child, or infant choking victim
4. Apply fundamentals knowledge of the basics of First Aid per the American Heart Association's Heartsaver First Aid course:
 - a. First Aid Basics
 - b. Medical Emergencies
 - c. Injury Emergencies
 - d. Environmental Emergencies

HLED 1120. American Red Cross First Aid & CPR/AED

Course Description

Introduces students to the fundamentals, techniques and practices of standard First Aid, Safety and CPR/AED. Upon successful completion of the course, students will become eligible for ARC or AHA certification.

Student Learning Outcomes

1. Demonstrate proficiency in providing CPR for adults, children, and infants.
2. Demonstrate proficiency in providing airway intervention for adults, children, and infants experiencing a choking episode in a conscious and unconscious victim.
3. Demonstrate ability to recognize and respond appropriately to life-threatening emergencies.
4. Demonstrate how to protect the victim and yourself in an emergency using personal protective equipment.
5. Demonstrate the proper use of an Automated External Defibrillator (AED).
6. Interpret potentially dangerous situations and respond accordingly.

HLED 1130. Concepts of Health & Wellness

Course Description

Introduces the student to the “Seven Dimensions of Wellness” (physical, emotional, intellectual, interpersonal, spiritual, environmental, and financial). This course addresses topics including fitness, exercise, nutrition, stress management and chronic lifestyle-related diseases.

Student Learning Outcomes

1. Demonstrate the ability to make evidence-based decisions regarding health and wellness practices.
2. Demonstrate the ability to engage in various forms of health-related fitness activities and discuss appropriate modifications to such activities to account for individual differences.
3. Evaluate their current behavior and differentiate between health enhancing and health limiting behaviors.
4. List some approaches to successful stress management.
5. Demonstrate knowledge of appropriate behavior change strategies.
6. Demonstrate knowledge of the “Seven Dimensions of Wellness” (physical, emotional, intellectual, interpersonal, spiritual, environmental, and financial).
7. Identify nutritional requirements and components of a healthy diet.

HLED 1132. Fundamentals of Physical Well Being

Course Description

Concepts of physical well-being; encouragement of a variety of lifetime physical activities; cognitive components of physical fitness, nutrition,
Concepts of physical well-being; encouragement of a variety of lifetime physical activities; cognitive components of physical fitness, nutrition, stress management, disease prevention and other health-related topics.

Student Learning Outcomes

1. Understand physical health from the perspectives of both the internal body and the external body
2. Gain knowledge of nutrition, mental, and environmental health
3. Discuss the significance of physical well-being with others and provide knowledge on different health modalities
4. Getting information and implementation about the health event
5. Discuss how physical activity is related to overall health and wellness (mental, emotional, social, physical, and environmental health).

HLED 1135. Fitness and Wellness Double number use – NMHED to correct

Course Description

An introduction to current physical activity guidelines emphasizing activities that improve the five health-related components of fitness. Current principles and guidelines of fitness and nutrition are used as the foundation for designing exercise programs to meet the student's unique fitness and wellness needs.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the most current physical activity guidelines
2. Interpret individual fitness assessment and apply the results to personal fitness goals
3. Identify and explain the six fitness principles
4. Execute a safe and effective exercise regimen
5. Demonstrate an understanding of basic nutrition as it relates to the dietary guidelines

HLED 1135. Concepts in Physical Education Double number use – NMHED to correct

Course Description

This course offers an examination of the interdisciplinary approach to the science and study of human movement. Students will receive an orientation to the wide array of fields related to physical education and exercise science. This course will explore the history, educational pathways, requirements, career opportunities, professional affiliations, certifications, and current issues and challenges within the field.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. Develop a knowledge and understanding of various health, wellness, and fitness concepts.
2. Develop an understanding of the importance of physical education and exercise science as it relates to the prevention of obesity and chronic disease.
3. Establish workout strategies that promote measures of health such as cardiorespiratory endurance, muscular strength and flexibility, balance, coordination, and personal wellbeing.
3. Recognize the benefits of physical activity and the importance to overall health and wellness.
4. Realize the impact of participation and achievement in physical activity in developing confidence, pride, and self-identity.
5. Gain an appreciation for activities that have carry over value to leisure time activities.

HLED 1140. Water Safety Instruction

Course Description

Will train students in the Water Safety Instruction program of the American Red Cross (ARC). Students will gain knowledge in teaching people how to be safe in, on or around water and teaching individuals of different ages and abilities how to swim. At the successful completion of the required skills test and written exam, students will receive an ARC Water Safety Instruction certificate.

Student Learning Outcomes

1. Demonstrate all ARC swimming strokes.
2. Explain and demonstrate water safety skills.
3. Plan, organize and execute a swimming class.
4. Demonstrate knowledge of safety and liability issues around the aquatics environment.

HLED 1150. Lifeguarding

Course Description

Provides knowledge and skills to prevent, recognize and respond to aquatic emergencies and to provide professional-level care for breathing and cardiac emergencies, injuries and sudden illnesses until emergency medical services personnel take over. At the successful completion of the required skills and written exams, students will receive an American Red Cross (ARC) Lifeguard Certification, which includes certifications in Lifeguarding, First Aid, CPR and AED.

Student Learning Outcomes

1. Demonstrate effective lifeguard skills and pass written exam.
2. Demonstrate effective victim recognition skills and pass written exam.
3. Demonstrate ARC CPR/ AED/ First Aid skills and pass written exam.

HLED 1155. Lifeguard Recertification**Course Description**

Will give currently American Red Cross (ARC) certified lifeguards a review of current ARC certification content and will train students to successfully complete the knowledge and skill evaluations required for ARC recertification. At the successful completion of the required skills and written exam, students will receive an ARC Lifeguard Training certificate, which will include the certifications of ARC First Aid at the workplace and ARC CPR for the professional rescuer.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate effective lifeguard skills
2. Demonstrate effective victim rescue skills
3. Demonstrate ARC CPR/AED skills and pass written exam.
4. Demonstrate ARC First Aid skills and pass written exam.

HLED 1160. Stress Management**Course Description**

Introduces students to the pathophysiology of stress. Emphasis will be placed on the detrimental effects of stress on the body, as well as on the impact of stress-eating on the body. A variety of stress management techniques will be explored to promote enhanced well-being.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define the physiological effects of stress on the body
2. Define the effects of stress on the immune system
3. Explain the causes and effects of stress-eating
4. Apply stress management techniques to enhance emotional, Intellectual, social and environmental wellness

HLED 1170. Fitness Concepts for Special Populations**Course Description**

This course is designed to provide knowledge and skills needed to work with individuals with a variety of disabilities and the effects these disabilities have on their performance in physical education.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Explain the federal law mandating services for students with disabilities.
2. Describe the characteristics of individuals with disabilities or with special needs.
3. Identify the benefits of physical education for individuals with special populations,
4. Explain how to apply appropriate activities such as; cardiovascular endurance, strength and muscular endurance, and flexibility programs for individuals with special needs.
5. Define and explain the concept of inclusion
6. Differentiate the developmental levels of functioning from which to plan physical activities for individuals with special needs.
7. Distinguish between the indicated and contraindicated activities for a variety of disabling conditions.

8. Explain the importance and value of a positive self-concept and emotional well-being related to the diversity of special populations.
9. Write an appropriate individual educational program (IEP) with someone with special needs.
10. Describe and explain the public issues, organizations and opportunities concerning those with special needs.

HLED 1180. Introduction to Personal Training

Course Description

The purpose of this course is to instruct and improve students' knowledge on how to develop the skills and knowledge necessary to be a Personal Trainer; to begin preparation to take and pass a Personal Trainers Certification; and to develop the ability to critically think through and apply information acquired to make rational decisions associated to fitness training.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Demonstrate through examination the scientific principles involved in weight training
2. Demonstrate through examination the scientific principles involved in cardiovascular training
3. Demonstrate through examination how to develop exercise prescriptions for a vast array of clients
4. Demonstrate through examination proper techniques on all areas of fitness
5. Demonstrate through examination how to maximize client's potential
6. Demonstrate through examination how to teach clients lifelong behaviors required to maintain a healthy lifestyle

HLED 1210. Babysitter's Training Certification

Course Description

Provides youth who are planning to babysit with the knowledge and skills necessary to safely and responsibly give care for children and infants. This class will help students develop leadership skills and learn how to develop a babysitting business, keep themselves and others safe and help children behave. At the successful completion of the required skills and written exam, students will receive the American Red Cross (ARC) Babysitter's Training certificate, which includes ARC Infant/ Child First Aid and CPR.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. List good babysitting. business practices and demonstrate professional work behavior
2. Demonstrate knowledge on how to care for infants and children
3. Recognize an emergency
4. Demonstrate ARC CPR skills for infant and children and. pass written exam.
5. Demonstrate ARC First Aid skills for infants and children and pass written exam.

HLED 1220. Personal Health Management

Course Description

An introduction to the major areas of information that help humans achieve, maintain, and promote positive health. Topics covered include nutrition, mental and physical health, drugs, human sexuality, prevention and control of diseases and injury, nutrition, and societal and environmental impacts on health.

Student Learning Outcomes

1. Describe and understand the dimensions of well ness
2. Develop a personal plan and skills for being healthy for life
3. Describe and understand stress, sources of stress, the relationship between stress and disease, and techniques for managing stress
4. Define and understand aspects of psychological health, psychological disorders, and psychological health strategies
5. Understand and describe various aspects of intimate relationships

6. Identify and understand male and female sexual and reproductive anatomy as well as the aspects of sexual function and behavior
7. Understand fertility, pregnancy, and childbirth
8. Identify and understand various methods of contraception
9. Identify and describe various aspects of the abortion issue
10. Identify and describe signs, symptoms, transmission and prevention of STIs
11. Describe and understand aspects of drug use and abuse
12. Understand the nature of alcohol and tobacco, problems associated with alcohol and tobacco abuse, benefits of alcohol, and effects on health
13. Describe and understand the components of a healthy diet and a personal healthy diet plan
14. Describe and understand aspects of physical fitness
15. Identify major risk factors and preventive measures for disease
16. Identify common diseases and prevention
17. Identify and describe aspects of the body's immune system and various sources of disease
18. Understand how to protect yourself from unintentional injuries and violence
19. Recognize and describe environmental health concerns
20. Think critically about the relationship between personal health and societal/environmental factors.

HLED 1225. Weight Management and Exercise

Course Description

A class designed to assist in body fat loss through adequate nutrition, physical activity, and behavior modification. Emphasis is placed on developing an exercise routine for weight management using a step counter/pedometer. Healthy ways to increase lean body mass will be explored.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the ACSM physical activity guidelines and associated health benefits
2. Explain the impact of diet and exercise on weight management
3. Apply principles of behavior modification to weight management
4. Recall general dietary guidelines as they relate to personal nutrition
5. Effectively use a step counter/ pedometer to track physical activity
6. Explain the causes and effects of emotional eating
7. Describe ways to increase lean body mass

HLED 1510. Medical Terminology

Course Description

Prefixes, suffixes, and root words of Greek and/or Latin origin frequently used in medical terminology. Word part combination practices, pronunciation, spelling and common medical abbreviations.

Student Learning Outcomes

HLED 2110. Principles of Coaching

Course Description

Explores methods and principles of coaching individual and team sports at the secondary and postsecondary levels, including discipline techniques, curriculum planning, ethics, motivation, budget management, and public relations. The course provides an understanding of a comprehensive coaching program.

Student Learning Outcomes

1. Demonstrate mastery of skills such as budget planning, scheduling, equipment care, and transportation.
2. Describe coaching styles and principles of a positive coaching philosophy.
3. Identify coaching objectives related to player development.
4. Identify the principles of reinforcement and motivation.
5. Identify the importance of risk management, self-management, and team management.
6. Identify various challenges related to coaching and how to minimize them.

HLED 2120. Techniques of Coaching Basketball

Course Description

This course will cover all aspects of coaching ranging from coaching philosophy to player development. Detailed lists of the sections covered in this class are located in the calendar portion of the syllabus. This course is designed to build a foundation in the understanding of coaching at all levels.

Student Learning Outcomes

Upon finishing this class every student will have gained knowledge in the field of coaching basketball. This involves understanding different aspects of coaching and the processes in which successful coach's implement.

HLED 2125. Officiating of Sport

Course Description

Theories of sports officiating including rules, regulations, training and evaluation.

Student Learning Outcomes

At the conclusion of the course the student should have an appreciation of the purpose and scope of a successful sports official.

HLED 2130. Consumer Health Education

Course Description

Acquire the knowledge and skills related to consumer health. Learn how to choose wisely from the menu of health products and services that affect you and your family's health.

Student Learning Outcomes

1. Identify and describe consumer health issues
2. Develop an understanding of the importance of fitness and nutrition and how to choose their consumer resources carefully related to these topics.
3. Be able to identify and evaluate sources of consumer health information.
4. Describe how consumers can make informed decisions concerning health products and services.
5. Identify consumer laws, agencies, and strategies that protect the consumer.

HLED 2131. IM Instruction in Lifestyle Change

Course Description

Health-risk appraisals and their application to lifestyle change. Topics include weight control, stress management and the principles of exercise adherence. Emphasis is on techniques in behavior modification, motivation, teaching and counseling, and behavior as lifestyles change.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Instruct an individual using behavior modification

2. Devise strategies to promote exercise initiation and exercise adherence
3. Apply behavior modification techniques and motivational strategies to instruction in lifestyle change
4. Demonstrate instructional and counseling techniques appropriate for use in lifestyle change programs

HLED 2135. Basic Care and Prevention of Athletic Injuries

Course Description

Student will be able to identify injury and illness risk factors associated with participation in competitive athletics and learn to plan and implement all components of a comprehensive injury and illness prevention program. Students will learn the most common athletic injuries in sport and appropriate timelines for return to play. Students will get a hands-on experience in the basic skills required to prevent injuries in an athletic environment.

Student Learning Outcomes

1. Introduction to the basic components of a comprehensive athletic injury/illness prevention program.
2. Gain understanding of the body's response to trauma
3. Learn about the causes and types of common athletic injuries.
4. Discuss the legal implications of dealing with athletic injuries.
5. Introduce basic injury assessment techniques.
6. Demonstrate proper techniques and applications of taping and strapping.
7. Identify proper management of environmental sports conditions.

HLED 2140. Fitness for Health and Sport (Not on CCNS HSRC tab or on Processing Tracking Lag

Course Description

A study of fitness needs for health enhancement and sport participation. Restricted to: P E,SP M,KIN,S ED majors.

Student Learning Outcomes

1. Recognize the importance of incorporating positive fitness/wellness habits within one's lifestyle in terms of enhancing longevity, disease prevention, and overall quality of life.
2. Examine various physiological benefits and adaptations to such factors as muscular strength, muscular endurance, cardiovascular fitness, flexibility, and body composition when certain stimuli are applied to each. Assessment of these characteristics will be witnessed primarily in practical experiences within the course's laboratory settings.
3. Identify current trends and/or health patterns within society in regard to scientific findings, declination in health habits, and increases in health ailments.
4. Compare various nutritional concepts, specifically proper dietary habits and their impact on weight management aspects.
5. Describe the role of physical activity and sport specific training play on competitive athletic performance.

HLED 2150. Foundations of Health Promotion

Course Description

For those considering becoming health majors or minors in school health or community health. Exploration of the basic philosophy and fundamental practices currently utilized in health education.

Student Learning Outcomes

1. Understand the background of the profession, including basic terms, concepts and principles related to health education.
2. Know and understand significant points in history that influenced public health and health education from the middle ages to the present.
3. Identify, understand and explain the various philosophical foundations of health.
4. Understand and become familiar with theoretical foundations of health education.
5. Define, understand and identify principles of ethics in health education.
6. Identify and understand roles, responsibilities, certifications and advanced study in health education.

7. Describe settings for and responsibilities of health educators.
8. Identify and explain the purpose of the various health related agencies and associations.
9. Understand and engage in the appropriate steps for reviewing health related literature, and
10. Identify and understand future trends in health education.

HLED 2160. Nutrition for Exercise and Sport

Course Description

Nutrition strategy for optimal health, including disease prevention and human performance. Topics include selecting healthy foods, nutrient metabolism, energy use, ergogenic aids, herbal supplements, and holistic health science philosophy.

Student Learning Outcomes

By the end of the course, the student will:

1. Understand sport nutrition and why it is studied in the Exercise & Sport Sciences curriculum (content)
2. Understand the goals of sport nutrition (content)
3. Understand the practical application of sport nutrition (content)
4. Understand the qualitative analysis of sport nutrition as it related to the health of the person/athlete (content, critical and reflective thinking)
5. Understand the strategies for optimal health, disease prevention, and human performance (content, critical and reflective thinking)
6. Perform a 7-day caloric intake and energy expenditure analysis on him/herself. (content, critical and reflective thinking, use of technology)

HLED 2170. Motor Behavior I

Course Description

Study of basic motor behavior theories and principles; developmental skill acquisition and issues related to exercise; contextual influences on motor tasks; developmentally appropriate assessment.

Student Learning Outcomes

1. Content knowledge: A physical education teacher can
 - a. Identify critical elements for basic motor skills and develop appropriate sequences.
 - b. Describe and demonstrate concepts and strategies related to skill movement and physical activity.
 - c. Describe and apply scientific and technological concepts of anatomy, physiology, biomechanics, motor learning, and motor development.
2. Growth and development: A physical education teacher understands how to
 - a. Assess individual and group performance in order to design safe instruction that meets learner developmental needs in the psychomotor, cognitive, affective, and fitness domains.
 - b. Identify, select, and implement appropriate learning/practice opportunities based on expected progressions.
3. Diverse learners: A physical education teacher plans to
 - a. Identify, select, and implement appropriate instruction that is sensitive to the strengths/weaknesses, multiple needs, learning styles, and experiences of learners.
 - b. Create a learning environment which respects and incorporates learners' personal, family, cultural, and community experiences.
4. Planning and instruction: A physical education teacher plans to
 - a. Design and implement learning experiences that are safe, appropriate, realistic, and relevant based on principles of effective instruction.
5. Learner assessment: A physical education teacher understands how to
 - a. Use a variety of formal and informal assessment techniques to assess learner performance, provide feedback, and communicate learner progress.
 - b. Use and interpret performance data to make informed instructional decisions.

HLED 2170L. Motor Behavior Lab

Course Description

Practical applications of basic motor behavior knowledge through a hands-on approach.

Student Learning Outcomes

1. Content knowledge: A physical education teacher can
 - a. Identify critical elements for basic motor skills and develop appropriate sequences.
 - b. Describe and demonstrate concepts and strategies related to skill movement and physical activity.
 - c. Describe and apply scientific and technological concepts of anatomy, physiology, biomechanics, motor learning, and motor development.
2. Growth and development: A physical education teacher understands how to
 - a. Assess individual and group performance in order to design safe instruction that meets learner developmental needs in the psychomotor, cognitive, affective, and fitness domains.
 - b. Identify, select, and implement appropriate learning/practice opportunities based on expected progressions.
3. Diverse learners: A physical education teacher plans to
 - a. Identify, select, and implement appropriate instruction that is sensitive to the strengths/weaknesses, multiple needs, learning styles, and experiences of learners.
 - b. Create a learning environment which respects and incorporates learners' personal, family, cultural, and community experiences.
4. Planning and instruction: A physical education teacher plans to
 - a. Design and implement learning experiences that are safe, appropriate, realistic, and relevant based on principles of effective instruction.
5. Learner assessment: A physical education teacher understands how to
 - a. Use a variety of formal and informal assessment techniques to assess learner performance, provide feedback, and communicate learner progress.
 - b. Use and interpret performance data to make informed instructional decisions.

HLED 2210. Education for AIDS Prevention

Course Description

Familiarize yourself concerning the HIV/AIDS epidemic with awareness including basic information, prevention, history, compassion, legal issues, testing, and societal implications.

Student Learning Outcomes

1. Identify and describe AIDS/ Human Immunodeficiency Virus (HIV)
2. Identify a variety of causes of AIDS
3. Describe the epidemiology and transmission of HIV
4. Develop an understanding of preventing the Transmission of HIV
5. Describe AIDS/HIV in our society
6. Become familiar with testing for HIV
7. Have an appreciation of AIDS/HIV education

HLED 2220. Consumer Health

Course Description

This course will focus on preparation in knowledge and skills related to consumers of health products and services.

Student Learning Outcomes

1. Demonstrate an ability to read, interpret, compare, and assess information relevant to consumer behavior.
2. Think critically and creatively about health and health care, products and services at individual and societal levels.
3. Increase your personal health literacy and decision-making skills.

4. Differentiate between quackery and legitimate health care providers, products, and services.
5. Explore and discuss the role of media in consumer health

HLED 2230. Observations in Health and Physical Education

Course Description

This course is designed to give the student the opportunity to experience the behind-the-scenes work of an instructor in a typical activity class as well as the actual instructing of the course so they can better understand teaching and learning in the Health and Physical Education setting. The student will select an activity course in a predetermined area of interest and assist the instructor with the responsibilities of that class.

Student Learning Outcomes

1. Construct and maintain a daily log of instructional activity.
2. Assist the instructor and engage with course as needed.
3. Write a well-developed report (2-3 page typed) of the experience of "shadowing" the instructor and the observations of teaching styles, techniques, and methods.

HLED 2320. Teaching Movement: Aquatics

Course Description

This course will introduce all types of swimming strokes including the front and back crawl, breaststroke, sidestroke, and elementary backstroke. Other skills such as fitness swimming, diving and water exercise will also be taught.

Student Learning Outcomes

At the conclusion of the course the student will be familiar with all the taught swimming and diving skills.

HLED 2321. Theory and Technique of Aquatics

Course Description

Introduction to fundamental aquatics knowledge and skills.

Student Learning Outcomes

Not Available

HLED 2325. Teaching Movement: Health and Fitness Instruction

Course Description

Rules and fundamental skills for personal training and other fitness instruction, techniques for teaching those skills, strategies for practicing skills and assessment methods appropriate to the activity.

Student Learning Outcomes

1. Explain the characteristics of various health fitness activities.
2. Identify the Health and fitness skills in cardiovascular, strengthening, flexibility, balance, and other activities.
3. Create proper goals, strategies, and methods of activity instruction for fitness and health.
4. Implement appropriate instructional cues and assessments to meet the activity goals for each learner.
5. Develop communication and management skills in teaching to encourage and supporting the learner's improvement, development, and achievement.

HLED 2330. Teaching Movement: Fitness Activities

Course Description

Teaching movement courses are designed to prepare physical educators for teaching skills related to physical activity. Classes cover rules of and fundamental skills for activity, techniques for teaching those skills, strategies for practicing skills, and assessment methods appropriate to the activity.

Student Learning Outcomes

Students will be able to:

1. A2 – model with competence basic motor skills and physical activities (e.g., weight training exercises, step aerobics, aqua aerobics);
2. A3 – describe and demonstrate concepts and strategies related to skill movement and physical activity;
3. A8 – create and use appropriate instructional cues and prompts for basic motor skills, rhythms, and physical activity;
4. D4 – use managerial and instructional routines which create smoothly functioning learning experiences;
5. D5 – organize, allocate, and manage resources (i.e., time, space, equipment, activities, and teacher/student interaction) to provide active and equitable learning experiences;
6. F6 – design and implement learning experiences that are safe, appropriate, realistic, and relevant based on principles of effective instruction; such instruction shall activate learners’ prior knowledge, anticipate preconceptions, encourage exploration and problem solving, and build on skills and experiences;
7. F7 – use demonstrations and explanations to link physical activity concepts to appropriate learning experiences.

HLED 2335. Teaching Movement: Raquet Sports

Course Description

Rules of and fundamental skills for racquet sports (tennis, racquetball, etc.), techniques for teaching those skills, strategies for practicing skills and assessment methods appropriate to the activity.

Student Learning Outcomes

1. Describe the features of diverse racquet sports.
2. Identify the different racquet sports, such as pickleball, badminton, tennis, and table tennis.
3. Build practical goals, strategies, and methods of activity instruction for racquet sports.
4. Conduct appropriate instructions with cues, comments, and feedback to meet the activity goals for individuals.
5. Develop communication and interaction as well as management skills in racquet sports.

HLED 2336. Teaching Movement: Strength and Olympic Lifts

Course Description

Safety and fundamental skills for Olympic style weight training, techniques for teaching those skills, strategies for practicing skills and assessment methods appropriate to the activities.

Student Learning Outcomes

1. Clarify definitions and accurately use the standard terminology associated with strength training, powerlifting, and Olympic lifting.
2. Identify and describe the major physiological adaptations that occur in response to resistance training.
3. Explain the principles of training and their application to designing effective strength and power programs.
4. Execute the fundamental strength lifts with proper, safe, and efficient technique.
5. Develop modifications of training programs based on individual needs, goals, training history, and contraindications

HLED 2340. Teaching Movement: Team Sports

Course Description

Teaching movement courses are designed to prepare physical educators for teaching skills related to physical activity. Classes cover rules of and fundamental skills for activity, techniques for teaching those skills, strategies for practicing skills, and assessment methods appropriate to the activity.

Student Learning Outcomes

Students will be able to:

1. A2 – model with competence basic manipulative skills, strategies, and methods of various team sports and lead-up games.
2. A3 – describe and demonstrate concepts and strategies related to specific sport-related skills, including rules related to each game.
3. A8 – create and use appropriate instructional cues and prompts.

4. D4 – use managerial and instructional routines which create smoothly functioning learning experiences.
5. D5 – organize, allocate, and manage resources (i.e., time, space, equipment, activities, and teacher/student interaction) to provide active and equitable learning experiences.
6. F6 – design and implement learning experiences that are safe, appropriate, realistic, and relevant based on principles of effective instruction; such instruction shall activate learners' prior knowledge, anticipate preconceptions, encourage exploration and problem solving, and build on skills and experiences.
7. F7 – use demonstrations and explanations to link physical activity concepts to appropriate learning experiences.

HLED 2410. CPR Re-certification

Course Description

CPR Re-certification

Student Learning Outcomes

The purpose of CPR Re-certification is to instruct students on how to properly perform Cardiopulmonary Resuscitation (CPR) and use an Automated External Defibrillator (AED) to save a life if anyone goes into cardiac arrest. This course instructs on how to recognize a person who has lost their pulse and there is no breathing. How to perform CPR on a victim until the ambulance arrives. How to breathe for a victim, how to push on the victim's chest to keep blood flowing through the body. This includes adults, children and infants. This course also teaches how to recognize and help a choking victim using the Heimlich maneuver.

HLED 2510. History & Philosophy of PE

Course Description

Provides an understanding and appreciation of contemporary physical education based upon knowledge of past social forces, conditions, movements, and philosophies which have shaped the present. Writing Intensive.

Student Learning Outcomes

1. Demonstrate a comprehensive understanding of the historical evolution of physical education, recognizing the key social forces, conditions, movements, and significant philosophies that have contributed to its development
2. Critically assess the philosophical underpinnings of physical education, including the examination of various philosophical perspectives that have influenced the field's concepts and practices
3. Articulate the contemporary relevance of historical and philosophical insights in the context of present-day physical education, highlighting connections between past developments and current practices
4. Recognize and appreciate the cultural diversity that has shaped physical education throughout history, acknowledging the impact of different societies, traditions, and belief systems
5. Develop effective written communication skills by completing writing-intensive assignments, enabling students to express their ideas, analyses, and reflections coherently and persuasively

HLED 2520. Media and Public Relations

Course Description

This course provides a survey and analysis of the best practices and techniques for effective communication in sports organizations. Topics include defining, developing, and delivering an effective media campaign; using mass and social media platforms for brands and teams; and ethical and legal issues (media rights, etc.) Students will be required to develop a variety of different publications (interviews, news releases, media brochures etc.) for different types of events.

Student Learning Outcomes

1. Students will attain a basic understanding of how public relations works and has an impact on the sport world.
2. Students will learn the entire encompassing involvement that public relations has and its importance to daily life within the sporting realm.
3. To attain a greater knowledge of various aspects involving public relations.

4. The student will be exposed to the world of public relations through a sport setting, which will involve work through the eyes of sports personnel and not through the corporate avenues.

HLED 2521. Service Marketing for Fitness Program

Course Description

This course is designed to equip aspiring and current fitness professionals with the foundational skills in service marketing, self-promotion, interpersonal communication, and basic business practices critical for success in the health and fitness industry. Students will explore strategies for building strong client relationships, effective communication of value, and leveraging both digital and in-person tools to retain clients. This course includes hands-on projects, peer discussions, and practical exercises to enhance confidence, professionalism, and marketing skills tailored for students in the final stages of the program or current professionals looking to gain a competitive edge for their business or practice.

Student Learning Outcomes

1. Identify and justify a target market and at least one niche clientele group using demographic and psychographic data to inform service promotion and customization.
2. Explain basic business operations, including safety and legal concerns, relevant to fitness professionals and personal training services.
3. Collect and evaluate client feedback and implement at least one documented service improvement to enhance service quality and client experience.
4. Develop a basic marketing plan and promotional strategy for health and fitness services.
5. Apply principles of service marketing excellence to propose strategies that build long-term client loyalty.
6. Design promotional materials and digital content (e.g., flyers, social media posts, email campaigns) to support client or business growth.
7. Create a structured weekly schedule that balances in-person services with marketing, programming, and administrative responsibilities of the fitness professional.
8. Create and implement client engagement and retention strategies, including personalized services, loyalty programs, and digital communication methods.
9. Demonstrate effective interpersonal and client communication skills in simulated or real client interactions.
10. Present and promote their services clearly and professionally, demonstrating confidence through verbal delivery, body language, and message clarity.

HLED 2530. Sexual Health Promotion and Education

Course Description

This course provides an introduction and basic knowledge about human sexuality including anatomical, physiological, psycho-social, and ethical components. Reproduction, contraception, sexually transmitted disease, sexual health and sexual dysfunctions are among areas examined.

Student Learning Outcomes

1. Discuss current research methods in human sexuality issues relevant to principles and theories that help promote a healthy sexual life.
2. Analyze female and male sexual anatomy and physiology, conception and contraception, pregnancy, childbirth, abortion, sexual behaviors and fantasies, sexual dysfunction, sexual coercion, concepts about sexually transmitted diseases, and HIV/AIDS.
3. Evaluate developmental perspectives relevant to sexuality and childhood, adolescence, adulthood, sexuality and disability, sexuality over a lifespan, gender identity, orientation, and gender roles.

4. Compare psychosocial perspective related to the notions of loving and being loved, and the concepts of intimacy, relationships, and communication during sexual relationships.
5. Examine lase and religious and ethical perspectives on sexuality.

HLED 2630. Pharmacology Education for Healthcare Professionals

Course Description

Students will be introduced to the basic principles of pharmacology. This course is aimed at those pursuing a healthcare profession, such as athletic trainers, physical therapists, etc.,, as well as future teachers and coaches.

Student Learning Outcomes

1. Students will be introduced to the basic principles of pharmacology.
2. Students will learn how medications can be safely administered through a variety of routes.
3. Students will learn what regulations are in place for medication administration and how a drug becomes approved by the controlling regulatory agency.
4. Students will learn how to manage medications in a healthcare profession setting as well as a school setting.
5. Students will learn the major drug classifications.
6. Students will understand and be able to identify the physiological effects, indications, and contraindications for selected classifications of drugs.

HLED 2990. Health Services Management Practicum

Course Description

Provides a simulated or clinical learning experience in a health care facility. The experience focuses on the practice of skills related to the laws and principles of health care, budget and finance in the healthcare setting, application of business and personnel management practices and organizational policies and procedures, technology, data management and reporting, medical record procedures, regulatory compliance, and monitoring of facilities, equipment and/or operational systems. This is an unpaid work experience with a minimum of 45 hours. Students work with the instructor on specific topics related to the program.

Student Learning Outcomes

Participate in or observe each of the following skills either through course projects/assignments or during the extern/practicum experience.

1. Practice skills related to the laws, regulations, and principles of health care.
 - a. Identify situations where healthcare management principles are used.
 - b. Identify important ethical, security, and privacy issues in health services management settings.
2. Budget and finance in the healthcare setting.
 - a. Describe revenue management guidelines as it applies to health services management.
3. Application of business and personnel management practices, operations, and organizational P&Ps.
 - a. Describe daily activities, supervisory/management policies, and procedures.
 - b. Describe management responsibilities.
4. Technology, data management, and reporting.
 - a. Identify facility, local, state, or federal record retention guidelines.
5. Medical record procedures
 - a. Identify methods of reviewing the release of information requests for completeness and accuracy.
 - b. Identify and explain important ethical, security, and privacy issues in HIM settings.
 - c. Identify facility, local, state, or federal record retention guidelines.

HLED 2996. Topics in Health Education

Course Description

Varies

Student Learning Outcomes

Varies

Holistic Health and Healing Arts (HHHA)

HHHA 1110. Introduction to Healing Arts**Course Description**

This entirely-online class grounds students in the foundation of Holistic Health and Healing Arts, introducing a wide range of healing modalities so that students can discover what works best for them

Student Learning Outcomes

1. Explain the philosophy and concepts of alternative, integrated, and complementary health care models.
2. Compare systems of health such as conventional and integrative medicine.
3. Explain the philosophy and concepts of Aromatherapy, Flower Essences, Homeopathy, Herbal Medicine, Acupuncture, Ayurvedic Medicine, Traditional Chinese Medicine, Neural Therapy, Naturopathic Medicine, and Nutritional Medicine.
4. Discuss the importance of a healthy and nutritious diet.
5. Explain the advantages and effects of Chiropractic, Craniosacral Therapy, Osteopathic Medicine, and Orthomolecular Therapy.
6. Study the 'Complete System of Health' of Yoga and Qigong/Tai Chi.
7. Explain the healing effects of Longevity Medicine, Sound Therapy, Hypnotherapy, Energy Medicine, and Guided Imagery.
8. Review an overview of Mind/Body Medicine.
9. Apply therapeutic modalities to common health conditions.
10. Identify career and academic pathways in the field of integrative medicine and holistic healing

HHHA 1111. Meditation for Wellness**Course Description**

This course is an introductory course on meditation for health and wellness. We will explore meditation with a holistic perspective by learning some basic practices from a variety of traditions, including Taoism, Buddhism, Yoga, and Neuroscience. The aim is to help new meditators to develop a regular practice that suits their individual needs and to create more health, wellness, awareness, concentration, and peace of mind.

Student Learning Outcomes

1. Students will be able to, in verbal quizzes in class, identify the disciplines to which various meditation techniques belong.
2. Students, assessed by instructor observation, will demonstrate their concentration through participation in guided meditative practices, which will include movement and breath techniques, and they will demonstrate respectful communication by making supportive comments to their peers in class discussion.
3. Students will be able to pinpoint the meditative techniques that work best for them and create a regular, personal meditation practice outside of class that suits their individual needs, logging these practices and journaling about them.
4. Students will share their observations in class and in their journals about how meditation has impacted their moods and general wellbeing.

HHHA 1112. Meditation, Consciousness and Self-Healing

Course Description

This course offers introduction to meditation and related practices such as mindfulness and moving contemplative forms such as yoga and chi gong, and the relationship of these processes to healing. Each class will include experiential exercises designed to illustrate stress reduction, meditation and awareness-building tools. Home practice will also be a featured component of this class. Students will track their process through the keeping of a weekly journal and will present a final project or paper as a summary of their learning throughout the semester. This class is a requirement for the HHHA Certificate

Student Learning Outcomes

1. Student Outcomes: As evaluated through weekly journal, class participation and preparation, and final project/presentations, students should be able to.
2. Demonstrate a basic but thorough understanding of the fundamental elements of meditation, mindfulness, and emotional self-healing work.
3. Demonstrate a thorough understanding of moving contemplative forms such as qigong.
4. Demonstrate a thorough understanding of walking meditation.
5. Develop an ability to sustain some degree of mindfulness in daily life.
6. Develop and sustain a consistent home practice in at least one of these areas.

HHHA 1114. Hatha Yoga

Course Description

This course, a fusion of discussions and physical yoga practices, is required for UNM Taos's 200-hour Yoga Teacher Training, though it is also open to students who are interested in deepening their own practices and not necessarily interested in teaching. The discussions, which are supported by readings of Patanjali's Yoga Sutras and B.K.S. Iyengar's Light on Yoga, illuminate the historical and philosophical traditions underpinning modern yoga. The yoga practices are meant to increase strength and flexibility while also invoking a sense of calm vitality, and students are always encouraged to work at the intensity that serves them, and to skip or modify poses as needed. Students are expected to contribute to discussions in class and on-line, teach poses to the group, take quizzes, and complete other assignments.

Student Learning Outcomes

1. Distill key philosophical concepts in online quizzes, online discussion boards, and in-class discussions.
2. Reflect their understanding of poses through written pose descriptions and through the short practices they lead.
3. Decide on the versions of poses that work best for them in our physical practices.
4. Identify the breathwork and meditative practices that are key to their own relaxation and teach these to fellow students.

HHA 1115. Tai Chi and Qigong

Course Description

This course will provide a foundation for developing a personal daily practice of meditative movement. Students will learn to cultivate traditional Taoist virtues such as acceptance, patience, and simplicity and explore how these concepts may be applied for the benefit of society. Students will practice the basics of posture, breath, stance, and movement as they pertain to a meditative martial arts practice, in the process, gaining improved balance, strength and flexibility. They will also learn self-massage and breathing techniques for the purpose of improved health and emotional well-being. Students will be expected to perform a Qigong orientated self-care sequence and perform the Taiji form "One Patch of Moonlight," as well as

to demonstrate their understanding of how Taoist principles may be useful tools in dealing with stress and conflict in real life situations.

Student Learning Outcomes

1. Be able to perform a Qigong orientated self-care sequence that includes breathing exercises, self- massage and meditation.
2. Be able to perform the Taiji form “One Patch of Moonlight.
3. Demonstrate an understanding of how Taoist principles such as calmness, equanimity and non- resistance may be useful tools in dealing with stress and conflict in real life situations.

HHHA 1116. Introduction to Massage

This course aims to develop the healing art of touch by teaching basic/Swedish massage, acupressure, and reflexology. Students will learn foundational anatomy and how it applies to massage sequencing, study the pathologies contraindicate massage, and develop body-reading skills. They will practice draping procedures that keep their clients comfortable throughout a massage. They will learn to embody effective body mechanics so they are relaxed as they offer massages. Students will demonstrate their knowledge through in-class exercises, presentations, and other assignments; their techniques will be evaluated by the instructor. This course applies to the HHHA Certificate as well as to Massage. Students must be 18 years old or have a GED to participate.

Student Learning Outcomes

1. Apply basic massage theory and technique to a massage practice.
2. Perform basic massage therapy skills.
3. Demonstrate an understanding of the varied histories of different massage and bodywork modalities.
4. Demonstrate an understanding of different career opportunities in massage and bodywork.

HHHA 1120. Yoga and Wellness

Course Description

An asana (posture) course that combines traditional yoga postures with functional movements, like sitting, standing, and walking.

Student Learning Outcomes

1. Demonstrate proper alignment in asana.
2. Explain the benefits of a wellness practice.
3. Demonstrates knowledge of yoga in wellness.

HHHA 1126. Introduction to Chinese Medicine

Course Description

This course introduces students to the history, theory, and practice of Chinese Medicine. It offers an overview of the major philosophies, both ancient and modern, underpinning this approach, while encouraging students to connect these concepts to nature and to their own experiences. Students will also explore the relationship between ancient Chinese Medicine and Modern Medicine, comparing approaches to diagnosis and treatment. Through in-class participation, reflective papers, case studies, and other assignments, students will show their understanding of the paradigms of Chinese Medicine.

Student Learning Outcomes

1. Learn the basic natural principles and philosophy of Chinese Medicine and their applicability to diagnoses and treatment of disease.
2. Critically examine the above-mentioned principles and ground their own experience in concepts presented in the course.

3. Compare and contrast the relationship between Chinese Medicine and Western medicine.
4. Analyze and synthesize the paradigm and perspective of Chinese medical concepts and philosophy.s

HHHA 1127. Dreams, Visions and Art Making: Imagery as a Healing Tool

Course Description

This class takes students on a journey of self-discovery through guided meditation. The images and intuition students tap into serve as fodder for their own creative work.

Student Learning Outcomes

1. Demonstrate a basic knowledge of, and facility in, meditation, visualization and dream practices. And, will have established an ability to practice these skills on their own and apply them to their written, visual and related creative work, as well as their personal growth.
2. Know how to use awareness tools to 'rewrite' both unconscious and conscious beliefs, creating new pathways in the brain for happiness and success.
3. Produce a journal of dreams, visual art, and writing.

HHHA 1128 Ayurveda

Course Description

This class introduces the ancient Indian healing modality called "The Science of Life," guiding students to an awareness of their constitutions and toward a greater energetic balance.

Student Learning Outcomes

1. Explain the philosophy and concepts of Integrated Health & Wellness Coaching.
2. Define the essential components of a coaching relationship between the coach and the client.
3. Demonstrate coaching strategies and methodologies with an emphasis on positive psychology.
4. Explain the meaning of optimal health, healthy nutrition, holistic fitness, and physical activity.
5. Explain holistic therapeutic tools, with an emphasis on Integrated Medicine.
6. Identify the process for conducting a coaching session following an evidence-based model.
7. Design their future career in the field of health & wellness coaching.

HHHA 1130. Yoga Styles and Safety

Course Description

This class explores the different styles of yoga as well as ways of sequencing and cuing poses. Students show their understanding of class concepts through practice teaching.

Student Learning Outcomes

1. Distill key philosophical concepts in online quizzes, online discussion boards, and in-class discussions.
2. Reflect their understanding of poses through written pose descriptions and through the short practices they lead.
3. Decide on the versions of poses that work best for them in our physical practices.
4. Identify the breathwork and meditative practices that are key to their own relaxation and teach these to fellow students.

HHHA 1131. Yoga for Common Conditions

Course Description

This class explores the different styles of yoga as well as ways of sequencing and cuing poses. Students show their understanding of class concepts through practice teaching.

Student Learning Outcomes

1. Distill key philosophical concepts in online quizzes, online discussion boards, and in-class discussions.

2. Reflect their understanding of poses through written pose descriptions and through the short practices they lead.
3. Decide on the versions of poses that work best for them in our physical practices.
4. Identify the breathwork and meditative practices that are key to their own relaxation and teach these to fellow students.

HHHA 1146. Reiki Healing I

Course Description

This class introduces energy work, helping students to develop their sensitivity and spiritual awareness while learning hands-on and intention-based techniques that encourage bodies to heal themselves.

Student Learning Outcomes

1. Demonstrate the basic hand position of Reiki.
2. Verbalize the ethical and legal guidelines in the practice of Reiki.
3. Verbalize the principles of Reiki.
4. Demonstrate the use and limits of Reiki.

HHHA 1147. Reiki Healing II

Course Description

This course provides an overview of the energy system Reiki and review for students who already have Reiki I. Students will review the philosophy and process of Reiki as reintroduced through Dr. Mikao Usui and Hawayo Takata. Basic hand positions will be reviewed and practiced. Students will also explore their own levels of self-awareness through guided imagery exercises.

Student Learning Outcomes

1. Demonstrate the basic hand position of Reiki.
2. Verbalize the ethical and legal guidelines in the practice of Reiki.
3. Verbalize the principles of Reiki.
4. Demonstrate the use and limits of Reiki.

HHHA 1148. Introduction to Homeopathy

Course Description

Students learn the philosophical underpinnings and practical applications of homeopathy, a complete therapeutic system of medicine that aims to promote general health and reinforce the body's own natural healing capacity.

Student Learning Outcomes

1. Explain and demonstrate an understanding of a homeopathic First-Aid Kit with its 36 remedies and 12 Schüssler's Cell Salts.
2. Identify useful homeopathic remedies indicated for common ailments like aches and pains, fever, influenza, headache, migraine, earache, sore throat, upper respiratory disorders, coughs and colds, digestive disorders, skin and hair symptoms, and related disorders, fungal infections as well as emotional distress and sleep problems to fatigue and childhood complaints.
3. Identify acute homeopathic remedies for situations such as animal bites, bruises, burns, injuries, nosebleeds, stings, sprains and strains, heat strokes, and wounds as well as ailments that can occur during travels.
4. Explain indicated homeopathic remedies regarding emotional imbalances, like anxiety, stress, grief, and depression.
5. Explain the subject of miasms, which describe the genetic predisposition toward various weaknesses and chronic diseases.
6. Discuss a homeopathic travel kit with an emphasis on preventative health care.

7. Identify career and academic pathways in the field of homeopathy.

HHHA 1149. Introduction to Herbology

Course Description

This class unveils the life-enhancing potential of herbs. Students learn to identify herbs, their properties, and their uses.

Student Learning Outcomes

Through written assignments and in-class teaching, students will show their understanding of the use of particular herbs and how to use them.

1. Demonstrate their understand and know when to use and the possible contraindications for some herbs.
2. Demonstrate how to take care of themselves and others thru traditional herbal methods.
3. Will make an herbal field notebook for reference.
4. Identify medicinal plants and and prepare herbal tonics.

HHHA 1153. Integrated Mental Health

Course Description

The comprehensive course Integrated Mental Health facilitates students' development of skills in mental health with an understanding of holistic concepts and applications. It benefits students, present and future integrated healthcare practitioners as well as mental health professionals. This course will explore advances in the understanding of the causes of mental illness which have important implications for therapeutic uses in the treatment of depression, anxiety, dementia, Alzheimer's disease and ADHD, and other mental health problems. This course provides knowledge about mental health with an approach to holistic health and integrative mental health care.

Student Learning Outcomes

1. Discuss the biology of the brain.
2. Explain the gut/brain connection and the microbiomes.
3. Explain how the mind relates to the brain.
4. Apply practical guidelines for emotional management and how to maintain mental clarity.
5. Show their understanding of the different veins in integrated mental health through a final research paper.

HHHA 1155. Integrative Health Coaching

This class elucidates the principles and concepts of integrated health coaching, preparing students to help guide others toward wellness.

Student Learning Outcomes

1. Explain the philosophy and concepts of Integrated Health & Wellness Coaching.
2. Define the essential components of a coaching relationship between the coach and the client.
3. Demonstrate coaching strategies and methodologies with an emphasis on positive psychology.
4. Explain the meaning of optimal health, healthy nutrition, holistic fitness, and physical activity.
5. Explain holistic therapeutic tools, with an emphasis on Integrated Medicine.
6. Identify the process for conducting a coaching session following an evidence-based model.
7. Design their future career in the field of health & wellness coaching.

HHHA 2110. Sacred Ceremony: Poems, Prayers, Rituals and Practices from Around the World

Course Description

This transformational class exposes students to a variety of healing ceremonies and invites them to explore the traditions of their own cultures and families.

Student Learning Outcomes

1. Demonstrate their knowledge of ritual practices in discussions and written assignments.
2. Select and practice at-home rituals for themselves that fit their goals and derive from their cultural traditions.
3. Research and plan in-class presentations following Ingerman's guidelines for ceremonial work.
4. Explain and perform poems, prayers, and personal ceremonies in-class.

HHHA 2112. Mediation and the Creative Arts**Course Description**

This course explores the ways in which contemplative forms can stimulate the creative process and open the mind to new possibilities. This class will alternate meditation, mindfulness, and sensory awareness practices with creative exercises including writing practice, drawing, and photography. It is open to everyone from beginners to experienced artists and writers, or anyone who simply wants to explore their own relationship to creativity and the creative process. Students will be expected to participate in-class meditation and art practices, as well as home experiential exercises, readings, discussions, and individual practice outside of class. They will present a final project summarizing their work over the course duration at the end of the semester.

Student Learning Outcomes

As evaluated through weekly journal, class participation and preparation, and particularly the final project/presentations, students will be able to:

1. Demonstrate a basic but thorough understanding of the fundamental elements of meditation and mindfulness practices and their relationship to the creative arts.
2. Have developed and sustained a consistent home meditation and art practice.
3. Will have developed and maintained a weekly journaling/writing practice.
4. Will be able to demonstrate their progress and development in an art form of their choosing through presentation of a final portfolio of their art work from throughout the semester up to and including the final project they present to the class.

HHHA 2162. Yoga and Anatomy Trains**Course Description**

This course takes students on a fascia-first approach to yoga anatomy through discussion and practice. The text is Thomas Myers' groundbreaking and detailed Anatomy Trains.

Student Learning Outcomes

1. Demonstrate proper alignment in asana.
2. Explain key anatomy trains concepts.
3. Demonstrate their understanding of lines of fascia through a yoga practice they lead and demonstrate.

HHHA 2163. Yoga and Psychology of Chakras**Course Description**

Focusing on Anodea Judith's seminal Eastern Body, Western Mind, this class addresses energetics as well as the biomechanics and alignment of the body chakra by chakra. Students will show their mastery of the concepts covered through practice teaching and reflective written assignments.

Student Learning Outcomes

1. Demonstrate the asana, pranayama, and other yoga tools that best align and benefit their body and chakra balancing needs.
2. Demonstrate a mastery of chakra philosophy through worksheets, class discussions, and other assignments.

3. Demonstrate an understanding of the effects of chakra philosophy on well-being by writing, sharing creative work, discussions, and a final project incorporating what they have learned and sharing it with others.

HHHA 2996. Holistic Health and Healing Arts Topics

Course Description

Varies

Student Learning Outcomes

Varies

Health Information Technology (HITP)

HITP 1110. Electronic Health Records

Course Description

Course Description

Current electronic health record principles, methods and procedures, and computerized medical record concepts and software applications will be introduced. Restricted to: Community Colleges only.

Student Learning Outcomes

1. Define the concept of an electronic health record.
2. Describe key issues related to privacy and security of EHRs.
3. Set up new patients, edit patient information, and export patient lists.
4. Set up new insurance companies.
5. Set up, edit and print addresses in physician, employee, pharmacy, and testing facility categories.
6. Add patients and notes to the schedule.
7. Use the Patient Tracker to track and locate a patient with the medical setting.
8. Describe the layout of an electric chart.
9. Create office visit notes.
10. Describe how to order lab, imaging, and medical tests.

HITP 1116. Computerized Business Applications

Course Description

This course provides the student with basic computer skills including the Microsoft Office Professional package. It also covers the use of database applications and the development and use of queries.

Student Learning Outcomes

1. Show ability to install software applications.
2. Create and modify a Word document.
3. Construct and format an Excel workbook.
4. Develop and customize a PowerPoint presentation.
5. Build and edit an Access database.
6. Explain various features found in the Microsoft Office Applications.
7. Describe how Microsoft Office applications may be utilized in a professional setting.
8. Discuss the uses for database applications in the healthcare industry.

HITP 1120. Health Information Introduction to Pharmacology

Course Description

Introduction to the principles of pharmacology, including drug terminology; drug origins, forms, and actions; routes of administration; as well as the use of generic name drugs, trade name drugs and categories of drugs to treat multiple and specific body systems.

Student Learning Outcomes

1. List and define the major pharmacological drugs and common generics used in healthcare.
2. Distinguish between local, systemic, therapeutic, allergic, and side effects of the drugs.
3. Describe the pharmacological action of common drugs and drug categories used to treat each body system, including usage, dosage, adverse effects, contraindications, indications, and key client education information.
4. Identify basic laws and ethics associated with pharmacological preparation and distribution.
5. Describe the principal mechanisms of actions, usage, dosage, adverse effects, contraindications, indications, and key client education information for drug classifications affecting multiple body systems. List several routes of drug administration and describe their advantages and disadvantages.

HITP 1121. Health Information Technology I**Course Description**

An introduction to health technology, with topics to include: the history and regulation of medical record documentation, public health initiatives, the structure and language of healthcare delivery, reimbursement and billing practices, electronic health records and coding, patient privacy and security, and certification processes in health technology.

Student Learning Outcomes

1. Demonstrate the ability to collect and maintain health data, including data elements, data sets, and databases, in compliance with established standards and best practices.
2. Summarize career opportunities for health information management professionals.
3. Analyze documentation in the health record supports the diagnosis and reflects the patient's progress, clinical findings, and discharge status.
4. Apply policies and procedures to ensure the accuracy of health data.
5. Verify timeliness, completeness, accuracy, and appropriateness of data and data sources for patient care, management, billing reports, registries, and/or databases.
6. Identify compliance requirements throughout the health information lifecycle including collection and storage, retention and destruction, and archive methods.
7. Identify types of health care data and information such as indexes, registers, and registries.
8. Identify privacy and security strategies impacting health information.
9. Assess ethical standards of practice using the AHIMA Code of Ethics.
10. Identify the use of classification systems, nomenclatures, and reimbursement methodologies.

HITP 1125. Medical Terminology and Anatomy**Course Description**

Covers the study of the language of medicine, focusing on prefixes, suffixes, word roots and their combining forms. Course includes word construction, spelling, usage, comprehension and pronunciation. Systems approach is used to present anatomy and physiology, symptomatology, pathology and diagnostic/surgical procedures.

Student Learning Outcomes

1. Identify and define word parts and combining forms.
2. Analyze and define medical terms.

3. Build medical terms for given definitions.
4. Build and analyze medical terms using word parts
5. Interpret the meaning of abbreviations.
6. Define, pronounce, and spell medical terms related to body structure, color, and oncology.
7. Build, analyze, define, pronounce, and spell the terms used to describe directions of the body
8. Define, pronounce, and spell the terms used to describe the anatomical planes and the abdominopelvic regions
9. Identify organs and structures of the integumentary, respiratory, urinary, and male/female reproductive systems.
10. Define, pronounce, and spell the disease and disorder, procedural, surgical, complimentary terms for the integumentary, respiratory, urinary, and male/female reproductive systems.
11. Identify the organs and other structures relating to pregnancy.
12. Define, pronounce, and spell the disease and disorder, procedural, surgical, and complementary terms related to obstetrics and neonatology.
13. Identify the organs and other structures of the cardiovascular, lymphatic, and digestive systems.
14. Define, pronounce, and spell the disease and disorder, procedural, surgical, and complementary terms for the cardiovascular, lymphatic, and digestive systems
15. Identify the anatomy of the ear and eye.
16. Define, pronounce, and spell the disease and disorder, procedural, surgical, and complementary terms for the ear and eye.
17. Identify the anatomy of the musculoskeletal system.
18. Define, pronounce, and spell the disease and disorder, procedural, surgical, and complimentary terms for the musculoskeletal system.
19. Identify the organs and other structures of the nervous and endocrine systems.
20. Define, pronounce, and spell the disease and disorder, procedural, surgical, and complimentary terms for the nervous and endocrine systems.
21. Apply use of technology in classroom submissions within an online setting.

HITP 1130. Pathophysiology and Pharmacology

Course Description

This course introduces students to specific disease processes in the human body including the etiology, diagnosis, and treatment of disease. A study of drug classifications, actions, therapeutic uses, adverse effects, and routes of administration is also included.

Student Learning Outcomes

1. Define key terminology relevant to human diseases and disorders.
2. Identify signs and symptoms, diagnostic tests, and treatment for common human diseases and disorders.
3. Identify specific common human diseases and disorders.
4. Identify the effects of aging on specific body systems.
5. Identify drug classifications, actions, therapeutic uses, adverse effects, and routes of administration.

HITP 1140. Health Information Introduction to Pathophysiology

Course Description

Introduction to the nature of disease and its effect on body systems. Disease processes affecting the human body via an integrated approach to specific disease entities will be presented including a review of normal functions of the appropriate

body systems. Diseases will be studied in relation to their etiology, pathology, physical signs and symptoms, diagnostic procedures, complications, treatment modalities and prognosis.

Student Learning Outcomes

1. Describe basic disease concepts, including mechanisms of disease, neoplasms, inflammation, and infection
2. Examine the basic anatomy and physiology of the body systems, etiology of various diseases and conditions, important signs and symptoms of disorders, common diagnostics, typical course and management of disorders, preventive measures, and the effects of aging
3. Identify the terminology, etiology, signs and symptoms, common diagnostics, typical course and management of disorders, and preventive measures associated with genetic and developmental disorders, childhood diseases, and mental health disorders
4. Recognize important medical terminology related to the understanding of human diseases
5. State the drug classifications and examples of medications in each class used to treat diseases, disorders and conditions related to each body system.

HITP 1150. Legal and Ethics Issues in HITP

Course Description

This course introduces the legal, regulatory, and ethical issues that affect health information. Topics include professional liability, informed consent, patient rights, legal documents, and workplace regulations. Special emphasis is placed on privacy and security requirements, release of information, HIPAA, and other federal and state compliance regulations. Students also study ethical principles that guide the management and protection of health information.

Student Learning Outcomes

1. Define legal and ethical terms related to health information.
2. Describe privacy requirements for protecting health information.
3. Describe security requirements for safeguarding electronic health records and information systems.
4. Apply legal processes and the use of legal documents in health information.
5. Identify laws and regulations that impact health information and healthcare facilities.
6. Apply federal and state legislation, CMS regulations, and accreditation standards to health information.
7. Identify compliance requirements for the health information life cycle, including retention and destruction.
8. Recognize ethical principles that guide decision-making in health information.

HITP 1170. Basic Principles of CPT-4 HCPCS Coding

Course Description

This course introduces students to CPT-4 and HCPCS coding classification systems and provides a basic understanding of CPT-4 and HCPCS principles and conventions. Students will assign procedure codes in accordance with official coding guidelines.

Student Learning Outcomes

1. Identify the structure, format, and conventions of the CPT-4 and HCPCS Level II coding systems.
2. Explain the purpose and appropriate use of CPT-4 and HCPCS codes in healthcare reimbursement and reporting.
3. Interpret clinical documentation to assign appropriate CPT-4 and HCPCS Level II codes using official guidelines.
4. Apply coding skills to outpatient and professional service scenarios in compliance with current coding standards.

HITP 1220. Introduction to Health Information Technology

Course Description

This course provides an overview of the core principles and practices in health information management. Topics include healthcare delivery systems, health record content and structure, healthcare data and documentation standards, legal and ethical responsibilities, classification and coding systems, and health information technologies. Emphasis is placed on the role of health information professionals in ensuring data quality, confidentiality, and compliance within healthcare organizations. Students will also gain hands-on experience using electronic health records to support health information tasks.

Student Learning Outcomes

1. Differentiate healthcare organizations, services, and professional roles.
2. Summarize career paths and growth opportunities in health information management professionals.
3. Apply ethical and legal principles, including legislation, licensure, privacy, security, confidentiality, and reporting requirements.
4. Identify components, tools, and processes that support the health record life cycle.
5. Identify the components, functions, and benefits of electronic health records in healthcare settings.
6. Identify types of healthcare data, including indexes, registers, and registries.
7. Identify classification systems and coding systems.
8. Demonstrate the use of electronic health records to support health information tasks.

HITP 1230. Basic Principles of ICD-10-CM ICD-10-PCS**Course Description**

This course introduces students to the ICD-10-CM and ICD-10-PCS coding classification systems and provides a basic understanding of ICD-10-CM and ICD-10-PCS principles, conventions, and structures. Students will assign diagnostic and procedure codes in accordance with official coding guidelines.

Student Learning Outcomes

1. Identify the structure, format, and conventions of the ICD-10-CM and ICD-10-PCS classification systems.
2. Explain the purpose and appropriate use of ICD-10-CM and ICD-10-PCS codes in healthcare reimbursement and reporting.
3. Interpret clinical documentation to assign appropriate ICD-10-CM and ICD-10-PCS codes using official guidelines.
4. Apply coding skills to inpatient scenarios in compliance with current coding standards.

HITP 1310. Introduction to Health Insurance and Revenue Cycle Management**Course Description**

This course introduces students to the role of health insurance payers in the healthcare reimbursement process and revenue cycle management. Students learn how coverage verification, prior authorizations, claims processing, payment posting, and appeals impact provider reimbursement. Emphasis is placed on documentation requirements, billing standards, and payer policies that support compliance and reduce financial risk.

Student Learning Outcomes

1. Identify each step of the healthcare revenue cycle and the role of health information professionals within it.
2. Explain how insurance coverage, benefits, and payer policies influence provider reimbursement.
3. Discuss the importance of verifying insurance eligibility and obtaining prior authorization according to payer requirements before services are provided.
4. Recognize the elements of a clean claim and the role of accurate documentation in claim acceptance and compliance.
5. Discuss how claims are processed by payers, including common reasons for denials and how they are handled.

6. Explain how adherence to payer rules and documentation guidelines reduces financial and legal risk.

HITP 2110. Introduction to Data Management

Course Description

Introduction to Data Management

This course introduces students to the application of health informatics and data analytics concepts to the management of health information. Topics include data dictionaries, data sets, data integrity, data management, and standards for the exchange of health information.

Student Learning Outcomes

1. Identify policies and procedures to achieve data integrity. (I.2.)
2. Describe components of data dictionaries and data sets. (I.6)
3. Apply health information concepts to the management of health information. (III.1)
4. Describe the concepts of managing data. (III.6)
5. Summarize standards for the exchange of health information. (III.7)

HITP 2120. Health Data Management Analytics and Quality

Course Description

This course introduces students to health data management, data analytics, and quality improvement practices in healthcare. Students will apply foundational statistical concepts and tools to analyze healthcare datasets, interpret findings, and support data-driven decision-making. Topics include data collection, data validation, statistical analysis, data visualization, and performance measurement. The course also covers the use of quality indicators and performance data to support care improvement and compliance, with attention to the role of health information professionals in ensuring data accuracy.

1. Organize and manage healthcare data using spreadsheets, data sets, and data dictionaries.
2. Calculate and apply statistical methods to analyze healthcare data and identify trends.
3. Develop visualizations to communicate data insights and support decision-making.
4. Explain how quality indicators are used to measure performance and support care improvement.
5. Describe the role of health information professionals in data accuracy, reporting, and compliance.
6. Evaluate how data quality and reporting processes influence healthcare outcomes, organizational performance, and regulatory compliance.
7. Recognize ethical considerations when collecting, analyzing, and reporting healthcare data.

HITP 2208. Medical Office Procedures

Course Description

Introduction of current and efficient administrative medical office procedures. The emphasis will be on practical, current strategies for maintaining accurate, organized and compliant documentation.

Student Learning Outcomes

1. Identify key medical terminology as it relates to administrative medical office operations.
2. Explain the roles, responsibilities, and professional ethics of an administrative medical assistant in various healthcare setting.
3. Demonstrate effective communication skills with patients, families, proxies and healthcare professionals.
4. Apply accurate updated policy to scheduling techniques, office and records management, and billing procedures in a medical office environment.

5. Apply techniques for efficient patient, office, and administrative workflows to enhance medical office management.
6. Identify medical office technology applications that promote efficient administrative duties and accurate documentation.

HITP 2211. Basic ICD-CPT Coding

Course Description

Introduction to coding is a focus upon foundational coding knowledge, the application of current coding guidelines, health record documentation analysis, and regulatory compliance. Students will master the intricacies of ICD-10-CM, ICD-10-PCS, CPT, and HCPCS coding systems, emphasizing accuracy and adherence to official guidelines. The course delves into the critical analysis of health record documentation, ensuring it supports diagnoses, reflects patient progress, and meets legal and regulatory requirements. Students will also explore the roles of various healthcare providers and disciplines in maintaining comprehensive and accurate documentation. Dental coding and 24/7 nursing facility coding methodologies are introduced. A significant portion of the curriculum is dedicated to understanding and applying domains, specifically Data Content, Structure & Standards; Informatics, Analytics and Data Use; and Compliance. This includes mastering diagnostic and procedural groupings (DRG, MS-DRG, APC, RUGS), evaluating coding accuracy, analyzing health record content, and ensuring compliance with HIPAA, The Joint Commission, and other relevant regulations. Students will also learn about physician query processes, analytics and decision support, and career opportunities in Health Information Management.

Student Learning Outcomes

1. Coding & Classification: Accurately apply & audit medical codes (ICD, CPT, HCPCS) and groupings (DRG, APC).
2. Health Records: Analyze, verify, and identify complete health records compliant with standards.
3. Analytics: Utilize data visualization and reporting for decision support.
4. Data Integrity: Ensure health data accuracy and integrity.
5. Compliance: Apply regulations (HIPAA, etc.) and support accreditation.
6. Professional Skills: Understand physician queries, provider roles, and HIM career paths.

HITP 2212. Advanced Coding and Rev Cycle Mgmt. (RM)

Course Description

This course provides an in-depth study of complex coding scenarios across multiple healthcare settings. Students will apply advanced coding principles using current coding systems (ICD-10-CM/PCS, CPT, and HCPCS), while gaining hands-on experience with an encoder and computer-assisted coding (CAC). Emphasis is placed on accurate code assignment, documentation review, and compliance with official guidelines. Students will also explore auditing techniques to assess coding accuracy.

Student Learning Outcomes

1. Analyze medical records and clinical documentation to extract key information necessary for accurate coding and reimbursement.
2. Apply advanced coding guidelines and principles to accurately assign diagnosis and procedure codes using ICD-10-CM/PCS, CPT, and HCPCS across various healthcare settings.
3. Utilize an encoder system to support accurate and efficient assignment of medical codes.
4. Apply computer-assisted coding (CAC) tools to enhance coding accuracy and workflow efficiency.
5. Perform coding audits to assess accuracy, identify discrepancies, and recommend corrective action.

HITP 2215. Intermediate Medical Coding

Course Description

Advance your coding skills with in-depth practice in ICD-10-CM, ICD-10-PCS, HCPCS, and CPT. This course tackles complex inpatient cases, explores specialized coding areas including psychiatric and dental coding, and emphasizes mastery of coding resources and modifiers. Gain a comprehensive understanding of payment methodologies and prepare for professional certification exams (CPC, CCS/CCS-P) through rigorous case studies and practical application of coding guidelines.

Student Learning Outcomes

1. Master Coding Conventions and Guidelines:
 - a. Accurately apply coding conventions and guidelines for assigning and reporting medical codes.
 - b. Prepare for and successfully pass a professional coding certification exam (CCA, CCS, or CCS-P) from AHIMA or (CPC) AAPC.
2. Demonstrate Proficiency in General Coding Guidelines:
 - a. Effectively locate and select appropriate medical codes.
 - b. Understand and apply the correct usage of symptom codes in relation to confirmed diagnoses and procedure codes.
3. Apply Critical Thinking and Justify Code Assignments:
 - a. Independently determine the most accurate medical codes for given scenarios.
 - b. Articulate and defend the rationale behind their code selections with clear and logical reasoning.

HITP 2219. Advanced Medical Coding and Clinical Documentation Integrity

Course Description

This advanced course is designed for experienced coders seeking to enhance their expertise in complex medical coding scenarios. Participants will delve into the intricacies of assigning accurate and compliant codes across various healthcare settings, including inpatient, outpatient, and specialized facilities such as dental coding and skilled nursing facilities coding.

Student Learning Outcomes

1. Master Advanced ICD-10-CM and ICD-10-PCS Coding:
 - a. Apply advanced coding principles to complex inpatient diagnoses, procedures, and reports.
 - b. Demonstrate proficiency in interpreting and utilizing official coding guidelines and conventions.
 - c. Analyze and accurately code intricate surgical procedures and medical diagnoses.
2. Proficiently Utilize HCPCS and CPT Coding:
 - a. Assign appropriate HCPCS and CPT codes for a wide range of medical services and procedures.
 - b. Understand the nuances of coding for various specialties and services.
3. Specialized Coding Applications:
 - a. Accurately code dental procedures using appropriate dental coding systems.
 - b. Apply specialized coding knowledge to psychiatric services within a 24/7 Skilled Nursing Facility environment.
4. Clinical Documentation Integrity (CDI):
 - a. Understand the importance of CDI within the coding workflow.
 - b. Recognize and address documentation deficiencies that impact coding accuracy.
5. Advanced Case Study Analysis:
 - a. Analyze and code complex real-world case studies, demonstrating the ability to apply advanced coding knowledge.
 - b. Develop critical thinking and problem-solving skills in challenging coding scenarios.
6. Capstone Project:
 - a. Complete a comprehensive capstone coding assignment, integrating all learned coding principles and demonstrating mastery of advanced coding skills.
7. Exam Preparation:

- a. Reinforce knowledge needed to pass professional coding certification exams, including CCA, CCS, CCS-P, or CPC. Gain any free certifications from coding organizations including the Pan American Health Organization, CDC, DHHS or other organizations as assigned.

HTIP 2221. Medical-Legal and Quality Management

Course Description

This course provides a comprehensive study of legal and ethical principles governing health information management, with a focus on ensuring the quality of health information and its ethical use. Students will examine the medical record as a legal document, explore standards and regulations governing medical records in various settings, and analyze methods used by healthcare facilities to assure the provision of high-quality medical care. The course will cover legal processes, external forces, and legislation impacting health information, including issues such as professional liability, informed consent, privacy and security laws, the legal health record, and workplace legalities. A variety of ethical issues in health care will also be explored.

Student Learning Outcomes

1. Apply and evaluate current laws, licensure & certification standards related to health information initiatives from the national, state, local & facility levels.
2. Differentiate the roles of various providers & disciplines throughout the continuum of healthcare & respond to their information needs.
3. Adhere to the legal & regulatory requirements related to health information infrastructures.
4. Adapt policies & procedures for access & disclosure of personal health information.
5. Release and report patient-specific data to authorized users.
6. Maintain and practice using user access logs/systems to track access to & disclosure of identifiable patient data.
7. Apply & promote ethical standards of practice.
8. Use specialized software in the completion of HIM processes such as record tracking, release of information, coding, grouping, registries, billing, quality improvement & imaging.
9. Abstract & report data for facility-wide quality management & performance improvement programs.
10. Analyze clinical data to identify trends that demonstrate quality, safety & effectiveness of healthcare.
11. Apply the fundamentals of team leadership.
12. Participate in and work in teams & committees.
13. Conduct orientation & training programs.
14. Monitor & report staffing levels & productivity standards for health information functions.
15. Use tools & techniques to monitor, report & improve processes.
16. Comply with local, state & federal laboratory or regulations.
17. Apply both legal and ethical terms used in health care.
18. Identify legal processes and the use of legal documents impacting health information and health care.
19. Identify the specific laws pertinent to health care professionals and facilities.
20. Apply privacy strategies to health information.
21. Apply security strategies to health information.
22. Identify compliance requirements throughout the health information life cycle, including record retention and destruction.
23. Identify health care ethical principles as they apply to all providers of care and services.

HITP 2232. Healthcare Reimbursement Methodologies

Course Description

This course covers policies, regulations, and standards as they pertain to revenue cycle management. Reimbursement methodologies and regulatory requirements pertaining to the prospective payment system and nomenclatures, health care insurers and contracts, case-mix, and conducting patient billing activities for a variety of healthcare organizations are included. Also included, are basic instructions for filing various types of insurances.

Student Learning Outcomes

- Identify policies and strategies to achieve data integrity (I.3)
2. Identify compliance of health record content within the health organization (I.4.)
3. Explain the use of classification systems, clinical vocabularies, and nomenclatures. (I.5)
4. Utilize technologies for health information management. (III.2.)
5. Summarize regulatory requirements and reimbursement methodologies (IV.3)
6. Validate assignment of diagnostic and procedural codes and groupings in accordance with official guidelines (IV.1)
7. Describe components of revenue cycle management and clinical documentation improvement (IV. 2)
8. Determine diagnosis and procedure codes according to official guidelines (IV.1 RM)
9. Evaluate revenue cycle processes. (IV.2 RM)
10. Evaluate compliance with regulatory requirements and reimbursement methodologies. (IV.3 RM)
11. Demonstrate compliance with external forces. (V.2)
12. Identify the impact of policy on health care. (V.4)
13. Utilize financial management processes. (VI.5)
14. Assess ethical standards of practice. (VI.7)

HITP 2240. Health Information Quality Management

Course Description

Introduction to basic concepts of quality and performance improvement as they apply to health record systems and the health care industry. Introduction to quality assessment, requirements of licensing, accreditation, and fiscal considerations.

Student Learning Outcomes

1. Identify responsibilities in medical facilities to develop leadership skills for success.
2. Abstract data for facility-wide quality management & performance improvement programs.
3. Identify techniques utilized by quality improvement organizations to evaluate and track medical treatments and services to improve the health information performance.
4. Demonstrate an understanding of healthcare compliance, patient consent, documentation, reporting, the creation of policies and procedures, and fundamentals of the Human Resource Department.
5. Explain the purpose and procedure of audits, regulatory agencies, marketing, and compliance in the health care setting.

HITP 2245. Health Statistics & Quality Improvement

Course Description

This course covers healthcare statistical methods and quality improvement concepts, tools and techniques. Students will gain a working knowledge of definitions, formulas, data collection and computation methods to determine standard rates, percentages, and averages for health care data. Vital statistics and reportable diseases and conditions are included. Quality assessment and improvement standards including requirements of licensing, accrediting, fiscal, and other regulatory agencies will be presented.

Student Learning Outcomes

1. Apply health informatics concepts to the management of health information. (III.1.)
2. Utilize technologies for health information management. (III.2.)

3. Calculate statistics for health care operations. (III.3.)
4. Report health care data through graphical representations. (III.4.)
5. Identify research methodologies used in health care. (III.5.)
6. Recognize compliance with external forces. (V.2.)
7. Identify the components of risk management related to health information management. (V.3.)
8. Identify data-driven performance improvement techniques for decision making. (VI.4.)

HITP 2248. Medical Coding I

Course Description

Comprehensive overview of the fundamentals, coding conventions, and principles of ICD-10-CM/PCS diagnostic and procedure codes.

Student Learning Outcomes

1. Identify diagnoses, procedures, services while applying coding manual and regulatory agency guidelines to patient medical records.
2. Identify legalities when managing patient records and reimbursement policies.
3. Analyze and assign accurate diagnostic codes based on a review of patient records.
4. Identify the role of a medical coder in various healthcare settings, including ethical considerations and workplace conduct.
5. Demonstrate proper medical record management techniques.

HITP 2258. Medical Coding II

Course Description

Comprehensive overview of the fundamentals, coding conventions, and principles of CPT and HCPCS diagnostic and procedure codes.

Student Learning Outcomes

1. Identify procedures and services in various healthcare settings while applying coding manual and regulatory agency guidelines to patient medical records.
2. Identify legalities when managing patient records and reimbursement policies.
3. Analyze and assign accurate procedural codes based on a review of patient records.
4. Identify the role of a medical coder in various healthcare settings, including ethical considerations and workplace conduct.
5. Demonstrate proper medical record management techniques.

HITP 2263. Health Information Supervision

Course Description

Focuses on basic management functions using examples and situations specific to health information. Communication, motivation, budgeting, job analysis, recruitment, discipline, teamwork, committee representation and federal/state laws regarding personnel management are discussed and emphasized. Quality assessment and improvement standards and requirements of licensing, accrediting, fiscal and other regulatory agencies are presented.

Student Learning Outcomes

1. Apply knowledge-based research techniques (such as library, MEDLINE, web-based) and common software applications (such as word processing, spreadsheet, database, graphics) to facilitate learning outcomes. (II.A.1).
2. Apply current laws, accreditation, licensure and certification standards to HI initiatives from national, state, local and facility levels (includes HIPAA, ARRA). (III.A.2).

3. Describe the organization of healthcare systems. Healthcare organization's structure and operation, organization of healthcare delivery system in the United States. (III.A).
4. Assess professional and practice-related ethical issues as they pertain to healthcare management.
5. Apply and promote ethical standards of practice. (III.B.5).
6. Identify and explain effective strategic leadership, management skills required in different healthcare settings. (V.A).
7. Define organizational behavior. (V.A.).
8. Explain the principles of management as they relate to the healthcare industry.
9. Apply the fundamentals of team leadership. (V.A.1).
10. Incorporate effective communication and interpersonal skills. (V.A) (5).
11. Propose and incorporate workflow and process monitors. (V.A.1).
12. Incorporate team leadership concepts and techniques.
13. Participate in work teams and committees. (V.A.2).
14. Compare and contrast orientation and training in the healthcare industry (including content, delivery, and media). (V.A.3).
15. Monitor and report staffing levels and productivity standards for health information functions. (V.A.5).
16. Use of quality improvement tools and techniques to monitor, report and improve processes. (V.A.6).
17. Have knowledge of local, state and federal labor regulations compliance. (V.A.7).
18. Construct organizational plans and budgets (including, a minimum framework, levels, and responsibilities).
19. Assess fundamentals of the budgeting process. (V.B.1) (4).
20. Monitor coding and revenue cycle processes. (V.B.3) (4).
21. Recommend cost-saving and efficient means of achieving work processes and goals.
22. Monitor and order supplies needed for work processes. (V.B.23) (V.B.4) (4).
23. Contribute to work plans, policies, procedures, and resource requisitions in relation to job functions. (V.B.5) (4).

HITP 2260. Organizational Management and Leadership

Course Description

This course introduces students to organizational management and leadership skills necessary for supervisory roles in health care. Topics include leadership principles, organizational change, human resource strategies, workforce training, financial and performance management, and cultural diversity. Students will explore strategies for recruitment, staffing, productivity, budgeting, and resource allocation, while developing skills to promote professionalism, diversity, and effective team performance.

Student Learning Outcomes

1. Define organizational management and leadership, including key functions and traditional theories.
2. Demonstrate fundamental leadership skills in health care settings.
3. Analyze the impact of organizational change on health care operations.
4. Apply strategies for workforce recruitment, selection, retention, and training.
5. Implement workforce and financial management principles, including staffing levels, productivity standards, budgeting, and resource allocation, to health care operations.
6. Promote a culture of diversity and professionalism in health care teams and interprofessional relationships.

HITP 2268. Health Information Systems

Course Description

Overview of health data management, work planning, and organization principles; an introduction to health care information systems; and review of the fundamentals of information systems for managerial, clinical support, and information systems.

Student Learning Outcomes

1. Identify the role of health information management in the healthcare system.
2. Identify the ethical and legal challenges in health information management.
3. Describe health care data and information management systems used in healthcare organizations.
4. Maintain data security in accordance with all laws and regulations.
5. Evaluate compliance with regulatory requirements and reimbursement methodologies.
6. Explain the role of the health information technician (HIT) in systems planning and development.
7. Identify the different types of health service organizations and delivery systems.

HITP 2272. Coding Seminar

Course Description

This course prepares prospective coding certificate graduates for the CCA certification exam (AHIMA). Job interview skills, resume writing, and professionalism will be emphasized.

Student Learning Outcomes

1. Describe the characteristics and behaviors that demonstrate a commitment to one's job.
2. Discuss the importance of character, values, morals, ethics, and other personal traits.
3. Outline the elements of effective interpersonal relationships, teamwork, and working well with others.
4. Explain how personal image and personal skills affect one's professional reputation.
5. Participate in employment preparation and readiness activities.
6. Utilize practice quizzes as a study tool for CCA certification exam preparation.
7. Develop a study plan for the CCA certification exam.

HITP 2288. Medical Insurance Billing

Course Description

Comprehensive overview of the insurance concepts and applications required for successfully and accurately completing and submitting insurance claims and reimbursement processes for various insurance carriers, both private and government, will be emphasized.

Student Learning Outcomes

1. Comprehend the ramifications of a breach of confidentiality regarding patient information.
2. Follow requirements of different insurance carriers—i.e., HMO's Independent Provider Organizations, Medicare, Medicaid, Workmen's Compensation—in processing patient claims.
3. Process insurance claim form an initial patient visit through receipt of payment from insurance carrier.
4. Match ICD-10 code to appropriate diagnosis.
5. Analyze patient records to construct the insurance claim form and apply the requirements of different insurance carriers to that claim.
6. Classify and explain the various reimbursement systems and how they impact billing.
7. Identify issues of fraud and abuse and follow ethical principles by reviewing inpatient and outpatient cases.

HITP 2310. Advanced Revenue Cycle Management

Course Description

This course provides a comprehensive examination of the healthcare revenue cycle, emphasizing the integration of advanced practices in clinical documentation integrity, compliant physician query processes, claims auditing, and denial

management. Students will engage in critical analysis of reimbursement methodologies and regulatory compliance. Through in-depth case studies, advanced chart reviews, and practical application of encoder tools, learners will refine their coding accuracy and gain proficiency in navigating complex revenue cycle scenarios to support optimal financial and clinical outcomes.

Student Learning Outcomes

1. Analyze the components of the healthcare revenue cycle to determine their impact on organizational financial performance and compliance.
2. Construct compliant physician queries to address and resolve clinical documentation deficiencies.
3. Apply advanced coding principles using encoder tools and case analysis to ensure accurate, complete, and compliant code assignment.
4. Evaluate claims for accuracy and compliance through auditing practices, identifying common billing errors and documentation issues.
5. Evaluate the root causes of denials to formulate effective appeal strategies in accordance with payer guidelines and regulatory requirements.
6. Interpret and apply reimbursement methodologies across various healthcare settings, including inpatient, outpatient, and professional services.
7. Utilize knowledge of documentation, coding, and billing practices to propose improvements that enhance revenue cycle efficiency and data integrity.

HITP 2320. Health IT and Emerging Technologies

Course Description

This course explores how health information technologies and emerging digital tools are used to manage health information and support patient care. Students will examine electronic health records (EHRs), data exchange and interoperability, cybersecurity, and mobile health applications. The course also introduces technologies such as artificial intelligence and clinical decision support systems, with a focus on how these tools enhance documentation, communication, and healthcare operations.

Student Learning Outcomes

1. Describe the core functions of electronic health record (EHR) systems and their role in supporting patient care, documentation, and operations.
2. Explain how interoperability standards and technologies support the secure exchange of health information across healthcare systems.
3. Identify common cybersecurity threats in healthcare and describe strategies used to protect electronic health information.
4. Discuss how mobile health applications, artificial intelligence, and other emerging technologies are used to enhance clinical decision-making and healthcare delivery.
5. Interpret examples of clinical decision support tools and describe their impact on patient safety, communication, and workflow.
6. Explain how digital health technologies influence healthcare operations, communication, and patient engagement.

HITP 2986. Health Information Technology Seminar

Course Description

This course prepares HIT graduates for the RHIT certification exam (AHIMA). Students will also share professional practice experiences. Job interview skills, resume writing, and professionalism will be emphasized.

Student Learning Outcomes

1. Describe the characteristics and behaviors that demonstrate a commitment to one's job.
2. Discuss the importance of character, values, morals, ethics, and other personal traits.
3. Outline the elements of effective interpersonal relationships, teamwork, and working well with others.
4. Explain how personal image and personal skills affect one's professional reputation.
5. Participate in employment preparation and other professional networking activities.
6. Develop a resume and cover letter.

Health Science (HLSC)

HLSC 1030. Medical Terminology**Course Description**

This course involves an integrated anatomy and physiology system approach for teaching medical terminology to the health care student. This assists students in learning terminology and to incorporate this knowledge through an understanding of anatomy and physiology. In this way, students discover the purpose and use of medical terms they are learning and using. This course assist students who are learning medical terminology for the first time as well as providing a broader knowledge of terminology as related to anatomy and physiology.

Student Learning Outcomes

1. Identify the basic elements of medical terminology, the organization of the body, and the word root, suffix, and prefix by passing quizzes and exams with a score of 70% or better.
2. Correctly spell and identify singular and plural endings for medical terms with 70% accuracy on written quizzes and exams.
3. Identify the medical terms used for each body system by scoring 70% or better on quizzes and exams.

HLSC 1110. Introduction to Health Science**Course Description**

This course introduces students to various health professions and the common knowledge, skills, and professional dispositions necessary for success in the health care field. Students will explore basic concepts in anatomy and physiology, medical terminology, human growth and development, cultural diversity, legal and ethical issues, components of the health care delivery system, roles and responsibilities of health care professionals and educational requirements as they relate to the health care field.

Student Learning Outcomes

1. Discuss differences between early and current beliefs on the causes and treatment of disease.
2. Identify major events in the history of health care.
3. Identify major historical individuals and how they improved health care.
4. Describe the types of private and government agencies and the health care services they offer.
5. Compare the basic principles of different health insurance plans.
6. Differentiate certification, registration and licensure.
7. Differentiate educational requirements for associate's, bachelor's and master's degrees.
8. Match different health care careers and their major duties.
9. Discuss the standards of professional appearance as they apply to uniforms, shoes, nails, hairs, jewelry, makeup and body art.
10. Create a character profile of a successful health care professional.
11. Identify factors that interfere with communication.
12. Explain the importance of listening, nonverbal behavior, reporting and recording in the communication process.
13. Define and explain HIPAA and how legal regulations apply to health care records.
14. List basic rules of ethics for health care professionals.
15. Explain professional standards and codes of ethics.
16. Define malpractice, negligence, invasion of privacy, and privileged communication.
17. Identify basic medical abbreviations.
18. Identify the major organs systems in the body, their function and how they interrelate.
19. Briefly explain the seven main life stages and the major developments that occur in each.
20. Describe the five stages of grieving.
21. List two purposes of hospice care.
22. Differentiate between culture, ethnicity and race.
23. Identify major ethnic groups in the United States.
24. Describe how bias, prejudice or stereotypes can negatively affect communication and describe ways of avoiding this.
25. Differentiate between a nuclear family and an extended family.
26. Identify ways in which language, personal space, touching, eye contact and gestures are affected by cultural diversity.
27. Compare and contrast the diverse health beliefs of different ethnic/cultural groups.
28. List ways a health care professional can show respect for cultural diversity and religious beliefs.
29. Differentiate between the myths and facts of the physical and psychosocial aspects of aging.
30. List the six nutrients essential for life.
31. Identify the three energy nutrients and their associated caloric values.
32. Define the difference between "overweight" and "overfat".
33. Define the twelve general diet recommendations for health.
34. List the dietary goal percentages of carbohydrates (complex versus refined), fats (saturated versus unsaturated), and protein as recommended by the Senate Select Committee on Nutrition and Human Needs.
35. List the four fat-soluble vitamins.
36. Match the appropriate fat-soluble vitamin with its major role and symptom of toxicity.
37. List the nine water-soluble vitamins.
38. Match the appropriate water-soluble vitamin with its major role and symptom of toxicity.

39. Match the macro and trace minerals with their major role in the body.
40. Describe current computer applications being used in today's health care system.
41. Describe proper body mechanics as they are related to various health care duties.
42. Recognize various safety standards including OSHA and the Bloodborne Pathogen Standard.
43. List the components of the chain of infections.
44. Differentiate between antisepsis, disinfection and sterilization.
45. List the four main vital signs and identify normative values.
46. Acquire a national recognized certification in first aid and adult CPR/AED.
47. Identify key professional dispositions and explain why employers consider them to be essential skills.

HLSC 1111. Intro to Health Careers

Course Description

This course is for students who are interested in a career in health care or health related field. You will be introduced to a variety of health care professions, determine the educational path required for your chosen field, and explore the personal qualities and professional skills essential for all health care providers.

Student Learning Outcomes

1. Describe the skills, educational requirements, and responsibilities of specific health careers.
2. Discuss the personal and professional qualities needed in health careers.
3. Explore the personal qualities, professional skills, and values necessary for success as a health care professional.

HLSC 1210. Medical Career Exploration

Course Description

Medical Career Exploration examines the goals of health care and explores the requirements of medical educational programs. This course provides research into educational requirements, desired personal characteristics, job satisfaction, career advancement, employment opportunities, and work hours. Topics discussed are socioeconomics, current and future health care trends, ethical issues, and pharmaceutical use in medicine. Hands-on experience at a medical facility is included as part of the course.

Student Learning Outcomes

1. The student will identify the required credentials and education for a career in medicine by researching and writing a paper with a minimum score of 75%.
2. The student will discuss socio-economic issues, health care trends, ethical issues, disease process, and medication use in health care demonstrated by scoring 75% or higher on a related paper.
3. The student will demonstrate communication skills in the clinical area by effectively communicating with other health care professionals demonstrated by scoring 75% or higher on a performance evaluation.

HLSC 1310. Dental Career Exploration

Course Description

Dental Career Exploration examines the goals of dentistry and explores the requirements of dental educational programs. This course provides research into career descriptions, career role, educational ladder, safety issues, and career opportunities for dentists. Hands-on experience at a dental clinic is included as part of the course.

Student Learning Outcomes

1. The student will identify the required credentials and education for a career in dentistry by researching and writing a paper with a minimum score of 75%.
2. The student will discuss socio-economic issues, health care trends, ethical issues, disease process, and medication use in health care demonstrated by scoring 75% or higher on a related paper.
3. The student will demonstrate communication skills in the clinical area by effectively communicating with other health care professionals demonstrated by scoring 75% or higher on a performance evaluation.

HLSC 1410. Veterinary Career Exploration

Course Description

Veterinary Career Exploration examines the goals of veterinary medicine and explores the requirements of veterinarian educational programs. This course provides research into career descriptions, career role, educational ladder, safety issues, and career opportunities for veterinarians. Hands-on experience at a veterinary clinic is included as part of the course.

Student Learning Outcomes

1. The student will identify the goals of veterinary medicine and will describe the careers in this field by passing a written exam with a minimum score of 75%.
2. The student will identify the required education and credentials for a career in veterinary medicine by researching and writing a paper and by passing a written exam with a minimum score of 75%
3. The student will explain how general academic subjects and workplace skills apply specifically to careers in veterinary medicine.
4. The student will demonstrate knowledge of safety skills used in veterinary medicine by passing a written and skill exam with a minimum score of 75%.
5. The student will demonstrate communication skills in the clinical area by effectively communicating with employees and animal owners and by passing a written exam with a minimum of 75%.

HLSC 1510. Medical Terminology

Course Description

The study and understanding of medical terminology as it relates to diseases, their causes and effects, and the terminology used in various medical specialties. This course includes word construction, spelling, comprehension, pronunciation, application and abbreviations.

Student Learning Outcomes

1. Apply prefixes, suffixes, and combining forms to build medical terms.
2. Identify terms for body regions, planes, cavities and membranes.
3. Select medical terminology names, locations and functions of the major organs of the body systems.
4. Identify the medical terms associated with major disease processes and procedures.
5. Demonstrate correct medical linguistic skills.

HLSC 1515. Advanced Medical Terminology

Course Description

Builds upon the concepts covered in HLSC 1510 providing greater understanding of how to properly use and apply medical terminology used in the various health fields. Medical terminology associated with the body system's anatomy and physiology, diagnostic and therapeutic procedures, pharmacology, and abbreviations will be emphasized.

Student Learning Outcomes

1. State the derivation of most healthcare terms.
2. Build medical terms to their accurate plural form.
3. Identify appropriate terms to the associated organization, position, and direction of the body.
4. Identify appropriate terms to the associated organ systems of the body.

HLSC 1520. Anatomy and Physiology for Health Careers

Course Description

This introductory course explores the fundamental principles of human anatomy and physiology. Providing a foundation in essential concepts of the function and structure of the human body for those interested in health careers.

Student Learning Outcomes

1. Describe the structural organization of the human body.
2. Identify the major body systems and their key functions.
3. Use anatomical terminology to describe body planes, directions, regions, and cavities.
4. Identify the major organs within each body system and their anatomical locations.
5. Explain how the structure and function of the human body change across the lifespan.
6. Identify common pathologies, signs, symptoms, etiology, diagnostic measures, and treatment modalities related to each body system.

HLSC 1521. Basic Body Structure and Function I**Course Description**

An introductory course in anatomy and physiology for students from diverse backgrounds and varying levels of educational preparation. No prior knowledge of biology or chemistry is assumed.

Student Learning Outcomes

1. Define the characteristics of life, hierarchy of organization within the human body, and basic terminology used in anatomy.
2. Outline cell structure, function, and diversity as well as the functional characteristics of human tissues.
3. Identify and describe the skeletal, muscular, nervous, and respiratory components of the human body.
4. Explain the function and anatomy of the integumentary, cardiovascular, urinary, and digestive systems.
5. Summarize the physiological roles of the integumentary, skeletal, muscular, nervous, cardiovascular, respiratory, digestive, and urinary systems in maintaining equilibrium (homeostasis, metabolism, and nutrition) within the human body.

HLSC 1525. Human Growth and Development**Course Description**

This course presents theories of biological, cognitive and psychosocial development across the life span. This course will stress the application of these concepts to the health care field.

Student Learning Outcomes

1. Understand the influences of sociocultural, environmental, spiritual, and religious factors on the developing person.
2. Recognize the family as the basic unit for the developing person
3. Relate the theories of human development and the basic principles of growth and development.
4. Identify health assessment and health promotion strategies for each developmental stage of the lifecycle in the following manner:
 - a. Family development and relationships
 - b. Physiologic concepts including physical characteristics with emphasis on physical assessment, nutrition, exercise, rest, sleep, play and leisure.
 - c. Psychosocial concepts involving cognitive, emotional and moral/spiritual development and health promotion and individual developmental tasks.
 - d. Health care and nursing application in addition to common health problems and special concerns.

HLSC 1530. Pathophysiology for Health Sciences**Course Description**

Introduction to the nature of disease and its effect on body systems. Disease processes affecting the human body via an integrated approach to specific disease entities will be presented including a review of normal functions of the appropriate

body systems. Diseases will be studied in relation to their etiology, pathology, physical signs and symptoms, diagnostic procedures, complications, treatment modalities and prognosis.

Student Learning Outcomes

1. Describe basic disease concepts, including mechanisms of disease, neoplasms, inflammation, and infection.
2. Examine the basic anatomy and physiology of the body systems, etiology of various diseases and conditions, important signs and symptoms of disorders, common diagnostics, typical course and management of disorders, preventive measures, and the effects of aging.
3. Identify the terminology, etiology, signs and symptoms, common diagnostics, typical course and management of disorders, and preventive measures associated with genetic and developmental disorders, childhood diseases, and mental health disorders.
4. Recognize important medical terminology related to the understanding of human diseases.
5. State the drug classifications and examples of medications in each class used to treat diseases, disorders and conditions related to each body system.

HLSC 1540. Legal and Ethical Issues in Health Care

Course Description

This course examines the legal and ethical considerations inherent in healthcare delivery. Students will analyze real-world case studies to understand the impact of professional actions on patients, families, and employers, while exploring the legal and ethical responsibilities of healthcare professionals, researchers, and policymakers.

Student Learning Outcomes

1. Analyze and apply ethical principles and legal frameworks to complex healthcare scenarios, including those related to patient rights, professional liability, and emerging bioethical issues.
2. Describe and evaluate the structure and function of the U.S. legal system as it pertains to healthcare professionals, including key legal terms, doctrines, and workplace regulations.
3. Discuss and address contemporary issues in healthcare, such as patient confidentiality, record keeping in the digital age, and the national healthcare crisis, within an ethical and legal context.
4. Explain the significance of integrating scientific knowledge, clinical expertise, and professional conduct in healthcare practice, and analyze how societal values and public law shape healthcare decision-making.
5. Apply theories and methods of ethical decision-making to resolve dilemmas encountered in healthcare practice, including understanding the interplay of public and private law.

HLSC 1545. Medical Ethics and Law

Course Description

This course covers legal relationships of healthcare providers and patients, contractual agreements, professional liability, malpractice, medical practice acts, informed consent, and medical-ethical issues. Emphasis is placed on making sound decisions when faced with ethical or legal dilemmas, legal terms, professional attitudes, and the principles and basic concepts of ethics and laws involved in providing medical services.

Student Learning Outcomes

1. Define key terms.
2. Discuss the code of ethics and the responsibilities of healthcare providers.
3. Identify legal relationships between healthcare providers and patients.
4. Discuss different types of licensure, registration, and certification of the allied health team.
5. Discuss the establishment and maintenance of medical records.
6. Outline proper ethical guidelines for sharing patient medical information.

7. Discuss the importance and the impact of HIPPA on medical records.
8. Define conditions for reporting physical abuse.
9. Compare consent and informed consent.
10. Differentiate between living will, advance directive, and the durable power of attorney for health care.
11. Describe the role of physicians and health professionals in death and dying situations.

Health, Medicine and Human Values (HMHV)

HMHV 1110. Social Contours of Health

Course Description

Seminar exploring ethnic, economic, demographic and geographic variables impacting public health in New Mexico and the Southwest. Topics include access to health care; local alternatives to medical treatment; cultural definitions of health, illness and death.

Student Learning Outcomes

By the end of the semester, you will be able to:

1. Identify, summarize, and apply sociological theories and concepts to the analysis of contemporary medical problems
2. Identify and theorize about the social causes of illness in society.
3. Explain how social inequalities – race, class and gender – affect the distribution, understanding and experience of illness.
4. Effectively communicate the above outcomes in verbal and written forms.

HMHV 1150. Foundations of Science

Course Description

The Foundations of Science course is designed for YOU (students transitioning from high school to college who plan on going into the life sciences with a special emphasis on medicine). The course takes an active learning approach that challenges you to apply your knowledge and work in small groups to solve real-world problems. The goal is to not only teach science, but to also train future scientists and medical doctors who will become life-long learners and leaders in their discipline and community. You will gain a background in fundamental science content, the tools of science and the tools for learning science. This will be accomplished using issues of debate related to science and medicine. Embedded in the discussion will be the fundamental science concepts necessary for explaining the issues. Students will also spend a significant amount of time developing study skills and life skills that will help them to achieve their goals in college and beyond.

Student Learning Outcomes

At the end of the course, you will be able to:

1. Demonstrate personal responsibility/self-authorship
 - a. Take responsibility for your actions/learning/life
 - b. Explain their preferred learning styles and how these relate to academic success
 - c. Develop a set of personal study strategies based on the findings of cognitive science
2. Experience the value of understanding others, interacting with others and collaborating
 - a. Value diversity and working as a group
 - b. Share and value what makes you unique
 - c. Communicate and collaborate with others
3. Reaffirm your passion for science and a career in medicine
 - a. Develop habits of mind to stay motivated
 - b. Develop strategies to overcome roadblocks
 - c. Explain basic scientific concepts to a non-expert in a way that enhances their decision-making.
4. Develop a toolkit to solve real-world problems in science.

- a. Learn appropriate vocabulary and develop skills in experimental methodology and mathematical manipulations to solve problems
- b. Design an experiment to solve a problem in a scientific manner
- c. Develop the thinking process for scientific investigation
- d. Learn how to read science textbooks and articles
- e. Evaluate arguments based on analysis of scientific data.
- f. Show/convince others that science competency is both interesting and relevant for all citizens.
- g. Marry scientific concepts learned in the course to a relevant context.
- h. Place important public issues such as the environment, energy and medical advances in a scientific context.
- i. Make informed decisions regarding health, safety, resources and the environment.

HMHV 2110. Literature, Fine Arts, and Medicine

Course Description

Seminar exploring links among health, illness, literature and the arts, encompassing a diverse range of forms and genres. Topics include representations of health, illness, and medicine; arts as therapy; medical history in literature and art.

Student Learning Outcomes

1. Through the reading of published stories, students will join the conversation about issues in medicine for which even the most respected experts disagree, problems for which there are no good or clear answers, problems which students will someday wrestle with themselves as physicians.
2. Students will grow in their understanding of, and their empathy for, the challenges and rewards faced by caregivers and patients.
3. Students will learn to analyze published essays and books, breaking down complex works of art into distinct parts, so that they may understand how these different components might be arranged when they write their own essays.
4. Students will learn to read powerfully: improving their verbal reasoning and reading comprehension skills through analytical and reflective writing.
5. Through the writing of their own stories, about a problem that they care about personally, students will gain a complex understanding of the many steps and stages necessary to create a meaningful piece of writing.
6. Students will create a complex, meaningful personal essay which emerges from their own wisdom about health, healing and medicine, which they bring from their families and communities, culture and life experience.
7. Students will grow in their skill and confidence as writers, which will help them succeed throughout their academic lives and beyond.
8. Students will grow in their understanding of their own motivations to be a caregiver.

HMHV 2993. Transition Workshop into BA/MD Program

Course Description

This course will give students in the BA/MD program an opportunity to discuss coursework, study skills, and interests required to successfully prepare for a health/medical career in rural or underserved area in New Mexico. It will offer the tools necessary to navigate the university system, the BA/MD program, as well as other enrichment activities.

Student Learning Outcomes

1. Students will develop knowledge, skills and attitudes that lead toward lifelong learning and enhance life opportunities
2. Students will be introduced to faculty members
3. Students will learn skills necessary to manage time, enhance leadership qualities, and participate in class activities
4. Students will become more familiar with the BA/MD program, policies, and support services offered by the University

Human Rights (HMRT)

HMRT 2110. Introduction to Human Rights

Course Description

The course provides a basic introduction to international human rights including conceptual foundations and key theoretical debates with attention paid to current events that are shaping justice and human rights. It provides a variety of disciplinary perspectives on human rights including philosophy, socio-legal studies, political science, law, and criminology. The combination of understanding the conceptual foundations, key theoretical debates, and thematic areas in human rights will enable students to understand the evolution of human rights regimes and their influence in society today.

1. Understand key theoretical debates on human rights.
2. Describe historical underpinnings of international human rights.
3. Identify different foundational texts in the evolution of justice and human rights.
4. Understand how social and historical contexts have impacted beliefs on justice, rights, and human dignity.
5. Explain thematic areas in international human rights.
6. Understand regional and global multilateral mechanisms in human rights law.
7. Critically examine the efficacy of international human rights.
8. Understand the social, political, economic and other factors that have molded human rights.
9. Gain a better understanding of your own worldviews and opinions towards justice and human rights.

HMRT 2125. International Rights of Children

Course Description

This course examines the history, sources and role of international rights of children in the protection of children worldwide. It provides an understanding of the international legal regulatory framework implemented to address the rights of children. The course is broken into two parts. The first part covers the history and development of international rights of children and explores key concepts from children's rights theory. This section also covers current international legal mechanisms in place to protect children worldwide. The second section covers issues in the protection of children's rights. Issues covered include (but not limited to): child labor, child trafficking, armed conflict, war, the right to truth. Lastly the course covers the future of international rights of children.

Student Learning Outcomes

1. Understand the history and origins of child protection in international human rights law.
2. Identify key concepts of children's rights theory in international human rights law.
3. Describe major international human rights law established for the protection of children.
4. Understand how international rights of children addresses issues in child exploitation and abuse related to child labor and child trafficking.
5. Explain the rights of children during armed conflict and war.
6. Identify the rights of children to the right to truth.
7. Critically examine the what the future of international rights of children entails when incorporating an understanding of human rights law.
8. Gain a better understanding of your own worldviews and opinions towards the international rights of children.

HMRT 2175. Border Justice and Human Rights

This course examines the human rights implications of border practices, migration/refugee patterns, and environmental degradation set amidst increasingly contentious territorial politics, complex population movements, and record-shattering climate change events. Additionally, the course provides context to justice along the U.S./Mexico border as seen through a human rights lens. It examines issues of border conflict around the world. It also explores the history of the U.S.-Mexico border and examines historical and contemporary human rights issues impacting the region. The course is broken into three parts. The first part introduces the history of the U.S.-Mexico border region. This includes exploring the history of border drawing and its impact on populations living along the border. The second section examines the long history of violence along borders. It examines how border identities develop over time in the midst of violence, community building, and the contested spaces of borders. It also explores how drugs, immigration, and free trade has impacted border regions. Lastly after understanding the history and issues of violence along borders, the last section explores human rights issues of border regions. This section examines how social movements and human rights advocacy have impacted the protection of rights of communities living along borders.

Student Learning Outcomes

1. Explain the historical evolution of border drawing along the U.S.-Mexico border and throughout the world.
2. Identify how colonization impacted the development of border regions.
3. Understand how identity is informed by migration and belonging in the U.S.-Mexico border region.
4. Describe how increased border enforcement and immigrant criminalization has impacted the U.S.-Mexico border region.
5. Understand how drug wars, human trafficking and gendered violence impacts the U.S.-Mexico border.
6. Describe past and current human rights violations taking place along the U.S.-Mexico border and at other borders throughout the world.
7. Understand how transnational advocacy groups and other social movements advocating for human rights have impacted border regions.
8. Gain a better understanding of your own worldviews and opinions towards the U.S.-Mexico border and human rights.

Heating, Ventilation, and Air Conditioning (HVAC)

HVAC 1105. Introduction to Fundamentals of Refrigeration**Course Description**

Demonstrate the ability to perform HVAC/R Technician duties in a safe manner. Accurately perform HVAC/R related calculations and interpret results for the purpose of diagnosis, repair, or installation of HVAC/R equipment and systems. Professionally communicate in oral and written forms. Demonstrate the use of current industry techniques including tools, testing equipment, manufacturers' apps. Determine the appropriate ethical action that should occur in a given circumstance. Work effectively in a team-based environment. Possess a mastery of the refrigeration cycle and its components

Student Learning Outcomes

1. Demonstrate working knowledge of heat theory, safety, and temperature/pressure/volume gas laws as they relate to the refrigeration cycle.

2. Identify and demonstrate heat transfer by conduction, convection, and radiation and describe their effects on temperature change using latent and sensible heat transfer.
3. Safely demonstrate the refrigeration process using system components such as compressors, condensers, evaporators, metering (expansion) devices and accessories.
4. Demonstrate a knowledge of industry standards for system installation of equipment and tubing and safely demonstrate tubing operations including cutting, reaming, flaring, swaging, and brazing.

HVAC 1110. Introduction to Fundamentals of Electricity

Course Description

Introduces the student to electrical theory, generation and distribution, OHM's Law, series and parallel circuits, A/C / D/C, practical applications and electrical safety.

Student Learning Outcomes

1. Demonstrate the use of industry practices: safety, use of lockout/tagout, diagnosing , repairing, and installing electrical components in HVAC/R equipment and systems
2. Use of test instruments both digital and analog
3. Comprehension of wiring diagrams, proper use of tools specific to the industry
4. Mastery of electrical theory and circuits, single-phase and three-phase applications
5. Use of symbols and terminology, and the ability to communicate professionally in oral and written forms.

HVAC 1111. EPA Clean Air

Course Description

Refrigerant certification preparation to include basics of refrigerant bearing equipment, ozone depletion and the new legislation, technician categories covered and the certification examination.

Student Learning Outcomes

1. Use oral and written communication effectively
2. Perform accurate conversions between various units and calculations related to air conditioning and refrigeration.

HVAC 1115. Refrigeration Management

Course Description

This course will stress the accepted practices and proper procedures to handle refrigerate materials. The course will educate the student in the proper procedures for safely conducting leak detection, evacuation, recovery and charging systems. Students will prepare for and take the Universal CFC Refrigerant Handlers Certification exam, which is required by the EPA. This certification is required to handle and service all types of refrigeration equipment containing and using refrigerants. Students must pass the exam with a 71% and be able to successfully perform evacuation, recovery, and charging of systems for Type 1, Type 2 and Type 3 procedures.

Student Learning Outcomes

1. Demonstrate knowledge of accepted practices and procedures of refrigerant handling used in the air conditioning and refrigeration industry.
2. Properly and safely service refrigeration equipment used for comfort air conditioning and refrigeration preservation processes.
3. Maintain refrigeration systems including leak and pressure testing, evacuation, and system recharging.
4. Be able to explain the application of relief devices on pressurizes fluids.
5. Be able to successfully identify equipment.

HVAC 1120. Motors & Controls

Course Description

Covers primary and control circuits in various applications, troubleshooting and components. Emphasizes attention to motors and starting devices.

Student Learning Outcomes

1. Demonstrate industry safety practices.
2. Use electrical meters appropriately to test and identify voltages in both single- and three-phase systems.
3. Size and test fuses/breakers and safely replace them.
4. Define or explain the use or function of contactor/starters.
5. Demonstrate proper use of test equipment for testing contactor/starters and motors.
6. Measure compressor windings and operating amps and determine if they are correct.
7. Demonstrate proper use of a megohmmeter and check winding insulation.
8. Use a continuity tester to determine whether an open circuit or dead short exists.
9. Define and explain the use or function of capacitors; calculate capacitance.
10. Use a capacitance meter to measure run and start capacitors.
11. Determine the electrical characteristics of both series and parallel circuits.
12. Explain electric motor theory (i.e., magnetism, electromotive force, etc.)
13. Explain operation and application of capacitor start induction run motor (CSIR), capacitor start capacitor run motor (CSCR), permanent split capacitor (PSC), and shaded pole.
14. Describe starting components associated with single-phase motors.
15. Explain the significance of power factor.
16. Determine physical conditions of motor bearings and rotors.
17. Draw and explain the starting and run circuit for a single-phase CSIR compressor using a current type-starting relay, the starting and run circuit for a single-phase CSCR compressor using a potential starting relay, and draw and explain the circuit for a PSC compressor.
18. Identify the fundamental types of electric motors, listing basic characteristics.
19. Describe the basic application where these motors are used in the industry.
20. Be able to wire and troubleshoot the motors starting devices used in the industry.
21. Apply principles of fundamental motor diagrams as they relate to motor controls and overload protection.
22. Demonstrate procedures used for troubleshooting motors and control components.
23. Apply principles of electricity using rating, and current to describe service factors.
24. Define capacitance and identify its use as it relates to motors.

HVAC 1125. Electrical/Mechanical Controls I

Course Description

Applications of basic electrical and mechanical controls. Reading and drawing diagrams of simple refrigerating equipment. Safe use of testing equipment.

Student Learning Outcomes

1. Use oral communication and written effectively, and work effectively as a team.
2. Troubleshoot refrigeration systems.
3. Perform accurate conversions between various units
4. Perform accurate calculations related to refrigeration,=
5. Determine the appropriate ethical action that should occur in a given circumstance

6. Perform technician duties safely, service refrigeration systems, repair refrigeration systems, maintain refrigeration systems.

HVAC 1130. Code and Safety I

Course Description

Investigates code requirements and safety practices related to refrigeration. Code and safety searches are an integral part of the course.

Student Learning Outcomes

1. Locate safety rules and regulations in the work place.
2. Defined safety rules and regulations to the Air Conditioning, Heating, and Refrigeration Industry.
3. Defined local and state codes enforcement agencies.
4. Locate safety rules and regulation which apply to our environment, and our personal every day life.

HVAC 1140. Application of Refrigeration Systems

Course Description

A comprehensive study of commercial refrigeration systems and their relationship to the Heating, Ventilation, Air Conditioning and Refrigeration (HVAC-R) industry. Students will study commercial control systems, switching logic and troubleshooting.

Student Learning Outcomes

1. Compare commercial refrigeration (food preservation and process operations) cycles of different temperature ranges to the comfort zone and temperature range used for comfort air conditioning systems
2. Describe the need for and operation of different types of control systems
3. Diagnose problems with systems operation
4. Identify and apply proper temperature ranges for commercial refrigeration

HVAC 1233. Professional Development and Leadership

Course Description

As members and/or officers of various student professional organizations, students gain experience in leadership, team building, and community service. Students competing in Skills USA are required to register for the course. May be repeated up to 6 credits. Consent of Instructor required. Restricted to: HVAC majors. Graded: S/U Grading (S/U, Audit). Restricted to: Community Colleges only.

Student Learning Outcomes

1. Professionally communicate in oral and written forms.
2. Work effectively in a team-based environment.
3. Demonstrate the ability to perform HVAC/R Technician duties in a safe manner.

HVAC 1235. AC and Controls

Course Description

Covers installation, service and maintenance of air conditioning and heat pump systems.

Student Learning Outcomes

1. Interprets model numbers and nomenclature so as to ascertain application and capacity of any listed component or system.

2. Evaluate system performance based on information obtained from readings and manufacturer's performance charts, using gauges, electrical test equipment and thermometers above listed systems for proper operation, and make repairs as needed.
3. Describe the steps necessary to:
 - a. assemble, pipe together, pressure-up, leak check, evacuate, charge, and operate any listed system,
 - b. recover, recycle, and reclaim refrigerant, services in layman terms,
 - c. connect wiring, check, integrity of electrical components, and gather electrical data for any listed system,
 - d. ohm out motor, and
 - e. the "hopsotch" method of troubleshooting.
4. Utilize schematics and wiring charts in order to determine operating characteristics and ampacity of listed systems.
5. Demonstrates the proper and safe use of tools and instruments such as clamp on amp meter, Digital Multimeter, Capacitor Checker, recording and electronic thermometers, trouble shoot electrical problems using the "hopsotch" method, removing and replacing any component on the above listed systems.
6. Use a schematic and electrical test instruments to trouble shoot and repair labs systems such as A/C Heat Pump, Roof Top combo and Split system.

HVAC 1238. Intrroduction to Sheet Metal Fabrication

Course Description

Introduction to sheet metal fabrication to include hands-on practical laboratory applications, cutting and forming procedures, identifying types and gauges. Design and layout techniques. Prerequisite: OETS 118 or equivalent math or consent of instructor.

Student Learning Outcomes

1. Professionally communicate in oral and written forms.
2. Accurately perform HVAC/R related calculations and interpret results for the purpose of diagnosis, repair, or installation of HVAC/R equipment and systems.
3. Determine the appropriate ethical action that should occur in a given circumstance.
4. Demonstrate the ability to perform HVAC/R Technician duties in a safe manner.
5. Demonstrate sheet metal design and layout techniques to fabricate ducting and associated fittings accurately.

HVAC 1240. Air Flow Principles/Duct Design

Course Description

Calculate and design duct systems for residential and commercial buildings. Determine indoor air quality and identify correct methods for providing quality air. Learn how to install a complete duct system and gas furnaces, air handlers, etc. Knowledge on different tools used for fabrication ductwork

Student Learning Outcomes

1. Calculate the needed heating and cooling loads for residential and light commercial buildings.
2. Design a basic ductwork system used to heat and cool and meet indoor air quality standards.
3. Install and maintain a basic ductwork system.
4. Apply air properties to properly equip and balance airflow in a ductwork system.

HVAC 1243. Residential Air Comditioning Systems

Course Description

Applications and types of equipment used in comfort cooling. Preventive maintenance, service, and repairs common to evaporative coolers and refrigerated air conditioning systems. Air properties and psychometrics.

Student Learning Outcomes

1. Use oral and written communication effectively
2. Work effectively as a team
2. Troubleshoot heating systems accurately perform conversions between various units
3. Accurately perform calculations related to heating systems
4. Determine the appropriate ethical action that should occur in a given circumstance.

HVAC 1244. Commercial Air Conditioning and Heating Systems

Course Description

Covers troubleshooting mechanical and electrical problems associated with HVAC equipment in commercial buildings. Includes gas, electric, and heat pump systems. only.

Student Learning Outcomes

1. Professionally communicate in oral and written forms.
2. Work effectively in a team-based environment.
3. Accurately perform HVAC/R related calculations and interpret results for the purpose of diagnosis, repair, or installation of HVAC/R equipment and systems.
4. Demonstrate the use of current industry techniques and equipment to diagnose HVAC/R systems and perform appropriate repairs.
5. Demonstrate the use of current industry techniques and equipment to perform the service and maintenance of HVAC/R equipment and systems.
6. Demonstrate the use of current industry techniques and equipment in the installation of HVAC/R equipment and systems.
7. Determine the appropriate ethical action that should occur in a given circumstance.
8. Demonstrate the ability to perform HVAC/R Technician duties in a safe manner.

HVAC 1245. Gas Heating Furnaces

Course Description

The study and application of gas furnaces including installation, operation, service, maintenance and controls. The students will learn about natural gas, and electric heating systems used for residential and/or light commercial heating systems including furnace and boiler package systems and alternative heating sources. Highlights electrical and electronic troubleshooting, service, maintenance, repair and replacement of residential and light commercial heating systems.

The course will include service, maintenance and troubleshooting.

Student Learning Outcomes

1. Identify the components and describe the sequence of operation of gas furnaces.
2. Use proper procedures to troubleshoot gas furnaces.
3. Describe and demonstrate proper procedures for conducting service calls and delivering customer service.
4. Demonstrate the use of proper procedures for preventative maintenance of gas furnaces.
5. Describe how gas pressure is measured, what unit of measurement is used and what is the purpose of a water manometer, gas combustion, four means of proof flame, why there is a fan-on and fan-off delay, flue gas venting systems, gas piping adjacent to the gas valve, calculate the correct orifice size, derate sea level input for altitude, calculate the correct gas pipe sizing for a one-story building with several gas appliances.

HVAC 1250. Heat Pump Systems

Course Description

The student will acquire the knowledge to identify heat pump components, explain the sequence of operation, and develop troubleshooting skills for both mechanical and electrical issues associated with reverse cycle refrigeration systems used in comfort heating and cooling, while utilizing the proper tools and equipment.

Student Learning Outcomes

1. Professionally communicate in oral and written forms.
2. Work effectively in a team-based environment.
3. Accurately perform HVAC/R related calculations and interpret results for the purpose of diagnosis, repair, or installation of HVAC/R equipment and systems.
4. Demonstrate the use of current industry techniques and equipment to diagnose HVAC/R systems and perform appropriate repairs.
5. Demonstrate the use of current industry techniques and equipment to perform the service and maintenance of HVAC/R equipment and systems.
6. Demonstrate the use of current industry techniques and equipment in the installation of HVAC/R equipment and systems.
7. Determine the appropriate ethical action that should occur in each circumstance.

HVAC 1321. Advanced Hydronic Systems and Controls I

Course Description

Covers the types of hydronic systems, pumps and valves used in the industry; the sizing, selection and internal construction, disassembling, assembling and measurement of mechanical hydronic systems. Stresses pneumatic, electronic and electric control systems with computer interfacing.

Student Learning Outcomes

1. Discuss, identify and demonstrate safety principles as applied to pumps and valves, types of pumps used in hydronic systems, types of valves used in hydronic systems, internal components of pumps and valves, remote communications, monitoring and alarming, energy accounting.
2. Draw pneumatic circuits that conform to standard industry logic and symbols using appropriate system control loops and controls, a ladder diagram of a given system, and pneumatic piping systems.
3. Define and explain the use or function of water valves, zone valves input and output, pneumatic components and the performance of each component.
4. Demonstrate proper use of test equipment for testing the following items, adjusting water flow for proper gallons per minute (GPM) and temperature difference, disassemble and reassemble a variety of pumps and valves, checking amp draws, troubleshooting of faulty pneumatic controls, identifying and draw all electrical symbols used by the HVACR industry in diagrams, use of air pressure test instruments to diagnose pneumatic troubles and correct system performance, measuring air valves for heating/cooling applications, and measuring operability of various actuators.
5. Select appropriate pumps and valves for heating/cooling applications, and plot various system curve pump graphs.
6. Interpret pneumatic diagrams into sequence of operation, detailed instructions for wiring circuits.
7. Develop a methodical routine for pneumatic troubleshooting, a methodical routine for electrical switches that are mechanical connected to pneumatic controls.
8. Analyze electrical performance of each component.
9. Describe electrical mechanical sequence from electrical schematic, the type of pneumatic thermostats, describe pneumatic/mechanical sequences of operation of control systems

HVAC 1323. Wtr/Stm Gen Con II

Course Description

Covers types, design, construction of typical systems, sizing and controls of units. Covers advanced building controls using interfaced operating monitor equipment.

Student Learning Outcomes

1. Demonstrate boiler operation procedures needed for safe start up and shutdown of boilers, proper use of test equipment for items such as expansion and condensate tanks, heat recovery systems, water flow rates, the operation of a central system, boiler-piping systems and appropriately diagnose steam and hot water boiler hydronic problems.
2. Perform combustion test and adjust to optimum efficiency, safety shutdown check, draft measurement, combustion, combustion controls and instruments.
3. Interpret detailed instructions for wiring circuits, electrical diagrams into sequence of operation, and draw electrical circuits that conform to standard industry logic and symbols using appropriate loads and controls, a ladder diagram of a given system, electrical test instruments to diagnose electrical troubles and correct electrical system performance.
4. Explain the basic functions for the following components:
Air distribution used for boiler operation, the definition of EMS, the difference between EMS and Direct Digital Controls (DDC), wiring methods, peripheral devices, input and output, the requirements for system control such as electronic DDC, pneumatic, building systems, the role computers are now playing in the HVACR industry, the history of DDC systems, central processors, electrical mechanical sequence from electrical schematic, remote communications, monitoring and alarming, the definition of DDC systems, draw electrical symbols used by the HVACR industry in diagrams, and list the principle parts of a programmable controller.
5. Determine gas burner capacity using boiler capacity, the correct water treatment for safe boiler operation, adjust water flow for proper gallons per minute (GPM) and temperature difference.
6. Develop a methodical routine for electrical troubleshooting.
7. Analyze electrical performance of each component.
8. Measure resistive values of various sensors and the operability of various boards.

HVAC 1325. Chilled Water Systems

Course Description

Emphasizes commercial and industrial chilled water systems.

Student Learning Outcomes

1. Demonstrate use of tools and test equipment and conform to all applicable governmental regulations (EPA).
2. Demonstrate how to check compressor lubrication oil.
3. Determine actual system flows using the appropriate test equipment.
4. Perform leak check and make repairs.
5. Record system data for the mechanical system operation.
6. Develop a systematic way to diagnose system problems and demonstrate method.
7. Identify and describe possible causes of failure and how to eliminate causes.
8. Identify the components of a liquid chiller.
9. Explain the methods of chiller capacity controls.
10. Discuss the application of liquid chillers.
11. Describe the differences in design and construction between direct expansions versus indirect expansion evaporators.

12. Explain the operation of liquid chillers.
13. Discuss the problems associated with liquid chillers.
14. Measure the temperature drop through the chiller.
15. Determine Btu/h capacity of water chillers using flow rate and Delta ΔT method
16. Calculate voltage imbalance & temperature rise on three-phase systems.

HVAC 1330. Controls III

Course Description

Covers the operations and configurations of Building Automated Controls (BACs) for Heating, Ventilating, Air Conditioning and Refrigeration (HVAC/R) Energy Management. During the course students will apply theory, knowledge and techniques to actual projects using computer based BACs.

Student Learning Outcomes

1. Use electrical test instruments to diagnose electrical troubles and correct electrical system performance.
2. Identify the requirements for system control: Electronic DDC as compared to Pneumatic control system to control building systems.
3. Explain the role computers are used in the HVACR industry.
4. Measure resistive value of various sensors.
5. Measure operability of various boards.
6. Explain the definitions of EMS.
7. Explain the difference between EMS and Direct Digital Controls (DDC).
8. Explain wiring methods, peripheral devices, and input and output.
9. Discuss remote communications, monitoring and alarming.
10. List the principal parts of a programmable controller
11. Explain the history of DDC systems.
12. Discuss the definition of DDC systems.
13. Explain central processors.

HVAC 1335. Code and Safety II

Course Description

Investigates code requirements and safety practices related to refrigeration. Code and safety searches are an integral part of this course.

Student Learning Outcomes

1. Locate specific data in the Uniform Mechanical Code Book.
2. Interpret the Uniform Mechanical Code data as it applies to ACHR applications.
3. Demonstrate safety procedures as applied to the industry."

HVAC 1338. NM Mech Codes: HVAC

Course Description

Principles and regulations developed for HVAC, sheet metal, and plumbing occupations to include terminology, ventilation air supply, exhaust systems, duct systems, combustion air, chimneys and vents, boilers/water heaters, refrigeration, panel and hydronic panel heating, fuel gas piping, storage systems, solar systems, and workmanship standards

Student Learning Outcomes

1. Use oral and written communication effectively.
2. Accurately perform conversions between various units.

3. Determine the appropriate ethical action that should occur in a given circumstance.

HVAC 1405. Refrigeration Application

Course Description

Covers system design, accessories, performance characteristics and problem diagnosis.

Student Learning Outcomes

1. Demonstrate industry safety practices.
2. Discuss the following personal traits:
 - a. honesty, integrity, reliability, responsibility, accountability, character, conflict resolution, teamwork, ethics, pride, initiative, and time management.
3. Measure pressures with the refrigeration gauge manifold.
4. Evacuate systems with a two-stage vacuum pump.
5. Measure vacuums with a thermostat vacuum gauge, temperatures with electronic thermometers, and measure temperatures with bimetal, thermocouple or glass stem thermometers.
6. Charge a system with a charging cylinder and electronic charging scale.
7. Check for leaks with nitrogen with a trace of R-22 using an electronic leak detector, halide torch and soap bubbles; make repairs.
8. Compare readings to manufacturers specifications and determine refrigerant amount and type.
9. Describe heat exchange techniques.
10. Explain capacities of refrigerant lines, effects of refrigerant velocity in lines, explain equivalent lengths of piping for fittings, explain use of traps in vapor risers, and explain the effects of pressure drop in the refrigeration system.
11. Calculate amount of refrigerant in lines.
12. Size piping using manufacturers installation instructions.
13. Calculate pressure drop in liquid line risers.
14. Identify the proper operation of unloaders.
15. Replace a dryer/filter.
16. Adjust a crankcase pressure-regulating valve; an evaporation pressure-regulating valve.
17. Explain the operation of components used for the pump down cycle and the application and operation of evaporator pressure regulating (EPR) valves.
18. Discuss the problems associated with compressors operating at lower evaporator temperatures, decreased volumetric efficiency, higher discharge gas temperatures, potential overloading during initial temperature pull-down.
19. Explain methods of head pressure control system and heat reclaim.
20. Select a compressor for a particular capacity and temperature range.
21. Check systems superheat and subcooling and display case temperatures and determine if system is operating properly.
22. Set compressor cut-in and cut-out for a special product.
23. Adjust head pressure controls for proper operation.
24. Check operation of equipment for automatic pump down.
25. Define the different types of multiplexed systems and explain their applications.
26. Describe how compressors are connected and describe the physical construction of a common rack system.
27. Define the different types of multiplexed systems and describe the advantages of controlling capacity using a multiplexed system.
28. Describe how compressors are cycled on and off.

29. Explain:

- a. the problems associated with multiplexed systems, oil control, crankcase pressure balance, and contamination due to a compressor burnout,
- b. the cascade system,
- c. function and placement of check and hot gas valves.
- d. advantages of multiple evaporator systems.
- e. the difference in compressor requirements for a multiplexed system,
- f. differences between even and uneven parallel systems,
- g. the operation of the defrost cycle.

30. Check staging of compressors with changes in system load and individual evaporator temperatures and adjust EPR valves accordingly.

31. Identify the capacity of compressors used on multiplexed systems by referring to manufacturers specifications.

32. Set super heat on Perkins systems.

33. Layout piping diagram of multiple evaporator systems showing placement of required low side components (TXVs, EPRs, check valves, etc.) and high side required components.

34. Describe:

- a. the types and applications of dispensing freezers.
- b. the design and function of dispensing freezers.
- c. the maintenance requirements of dispensing freezers including sanitary requirements.

35. Clean and set-up a dispensing freezer and check its operation.

36. Demonstrate the operation of low ambient head pressure control systems (fan cycling, dampers and flooding of condenser).

37. Adjust pressure control to lowest temperature.

38. Explain the operation of the oil separation and the oils return to the compressor crankcase and oil level (balance) of multi-parallel compressor applications.

39. Establish the pressure control settings.

40. Charge system with refrigerant on liquid side as well as suction side.

41. Test and adjust all operating and safety controls.

42. Develop systematic way to diagnose system problems and demonstrate method.

43. Determine system air flow requirements, and actual system air flow.

HVAC 1407. Ice Makers

Course Description

The student will identify styles of ice makers, explain the sequence of operation and learn how to troubleshoot faulty components: service, install, and maintain these systems.

Student Learning Outcomes

1. Understand safety guidelines when working on ice machines.
2. Knowledge of code requirements.
3. Knowledge of volt-ohm meter.
4. Interpreting wire diagrams and replacement of components.

HVAC 1410. Commercial Refrigeration Systems

Course Description

This course covers the installation, service, and maintenance of a wide range of refrigeration equipment, including reach-in and walk-in coolers, ice machines, ice cream machines, as well as mechanical and electrical troubleshooting of refrigeration systems. Encompassing the service and maintenance of commercial refrigeration equipment, which involves procedures for evacuation and charging, understanding electrical diagrams, and handling compressors and related accessories.

Student Learning Outcomes

1. Read and interpret technical data to design refrigeration systems, applying knowledge of model numbers, nomenclature, and pressure/enthalpy charts.
2. Calculate heat gain, recommend appropriate systems, and incorporate secondary refrigerants into design decisions.
3. Size, assemble, pipe, test, and operate refrigeration systems. They will troubleshoot and resolve issues in parallel systems and demonstrate proficiency in starting up and explaining lab systems.
4. Diagnose and repair refrigerant side, air side, and electrical issues, evaluate system performance using data, and troubleshoot defrost timers and safety controls.
5. Perform maintenance tasks, including leak checks, repairs, recovery, evacuation, and recharging of systems, while ensuring compliance with industry standards.
6. Practice safe HVAC/R techniques, communicate effectively in oral and written formats, collaborate in teams, and demonstrate ethical and professional conduct in their work.

HVAC 1415. Industrial Refrigeration

Course Description

Coverage of the fundamentals, design, installation, and operation of industrial refrigeration systems. Also examined in depth are: Multistate Systems—Commonly used in low-temperature systems. Compressors, Evaporators, and Condensers—Essential system components. Piping, Vessels, Valves and Refrigerant Controls.

Student Learning Outcomes

1. Explain the difference between a direct expansion (DX) and flooded evaporator.
2. Distinguish the different type of metering device is used for different refrigeration application.
3. Discuss the functions of refrigerant oil in a refrigeration system and the methods of cooling the refrigerant oil.
4. List the advantages of pumped liquid recirculation systems and secondary coolant systems.
5. Describe two-stage refrigeration system and cascade system.
6. Distinguish the difference between air-cooled, water-cooled, and evaporative condensers.
7. Discuss the various types of defrost methods.
8. Plot the refrigeration cycle on a pressure-enthalpy chart.
9. Discuss operating limits for the various styles of compressors.
10. Compare the methods used to accomplish compression and the different approaches to capacity control.

HVAC 1420. Energy Efficient Green Bldg I

Course Description

This section covers the training needed for a standardize set of building performance procedures. During the course, students will apply theory, knowledge, and techniques to actual projects using duct blaster testing warm air equipment.

Student Learning Outcomes

1. Develop an understanding of the requirements and dedication needed to complete the energy auditing.
2. Describe the job requirements of an Energy Auditor.
3. Develop knowledge of the many instruments available for use in the energy auditing field.

4. Discuss water conservation for energy savings.
5. Explain the principle of hot water heating systems.
6. Explain heat loss.
7. Describe the methods and causes of heat transfer.
8. Explain the building envelope and thermal characteristics of a building.
9. Describe the basic types and effect of insulation in a building.
10. Identify the primary parts of a duct tester.
11. Explain the importance of duct tightness.
12. Demonstrate how to set up a duct tester and perform standard duct system test.
13. Differentiate the R-value and U-value.
14. List the different types of windows and doors.
15. Compare heat gain and loss through windows and doors.
16. Identify various mechanical equipment and appliances that consume household energy.
17. Locate the manufacturer data and system characteristics of various household appliances and systems.
18. Demonstrate the methods for locating duct leakage.
19. Evaluate the duct leakage test results and prepare test reports.

HVAC 1425. Energy Efficient Green Bldg II

Course Description

Weatherization Training with Concentration on Building Performance. This section covers the Training needed for a standardize set of Building Performance Procedures. During the course, students will apply theory, knowledge, and techniques to actual projects using Blower Door testing equipment.

Student Learning Outcomes

1. Students will apply theory, knowledge, and techniques to actual projects using Blower Door testing equipment.
2. Students will apply theory, knowledge, and techniques to House as a System and Building Science Basics.
3. Students will apply theory, knowledge, and techniques to Blower Door Basics and Pressure and Thermal Boundaries.
4. Students will apply theory, knowledge, and techniques to Combustion Safety Worker Safety Materials, Tools, & Equipment Typical Weatherization Measures Mobile Home Basics, and Multifamily Basics.
5. Students will apply theory, knowledge, and techniques to Building Envelope Ratio of exterior surface area to conditioned area smaller for multifamily than single-family Balancing ventilation critical to energy efficiency and comfort.
6. Student shall describe the HVAC/R Energy Efficiency & Green Building Code Compliance and safety used in the HVAC/R industry.
7. Student shall describe the energy code in building performance.
8. Student shall describe the energy code in Typically Heating & Domestic Hot Water, Building Envelope.
9. Student shall describe the energy code for Boiler rooms, ventilation, Lighting Seal ventilation shafts, garbage chutes, top and bottom of building, main and unit plumbing and HVAC pipes/ducts.
10. Student shall describe the energy code for Ratio of exterior surface area to conditioned area smaller for multifamily than single-family.

HVAC 1430. Efficient Green Building Code

Course Description

The study of Energy Efficiency & Green Building Code Compliance, Course will cover Federal, State, and local Green Building Codes.

Student Learning Outcomes

Upon completion of this course, the student will be able to accomplish the following with accuracy of at least 71%, or to the instructor's satisfaction. The student can use the following as a checklist for this course:

1. To obtain an understanding of the administrative provisions of the IECC.
2. To obtain an understanding of the definitions and how the climate zones are structured.
3. To obtain an understanding of the residential building thermal envelope prescriptive insulation requirements.
4. Locate safety rules and regulation which apply to our environment, energy conservation, and our personal everyday life.

HVAC 1510. HVAC/R Advanced Electricity**Course Description**

Students will learn safe work practices while gaining knowledge of HVAC/R electrical controls, wiring diagrams, comprehensive troubleshooting, component failures, and properly diagnosing failures correctly. Practical and realistic examples will be stressed throughout, as well as the National Electrical Code and Uniform Mechanical Code as it relates to the HVAC/R industry.

Student Learning Outcomes

Demonstrate knowledge of electrical controls, safety, wiring and pictorial diagrams.

HVAC 1985. Heating, Ventilation and Air Conditioning and Field Experience**Course Description**

The course will provide students with actual hands-on exposure to HVAC/R fieldwork, offering insights into the expectations of field technicians as they shadow experienced HVAC/R professionals. Students will gain practical experience through supervised training at an approved Heating, Ventilation, Air Conditioning, and Refrigeration workplace.

Student Learning Outcomes

1. Effectively utilize verbal and written communication, collaborate efficiently within a team.
2. Diagnose issues in refrigeration systems.
3. Precisely execute unit conversions.
4. Accurately conduct refrigeration-related calculations.
5. Identify the ethical course of action in specific situations.
6. Safely execute technician responsibilities.
7. Provide maintenance for refrigeration systems.
8. Conduct repairs on refrigeration systems, and service refrigeration systems.

HVAC 1990. Heating Ventilation and Air Conditioning Practicum**Course Description**

Working in the field with journeymen service technicians. Develop and apply job skills

Student Learning Outcomes

Varies

HVAC 1996. Heating, Ventilation and Air Conditioning Special Topics**Course Description**

Topics to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

HVAC 1997. Heating, Ventilation and Air Conditioning Independent Study**Course Description**

Individual studies related to heating, air conditioning, and refrigeration.

Student Learning Outcomes

Varies

HVAC 2985. Heating, Ventilation and Air Conditioning Field Experience**Course Description**

The course will provide students with actual hands-on exposure to HVAC/R fieldwork, offering insights into the expectations of field technicians as they shadow experienced HVAC/R professionals. Students will gain practical experience through supervised training at an approved Heating, Ventilation, Air Conditioning, and Refrigeration workplace.

Student Learning Outcomes

1. Effectively utilize verbal and written communication, collaborate efficiently within a team.
2. Diagnose issues in refrigeration systems.
3. Precisely execute unit conversions.
4. Accurately conduct refrigeration-related calculations.
5. Identify the ethical course of action in specific situations.
6. Safely execute technician responsibilities.
7. Provide maintenance for refrigeration systems.
8. Conduct repairs on refrigeration systems, and service refrigeration systems.

Hebrew (HEBR)**HEBR 1110. Hebrew I****Course Description**

This course is an introduction to fundamentals of the Hebrew language.

Student Learning Outcomes

1. Become familiar with the basics of the Hebrew language.
2. Have an understanding of the development and history of the Hebrew language.
3. Start reading the Hebrew Tanakh.

HEBR 1120. Hebrew II**Course Description**

This course is a continuation of HEB 201. Class will consist of lectures, various activities, and class discussion. Since a large amount and a wide range of material will be covered during each class meeting, regular attendance is necessary to do well in the class. Roll will be taken, and a student who is consistently absent should expect a lower grade.

Student Learning Outcomes

To enable the student:

1. To become familiar with of the basics of the Hebrew language.
2. To have an understanding of the development and history of the Hebrew language.
3. To start reading the Hebrew Tanakh.

HEBR 2110. Hebrew III**Course Description**

This course is an continuation of the study of Biblical/Classical Hebrew language. Class will consist of lectures, various activities, and class discussion. Since a large amount and a wide range of material will be covered during each class meeting, regular attendance is necessary to do well in the class. Roll will be taken, and a student who is consistently absent should expect a lower grade.

Student Learning Outcomes

1. Become familiar with more of the Biblical Hebrew language.
2. Have an understanding of the development and history of the Hebrew language.
3. Continue reading the Hebrew Tanakh.

HEBR 2120. Hebrew IV**Course Description**

Continuation of Intermediate Hebrew. Biblical Hebrew poetry with reference to selected passages.

Student Learning Outcomes

1. Students should have a deeper understanding of selected Hebrew texts relating to Western Civilization.
2. Students should have learned a wider vocabulary of Hebrew words.
3. Students should be able to read (aloud), with understanding selected Hebrew texts of moderate complexity and difficulty.
4. Students should be able to translate and analyze Hebrew sentences and passages from selected Hebrew texts of moderate complexity and difficult
5. Students should be familiar with, and able to use effectively, lexica and other resources for the study of the Hebrew language and texts.
6. Students should be able to write and/or word-process grammatically correct sentences in Hebrew.
7. Students should be able to discuss the cultural setting of selected Hebrew words and texts.

History (HIST)

HIST 1103. Introduction to Historical Study**Course Description**

This course introduces students to the dynamic nature of the field of history. Students will survey the various types of sources that historians rely on to reconstruct past events and will learn to apply historical thinking methods to interpret and write about past events.

Student Learning Outcomes

1. Articulate a definition of the field of historical study that recognizes the centrality of including multiple perspectives on any given historical event
2. Distinguish between and evaluate primary and secondary sources for historical study
3. Identify the elements of the historical thinking process in the context of their application in historical accounts
4. Demonstrate the ability to place historical sources in context through the creation of a project that includes both primary and secondary sources
5. Identify possible career pathways for historians and describe how to prepare for such opportunities

HIST 1105. Making History**Course Description**

General introduction to history: how historians carry out research and develop interpretations about the past.

Student Learning Outcomes

Through readings, lectures, discussions, examinations, as well as writing assignments, students, upon completion of this course, will be able to:

1. understand and articulate the differences and similarities between history and memory;
2. analyze and critically interpret primary sources and understand how others might interpret and use the same material in different ways;
3. recognize and appreciate the diversity of historical experiences and the uses of historical memory in various societies;
4. understand how historical experiences that include political, geographical, social, cultural, religious and intellectual experiences have been expressed across historical periods;
5. understand how historical experiences and memories have shaped contemporary societies;
6. identify and understand the degree to which history has been used and misused in the past;
7. demonstrate improvement in their ability to read critically, think logically, and express themselves clearly in writing.

HIST 1110. United States History I**Course Description**

The primary objective of this course is to serve as an introduction to the history of the United States from the pre-colonial period to the immediate aftermath of the Civil War. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of the United States within the context of world societies.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the United States from the pre-colonial period to the immediate aftermath of the Civil War.
Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND
2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.
Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE
3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.
Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY
4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.
Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE
5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience. **Bloom Taxonomy's Cognitive Process: CREATE, APPLY 8**
6. Students will APPLY historical knowledge and historical thinking “in order to infer what drives and motivates human behavior in both past and present.”
Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE 9

HIST 1120. United States History II

Course Description

The primary objective of this course is to serve as an introduction to the history of the United States from reconstruction to the present. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of the United States within the context of world societies.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the United States from the reconstruction to the present.
Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND
2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.
Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE
3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.
Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY
4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.
Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE
5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.
Bloom Taxonomy's Cognitive Process: CREATE, APPLY
6. Students will APPLY historical knowledge and historical thinking “in order to infer what drives and motivates human behavior in both past and present.”
Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE 10 11

HIST 1122. History of Latinos in the U.S.

Course Description

This course will explore major themes that influence and characterize the experiences of various Hispanic and Latino/a/x populations in the regions of North America encompassing the contemporary United States. Through course lessons, readings, mixed media, and discussions, students will develop an appreciation for the diverse Latino/a/x groups that are estimated to comprise nearly 30% of the U.S. population by 2050. The elements of this course are designed to inform students on the key historical events and trends of culture, economics, immigration, politics, religion, and social life from pre-European contact up to the present day.

Student Learning Outcomes

1. Students will be able to explain in their work how core concepts, events, and institutions in the History of Latino/a/x populations in the U.S., and how those cultures changed over the course of the centuries from the pre-colonial period to present.

Bloom Taxonomy's Cognitive Process: Remember and Understand

2. Students will distinguish between primary and secondary sources, identify, and evaluate evidence, and empathize with people in their historical context.

Bloom Taxonomy's Cognitive Process: Analyze, Remember, Evaluate, Create

3. Students will summarize and appraise diverse cultural, ethnic, and linguistic manifestations of Latino/a/x populations in the U.S. to construct past events.

Bloom Taxonomy's Cognitive Process: Understand, Evaluate, Apply

4. Students will identify historical arguments in a variety of sources and engage with critical topics in the historical study of Latino/a/x populations in the U.S., including gender, class, and sexuality, while also evaluating credibility, perspective, and relevance.

Bloom Taxonomy's Cognitive Process: Remember, Understand, Evaluate

5. Students will create well-supported historical arguments and narratives that demonstrate an awareness of genre and audience.

Bloom Taxonomy's Cognitive Process: Create, Apply

6. Students will apply historical knowledge and historical thinking to infer what drives and motivates the Latino/a/x experience in the U.S. in both past and present.

Bloom Taxonomy's Cognitive Process: Apply, Analyze

HIST 1130. World History I

Course Description

The primary objective of this course is to serve as an introduction to global history from ancient times to the 16th century. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of world societies.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for global history from ancient times to the 16th century.

Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND

2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.

Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE

3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.

Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY

4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.

Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE

5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.

Bloom Taxonomy's Cognitive Process: CREATE, APPLY

6. Students will APPLY historical knowledge and historical thinking **"in order to infer what drives and motivates human behavior in both past and present."**

Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE 12

HIST 1140. World History II

Course Description

The primary objective of this course is to serve as an introduction to global history from the 16th century to the present. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of world societies.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of global history from the 16th century to the present.

Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND

2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.

Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE

3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.

Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY

4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.

Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE

5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.

Bloom Taxonomy's Cognitive Process: CREATE, APPLY

6. Students will APPLY historical knowledge and historical thinking **"in order to infer what drives and motivates human behavior in both past and present."**

Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE 13

HIST 1150 Western Civilization I

Course Description

This course is a chronological treatment of the history of the western world from ancient times to the early modern era. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of western civilization within the context of world societies. Selective attention will be given to "non-western" civilizations which impact and influence the development of "western" civilization.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the western world from ancient times to the early modern era.

Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND

2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.

Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE

3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.

Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY

4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.

Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE

5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.

Bloom Taxonomy's Cognitive Process: CREATE, APPLY

6. Students will APPLY historical knowledge and historical thinking **"in order to infer what drives and motivates human behavior in both past and present."**

Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE 14

HIST 1160. Western Civilization II

Course Description

This course is a chronological treatment of the history of the western world from the early modern era to the present. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of western civilization within the context of world societies. Selective attention will be given to "non-western" civilizations which impact and influence the development of "western" civilization.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the western world from the early modern era to the present.

Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND

2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.

Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE

3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.

Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY

4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.

Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE

5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.

Bloom Taxonomy's Cognitive Process: CREATE, APPLY

6. Students will APPLY historical knowledge and historical thinking **"in order to infer what drives and motivates human behavior in both past and present."**

Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE

HIST 1165. The Western World

Course Description

The Western World is a survey of what is sometimes called "the Western tradition," that is, the history of European civilization from its beginnings to the present. During the semester we will explore the development of European history and culture while also becoming acquainted with the study of history. This course is intended both to acquaint all students with

the basic outlines of Western cultural traditions as well as to introduce students interested in historical study to topics and methods that can be pursued in the department's upper-division offerings.

Student Learning Outcomes

1. Students will demonstrate an understanding of the origins and main economic, cultural, social, and political developments of Western history between the beginnings of civilization and the present; this will be measured by successful completion of the course with a grade of C or higher.
2. Students will demonstrate an understanding of some of the concepts, methods, and skills of the historian. They will be able to see and understand the connections between a society's economic organization, social structure, political institutions, cultural and intellectual achievements, and the lives of ordinary people, and will be able to express that understanding in discussions and written assignments. They will be able to read and analyze primary source documents and use those documents to gain an enhanced understanding of the societies and people being studied; this will be measured by successful completion—with a grade of C or higher—of exams and assignments, particularly the discussion assignments and other measures focused on primary sources.
3. Students will demonstrate a basic ability to navigate the world-wide web and will make use of the course's Desire2Learn (D2L) website. Quizzes, assignments, reviews, and other exercises will require the students to make use of several of the website's features. Students will also master Iclicker classroom response technology; success will be measured by successful completion of online quizzes, and by receiving at least 70% of all available Iclicker points.
4. Students will demonstrate an understanding of the connections between the European past and the contemporary world. They will demonstrate this understanding in class discussions, assignments, and essays.

HIST 1166. Technology and Science from the Hand-Ax to the Steam Engine: Full STEAM Ahead

Course Description

This course is an introduction to the history of science and technology up to and including the invention of the steam engine. It offers an overview of historical evolution of fundamental scientific concepts and technological developments in various cultures of the world. This course is paired with an optional hands-on lab component.

Student Learning Outcomes

1. increasing students' understanding of the historical roots of modern science and technology.
2. helping students appreciate the contributions of different cultures to the development of science and technology.
3. enhancing students' ability to use historical data, narrative, visual images, and theory in making coherent arguments about the past.
4. helping students develop communication skills in both oral and written form, through class discussion and written assignments.

HIST 1166L. Technology and Science from the Hand-Ax to the Steam Engine: Full STEAM Ahead Lab

Course Description

This is a pilot lab course linked with the HIST189-01 social science course as part of the Living Learning Community program through the Office for Student Learning. This semester will focus on completing a group project investigating issues with technology relevant to our community. We will look at the relationship between technology and contemporary society by looking at how nontechnical factors, such as politics, culture, and economics, drive change in technology.

Student Learning Outcomes

1. Understand the connection between the evolution of modern science and technology and contemporary social issues/problems, relevant to our community.
2. Investigate the current implementation of science and technology, with a focus on the interconnection between technology, culture, and community
3. Enhance your ability to evaluate information and communicate your ideas through logical evidence-based argument

4. Develop critical thinking skills and resource knowledge that will facilitate academic success and professional development

HIST 1170. Survey of Early Latin America

Course Description

The primary objective of this course is to serve as a survey of the history of Latin America from pre-Columbian times through independence. This course will explore the contributions of Indigenous peoples, Africans, and Europeans to the creation of Latin America's diverse societies. The elements of this course are designed to inform students on the major events and trends that are essential to the understanding of the history of Latin America within the context of world societies.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of Latin America from pre-Columbian times through independence.

Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND

2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.

Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE

3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.

Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY

4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.

Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE

5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.

Bloom Taxonomy's Cognitive Process: CREATE, APPLY

6. Students will APPLY historical knowledge and historical thinking "in order to infer what drives and motivates human behavior in both past and present."

Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE

HIST 1175. History of Pre-Columbian America

Course Description

A survey of the economic, political and social conditions of the indigenous peoples of North and South America prior to 1492.

Student Learning Outcomes

After successfully completing this course the student should be able to:

1. Demonstrate an understanding of the politics, cultures, economics, and social structures of Native peoples in North and SO& America as they existed prior to 1492.
2. Demonstrate an understanding of the daily lives of peoples living in North and South American prior to 1492.
3. Examine the relationships between peoples in the Americas prior to 1492.

HIST 1180. Survey of Modern Latin America

Course Description

The primary objective of this course is to serve as a survey of the history of Latin America from independence to the present. This course will explore the contributions of Indigenous peoples, Africans, and Europeans to the creation of Latin America's diverse societies. The elements of this course are designed to inform students on the major events and trends that are essential to the understanding of the history of Latin America within the context of world societies.

Student Learning Outcomes

1. Students will be able to **EXPLAIN** in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of Latin America from independence to the present.
Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND
2. Students will **DISTINGUISH** between primary and secondary sources, **IDENTIFY** and **EVALUATE** evidence and **EMPATHIZE** with people in their historical context.
Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE
3. Students will **SUMMARIZE** and **APPRAISE** different historical interpretations and evidence in order to **CONSTRUCT** past events.
Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY
4. Students will **IDENTIFY** historical arguments in a variety of sources and **EXPLAIN** how they were constructed, **EVALUATING** credibility, perspective, and relevance.
Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE
5. Students will **CREATE** well-supported historical arguments and narratives that demonstrate an awareness of audience.
Bloom Taxonomy's Cognitive Process: CREATE, APPLY
6. Students will **APPLY** historical knowledge and historical thinking **"in order to infer what drives and motivates human behavior in both past and present."**
Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE

HIST 1185. History of Lost Civilizations

Course Catalog Description:

This course introduces students to a comparative analysis of lost civilizations of both what is deemed the "old" world and "new" world, including the Sumerians, Hittites, Minoans, Mycenaeans, Amazonians, Atlantis, Etruscans, Mohenjo-Daro, Mesoamerican, Roanoke, Mali, and Dong Son.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Articulate the differences between categories of evidence, including their benefits and shortcomings.
2. Analyze cultures of the past and their bearing on the present by utilize various primary and secondary sources.
3. Recognize causal relationships between the past and the present.
4. Recognize the interconnectivity between the social science disciplines.
5. Articulate how popular culture, memory theories, and ideas of the mythical/mysterious influence our interpretations of the past and evidence.
6. Recognize myth from fact.

HIST 1190. Medieval World

Course Description

This course will introduce students to the history and culture of Medieval Europe. It is designed to provide students with an understanding of specific topics such as the growth of Christianity, feudalism, social conformity, and the responses of the people to the challenges of famine, disease, and warfare. For this purpose, the course is organized chronologically and topically.

Student Learning Outcomes

1. Analyze and critically interpret significant primary texts and/or works of art (this includes fine art, literature, music, theatre, and film).
2. Compare art forms, modes of thought and expression, and processes across a range of historical periods and/or structures (such as political, geographic, economic, social, cultural, religious, intellectual).

3. Recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
4. Draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought.

HIST 1194. Europe in the 19th Century, 1815-1914

Course Description

The course is an introduction to the major developments and themes in the 19th-century Europe. The students will learn about main international developments including the Congress System, the Revolutions of 1848, the advance of modern ideologies and major trends in arts and sciences, and the causes of World War I.

Student Learning Outcomes

1. Analyze and critically interpret significant primary texts and/or works of art (this includes fine art, literature, music, theatre, and film).
2. Compare art forms, modes of thought and expression, and processes across a range of historical periods and/or structures (such as political, geographic, economic, social, cultural, religious, intellectual).
3. Recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
4. Draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought

HIST 1195. Europe in the 20th Century, 1914-2000

Course Description

The course examines the great watersheds of the last century in Europe, including the World Wars, the division of the continent during the Cold War, and the fall of communism. Several case-studies and problems will be broached in lectures to help students understand the legacies of the 20th century that we face today.

Student Learning Outcomes

1. Analyze and critically interpret significant primary texts and/or works of art (this includes fine art, literature, music, theatre, and film).
2. Compare art forms, modes of thought and expression, and processes across a range of historical periods and/or structures (such as political, geographic, economic, social, cultural, religious, intellectual).
3. Recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
4. Draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought.

HIST 1213. Introduction to German Culture and Civilization: From Roman Time to Bismarck

Course Description

Taught in English, this is the first of two courses designed to give the student an introductory overview of German Culture and its development. It will cover the span of roughly one thousand years; from the Great Migrations and the fall of the Roman Empire to the formation of the so-called 'Second Reich' under Otto von Bismarck.

Student Learning Outcomes

1. Have a basic understanding of the history of Germanic civilization in terms of major periods and movements (including social, artistic, and political developments, and philosophical traditions) and a basic grasp of critical methods for interpreting these fields.
2. Exhibit limited knowledge about historical, cultural, social, geographical and societal issues affecting the various cultures of the German-speaking world.
3. Understand the relationship of culture to social history and intellectual life in the German-speaking countries.

4. Have a basic understanding of the impact the leadership of key historical figures (political and intellectual leaders) had on the shaping of German, European and World culture and civilization.
5. Demonstrate awareness of ethical themes pertaining to the culture and history of German speaking countries.
6. Demonstrate the ability to analyze, synthesize, apply and evaluate the information they are given (critical thinking) pertaining to grammar, cultural, historical, societal and language issues.
7. Develop an understanding and lifelong appreciation for languages, cultures, value systems, educational systems, political systems and leadership systems other than their own.
8. Be able to identify historical events of German speaking countries.
9. Be able to understand and identify cultural differences in German speaking countries.
10. Demonstrate the ability to adhere to the NMML cadet honor code and to exhibit academic integrity (character development).

HIST 1223. Introduction to Modern German Culture and Civilization: From 1871 to present.

Course Description

This continuation course in German culture and civilization covers the more recent history and culture of Germany, Austria-Hungary, Switzerland and other areas of German culture from the beginning of Bismarck's Second Empire to current issues related to post-unification Germany. This course is taught in English.

Student Learning Outcomes:

1. Students will have a basic understanding of the history of German civilization in terms of major periods and movements (including social, artistic, and political developments, and philosophical traditions) and a basic grasp of critical methods for interpreting these fields.
2. Students will exhibit limited knowledge about historical, cultural, social, geographical and societal issues affecting the various cultures of the German-speaking world.
3. Understand the relationship of culture to social history and intellectual life in the German-speaking countries.
4. Students will have a basic understanding of the impact the leadership of key historical figures (political and intellectual leaders) had on the shaping of German, European and World culture and civilization.
5. Students will demonstrate awareness of ethical themes pertaining to the culture and history of German speaking countries.
6. Students will demonstrate the ability to analyze, synthesize, apply and evaluate the information they are given (critical thinking) pertaining to grammar, cultural, historical, societal and language issues.
7. Students will develop an understanding and lifelong appreciation for languages, cultures, value systems, educational systems, political systems and leadership systems other than their own.
8. Students will be able to identify historical events of German speaking countries.
9. Students will be able to understand and identify cultural differences in German speaking countries.
10. Students will demonstrate the ability to adhere to the NMML cadet honor code and to exhibit academic integrity (character development).

HIST 2050. American History through Film

Course Description

This course studies the relationship between film and popular and historical memory. Our purpose is to understand the history as portrayed in popular Hollywood releases, assess how those films draw from and inform historical memory, and evaluate their usefulness as historical source material. Our study will examine the political, economic, social, cultural, and intellectual contexts that have shaped our popular concepts of historical events and actors.

Student Learning Outcomes

1. Understand the links between media and historical memory.
2. Describe and analyze historical memory and its effects on collective memory and identity.
3. Evaluate a motion picture based on its historic and artistic merits.
4. Discuss how race, ethnicity, gender, and violence factored into American history.
5. Develop, draft, revise and present an original thesis-based argument in the form of a research paper.

HIST 2080. Americans at War

Course Description

America has been at war for nearly three centuries. This course will examine the causes, undercurrents and significance of America's military engagements at home and abroad and examine how each helped change the trajectory of American history and its role as a current world power. This course will take an in depth look at the major battles, players, aftermath and technological advancements during the major American engagements— the American Revolution, Mexican American War, the Civil War, Spanish American War, two World Wars and the cold war era battles in Korea and Vietnam.

Student Learning Outcomes

Using primary and secondary sources, students will analyze and critically examine the causation, phases, strategies, persons, outcomes, and aftereffects of conflicts in American History beginning with its independence until the Vietnam war. They will evaluate and compare the evolution of military, economic and social constructs during times of war and be able to effectively communicate and debate the complexities of the successes and failures on a global scale of each conflict and the impact it had in shaping the America we know today.

HIST 2088. History Specialty

This course allows students to apply computer information technology elective credit towards a History program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

HIST 2110. Survey of New Mexico History

Course Description

The primary objective of this course is to serve as an introduction to the history of New Mexico from the pre-Columbian times to the present day. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the development of New Mexico within the context of the Americas.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of New Mexico from pre-Columbian times to the present day.

Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND

2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.

Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE

3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.

Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY

4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.
Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE
5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.
Bloom Taxonomy's Cognitive Process: CREATE, APPLY
6. Students will APPLY historical knowledge and historical thinking **“in order to infer what drives and motivates human behavior in both past and present.”**
Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE 16

HIST 2114. Lincoln County History

Course Description

History of the Lincoln County region and the Mescalero reservation.

Student Learning Outcomes

By the end of the course, the student should be able to:

1. Explain how each town/city in Lincoln County developed
2. Explain the Lincoln County war
3. Discuss the region's key biographical figures
4. Explain the development of the Mescalero community
5. Identify cultural and historic sites in the region

HIST 2115. Lincoln County War

Course Description

History of the Lincoln County War including origin of the war, related events, key figures and social context of war in the American West. 25

Student Learning Outcomes

Not Available

HIST 2116. Lincoln County War through Film

Course Description

Film criticism of major motion films and documentaries related to the Lincoln County War. Some YouTube may also be viewed.

Student Learning Outcomes

Student Learning Objectives

By the end of the course, the student should be able to:

1. Explain the aesthetic and narrative contributions of several major motion films
2. Explain the historical and cultural context of several films
3. Explain the significance of the LCW in history and film
4. Discuss the war's key biographical figures
5. Discuss how race, ethnicity, class, gender, religion, and violence factored into the war

HIST 2120. Survey of Mexican American History

Course Description

The primary objective of this course is to serve as a survey of the history of the Mexican community in the United States with a greater emphasis on 20th century to the present. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the history of Mexican Americans.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of the Mexican community in the United States.
Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND
2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.
Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE
3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.
Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY
4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.
Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE
5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.
Bloom Taxonomy's Cognitive Process: CREATE, APPLY
6. Students will APPLY historical knowledge and historical thinking **“in order to infer what drives and motivates human behavior in both past and present.”**
Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE

HIST 2122. Chicano Experience in the US

Course Description

In 1848, the United States violently wrested over half of the landmass of Mexico, displacing and forcing indigenous and traditional peoples of the Southwest to re-establish citizenry in their own homelands. The Treaty of Guadalupe-Hidalgo (1848) assured Mexicans the full rights to citizenship in the United States, but the imposition of a new governmental system often left the new “ethnic minority group” to deal with economic and psychological hardships. Despite these hardships, Chicanas/os have not only survived, but in many cases thrived, in the country that often treated them as “second class citizens.” In this class we will examine the historical, cultural, political, and economic conditions of Chicanas/os in the U.S. through the major court cases that have shaped Mexican American identity.

Student Learning Outcomes

Objectives for the course include: historical knowledge, empirical knowledge and quantitative methods, interpretation and qualitative analysis, and community service.

1. Historical Knowledge
 - a. Familiarity with the history of modern Western civilization, including European expansion, conquest, and enslavement.
 - b. Acquaintance with debates in historiography, particularly as they relate to the use of history in relation to the understanding of people of color.
2. Empirical Knowledge and Quantitative Methods
 - a. Familiarity with different methods of gathering empirical data about human communities (anthropological, sociological, etc.).
 - b. Knowledge of critical debates about the use and implications of traditional methods of gathering empirical data to obtain knowledge about communities of color.
 - c. Identification of proper methods to conduct research, and awareness of the limits and possibilities of such methods.
 - d. Creative use, delimitation, and expansion of methods of empirical and quantitative study based on the nature of the problems and questions addressed in the research as well as the object of study.
3. Interpretation and Qualitative Analysis

- a. Acquaintance with major methods and debates in the humanities.
 - b. Identification of proper methods to conduct research about the creative products of human communities, and ethno-racial communities in particular.
4. Community Service
 - a. Apply and share knowledge discussed and researched for course in public forums.
 - b. Create praxis-oriented projects that put theory to work in a community context (on or off campus).

HIST 2125. Latin American Civilization

Course Description

An introduction to the main currents in Latin American societies and cultures. The course focuses on the social, political, cultural and economic issues relevant to Mexico and Central American, the Caribbean, the Andean countries and the Southern Cone. Major topics include: The history of Latin American native populations; the Spanish conquest; the colonial epoch; the wars of independence; the emergence of new nations; modern revolutions; and the influence of modern revolutions; and the influence of modernization and globalization.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify the historical forces that led to Independence in 1821.
2. Identify and describe, in writing, the major characteristics of the pre-contact high cultures of Mexico, Central and South America.
3. Describe, orally and in writing, the process of conquest and colonization of the Americas by Spain and Portugal.
4. Discuss in general the political, social and economic consequences of the Spanish and Portuguese colonies in the Americas.
5. Identify, in writing, the historical forces that led to Independence in 1821.
6. Trace and recognize the processes of origination of the multiracial societies that comprise the Spanish and Portuguese colonies in the Americas.

HIST 2130. Survey of Native American History

Course Description

The primary objective of this course is to serve as a survey of the history of Native American History from pre-colonial times until the present. This course will explore the cultural diversity of the Native Americans. The elements of this course are designed to inform students on the major events and trends that are essential in the understanding of the history of Native Americans.

Student Learning Outcomes

1. Students will be able to EXPLAIN in their work how humans in the past shaped their own unique historical moments and were shaped by those moments, and how those cultures changed over the course of the centuries for the history of Native Americans from pre-colonial times until the present.

Bloom Taxonomy's Cognitive Process: REMEMBER AND UNDERSTAND

2. Students will DISTINGUISH between primary and secondary sources, IDENTIFY and EVALUATE evidence and EMPATHIZE with people in their historical context.

Bloom Taxonomy's Cognitive Process: ANALYZE, REMEMBER, EVALUATE, CREATE

3. Students will SUMMARIZE and APPRAISE different historical interpretations and evidence in order to CONSTRUCT past events.

Bloom Taxonomy's Cognitive Process: UNDERSTAND, EVALUATE, APPLY

4. Students will IDENTIFY historical arguments in a variety of sources and EXPLAIN how they were constructed, EVALUATING credibility, perspective, and relevance.

Bloom Taxonomy's Cognitive Process: REMEMBER, UNDERSTAND, EVALUATE

5. Students will CREATE well-supported historical arguments and narratives that demonstrate an awareness of audience.
Bloom Taxonomy's Cognitive Process: CREATE, APPLY
6. Students will APPLY historical knowledge and historical thinking **“in order to infer what drives and motivates human behavior in both past and present.”**
Bloom Taxonomy's Cognitive Process: APPLY, ANALYZE 18

HIST 2131. Survey of Native American History II

Course Description

Introduces the history and cultures of Native peoples of North America from the earliest times to the present. The course will examine culture change and the interaction of native groups with each other and European peoples. Contemporary priorities and ongoing concerns are also examined.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. knowledge of historical events
 - 1.1. analyze and discuss coherently the major themes in United States history until the end of the Civil War including:
 - 1.1.1. the means and methods of colonization
 - 1.1.2. the development of slavery and the subsequent battle against this institution
 - 1.1.3. the development of American political institutions
 - 1.1.4. the foundation of the American political system underlying the Constitution
 - 1.1.5. the reasons behind the War of Independence
 - 1.1.6. the growth of the plurality in the English American colonies and the United States
 - 1.1.7. the economic development of the United States from colonial beginnings through early industrialization
 - 1.1.8. the westward expansion of the American people
 - 1.1.9. the causes and key events of the Civil War
2. an understanding of the causes and processes involved in the growth and development of cultures over time
3. an awareness of the function of change and continuities in the past
4. an understanding of the historical roots of the contemporary world.
 - 4.1. will understand the relationships between the institutions, conflicts, and values of today as the legacy of our predecessors
 - 4.2. will express their understanding in papers and classroom discussion
5. an appreciation of the study of history.
 - 5.1. will enable students to relate events of the past to their own lives and times.
 - 5.2. will appropriately use these concepts in tests, papers, and in classroom discussion
6. an understanding of historical methods
 - 6.1. critical analysis of texts and argument
 - 6.2. interpretation of evidence
 - 6.3. conduct research in a variety of media

HIST 2135. Navajo History

Course Description

Introduces the history and culture of the Navajo people from the earliest times to the present. The course will examine cultural change, the interaction of the Navajo with other native groups and especially with European peoples.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. Demonstrate a knowledge of historical events

- a. Understand the chronology of Navajo history
2. Understand the causes and processes involved in the growth and development of the Navajo over time, including:
3. Understand the historical roots of the contemporary world
 - a. will understand the relationships between the institutions, conflicts, and values of today as the legacy of our predecessors
 - b. will express their understanding in papers and classroom discussion
4. Appreciate the study of history.
 - a. will enable students to relate events of the past to their own lives and times.
5. Appropriately use these concepts in tests, papers, and in classroom discussion
6. Understand historical methods
 - a. critical analysis of texts and argument
 - b. interpretation of evidence
 - c. conduct research in a variety of media
 - d. cite sources appropriately

HIST 2136. History of Indian Education

Course Description

Survey of major artistic traditions and interrelationships among Southwest cultures from prehistoric to modern times using slide lecture, video film, discussion to review the arts of basketry, pottery, architecture, jewelry, textiles, sculpture, painting, and photography in their cultural and historical contents.

Student Learning Outcomes

1. Recognize the procedures implemented from European contact into the present regarding the education of Native Americans
2. Distinguish what tactics were utilized in particular historical time frames to regulate and educate Native people.
3. Analyze how the efforts to educate and assimilate Native people into Non-Native society affected the past and present lives of Indian people
4. Understand the role of Christianity and the U.S. Government in Indian education (Mission & Boarding Schools)
5. Comprehend terms, policies, and treaty information in regard to Native Education

HIST 2140. Survey of the Civil War

Course Description

This course is a history of the American Civil War with an emphasis upon the sectional conflicts and events that led to the war. The course also covers the military, diplomatic, and domestic developments in both the North and the South during the Civil War years, showing the impact of the war on both the North and South, as well as its impact upon developments throughout the world.

Student Learning Outcomes

1. The role slavery played in bringing on the war.
2. The impact of various economic, political, and philosophical sectional conflicts in bringing about the Civil War.
3. Obtain an understanding of the events which finally triggered the war, and how the unfolding of these events doomed any attempt at compromise.
4. An understanding of the relative strengths and weaknesses of both sides, showing how the disparity between the two sides contributed to the northern victory.
5. The role of diplomacy in securing a Northern victory.
6. The battles and military strategies of the Civil War.
7. The impact of the war in both North and South.

HIST 2145. American Military History

Course Description

This course is a survey of the American military experience from colonial times to the present. Our purpose is to understand the history and traditions of our armed forces as they have changed over the years. Our study will examine the political, economic, social, and intellectual contexts that have shaped our institutions of war and peace. Throughout the semester we will concentrate on honing our analytical and communication skills.

Student Learning Outcomes

To acquire an understanding of the contributions that the American military have made to war and peace throughout the history of the United States...

1. Understand the evolution of the Army's approach to warfare through the Guardian, Heroic, and Managerial schools of thought.
2. Appreciate the key relationship between political activity and policy with warfare.
3. Assess the ongoing role that militias have played.
4. Wrestle with the ongoing debate over the roles of conventional and unconventional warfare.
5. Realize the importance of external support to indigenous military operations.
6. Recognize the impact of the armed forces in American expansion.
7. Understand the place of our wars in shaping society.
8. Comprehend the relationship of diplomacy, politics, economics, and security issues in establishing national strategic policies.
9. Discover the roots of the military-industrial complex during the twentieth century.
10. Assess the impact of the modern security state on American society.
11. Determine the sources of professionalism among military leaders.
To interpret sources and data in historical context...
12. Read and evaluate primary and secondary source materials
13. Understand the role of revisionism in military history
To reflect on the roles that personal integrity, professional leadership, and communal ethics play in the day-to-day behavior of individuals and institutions.
To develop verbal, written and analytical skills...
14. Through discussion, assessments, and essays
To think historically and learn to formulate questions about the past and present, resolving conflicting interpretations, and drawing tentative conclusions from imperfect evidence...
15. Through the in-depth study of the American military experience.

HIST 2150. History of the American Southwest

Course Description

This course is designed to provide you with an overview of American History of the Southwest starting from the American acquisition of the Southwest to modern times. Major themes in American Southwestern history will be covered. Work will consist of reading our course textbooks and utilizing the internet resources. A research paper 5 pages double spaced will be required and due the last week of the semester. Thematically, this course will be divided into three parts.

Student Learning Outcomes

1. An introduction to the use of both library and internet resources.
2. Gather information for a research paper, identify important individuals that have shaped American Southwestern history and society.
3. To garner the ability to utilize maps, documentary images, graphs and tables for a greater understanding of American historical content.
4. Understand from a human point of view the difficulties minorities have faced from the American acquisition of the Southwest.

HIST 2155. Southwestern Women's History

Course Description

In this course, we will examine the multiple ways in which women helped to shape the U.S. Southwest. History has often left out the perspectives of women but will research and discuss women's involvement in Southwestern history, including politics, economics, and culture.

Student Learning Outcomes

Objectives for the course include: historical knowledge, empirical knowledge and quantitative methods, interpretation and qualitative analysis, and community service.

1. Historical Knowledge

- a. Familiarity with the history of modern Western civilization, including European expansion, conquest, and enslavement.
- b. Acquaintance with debates in historiography, particularly as they relate to the use of history in relation to the understanding of people of color.

2. Empirical Knowledge and Quantitative Methods

- a. Familiarity with different methods of gathering empirical data about human communities (anthropological, sociological, etc.).
- b. Knowledge of critical debates about the use and implications of traditional methods of gathering empirical data to obtain knowledge about communities of color.
- c. Identification of proper methods to conduct research, and awareness of the limits and possibilities of such methods.
- d. Creative use, delimitation, and expansion of methods of empirical and quantitative study based on the nature of the problems and questions addressed in the research as well as the object of study.

3. Interpretation and Qualitative Analysis

- a. Acquaintance with major methods and debates in the humanities.
- b. Identification of proper methods to conduct research about the creative products of human communities, and ethno-racial communities in particular.

4. Community Service

- a. Apply and share knowledge discussed and researched for course in public forums.
- b. Create praxis-oriented projects that put theory to work in a community context (on or off campus).

HIST 2210. History of the Islamic Middle East

Course Description

This course explores the 1400-year history of the Islamic Middle East, with an emphasis on both the political and religious history of the region. Both historical and contemporary issues related to the Middle East are discussed.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the political history of the Islamic Middle East
2. Describe the religious history of the Islamic Middle East
3. Discuss the relationship between the region's past and contemporary political and religious issues.
4. Understand the central role of religion in the lives of Middle Eastern peoples
5. Understand the inseparable nature of religion and politics in Middle Eastern history.

HIST 2240. History of Vietnam

Course Description

Emphasizes causes of the war, military and political aspects, conduct and consequences of years of conflict in Vietnam: issues surrounding U.S. involvement in Vietnam and changes in the culture, institutions and political thought of the U.S. involvement in Vietnam and changes in the culture, institutions and political thought of the U.S. during and after the war.

Student Learning Outcomes

Students will be able to:

1. examine the cultural and political history of the Vietnamese people.
2. analyze the nature of the European entry into and subsequent colonization of Indo-China.
3. explain the origins of U.S. support for the first Indo-China War.
4. assess the characteristics of American culture and politics which led to major U.S. involvement in the second Indo-China War.
5. give examples of the political, cultural, and environmental connections between past and present that have contributed to interrelations among current communities and nations.
6. articulate a definition of citizenship that emphasizes the common goals and challenges of a global human community.
7. evaluate differences in interpretation generated by diverse primary and secondary sources in historical scholarship.

HIST 2245. Islamic Civilizations to 1800**Course Description**

History of Islamic civilizations to 1800.

Student Learning Outcomes

1. By the conclusion of the course, the student will be able to demonstrate a knowledge of the history of cultural encounters, exchanges, and conflicts between the Islamic world and the West from the seventh to the sixteenth century;
2. Be able to evaluate the major themes of cultural contact, conflict, and interchange between the Islamic world and the West;
3. Critically read and evaluate historical evidence with the goal of forming an argument about historical evidence; and
4. Communicate a historical argument logically, clearly, and effectively in writing.

HIST 2246. Islamic Civilizations since 1800**Course Description**

History of Islamic civilizations since 1800.

Student Learning Outcomes

1. By the conclusion of the course, the student will be able to demonstrate a knowledge of the history of cultural encounters, exchanges, and conflicts between the Islamic world and the West from the sixteenth century;
2. Be able to evaluate the major themes of cultural contact, conflict, and interchange between the Islamic world and the West;
3. Critically read and evaluate historical evidence with the goal of forming an argument about historical evidence; and
4. Communicate a historical argument logically, clearly, and effectively in writing.

HIST 2250. East Asia to 1600**Course Description**

History of China, Korea, Vietnam, and Japan from earliest times through the sixteenth century. Emphasis on cultural and political developments and their social and economic contexts, and the interaction between East Asian societies.

Student Learning Outcomes

1. Students will learn the analytic skills of interpreting historical changes and continuity.
2. They will assess and use historical documents and learn how to evaluate varying historical interpretations.
3. Students will understand the chronological and geographic context of important historical events, and will understand the social, technological, economic, cultural and political components of the society under study in this course.

4. Students will understand how people shape their culture and its beliefs, and the way in which prevailing cultures and beliefs shape them.
5. They will understand the historical origins of present-day societies, to learn about their own historical roots.
6. They will learn about the development of structures of power, the production of and distribution of goods, and the relationship between science and technology and human values and behavior.

HIST 2251. East Asia Since 1600

Course Description

History of China, Korea, Vietnam, and Japan from the sixteenth through the twentieth centuries. Emphasis on internal development of each country, as well as the social and political impact of Western Imperialism, and the emergence of each country's unique version of modern society.

Student Learning Outcomes

1. Students will learn the analytical skills of interpreting historical changes and continuity.
2. They will assess and use historical documents and learn how to evaluate varying historical interpretations.
3. Students will understand the chronological and geographic context of important historical events, and will understand the social, technological, economic, cultural and political components of the society under study in this course.
4. Students will understand how people shape their culture and its beliefs, and the way in which prevailing cultures and beliefs shape them.
5. They will understand the historical origins of present-day societies, to learn about their own historical roots.
6. They will learn about the development of structures of power, the production of and distribution of goods, and the relationship between science and technology and human values and behavior.

HIST 2255. Traditional Eastern Civilizations

Course Description

This course surveys nearly all of Asia (East, South, and West) from antiquity to approximately 1600 CE. The focus is on the development of three major civilizations: Chinese, South Asian, and Islamic. Topics with comparative potential include governing institutions, social structures, economies and trade, belief systems, and artistic expressions.

Student Learning Outcomes

1. Students will understand academic honesty. They will demonstrate in their formal research papers the ethical use of sources and provide accurate and properly formatted citations.
2. Students will understand the basic skills that historians use in research. They will demonstrate in discussions and written work an understanding of the differences between primary and secondary sources as well as an ability to identify and evaluate evidence.
3. Students will understand the concept of historical analysis. They will demonstrate in discussions and written work the ability to think critically about sources and to articulate historical processes.
4. Students will understand the value of diversity. They will demonstrate in discussions and written work the ability to recognize the diversity of human experience and points of view, including their own.

HIST 2256. Modern Eastern Civilization

Course Description

This course surveys Asia from approximately 1600 CE to the present. Topics include the emergence of modern Asia from the impact of western colonialism and imperialism to nationalism, modernization, and revolution.

Student Learning Outcomes:

1. Students will distinguish between primary and secondary sources and identify and evaluate evidence.
2. Students will demonstrate in discussion and written work their understanding of different peoples and cultures in past environments and of how those cultures changed over the course of the centuries.

3. Students will demonstrate in written work and class discussions the ability to recognize and articulate the diversity of human experience, including ethnicity, race, language, gender, as well as political, economic, social, and cultural structures over time and space.
4. Students will produce their own historical analysis of documents and develop the ability to think critically and historically when discussing the past.
5. Students will demonstrate ethical use of sources and provide accurate and properly formatted citations in formal papers.

HIST 2270. The American West

Course Description

Explores the people, cultures, processes, ideas and environmental factors that shaped the history of the West. Examines topics and exploration, migration and immigration, land use and misuse, western violence and experiences of various ethnics' groups of the region.

Student Learning Outcomes

Students will be able to:

1. describe the key processes of identity formation, boundary construction, and cultural interchange that have shaped the settlement of the North American continent.
2. identify the major individuals, cultural groups, and key events involved in America's westward movement.
3. explore and evaluate the West of myth and imagination.
4. give examples of the political, cultural, and environmental connections between past and present that have contributed to interrelations among current communities and nations.
5. articulate a definition of citizenship that emphasizes the common goals and challenges of a global human community.
6. evaluate differences in interpretation generated by diverse primary and secondary sources in historical scholarship.

HIST 2310. Introduction to Historical Methods

Course Description

Topics include constructing a research agenda, primary and secondary source analysis, historiography, standards of citation and argumentation expected in the profession.

Student Learning Outcomes

The course will focus on mastering the practical aspects of learning history. These include such skills as

1. critical reading
2. the ability to write cogently and with accuracy
3. choosing appropriate topics for historical research
4. developing research agendas and methodical plans for research
5. understanding and analyzing primary and secondary sources
6. using the appropriate style for the citation of sources in research papers and historical writing

HIST 2350. Historical Questions and Debates

Course Description

Far from an assemblage of facts, the most interesting histories are insightful interpretations of fragmentary evidence that explain significant historical change. Yet for any given historical question, there are many ways of selecting and interpreting sources depending on presuppositions about key driving forces, balancing short- and long-term influences, and privileging certain kinds of sources and voices over others. As a result, many important historical questions remain difficult to answer in terms of causality and significance. But competing explanations are not merely the subject of academic debates. This course illustrates how ongoing historical disagreements continually influence society, particularly with respect to large structural systems, social identities, legal rights, and access to resources.

Student Learning Outcomes

1. Students will IDENTIFY how information about humans and societies is researched from a variety of sources, EXPLAIN how different methods result in different kinds of arguments, and EVALUATE credibility, perspective, and relevance of evidence.
2. Students will EXPLAIN how historical narratives are constructed, how historians mediate between the past and present, and how source analysis and storytelling play integral roles in constructing historical interpretations.
3. Students will DESIGN research projects to understand various historical debates, EXPLAIN how and why they arose, and ANALYZE ongoing implications of those debates.
4. Students will DISTINGUISH between primary and secondary sources, IDENTIFY different kinds of historical evidence, and APPLY that evidence to EXPLAIN how different social systems and diverse identities are created, maintained, and adapted by different groups over time.
5. Students will be able to DEMONSTRATE in their work various approaches to analyzing and understanding how diverse peoples, as individuals, and in complex groups, shaped their own historical moments and were shaped by those moments.

HIST 2510. Uses of History**Course Description**

This class examines the various ways that historical events and issues are relevant in the current moment in terms of public discourse, literature, and politics.

Student Learning Outcomes:

1. Identify moments in which historical narratives are evoked in popular culture and discourse to support certain positions in current issues.
2. Apply historical thinking skills to analyze and evaluate the validity of historical references in popular culture and discourse.
3. Evaluate the ways in which authors construct fictional and non-fictional narratives based in historical details.
4. Examine the messages presented in historical statues and monuments (sites of historical memory) in the contexts in which they were created.
5. Construct an original project that emphasizes the ongoing relevance of historical issues to current events.

Honors (HNRS)

HNRS 1110. Journeys of Discovery

Course Description

Weekly conversations among students and a faculty member; organized around a particular subject and a small selection of readings.

Student Learning Outcomes

1. Students will comprehend and condense information to contribute to class discussions.
2. Students will develop public speaking and presentation skills based on research conducted in and outside of class.
3. Students will expand upon collaborative skills as both group presentations and group written reports.

HNRS 1115. Honors First Year Seminar

Course Description

This course is designed to introduce new first semester students to the life of the mind, the life of the University, and the principles that guide the University Honors Program. Combining critical thinking and experiential exploration, students will develop a personalized plan for success, both in and out of the classroom, consistent with the values of the Honors College and the mission of the University.

Student Learning Outcomes

1. Demonstrate critical thought about the nature of knowledge, learning, and student development in the contemporary University.
2. Explain how key concepts and principles serve as the foundation for the Honors College mission and values.
3. Create a plan for their experiences at university, in and out of the classroom, that will maximize their academic achievement and personal success beyond graduation.

HNRS 1120. Honors Legacy Seminar

Course Description

Surveys of major ideas basic to the intellectual, historical and artistic traditions of Western culture.

Student Learning Outcomes

1. Explore how individuals and diverse societies, past and present, make meaning and assign value.
2. Explain how histories, cultural works, languages and ideas shape diverse communities and relations between them.
3. Design ways of understanding diverse human experiences, including conflict and inequality, by examining cultural records.
4. Identify and analyze the sources of particular claims about human experience.

HNRS 1135. Introduction to Biological Anthropology

Course Description

This course provides a basic introduction to the broad field of biological anthropology. The research interests of biological anthropologists include the history and development of modern evolutionary biology, molecular and population genetics, modern primates, the primate and human fossil record, and modern human biological diversity.

Student Learning Outcomes

1. Summarize the basic principles of evolution and recognize how they apply to the human species.
2. Recognize the biological and behavioral continuity of humans with all life, and especially other modern primate species.
3. Identify ways in which the human species is biologically and behaviorally unique.
4. Summarize fossil evidence for human evolution.
5. Distinguish the major Paleolithic industries and outline the behavioral and cognitive changes indicated by the fossil and archeological evidence.
6. Critically evaluate popular accounts of human variation and human evolution.
7. Interpret modern human dilemmas (e.g., overpopulation, co-evolution of disease, and genetic engineering) from an evolutionary perspective.
8. Discuss in class and analyze in writing scholarly arguments concerning course concepts.

HNRS 1135L. Introduction to Biological Anthropology Lab

Course Description

This laboratory course expands on the topics covered in lecture course and uses scientific methods and principles to examine evidence for the process of evolution, the nature of heredity, human evolutionary history and family tree relationships, primate ecology and behavior, and modern human diversity. Hands-on experience with fossil and skeletal material will be an important part of the learning process.

Student Learning Outcomes

1. Demonstrate an understanding of the scientific method.
2. Employ principles of Mendelian genetics to determine genotype and phenotype probabilities, and calculate gene, genotype, and phenotype frequencies using the Hardy-Weinberg Equilibrium formula.
3. Demonstrate an understanding of cell structure and functions.
4. Use common lab and anthropometric equipment such as a compound microscope and calipers.
5. Discuss primate evolution and compare and contrast members of the Primate order in terms of structure, behavior, and phylogeny.
6. Classify hominid species based upon selected traits such as anatomical changes associated with bipedalism, changes in the size and structure of the brain, and the development of culture.
7. Locate and describe the major bones of the human skeleton and identify characteristics of human skeletons or skulls such as gender, age, and ancestry.
8. Discuss current research in genome analysis of various hominid populations.

HNRS 1980. AP Seminar

Course Description

AP Seminar is a foundational course that engages students in cross-curricular conversations that explore the complexities of academic and real-world topics and issues by analyzing divergent perspectives. Using an inquiry framework. Students practice reading and analyzing articles. research studies. and foundational literary. and philosophical texts; listening to and viewing speeches, broadcasts, and personal accounts; and experiencing artistic works and performances. Students learn to synthesize information from multiple sources. develop their own perspectives in written essays, and design and deliver oral and visual presentations, both individually and as part of a team. Ultimately, the course aims to equip students with the power to analyze and evaluate information with accuracy and precision In order to craft and communicate evidence- based arguments.

Student Learning Outcomes

Not Available

HNRS 1210. Honors Seminar

Course Description

A lower division seminar for students enrolled in the Honors Program. The course will emphasize the continued development of critical thinking, enhancement of study skills, and encourage participation in campus activities. The class usually involves off-campus travel.

Student Learning Outcomes

1. Develop an understanding of the ways in which humans interact and influence natural systems.
2. Foster an understanding of the basic ecology of the Gila Region.
3. Develop a sense of place and an appreciation of the characteristics that make the Gila Region unique.
4. Gain confidence and competence in the outdoors.
5. Understand and practice Leave-No-Trace techniques (environmental ethics).
6. Consider scale and scalar relationships.
7. Engage in a backpacking trip.

HNRS 2110. The Present in the Past: Contemporary Issues and their Historical Roots**Course Description**

This course will take today's concerns, trends, and customs and contextualize them in the past, explaining their historical origins and development. As an example, we will examine the history of celebrity and how celebrities from Lord Byron to the Kardashians' made an impact on their contemporaries and the broader society of their time. This reading- and writing-intensive course will help students develop skills related to critical thinking, logical argumentation, and written and oral communication.

Student Learning Outcomes

1. Analyze and critically interpret primary sources and understand how others might interpret and use the same material in different ways.
2. Recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
3. Understand how historical experiences and memories have shaped contemporary societies.
4. Identify and understand the degree to which history has been used and misused in the past.
5. Draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought.
6. Demonstrate improvement in their ability to read critically, think logically, and express themselves clearly in writing.

HNRS 2111. Successful Fellowship Writing**Course Description**

Provides scholars with hands-on skills to complete proposals for scholarships and fellowships, such as the Truman, Rhodes, Marshall, Goldwater, and Udall. Other skills include resume writing, general research development, and finding grant and foundation sources. Intended for freshmen and sophomores.

Student Learning Outcomes

1. Review of Prestigious International and National scholarships.
2. Best practices in preparing competitive proposals and applications.
3. Effective strategies for writing compelling Executive summaries, Resumes, and Personal Statements.

HNRS 2112. Rhetoric & Discourse**Course Description**

This course is an interdisciplinary study of writing. People read to engage ideas. They read to inform decisions. Effective writers make ideas and information accessible. Students in this seminar learn the elements of effective writing.

Student Learning Outcomes

1. Demonstrate the ability to understand, appreciate, and evaluate written and spoken messages

2. Display organized thinking and express students' viewpoints clearly, concisely, and effectively
3. Demonstrate awareness of best means to deliver intended message to audience
4. Incorporate legitimate information, properly cited sources, and accurately represented material

HNRS 2113. Fine Arts as Global Perspective

Course Description

This course introduces interdisciplinary perspectives on fine art fields such as visual arts, theater, architecture, dance and music. Its goal is to encourage understanding of the role of art in society and culture

Student Learning Outcomes

1. Analyze and interpret art works that seek social transformation.
2. Employ critical thinking when identifying a work of art and evaluating its merit.
3. Analyze seminal art historical and philosophical texts that challenge the role and importance of political art.
4. Demonstrate effective written communication through written papers, written observations and an artist's statement.
5. Demonstrate effective oral communication in formal assignments (critiques, oral presentations) as well as class participation.
6. Effectively communicate and collaborate on the formation and creation of a work of art.
7. Use the creative process, art making, to evaluate their social responsibilities in their own communities.

HNRS 2114. Music in Time and Space

Course Description

Introduction to all forms of Music. Through our auditory senses and intellectual faculties music is an ideal means for intelligent and humanistic examination of peoples and cultures, and for the enhancement of life. Types of music covered include classical, jazz, rock and roll, and world music. Music videos, live in-class performances, evening concerts, and lectures will be used as a basis for discussions and research.

Student Learning Outcomes

1. Analyze and critically interpret significant primary texts and/or works of art (this includes fine art, literature, music, theatre, and film).
2. Compare art forms, modes of thought and expression, and processes across a range of historical periods and/or structures (such as political, geographic, social, cultural, religious, intellectual).
3. Recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
4. Draw on historical and/or cultural perspectives to evaluate all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought

HNRS 2115. Encounters with Art

Course Description

A multicultural examination of the principles and philosophies of the visual arts and the ideas expressed through them.

Student Learning Outcomes

1. Articulate the relationship of art to the human experience
2. Apply the vocabulary of art to critical writings and discussions
3. Interpret art works within cultural, social, personal and historical contexts

HNRS 2116. Earth, Time and Life

Course Description

Covers how the earth's materials form, processes involved in changing the earth's configuration, and extent of people's dependence upon the earth's resources. Includes mineral and energy resources, development of landscapes, environmental problems, evolution of the earth and life forms

Student Learning Outcomes

1. Gain a general understanding of geology and the geological processes that have been occurring throughout Earth's history.
2. Learn about some of the common minerals and rocks that are the building blocks to geology and the rock cycle.
3. Investigate the processes associated with each rock type (e.g., volcanoes, faults, depositional processes, etc.) and as well as potential geologic hazards (e.g., volcanic eruptions, earthquakes, flooding, etc.).
4. Recognize and identify common minerals and rocks and understand the basic processes and conditions responsible for their formation and occurrence.
5. Comprehensively understand how the internal and external parts of the Earth have functioned throughout geologic time.

HNRS 2117. The World of the Renaissance: Discovering the Modern

Course Description

An introduction to the literature and thought of Renaissance Europe. Humanism and the Reformation will be approached through the intensive study of major writers such as Petrarch, Machiavelli, Luther, Erasmus, Montaigne, and Shakespeare. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. Analyze and critically interpret significant primary texts and/or works of fine art, literature, philosophy, and theatre from the early modern period;
2. Locate art forms, modes of thought and expression, and processes from the early modern period in historical and/or cultural context and compare them to those of other time periods;
3. Demonstrate an understanding of how early modern historical and/or cultural perspectives and key technological developments contributed to the development of contemporary thought and modes of expression;
4. Recognize and articulate the diversity of human experience across historical periods and/or cultural perspectives;
5. Demonstrate skill in working with relevant secondary resources and research tools to develop a class.

HNRS 2118. Places of the Present

Course Description:

Places of the Present courses are built on the idea that active learning is both a process and a product in which the student is the primary agent, and that the concept of the text as a material for study and analysis should be expanded to include place.

Student Learning Outcomes:

1. Analyze and critically interpret place as though it were a text.
2. Engage in reflective practices.
3. Articulate reflections and synthesis through written and/or other media.
4. Apply cross-disciplinary knowledge and methods to develop questions.
5. Take creative risks and solve problems through iteration, revision, and exploration of divergent solutions.

HNRS 2120. Foundations of Western Culture

Course Description

Critical reading of seminal texts relating to the foundations of culture and values in Western civilization, from ancient Greece to about 1700. Focus on the development of concepts of nature, human nature, and the state.

Student Learning Outcomes

1. Students will enhance abilities to quickly read, comprehend, and evaluate lengthy, complex texts to extract their fundamental arguments.
2. Students will improve critical thinking by grappling with ethical issues about the rights of individuals versus societies.
3. Students will use historical analysis to contextualize current social, political, geographic, and economic issues and how the foundations continue to affect contemporary society.

HNRS 2121. Women Across Cultures**Course Description**

Historical and critical examination of women's contributions worldwide with emphasis on the issues of representation that have contributed to exclusion and marginalization of women and their achievements.

Student Learning Outcomes

1. Cultivate their knowledge about a broad range of women's experiences within the hierarchies of gender, class, race, national origin, language, (dis)ability, age, sexuality, body shape etc.
2. Practice the use of critical feminist theoretical tenets, language, and research tools aiming to: Unpack the complexities of women's lived experiences at the intersections of constructed categories of difference and explore systems of oppression that contribute to the exclusion and exploitation of women around the globe.
3. Foster the understanding of local, national, and global activism committed to creative ways of resistance to inequities and collective approaches of shaping a more just and sustainable world for all.

HNRS 2130. Shakespeare on Film**Course Description**

How do Shakespeare's plays continue to speak to us through the medium of film? Written in a time of rapid social change, Shakespeare's plays invited audiences to think critically about the relationship between the self and others and to question conventions. Performances of Shakespeare have long been used to call out social injustice, from western anti-Semitism prior to World War II (*The Merchant of Venice*), to civil rights-era white supremacy in the US and apartheid in South Africa (*Othello*), and authoritarianism in the Arab Spring (*Richard III*). This course focuses on post-1980 Hollywood film versions of Shakespeare's plays and a few prior landmark adaptations around the world, examining how they use Shakespeare as a medium for debate and even a catalyst for social change.

Student Learning Outcomes

1. Students will enhance written communication through preparation of papers that synthesize primary and secondary source material.
2. Students will critically evaluate works of fiction to identify common themes, archetypes, and expressions of culturally contextualized morals. Students will improve oral communication and discussion skills as they collectively dissect course material.

HNRS 2140. Plato and the Discovery of Philosophy**Course Description**

Examines arguments and theories found in the Platonic dialogues with a view to determining the nature and value of philosophy both from Plato's point of view and absolutely.

Student Learning Outcomes

1. Students will evaluate a number of Plato's dialogues to understand his doctrines and arguments.
2. Students will use their understanding to further evaluate why his philosophies have remained influential in modern, Western society and beyond.
3. Students will develop well-formulated, compelling arguments from philosophical texts.

HNRS 2141. Bamboo and Silk: The Fabric of Chinese Literature

Course Description

Introductory survey of traditional and modern Chinese prose and poetry in translation with emphasis on genre, theme, and social/historical context.

Student Learning Outcomes

1. Students will acquire extensive knowledge of one of the world's oldest and richest literary traditions.
2. Not incidentally, students will also gain knowledge of China's history and philosophical traditions.
3. As this class is based on reading, writing, and discussion, students will hone their interpretive and expressive skills.

HNRS 2145. Celtic Literature**Course Description**

This course provides an overview of the most important early literary works of the so-called Celtic nations, principally Ireland and Wales, from a literary and historical approach. This literature stems from the period 600-1200 and ends with the development of the Romances under influence from the French.

Student Learning Outcomes

1. Students will enhance written communication through preparation of papers that synthesize primary and secondary source material.
2. Students will critically evaluate works of fiction to identify common themes, archetypes, and expressions of culturally contextualized morals.
3. Students will improve oral communication and discussion skills as they collectively dissect course material and participate in class discussions.

HNRS 2150. Religion and the State**Course Description**

Moral and political questions that arise in connection with church-state relations, including religious toleration, separation of church and state, the individual's moral duty to ignore religious convictions when performing functions of democratic citizenship, and the extent to which these ideas are embodied in our nation's traditions

Student Learning Outcomes

1. Students will evaluate ideologies, their impact, and the increasingly critical role of religion and spirituality as they continue to shape the rapidly changing sociopolitical landscapes of the Western world.
2. Students will formulate theoretical knowledge by integrating historical, conceptual, and comparative modes of research.
3. Students will interpret how religious and spiritual phenomena affect global perceptions of order/disorder in society, leading to the formation of current public policy.

HNRS 2160. New Testament as Literature**Course Description**

Literature of the New Testament examined from a literary perspective. Emphasis on translation history of the New Testament, generic features of gospel, epistle and apocalypse, precedent literary models, problems of authorship, classification of New Testament texts.

Student Learning Outcomes

1. Students will hone critical thinking skills by analyzing arguments and controversies surrounding the roots of Christianity.
2. Students will discern and discuss the viability of both literary and historical sources with debated authorship, dating, and interdependency.
3. Students will practice interpersonal navigation and maintaining an academic environment of respect as they discuss a number of topics that can be considered controversial or subjective.

HNRS 2161. Window of Humanity

Course Description

Anthropology is the most humanistic of the sciences, and the most scientific of the humanities. This course will use anthropological perspectives to examine the human experience from our earliest origins, through the experiences of contemporary societies. We will gain insights into the influence of both culture and biology on shaping our shared human universals, and on the many ways in which human groups are diverse. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. Explain the concepts that define Anthropology (along with its subfields) as a specific research discipline.
2. Possess a growing vocabulary for anthropology, cultural study, ethnographic research and writing that will empower them as they continue with their degrees and professional careers.
3. Recognize how Anthropological concepts, terms, and methods are valuable for present-day concerns and how these tools can be used to engage life and the world at large.

HNRS 2165. Humanities in the 21st Century

Course Description

An exploration of the humanities, of their intrinsic and extrinsic values, and of the skills and habits of mind they cultivate.

Student Learning Outcomes

1. Articulate what the humanities are and what role they have played in education throughout the ages
2. Articulate examples of the intrinsic value of the humanities
3. Articulate the skills and habits of thought in at least one chosen discipline in the humanities
4. Articulate common misconceptions about university majors and reframe the common misconceptions
5. Create at least three employment scenarios based on your skills and interests
6. Exercise divergent thinking with regards to future career paths

HNRS 2167. Humanities in Society and Culture

Course Description

This course introduces interdisciplinary perspectives on humanities fields such as literature, history, and philosophy as well as associated disciplines. Its goal is to encourage understanding of the role of the humanities in society and culture.

Student Learning Outcomes

1. Analyze, critically interpret, and evaluate primary works within the humanities.
2. Evaluate how some key works in the humanities reflect either a historical period or national, cultural, ethnic, or gender issues.
3. Compare how these key works invoke shared human experiences that may relate to readers and the world today.
4. Construct persuasive arguments and increase writing proficiency through analytical essays characterized by original and insightful theses, supported by logically integrated and sound subordinate ideas, appropriate and pertinent evidence, and good sentence structure, diction, grammar, punctuation, and spelling.

HNRS 2170. The Human Mind

Course Description

The primary course objective is to develop an appreciation of the variety and complexity of problems that are solved by the human mind. The course explores how problems are solved by a combined computational analysis (computational theory of mind), and evolutionary (evolution by natural selection) perspective. The mind is what the brain does (i.e., information processing) and the brain is a computational device that is a product of evolution by natural selection. Note that this is not a neuroscience course, we will be focusing on the mind (what the brain does) rather than on the brain.

Student Learning Outcomes

1. Enhance written and oral communication

2. Stimulate critical thinking and learn to weigh scientific evidence
3. Challenge students to make ethical decisions and promote personal and social responsibility

HNRS 2171. The Worlds of Arthur

Course Description

Arthurian texts and traditions from medieval chronicle histories to modern novels. Emphasis on both the continuities of the Arthurian tradition and the diversity of genres, media, and cultures that have given expression to the legend.

Student Learning Outcomes

1. Students will examine how texts and narratives, even with fictional implications, still held psychological, social, cultural, and religious sway within developed societies throughout history.
2. Students will synthesize information from an array of both primary and secondary sources to measure the cultural significance King Arthur holds in contemporary societies.
3. Students will extrapolate how a society's values at any point in history will affect the transference of mythos, just as a myth transmits the values of that society.

HNRS 2172. Archaeology: Search for the Past

Course Description

A critical evaluation of various approaches to understanding prehistory and history. The methods and theories of legitimate archaeology are contrasted with fantastic claims that invoke extraterrestrials, global catastrophes, transoceanic voyages, and extra-sensory perception.

Student Learning Outcomes

1. Identify, describe, and explain how human lifeways changed in diverse communities in different parts of the globe.
2. Select and use relevant archaeological evidence to articulate how people's beliefs and values were influenced by politics, geography, economics, culture, biology, history, and social institutions in the past.
3. Analyze the significance of archaeological artifacts in context and explain their relevance to understanding relations among individuals, their society, and the environment.
4. Evaluate how practices in research, conservation, and tourism to archaeological sites promote ethical stewardship of non-renewable archaeological resources.
5. Design a study tour to archaeological sites that will address a key question or argument in prehistory and promote historic/archaeological preservation.

HNRS 2173. Medieval Understandings: Literature and Culture in the Middle Ages

Course Description

Intensive, interdisciplinary introduction to the thought and culture of medieval Europe. Core texts will include works by St. Augustine, Marie de France, and Dante, as well as anonymous works such as *Sir Gawain and the Green Knight*, all supplemented by study of medieval art, architecture, philosophy, and social history.

Student Learning Outcomes

1. Students will hone critical reading skills as they read through a wealth of texts, by prioritizing attention to details and how it affects the overall narrative.
2. Students will recognize how the social, religious, and political environments of the medieval era shaped contemporary society in affected regions beyond Europe.
3. Students will employ comparative analysis skills as they examine how Islamic culture might have influenced poetry and music in medieval Europe.

HNRS 2174. American Politics in a Changing World

Course Description

American politics and policies examined from a historical and global perspective. Philosophical underpinnings of American national government, the structure of government based on that philosophy, and the practical implications of both the philosophical and structural base. How American government influences and is influenced by the world community.

Student Learning Outcomes

1. Students will enhance their understanding of the operation of major American political institutions and processes.
2. Students will investigate how the uniquely American form of constitutional governance has sought to adapt to changing historical and cultural conditions.
3. Students will practice interpersonal navigation and maintaining an academic environment of respect as they discuss a number of topics that can be considered controversial or subjective.

HNRS 2175. Introduction to Communication Honors

Course Description

Study and practice of interpersonal, small group, and presentational skills essential to effective social, business, and professional interaction.

Student Learning Outcomes

1. Analyze and evaluate oral and written communication in terms of situation, audience, purpose, aesthetics, and diverse points of view.
2. Express a primary purpose in a compelling statement and order supporting points logically and convincingly.
3. Use effective rhetorical strategies to persuade, inform and engage.
4. Employ writing and/or speaking processes such as planning, collaborating, organizing, composing, revising & editing to create presentations using correct diction, syntax, grammar and mechanics.
5. Integrate research correctly and ethically from credible sources to support the primary purpose of a communication.
6. Engage in reasoned civil discourse while recognizing the distinctions among opinions, facts, and inferences.

HNRS 2176. Acting for Everyone

Course Description

To provide fundamental training in acting techniques, including stage voice and movement, improvisation, ensemble building, characterization, emotion exploration and basic performance analysis. The course will provide a correlation between theatre skills and everyday "life" skills and seek to encourage an appreciation for the art of theatre.

Student Learning Outcomes

1. Improve effectiveness of oral communication.
2. Enhance creativity and appreciation of theatre.
3. Build confidence and expressiveness.

HNRS 2178. Theatre: Beginnings to Broadway

Course Description

Intercultural and historical overview of live theatre production and performance, including history, literature and professionals. Students attend and report on stage productions.

Student Learning Outcomes

1. Distinguish and differentiate the characteristics of theatre from other art forms.
2. Describe the major components of a theatrical event.
3. Describe the functions of various theatre personnel.
4. Define specific terms relating to the study of theatre.
5. List and describe the parts of a play.
6. Define the different parts of plot.
7. Critique plays
8. Describe the characteristics of theatre in the different periods of history.

9. Develop an appreciation for theatre as an art form and a reflection of society

HNRS 2180. Citizen and State Great Political Issues

Course Description

The fundamental questions of politics: why and how political societies are organized, what values they express, and how well they satisfy those normative goals and the differing conceptions of citizenship, representation, and freedom.

Student Learning Outcomes

1. Students will investigate the fluid state of American politics by discerning the decisions and policies of a selection of presidents.
2. Students will investigate the complex operations behind a representative democracy.
3. Students will examine how the sociopolitical environment surrounding a president influences his policies, and how a president's policies affect the broader society.
4. Students will assess and measure how politics can be affected by active and engaged citizens.

HNRS 2185. Democracies, Despots, and Daily Life

Course Description

This course will offer students the chance to read firsthand accounts of ordinary citizens' lives under different political systems, from the earliest age to the present day. This reading- and writing-intensive course will help students develop skills related to critical thinking, logical argumentation, and written and oral communication.

Student Learning Outcomes

1. Analyze and critically interpret primary sources and understand how others might interpret and use the same material in different ways.
2. Recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
3. Understand how historical experiences and memories have shaped contemporary societies.
4. Identify and understand the degree to which history has been used and misused in the past.
5. Draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought.
6. Demonstrate improvement in their ability to read critically, think logically, and express themselves clearly in writing.

HNRS 2190. Claiming a Multiracial Past

Course Description

Survey of history of the United States in the nineteenth and twentieth centuries, with an emphasis on multicultural social and cultural history. Focus on understanding American history from the point of view of dispossessed, impoverished, and disenfranchised Americans who have fought to claim both their rights as Americans and American past.

Student Learning Outcomes

1. Students will contextualize the current state of American "being" by focusing on the multicultural-social and cultural history of the U.S. in the nineteenth and twentieth centuries.
2. Students will hone public speaking and presentation skills through classroom discussions and activities.
3. Students will practice interpersonal navigation and maintaining an academic environment of respect as they discuss a number of topics that can be considered controversial or subjective.

HNRS 2221. Mathematics in the World

Course Description

This course is an interdisciplinary and rigorous introduction to mathematical reasoning. Themed sections connect foundational ideas of mathematics, such as logic, systems of numbers, sequences and series, geometry, and probability to other aspects of human thought.

Student Learning Outcomes

Student will demonstrate competency in:

1. Mathematical problem solving.
2. Written mathematical communication.
3. Oral mathematical communication.

HNRS 2331. Science in the 21st Century**Course Description**

This course introduces principles from scientific fields such as biology, chemistry, physics, geology, and astronomy. It will familiarize students with scientific inquiry and an understanding of the role of the sciences in society and culture.

Student Learning Outcomes

1. Using written language, students explain and discuss the concepts listed in the course content and apply them to everyday phenomena and interdisciplinary examples.
2. Students apply formulas to calculate measurable quantities related to course concepts.
3. Demonstrate ability to collect data, write reports which include data, evidence, interpretation and conclusions using both technical and nontechnical language while utilizing good sentence structure, grammar, punctuation and spelling.
4. Students explain and discuss principles underlying course concepts.
5. Demonstrate knowledge and comprehension of course concepts.
6. Students develop critical thinking skills that enable application of scientific knowledge in new and unusual settings, across disciplines in order to answer questions and make informed decisions.

HNRS 2331L. Science in the 21st Century Lab**Course Description**

This optional lab corresponding to HNRS 2331 uses direct experimental work, field study, and other practical applications to introduce scientific method and inquiry in one or more of the basic sciences.

Student Learning Outcomes

1. Using written language, students explain and discuss the concepts listed in the course content and apply them to everyday phenomena and interdisciplinary examples.
2. Students apply formulas to calculate measurable quantities related to course concepts.
3. Demonstrate ability to collect data, write reports which include data, evidence, interpretation and conclusions using both technical and nontechnical language while utilizing good sentence structure, grammar, punctuation and spelling.
4. Students explain and discuss principles underlying course concepts.
5. Demonstrate knowledge and comprehension of course concepts.
6. Students develop critical thinking skills that enable application of scientific knowledge in new and unusual settings, across disciplines in order to answer questions and make informed decisions.

HNRS 2364. The Individual and the Collective**Course Description**

This course is an interdisciplinary introduction to the social and behavioral sciences. Insight from multiple disciplines including psychology, anthropology, political science, sociology and economics will be used to critically analyze local, national, or global problems.

Student Learning Outcomes

1. By the end of the course, students will be able to define social science and articulate how approaches vary across the disciplines.
2. By the end of the course, students will demonstrate a toolkit of social scientific theories and concepts.

3. By the end of the course, students will be able to examine empirical evidence using social science methods.
4. By the end of the course, students will be able to apply the theories and methods of the social sciences to identify, describe, and explain human behaviors and to critically evaluate how these behaviors are influenced by and influence social structure and the environment.

HNRS 2980. AP Research

Course Description

This is the second course in the AP Capstone experience, allows students to deeply explore an academic topic, problem, issue, or idea of individual interest. Students design and plan, and implement a yearlong investigation to address a research question. Through this inquiry, they further the skills they acquired in the AP Seminar course by learning research methodology, employing ethical research practices, and accessing, analyzing, and synthesizing information. Students reflect on their skill development, document their processes, and curate the artifacts of their scholarly work: through a process and reflection portfolio. The course culminates in an academic paper of 4,000-5,000 words (accompanied by a performance exhibit, or product where applicable) and a presentation with an oral defense.

Student Learning Outcomes

Varies

HNRS 2996. Honors Topics

Course Description

Special topics are offered occasionally, and the selection is different every semester. Special Topic courses do not repeat material presented by regular semester courses. The purpose of special topics is to provide students with new, one-time, and developing information in accounting.

Student Learning Outcomes

Vary depending upon topic.

HNRS 2997. Honors Independent Study

Course Description

Varies

Student Learning Outcomes

Varies

Horticulture (HORT)

HORT 1110. Introduction to Horticulture

Course Description

An introduction to principles and practices of horticulture as a science and its practical applications. SOIL Includes an introduction to plant anatomy, classification and identification, physiology, genetics, and propagation as they apply to horticulture.

Student Learning Outcomes

At the end of this course, students will be able to:

1. Demonstrate an understanding of basic plant biology concepts in plant morphology, anatomy, taxonomy, physiology, reproduction, and genetics.
2. Recognize plant responses to biotic and abiotic environmental conditions.
3. Students will facilitate plant growth, solve problems, and demonstrate principles revealed with hormone, propagation, nutrition, water, and soil modification.
4. Understand and apply general horticulture principles and practices.
5. Understand career opportunities in horticulture.

HORT 1115. Introductory Plant Science

Course Description

Introduction to the physical, biological, and chemical principles underlying plant growth and development in managed ecosystems. In the laboratory portion of the class, students perform experiments demonstrating the principles covered in lecture. The course uses economic plants and agriculturally relevant ecosystems to demonstrate basic principles.

Appropriate for nonscience majors. Same as AGRO 1100G

Student Learning Outcomes

1. Describe the role plants play in everyday lives.
2. Introduce career opportunities in plant and soil sciences, and related fields.
3. Define plants through the concepts of plant structure and anatomy.
4. Introduce the wide variety of plants cultivated throughout the world.
5. Describe how plants work (growth, reproduction, physiology, and soil).
6. Describe how plants are manipulated to feed, clothe and entertain the world.

HORT 1210. Cannabis & Hemp Enterprises I

Course Description

Cannabis I prepares students to become informed and ethical managers, business owners, investors, and advocates in the legal cannabis industry. Topics include History of Hemp/Cannabis as a Business Enterprise, Emerging Hemp/Cannabis Markets, Understanding and Navigating the New Mexico Cannabis Regulation Act (CRA) and the 2018 Farm Bill and Domestic Hemp Production rules in NM. Course delivered using current technologies available to students in biweekly modules.

Student Learning Outcomes

1. Define critical business requirements, and regulations of the NM Cannabis Regulation Act.
2. Discuss best practices for Cannabis & Hemp licenses.
3. Define common industry terms.
4. Analyze historical legal and regulatory benchmarks
5. Evaluate effects of methods of Ingestion and Delivery systems
6. Create a Cannabis/Hemp Cultivation Plan for 200 points.

HORT 1220. Cannabis II

Course Description

Cannabis II prepares students to enter the hemp/cannabis career and entrepreneurial marketplace by making informed decisions about the unique challenges of the hemp/cannabis industry. Topics include Hemp/Cannabis Startup, Building a Business Plan, Engaging Professional Assistance, Management, Strategies for success, and Managing and Operating a NMCRA compliant Cannabis Enterprise.

Student Learning Outcomes

1. Formulate a general understanding of the unique challenges of managing/owning a licensed cannabis and hemp business by writing standard operating procedures for business.
2. Apply student knowledge of NM Cannabis Regulation Act and its role in guiding the NM regulation and Licensing Department by correctly evaluating various legal scenarios.
3. Demonstrate an understanding of the various aspects of Cannabis & Hemp business operations by authorizing a micro business plan.

HORT 2110. Ornamental Plants I

Course Description

This covers identification, botanical characteristics, culture, and landscape uses of woody plants. Emphasis will be on deciduous trees, native shrubs, and evergreens

Student Learning Outcomes

1. Identify landscape plants by scientific names, including family, genus and specific epithet.
2. Use scientific terminology to accurately describe landscape plant morphology.
3. Illustrate plant family relationships at the family and genus level.
4. Apply landscape design principles and knowledge of plant requirements to arrange plants in a landscape.

HORT 2120. Ornamental Plants II

Course Description

Identification, botanical characteristics, culture, and landscape uses of woody plants. Emphasis on flowering trees, cacti, and members of the pea and rose families.

Student Learning Outcomes

1. Identify landscape plants by scientific names, including family, genus and specific epithet.
2. Use scientific terminology to accurately describe landscape plant morphology.
3. Illustrate plant family relationships at the family and genus level.
4. Apply landscape design principles and knowledge of plant requirements to arrange plants in a landscape.

HORT 2130. Floral Quality Evaluation and Design

Course Description

Critical hands-on evaluation of the quality of cut and potted floral and tropical foliage crops, their specific merits and faults, and fundamentals of floral design.

Student Learning Outcomes

1. Identify common floriculture crops or know resourcing to help identify the crop.
2. Evaluate quality (merit and fault) of common floriculture crops, based on industry standards and merit. Pi Alpha Xi and American Floral Endowment standards will be used for the purpose of this class.
3. Have a basic understanding of the floriculture industry and identify career pathways within the industry.
4. Know, understand, creatively interpret, and execute basic principles of design in regard to floral design.
5. Use interpersonal communication, problem solving, basic math, and marketing during cash and carry "lab" time (flower sales) in developing job ready skills in floristry.
6. Layer principles of design, marketing, sales, and time management to create floral art in real-world scenarios.

HORT 2160. Plant Propagation

Course Description

Practical methods of propagating horticultural plants by seed, cuttings, layering, grafting, division and tissue culture. Examination of relevant physiological processes involved with successful plant propagation techniques. Same as AGRO 2160.

Student Learning Outcomes

1. Practical methods of propagating plants by seed, cuttings, layering, grafting, division, and tissue culture through experiential, "hands-on" laboratories.
2. Relevant physiological principles involved in propagating horticultural plants through lecture discussions and readings.

Hotel, Restaurant & Tourism Management (HRTM)

HRTM 1110. Freshman Orientation

Course Description

Orientation to university life, including available resources and methods to promote success at NMSU.

Student Learning Outcomes

1. Identify career opportunities in hospitality and tourism.
2. Understand skills and characteristics desired by potential employers of Hotel, Restaurant and Tourism students.
3. Develop greater appreciation of current trends in the hospitality and tourism industry.
4. Become more familiar with faculty and staff in the School of Hotel, Restaurant and Tourism Management and resources available to students in the department.
5. Refine written and verbal communication skills.

HRTM 1115. Introduction to Management in the Hospitality Industry

Course Description

The course will explore and analyze management opportunities, functions, methods, and concepts in various segments of the hospitality industry.

Student Learning Outcomes

Students should be able to:

1. Understand the key aspects of hospitality and tourism functions and the language used by these functions.
2. Develop and demonstrate an appreciation of the interrelationship of these functions.
3. Demonstrate familiarity with the environments in which hospitality and tourism operates (economic and legal environment of hospitality and tourism, the globalization of markets, workforce diversity, leadership and entrepreneurship).
4. Develop and display an understanding of the importance of addressing questions about the role of hospitality and tourism in society, corporate social responsibility, ethical issues, and personal values.
5. Develop and display critical thinking and analytical skills through oral presentations and in written form on assignments and exams.

HRTM 1120. Introduction to Tourism

Course Description

Survey of travel and tourism development and operating characteristics.

Student Learning Outcomes

1. Define tourism and related terms.
2. Identify and explain the role of the elements of the destination mix.
3. Identify the potential socio-cultural, economic and environmental impacts of tourism.
4. Identify and describe the role of key governmental and nongovernmental organizations in tourism.
5. Describe basic tourism planning and development principles.
6. Discuss the unique challenges of tourism marketing and standard marketing methods.
7. Describe the components of the tourism distribution system.
8. Demonstrate a basic understanding of traveler behavior including motivations and barriers to travel.

9. Identify major factors that influence traveler flows
10. Describe the role of major modes of transportation in the tourism system.
11. Identify and describe the three pillars of sustainable tourism development.
12. Explain personal and social responsibility as it relates to sustainable tourism development.
13. Demonstrate effective communication and critical thinking skills.

HRTM 1130. Introduction to Hospitality Management

Course Description

Overview of the major segments of the hospitality industry, with a focus on basic management principles.

Student Learning Outcomes

1. Understand the concept of management contracts and franchising.
2. Recognize and understand needed leadership qualities to achieve organizational objectives.
3. Understand the hospitality industry within the global environment.
4. Identify company and industry trends.
5. Understand the functions of all departments in a hospitality organization (restaurant, hotel, club, etc.).
6. Apply the concepts of convention management, meeting and event planning, and casino management.
7. Understand the concepts of quick and institutional/contract foodservice management.
8. Understand the principles of bar management and compare and contrast wines, beers and distilled spirits.
9. Manage the process of service delivery.
10. Identify and solve managerial problems
11. Manage a diverse workforce and develop positive employee relations to reduce turnover.

HRTM 1140. Introduction to Food Preparation

Course Description

The fundamental concepts, skills and techniques involved in basic cookery are covered in this course. Special emphasis is given to the study of ingredients, cooking theories, and the preparation of stocks, broth, glazes, and soups, thickening agents, the grand sauces and emulsion sauces. Lectures and demonstrations teach organization skills in the kitchen, work coordination, and knife skills. The basics of vegetable cookery, starch cookery, meat and poultry are covered. Emphasis is given to basic cooking techniques such as sautéing, roasting, poaching, braising and frying. Students must successfully pass a practical cooking examination covering a variety of cooking techniques.

Student Learning Outcomes

Students should be able to:

1. Identify basic kitchen utensils and equipment associated with the culinary profession, as well as measuring devices.
2. List and describe the method of preparation for stocks and Grand Sauces and various derivatives of each.
3. List and describe the method of preparation for clear soups, puree and cream soups, and specialty soups.
4. Demonstrate adult and professional manner during all classes, both laboratory and lecture.
5. List and explain the methods of preparation for basic vegetables and starches
6. List and explain all basics in regard to heat application as to:
 - a. Roasting
 - b. Sautéing
 - c. Pan Frying
 - d. Braising
 - e. Simmering
 - f. Deep Frying
 - g. Submerge Poaching
 - h. Shallow Poaching

HRTM 1145. Food and Beverage Service Management

Course Description

You will study food and beverage service management systems in the hospitality field. You will learn to analyze cost control and quality control techniques. This course requires a work site practice location.

Student Learning Outcomes

Students should be able to:

1. Identify effective communication and motivational techniques to create a positive work climate.
2. Identify and list the job responsibilities and personnel requirements of a manager of dining room service.
3. List and explain the principles necessary for dining room service management.
4. Identify dining room service needs determined by the menu.
5. Identify and articulate the necessity of good communication between food production and service employees.
6. Establish guidelines for par inventory levels for dinnerware, glassware, flatware, and linens.
7. List and describe the basic styles of service.
8. Explain and demonstrate staffing guidelines, including developing a work schedules.
9. List and describe procedures for controlling manual guest checks.
10. List and articulate dining room procedures which include reservation handling and suggestive selling.
11. List beverage service positions and describe the duties.
12. List and explain the key elements of planning, time management and delegating as it relates to service
13. Identify costs within the food and beverage operations; calculate selling price, and forecast sales, and build a profit and loss/income statement. These are key business competencies to prepare for real business.
14. List, articulate and demonstrate responsible alcohol awareness component in keeping with the state regulations.
15. List the characteristics of various wines and beers.
16. Match a variety of foods with the appropriate beverages.
17. Identify all local state and federal laws pertaining to the purchase and service of alcoholic beverages.
18. Distinguish the basic production process for distilled spirits, liquors, beer and brandy.
19. Identify and describe the preparation, presentation, and service of alcoholic, non- alcoholic beverages including coffees and teas.
20. Identify and list equipment and glassware used for beverage preparation and service.
21. List and describe opening and closing procedures of a beverage operation.
22. List and explain procedures for implementing internal beverage controls.

HRTM 1320. Food Production and Service Fundamentals

Course Description

Basic overview of food service systems including menu management, purchasing and production. The course includes basic principles of food fabrication and production. Topics include knife skills, culinary terminology, product identification, quality standards, nutritional cooking theory and application of food preparation techniques. The course includes laboratory aspects and demonstration of basic food production techniques, service styles, practices and procedures in food service operations including culinary math. This course provides students with an understanding of food service sanitation and culinary nutrition. Completion of a national certification examination is required.

Student Learning Outcomes

1. Demonstrate use of standard recipes and how to reduce and increase their yields.
2. Demonstrate basic culinary knife cuts, basic fabrication and mise en place.
3. Demonstrate basic cookery techniques of dry, moist and a combination of heat.
4. Demonstrate the proper plating and garnishing of foods.
5. Describe proper personal behaviors required for the safe handling of food.
6. Identify and properly operate kitchen equipment.
7. Pass the ServSafe Exam.

8. Describe the three forms of food contaminants and preventative measures.
9. Demonstrate how to properly “set” a table for service.
10. Demonstrate how to provide dining room service with proper etiquette
11. Demonstrate safe work habits, identify safety hazards, and employ preventative safety measures.
12. Maintain positive relations with fellow students and faculty through teamwork.
13. Exhibit appropriate work habits and attitudes; demonstrate a willingness to compromise.
14. Demonstrate a positive attitude, conversation skills, personal hygiene and work attire.

HRTM 2110. Safety, Sanitation and Health in the Hospitality Industry

Course Description

Addresses public health, HACCP, and food safety responsibilities in the hospitality industry. Sanitation certification test allows students to receive national ServSafe Food Protection Manager Certification. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. Identify the hazards to safe food and the foods at risk in a foodservice operation.
2. Identify and discuss the Hazard Analysis Critical Control Point (HACCP) system and be able to design a HACCP flowchart.
3. Demonstrate knowledge of how to protect food during purchasing, receiving, storing, preparing, holding, and serving.
4. Discuss the procedures for ensuring sanitary equipment, facilities, and food-handling practices.
5. Explain how to set-up cleaning, safety, pest control, crisis management, and training programs.

HRTM 2120. Food Production and Service Fundamentals

Course Description

Basic overview of food service systems including menu management, purchasing and production. The course includes basic principles of food fabrication and production. Topics include knife skills, culinary terminology, product identification, quality standards, nutritional cooking theory and application of food preparation techniques. The course includes laboratory aspects and demonstration of basic food production techniques, service styles, practices and procedures in food service operations including culinary math. This course provides students with an understanding of food service sanitation and culinary nutrition. Completion of a national certification examination is required.

Student Learning Outcomes

1. Demonstrate use of standard recipes and how to reduce and increase their yields.
2. Demonstrate basic culinary knife cuts, basic fabrication and mise en place.
3. Demonstrate basic cookery techniques of dry, moist and a combination of heat.
4. Demonstrate the proper plating and garnishing of foods.
5. Describe proper personal behaviors required for the safe handling of food.
6. Identify and properly operate kitchen equipment.
7. Pass the ServSafe Exam.
8. Describe the three forms of food contaminants and preventative measures.
9. Demonstrate how to properly “set” a table for service.
10. Demonstrate how to provide dining room service with proper etiquette.
11. Demonstrate safe work habits, identify safety hazards, and employ preventative safety measures.
12. Maintain positive relations with fellow students and faculty through teamwork.
13. Exhibit appropriate work habits and attitudes; demonstrate a willingness to compromise.
14. Demonstrate a positive attitude, conversation skills, personal hygiene and work attire.

HRTM 2130. Hotel Operations I

Course Description

Analysis of hotel operations to include guest services, reservations, reception, guest/city ledger and the night audit.

Student Learning Outcomes

At the completion of the course, students should be able to:

1. Outline the history, magnitude and culture of the hotel industry
2. Define and identify hotel ownership and operational structures
3. Outline the organization and structure of a hotel and resort.
4. Describe and calculate the components and processes of room reservation forecasting, pricing and revenue management.
5. Outline and explain the flow of the guest from pre-arrival through arrival, room occupancy and departure.
6. Demonstrate the procedures and processes for Guest Accounting, the City Ledger, Guest Credit and the Night Audit.
7. Discuss problem solving and guest service associated with the front office and other departments of the hotel and resort.
8. Forecast impacts of technology to the guest services and hotel operations
9. Describe the day to day activities and responsibilities of a Hotel Front Office Manager or a Hotel Assistant General Manager (AGM).

HRTM 2996. Topics in Hotel, Restaurant, & Tourism Management

Course Description

Varies.

Student Learning Outcomes

Varies.

Human Development (HUDV)

HUDV 1110. Volunteer in the Community

Course Description

In this individualized course, students have an opportunity to design, implement and evaluate a service project within the community. Students learn concepts and principles of service and get support and feedback as needed.

Student Learning Outcomes

1. Demonstrate an understanding of the nature of service
2. Identify the needs of the agency or clients served
3. Evaluate the contributions and consequences (positive and negative) of the service project

HUDV 2110. Student Leadership

Course Description

An introduction to theories and skills of practicing collaborative leadership in a multicultural environment. Focus is on the applied practice of leadership using project-based learning through Santa Fe Community College Student Government Association or through other leadership groups.

Student Learning Outcomes

1. Articulate the concept of collaborative, representative leadership
2. Employ communication, facilitation, conflict resolution and consensus' building skills
3. Plan and perform leadership activities, participate constructively in meetings and serve as a representative of the Santa Fe Community College student body
4. Describe competencies in goal and project management

HUDV 2120. Service Leadership

Course Description

This course examines the dynamics of leadership in action. Readings on effective leadership models, communication styles, and conflict resolution methods inform students as they design, implement, and evaluate a leadership project. Students apply concepts and develop leadership and service skills through their internship experience in a nonprofit organization.

Student Learning Outcomes

1. Demonstrate an understanding of the nature of service leadership
2. Identify effective leadership practices
3. Evaluate the contributions and consequences (positive and negative) of the leadership practicum

HUDV 2130. Community Development

Course Description

This course aims to provide a broad understanding of issues relevant to improving the quality of life in communities. Topics include economic and cultural forces, social change processes, community research methods, and model programs. This course exposes students to theory and practice of community change so they can develop the skills needed to work as professional community leaders, program administrators, and/or contemporary engaged citizens.

Student Learning Outcomes

1. Define communication mechanisms for creating community change
2. Identify theories and practices for developing partnerships and volunteer involvement.
3. Describe the impact of messages on attitude and behavior
4. Define ethics for social change
5. Delineate methods for planning in communities
6. Define human resource and community service
7. Describe the skills and techniques used for organizational and program management
8. Describe internal and external evaluation measurements
9. Identify steps in program planning, improvement, and accountability

HUDV 2140. Mentoring and Leadership Seminar

Course Description

An exploration of the need for and effectiveness of youth mentoring. Students develop an understanding of the components of successful mentoring relationships and successful mentoring programs. Topics include developing mutuality, trust and empathy, role modeling and identification and social-emotional and cognitive development.

Student Learning Outcomes

1. Describe the role of adverse childhood experiences in shaping young minds.
2. Describe the role of youth mentoring in positive youth development.
3. Explain the components of successful mentoring relationships and successful mentoring programs.

Human Rights (HMRT)

HMRT 2025. International Right of Children

Human Services (HMSV)

HMSV 1020. Introduction to Applied Behavior Analysis

Course Description

Introduces effective applied behavior analysis principles and interventions in working with children with behavioral needs. Designed to meet the Task List requirements for the 40-Hour Registered Behavior Technician (RBT) Training required by the Behavior Analyst Certification Board (BACB) for RBT certification.

Enhanced Description: This course is based on the Registered Behavior Technician (RBT) Task list and is designed to meet the 40-hour training requirement for the RBT credential issued by the Behavior Analyst Certification Board (BACB). The

training course is offered independent of the BACB. The RBT Task List is available at <http://bacb.com/wp-content/uploads/2016/03/160321-RBT-task-list.pdf>.

An RBT is a behavioral services paraprofessional who practices under the supervision of a Board-Certified Behavior Analyst or a Board-Certified Behavior Analyst-Doctoral. An RBT's primary responsibilities include implementing plans written by a BCBA or BCBA-D, assisting with preference assessments and Functional Behavior Assessments, collecting and recording data, documenting session notes, and communicating with stakeholders and a supervising BCBA or BCBA-D.

Student Learning Outcomes

1. Demonstrate the knowledge and skills listed in the RBT Task List
2. Perform the skills listed in the RBT Task List

HMSV 1110. Group Dynamics

Course Description

This course introduces you to basic issues and stages of development in the group counseling process, overview of types of counseling groups, group theory, leadership ethical guidelines, group formation and termination.

Student Learning Outcomes

1. To understand differing theoretical approaches to group therapy.
2. To understand different types and purposes of group work.
3. To develop a rationale of group leadership and group therapy.
4. To demonstrate group facilitation skills from an integrative theoretical perspective.

HMSV 1120. Interviewing Techniques

Course Description

This course is designed to teach basic interviewing techniques used in a variety of settings. Theoretical foundations of various interviewing styles and techniques will be examined. The student will develop an awareness of ways in which the interviewer's background, attitudes, and behaviors influence the interview.

Student Learning Outcomes

1. Identify, describe, and assess the standards of confidentiality and ethical practice for interviewing.
2. Identify the stages of an interview and appropriate communication skills associated with each stage.
3. Demonstrate interpersonal skills of establishing rapport, clarifying expectations, and dealing with conflict.
4. Identify, discuss, and understand proven methods and techniques used to conduct effective clinical interviews.
5. Survey various theoretical orientations currently in use and provide an overview of how they impact the clinical interview process
6. Apply core interviewing skills for engaging clients .
7. Describe the major theories of crisis intervention and crisis intervention models.
8. Be able to identify and use various methodologies to perform an effective interview.

HMSV 1140. Professional Skills in Human Services I

Course Description

Provides knowledge and skill development related to entry level professional responsibilities and job performance in human service settings. Skills and knowledge include understanding professional, ethical, and effective use of self; developing basic interpersonal rapport building skills for working with coworkers and diverse populations; and information management, documentation, and organizational skills for appropriately developing and maintaining confidential materials.

Student Learning Outcomes

Students will:

1. Students will exhibit entry level skill in developing professional boundaries, including self-disclosure and use of self, appropriate to work with clients and service professionals.
2. Students will produce written communication that meets college and professional standards.

3. Students will demonstrate interpersonal skills in rapport building and engagement appropriate to entry level client/worker interactions in human service settings.
4. Students will explain professional confidentiality standards for handling all forms of information disclosed and maintained in human service settings.
5. Students will use organizational skills important for professional accountability in completing course requirements.
6. Students will identify culturally sensitive behaviors and attitudes important for working with others.
7. Students will appropriately apply ethical standards and problem-solving skills to dilemmas.

HMSV 1150. Motivational Interviewing

Course Description

Explores the techniques in motivational interviewing counseling skills applied to the area of substance abuse counseling. Motivational interviewing is an evidence-based treatment that addresses ambivalence to change through a person-focused approach.

Student Learning Outcomes

Students will:

1. Understand and demonstrate the basic concepts of Motivational Interviewing, its spirit and essential strategies.
2. Learn, practice, and integrate basic MI counseling skills, including a. Non-verbal listening skills b. Constructing and asking open-ended questions c. Reflective Listening d. Eliciting and responding to change talk e. Values Clarification f. Moving toward change g. Constructing a Behavioral Plan.
3. Develop a working knowledge of the nature of ambivalence about behavior change and how to effectively work with clients to resolve their ambivalence as a means of affecting behavior change.

HMSV 1160. Counseling Ethics

Course Description

This course studies ethical theory as applied to counseling situations in our complex and litigious society. Ethical dilemmas such as dual relationships, boundaries, limits of confidentiality, progress notes and agency staffing are presented. Practical applications of professional ethics are discussed and analyzed.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify major areas of ethical concern.
2. Demonstrate knowledge of professional codes of ethics.
3. Identify when it is essential to consult supervisors and peers.
4. Apply knowledge of ethics to case study analyses.

HMSV 1170. Conflict Resolution for Human Services

Course Description

An introduction to the fundamentals and life skills of conflict management through positive and productive communication, self-evaluation, and appropriate resolution strategies. It examines personal values, cultural influences, communication style, and conflict management style with an emphasis on gaining an understanding of the causes of conflict and resources for resolving conflict. This course is recognized by the State Office of Alternative Dispute Prevention and Resolution as required training for all volunteer mediators.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify one's own values and conflict management style to frame conflict for resolution.
2. Explore multiple perspectives of values and conflict management styles to frame conflict for resolution.
3. Understand the foundations of positive and constructive communication.
4. Recognize stages of conflict and to manage the stages productively.

5. Demonstrate an understanding of the dynamic of power and its influence, and how to create equity.
6. Identify the factors and causes of conflict to develop appropriate resolution strategies.
7. Apply the basic and intermediate steps of the mediation process.
8. Create lasting agreements based on the interests and needs of the disputing parties.

HMSV 1180. Prevention Ethics

Course Description

Prevention Ethics will fulfill the ethics requirement for Prevention Specialists. This course will cover the main topics in the Prevention Ethics code by the New Mexico Credentialing Board for Professional Behavioral Health. Topics will include competency, integrity and confidentiality.

Student Learning Outcomes

1. Understand the need for professional codes of ethics in a community prevention setting.
2. Apply the ethical code in a professional setting.
3. Define competency, integrity and confidentiality as it relates to prevention ethics.
4. Identify possible ethical conflicts for the prevention specialist.
5. Understand and accept cultural and individual differences.

HMSV 1210. Foundations of Substance Abuse Services

Course Description

Presents the history of addictive disorder identification and service provision for substance abuse, addiction, prevention, and treatment services. Topics will also include current and emerging trends in service delivery and service integration, development of national governing bodies and ethical standards, development of the profession, and the socio-political forces affecting the development, delivery and accessibility of substance abuse services.

Student Learning Outcomes

1. Explain the evolution of the substance abuse profession including historical successes and failures related to professional development, focus of work, inter-profession collaboration, and recognition.
2. Demonstrate understanding of social and political factors affecting service development and delivery at the state and national levels.
3. Explain how public policy, legislation, and personal behavior are influenced by personal and public attitudes, cultural beliefs and values.
4. Identify contextual influences on addiction counseling.
5. Identify state and national organizations, associations, and governing bodies related to the historical development of substance abuse counseling professional standards.

HMSV 1220. Physiological and Pharmacological Foundations of Substance Abuse Counseling

Course Description

Examines the pharmacological and physiological effects of alcohol and other psychoactive substances according to human developmental stages, neurobiology, severity of use, drug interactions and co-occurring disorders across populations. This includes factors associated with drug intake from use to recovery, licit and illicit use, methods of administration, drug symptomology, patient education, and illnesses associated with use.

Student Learning Outcomes

1. Identify how specific categories of drugs affect the physical, emotional, social, psychological, cognitive, and spiritual aspects of the person at different developmental stages.
2. Identify symptoms of intoxication according to different substances.
3. Demonstrate basic skills in educating clients regarding the physiology and pharmacology of substance use, abuse, addiction, and recovery.
4. Demonstrate a basic understanding of current neurobiology of substance related and addictive disorders.

5. Explain the signs and symptoms of various withdrawal syndromes associated with dependence and/or addiction to alcohol and/or other drugs.
6. Contrast the agonist and antagonist effects of alcohol and other drug on the central nervous system.
7. Recognize the potential for substance use disorders to mimic a variety of medical and psychological disorders and the potential for medical and psychological disorders to co-exist with addiction and substance abuse.

HMSV 1230. Case Management and Community Resources for Substance Abuse Counseling

Course Description

Explores the principles and practice of case management in addiction treatment including the processes collaboration with referral sources; review and interpretation of client evaluation information; administrative procedures for eligibility and admission for treatment; and coordination with service providers. Students will be required to complete field-based work in an approved setting.

Student Learning Outcomes

Upon successful completion of this laboratory course, students will be proficient in their ability to:

1. Apply the established diagnostic criteria for substance abuse disorders to determine the strategies for reducing the negative impacts of substance use, abuse and dependence within a window of opportunity for change.
2. Incorporate individual and cultural relevance in concert with established situation-specific policies and procedures for crisis management and subscribe to constant professional development.
3. Apply standards of clinical evaluation, including establishing rapport, data gathering and screening, analysis of substance abuse implications, treatment possibilities, initial actions, and documentation of findings and treatment recommendations.
4. Use data to determine the appropriate referral service to professional, agencies, community programs or other resource, and clearly and specifically explain the referral service's role in treatment and contact information.
5. Apply situation-specific service coordination, including relevant intake information, treatment options and insurance coverage, ongoing treatment and recovery options, ongoing communication with outside resources, and documentation of all processes.
6. Provide formal and informal education to clients and client advocates in substance abuse awareness, prevention and recovery programs.
7. Apply principles of client record management and protect client rights to privacy and confidentiality.

HMSV 1310. Loss, Bereavement, and the Family

Course Description

This course will explore loss, bereavement and recovery in the context of the family. It will include identifying the stages of grief; normal losses in the life cycle; complicated bereavement; differences in child and adult bereavement; effective measures to help bereaved families; and cultural differences in bereavement.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define the stages of grief.
2. Identify normal losses in the life cycle.
3. Assess complicated bereavement.
4. Describe ethical issues that may emerge in helping the bereaved.
5. Explain effective coping strategies for dealing with bereavement.
6. Contrast cultural differences in the bereavement process.
7. Illustrate effective techniques for family adaptation to loss.

HMSV 2110. Case Management

Course Description

This course introduces students to the concept of case management, how it is used in human services, and skills necessary to function effectively as case managers. The emphasis is on the client assessment process, service planning and delivery, and client advocacy. Topics introduced include observation, data collection, documentation, and reporting of client behaviors, identification and referral to appropriate services, monitoring, planning, and evaluation. This course provides student with basic knowledge and beginning case management skills.

Student Learning Outcomes

1. Define the purpose of case management and explain the role of the case manager
2. Explain the process of case management and what it entails
3. Explain the ethical, professional and legal responsibilities of case managers
4. Describe several settings within which case management takes place
5. Apply principles of client record management, and protect client rights to privacy and confidentiality
6. Use data to determine the appropriate referral service to professional, agencies, community programs or other resource, and clearly and specifically explain the referral service's role in treatment and contact information
7. Apply standards of clinical evaluation, including establishing rapport, data gathering and screening, analysis of substance abuse implications, treatment possibilities, initial actions, and documentation of findings and treatment recommendations
8. Incorporate individual and cultural relevance in concert with established situation-specific policies and procedures for crisis management

HMSV 2120. Clinical Evaluation of Substance Abuse and Treatment

Course Description

This course examines the principles and practice of clinical evaluation in substance abuse treatment and counseling and presents a study of symptoms and manifestations of substance abuse as they relate to client evaluation, assessment, treatment, and referral. Students will gain an understanding of comprehensive assessment strategies, assessment in relation to diagnosis, the diagnostic classification system, and develop skills for using valid screening and diagnostic instruments.

Student Learning Outcomes

1. Identify appropriate evaluation instruments and procedures to develop a comprehensive assessment process and systematic data collection that provides assessment information from client and other sources, for determining an initial action plan responsive to individualized client needs, characteristics, and resources.
2. Apply accepted diagnostic criteria to assess client's substance abuse and/or mental health treatment and referral needs with consideration of factors such as client's preferences and readiness for treatment, severity of health needs, substance use, and crisis concerns.
3. Apply ethical and behavioral standards throughout the clinical evaluation process when working with clients and other providers to ensure client rights are upheld and agency and government regulatory standards are maintained.
4. Explain the purpose, application and limitations of validated clinical screening and assessment instruments commonly used in the field and describe how they are administered and scored.
5. Exhibit rapport building strategies to support educating clients and significant others about the assessment process, diagnostic findings and concerns, treatment options, action plan development and treatment goals, as well as encourage open dialog about effects of substance use and change/recovery options.
6. Use data to determine appropriate referrals to other service providers, and to assess the client's ability to understand referral options, service providers' roles and treatment protocols, and client's capacity to follow through on connecting to services.

HMSV 2140. Introduction to Alcohol and Drug Abuse

Course Description

This course provides a broad overview of the field, including issues of alcohol and other drugs in history and society; definitions and prevalence of alcohol and drugs use misuse and addiction; major theoretical perspectives on the causes and

remedies of substance abuse; major landmarks in alcohol and drug social policy; and the development and evolution of the alcohol and drug abuse counseling field.

Student Learning Outcomes

Upon completion of this course the student should be able to:

1. The student will be able to explain public policy and its effect on drug use.
2. The student will be able to describe ways drugs negatively affect the body and brain.
3. The student will be able to describe patterns of both alcohol consumption and family dynamics in alcoholism.
4. The student will be able to describe aspects (including forms of administration, acute/chronic effects, patterns of abuse) of the following: major stimulants, narcotics, hallucinogens, marijuana, inhalants and depressants.
5. The student will be able to describe effective components of prevention programs.

HMSV 2150. Introduction to Disability Services

Course Description

An overview of disability services with an emphasis on definitions and models of disability, and disability history. The lived experience of disability is explored as well as the impact of disability on the family. The portrayal of disability in literature, film, and media as well as future issues in disability such as the impact of technology is explored. Students apply critical thinking to their experiences with disability in the contexts of professional, personal, and community life.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and demonstrate knowledge of various definitions of disability.
2. Develop and apply an understanding of the Americans with Disabilities Act and the ongoing challenges of the disability rights movement.
3. Apply critical thinking skills to disability issues in the contexts of personal, professional, and community life.
4. Explore and document the importance of disability history and services in the Santa Fe community.

HMSV 2160. Introduction to Pharmacology

Course Description

Introduces the student to the effects of drugs on behavior. Brain-behavior interactions and how drugs affect this interaction will be presented.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. Define psychopharmacology & behavioral pharmacology.
2. Distinguish between pharmacodynamics & pharmacokinetics.
3. Explain the different behavioral methods used to assess animals under the influence of psychoactive drugs.
4. Explain the behavioral methods used to assess humans under the influence of psychoactive drugs.
5. Describe the anatomy of the brain and nervous system including gross and microscopic neuroanatomy.
6. Explain how a neuron functions, including ion exchange (sodium/potassium influx & efflux), action potential, neurotransmitter release, receptor binding, EPSP's, IPSP's, spatial summation, temporal summation and degradation.
7. Discuss the different neurotransmitters and explain their actions at the different receptor sites within the nervous system, and drugs that influence neurotransmitter functions.
8. Explain the circuits or pathways in the brain involved in drug addiction.
9. Describe the general classification of drugs of abuse (i.e., stimulants, depressants and hallucinogens) and some of the specific drugs that fit into these classes, as well as other drugs of abuse not within this general classification of psychoactive drugs.
10. Explain the drugs of treatment for psychological disorders such as: anxiety, schizophrenia, bipolar depression, clinical depression, etc.

HMSV 2210. Alcohol & Drug Abuse Counseling Families & Groups

Course Description

This course emphasizes the techniques and skills required for counseling families and groups including systems theory, family intervention, employee assistance practice and group processes.

Student Learning Outcomes

1. The student will be able to describe alcoholism as a disease that is often progressive and fatal, and that has genetic, environmental, and psychosocial causes.
2. The student will be able to compare and contrast various aspects of individual, family and group counseling.
3. The student will be able to describe the relationship between the successful development of interpersonal skills and one's risk for drug abuse and between the mastery of developmental tasks and the risk for drug abuse.
4. The student will be able to describe prevention/intervention and risk factors for special populations and diverse cultures.

HMSV 2212. Effects of Drug Abuse

Course Description

This course acquaints students with psychoactive drug classification and with the physiological, biochemical and psychological effects of mind-altering drugs. The course also describes the characteristics of several types of mental illness, how they are impacted by chemical dependency, and how a psycho-educational approach may be used in treatment

Student Learning Outcomes

Not Available

HMSV 2213. Co-Occurring Disorders

Course Description

This course provides students with an understanding of co-occurring psychiatric and substance abuse disorders and their impact on the individual, family and community. The course includes an integrated approach to address the issues accompanying the illness.

Student Learning Outcomes

1. The student will be able to identify factors accompanying selected mental illnesses as they relate to an individual with addiction disorder.
2. The student will be able to identify the DSM-5 criteria for co-occurring disorders.
3. The student will be able to identify the need for integrated treatment systems, no closed door to treatment, case management, use the DSM to identify characteristics of mental illness.
4. The student will be able to identify special issues as they relate of the substance abuse counselor working with individuals experiencing coexisting mental illness and how their families are impacted.
5. Students will be able to identify the presenting symptoms and characteristics of individuals with Psychiatric versus substance abuse disorders.
6. Students will be able to identify psychosocial issues commonly associated with co-occurring disorders.
7. Students will be able to identify and describe special issues in working with dually diagnosed clients.

HMSV 2215. Adolescent Substance Abuse: Prevention and Treatment

Course Description

This course meets the criteria for education hours toward the Licensed Substance Abuse Associate – the entry level license in New Mexico to become an independent addiction counselor. In this course we will evaluate the impact of risk and protective factors in the prevention and treatment of adolescent substance use. Discover the differences between adolescent and adult substance use/abuse and evidence-based approaches for prevention and treatment. Assess the

different external and internal factors that may contribute to alcohol and drug use during adolescence and young adulthood.

Student Learning Outcomes

Upon Successful completion of this course, students will be able to:

1. Review adolescence growth and development and identify risk and protective factors for substance use disorders.
2. Identify risk and protective factors for adolescent substance abuse/addiction.
3. Identify evidence-based approaches for working with adolescents.
4. Explore brain development during adolescence and young adulthood and how it can contribute to risk-taking behavior, as well as affect brain development.
5. Identify characteristics common to adolescents with substance abuse/addiction.
6. List and describe community resources available to adolescent substance abuse/Addiction clients.
7. Identify barriers to treatment of for adolescents with substance use disorders.

HMSV 2230. Alcohol & Drug Abuse Counseling: Special Populations

Course Description

This course emphasizes the techniques and skills required for counseling with special populations including women, minorities, youth and persons with co-occurring physical and mental disabilities and disorders.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Describe different theories, models and definitions related to substance abuse.
2. Compare and contrast various aspects of intervention, prevention and public policy relating to substance abuse.
3. Describe skills and techniques required for counseling special populations.

HMSV 2235. Biopsychosocial Foundation of Alcohol and Drug Abuse

Course Description

A comprehensive survey of the contributions of biology, medicine, psychology, sociology, anthropology and other disciplines to the understanding of substance use disorders and addictive disease. Research is presented from genetics, neurochemistry, learning theory, socialization and cultural views of addiction and recovery.

Student Learning Outcomes

Upon completion of this course the student should be able to:

1. The student will be able to identify and describe a minimum of five (5) variables that influence substance use, abuse, and dependence.
2. The student will be able to compare and contrast a minimum of three (3) models and/or theories of drug dependence and addiction.
3. The student will be able to describe in detail a minimum of five (5) drugs including their different classifications, their height of dependence and addiction and how it affects the nervous system.
4. The student will describe in detail a minimum of three (3) different early prevention approaches and describe how to do motivational interviewing.
5. The student will be able to define co-occurring disorders and select a minimum of three (3) specific co-occurring disorders and describe how treatment is used with individuals of the selected disorders co-occurring with substance abuse.

HMSV 2240. Counseling in the Substance Abuse Field

Course Description

This course advances students' skills, knowledge and attitudes for substance abuse counseling of individuals, couples, and groups. Emphasis will be on the principles of motivational counseling, client empowering approaches, and understanding

diversity and culture to support counseling techniques. Goal setting, community reinforcement, crisis and relapse interventions, treatment modification, and adapting strategies to support client recovery will also be presented.

Student Learning Outcomes

1. Adapt practice to a range of modalities and treatment settings, taking into consideration a variety of health plans and payment options for specific clients.
2. Apply professional and ethical obligations as relates to individuals, cultures and language diversity.
3. Apply standards of clinical evaluation, including establishing rapport, data gathering and screening, analysis of substance abuse implications, treatment possibilities, initial actions, and documentation of findings and treatment recommendations.
4. Use data to determine the appropriate referral service to professional, agencies, community programs or other resource, and clearly and specifically explain the referral service's role in treatment and contact information.
5. Apply situation-specific service coordination, including relevant intake information, treatment options and insurance coverage, ongoing treatment and recovery options, ongoing communication with outside resources, and documentation of all processes.
6. Create a healthy, helpful, professional and ethical relationship with clients and client advocates that places client knowledge, skills and attitudes at the forefront of possibilities for recovery, and formally and informally educate them on the causes, treatment and recovery options available for substance use and abuse.
7. Provide formal and informal education to clients and client advocates in substance abuse awareness, prevention and recovery programs.
8. Apply principles of substance abuse disorders to individuals and groups to analyze the warning signs, symptoms and implications of the risk for, or resilience to, psychoactive use disorders, and the potential for prevention, treatment and recovery.

HMSV 2250. Counseling Skills for Addiction Professionals

Course Description

Focused study of the applied skills, techniques, and varied approaches to the addiction treatment continuum of care. The emphasis is on understanding individual, group, and family dynamics, gaining effective helping strategies and interpersonal skills. Students also become familiar with counseling approaches that meet the current standard of care in a range of treatment settings.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify how addiction affects psychological, physical, social and vocational functioning.
2. Demonstrate knowledge of counseling approaches, philosophies, methods and objectives utilized in treating addictive disorders.
3. Identify the implications of varied counseling approaches with clients from diverse backgrounds and/or complex needs.
4. Explain the evaluative tools and criteria used to assess treatment progress and treatment outcomes.

HMSV 2255. Psychology of Addictive Behavior

Course Description

An exploration of research and theories related to the psychological, behavioral and psychological bases of addiction and recovery. A variety of common addictive disorders are examined, including addiction to alcohol, eating, smoking, gambling, work, sex and drugs. Students examine the impact of addictions on families, the workplace and society as well as on the individual.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize where dependency comes from, how it develops and how dependency is passed on to children.

2. Identify defense mechanism against recognizing addictive behaviors.
3. Roles and relationships.

HMSV 2260. Substance Abuse Assessment, Evaluation and Treatment

Course Description

Not Available

Student Learning Outcomes

Not Available

HMSV 2270. Substance Abuse in Families

Course Description

This course examines substance abuse within the context of a family system. It includes aspects such as developing a substance abuse family identity, typical problem-solving behaviors in substance-abuse families, daily routine regulators of home life, family ritual disruptions and intergenerational transmission of substance-abuse patterns.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of how families develop a substance abuse family identity.
2. Distinguish key themes pertaining to each developmental phase of substance abuse families' life history.
3. Identify rules, roles, rituals and routines among substance abuse families.
4. Examine the intergenerational transmission of families' substance abuse patterns.
5. Indicate effective interventions with substance abuse families.

HMSV 2280. Substance Abuse Prevention

Course Description

This course presents an overview of the history, principles, and approaches to the field of substance prevention. Topics include promotion of healthy lifestyle choice, community collaboration, public policy, and effective prevention planning. This course meets the State of New Mexico Alcohol, Tobacco, and Other Drugs (ATODA) requirements and prepares students to become candidates for certification as prevention interns.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe how substance abuse prevention is an evolving discipline.
2. Understand and apply the risk and protective factor.
3. Identify stages of community readiness and corresponding to enhance readiness.
4. Outline a strategy for becoming more culturally competent.
5. Apply concepts from Erikson's theory to prevention.
6. Demonstrate three ways to make prevention programs more developmentally appropriate.

HMSV 2290. Substance Abuse Counseling Field Experience

Course Description

Course requires students to complete 90 hours in a substance abuse treatment facility while under the joint supervision of a qualified on-site substance abuse counseling professional and their course instructor. Field experience hours provide opportunities for students to integrate on-site responsibilities with academic knowledge, theory and skill development, and get professional feedback within a work setting.

Student Learning Outcomes

1. Students will produce professional documentation aligned with field standards for confidentiality.
2. Students will demonstrate understanding of terminology, procedures, and professional responsibilities related to the treatment of substance abuse disorders.

3. Students will identify areas for professional growth and develop ways to improve in said areas.
4. Students will demonstrate knowledge of the practicum agency's philosophy, policies, procedures, and services.
5. Students will demonstrate at least entry-level competency in basic treatment skills and required knowledge, skills, and attitudes of standard practice in the field.

HMSV 2295. Substance Abuse Prevention Certification Test Prep

Course Description

This comprehensive test preparation course will help substance abuse prevention specialist candidates apply and prepare for the national certification examination from the Center for Substance Abuse Prevention. The content covered in this course is based on the components of the national exam. May be taken twice for degree or certificate credit.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate understanding of the concepts covered in certification examination.
2. Explain the rules, regulations, and policies pertaining to prevention specialist certification.

HMSV 2310. Professions and Practices

Course Description

This course may be paired with HMSV practicum 250 and HMSV practicum 255. Students are required to enroll in this class prior to or while completing their HMSV practicum. It will enable students to achieve a greater understanding of their practicum internship while examining professional ethics, conduct and a wide range of practice situations.

Student Learning Outcomes

Upon completion of the class, students will be able to:

1. Identify Human Services needs in San Juan County and the State of N.M.
2. Locate and discuss the various Human Services providers in San Juan County and the State of N.M.
3. Demonstrate an increased awareness of the interrelationships of the various professions in the field of Human Services in regard to client services.
4. Illustrate an understanding of the various populations associated with Human Services.

HMSV 2320. Professional Issues in Human Services

Course Description

Legal and ethical issues emanating from the professional helping relationships in human services and substance abuse treatment such as confidentiality, privileged communication, dual relationships, competency and reciprocal roles of and responsibilities of both client and helper.

Student Learning Outcomes

Upon successful completion of this course, students will be able to

1. Understand the theory, practice, and professional responsibility of confidentiality.
2. Demonstrate the importance of cultural competency practices in the helping process.
3. Demonstrate effective oral and written communications skills in working with clients, agency staff and agency constituent.
4. Apply the ethical decision-making model to a hypothetical case using a Code of Ethics standards.
5. Apply a strategic framework to identify, analyze and resolve ethical dilemmas and problems that may arise in working with clients.

HMSV 2330. Professional Skills in Human Services II

Course Description

Provides intermediate level training in the knowledge, skills, and attitudes related to professional responsibilities and job performance at the micro, mezzo, and macro levels in human service settings. Builds on previous coursework to develop

skills in information gathering, intervention, referral, management of competing needs, use of supervision, professional relationship development, troubleshooting, self -assessment and self-care.

Student Learning Outcomes

Student will:

1. Exhibit troubleshooting skills and strategies relevant to human service work related situations.
2. Use information gathering skills to develop documentation similar to that required in human service settings.
3. Demonstrate professional referral behaviors important for developing positive working relationships between service providers.
4. Differentiate intervention strategies appropriate to the micro, mezzo, and macro levels of professional practice.
5. Identify ways to benefit from feedback and supervision.
6. Identify self-assessment and self-care strategies supportive of personal and professional growth.
7. Apply assessment strategies for managing competing needs of a client.

HMSV 2340. Case Management and Professional Skills in Substance Abuse Treatment

Course Description

Explores the principles and practice of case management in addiction treatment including collaboration with referral sources; review and interpretation of client evaluation information; administrative procedures for eligibility and admission for treatment; and coordination with service providers. Introduces legal, ethical, cultural, and professional issues in substance abuse treatment with the goal of developing student competencies in these areas. State and Federal regulations, laws and codes that protect client confidentiality, cultural values, service parity and equity will be emphasized. Strategic Prevention Framework skills such as team and capacity building, community assessment and planning will also be addressed.

Student Learning Outcomes

Student will be able to

1. Identify the scope of practice for LSAA and LADAC in New Mexico.
2. Apply the New Mexico NAADAC code of ethics and identify departures or activities that do not fall within the scope of practice.
3. Demonstrate skills regarding HIPAA regulations compliance.
4. Demonstrate abilities in incorporating the needs of culturally diverse individuals into clinical practice.
5. Identify culturally relevant signifiers and culturally sensitive resources to support nondiscriminatory work with clients.
6. Identify evaluation techniques, both supervisory and self-review, to assess their skills, knowledge and attitudes related to professional standards and scope of practice.
7. Incorporate individual and cultural relevance in concert with established situation-specific policies and procedures for crisis management and subscribe to constant professional development.
8. Apply standards of clinical evaluation, including establishing rapport, data gathering and screening, analysis of substance abuse implications, treatment possibilities, initial actions, and documentation of findings and treatment recommendations.
9. Use data to determine the appropriate referral service to professional, agencies, community programs or other resource, and clearly and specifically explain the referral service's role in treatment and contact information.
10. Apply principles of client record management and protect client rights to privacy and confidentiality.

HMSV 2350. Coalitions, Community Development, and Grant Writing

Course Description

An exploration of best practices relating to community development, coalition building and grant writing. Students will learn roles and responsibilities of organizing a community and building effective coalitions to address social problems. The emphasis will be on assessing community needs, grant writing, growing the organization, cultural inclusiveness, and evaluation of data.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define roles and responsibilities of community organizers and coalitions.
2. Describe the steps for effective coalition development.
3. Describe skills and techniques for collaborating with other organizations in a community.
4. Explain strategies for grassroots organizing and for acquiring and leveraging resources.
5. Delineate steps in participatory process in defining missions/goals and setting priorities.
6. Define strategies and skills in grant writing.
7. Describe the characteristics of a high functioning coalition.
8. Describe best practices for influencing policy change.

HMSV 2360. Public Policy and Social Change

Course Description

This course will provide an overview of the structures and processes of public policy. The course will examine how social change is brought about through the actions of various agents including interest groups, advocacy coalitions, and executive, legislative and judicial policymakers.

Student Learning Outcomes

Learn:

1. Be able to describe the governmental structures and processes by which policy is made.
2. Demonstrate understanding of the policy advocacy process
3. Be able to describe the process of policy implementation.

Think:

1. Engage in analysis of policy issues and solutions from a number of different points of view.
2. Demonstrate ability to critique various theoretical frameworks that are used to analyze the policy process.
3. Think critically about policy issues and processes.

Integrate

1. Demonstrate ability to find information relevant to policy issues and processes.

Act

1. Demonstrate ability to formulate an action plan for policy advocacy, implementation, and evaluation.

HMSV 2365.Resource & Information Literacy in Human Services

Course Catalog Description:

Covers basic concepts and skills of locating information and resources through research, critical thinking, and networking to develop resources for clients and client groups. Students are introduced to characteristics, formats, and organization of information, and learn to locate and select a variety of information that augments the human services helping process.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Formulate a research strategy to find information about a selected topic.
2. Locate materials from a variety of sources and obtain them for use.
3. Use search engines and directories to find information on the internet.
4. Evaluate information sources for accuracy, authority, objectivity, purpose, currency, and appropriateness.

HMSV 2370. Human Service Delivery Systems

Course Catalog Description:

Provides an overview of human service delivery systems from their origins to modern times, including analysis of social, political and ideological shifts that shape delivery systems. Basic strategies and tactics of human service delivery are emphasized, fostering an understanding and ability to navigate these systems in practice.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Define the purpose of various Human Service Delivery Systems.
2. Explain the functions of various Human Service Delivery Systems.
3. Explain the process of individual Human Service Delivery Systems.
4. To develop the ability, knowledge, and skills necessary to better utilize various Human Service Delivery Systems.

HMSV 2410. Principles of Prevention & Research in Alcohol & Drug Abuse

Course Description

This course provides a broad overview of the methods and effectiveness of primary, secondary, and tertiary prevention efforts. Emphasis is given to research supported strategies directed to individuals, communities and special populations. Prevention is examined from both risk factor and protective factor perspectives.

Student Learning Outcomes

Upon completion of this course the student should be able to:

1. The student will be able to describe alcoholism research and prevention that is progressive to the understanding and treatment of alcohol disorders.
2. The student will be able to describe the relationship between the successful development of research and prevention and be able to implement a cognitive behavioral approach to alcoholism.
3. The student will compare and contrast research on genetics and environmental factors of alcohol abuse.
4. The student will be able to describe recent and current research trends in alcohol use in the U.S.
5. The student will be able to describe the relationship between alcohol and the following: violent crimes, aggression, sex and emotions.

HMSV 2420. Principles of Treatment & Recovery in Alcohol and Drug Abuse

Course Description

This course defines the legal and ethical scope of practice for alcohol and drug counselors; surveys the research support for the effectiveness of alcohol and drug abuse treatments; provides an understanding of the processes of change, relapse, and recovery; and imparts skills in self-help facilitation, cognitive-behavioral techniques, and motivational interviewing approaches in individual counseling.

Student Learning Outcomes

Upon completion of this course the student should be able to:

1. The student will be able to demonstrate the ability to conduct and document a biopsychosocial interview, identify target behaviors & behavioral patterns, develop an appropriate treatment plan and compose a discharge plan.
2. The student will be able to demonstrate the ability to administer various assessments related to substance abuse.
3. The student will be able to compare and contrast aspects of individual treatment, group therapy, adolescent treatment and the family program.

HMSV 2430. Techniques of Assessment & Intervention

Course Description

The purpose of this course is to promote the knowledge, attitudes, and skills required for effective assessment practice and the selection of human services interventions.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Distinguish between Screening, Assessment and Specialized Evaluation.
2. Describe the structure and goals of Screening, Assessment and Specialized Evaluation.
3. Display basic competency in completing a client screening exercise.
4. Describe the process and purposes of SBIRT (screening, brief intervention and referral to treatment).

HMSV 2440. Evidence-based Treatment and Skills for Substance Abuse Counseling

Course Description

This course reviews the principles and practice of evidence-based treatment in addiction treatment including the processes of using assessment information to guide treatment planning; examining treatment options across the continuum of care; and formulating and monitoring culturally relevant treatment goals.

Student Learning Outcomes

1. Incorporate individual and cultural relevance in concert with established situation-specific policies and procedures for crisis management and subscribe to constant professional development. Addiction Counseling Competencies, TAP 21 C.18, C.20-C.23.
2. Apply standards of clinical evaluation, including establishing rapport, data gathering and screening, analysis of substance abuse implications, treatment possibilities, initial actions, and documentation of findings and treatment recommendations. Addiction Counseling Competencies, TAP 21 C.24-C.36.
3. Use data to determine the appropriate referral service to professional, agencies, community programs or other resource, and clearly and specifically explain the referral service's role in treatment and contact information. Addiction Counseling Competencies, TAP 21 C.49, C.51-C.54.
4. Apply situation-specific service coordination, including relevant intake information, treatment options and insurance coverage, ongoing treatment and recovery options, ongoing communication with outside resources, and documentation of all processes. Addiction Counseling Competencies, TAP 21 C.57-C.60, C.62-C.74.
5. Provide formal and informal education to clients and client advocates in substance abuse awareness, prevention and recovery programs. Addiction Counseling Competencies, TAP 21 C.99, C.101, C.104.
6. Apply principles of substance abuse disorders to individuals and groups to analyze the warning signs, symptoms and implications of the risk for, or resilience to, psychoactive use disorders, and the potential for prevention, treatment and recovery. Addiction Counseling Competencies, TAP 21 C.108-C.114.

HMSV 2450. Crisis Intervention, Coping & Stabilization

Course Description

This course is an introduction to crisis intervention for human services workers, it will explore: the history of crisis intervention; crisis intervention models; ethical issues; cultural sensitivity; suicide assessment; developmental crises; crises of loss; HIV/AIDS; domestic violence, and community disasters.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define the elements of a crisis.
2. Trace the history of crisis intervention.
3. Describe the ABC Model of Crisis intervention.
4. Identify ethical issues that may emerge in crises.
5. Illustrate developmental crises.
6. Explain effective coping strategies for dealing with crises.
7. Assess suicidality of a client.
8. Illustrate client re-stabilization in five types of crises.

HMSV 2460. Post-traumatic Stress Disorder Diagnosis & Treatment

Course Description

An exploration of post-traumatic stress disorder (PTSD) diagnosis, treatment and recovery. This course will examine contributing factors to the development of PTSD including exposure to natural disasters, abuse; bullying, and violence; emigrations under duress; persecution and/or political unrest; terrorism and war. In addition, protective factors such as

familial and social support, community networks, and the role of spirituality will be explored. Acute traumatic stress reactions will be differentiated from PTSD.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the diagnostic criteria for posttraumatic stress disorder.
2. Evaluate assessment and treatment options for post-traumatic stress disorder.
3. Contrast risk and protective factors between adults and children.
4. Illustrate the presentation of acute, chronic, and delayed onset post-traumatic stress disorder.
5. Assess the prevalence and presentation of post-traumatic stress disorder among special populations.
6. Define secondary post-traumatic stress disorder and prevention strategies for trauma helping professionals.

HMSV 2470. Treatment Modalities

Course Description

This course will introduce the major intervention and treatment strategies for substance abuse. Special consideration will be given to the prediction of treatment outcomes.

Student Learning Outcomes

1. Identify the origins of modern treatment approaches
2. Identify empirically supported treatment protocols
3. Demonstrate an understanding of the various philosophies and treatment approaches used with specific treatment populations.
4. Demonstrate an awareness of the implications of Co-Occurring disorders on the treatment approaches used.
5. Design a treatment program for a "special need" population and determine an appropriate treatment approach. Determine the number of staff, licensure levels, and funding sources and identify supportive research for such a program.

HMSV 2480. Twelve Core Functions

Course Description

Putting it all together. Screening, intake, orientation, assessment, treatment plan, counseling, case management, crises intervention, client education, referral, records, and consultation.

Student Learning Outcomes

Specific Student Learning Outcomes will be met through a variety of teaching and learning experiences including; lectures, class discussions, field assignments, guest lecturers, assigned readings, and written assignments. By the conclusion of this course, students should be able to demonstrate.

1. An ability to research a psychotherapeutic treatment modality and make a presentation of their findings.
2. Provide a general biopsychosocial assessment of a specified character from a movie.
3. Demonstrate case management skills necessary for those working in substance abuse including: screening, intake, orientation, assessment, treatment plan, counseling, case management, crises intervention, client education, referral, records, and consultation.

HMSV 2510. Compassion Fatigue and Secondary Stress Disorder

Course Description

An examination of the possible "cost of caring" among those who help persons who have suffered trauma. "Compassion Fatigue" is a user-friendly term for secondary traumatic stress disorder. It applies to those emotionally affected by the trauma of another, such as those working with children, veterans, victims of domestic violence, terrorism, and major disaster survivors. Prevention strategies, effective treatment methods, and plans for recovery are considered.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify signs of helper stresses in community mental health services.
2. Evaluate assessment and treatment options for secondary traumatic stress disorder.
3. Describe helper stresses particular to those working with children.
4. Illustrate stress responses specific to disasters first responders.
5. Contrast compassion satisfaction with compassion fatigue.
6. Define prevention strategies for trauma helping professionals.

HMSV 2520. Principles of Diversity

Course Description

Principles of Diversity is a foundation course that challenges students to begin the process of becoming culturally competent helpers. The course teaches students to develop an awareness of personal cultures, beliefs, customs, and values; knowledge of others' cultures, beliefs, customs, and values; and teaches culturally appropriate interventions with diverse clients.

Student Learning Outcomes

Upon completion of this course, participants will be able to

1. Have increased awareness about racism, prejudice, oppression, and privilege, and the effects of these factors on themselves and their clients and client systems.
2. Gain a conceptual understanding of cultural competence and begin to develop an understanding of barriers to cross-cultural communication.
3. Improve their understanding of their own social and cultural identities and how they relate to clients of similar and different backgrounds and perspectives.
4. Address personal biases through continuing education, intentional exposure, and purposeful.

Humanities (HUMN)

HUMN 1105. Being Human: An Introduction to the Humanities**Course Description**

This course is an introduction to the academic study of the Humanities with a focus on the artistic, scientific, religious, and cultural expressions of New Mexico. It is inquiry and project based, providing students with a foundation of Humanistic thought and college level reading, writing and communication skills.

Student Learning Outcomes

1. Identify and analyze key ideas, contributions, and expressions from various cultures and time periods in the areas of the arts, sciences, politics, religion, architecture, music, and philosophy examined in the course.
2. Identify and analyze key expressions of New Mexico using Humanities vocabulary and theory.
3. Demonstrate knowledge of particular examples introduced in the course.
4. Demonstrate critical skills in interpretation, discussion, and in composing creative, analytical and/or objective responses to material

HUMN 1110. Introduction to World Humanities I**Course Description**

This course is an interdisciplinary introduction to the cultural contributions and expressions in ancient world civilizations such as Mesopotamia, Greece, Rome, Asia, Africa, and the Americas, emphasizing artistic expression, philosophical thought, and religious practices in these civilizations, as well as historical, scientific, and technological developments.

Student Learning Outcomes

1. Identify and analyze key ideas, contributions, and expressions from the civilizations, cultures, and time periods in the areas of the arts, sciences, politics, religion, architecture, music, and philosophy examined in the course.
2. Recognize and distinguish between ideas, contributions, and expressions of various cultures and civilizations as well as identify connections.
3. Demonstrate knowledge of particular examples introduced in the course.
4. Demonstrate critical skills in interpretation, discussion, and in composing creative, analytical and/or objective responses to material.

HUMN 1115. The Medieval World**Course Description**

An introduction to the cultural developments of world civilizations between the years 500 and 1500 CE, examining intellectual, scientific and artistic expressions and developments through an interdisciplinary method of study. Special attention is given to cultures of Asia and Africa, religious and ethnic minorities of Europe and the lives and roles of women. Connections to the historical eras prior and subsequent will be noted. The course will employ a thematic approach through topics such as art, music, religion, philosophy, science and technology in each culture as well as lasting influence, impact, contributions and social trends.

Student Learning Outcomes

1. Analyze what kinds of human achievements affect, alter and modify each culture.

2. Identify various contributions from each culture in art, architecture, music, philosophy, literature, religion, and science.
3. Explore transhistorical and transcultural connections and their lasting influence and impact.
4. Develop critical skills in reading, discussion, and composing papers of objective, analytical, and creative quality.

HUMN 1120. The Search for Meaning

Course Description

This topics course examines the personal search for meaning through the lens of the Humanities and within the social context. The course involves readings, discussions, research, and composition.

Student Learning Outcomes

1. Students will understand concepts related to the personal construct of *meaning* within the social environment
2. Students will demonstrate critical thinking skills through exploration and analysis of texts from various traditions
3. Students will demonstrate critical thinking skills through the study of ideas, issues, and problems as related to the concept of meaning

HUMN 1130. Media and Culture

HUMN 1133. German Culture Through Film

Course Description

This course explores German history from the end of the monarchy in 1918 up to the 21st century, using films ranging from the silent era, through Nazi documentaries and “rubble” films, up to modern treatments of reunified Germany. Students will learn film terminology, and analyze the director’s use of various techniques, as well as gain an understanding of important issues in recent European history.

Student Learning Outcomes

By the end of this course, students will:

1. Gain an understanding of how film works and what a director does.
2. Be able to use the terminology of film analysis and techniques, including in wrestling with what makes a film a classic whether one can appreciate a film separately from liking it.
3. Describe and reflect upon the historical and cultural movements and events in Germany from approximately 1920 to 2005; and
4. Explore how are these events/movements reflected in contemporaneous and retrospective films and vice versa.

HUMN 1150. Introduction to Culture and Gender Studies

Course Description

An interdisciplinary introduction to the study of culture and gender. Culture and gender pervade our everyday lives and shape our realities in profound ways. Politics, history, science, the arts, media, education, and human development shape and are shaped by culture and gender. This course provides a framework for ongoing study in the area.

Student Learning Outcomes

1. Demonstrate knowledge of the various definitions of both culture and gender.
2. Describe the interdisciplinary nature of culture and gender studies.
3. Describe and discuss the influence of gender and culture in society.
4. Critically evaluate the social, political, and historical construction of gender and culture.

HUMN 1180. The History of Native Americans in Media

Course Description

This course is designed to allow students to examine the careers and lives of American Indians with a focus on the history of American Indians in Media. Media is a word which encompasses a broad range of topics. Students will explore issues through film, the spoken word, the written word and live performance which may be relevant to the historical significance of how American Indians are viewed. This includes contemporary fiction/non-fiction writings, filmmaking and acting, theater performances, musical and spoken word recordings, and radio and television broadcasting with an emphasis on Native Language Revitalization. In addition, the course will attempt to broaden the student's ability to analyze and evaluate oral and written communication in terms of situation, audience, purpose, aesthetics and diverse points of view, while exploring the voices of North American Indigenous Peoples.

Student Learning Outcomes

1. Students will understand the Writing Process.
2. Students will gain knowledge about how to interpret creative works by various well known American Indian and non-native filmmakers and writers.
3. Students will be introduced to the nature of oral tradition and the challenges facing Native American readers from different Nations in preserving such materials.
4. Students will explore issues relevant to contemporary American Indians as portrayed in documentaries, dramas, comedies, horror, western, action adventure, and romance films.
5. Using anthropological and oral materials as background, we will consider how several major American Indian writers have combined old and new to develop innovative forms of expression.
6. Students will employ critical thinking and analysis skills including how to use M.O.O.D.L.E., the NTU online learning environment.
7. Students will attend class regularly, do assigned reading, take part in online/in class discussions, and participate in M.O.O.D.L.E. activities which include uploading Film Responses and a Final Electronic Portfolio of their best writing.

HUMN 1211. Leadership Development

Course Description

Integrates character education and moral development theory within the context of leadership. Stresses critical thinking through readings and films on fictional, historic, and contemporary leaders dealing with moral and ethical issues. Follows PTK curriculum.

Student Learning Outcomes:

By the end of this course, Cadets will be able to:

1. Develop a fundamental understanding of leadership and the skills manifest in effective leaders.
2. Identify their personal leadership assumptions and philosophies and enhance self-awareness for improvement and leadership capabilities.
3. Demonstrate effective techniques and strategies for articulating a vision.
4. Understand the steps involved in setting goals and applying them to personal, professional, and educational situations.
5. Discuss the complexities inherent in ethical leadership.
6. Employ the processes involved in effective decision-making.
7. Recognize the different types of conflict and appreciate the role a leader can plan in managing conflict.
8. Learn team-building strategies, identify team dysfunctions and engage in team-building activities.
9. Comprehend the concept of empowerment and the techniques of effective leaders to empower others.
10. Express the methods leaders can use to initiate change and help others adjust to change.
11. Expand their awareness of leadership to include the concept of servant leadership.
12. Articulate their personal leadership values and build lives of leadership based on those values.
13. Put short-term course outcomes into long-term practice through use and analysis.

14. Apply ethical considerations to multiple aspects of their lives.

HUMN 1220. Film Genres

Course Description

This course helps students become more aware of film as a constructed and contextually bound art form by providing students with the strategies to analyze films and genres. It also helps students see film as both conventional and a socio cultural-situated artifact. U.S. and foreign films are included. This class helps students develop their aesthetic sensibility, creativity, and collaboration. This will help make them well-rounded individuals valued in the workplace.

Student Learning Outcomes

By the end of this course, students should be able to

1. Discuss film as a constructed, conventional, and contextually bound art form.
2. Know film and genre analysis strategies.
3. Analyze different U.S. and international film genres and trans-genres.
4. Work collaboratively in viewing, critiquing, and presenting films.

HUMN 1230. History of Sci-Fi Dystopia

Course Description

Science fiction is more than pure escapism: science fiction allows us to imagine our future while also interrogating our past and present. This course provides a historical survey of modern advancements in science and technology through the lens of sci-fi narratives, examining the evolution of humanity's perceptions of, anxieties about, and relationship with technology and science.

Student Learning Outcomes

By the end of this course, students should be able to

1. Identify prominent works of science fiction.
2. Apply concepts related to media theory and science fiction as a genre to the critical analysis of narratives.
3. Understand key moments in the modern history of technology/science.
4. Analyze how sci-fi narratives reflect historical moments and cultural anxieties/aspirations surrounding technology/science.
5. Examine our current relationship with technology/science and potential future consequences of modern technologies/science.

HUMN 2110. Introduction to World Humanities II

Course Description

This course is an interdisciplinary introduction to the interrelationships of cultural contributions and values during the Renaissance, Baroque, Enlightenment, Romantic, and Modern eras in Europe as well as those during the same time periods in China, Japan, Africa, other parts of the Middle East, and Latin America. The course will emphasize artistic expression, philosophical thought, and religious practices in these regions, as well as historical and technological developments.

Student Learning Outcomes

1. Identify and analyze key ideas, contributions, and expressions from the civilizations, cultures, and time periods in the areas of the arts, sciences, politics, religion, architecture, music, and philosophy examined in the course.
2. Recognize and distinguish between ideas, contributions, and expressions of various cultures and civilizations as well as identify connections.
3. Demonstrate knowledge of particular examples introduced in the course.
4. Demonstrate critical skills in interpretation, discussion, and in composing creative, analytical and/or objective responses to material.

HUMN 2120. Comparative Religion

Course Description

To gain a familiarity with the major religious traditions in the world, you will examine various religious traditions and practices, focusing on the similarities and differences between their conception of the Divine and different religious conceptions of what it means to live the "good life." You will alternate between (a) reading secondary texts that compare religious traditions from an "outsider" perspective and (b) reading primary texts central to each religion.

Student Learning Outcomes

Not Available

HUMN 2130. World Mythology**Course Description**

This course is an introduction to the nature and function of mythology. In this class we will study and compare mythologies of different cultures, keeping an eye on the ways in which myths expresses the inexpressible.

Student Learning Outcomes

1. Explore ways both individuals and cultures use myth, ritual, and ceremony.
2. Learn to read and interpret symbolic material.
3. Master the basic theoretical issues involved in mythological studies.
4. Recognize basic patterns and mythological motifs in both myths and in the presentation of everyday culture.

HUMN 2140. Hispanic Feminist Studies**Course Description**

You will be introduced to the interdisciplinary field of Chicana Studies, including historical research on labor, political involvement, cultural studies, and feminism.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Quote and discuss with a working understanding of historical research on labor, political involvement, cultural.
2. Research a specific historical event and examining historical research on labor, political involvement, cultural
3. Describe the two waves of feminism in the United States
4. Relate historical studies, and feminism studies, and feminism to one's own life experience.

HUMN 2150. Media and Gender**Course Description**

HUMN 2160. Foundations of Integrated Studies**Course Description**

In the so-called real world, many problems are far too complex for any single discipline to tackle alone. Take global warming. Predicting changes in weather patterns involves meteorologists, geologists, oceanographers, and chemists. In order to solve the economic problems caused by global warming politicians are working with scientists, environmentalists, and business leaders. Even these efforts are far too limited. Similarly, understanding the psyche requires a complex approach, involving many different points of view. The inner climate of a human being is at least as complicated as the weather.

What we call "Integrated Studies" is a process of answering questions, solving problems, or addressing topics that are too complex to be dealt with adequately by a single discipline, tradition, or point of view. Integrated Studies teaches us how to reach beyond the artificial boundaries of the classroom. It also teaches us how to spot the blind spots of each viewpoint or discipline.

Student Learning Outcomes

In this course, you will learn the basic principles of interdisciplinary work. You will also learn about the problems you will encounter when trying to integrate knowledge from different disciplines.

At Northern New Mexico College, the Integrated Studies program consists of three inter-related concentrations: humanities, psychology, and Pueblo Indian Studies. In this course you will be introduced to your specific degree plan and learn how your own field can be strengthened by integrating knowledge from other disciplines.

As a gateway course to the Integrated Studies program, this class will lay a foundation for your B.A. In addition, you will learn to

1. Understand the nature of academic disciplines.
2. Solve complex problems through integrating conflicting insights from more than one tradition, perspective, or discipline.
3. Take into account your own personal and disciplinary bias.
4. Learn to identify the strengths and weaknesses of each discipline or perspective.

HUMN 2170. Latin American Food and Culture

Course Description

This course studies the relationship between food and culture in Latin America. Students will learn to appreciate Latin American food, and to express your appreciation for this food in conversation and in writing. Students will learn how culinary practices change throughout history, from the agrarian societies of Latin America prior to the Spanish conquest to the urban, industrialized societies of the present. You will also learn to think critically about how the foods people produce and consume relate to other aspects of their lives, including issues related to (but not limited to) social class, gender relations, ethnic identity, and political and religious beliefs.

Student Learning Outcomes

1. Identify many of the principal ingredients, dishes, and modes of preparation of Latin American cuisine throughout history, from the pre-Columbian period to the present.
2. Describe Latin American foods in detail and express your appreciation for them.
3. Explain how food production and consumption relates to historical processes of political, social, and technological change in Latin America.
4. Synthesize complex arguments about Latin American food and culture, drawing on academic and journalistic sources.
5. Formulate a thoughtful and detailed response to the basic course questions: what can we learn about life in Latin America through its food? And what can we learn about ourselves by studying Latin American food?

HUMN 2180. Latin American Popular Music

Course Description

This course examines some of the major forms of Latin American music, from early twentieth century genres such as tango and samba to contemporary genres such as cumbia, reggaeton, and funk. Students learn to identify key artists, songs, and albums; to narrate the histories of the different genres; and to recognize and appreciate each genre's formal qualities, including melodic, harmonic, and rhythmic elements. They also relate songs from each genre to their immediate significant historical, sociopolitical, cultural, and technological contexts. Finally, students develop a general understanding of how Latin American popular music circulates in the globalized societies of the twenty-first century.

Student Learning Outcomes

1. Identify many of the key singers, musicians, songs, albums, and genres of Latin American popular music.
2. Define key concepts related to the study of music and culture and apply those concepts to particular musical works in essays and class presentations.
3. Narrate the history of some of the principal genres of Latin American popular music (tango, salsa, samba/bossa nova, the corrido, cumbia, funk, and reggaetón), including each genre's origin, key recordings, and popularization.

4. Relate musical works to broader processes of political, economic, cultural, and technological change in modern Latin America.

HUMN 2410. Hackers, Politics and Culture

Course Description

In this course, students study the interwoven history of computer hacking, politics, and culture. Students see how the practice of computer hacking and modern hacker culture emerged from origin points like MIT's Tech Model Railroad Club, the 1960's American counterculture, and proto hacker "Phone Phreak" communities. Students will examine how legal and political institutions have responded to the growing phenomena of computer hacking and cyberwarfare, as well as how hacktivists and online activists have used digital technologies to push for political and social change. Students will also explore pop culture's growing interest in computer hacking and, more significantly, how works of pop culture and science fiction have directly influenced hacks and hackers throughout the history of computing. In the process, students will research and produce case studies of hacks or hacktivist actions, considering their objectives, tactics, tools, and impacts.

Student Learning Outcomes

By the end of class, students will:

1. Increase their understanding of the intertwined history of hacking, politics, and culture.
2. Learn how to evaluate hacker/hacktivist actions in terms of Objectives, Tactics, Tools, and Impacts.
3. Research the contexts and dialogs surrounding historical events.
4. Understand how legislation has responded to emerging technologies.
5. Analyze visual and written documents.
6. Integrate research and cite material to make compelling analytical arguments.
7. Communicate effectively in a variety of media.
8. See how computer hackers draw inspiration from popular culture and how popular culture responds to emerging technologies.

Information and Digital Literacy (IADL)

IADL 1110. Introduction to Information Studies

Course Description

Introduction to systems of information and how they impact our current social and cultural life. This course introduces organizing systems and classification, definitions of information, intellectual property and copyright, information formats, information ethics, and the history and structure of the internet. Other topics may include the history of information, social media, the attention economy, Wikipedia®, net neutrality, and algorithmic bias.

Student Learning Outcomes

1. Students will be able to articulate a practical definition of information in order to use it intentionally and effectively.
2. Students will be able to identify and use relevant and authoritative information formats appropriate to their information needs.
3. Students will be able to discuss how organizing systems work in order to retrieve and manage information stored in them.
4. Students will be able to engage in the iterative research process to create an information product.
5. Students will be able to make informed decisions about the information they use and share online.

IADL 1111. Introduction to Online Learning and Strategies for Success

Course Description

This course will introduce the fundamental knowledge and practice of online learning and learning strategies. Students will apply this knowledge and practice in online learning environments to be successful online lifelong learners.

Student Learning Outcomes

1. Understand the foundations of online learning.
2. Develop effective habits and skills for online learning success.
3. Follow ethical and professional standards in online learning.
4. Engage in meaningful and collaborative online interactions.
5. Use tools and technologies to enhance online learning.

IADL 1112. AI for Learners: Principles, Applications, and Ethical Considerations

Course Description

The goal of this course is to empower students with a strong foundation in AI literacy. This includes understanding AI principles, its applications in education, and the ethical considerations surrounding AI. We aim for students to confidently and effectively utilize AI tools and resources to enhance their academic performance, problem-solving skills, and information literacy throughout their academic and lifelong learning endeavors."

This version specifies what students will learn (AI principles, applications, and ethics), how they will apply their knowledge (using AI tools for academic and lifelong learning), and sets a clear expectation for the outcome (confidence and effectiveness in utilizing AI).

This course is designed to equip students with the knowledge and skills needed to thrive in an AI-driven world, where AI is not just a tool but a transformative force. Students will not only understand AI but also harness its potential effectively, making students confident and informed AI users both in their academic journey and beyond.

Student Learning Outcomes

1. Explain the fundamental principles and mechanisms underlying machine learning.
2. Recognize and articulate the diverse ways AI technologies contribute to daily life, especially in learning.
3. Employ AI tools and applications to enhance their learning journey, encompassing tasks such as composing written assignments, tackling technical projects, and conducting research.
4. Demonstrate an understanding of the constraints and shortcomings inherent in AI's role in learning.
5. Identify ethical dilemmas and concerns associated with the use of AI in educational contexts.

6. Apply AI tools and techniques in an ethically responsible manner within the realm of learning, ensuring that ethical considerations guide their utilization of AI resources.

International Studies (INST)

INTS 1101. Introduction to International Studies

Course Description

Unlike many traditional academic concentrations, International Studies is interdisciplinary, allowing students to approach their course of study from multiple and combined academic perspectives such as historical, anthropological, political, economic, and geographic. This gateway course is designed to reflect that approach while introducing students who are interested in International Studies to the degree requirements and expectations. To do so, this course will explore major issues and trends in contemporary global affairs. Students will acquire an understanding of how the past has and continues to shape the issues of our lives. Note: This is a survey course that is designed to introduce students to broad concepts that are crucial to International Studies; it is also geared toward helping students acquire some basic academic skills including critical reading, thinking, research and writing. To acquire a deeper understanding of any one particular topic introduced in this course, you will need to take more advanced courses that are geared to the intricacies of that specific topic. The following components will be emphasized simultaneously throughout the course: cross-disciplinary concepts of knowledge and learning; region-based issues and area studies; economic, cultural, and political globalization; the intersection of content topics such as peace and conflict, international institutions, gender, religion, indigenous populations.

Student Learning Outcomes

By the end of this course, you will:

1. Understand interdisciplinary scholarship as it applies to International Studies.
2. Be able to question dogmas and taboos in today's society.
3. Have developed an awareness of differing perspectives and diversity.
4. Understand world issues and trends.
5. Understand the impact and legacy of colonialism/imperialism in developing nations.
6. Have developed the skills to identify and critically engage with the transnational processes that define international issues in the contemporary world.
7. Understand the range and variety of career/graduate school options that International Studies makes possible.
8. Be aware of intercultural learning strategies/skills.
9. Be able to identify the UNM course offerings that satisfy the area concentration requirements for International Studies, including:

- a. Africa.
 - b. Asia/Middle East (+ Eastern Russia).
 - c. Europe (+ Western Russia).
 - d. Latin America.
10. Be able to identify the UNM course offerings that satisfy the thematic concentration requirements for International Studies, including:
- a. Culture & Arts in the Contemporary World (CACW).
 - b. Religion and Belief Systems (RABS).
 - c. Indigenous, National and Transnational Identities (INTI).
 - d. Women and Gender in the Contemporary World (WGCW).
 - e. Global Markets, International Institutions, and Global Governance (GMGG).
 - f. Conflict, Peace & Diplomacy (CPAD).

Italian (ITAL)

ITAL 1130. Accelerated Elementary Italian

Course Description

Intensive course for serious beginning students.

Student Learning Outcomes

By the end of the semester, you will be able to:

1. Hear, speak, read, and write basic Italian.
2. Converse and write on topics related to immediate personal needs, greetings, farewells, introductions, personal data, likes and dislikes, obligations and desires, daily routines, the home, working, basic food, body, health, weather, professions, the media, studies, travel, and so on.
3. Comprehend both artificial and authentic written and aural texts of short to moderate length on familiar topics.
4. Use a basic core vocabulary of about 2,000 words.
5. Use essential grammar concepts.
6. Attain an ACTFL oral proficiency level of Novice-High.
7. Identify key concepts, persons, and places important to Italian speakers.
8. Explain basic concepts and facts of everyday Italian life and social patterns.

ITAL 1140L. Italian Lab

Course Description

A self-paced language lab designed to accelerate, reinforce and support all levels of Italian. The course provides an opportunity to practice and strengthen listening, speaking, reading and writing skills through the use of software, audio and video tapes, and other technologies.

Student Learning Outcomes

At the conclusion of this course, the student should be able to demonstrate progress in the following areas:

1. Pronunciation
2. Vocabulary
3. Grammatical structure
4. Reading and listening comprehension skills
2. Writing and speaking skills
3. History and culture of the Italian speaking world

ITAL 2130. Accelerated Intermediate Italian

Course Description

Intensive course for serious beginning students.

Student Learning Outcomes

By the end of the semester, you will be able to:

1. Hear, speak, read, and write at a relatively complex intermediate level.
2. Converse and write on topics related to immediate personal needs, greetings, farewells, introductions, personal data, likes and dislikes, obligations and desires, daily routines, the home, working, basic food, body, health, weather, professions, the media, studies, travel, and so on.
3. Comprehend both artificial and authentic written and aural texts of short to moderate length on familiar topics.
4. Use essential grammar concepts.
5. Attain an ACTFL oral proficiency level of Intermediate-Mid.
6. Identify patterns of cultural behavior or customs which have been presented in class discussions.

Japanese (JAPN)

JAPN 1105. Introduction to Japanese

Course Description

Introduces the student to the sound system, pronunciation and basic vocabulary necessary for communication in Japanese. This course is recommended for students who have had no previous exposure to Japanese or any other foreign language.

Student Learning Outcomes

1. Use "survival" Japanese.
2. Feel comfortable with Japanese-speaking people.
3. Handle a good vocabulary (and dictionary) to build simple Japanese sentences.

JAPN 1110. Japanese I

Course Description

This course focuses on the basics of the Japanese language with a balanced approach to the development of four skills: listening, speaking, reading and writing. The course is designed to teach students to communicate with Japanese socially and to utilize culturally appropriate manners to engage in Japanese daily life. While conversational skills are emphasized, the student will also be introduced to the various Japanese scripts.

Student Learning Outcomes

1. Become introduced to the sound system of the Japanese language.
2. Gain a basic understanding of Japanese scripts.
3. Learn and utilize vocabulary needed for basic conversation.
4. Converse and write on topics related to immediate personal needs, greetings, introductions, personal data, daily routines and school.
5. Comprehend both artificial and authentic written and aural texts of short length on familiar topics.
6. Comprehend and use essential grammar concepts.
7. Identify patterns of cultural behavior or customs in Japan, including gestures, greetings, and body language.
8. Gain the ability to converse using Japanese idiomatic expressions.

JAPN 1120. Japanese II

Course Description

This course focuses on building upon the basics of the Japanese language with a balanced approach to the development of four skills: listening, speaking, reading and writing. The course is designed to teach students to communicate with Japanese socially and to utilize culturally appropriate manners to engage in Japanese daily life. Along with further developing conversational skills, the student will also continue to learn about and utilize various Japanese scripts.

Student Learning Outcomes

1. Understand and utilize in more depth the sound system of the Japanese language.

2. Gain a greater understanding of Japanese scripts.
3. Utilize expanded vocabulary in conversation.
4. Converse and write on topics related to personal, social, geographical, and political life.
5. Comprehend both artificial and authentic written and aural texts of longer, but still brief length, such as personal letters, messages, journals, and narrative accounts.
6. Comprehend and use essential and more complex grammatical concepts.
7. Continue to develop a sense of culturally appropriate conduct.
8. Build upon the ability to converse using Japanese idiomatic expressions.

JAPN 1130. First Semester Japanese Intensive

Course Description

This is the first semester of a two-semester sequence in first year Japanese. This course focuses on the basics of the Japanese language with a balanced approach to the development of four skills: listening, speaking, reading and writing. It is designed to teach students to communicate with Japanese socially and culturally appropriate manners to survive daily life. Basic reading and writing will be also covered in the cultural context. The course follows ACTFL guidelines, integrating the 5 Cs: communication, cultures, connections, comparisons and communities, to offer the student a well-rounded classroom experience. Students will attain ACTFL novice-high level in four skills.

Student Learning Outcomes

1. Communicate and exchange information about familiar topics, such as greetings, family, visiting friends, and basic shopping and traveling using phrases and simple sentences, sometimes supported by memorized patterns.
2. Usually handle short social interactions in everyday situations by asking and answering simple questions
3. Write short messages and notes in Japanese characters on familiar topics related to everyday life.
4. Often understand words, phrases, and simple sentences in Japanese related to everyday life.
5. Recognize pieces of information and sometimes understand the main topic of what is being said.
6. Understand familiar words, phrases, and sentences in Japanese characters within short and simple texts related to everyday life.
7. Sometimes understand the main idea of what they have read in Japanese characters.
8. Identify beliefs, behaviors and cultural artifacts of Japan.
9. Develop initial awareness of cultural similarities and differences.

JAPN 1135. Second Semester Japanese Intensive

Course Description

This is the second semester of a two-semester sequence in first year Japanese. This course continues with the basics of the Japanese language with a balanced approach to the development of the four skills: speaking, listening, writing and reading, and cultural enhancement. The course is designed to expand vocabulary, grammar and 145 Kanji to deal with daily activities. This class will be taught by having students interact and perform with each other in addition to the lectures to be given by the instructor in culturally as well as grammatically appropriate manners. Students will attain ACTFL novice-high level in four skills.

Student Learning Outcomes

1. Participate in conversations on a number of familiar topics, such as making appointments, visiting theater, making plans for holiday, talking about likes dislikes, sickness, using simple sentences.
2. Handle short social interactions in everyday situations by asking and answering simple questions.
3. Write briefly about most familiar topics in Japanese characters and present information using a series of simple sentences.
4. Understand the main idea in short, simple oral messages and presentations in Japanese on familiar topics.
5. Understand the main idea of short and simple texts in Japanese characters when the topic is familiar.
6. Describe and make comparisons between cultures about beliefs, behaviors and cultural artifacts in Japan.

7. Continue developing awareness of cultural similarities and differences.

JAPN 1140L. Japanese Language Lab

Course Description

A self-paced language lab designed to accelerate, reinforce and support all levels of Japanese. The course provides an opportunity to practice and strengthen listening, speaking, reading and writing skills through the use of software, audio and video tapes, and other technologies. Graded as Pass/Fail. May be taken twice for degree or certificate credit.

Student Learning Outcomes

At the conclusion of this course, the student should be able to demonstrate progress in the following areas:

1. Pronunciation
2. Vocabulary
3. Grammatical structure
4. Reading and listening comprehension skills
5. Writing and speaking skills
6. History and culture of the language-speaking world

JAPN 2110. Japanese III

Course Description

This course is designed for students who have completed 12 credit hours or the equivalent of Japanese study. This course continues to expand vocabulary, grammar and 209 Kanji to deal with daily activities. Its objective is to teach students to communicate in a meaningful way using all four language skills: speaking, listening comprehension, reading and writing. Students will be able to manage not-complicated daily situation. Students will attain ACTFL intermediate-low level in four skills.

Student Learning Outcomes

1. Participate in conversations on familiar topics, such as applying part-time job, gift giving/receiving, planning a trip, lost and found, using sentences and short series of sentences.
2. Handle short social interactions in everyday situations by asking and answering a variety of questions.
3. Usually say what they want to say about themselves and their everyday life.
4. Write on a variety of familiar topics in Japanese characters using connected sentences.
5. Understand the main idea in messages and presentations in Japanese on a variety of topics related to everyday life and personal interests and studies.
6. Sometimes understand the main idea of conversations that they overhear.
7. Understand the main idea of texts in Japanese characters related to everyday life and personal interests or studies.
8. Describe and make comparisons between cultures about beliefs, behaviors and cultural artifacts in Japan.

JAPN 2120. Japanese IV

Course Description

This course is designed for students who have completed 15 credit hours or the equivalent of Japanese study. This course continues to expand vocabulary, grammar and 271 Kanji to deal with not-complicated daily situation with ease. Also, students acquire a competence for Japanese pragmatic usage. This course follows ACTFL language guidelines, integrating the five C's: communication, cultures, connections, comparisons and communities, to offer the student a well-rounded classroom experience. Students will attain ACTFL intermediate-mid level in four skills.

Student Learning Outcomes

1. Participate with ease and confidence in conversations on familiar topics, such as relationships, part-time job, shopping with a variety of request, meeting socially superiors.
2. Usually describe people, places, and things, and talk about events and experiences in various time frames.
3. Handle social interactions in everyday situations, sometimes even when there is an unexpected complication.

4. Write about topics related to school, work, and community in a generally organized way in Japanese characters.
5. Write some simple paragraphs in Japanese characters about events and experiences in various time frames.
6. Easily understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
7. Usually understand a few details of what they overhear in conversations, even when something unexpected is expressed.
8. Sometimes follow what they hear about events and experiences in various time frames.
9. Understand the main idea of texts in Japanese characters with topics related to everyday life, personal interests, and studies, as well as sometimes follow stories and descriptions about events and experiences in various time frames.
10. Describe and make comparisons between cultures about beliefs, behaviors and cultural artifact in Japan.
11. Start using languages in a culturally appropriate way based on the understanding of cultural similarities and differences, including the use of “honorific” and “humble” expression.

Landscape Architecture (LARC)

LARC 1110. Introduction to Landscape Architecture

Course Description:

Landscape Architecture is a versatile field with equally versatile practitioners. Designers of the outside spaces where humans interact with each other and with nature, we bring together a wide range of tools and experiences to solve the unique challenges of helping to create vibrant spaces. In this course you will develop an understanding of why today, more than ever, the practice of Landscape Architecture plays a valuable and critical role in how humans understand, inhabit and help shape the world around us.

Student Learning Outcomes

Students will be able to:

1. Examine the relationship among environmental, socio-cultural, political, and economic systems as they interact with and affect the sustainability of the natural and human worlds.
2. Describe shared ethical responsibilities or moral norms among members of a group. Explain ethical issues or propose solutions based on ethical perspectives or theories.
3. Identify and communicate in various genres and mediums (oral, written, and digital) using strategies appropriate for the rhetorical situations (i.e., attending to audience, purpose, and context).
4. Apply strategies such as reading for main points; seeking key arguments, counterarguments, rebuttals; locating supportive documentation for arguments; reading with a specific stakeholder lens; applying a theoretical lens (e.g. cultural, political, economic) to understand and evaluate messages in terms of the rhetorical situation (audience, purpose, and context).
5. Evaluate the authority of sources in their own arguments and those of others; distinguish among supported claims, unsupported claims, facts, inferences, and opinions. In arguments, integrate support for their own claims with information from sources that are used and cited ethically and appropriately (using Chicago Style).
6. Develop conclusions, solutions, and outcomes that reflect an informed, well-reasoned evaluation.
7. Explain and support one’s own position on specific local or global issues while recognizing that there may be multiple valid perspectives

8. Explain a range of personal, social, cultural, or social justice issues as they relate to one's own or others' perspectives.
9. Delineate a problem or question. Students state problem/question appropriate to the context.

LARC 1115. Landscape Literacy and Representation

Course Description

The landscape can be thought of as a tapestry, woven with many different intricate elements in many complex combinations and patterns. The ability to “read” and understand those qualities and relationships is crucial to understanding and interpreting the complexities at work in a landscape. It is equally valuable to be able to graphically represent landscapes, and landscape designs, that focus or reveal those relationships and patterns. In this course we will learn how to “read” a landscape through embodied ways of learning and traditional research methods. We will use analog and digital modes of representation to construct visual narratives of our growing body of knowledge. Primary methods of representation will include hand drawing, photography, collage, map making, diagrams and writing.

Student Learning Outcomes

Students will be able to demonstrate:

1. The ability to analyze an unfamiliar landscape through embodied observation and traditional inquiry and research.
2. The ability to use analog and digital modes of representation to explore hidden and obvious landscape systems.
3. The ability to synthesize findings into a rich and layered landscape narrative.

LARC 2411. LA design Studio; Speculation

Course Description'

This design studio will investigate issues of our time through speculation and critical questioning as a method to imagine and test diverse design propositions at multiple scales of landscape. Notions of beauty, wonder and poetics will compliment and challenge notions of utility and practicality to create rich and imaginative versions of landscape futures.

Student Learning Outcomes

1. Students demonstrate the ability to:
2. Construct a line of inquiry in response to a speculative prompt.
3. Conduct design propositions in response to lines of inquiry.
4. Graphically and verbally represent design propositions in a clear and engaging manner.
5. Write a clear abstract explaining the thesis question and design response.

Language, Literacy and Sociocultural Studies (LLSS)

LLSS 1110. Foundations of American Indian Education

Course Description:

This course is an exploration of American Indian Education from the past to the present. Topics include: boarding schools, Indigenous language issues, policies, practices, experiences, educational models, language and cultural maintenance,

urban/rural schools. In particular, this course will look at curriculum, pedagogy, and the processes of education that empower students to draw on their personal strengths and lived experiences and to develop their confidence in their abilities to learn. We will explore ways to understand and appreciate students' background, and to foster learning that values the rich cultural and linguistic resources that children bring to the classroom, so that we can help learners successfully integrate the learning community of the school with their broader communities.

Student Learning Outcomes

1. To develop an appreciation of Indigenous forms of education that pre-date western forms of curriculum, instruction, and policies.
2. To examine government policies that shaped American Indian Education from the late 19th century to the present.
3. To analyze the impact of federal policies on the current status of languages and cultures of Indigenous Peoples.
4. To analyze factors and conditions that shape present-day manifestations of oppression in the education of Indigenous youth.
5. To recognize the significance of diversity among Indigenous People as it relates to schooling today.
6. To understand the nature, problems, and complexity of education through the study of current issues and trends.
7. To develop a critical awareness of the effects of race, class, gender, sexual orientation, and culture on educational experiences of Indigenous youth and educators.
8. To gain awareness of Indigenous models of education and their pedagogical utility for educators and Native youth.
9. To gain a deeper understanding of the interplay of education, power, and Indigenous

Latin (LATN)

LATN 1110. Latin I

Course Description

Introduction to the Latin language; grammar, syntax and readings in Roman authors.

Student Learning Outcomes

If you consistently keep up with the classwork and homework, by the end of the semester, you will be able to:

1. Read and understand short, basic authentic Latin texts at the novice-mid level.
2. Accurately translate short, basic authentic Latin texts.
3. Use complex grammar skills to analyze Latin texts.
4. Identify patterns of cultural behavior or customs that have been discussed in class.
5. Express thoughts and opinions on a variety of issues related to the classical Roman world.

LATN 1120. Latin II

Course Description

Continuation of 1110. Introduction to the Latin language; grammar, syntax and readings in Roman authors.

Student Learning Outcomes

1. Read and understand short, basic authentic Latin texts at the novice-mid level.
2. Accurately translate short, basic authentic Latin texts.
3. Use complex grammar skills to analyze Latin texts.
4. Identify patterns of cultural behavior or customs that have been discussed in class.
5. Express thoughts and opinions on a variety of issues related to the classical Roman world.

LATN 2110. Latin III

Course Description

Systematic review of Latin grammar and syntax; readings in simple prose authors such as Cicero and Caesar; introduction to Latin poetry and scansion.

Student Learning Outcomes

1. Read and understand unabridged Latin at an intermediate level.

2. Accurately translate unabridged Latin texts.
3. Learn about discuss the cultural position and relevance of rhetoric and literature in ancient Rome. (the verb “learn” is too vague to be a valid objective)
4. Express thoughts and opinions on a variety of issues related to the classical world.

LATN 2120. Intermediate Latin IV

Course Description

Systematic review of Latin grammar and syntax; readings in simple prose authors such as Cicero and Caesar; introduction to Latin poetry and scansion.

Student Learning Outcomes

At the end of the semester, students will be able to

1. Read and understand unabridged Latin at an intermediate level.
2. Accurately translate unabridged Latin texts.
3. Learn about discuss the cultural position and relevance of rhetoric and literature in ancient Rome.
4. Express thoughts and opinions on a variety of issues related to the classical world.

Latin American and Latino Studies (LALS)

LALS 2240. Hispanics, Chicanos, and Latinx: History, Politics, Migration, Identities and Culture

Course Description

This interdisciplinary course explores the role of the Hispanic, Chicano and Latinx identity in our culture and society. This course questions the politics of labeling these identities by examining migration and community formation histories; labor markets; race and racial formations; education and the politics of language; political activism; and popular culture.

Student Learning Outcomes

Not Available

Latin American Studies (LTAM)

LTAM 1110. Introduction to Latin American Studies

Course Description

An interdisciplinary survey of Latin American history, culture, economics, politics, and social relations.

Student Learning Outcomes

Students will be able to:

1. Describe the unique cultural and social traditions in the region
2. Identify the principal events, problems, and concerns faced by Latin Americans today within a cultural and historical context
3. Evaluate the role of race, class, and gender in the creation of Latin American societies
4. Analyze the impact of colonialism on the construction of unique Latin American societies, and on the region's indigenous peoples
5. Interpret the political, cultural, and environmental developments that have contributed to interrelations among current Latin American communities and nations

LTAM 1111 Latin American Film

Course Description

Latin American Film explores themes relevant to Latin American societies through the viewing and analysis of critically acclaimed films and documentaries from Latin America. Such themes include memory and oblivion, immigration, gender issues, marginalized peoples, and globalization

Student Learning Outcomes

1. Gain Knowledge and Understanding of Latin American Cultures

- a. Students demonstrate an understanding of the relationship between the practices and perspectives of Latin American cultures.
 - b. Students demonstrate an understanding of the relationship between the products and perspectives of Latin American cultures.
- 2. Connect with Other Disciplines and Acquire Information
 - a. Students reinforce and further their knowledge of other disciplines through Spanish and Portuguese language films and documentaries.
 - b. Students acquire information and recognize the distinctive viewpoints that are only available through the Latin American cultures.
- 3. Develop insight into the Nature of Culture
 - a. Students demonstrate understanding of the concept of cultures through comparisons of Latin American cultures studied and their own.

LTAM 2088. Latin American Studies Specialty

Course Description

This course allows students to apply computer information technology elective credit towards a Latin American Studies program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

LTAM 2111. Tourism and Culture

Course Description

This course explores the extent to which colonialism and tourism have shaped Latin American communities as well as North Americans' conceptions of the region, through the lenses of imperialism, indigeneity, identity, and politics in Latin American tourist economies.

Student Learning Outcomes:

- 1. Identify and describe the legacies of colonialism in different present-day tourist sites in Latin America.
- 2. Evaluate the reasons for which indigenous peoples have both joined and opposed tourist ventures at different times and in different places.
- 3. Analyze the effects of tourism on the construction of cultural space and place.
- 4. Identify and evaluate relative power relations between tourists and local populations.

LBAR 2610. Liberal Arts Study Abroad

Course Description

This course provides students with an immersive study of culture and social relations in another country. In preparation for the in-country Study Abroad experience, students will explore interdisciplinary approaches to the study of that place and peoples.

Student Learning Outcomes:

1. Apply culturally specific knowledge to think comparatively about global and local issues.
2. Recognize and understand differences between their home culture and other cultures.
3. Demonstrate the ability to interact effectively and in a culturally sensitive way with people of different cultural backgrounds.
4. Demonstrate increased self-confidence and decision-making capabilities, as well as the ability to adapt to changing circumstances.

LBAR 2999. Community Leadership: Liberal Arts Capstone

Course Description

Using an interdisciplinary approach, engages students in a local community action project, further developing skills in critical thinking and effective communication. Includes applying skills valued by employers such as problem-solving techniques, effective use of digital tools for research and communication, small group communication, and leadership.

Library Science (LIBR)

LIBR 1110. Introduction to Research

Course Description

The goal of this course is to provide students with techniques and tools to become better researchers. This course introduces students to the research process, and the organization, location, and evaluation of information.

Student Learning Outcomes

After completing this course, students will be able to:

1. Develop a research plan based on an information need.
2. Find information efficiently and effectively using a variety of search tools.
3. Evaluate the reliability of an information resource.
4. Practice ethical behavior in using information.

LIBR 1111. Introduction to Information Literacy in an Electronic Environment

Course Description

Introduction to the basics of the research process; the organization, location and evaluation of information using print, non-print and electronic resources; and techniques of effective personal information management in a computerized setting. Uses a combination of active and hands-on learning methods as well as lectures.

Student Learning Outcomes

1. Develop a discipline-specific research guide based on an established subject area.
2. Select appropriate information sources and use them to find information efficiently.
3. Evaluate information and its sources.
4. Practice ethical behavior in using information.

Language, Letters and Liberal Arts (LLLA)

LLLA 1101. Foundations in Liberal Arts

Course Description

Liberal Arts Education is an approach to learning that empowers individuals and prepares them to deal with complexity, diversity, and change. It provides students with broad knowledge of the wider world (e.g., science, culture, and society) as well as in-depth study in specific areas of interest. A liberal arts education helps students develop a sense of social responsibility, as well as strong and transferable intellectual and practical skills such as communication, analytical and problem-solving skills, and a demonstrated ability to apply knowledge and skills in real-world settings. In this course, we will explore the concepts that inform the liberal arts, read and analyze texts that exemplify liberal arts learning, and discuss potential careers in the liberal arts. "In this course we will:

Student Learning Outcomes

1. Explore concepts that inform the liberal arts
2. Read and analyze texts that exemplify liberal arts learning
3. Practice written and oral communication skills
4. Research potential careers in the liberal arts

Linguistics (LING)

LING 1996. Topics in Linguistics

Varies

Student Learning Outcomes

LING 2110. Introduction to the Study of Language and Linguistics

Course Description

This course presents an introduction to the study of language through the basic aspects of linguistic analysis: the sound system (phonetics and phonology), the structure of words and sentences (morphology and syntax), and the ways in which language is used to convey meaning (semantics and pragmatics). In addition, the course will investigate how language is acquired and stored in the brain, and how differences in speech styles and dialects reflect different social and cultural backgrounds of individual speakers.

Student Learning Outcomes

1. Understand the basic concepts and terminology associated with phonetics, phonology, morphology, syntax, semantics, and pragmatics.
2. Comprehend how language evolves over history and over an individual's lifespan.
3. Describe some common, but mistaken, beliefs about language and to distinguish between descriptive and prescriptive approaches to language.
4. Describe the social, psychological, geographic and historical influences that lead to language dominance or language endangerment.
5. Be aware of the relations among various languages in the world, between dialects and slang, and between human and non-human languages.
6. Apply methods of linguistic analysis as introduced in the course.
7. Critically engage with the works of linguistic researchers.
8. Stimulate curiosity about language and what it reveals about the human mind.

LING 2151. Language in Advertising

Course Description

This course focuses on the role that language and other symbolic systems play in advertising, branding, and marketing persuasion. Students analyze and evaluate the social meaning that is conveyed through marketing language choices and become more critical consumers as a result. Questions of who is targeted by particular linguistic practices and how those marketing choices contribute to definitions of social and cultural groups are addressed. Students will have the opportunity to conduct mini research projects to extend their knowledge of concepts and test hypotheses presented in class. No prior knowledge of linguistics or marketing research is assumed.

Student Learning Outcomes

1. Understand the basic concepts and terminology associated with phonetics, phonology, morphology, syntax, semantics, and pragmatics.
2. Comprehend how language evolves over history and over an individual's lifespan.
3. Describe some common, but mistaken, beliefs about language and to distinguish between descriptive and prescriptive approaches to language.
4. Describe the social, psychological, geographic and historical influences that lead to language dominance or language endangerment.
5. Be aware of the relations among various languages in the world, between dialects and slang, and between human and non-human languages.
6. Apply methods of linguistic analysis as introduced in the course.
7. Critically engage with the works of linguistic researchers.
8. Stimulate curiosity about language and what it reveals about the human mind.

Management (MGMT)

MGMT 2110. Principles of Management

Course Description

An introduction to the basic theory of management including the functions of planning, organizing, staffing, leading, and controlling, while considering management's ethical and social responsibilities.

Student Learning Outcomes

Students should be able to:

Required:

1. Explain the major functions of management including planning, organizing, communications, controlling, motivating, leading, and staffing.
2. Recognize major developments in the history of management thought.
3. Describe the basic managerial processes including decision-making and other key skills necessary for managers to perform their roles.
4. Identify an organization's stakeholders and the importance of social and ethical responsibility of managers.
5. Explain the formulation and implementation of strategic planning, including the relationship between goals, plans, vision statements, and mission statements.
6. Describe the strategies managers use to help organizations adapt to changing internal and external environments.
7. Explain organizational change, forces for change, sources of resistance to change, and the techniques managers can use to implement and facilitate change.

Marketing (MKTG)

MKTG 1111. PGA Golf Management Freshman Orientation

Course Description

To receive a specialty degree in PGA Golf Management, students are required to complete ALL three levels of the PGA's/PGM.

Student Learning Outcomes

Students should be able to:

1. Introduction to the PGA PGM
2. PGA History and Constitution
3. The Rules of Golf
4. Career Enhancement A
5. Tournament Operations A
6. Rules of Golf B
7. Career Enhancement B

MKTG 1112. Level 1, PGA's PGM Education Program (Part 1)

Course Description

To receive a specialty degree in PGA Golf Management, students are required to complete **ALL** three levels of the PGA's/PGM Educational Program. This course will cover material found in the Level 1 Work Experience Activities. The final exam will be a brief analysis of what has been covered throughout the semester, what remains for completion, and preparation for internship experiences.

Student Learning Outcomes

Customer Relations

1. Discuss the business value of effective customer relations
2. Describe the essential components of the PGA Customer Relations Model
3. Identify and define moments of truth
4. Recognize the four Interaction Strategies and apply them in a variety of routine and challenging customer situations
5. Identify the seven Interpersonal Skills and apply them in a variety of routine and challenging customer situations
6. Initiate the PGA Experience using a systematic greeting and engagement process

Business Planning

1. Describe the business planning process and the PGA Business Planning Model
2. Understand the difference between long-term and short-term planning
3. Use case studies to learn how to apply business
4. Define "the business" at the facility level in terms of vision, core values, facility characteristics, and mission
5. Assess the current state of the business
6. Identify internal and external factors that will impact business success
7. Conduct a SWOT analysis
8. Develop appropriate business goals and objectives based on the facility profile and SWOT analysis
9. Develop strategies to achieve long-term business goals and short-term business objectives
10. Analyze financial history and create financial forecasts
11. Prepare and operating budget
12. Monitor performance and modify the plan or operations, if required, at regular intervals

MKTG 1210. Advertising

Course Description

A survey of currently available advertising media. A psychological approach to consumer persuasion; applied techniques in media selection, layout mechanics, production methods, and campaign structures.

Student Learning Outcomes

Students should be able to:

1. Define advertising and the relevant application of psychology in delivering the message.
2. Explain the importance of various advertising media in the marketing mix.
3. Identify and explain the social, ethical and legal issues advertisers must consider.

4. Describe the significance of the marketing function in business.
5. Explain the importance of advertising and other marketing communication tools.
6. Demonstrate application of the planning process as it applies to marketing and advertising.
7. Describe the factors that are weighted when considering the use of radio and television in the creative advertising mix.
8. Describe the relationship between market segment, consumer behavior and selection of advertising campaign types.
9. List the alternative means of reaching a target market and the technical challenges of each.

MKTG 1220. Small Business Marketing

Course Description

An overview of public relations principles, practices and purposes as applied to small business. Topics include basics of news release writing, media awareness, development and maintenance of a positive public image, branding, ethical marketing, and the relationships of public relations with advertising and marketing. Methods and practices used in small business are explored.

Student Learning Outcomes

Students should be able to:

1. Explain the importance of creating and sustaining a positive public awareness and image.
2. Identify public relations practices as they relate to the management and marketing processes.
3. Define branding and discuss its importance for small business.
4. Describe the value of business event management and promotion for small business.
5. Discuss how media relations, public relations, advertising and marketing efforts are interrelated and the importance of each.

MKTG 1230. Social Media Marketing

Course Description

An examination of social media platforms, techniques, strategies and tools. Topics include integrating social media technologies into a marketing plan, creating social media marketing campaigns, and analyzing effectiveness.

Student Learning Outcomes

Students should be able to:

1. Describe social media marketing strategies.
2. Create a social media strategy, plan, and campaign.
3. Integrate different social media techniques into a marketing plan.

MKTG 2110. Principles of Marketing

Course Description

Survey of modern marketing concepts and practices focusing on the marketing mix: product, pricing, promotion, and distribution strategies. Topics include the marketing environment, consumer behavior, marketing research, target marketing, and the ethical and social responsibilities of marketers.

Student Learning Outcomes

Students should be able to:

1. Describe the professional, ethical, and social responsibilities of marketers.
2. Explain the role of the product in the marketing mix, including the product life cycle, the relevance of product innovation, and product classifications.
3. Illustrate the role of promotion in the marketing mix, including the communication process and the promotional mix.
4. Explain the role of price in the marketing mix, including pricing objectives, pricing policies, and pricing methods.
5. Describe the operation of channels of distribution and supply chains, including functions of intermediaries and degrees of coverage.

6. Define the concepts of target markets and market segmentation with respect to elements of the marketing mix.
7. Explain the importance of market research and information systems in supporting marketing decision-making.
8. Describe the dynamic environment(s) in which marketing decisions must be made.

MKTG 2111. Level 1, PGA's PGM Education Program (Part2)

Course Description

To receive a specialty degree in PGA Golf Management, students are required to complete ALL three levels of the PGA/PGM Educational Program. This course will cover material found in the Level 1 Work Experience Activities. Quizzes will be given throughout the semester at the instructor's discretion. Your final grade will be based on work experience activities, exams, and attendance/class participation.

Student Learning Outcomes

Golf Car Fleet Management

1. Describe the importance of the golf car to the golfer, the golf facility, and the golf professional
2. Identify the characteristics of a well-managed, profitable golf car fleet
3. Describe the responsibilities of the fleet manager
4. Identify the essential policies and procedures that are the foundation of a sage and efficient golf car rental program
5. Describe the fleet staffing requirements of a typical golf facility
6. Identify the benefits and components of an effective maintenance program and a proper storage facility
7. Examine golf car needs in light of the facility's mission, customers, and physical characteristics
8. Describe how to acquire a fleet
9. Estimate fleet revenue, costs, and profit, and identify how budgeting changes will impact the financial bottom line
10. Perform a lease-versus-purchase analysis, and identify the benefits of each
11. Determine rental fees and promote ridership

Tournament Operations

1. Analyze the role of tournament business at a golf facility
2. Identify tournament business objectives and the strategies used to achieve them
3. Define a tournament's purpose and develop an event that meets that purpose for the customer
4. Plan, organize, and promote events
5. Organize staff to meet tournament implementation schedules and budget requirements
6. Prepare the course and facility for an event
7. Communicate effectively with players, staff, and officials during an event
8. Describe all critical tasks required for tournament execution
9. Manage rules situations and make rulings during events
10. Review a tournament and suggest improvements for future events

MKTG 2112. Level 1, PGA's PGM Education Program (Part 3)

Course Description

The PGA Golf Management Program is a specialized program where students are required to complete Levels 1, 2, and 3 of the PGA/PGM Educational Program. This course will cover the Introduction to Teaching and Golf Club Performance portion of the PGA/PGM Educational Program. Students will learn the material necessary to complete the associated Work Experience Activities and Intro to Teaching Test. Students will also develop a foundation of knowledge and experience needed to complete the ensuing PGA teaching courses (Intermediate Teaching and Advanced Teaching).

Student Learning Outcomes

Knowledge of Learning:

1. Explain how students learn golf knowledge and skills and identify the implications for teaching.
2. Explain how students process information when learning golf skills.
3. Identify and explain the principles of effective practice.

4. Explain how juniors learn golf knowledge and skills and identify the implications for teaching.

Knowledge of Teaching:

1. Structure an effective golf lesson.
2. Analyze student's instructional needs and set clear, purposeful learning and practice goals.
3. Deliver effective explanations and demonstrations during a golf lesson.
4. Engage in self-assessment of teaching skills and competencies.

Knowledge of the Game:

1. Recognize and apply the appropriate clubhead path and clubface position information to improve a golfer's performance.
2. Conduct appropriate assessments to determine the skill level of the golfer.
3. Demonstrate basic knowledge of anatomy and physiology, and conduct a physical observation to identify movement capabilities and limitations that may affect a golfer's performance.
4. Define club performance terms and specifications, and describe their effect on ball flight and player performance.

MKTG 2120. Marketing Content Strategy and Branding

Course Description

This course is designed to give the student insight into branding and content strategy. It aims to push students to explore concepts such as consumer psychology, appropriate content, and strategy and search engine optimization. Students will have the opportunity to practice their writing and communication skills -- both vital skills for digital marketing.

Student Learning Outcomes

1. Discuss consumer psychology & buying motivations.
2. Develop a content marketing mission statement.
3. Create and analyze written content for blog posts that aligns with a brand messaging framework and target audience.
4. Apply best practices for visual design & text content for social media sites.

MKTG 2210. Agricultural Marketing

Course Description

This course explores the principles of marketing agricultural products and commodities. Instruction in the techniques of marketing services provided to agriculture related fields is also provided in this course. Development, analysis and decision-making associated with marketing of agricultural products and services are studied.

Student Learning Outcomes

Students should be able to:

1. Identify the role marketing plays in agricultural business as demonstrated on a faculty administer exam.
2. Recognize the different areas that make up the marketing environment as demonstrated on a faculty-administered exam.
3. Distinguish between the different parts of the agricultural business marketing system as demonstrated on a faculty-administered exam.
4. Explain the role of management in agricultural marketing as demonstrated on a faculty-administered exam.
5. Asses the function of organization and evaluation in agricultural marketing as evidence on faculty assigned projects.

MKTG 2215. Digital Marketing Fundamentals

Course Description

This course explores the importance of using new media in today's marketplace and using them effectively to build relationships with customers. Students will incorporate consumer expectations into a digital marketing plan, evaluate digital marketing delivery options, analyze website design, evaluate competitive digital marketing strategies, and explore the ethical and legal issues created by the new technology. Topics include the use of the internet in developing

marketing strategy, conducting market research, and making marketing mix decisions. Inbound marketing techniques will also be explored. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Describe the role of digital marketing in developing customer relationships and show how it fits within an organization's overall marketing strategy.
2. Explain the various media available for planning purposes and analyze factors to determine appropriate media selections.
3. Describe the differences between, and the convergence of, paid, earned, and owned media.
4. Explain and apply inbound marketing methodology.
5. Identify and incorporate various digital initiatives into an overall strategic marketing plan.

MKTG 2220. Digital Marketing

Course Description

This course focuses on planning to create and market a website. Internet marketing topics such as registering with search engines, increasing traffic, segmenting and targeting markets, establishing an online presence, developing a marketing plan and reshaping business for the Web market are covered.

Student Learning Outcomes

Upon successful completion of this course, students will be able to:

1. Describe how search engines work. (Use knowledge to make recommendations to a website on how it can improve its organic search rankings – perform search engine optimization)
2. Describe the various methods of online display advertising.
3. Determine the appropriate key performance indicators (KPIs) for any type of website.
4. Describe and implement best practices in marketing to a database of current and potential customers via email.
5. Utilize knowledge of social media tactics to design an effective social media campaign.
6. Implement online reputation management tactics to improve the online reputation of a brand.
7. Develop and present a digital marketing plan for a small, local business.

MKTG 2230. Marketing Analytics and Performance Optimization

Course Description

This course aims to give students the skills needed to analyze results of marketing efforts. Students will learn about factors that drive conversion and how to optimize their efforts using data and A/B testing. Students will understand what the key metrics for digital marketing are. Students will be assessed through three projects that give them an opportunity to get hands-on experience using spreadsheets, Google Analytics and analyzing an A/B test. The course is part of Facebook's Digital Marketing curriculum and is required to gain the Facebook Certification. Basic internet skills and an understanding of Microsoft Office applications are recommended.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Demonstrate ability to calculate key marketing metrics and understand their significance to determine strategic marketing optimization decisions.
2. Demonstrate the ability to A/B test various elements of marketing efforts to increase conversion rates.
3. Understand the factors that drive conversion and opportunities to optimize marketing performance.

MKTG 2231. Intermediate Social Media Marketing

Course Description

This course is designed to give students an understanding of the concepts involved in integrated marketing

communication (IMC) with a focus on social media and the role they play in advertising, public relations, branding, and corporate communication strategies. Focus will be on the planning, research and creative skills needed to reach promotional objectives through a social media campaign. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Describe how integrated marketing attempts to meld all aspects of marketing, communication, and some aspects of customer experience to achieve a messaging unity through advertising, sales promotion, public relations, direct marketing, and social media.
2. Explain the design process for delivering a consistent message across channels to create a unified and seamless experience for consumers when they interact with a business or brand.
3. Evaluate the efficacy of different social media channels.
4. Describe best practices in the use of social media platforms and websites to promote a product, service, or event.
5. Develop a unified, integrated social media strategy for an organization or event

MKTG 2240. Email Marketing

Course Description

This course offers a deep dive into the world of email marketing, an incredibly effective marketing channel that can deliver great results for companies. In this course, students will learn about the role of email marketing in a company's marketing campaign, what stages of the customer journey email marketing is suited for, and best practices for email copy. The course will also touch upon more complex email practices such as automation and how to outline an email campaign. The students will be assessed on their performance on a capstone project which will entail outlining the components of an email campaign.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Recognize best practices and understand the lifecycle of an email campaign.
2. Understand how to generate an email list.
3. Familiarized with email automation tools and how they can help launch email campaigns.
4. Understand how to develop an email plan to launch multiple email campaigns at once.

MKTG 2245. Mobile, Email and Search Marketing

Course Description

Students explore and analyze the mobile marketing channels available to companies and gain exposure to different mobile strategies companies are using, including device-specific ad and location-based campaigns. As an essential component of a company's marketing mix, students will develop a plan for marketing to a database of current and potential customers via email. In addition, they explore the differences between Search Engine Marketing (SEM) and Search Engine Optimization (SEO) and how these contribute to overall strategy. Topics such as affiliate, paid and unpaid advertising, and performing site audits to improve SEO are also explored. Students develop skills in maximizing small marketing campaigns, understanding optimal audience outreach, and analyzing customer interactions and data. May be preparation for industry certification exams.

Student Learning Outcomes

1. Explain and implement best practices in mobile marketing.
2. Analyze different mobile channels and implement mobile strategies as part of a marketing plan.
3. Describe a responsive design and develop an email campaign responsive to mobile devices.
4. Evaluate a search engine marketing campaign and its effectiveness.
5. Describe changes that will improve a campaign's conversion rates.

MKTG 2410. Content Marketing and Branding

Course Description

This writing intensive course will focus on creating a brand identity and guidelines and gaining a better understanding of the essentials of creating, promoting, and measuring valuable and relevant content to attract and engage a profitable online presence and audience. Through practical exercises, different types of content embraced by social media will be explored along with how to leverage the value of content you generate. Best practices in digital storytelling will be utilized through effective writing of content such as blog posts, social media articles and posts, online journals, magazines, and digital newsletters. May be preparation for an industry certification exam.

Student Learning Outcomes

Upon successful completion of the course, students will be able to

1. Describe best practices for using content to support a brand strategy.
2. Employ best writing and posting practices for different types of content supported by social media.
3. Describe content tactics and challenges and how to leverage the value of created content.
4. Create a content marketing strategy, including sample pieces of marketing collateral.

MKTG 2250. Social Media Strategies

Course Description

This course focuses on the role social media plays in a digital marketing strategy. Topics include bid calculations, cost estimates, and various digital marketing platforms, as well as their practical application within the scope of a social media strategy. Students will also apply best practices to leverage social media in a time-specific marketing campaign to enhance social media skills.

Student Learning Outcomes

1. Summarize the role of social media in a marketing campaign and differences in voice and audience across various social media channels.
2. Identify best practices and describe the lifecycle of a social media campaign.
3. Calculate bids and explain the costs that come with social media advertising.
4. Demonstrate the ability to run a simulated social media campaign and the key metrics for optimization.

MKTG 2330. Website Design and Marketing

Course Description

Focusing on planning, creating, and marketing a website, topics in this course include developing a plan, segmenting and targeting markets, establishing an online presence, increasing website traffic and exploring ways to achieve a higher search engine ranking (SEO). May be preparation for an industry certification exam. The course does not require coding or coding knowledge; however, students need to have basic computer skills.

Student Learning Outcomes

Upon successful completion of the course, students will be able to:

1. Create a measurable and goal-oriented marketing plan for a website.
2. Create an engaging website.
3. Explain different web design frameworks for improving conversion rates and apply these design frameworks to identify areas for website improvement.
4. Utilize analytics for decision making.
5. Explain how search engines work and make recommendations on a website can improve its organic search rankings.
6. Develop a toolset to assist in current and future website optimization and marketing efforts.

MKTG 2410. Content Marketing and Branding

Course Description

This writing intensive course will focus on creating a brand identity and guidelines and gaining a better understanding of the essentials of creating, promoting, and measuring valuable and relevant content to attract and engage a profitable online presence and audience. Through practical exercises, different types of content embraced by social media will be explored along with how to leverage the value of content you generate. Best practices in digital storytelling will be utilized through effective writing of content such as blog posts, social media articles and posts, online journals, magazines, and digital newsletters. May be preparation for an industry certification exam.

Student Learning Outcomes

Upon successful completion of the course, students will be able to

1. Describe best practices for using content to support a brand strategy.
2. Employ best writing and posting practices for different types of content supported by social media.
3. Describe content tactics and challenges and how to leverage the value of created content.
4. Create a content marketing strategy, including sample pieces of marketing collateral.

MKTG 2430. Display and Video Advertising

Course Description

This course focuses on the basics of display and video advertising, outlining a variety of topics including best practices, targeting, optimization, and audience strategy. Students learn how to design and successfully manage display and video advertising campaigns towards various marketing objectives, from research to implementation. May be preparation for industry certification exams.

Student Learning Outcomes

Upon successful completion of the course, students will be able to

1. Describe the various methods of online display advertising.
2. Describe the various methods of online video advertising.
3. Create an online display and video advertising campaign.
4. Describe and evaluate key metrics in measuring stages of the advertising funnel.

MKTG 2993. Workshop in Marketing

Course Description

Varies

Student Learning Outcomes

Varies

MKTG 2994. Marketing ePortfolio Capstone

Course Description

Through the marketing program, students develop an ePortfolio to show off skills gained to prospective higher education programs and employers. This is meant to help students stand out for careers that align with their passion for marketing. Along with polishing individual ePortfolios, in this capstone course, students will be provided resources to both pursue and enhance careers in the digital marketing field or transfer to another institution to pursue a bachelor's degree. Relevant experiences and examples will be shared on going beyond the resume to land challenging and rewarding career opportunities. Also explored will be higher education partnerships and scholarship opportunities.

Student Learning Outcomes

Upon successful completion of the course, students will be able to...

1. Establish a personal brand using integrated marketing communications concepts.
2. Develop an ePortfolio that showcases talents, skills, and previous work.
3. Develop a network of professional resources.
4. Explain career and/or educational searches and advance goals.

MKTG 2996. Topics in Marketing**Course Description**

Student Learning Outcomes

Varies

Massage Therapy (MASS)

MASS 1110. Massage Therapy I**Course Description**

Introduces students to the field of massage therapy. Students learn the history of massage and ethics as it pertains to massage therapy. The course provides hands-on training of safe and effective massage techniques.

Student Learning Outcomes

1. Describe the history of massage therapy.
2. Identify basic physiology as it pertains to massage therapy.
3. Examine basic pathology as it pertains to massage therapy.
4. Drape the massage therapy client in a safe and ethical manner.
5. Demonstrate proper body mechanics for massage.
6. Demonstrate proper sequencing when conducting a massage.
7. Perform introductory massage strokes and sequences.

MASS 1140. Kinesiology for Massage Therapy

Introduces kinesiology as it relates to massage therapy. Emphasis is placed on palpation of muscles, including muscle attachments and the muscle belly. Reviews musculoskeletal terminology, muscle structure and function, including range of motion as it applies to massage therapy. The risks and benefits of pathologies commonly encountered by massage therapists are thoroughly addressed.

Student Learning Outcomes

1. Identify and describe the kinesiological principles of the human body related to massage therapy.
2. Practice palpation of the attachments and belly of muscles.
3. Identify and describe the effects of range of motion.
4. Identify and describe pathologies commonly encountered in the practice of massage.
5. Apply musculoskeletal terminology.

MASS 1240. Thai Massage Therapy Contraindications**Course Description**

Identifies contraindications and areas of caution related to Thai massage therapy. The course covers when it is not appropriate or safe to treat a client and identifies precautions Thai massage therapists must take when working with special populations, pathologies and contraindications related to classes of medication.

Student Learning Outcomes

1. Identify contraindications and areas of caution related to Thai massage therapy.
2. Identify Thai massage therapy contraindications related to specific pathologies.
3. Describe Thai massage therapy contraindications related to special populations.
4. Demonstrate an understanding of Thai massage therapy contraindications related to classes of medications.
5. Assess and plan a Thai massage that safely manages contraindications.

MASS 1250. Thai Massage Therapy Professional Ethics

Course Description

This course covers difference in concepts of boundaries, professional practice, self-care and sustainability practices in Thai culture and Thai massage therapy practice as compared to massage therapy in the United States. Fundamentals in the difference between the history, traditions and culture in Thai massage therapy compared to massage therapy in the United States. Cultural appropriation and ethical practices as they relate to practices outside one's own culture. Overview of key Western massage concepts as preparation for the required National Massage Therapy Board Examination (MBLEX).

Student Learning Outcomes

1. Demonstrate respect and understanding of the traditions and ethics associated with the practice of Thai massage therapy.
2. Understand the history and development of Thai massage therapy as it relates to Thai Medicine, Buddhist Medicine and Thai ethics and culture.
3. Consider and understand cultural appropriation and ethical practices as they relate to practices outside one's own culture.
4. Ethics of communication, intake and relationship of the practitioner to their clients, other practitioners of massage and the tradition of Thai massage therapy.
5. Understand key Western massage concepts required for the MBLEX.

MASS 1340. Massage and Medically Complex Populations

Course Description

Introduces students to the field of medically complex massage therapy practices. This course covers basic guidelines of what to do for clients during cancer treatment and the years post-treatment. Intake questions, precautions, contraindications and comfort techniques are reviewed.

Student Learning Outcomes

1. Identify basic types of medically complex populations as they pertain to massage therapy.
2. Describe basic guidelines for massaging during treatment and medical care.
3. Describe and practice intake questions appropriate for medically complex massage clients.
4. Identify and describe what precautions, contraindications and comfort techniques needed for medically complex populations.
5. Describe ethics as it relates to medically complex populations and massage therapy.

MASS 1400. Introduction to Chair Massage Therapy

Course Description

Introduces students to the field of Chair Massage Therapy. Students practice a sequence of massage therapy techniques and hands-on treatment for the whole body. The treatment is focused on appropriate body mechanics and principles of massage for clients who are clothed.

Student Learning Outcomes

1. Practice the bodymechanics for Chair Massage Therapy.
2. Identify basic principles of Chair Massage Therapy.
3. Practice hands-on techniques following a sequence of strokes.
4. Describe ethics as it relates to people who would benefit from Chair Massage Therapy.

Mass 1410 Thai Massage Therapy I

Course Description

Introduces students to the field of Thai massage therapy. Students learn the history of Thai massage and ethics as it pertains to massage therapy. The course provides hands-on training of safe and effective Thai massage stretches, techniques and sequences.

Student Learning Outcomes

1. Describe the history of Thai massage therapy.
2. Evaluate ethical scenarios as they pertain to Thai massage therapy.
3. Bolster the massage therapy client in a safe manner.
4. Demonstrate proper body mechanics for Thai massage therapy.
5. Demonstrate proper sequencing when conducting a Thai massage session
6. Perform introductory Thai massage stretches, techniques and sequences

MASS 1420. Thai Table Massage Herbal Compress and Stretching

Course Description

Introduces students to the field of Thai table Massage Therapy tools and deep tissue techniques. Reviews ethics as it relates to cultural appreciation and Buddhist medicine. Practice a variety of techniques such as basic full body compression ,rolling, Thai massage Deep Tissue techniques, traction and stretching sequences that are applicable to the massage table or the mat.

Student Learning Outcomes

1. Practice techniques using Thai Massage Therapy tools.
2. Describe the ethics of Thai Massage Therapy as it relates to cultural appreciation.
3. Practice deep tissue hands-on Thai massage techniques.

MASS 1430. Thai Table Massage Herbal Compress and Stretching

Course Description

Students practice Thai table massage hydrotherapy techniques using herbal compresses and stretching. Reviews ethics as it relates to cultural competency, and appreciation. Practice a variety of techniques such as use and application of herbal compresses, basic full body compression, traction and stretching sequences that are applicable to the massage table or the mat.

Student Learning Outcomes

1. Practice techniques using Thai table massage therapy herbal compresses.
2. Describe the ethics of Thai Massage Therapy as it relates to cultural competency.
3. Practice hands-on compression, traction and stretching sequences.

MASS 1440. Thai Table Massage Cupping and Myofascial Release

Course Description

Students practice Thai table massage therapy cupping techniques. Learn about the benefits of cupping to practitioner and client. Reviews ethics as it relates to cultural appropriation and Buddhist medicine. Practice a variety of myofascial release techniques such as static cupping, moving cupping, massaging with cups, compression, holding and other Thai techniques that are applicable to the massage table or the mat.

Student Learning Outcomes

1. Practice advanced techniques using Thai table massage therapy cupping.
2. Describe the ethics of Thai massage therapy as it relates to cultural appropriation.
3. Demonstrate Thai cupping and myofascial release techniques.

MASS 1460. Introduction to Ortho Bionomy Part I

Course Description

Introduces students to the foundational principles and practices of Ortho-Bionomy®, a gentle, yet profound approach to somatic education and bodywork. Emphasizing the body's innate capacity for self-correction, the course explores key concepts such as movement away from pain, collaborating with the body and the use of positional release techniques to access self-corrective responses. Students gain hands-on experience applying Ortho-Bionomy methods to the spine while developing professional skills in communication, boundaries and ethical practices.

Student Learning Outcomes

1. Describe the history of Ortho-Bionomy.
2. Identify main principles and concepts.
3. Practice Ortho-Bionomy techniques for the spine.
4. Describe ethics as it relates to Ortho-Bionomy.

MASS 1470. Introduction to Ortho Bionomy Part II

Course Description

Introduces students to the foundational principles and practices of Ortho-Bionomy®, a gentle, yet profound approach to somatic education and bodywork. Emphasizing the body's innate capacity for self-correction, the course explores key concepts such as movement away from pain, collaborating with the body and the use of positional release techniques to access self-corrective responses. Students gain hands-on experience applying Ortho-Bionomy methods to the extremities while developing professional skills in communication, boundaries and ethical practices.

Student Learning Outcomes

1. Describe the history of Ortho-Bionomy.
2. Identify main principles and concepts.
3. Practice Ortho-Bionomy techniques for the extremities.
4. Describe ethics as it relates to Ortho-Bionomy.

MASS 1510. Thai Massage Therapy II

Course Description

An in depth, hands-on study and practice of safe and effective Thai massage skills. Learn applications of hydrotherapy techniques. Introduces Thai massage therapy theory and assessment. Students deepen their knowledge of anatomy and apply Thai massage therapy techniques.

Student Learning Outcome:

1. Plan, organize and perform an effective full body Thai massage.
2. Apply anatomical knowledge as it pertains to Thai massage therapy.
3. Utilize basic hydrotherapy techniques and skills.
4. Apply Thai massage theory and assessment to a session.
5. Perform full body Thai massage therapy.

MASS 1610. Thai Massage Therapy III

Course Description

Introduces students to the field of Thai deep tissue and myofascial release techniques and advanced stretching. Students deepen their knowledge of anatomy and theory as it pertains to Thai massage therapy and practice Thai massage fundamentals and techniques in a professional setting. Students give professional Thai massages under the supervision of an instructor to clients from the community.

Student Learning Outcome

1. Plan, organize and perform a Thai deep tissue and myofascial massage in the classroom setting.

2. Apply anatomical knowledge and theory as it pertains to Thai massage therapy.
3. Plan, organize and perform Thai massage sessions for clients in the community.

MASS 1980. Clinical Intensive in Massage Therapy

Course Description

Practice massage therapy fundamentals and techniques in a professional massage setting. Students give professional massages under the supervision of the instructor to clients from the community.

Student Learning Outcomes

1. Plan and organize full body massage to provide relief and well-being to clients from the community.
2. Practice verbal and written intake forms.
3. Model appropriate body mechanics, draping techniques and communication skills with clients.

MASS 2250. Massage Therapy I

Course Description

This course is for students accepted and enrolled in the UNM Massage Therapy Program. This course will develop student understanding of the healing art and science of professional touch, gain a basic understanding of the field of massage, and begin to provide the groundwork for students seeking professional licensure in the field of massage therapy.

In MAS I, students will gain a general understanding of the history of massage therapy, the scope of practice and ethics, and the professional requirements to practice massage therapy. Students will build on their knowledge of human anatomy and physiology throughout this course and understand the indications and contraindications of massage therapy.

Students will learn professionalism, quality, and definitions of healthy touch, proper and ethical practices of care, and universal precautions.

Students will also learn the basics of professional self-care practices such as body mechanics, healthy professional boundaries, and creating healthy environments for both practitioner and client.

You will learn basic massage techniques including but not limited to Swedish massage, Reflexology, Acupressure, and connective tissue manipulation. You will enhance your intuition, learn body reading, and begin to understand the overall effects of massage therapy technique choices. You will also learn and expand your awareness of the body/mind connections and how they relate to you as a therapist and your clients.

This course will provide the opportunity for students to learn the fundamentals of relaxation massage therapy techniques, as well as an opportunity to practice with hands-on contact hours. Students will continue developing their massage therapy hands-on techniques as they become exposed to new modalities throughout the course.

Students will provide and receive professional practice sessions in a safe, supportive, supervised, and professional environment.

Student Learning Outcomes

1. Learn, practice, and perfect a full Swedish Massage session, including proper draping, universal precautions, indications, and contraindications considerations, embrace appropriate timing and pacing for a complete massage therapy session, and use appropriate equipment, oils, linens, ambiance, and communication.
2. Have an understanding of the history of therapeutic massage, various massage modalities, and professionalism in massage therapy.
3. Perform advanced massage strokes and sequences.
4. Apply advanced draping procedures while massaging the client.
5. Demonstrate knowledge of basic pathologies, medical terminology, indications, and contraindications to massage.
6. Demonstrate an understanding of basic structural anatomy and how it applies to developing a massage sequence.

7. Begin to anticipate and develop a course of therapeutic plan of action and demonstrate a basic understanding of SOAP charting principles.
8. Demonstrate healthy respect, appropriate interpersonal conduct, and healthy professional communication strategies.
9. Demonstrate understanding and use of appropriate self-care techniques and modalities to support both the strenuous activity of this profession as well as personal development.
10. Demonstrate ability to receive and integrate healthy teaching/learning, critique, and adjustments for body mechanics, palpatory skills, manual therapy techniques, draping practice, professionalism, business practices, and ethical standards throughout the curriculum.

MASS 2251. Massage Therapy II

Course Description

This course is for students enrolled in the UNM Integrative Massage Therapy Program who have successfully completed Introduction to Massage and Massage Therapy I.

This course will provide the opportunity for students to refine their understanding of deep tissue and medical massage fundamentals as well as an opportunity to practice. Students will continue developing their skills in deep tissue massage. Students will learn application of hydrotherapy, energy techniques, introduction to oriental medicine, sports massage, contraindications, and disease education. Other massage modalities may be explored at the discretion of the instructor. Students will work on each other in a safe, supportive, and professional environment.

Student Learning Outcomes

1. Perform basic visual and manual soft-tissue assessment.
2. Demonstrate appropriate professionalism, standard infection control and proper body mechanics.
3. Demonstrate knowledge of the safety issues and appropriateness of the application of hydrotherapy and other hot and cold body treatments.
4. Demonstrate basic medical massage treatment and how it applies to developing a massage sequence.

MASS 2252. Massage Therapy III

Course Description

This course is for students enrolled in the UNM Integrative Massage Therapy Certification Program who have successfully completed Massage Therapy II. This course will provide the opportunity for students to refine their understanding of Medical Massage fundamentals as well as an opportunity to practice.

Students will continue learning the application of hydrotherapy, sports massage, contraindications, and disease education.

This course is meant to be taken in conjunction with the clinical practicum.

Other massage modalities may be explored at the discretion of the instructor. Students will work on each other in a safe, supportive, and professional environment.

Student Learning Outcomes

1. Demonstrate the application of medical massage techniques to specific pathologies.
2. Demonstrate how to work with specific pathologies such as HIV, HEPC, and Palliative Care.
3. Be certified in Heartsavers CPR and First Aid.
4. Know how to prepare for MBLEx National Exam.
5. Be guided in the application process for licensure in the state of New Mexico.

MASS 2253. Deep Tissues Techniques in Massage Therapy I

Course Description

This course is for students enrolled in the UNM Integrative Massage Therapy Program who have successfully completed Introduction to Massage and Massage Therapy I. This course will provide the opportunity for students to learn Deep Tissue Techniques in Massage as well as an opportunity to practice. Students will continue developing their skills in Swedish Massage while learning application of Deep Tissue theory and hands on modalities. Other massage modalities may be explored at the discretion of the instructor. Students will work on each other in a safe, supportive, and professional environment.

Student Learning Outcomes

1. Perform basic visual and manual soft-tissue assessment.
2. Demonstrate appropriate professionalism, standard infection control and proper body mechanics.
3. Demonstrate knowledge of the safety issues and appropriateness of the application of deep tissue techniques.
4. Demonstrate basic application of deep tissue techniques and how it applies to developing a massage sequence.

MASS 2254. Myofascial and Myoskeletal Techniques in Massage Therapy

Course Description

This course is for students enrolled in the UNM Integrative Massage Therapy Program who have successfully completed Deep Tissue Massage. Students will continue developing their skills in soft tissue manipulation while learning application of myofascial and myoskeletal techniques.

Other massage modalities may be explored at the discretion of the instructor. Students will work on each other in a safe, supportive, and professional environment.

Student Learning Outcomes

1. Facilitate basic visual assessment of soft tissues of client.
2. Demonstrate appropriate professionalism, standard infection control and proper body mechanics.
3. Demonstrate and apply myofascial techniques to a client.
4. Demonstrate and apply myoskeletal techniques to a client.

MASS 2255. Massage Clinic

Course Description

Students will learn to run a small clinic using online software platform Massagebook and practice the application of massage therapy to the general public. www.massagebook.com

Student Learning Outcomes

1. Demonstrate competence with the application of Therapeutic Massage Skills to the general public.
2. Demonstrate the ability to work as a team running the Massage Clinic.
3. Demonstrate developed skills that include scheduling clients, taking payment, sending appointment notification.
4. Demonstrate the ability to compile and maintain accurate SOAP notes.

MASS 2258. Eastern Modalities-Thai Massage

Course Description

This course is an introduction to some of the different forms of Eastern bodywork with a working emphasis on Thai Yoga Massage. Students will be given a solid foundation of knowledge on the histories of the modalities presented, Qi (Chi), Yin Yang theory, 5 Element theory, meridians and sen, as well as the principles of traditional Thai Massage.

Students must have massage training to enroll in this course.

Student Learning Outcomes

1. Relate basic Traditional Thai Massage theory and technique to a massage practice.
2. Repeat basic entry level Thai Massage therapy skills.

3. Interpret the varied histories of Asian modalities, 5 element theory, the differences and similarities between the presented modalities and the influences of one another.
4. Recognize and explain distinguishing indicators and contraindications for therapeutic Thai Massage.

MASS 2259. Exercise Physiology

Course Description

Students will learn how body systems respond during exercise through the disciplines of Anatomy, Physiology and Kinesiology. Students will learn tools to evaluate an appropriate nutrition and exercise program and how to apply it to a client. Students will learn application of kinesiology to the human form and movement as it is related to normal physiological range of motion.

Student Learning Outcomes

1. Perform basic visual and manual assessment.
2. Demonstrate knowledge of the safety issues and appropriateness of the application of kinesiology techniques.
3. Demonstrate basic application of functioning of the body during physical activity.

MASS 2263. Cranial Sacral I

Course Description

This course is for students who would like to gain a foundation in biodynamic craniosacral therapy. Students should have some knowledge of the human anatomy and physiology as this course will begin with cranium anatomy and advancing the understanding of the craniosacral system. Specific techniques for treating the craniosacral system vis-à-vis the cranium will be taught and practiced.

Student Learning Outcomes

1. Describe the scientific foundation and principles of CranioSacral Therapy - and why it's the key to relieving pain and dysfunction at their source.
2. Demonstrate finely tuned palpation skills you can rely on as highly sensitive and intuitive healthcare tools.
3. Identify the subtle craniosacral rhythm and interpret its patterns to accurately evaluate dysfunction and improvements.

MASS 2267. Cranial Sacral II

Course Description

This course is a continuation for students who would like to gain a foundation in biodynamic craniosacral therapy. Students should have some knowledge of the human anatomy and physiology as this course will begin with cranium anatomy and advancing the understanding of the craniosacral system. Specific techniques for treating the craniosacral system vis-à-vis the cranium will be taught and practiced.

Student Learning Outcomes

1. Locate the source of physical problems by traveling through the fascial system, that complex web of tissue that impacts all body structures and systems.
2. Release dural tube restrictions to enhance interactions between the central nervous system and the rest of the body.
3. Use techniques that produce dramatic health and relaxation effects, including Direction of Energy and Still-Point Induction.

MASS 2270. Eastern Modalities-Shiatsu

Course Description

This course is an introduction to some of the different forms of Eastern bodywork with a working emphasis on Shiatsu Massage. Students will be given a solid foundation of knowledge on the histories of the modalities presented, Qi (Chi), Yin Yang theory, 5 Element theory, meridians and tsubos, as well as the principles of Shiatsu Massage and how it is directly applicable to massage sequencing.

Student must have massage training to enroll in this course.

Student Learning Outcomes

1. Relate basic Shiatsu Massage theory and techniques to a massage practice.
2. Repeat intermediate strokes and sequence procedures in Shiatsu while massaging a client.
3. Interpret the varied histories of Asian modalities, 5 Element theory, the differences and similarities between the presented modalities and the influences of the Traditional Chinese Medicine healing model.
4. Recognize and explain distinguishing indicators and contraindications for therapeutic Shiatsu Massage.

MASS 2280. Massage Anatomy and Physiology

Course Description

This course is for students enrolled in the UNM Integrative Massage Therapy Program who have successfully completed Introduction to Massage and Massage Therapy I. Anatomy & physiology. This course will provide the opportunity for students to learn how body systems affect the ability to move and how movement in turn influences the body systems, deepening an understanding of the concept 'movement as medicine'. Also examining how correct nutrition, diet and supplementation can enhance overall health. We will promote a deeper understanding of human anatomy at a conceptual and tactile level, a portion of the class will involve hands on exploration of concepts with related massage techniques. Students will work on each other in a safe, supportive, and professional environment.

Student Learning Outcomes

1. Gain better understanding of human movement, through the anatomical and physiological systems.
2. Gain the ability to understand and help counteract the stress of chosen exercises.
3. Understand how to meet their own fitness goals.
4. Create a diet, exercise and lifestyle plan to fit their individual needs.

MASS 2610. Professional Ethics in Massage Therapy

Course Description

This course covers the ethical guidelines and standards of practice essential for massage therapy certification. Students will explore key topics including scope of practice, confidentiality, record keeping, professional boundaries, informed consent, and dual relationships between therapists and clients.

Student Learning Outcomes

1. Identify and describe the guidelines for professional conduct as outlined.
2. Explain appropriate client boundaries in role-playing scenarios and articulate self-care strategies.
3. Define the limitations and guidelines of massage therapy scope of practice in a written response, and be able to identify situations requiring referral to another professional.
4. Analyze case studies demonstrating ethical client considerations.
5. Identify methods for obtaining informed consent.

MASS 2620. Business for Self-Employment and Massage Therapy

Course Description

Best business and marketing practices for partially or fully self-employed professionals and independent contractors. Covers the fundamentals of business success including branding, marketing, client communications, charting and record keeping. Practice basic financial literacy, billing and tax practices; licensing and registration following applicable state and federal laws

in self-employment. Discuss office space and the merits of renting, owning or sharing spaces as well as the office layout, equipment and following local regulations.

Student Learning Outcomes

1. Describe best business practices for partially or fully self-employed professionals and independent contractors.
2. Describe the fundamentals of business success.
3. Demonstrate basic financial literacy, billing and tax practices.
4. Identify licensing and registration following applicable state and federal laws in self-employment.
5. Describe office space options and the merits of renting, owning or sharing spaces as well as the office layout, equipment and following local regulations.

MASS 2996. Massage Therapy Topics

Course Description

Varies

Student Learning Outcomes

Varies

Materials Engineering (MLTS)

MLTS 1110L. Materials Science & Engineering Laboratory

Course Description

Hands-on laboratory experience with some fundamental concepts in Materials engineering: classification of solids, gelation processes, particulate dispersions, nucleation and growth of crystals, phase diagrams, magnetic domains, (explosive) welding, and composite design. Course provides a glossary of terms and concepts used in the field of Materials science and engineering.

Student Learning Outcomes

1. State the four major classes of materials.
2. Identify (by sight/feel) common engineered materials.
3. Identify several of the seven crystal systems.
4. Perform batching calculations, express composition as weight and volume percentages.
5. Read/interpret a simple binary phase diagram.
6. Measure density and viscosity of a fluid.
7. Measure and calculate strengths of materials (simple compression, bending).
8. Explain the differences between fusion welding and solid-state welding.
9. Distinguish between different types of magnetism.
10. Follow procedural instructions and conduct experiments.
11. Safely utilize basic laboratory apparatus (hot plate, Bunsen burner, balance, etc.).
12. Identify critical parts of and properly use a reflecting light microscope.
13. Plot data using contemporary software (e.g. Excel, MATLAB, etc.).

MTLS 2202. Materials Engineering I

Course Description

The course is an introduction to the important concepts in materials science and engineering with a goal of building the foundations for all other courses related to materials. The course introduces the perspectives needed to think about materials in other areas of engineering and the physical sciences. The structure, properties, and processing of metals, ceramics, polymers, and composite materials are discussed. Topics covered include atomic bonding, crystal structures and symmetry, metal alloys, strength, microstructures, glasses, defects, diffusion, elasticity, fracture, and phase diagrams.

Student Learning Outcomes

1. Describe the major bond type(s) in the four major classes of materials.

2. Identify the common crystal structures of metals.
3. Compute atomic packing factors in metal structures.
4. Identify directions and planes within a crystalline unit cell.
5. Describe the mechanisms of deformation of metals, polymers and ceramics.
6. Explain the common methods of strengthening metals and alloys.
7. Describe the common crystal defects.
8. Calculate diffusion rates and concentrations.
9. Use phase diagrams to calculate compositions of binary alloys.
10. Use phase diagrams to predict microstructures of binary alloys.
11. Describe why heat treatments work and how to use them.
12. Explain the common steel alloys.
13. Describe the common forms of corrosion.

MTLS 2202L. Materials Engineering I Laboratory

Course Description

Laboratory experiments addressing elementary design problems involving optimal use of Materials. Designed to reinforce principles discussed in MTLS 2202.

Student Learning Outcomes

1. Explain the proper safety procedures for a materials lab.
2. Describe the operation of a scanning electron microscope.
3. Explain how to obtain texture and compositional information from metal samples.
4. Convert the 2-theta angle of the XRD peaks to the lattice parameter.
5. Polish and etch a metal sample in order to reveal its microstructure.
6. Use an optical microscope.
7. Measure the hardness of a sample and convert it to the approximate strength.
8. Describe the effect of extreme temperatures on the properties of materials.
9. Use tensile test data to calculate the elastic modulus, yield strength, tensile strength, and maximum elongation.

MTLS 2235. Materials Engineering II

Course Description

Survey of technologically important Materials including ceramics, glasses, semiconductors, polymers and composites. The objective is to understand the chemical composition, structure, processing and property relationships in material systems. The student will obtain a basic understanding of the principles of electronic transport, dielectric, thermal, optical and mechanical properties of engineered solids. Undergraduate students majoring in Materials Engineering must take MTLS 2235L concurrently.

Student Learning Outcomes

1. Perform stoichiometric batching calculations and steps to fabricate a polycrystalline ceramic.
2. Accurately measure the bulk density of ceramic via Archimedes method.
3. Design, batch and make a soda-lime-silica glass.
4. Locate a glass composition on a ternary diagram.
5. Calculate average molecular weights and degree of polymerization of a common polymer.
6. Compute/predict polymer molecule size (extended, random coil).
7. Measure viscosity of polymer solutions.
8. Cite differences between reinforced plastics and advanced composites.
9. Describe the major steps involved in IC manufacturing.
10. Explain the difference between low-K and high-K dielectrics and their applications.
11. Build a simple parallel plate capacitor using a dense ceramic and conducting paste.

12. Measure capacitance using an impedance analyzer and calculate the dielectric constant.
13. Follow written procedures in performing laboratory experiments.
14. Design and create professional engineering tables and graphs to analyze collected data.
15. Describe experimental results and relate to known phenomena.
16. Draw sound conclusions.
17. Write concise and coherent engineering reports.

MTLS 2235L. Materials Engineering II Lab

Course Description

Laboratory experiments introducing the fabrication of technical Materials and the measurement of their properties. Designed to reinforce principles discussed in MTLS 2235.

Student Learning Outcome

1. Use Paulings Rules to predict crystal structures of simple ceramic compounds.
2. Calculate theoretical density of a crystalline ceramic.
3. Perform stoichiometric batching calculations.
4. Label all critical points and phase fields in a binary phase diagram.
5. Describe the characteristics of a refractory.
6. Explain the effects of network formers & network modifiers in a common glass composition.
7. Describe how glass is tempered.
8. Explain why ceramics are brittle.
9. Compute the flexural strength of a ceramic from 3pt bending fracture.
10. Identify/recognize the chemical-molecular structure of common engineering polymers.
11. Calculate average molecular weights and degree of polymerization.
12. Compute/predict polymer molecule size (extended, random coil).
13. Describe the geometric variations (isomers, copolymers) occurring in polymers.
14. Cite the differences between thermoplastics and thermosets.
15. Distinguish between addition and condensation polymerization.
16. Sketch the stress-strain behavior of typical polymers (linear, network, elastomer).
17. Discuss the influence of mol. weight, structure & crystallinity on thermo-mechanical behavior.
18. Use mixing rules to compute the elastic modulus of particle and fiber reinforced composites.
19. Cite the relative advantages/disadvantages of PMCs, MMCs, CMCs.
20. Describe the electrical behavior of materials with reference to the electron band diagrams.
21. Compute the carrier concentration and conductivity of a metal according to free electron theory.
22. Compute the carrier concentration and conductivity of intrinsic and extrinsic semiconductors.
23. Explain an ohmic vs a rectifying contact.
24. Explain the operation of a field effect transistor.
25. Describe the four frequency-dependent polarization mechanisms possible in materials.
26. Calculate the dielectric constant of a material from capacitance in a parallel plate configuration.

Mathematics (MATH)

MATH 1009. Mathematics for the Elementary Teacher

Course Description

Course offers an in-depth look at the representations of rational numbers, including base-ten and decimal numbers, integers, fractions, arithmetic operations on these sets and number properties using student activities and investigations. Problem solving is emphasized throughout.

Student Learning Outcomes

1. Decompose numbers to demonstrate place value.
2. Identify and define the whole numbers, the integers, and the rational numbers.
3. Compare and contrast the various appropriate uses of whole numbers, integers, and rational numbers.
4. Represent rational numbers using concrete models, number lines, and symbolic representations, and flexibly move between representations.
5. Represent decimal numbers (including whole numbers) in different ways that demonstrate their place value structure (e.g., bundled objects and the number line).
6. Use concrete models number lines to demonstrate the equivalence of numbers, including equivalent fractions and fractions and decimals.
7. Use concrete models and number lines to compare numbers.
8. Explain procedures for rounding and comparing numbers using place value.
9. Convey the relative sizes of integers, and rational numbers written as decimals and fractions.
10. Recognize and produce appropriate definitions for addition, subtraction, multiplication, and division of whole numbers and rational numbers with particular attention to how these operations generalize from whole numbers to rational numbers.
11. Model addition, subtraction, multiplication, and division using concrete models and contextual situations.
12. Communicate the relationship among the operations.
13. Identify an operation that applies to a given problem and explain why it is appropriate.
14. Identify geometric models (e.g., area and volume models) used to represent numbers and operations.
15. Accurately use standard and non-standard algorithms for the arithmetic operations of whole numbers, fractions, and decimals.
16. Demonstrate and explain the relationship between place value, the properties of arithmetic, and the algorithms (standard and alternative) used for operations on decimal numbers including whole numbers.
17. Perform and describe strategies for mental computation and estimation using fact families, the structure of base-ten numbers, and the properties of arithmetic.
18. Evaluate computed answers for their reasonableness and give answers at an appropriate level of precision.
19. Use powers and scientific notation to express and compare large and small numbers.
20. Illustrate the associative, commutative and distributive properties of arithmetic and demonstrate their use in common arithmetic procedures.
21. Recognize and produce appropriate examples demonstrating the importance of the properties of arithmetic fact fluency, estimation, problem solving, and algebra and that these properties apply to all branches of mathematics and at all levels.
22. Make sense of problems and persevere in solving them.
23. Reason abstractly and quantitatively.
24. Construct viable arguments and critique the reasoning of others.
25. Model with mathematics.
26. Use appropriate tools strategically.
27. Attend to precision.
28. Look for and make sense of structure.
29. Use mathematical notation properly.

MATH 1010. Math for School Teachers

Course Description

Not Available

Student Learning Outcomes

Not Available

MATH 1101. Methods of Problem Solving

Course Description

Not Available

Student Learning Outcomes

Not Available

MATH 1110. Math for Teachers I

Course Description

Investigates the representation of rational numbers and rational number arithmetic, including base ten and decimal numbers, fractions, and arithmetic operations on these sets. Connections to basic geometric concepts are included. Explanation and problem solving is emphasized throughout.

Student Learning Outcomes

1. Unpack arithmetic.
 - a. Component 1: Explain procedures for doing addition, subtraction, and multiplication with whole numbers, integers, and fractions.
 - b. Component 2: Do addition, subtraction, and multiplication of multi-digit numbers in several different ways.
 - c. Component 3: Analyze student work, assess validity of arguments, and identify mathematical misconceptions in mistakes.
 - d. Component 4: Use the decomposition of whole numbers to find factors, multiples, and prime numbers.
 - e. Component 5: Use the relationships between operations, to solve simple algebraic equations.
2. Apply mathematical concepts.
 - a. Component 1: Recognize the difference between multiplicative and additive situations.
 - b. Component 2: Solve problems involving fractions.
3. Represent mathematical concepts.
 - a. Component 1: Use tactile representations, including base blocks and integer chips to represent numbers and operations.
 - b. Component 2: Use visual representations, including discrete pictures, number lines, and rectangles, to represent operations.
 - c. Component 3: Use tactile and visual representations to explain how estimation and rounding work.
 - d. Component 4: Use concrete applications to represent operations.
4. Communicate mathematical concepts.
 - a. Component 1: Describe the equivalence between different representations of numbers and operations.
 - b. Component 2: Create justifications for properties and procedures in arithmetic.
 - c. Component 3: Use correct terminology and notation.

MATH 1111. Problem Solving with Formulas, Measurements, and Algebra

Course Description

This course presents strategies for solving mathematical problems; topics include ratios, proportions, per cents (increase and decrease), precision in measurement, use of scientific notation, units' conversion and dimensional analysis. The emphasis is on critical thinking and quantitative reasoning using relevant math skill.

Student Learning Outcomes

1. **Create and apply algebraic models to solve problems.**
 - a. Component 1: Create linear algebraic models by constructing ratios and proportions and use to solve problems.
 - b. Component 2: Apply basic exponential algebraic models including compound interest and percent increase and decrease to solve applied problems
 - c. Component 3: Solve applied problems related to measurement
2. **Use quantitative reasoning to solve problems.**

Component 1: Select and use appropriate formulas to solve problems.

Component 2: Solve a formula for a specific variable

Component 3: Use appropriate notation (including scientific notation), level of precision, and terminology when solving problems and communicating answers.

Component 4: Use appropriate unit conversions and apply dimensional analyses as needed to solve problems.

Component 5: Apply non-algebraic techniques, such as drawing pictures, performing multiple arithmetic calculations, and using trial and error to solve problems.

3. **Use critical thinking techniques**

Assess whether the outcome of a given calculation is reasonable through quick mental estimation, checking answers against recommended ranges, and/or solving a problem using multiple methods.

MATH 1112. Problem Solving with Statistics and Probability

Course Description

This course presents an introduction to statistics and probability. Topics include constructing and interpreting graphical representations of data, finding and interpreting measures of central tendency (mean, median, mode), finding and interpreting measures of dispersion (standard deviation, range), calculating probability for single and compound events using probability rules.

Student Learning Outcomes

1. **Describe and summarize data graphically and numerically to solve problems**

Component 1: Represent data using graphs and tables such as histograms and frequency distribution tables.

Component 2: Interpret graphical displays of data

Component 3: Calculate measures of central tendency including mean, median, mode and quartiles and use them to characterize and interpret data.

Component 4: Calculate measures of dispersion including range and standard deviation and use them to characterize and interpret data.

Component 5: Calculate probability for single and compound events using probability rules to solve problems

2. **Use critical thinking techniques**

Assess whether the outcome of a given calculation is reasonable through quick mental estimation, checking answers against recommended ranges, and/or solving a problem using multiple methods.

MATH 1113. Problem Solving with Geometry and Trigonometry

Course Description

This course presents strategies for solving mathematical problems; topics include practical plane and solid geometry and right triangle trigonometry.

Student Learning Outcomes

1. **Use plane geometry to solve problems.**

Component 1: Accurately measure angles and classify as acute, obtuse or right angles.

Component 2: Use simple geometric relationships involving intersecting lines

Component 3: Identify and find the area and perimeter of geometric shapes including circles, squares, rectangles, parallelograms, trapezoids and hexagons

Component 4: Apply the Pythagorean theorem to find the sides of a right triangle

Component 5: Solve applied problems involving area and perimeter of plane figures

2. **Use the properties of solid figures to solve problems.**

Component 1: Identify and find the surface area and volume of solid objects including prisms, cubes, cones, cylinders, pyramids, spheres, and frustums.

Component 2: Solve applied problems involving solid figures

3. **Use triangle trigonometry to solve applied problems.**

Component 1: Convert angles between decimal degrees, degrees and minutes, and radians

Component 2: Find the values of trigonometric ratios

Component 3: Solve right triangles using exact values for special triangles and approximate values for other right triangles. Use a calculator to approximate angle values using inverse trigonometric functions.

4. Use critical thinking techniques

Assess whether the outcome of a given calculation is reasonable through quick mental estimation, checking answers against recommended ranges, and/or solving a problem using multiple methods.

MATH 1114. Problem Solving with Consumer Mathematics

Course Description

This course presents strategies for solving mathematical problems in Consumer Mathematics. Students will develop a personal budget, then learn the mathematics of topics such as interest, mortgage, rent and leasing, credit cards, loans (such as is needed to purchase a vehicle), depreciation, annuities, investments, and stocks and bonds.

Student Learning Outcomes

1. Use, organize and graphically display data to model a personal budget.

Component 1: Use the percent formula to allocate amounts of a given income to each budget category.

Component 2: Use technology to construct pie charts illustrating a personal budget.

Component 3: Interpret graphical displays of budget data.

2. Use compound interest to solve applied problems.

Component 1: Demonstrate how compound interest impacts financial decisions related to mortgages, credit cards, loans or car buying.

Component 2: Demonstrate how compound interest impacts financial decisions related to investments such as retirement funds, bank savings, stocks, bonds, or crypto currencies.

Component 3: Compare and analyze interest-rate based financial options

Component 4: Calculate and analyze investment goals.

3. Use critical thinking techniques

Assess whether the outcome of a given calculation is reasonable through quick mental estimation, checking answers against recommended ranges, and/or solving a problem using multiple methods.

MATH 1115. Math for Teachers II

Course Description

Develops basic geometric concepts including rigid transformations and congruence; dilations and similarity; length, area and volume; systems of measurement and unit conversions; and connections to coordinate geometry. Explanation and problem solving is emphasized throughout.

Student Learning Outcomes

1. Apply arithmetic.

Component 1: Use and justify formulas relating to measurement.

Component 2: Recognize operations required by problems involving geometric figures.

2. Represent geometric concepts.

Component 1: Use tactile representations, such as pattern blocks, geoboards, and nets, to represent geometric problems.

Component 2: Use a compass, protractor, and ruler.

Component 3: Create representations of 3-dimensional figures.

3. Communicate geometric concepts.

Component 1: Use correct terminology and notation.

Component 2: Describe geometric objects including shapes, transformations, and measurements using appropriate units.

Component 3: Create justifications for properties and procedures in geometric classification and in measurement.

4. Apply proportional reasoning when appropriate.

Component 1: Recognize growth factors in different dimensions.

Component 2: Solve problems involving congruent and similar objects.

Component 3: Convert between units of measurement in various dimensions.

MATH 1116. Mathematics for the Elementary Teacher II

Course Description

Algebra from the viewpoint of the elementary curriculum with emphasis on proportional and linear relationships. Additional topics include number theory, ratio, percent, probability and statistics. Student activities, investigations and problem solving are emphasized throughout.

Student Learning Outcomes

1. Interpret a composite number as the product of prime factors.
2. Use factors and multiples to solve problems.
3. Use tests for divisibility
4. Differentiate between prime or composite numbers using various techniques including factoring and the
5. Sieve of Eratosthenes
6. Discuss the Fundamental Theorem of Arithmetic
7. Compare and contrast the sets of rational, irrational and real numbers
8. Express percent of a quantity as a rate per 100
9. Use proportional reasoning in common applications
10. Represent a quantity as a fraction, percent, and decimal
11. Use proportional relationships to solve percent problems
12. Represent, analyze, and interpret a variety of patterns with tables, graphs, words and equations
13. Explain how formulas represent relationships between quantities
14. Solve and graph linear equations
15. Define and identify functions
16. Represent functions with words, tables, equations and graphs
17. Interpret the slope of a line as a ratio between quantities or a unit rate in contextual situations
18. Analyze linear relationships and identify the slope and y-intercept in a graph, equation, and applied situation
19. Select, create, and use appropriate graphical representations of data including frequency tables, pictographs, line plots, bar graphs, line graphs, histograms, box plots, and scatterplots
20. Identify graphic misrepresentations and distortions of data sets such as unequal interval size, axis range, and scaling
21. Summarize and interpret data using mean, median and quartiles and explain the appropriateness and limitations of each measure
22. Compute theoretical probabilities using organized lists, tree diagrams, area models, and formulas for simple and compound events
23. Compare probabilities estimated using empirical data to those computed theoretically.
24. Discuss the importance of randomness
25. Compare and contrast population and sample
26. Use the vocabulary of probability to generate convincing arguments, draw conclusions, and make informed decisions.
27. Use measures of center and measures of variability to draw informal comparative inferences about two populations
28. Explain and compute standard deviation and inter-quartile range
29. Make sense of problems and persevere in solving them.
30. Reason abstractly and quantitatively.
31. Construct viable arguments and critique the reasoning of others.

32. Model with mathematics.
33. Use appropriate tools strategically.
34. Attend to precision.
35. Look for and make sense of structure.
36. Use mathematical notation properly.

MATH 1117. Math for Elementary & Middle School Teachers

Course Description

Develops basic geometric concepts including rigid transformations and congruence; dilations and similarity; length, area and volume; systems of measurement and unit conversions; connections to coordinate geometry. Student activities, investigations and problem solving are emphasized throughout.

Student Learning Outcomes

1. Classify polygons based on properties such as number of sides, side lengths, and angle measures
2. Identify and draw polygons and circles that have given properties
3. Identify, describe, and draw rectangular solids and other polyhedral, cylinders, spheres and cones
4. Define length, area and volume and explain the differences through models
5. Define perimeter and find the perimeter of polygons
6. Explain and demonstrate why multiplication applies to the area of a rectangle and volume of a rectangular solid
7. Decompose polygonal regions into simpler polygons to find the area
8. Develop and use formulas for parallelograms, triangles, and prisms
9. Measure objects with appropriate tools with standard and non-standard units
10. Describe the metric system and US customary system and convert units within a system
11. Estimate and measure angles
12. Solve problems involving measurements of time, length, area, volume, and mass
13. Calculate the circumference, radius, diameter and area of circle and explain the relationship between π and circumference and area.
14. Use the properties of parallel lines and parallel line cut by a transversal to reason and solve problems about angles
15. Know and use the Pythagorean Theorem and its converse.
16. Solve problems
17. Find the volume of prisms, pyramids, cylinders, cones and spheres
18. Describe the effect of scaling on length, area, and volume
19. Use units that are products and units that are rates in application problems
20. Explain the process for unit conversion
21. Define congruent triangles and use their properties to solve problems
22. Prove or disprove congruence of triangles using the SSS, SAS, ASA properties of congruent triangles
23. Define similar triangles and use their properties to solve problems
24. Compare and contrast congruent and similar figures
25. Describe translations, reflections, and rotations using informal language and formal terminology
26. Identify and describe the image of a polygon under a specified transformation
27. Recognize that length, area, volume, and angle measurement are preserved by rigid transformations
28. Describe the relationship between congruence and rigid transformations
29. Describe the connection between symmetrical and rigid transformations
30. Describe dilations using informal language and formal terminology
31. Identify and describe the image of a polygon under a dilation in the Euclidean and coordinate plane
32. Describe the effect of dilation on length, area, volume, and angle measurement
33. Describe the relationship between similarity and dilation
34. Solve problems using points in the coordinate system

MATH 1118. Math for Elementary and Middle School Teachers I

Course Description

Course offers an in-depth look at rational numbers, arithmetic operations, and basic geometric concepts. Problem solving is emphasized throughout.

Student Learning Outcomes

1. Represent numbers and operations with models.
 - a. Use visual models, including physical objects, drawings of counts, lengths, and area, number lines, and symbols to represent numbers and operations, and flexibly move between representations.
 - b. Explain the relationship between contexts and the appropriate mathematical operations.
2. Identify and use the deeper structures of arithmetic.
 - a. Analyze and perform multiple methods for doing addition, subtraction, multiplication, and division.
 - b. Analyze student work, assess the validity of arguments, and identify mathematical misconceptions in mistakes.
 - c. Describe and use the relationships between operations to represent and solve problems.
 - d. Describe and use strategies for mental computation and estimation using fact families, the structure of base-ten numbers, and the properties of arithmetic.
3. Explain concepts in arithmetic.
 - a. Explain procedures for doing addition, subtraction, multiplication and division with base-10 numbers using correct mathematical terminology and notation.
 - b. Explain why the commutative and associative properties of addition and multiplication and the distributive property of multiplication over addition make sense.
 - c. Explain how estimation and rounding work using models and correct mathematical terminology and notation.
4. Explain concepts in geometry.
 - a. Describe, using appropriate vocabulary and representations, how points, lines, and angles relate to each other and to applications in the real world.
 - b. Explain different ways to classify two-dimensional shapes based on their properties.

MATH 1125. Discovering the Art of Mathematics

Course Description

This course provides an inquiry-based approach to investigating the connections between mathematics, art, culture, and nature. Students will explore a variety of topics and problems which may include (but are not limited to): Geometry, Number Theory, Group Theory, Game Theory, and Calculus. Students' satisfactory completion of collaborative classroom activities, projects, homework, and presentations will be integral to success in this course.

Student Learning Outcomes

1. Students will take greater personal **responsibility** for their learning.
 - Consistently attend classes on time in their entirety
 - Consistently participate and engage in in-class activities
 - Consistently complete reading and homework assignments on time.
 - Take notes from readings, class activities, and follow up on graded assignments.
2. Students will strengthen their ability to **communicate** mathematical arguments.
 - Explain ideas and arguments both orally and in writing.
 - Ask questions that seek clarification, expands on, or challenges ideas presented in the text and in class activities.
3. Students will demonstrate strong mathematical **reasoning** and problem-solving skills.
 - Justify steps in mathematical proofs and solutions
 - Formulate and evaluate conjectures and hypotheses
 - Formally critique the reasonings of the one's own arguments as well as the arguments of others.

4. Students will understand the mathematical patterns underlying perspective and fractal geometry.
Explain how to determine the viewing targets and viewing points of 2 dimensional pictures using mathematics.
Describe fractals as a mathematical concept.
Create projects that expands on ideas covered in class.

MATH 1127. College Mathematics/Quantitative Reasoning

Course Description

Not Available

Student Learning Outcomes

Not Available

MATH 1130. Survey of Mathematics

Course Description

This course will develop students' ability to work with and interpret numerical data, to apply logical and symbolic analysis to a variety of problems, and/or to model phenomena with mathematical or logical reasoning. Topics include financial mathematics used in everyday life situations, statistics, and optional topics from a wide array of authentic contexts.

Student Learning Outcomes

1. Construct and analyze graphs and/or data sets.
 - a. Gather and organize information.
 - b. Understand the purpose and use of various graphical representations such as tables, line graphs, tilings, networks, bar graphs, etc.
 - c. Interpret results through graphs, lists, tables, sequences, etc.
 - d. Draw conclusions from data or various graphical representations.
2. Use and solve various kinds of equations.
 - a. Understand the purpose of and use appropriate formulas within a mathematical application.
 - b. Solve equations within a mathematical application.
 - c. Check answers to problems and determine the reasonableness of results.
3. Understand and write mathematical explanations using appropriate definitions and symbols.
 - a. Translate mathematical information into symbolic form.
 - b. Define mathematical concepts in the student's own words.
 - c. Use basic mathematical skills to solve problems.
4. Demonstrate problem solving skills within the context of mathematical applications.
 - a. Show an understanding of a mathematical application both orally and in writing.
 - b. Choose an effective strategy to solve a problem.
 - c. Gather and organize relevant information for a given application.

MATH 1130L. Survey of Mathematics Workshop

Course Description

Provides support to students taking MATH 1130 Survey of Mathematics. Students review mathematical concepts and skills and develop learning strategies to support their success in Survey of Mathematics.

Student Learning Outcomes

1. Construct and analyze graphs and/or data sets
 - a. Gather and organize information
 - b. Understand the purpose and use of various graphical representations such as tables, line graphs, tilings, networks, bar graphs, etc.
 - c. Interpret results through graphs, lists, tables, sequences, etc.

- d. Draw conclusions from data or various graphical representations
- 2. Use and solve various kinds of equations
 - a. Understand the purpose of and use appropriate formulas within a mathematical application
 - b. Solve equations within a mathematical application
 - c. Check answers to problems and determine the reasonableness of results
- 3. Understand and write mathematical explanations using appropriate definitions and symbols
 - a. Translate mathematical information into symbolic form
 - b. Define mathematical concepts in the student's own words
 - c. Use basic mathematical skills to solve problems
- 4. Demonstrate problem solving skills within the context of mathematical applications
 - a. Show an understanding of a mathematical application both orally and in writing
 - b. Choose an effective strategy to solve a problem
 - c. Gather and organize relevant information for a given application

MATH 1131. Companion to Conceptual Mathematics

Course Description

Instructs students in the knowledge of basic mathematics necessary for success in **Math 130? (Should this be MATH 1130)**. Topics include basic arithmetic, simplifying and solving algebraic equations, conversions, scientific notation, percent, ratios and proportions, basic geometry, introduction to basic financial literacy, introduction to statistics, formulas and the introduction of variable expressions and linear equations.

Student Learning Outcomes

- 1. Algebraic Expressions and Equations
 - a. Translate a verbal/written model to an algebraic model.
 - b. Evaluate algebraic expressions.
 - c. Manipulate algebraic expressions using commutative, associative, and distributive law.
 - d. Add, subtract, multiply, and divide real numbers.
 - e. Define absolute value geometrically and algebraically.
 - f. Simplify algebraic expressions using the order of operations.
 - g. Perform operations on exponential expressions.
- 2. Equations and Problem Solving
 - a. Solve linear equations.
 - b. Manipulate algebraic formulas.
 - c. Solve linear equations.
 - d. Solve word problems using linear equations.
- 3. Graphs
 - a. Analyze graphs and tables.
 - b. Graph linear equations.
 - c. Visualize and compute rates and slopes from graphical, numerical, and algebraic representations.
 - d. Recognize and convert linear functions from numerical, graphical, and algebraic representations.
- 4. Intro to Statistics and Finance
 - a. Intro to interest and statistics: central and standard deviation.
- 5. Exponents
 - a. Simplify exponential expressions using the rules of exponents.
 - b. Convert numbers between standard and scientific notation.
 - c. Perform operations using scientific notation.

MATH 1134. Fundamentals of Elementary Mathematics I

Course Description

Numbers and the four operations of arithmetic. Understanding and comparing multiple representations of numbers and operations, in particular how these representations build from whole numbers to integers to fractions and decimals. Applying properties of numbers and operations in contextual situations. Reasoning, communicating, and problem solving with numbers and operations. Applications to ratio, and connections with algebra. Taught primarily through student activities and investigations. Restricted to: EDUC, EPAR, E ED, ECED majors.

Student Learning Outcomes

1. As future elementary teachers you will be teaching mathematics to children.
2. In order to teach a subject well you need not only to know the material that you will teach, but you need to know more than what you will teach, and know it well, in order to be able to answer questions, understand student reasoning, give alternate explanations when your students do not understand something, and be able to adjust to changes in the mathematical curriculum.
3. Furthermore, even if you hope to teach a given grade, you should be prepared to teach a variety of grades since what a person ends up teaching is often not what they planned to do.
4. We will explore ideas of arithmetic in a way to help you improve your mathematical ability, gain confidence in your ability, introduce to you different ideas and models, and to see a variety of mathematical activities that are appropriate for people of all ages.
5. Everything we study will be done with the aim of developing your ability to relate to the mathematics of elementary school and to help children develop mathematical understanding.

MATH 1135. Numbers and Society

Course Description

This course introduces logic, the process of collecting, analyzing, and displaying data. Students will understand concepts in statistics, carry out basic procedures of data analysis, and interpret data using quantitative and logical thinking and reasoning. Students will make connections between the use of statistics in society and in their lives.

Student Learning Outcomes

1. Students will take greater personal responsibility for their learning.
 - Consistently attend classes on time in their entirety.
 - Consistently participate and engage in in-class activities.
 - Consistently complete reading and homework assignments on time.
 - Take notes from readings, class activities, and follow up on graded assignments.
2. Students will strengthen their ability to communicate mathematical arguments.
 - Explain ideas and arguments both orally and in writing.
 - Ask questions that seek clarification, expands on, or challenges ideas presented in the text and in class activities.
3. Students will demonstrate strong mathematical reasoning and problem-solving skills.
 - Justify steps in mathematical proofs and solutions.
 - Formulate and evaluate conjectures and hypotheses.
 - Formally critique the reasonings of the one's own arguments as well as the arguments of others.
4. Students will understand the mathematical concepts underlying politics and decision making.
 - Effectively utilize precise definitions in reasonings.
 - Be able to summarize important theorems and explain their significance.
 - Be able to summarize important theorems and explain their significance.
 - Create a project that expands on ideas covered in class.

MATH 1140. Geometry for Design

Course Description

Presents the mathematical basis of geometric practices used in structural and decorative design. Surveys the major historical approaches to geometric study: Euclidean, descriptive, transformational, combinatorial, and ornamental. Compares aesthetic and technological issues in cultural context.

Student Learning Outcomes

1. Apply theorems of EUCLIDEAN GEOMETRY.
 - a. measure plane figures.
 - b. prove congruence of plane figures.
 - c. use similarity to solve proportions and scaling problems.
 - d. solve triangles with trigonometry.
2. Use construction tools of DESCRIPTIVE GEOMETRY.
 - a. reproduce the basic constructions.
 - b. draw arcs, polygons, tracery, and arches.
 - c. solve construction problems.
3. Apply operations of TRANSFORMATIONAL GEOMETRY.
 - a. transform plane figures.
 - b. identify transformations in context.
4. Analyze elements of COMBINATORIAL GEOMETRY.
 - a. analyze tessellations and polyhedra.
 - b. design new tessellations.
 - c. build models of polyhedra.
5. Classify elements of ORNAMENTAL GEOMETRY.
 - a. identify linear and planar symmetries.
 - b. compare symmetries in world folk designs
 - c. analyze fractals.
6. Compare ideas about VISUAL PERCEPTION.
 - a. analyze archetypal symbols and logos.
 - b. compare cultural geometric styles and meanings.

MATH 1150. Business Math

Course Description

Studies finite math topics used in business, biology, and social science including systems of linear equations, matrices, linear programming, counting techniques, probability, and math of finance.

Student Learning Outcomes

Students will:

1. Display, analyze, and interpret data.
2. Demonstrate knowledge of problem-solving strategies.
3. Construct valid mathematical explanations.
4. Display an understanding of the development of mathematics.
5. Demonstrate an appreciation for the extent, application, and beauty of mathematics.

MATH 1155. Math for Health Careers

Course Description

This course introduces the computational skills needed to study in health careers programs. Topics include operations on fractions, decimals, percents, as well as the use of formulas, ratio and proportion, and measurement. Students will solve word problems specific to medication orders.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

- 1.1 Add, subtract, multiply and divide integers and simplify expressions of integers and decimals.
- 1.2 Add, subtract, multiply and divide rational numbers and simplify rational expressions.
- 1.3 Read and write Roman numerals.
- 1.4 Apply computational and calculator skills to appropriate applications for health career areas.
- 1.5 Apply commutative, associative and distributive laws in simplifying and solving equations involving integers and fractions.
- 1.6 Use ratios and proportions to solve problems of direct variation in appropriate applications for health career areas.
- 1.7 Convert percents to fractions and vice-versa to solve problems in appropriate applications for health career areas.
- 1.8 Apply logarithms in appropriate applications for health career areas.
- 1.9 Use angles in appropriate applications for health career areas.
- 2.1 Appropriately convert units of length, weight, volume and dosage measurement systems (i.e. Metric, English, Apothecaries' and Household).
- 2.2 Use and read mathematical medical abbreviations.
- 2.3 Use and read military time.
- 3.1 Calculate correct dosages for given medications in all forms (i.e. tablets, liquids, intravenous).
- 3.2 Be able to read and construct graphs (i.e., table, bar, circle, line, etc.).
- 3.3 Understand and apply basic statistics.
- 3.4 Compute range, mid-range, median, mode, mean, and standard deviation.
- 3.5 Compute 1,2 and 3 standard deviations on either side of the mean of the normal distribution

MATH 1155A. Health Careers Math w/skills review

Course Description

This course is designed for students needing pre-algebra concepts review and Math for Health Careers. This course reviews the basics of computational skills involving integers, fractions, decimals, and percents to prepare students for the skills used in this course. This course also introduces the computational skills needed to study in health careers programs. Topics include more difficult operations on fractions, decimals, and percents, as well as the use of formulas, ratios and proportions, and measurements. Students will solve word problems specific to medication orders, the combined gas law, and medical related unit conversions as well as pH and pOH calculations.

Student Learning Outcomes

This course is designed for students needing pre-algebra concepts review and Math for Health Careers. This course reviews the basics of computational skills involving integers, fractions, decimals, and percents to prepare students for the skills used in this course. This course also introduces the computational skills needed to study in health careers programs. Topics include more difficult operations on fractions, decimals, and percents, as well as the use of formulas, ratios and proportions, and measurements. Students will solve word problems specific to medication orders, and medical related unit conversions. Upon successful completion of the course, the student will be able to ...

- 1.1 Perform operations (addition, subtraction, multiplication, division and exponentiation) with decimals, whole numbers, signed numbers and fractions
- 1.2 Apply commutative, associative and distributive laws in simplifying and solving equations involving integers and fractions.
- 1.3 Find the prime factorization of a number
- 1.4 Find the least common multiple and greatest common factor of a given set of numbers
- 1.5 Correctly apply the order of operations to a given set of numbers
- 1.6 manipulate simple algebraic expressions and solve elementary equations
- 1.7 Convert between standard and scientific notation, perform arithmetic operations on numbers written and scientific notation
- 1.8 Truncate and round numbers
- 1.9 Apply algebraic rules to expressions in exponential forms

- 1.10 Recognize when to estimate, approximate or compute exact values
- 1.11 Apply the rules for simplifying expressions
- 1.12 Read and write Roman numerals.
- 2.1 Articulate the significance of and need for units of measurement
- 2.2 Measure angles and Use angles in appropriate applications for health career areas.
- 2.3 Appropriately convert units of length, weight, volume and dosage measurement systems (i.e., Metric, English, Apothecaries' and Household).
- 2.4 Use and read mathematical medical abbreviations.
- 2.5 Use and read military time.
- 3.1 Setup ratios and understand what they represent
- 3.2 Set up and solve proportions
- 3.3 Use ratios and proportions to solve problems of direct variation in appropriate applications for health career areas.
- 3.4 Convert percents to fractions and vice-versa to solve problems in appropriate applications for health career areas.
- 3.5 Calculate rates and unit pricing
- 3.6 Compute percents, convert numbers to percents and percents to numbers
- 3.7 Codel applications requiring percents
- 3.8 Calculate percents of change
- 3.9 Calculate discounts
- 4.1 Calculate correct dosages for given medications in all forms (i.e., tablets, liquids, intravenous).
- 4.2 Be able to read and construct graphs (i.e., table, bar, circle, line, etc.).
- 4.3 Understand and apply basic statistics.
- 4.4 Compute range, mid-range, median, mode, mean, and standard deviation.
- 4.5 Compute 1, 2 and 3 standard deviations on either side of the mean of the normal distribution.
- 4.6 Apply computational and calculator skills to appropriate applications for health career areas.
- 4.7 Apply logarithms in appropriate applications for health career areas.

MATH 1165. Finite Mathematics

Not Available

MATH 1170. Technical Math

Course Description

This course is designed for students in technical trades, Allied Health, and Tech Prep programs. There is an expectation for minimal background in mathematics (meet high school graduation requirements). For some of you, several topics may be "easy," for others these same topics may present a challenge, especially if it has been some time since you have done mathematical calculations and solved problems algebraically. We will begin with basic arithmetic operations on real numbers (whole numbers, fractions, decimals). We will delve into measurement in both the American Standard and International (metric) systems. We will do some algebra and work with geometric formulas. There are also sections on trigonometry and statistics. All of this will give you an overview of the types of mathematics you will likely use in technical and health fields.

Student Learning Outcomes

Upon completion of this course, students will demonstrate competence (70% or better) in the following areas:

Course Goal #1: Communication

- 1. Students will use correct mathematical notation and terminology.

2. Students will correctly interpret graphical representations of information.
3. Students will explain (orally and/or in writing) the steps needed to solve a problem.
4. Students will analyze solutions to equations and formulas and give them contextual meaning.

Course Goal #2: Real Number Arithmetic

1. Students will correctly add, subtract, multiply, and divide common fractions.
2. Students will correctly add, subtract, multiply, and divide decimal fractions.
3. Students will correctly add, subtract, multiply, and divide integers.
4. Students will correctly evaluate exponents and radicals.
5. Students will correctly perform calculations and solve problems in which some values are percents.
6. Students will correctly convert between common fraction, decimal fraction, and percent notation.
7. Students will correctly use the Order of Operations.
8. Students will correctly solve proportional equations.

Course Goal #3: Measurement

1. Students will correctly use tools to find accurate measurements in both the American Customary and Metric measurement systems.
2. Students will correctly convert between units within and between both the American Customary and Metric measurement systems.
3. Students will correctly interpret significant digits from recorded measurements.

Course Goal #4: Basic Algebra

1. Students will correctly solve for a variable in linear and quadratic equations.
2. Students will correctly solve for the indicated variable in a formula.
3. Students will correctly add, subtract, multiply, and simplify algebraic expressions.
4. Students will correctly convert contextual statements (word problems) into algebraic expressions and equations.
5. Students will correctly complete calculations with scientific notation.

Course Goal #5: Plane Geometry and Solid Figures (2-D and 3-D)

1. Students will correctly compute perimeter, circumference, area, volume, and surface area of 2-D and 3-D geometric figures.
2. Students will correctly measure various attributes of 2-D and 3-D geometric figures.
3. Students will correctly solve contextual problems involving 2-D and 3-D geometric figures.

Course Goal #6: Triangle Trigonometry

1. Students will correctly use the Pythagorean Theorem to solve problems as applied to right triangles.
2. Students will correctly use basic trigonometric ratios to solve problems as applied to right triangles.
3. Students will correctly use the Law of Sines and/or the Law of Cosines to solve problems as applied to oblique triangles.

Course Goal #7: Statistics

1. Students will correctly read and construct graphs from data.
2. Students will correctly calculate measures of central tendency.

MATH 1170L. Technical Math Supplemental Instruction

Course Description

Supplementary instruction as a co-requisite for Math 1170.

Student Learning Outcomes

Technical Math Supplemental Instruction provides time for students to work on problems from Technical Mathematics under the guidance of the instructor.

MATH 1215. Intermediate Algebra

Course Description

A study of linear and quadratic functions, and an introduction to polynomial, absolute value, rational, radical, exponential, and logarithmic functions. A development of strategies for solving single-variable equations and contextual problems.

Student Learning Outcomes

1. Students will build on their knowledge of linear and quadratic functions and begin to build an understanding of absolute value, polynomial, rational, power, radical, exponential and logarithmic functions in the following contexts:
2. Demonstrate appropriate use of basic function language and notation.
3. Convert between equivalent forms of algebraic expressions.
4. Solve single-variable equations of the types listed above.
5. Interpret and communicate algebraic solutions graphically and numerically.
6. Demonstrate contextual problem-solving skills that include setting up and solving problems and interpreting solutions in context.
7. Apply appropriate problem-solving methods from algebraic, graphical, and numerical.

MATH 1215X. Intermediate Algebra IA (1/3)

Course Description

A study of linear and quadratic functions, and an introduction to polynomial, absolute value, rational, radical, exponential, and logarithmic functions. A development of strategies for solving single-variable equations and contextual problems. This is the first course in a three-part sequence.

To receive transfer credit for MATH 1215, all courses in this sequence (MATH 1215X, MATH 1215Y, MATH 1215Z) must be taken and passed. MATH 1215X, MATH 1215Y, and MATH 1215Z together are equivalent of the single course MATH 1215 Intermediate Algebra.

Student Learning Outcomes

Student Learning Outcomes for all 3 parts of Math 1215: When the course is over student should be able to

1. Demonstrate appropriate use of basic function language and notation.
2. Simplify and perform operations on algebraic expressions.
3. Solve single-variable equations of the types listed above.
4. Interpret and communicate algebraic solutions graphically and numerically.
5. Demonstrate contextual problem-solving skills (this includes setting up and solving problems and interpreting solutions in context).
6. Apply appropriate algebraic, graphical, and numerical problem-solving methods.

MATH 1215Y. Intermediate Algebra IB (2/3)

Course Description

A study of linear and quadratic functions, and an introduction to polynomial, absolute value, rational, radical, exponential, and logarithmic functions. A development of strategies for solving single-variable equations and contextual problems. This is the second course in a three-part sequence.

To receive transfer credit for MATH 1215, all courses in this sequence (MATH 1215X, MATH 1215Y, MATH 1215Z) must be taken and passed. MATH 1215X, MATH 1215Y, and MATH 1215Z together are equivalent of the single course MATH 1215 Intermediate Algebra.

Student Learning Outcomes

Student Learning Outcomes for all 3 parts of Math 1215: When the course is over student should be able to

1. Demonstrate appropriate use of basic function language and notation.
2. Simplify and perform operations on algebraic expressions.
3. Solve single-variable equations of the types listed above.
4. Interpret and communicate algebraic solutions graphically and numerically.
5. Demonstrate contextual problem-solving skills (this includes setting up and solving problems and interpreting solutions in context).

6. Apply appropriate algebraic, graphical, and numerical problem-solving methods.

MATH 1215Z. Intermediate Algebra IC (3/3)

Course Description

A study of linear and quadratic functions, and an introduction to polynomial, absolute value, rational, radical, exponential, and logarithmic functions. A development of strategies for solving single-variable equations and contextual problems. This is the third course in a three-part sequence.

To receive transfer credit for MATH 1215, all courses in this sequence (MATH 1215X, MATH 1215Y, MATH 1215Z) must be taken and passed. MATH 1215X, MATH 1215Y, and MATH 1215Z together are equivalent of the single course MATH 1215 Intermediate Algebra.

Student Learning Outcomes

Student Learning Outcomes for all 3 parts of Math 1215: When the course is over student should be able to

1. Demonstrate appropriate use of basic function language and notation.
2. Simplify and perform operations on algebraic expressions.
3. Solve single-variable equations of the types listed above.
4. Interpret and communicate algebraic solutions graphically and numerically.
5. Demonstrate contextual problem-solving skills (this includes setting up and solving problems and interpreting solutions in context).
6. Apply appropriate algebraic, graphical, and numerical problem-solving methods.

MATH 1216. Preparatory Algebra

Course Description

Graphing, equations, inequalities, functions, and factoring. Focused preparation for MATH 1220, College Algebra.

Learning Outcomes

1. The student will be able to use properties of real numbers.
2. The student will be able to solve linear equations and inequalities.
3. The student will be able to understand and use the basic concepts of graphing linear equations and functions in two variables.
4. The student will be able to solve systems of linear equations.
5. The student will be able to apply the laws of exponents and perform operations using polynomials.
6. The student will be able to simplify expressions and solve equations containing rational expressions.
7. The student will be able to simplify expressions and solve equations containing rational exponents and radicals.
8. The student will be able to solve Quadratic Equations.

MATH 1217. General Supplemental Instruction I

Course Description

Collaborative workshop for students enrolled in Intermediate Algebra. S/U Grading (S/U, Audit).

Student Learning Outcomes

1. Intermediate Algebra Workshop provides time for students to work on problems from Intermediate Algebra under the guidance of their instructor.

MATH 1218. Foundations for Statistics

Course Description

Gives the student a deeper understanding of mathematics through classroom and group interaction. Students will read and understand the relevant scenarios from non-technical fields and be able to justify their findings and conclusions in multiple ways. An understanding of mathematical notation and equation solving will be emphasized. Students will use technology throughout the course to research, collect and analyze data as well as to make predictions and present findings.

Student Learning Outcomes

1. The student will use the language of statistics and apply the key elements to any statistical problem.
2. The student will utilize different methods for describing sets of data.
3. The student will develop an understanding of statistical probability as a measure of uncertainty.
4. The student will develop the notion of a random variable.

MATH 1220. College Algebra**Course Description**

The study of equations, functions and graphs, reviewing linear and quadratic functions, and concentrating on polynomial, rational, exponential and logarithmic functions. Emphasizes algebraic problem-solving skills and graphical representation of functions.

Student Learning Outcomes

Students will build on their knowledge of polynomial, rational, absolute value, radical, exponential and logarithm functions in the following contexts:

1. Use function notation; perform function arithmetic, including composition; find inverse functions.
2. Identify functions and their transformations given in algebraic, graphical, numerical, and verbal representations, and explain the connections between these representations.
3. Graph and interpret key feature of functions, e.g., intercepts, leading term, end behavior, asymptotes.
4. Solve equations algebraically to answer questions about graphs and use graphs to estimate solutions to equations.
5. Solve contextual problems by identifying the appropriate type of function given the context and creating a formula based on the information given.
6. Communicate mathematical information using proper notation and verbal explanations.

MATH 1220L. College Algebra Workshop**Course Description**

College Algebra Workshop provides time for students to work on problems from College Algebra under the guidance of their College Algebra instructor.

Student Learning Outcomes

Students will build on their knowledge of polynomial, rational, absolute value, radical, exponential and logarithm functions in the following contexts:

1. Use function notation; perform function arithmetic, including composition; find inverse functions.
2. Identify functions and their transformations given in algebraic, graphical, numerical, and verbal representations, and explain the connections between these representations.
3. Graph and interpret key features of functions, e.g., intercepts, leading term, end behavior, asymptotes.
4. Solve equations algebraically to answer questions about graphs and use graphs to estimate solutions to equations.
5. Solve contextual problems by identifying the appropriate type of function given the context and creating a formula based on the information given.

MATH 1221. General Supplemental Instruction II**On CCNS matrix for NMSU System, SENMC and SJC****Course Description**

Collaborative workshop for students enrolled in College Algebra. ~~S/U Grading (S/U, Audit).~~

Student Learning Outcomes

Not Available

MATH 1230. Trigonometry**Course Description**

A study of plane trigonometry including the definitions of the fundamental trig functions using right angle triangle and unit circle approaches. Trig functions of any real number will be evaluated, and the functions graphed along with their transformations. Trigonometric identities will be developed and demonstrated including multiple angle identities and identities developed from them. Inverse Trigonometric functions will be developed and used to solve trigonometric equations. Trigonometric applications will be solved using right angle trigonometry and the laws of sines and cosines. Trigonometric methods will be applied to complex numbers and the use of 2-D vectors and vector dot products.

Student Learning Outcomes

1. Students will be able to define and evaluate the trigonometric functions as functions of angle in both degree and radian measure using the definitions in terms of x , y , and r ; as the ratio of sides of a right triangle; using the unit circle; using reference angles, commonly used (0° , 30° , 45° , 60° , 90°) angles and using a calculator.
2. Students will be able to solve right triangles. They will be able to draw a sketch in an applied problem when necessary.
3. Students will be able to solve non-right triangles using the law of sines and the law of cosines.
4. Students will be able to prove trigonometric identities and apply addition and subtraction, double-angle, half-angle and power reduction formulas.
5. Students will be able to graph the six trigonometric functions, their transformations and their inverses.
6. Students will be able to use algebraic methods, including the use of identities and inverses, to solve trigonometric equations and demonstrate connections to graphical and numerical representations of the solutions.
7. Students will be able to add and subtract vectors in two dimensions. They will be able to use the dot product to project one vector onto another and to determine the angle between two vectors. They will be able to solve a variety of word problems using vectors.
8. Students will be able to work with polar coordinates; this includes graphing in polar coordinates and transforming an equation with polar coordinates into one with rectangular coordinates, and vice versa.
9. Students will be able to work with the trigonometric form of complex numbers, including using De Moivre's formula.

MATH 1240. Pre-Calculus

Course Description

This course extends students' knowledge of polynomial, rational, exponential and logarithmic functions to new contexts, including rates of change, limits, systems of equations, conic sections, and sequences and series.

Student Learning Outcomes

1. Functions
 - a. Reinforce recognizing a function from its graph and from its algebraic expression.
 - b. Reinforce identification of a one-to-one function graphically and from its algebraic expression.
 - c. Reinforce identification of inverse functions graphically and algebraically.
 - d. Reinforce combining functions arithmetically and compositionally.
 - e. Be able to calculate the average rate of change of a function using the difference quotient and depict it graphically.
 - f. Be able to find a limiting value of a function and be able to identify and use the notation that describes this.
2. Graphing
 - a. Reinforce using key characteristics of functions to graph them.
 - b. Be able to graph conic sections from their key characteristics such as foci, eccentricity and asymptotes.
 - c. Be able to identify all functions mentioned from their graphs, describing their key aspects.
3. Solving
 - a. Exponential/Logarithmic equations using the rules of exponents and logarithms
 - b. Systems of linear equations by elimination.
 - c. Non-linear systems algebraically and graphically.
4. Applications

- a. Modeling with functions with an emphasis on exponential and logarithmic functions, growth and decay.
- 5. Sequences and series
 - a. Understand the concept and notation of a sequence.
 - b. Understand the concept and notation of a series.
 - c. Be able to find limits of basic sequences.
 - d. Be able to find sums of basic series.

MATH 1250. Trigonometry & Pre-Calculus

Course Description

Trigonometry & Pre-Calculus includes the study of functions in general with emphasis on the elementary functions: algebraic, exponential, logarithmic, trigonometric and inverse trigonometric functions. Topics include rates of change, limits, systems of equations, conic sections, sequences and series, trigonometric equations and identities, complex number, vectors, and applications.

Note: 80% of course must include 80% of Trigonometry SLOs and 80% of Pre-Calculus SLOs.

Student Learning Outcomes - Trigonometry

1. Students will be able to define and evaluate the trigonometric functions as functions of angle in both degree and radian measure using the definitions in terms of x , y , and r ; as the ratio of sides of a right triangle; using the unit circle; using reference angles, commonly used (0° , 30° , 45° , 60° , 90°) angles and using a calculator.
2. Students will be able to solve right triangles. They will be able to draw a sketch in an applied problem when necessary.
3. Students will be able to solve non-right triangles using the law of sines and the law of cosines.
4. Students will be able to prove trigonometric identities and apply addition and subtraction, double-angle, half-angle and power reduction formulas.
5. Students will be able to graph the six trigonometric functions, their transformations and their inverses.
6. Students will be able to use algebraic methods, including the use of identities and inverses, to solve trigonometric equations and demonstrate connections to graphical and numerical representations of the solutions.
7. Students will be able to add and subtract vectors in two dimensions. They will be able to use the dot product to project one vector onto another and to determine the angle between two vectors. They will be able to solve a variety of word problems using vectors.
8. Students will be able to work with polar coordinates; this includes graphing in polar coordinates and transforming an equation with polar coordinates into one with rectangular coordinates, and vice versa.
9. Students will be able to work with the trigonometric form of complex numbers, including using De Moivre's formula.

Student Learning Outcomes - Pre-Calculus

1. Functions
 - a. Reinforce recognizing a function from its graph and from its algebraic expression.
 - b. Reinforce identification of a one-to-one function graphically and from its algebraic expression.
 - c. Reinforce identification of inverse functions graphically and algebraically.
 - d. Reinforce combining functions arithmetically and compositionally.
 - e. Be able to calculate the average rate of change of a function using the difference quotient and depict it graphically.
 - f. Be able to find a limiting value of a function and be able to identify and use the notation that describes this.
2. Graphing
 - a. Reinforce using key characteristics of functions to graph them.
 - b. Be able to graph conic sections from their key characteristics such as foci, eccentricity and asymptotes.
 - c. Be able to identify all functions mentioned from their graphs, describing their key aspects.
3. Solving
 - a. Exponential/Logarithmic equations using the rules of exponents and logarithms

- b. Systems of linear equations by elimination.
 - c. Non-linear systems algebraically and graphically.
- 4. Applications
 - a. Modeling with functions with an emphasis on exponential and logarithmic functions, growth and decay.
- 5. Sequences and series
 - a. Understand the concept and notation of a sequence.
 - b. Understand the concept and notation of a series.
 - c. Be able to find limits of basic sequences.
 - d. Be able to find sums of basic series.

MATH 1250L. Trigonometry & Pre-Calculus Laboratory

Course Description

Student Learning Outcomes

Not Available

MATH 1251. Trigonometry & Pre-Calculus Support

Course Description

Supports students in the study of algebra and other concepts necessary for success in MATH 1250.

This is the corequisite support option for Math 1250. Students are required to attend and work in appropriate/applicable software related to Math 1250. Students will build on their knowledge of linear and quadratic functions and will begin to build an understanding of absolute value, polynomial, rational, power, radical, exponential, and logarithmic functions.

Student Learning Outcomes:

1. Demonstrate appropriate use of basic function language and notation.
2. Convert between equivalent forms of algebraic expressions.
3. Solve single-variable equations of the types listed above.
4. Interpret and communicate algebraic solutions graphically and numerically.
5. Demonstrate contextual problem-solving skills that include setting up and solving problems and interpreting solutions in context.

MATH 1300. Statistical Literacy

Course Description

Participants will study social statistics encountered by consumers. Study statistics as numbers in context and as evidence in arguments. Study influences statistics and techniques to mitigate these influences. Strong focus on confounding.

Student Learning Outcomes

1. Can use ordinary English to distinguish association from causation and to form arithmetic associations of numbers and ratios.
2. Can identify and evaluate influences (confounding, assembly, randomness and error/bias) on a statistic.
3. Can identify, evaluate and use various techniques to take control of – or control for – these influences.
4. Can use ordinary English to describe and compare statistics as presented in statements, tables and graphs.
5. Can evaluate the strength of evidence provided by statistics in the everyday media, press releases and journal articles.

MATH 1350. Introduction to Statistics

Course Description

This course discusses the fundamentals of descriptive and inferential statistics. Students will gain introductions to topics such as descriptive statistics, probability and basic probability models used in statistics, sampling and statistical inference,

and techniques for the visual presentation of numerical data. These concepts will be illustrated by examples from a variety of fields.

Student Learning Outcomes

1. Explain the general concepts of statistics.
 - a. Explain and evaluate statistics used in the real world (from a news article, research project, etc.).
 - b. Use statistical vocabulary appropriately.
 - c. Distinguish between descriptive and inferential statistics.
 - d. Distinguish between qualitative and quantitative data.
 - e. Distinguish between populations and samples, and parameters and statistics.
 - f. Give examples of independent and dependent variables.
2. Presentation and description of data.
 - a. Present data graphically using histograms, frequency curves and other statistical graphs.
 - b. Interpret graphs of data, including histograms and shapes of distributions.
3. Summarize data using measures of central tendency and variation.
 - a. Calculate and interpret the mean, median, and mode to describe data.
 - b. Calculate and interpret range, variance, and standard deviation to describe data.
4. Present the concepts of probability.
 - a. Interpret basic probabilities.
 - b. Calculate probabilities using compound probability rules and the binomial distribution.
 - c. Calculate probabilities using the standard normal distribution and relate them to areas under the curve.
 - d. Determine if the binomial distribution can be approximated with the normal distribution.
 - e. Describe the relationship between the sampling distribution and the population distribution.
 - f. Use the central limit theorem to approximate the probability distribution and calculate probabilities.
5. Compute point and interval estimates.
 - a. Determine the confidence interval for a parameter.
 - b. Interpret the confidence level and margin of error.
 - c. Determine whether a statistical technique is appropriate under stated conditions.
6. Perform hypothesis tests.
 - a. Determine whether a statistical test is appropriate under stated conditions.
 - b. Identify null and alternative hypothesis.
 - c. Perform and interpret statistical tests (e.g., z-test, t-test, one-tailed and two-tailed, one-sample, two-sample) and determine whether data is statistically significant.
 - d. State the conclusion of a hypothesis test.
 - e. Interpret a p-value as compared to a significance level.
 - f. Explain why a test can lead us to reject a null hypothesis, not accept one.
 - g. Distinguish between Type I and Type II errors.
7. Analyze data using regression and correlation.
 - a. Explain the difference between correlation and causation.
 - b. Construct and interpret scatter plots.
 - c. Calculate and interpret the linear correlation coefficient.
 - d. Determine and use the equation of a least-squares regression line between two variables to make predictions.
 - e. Interpret the meaning of the coefficient of determination.
8. Optional topics.
 - a. Inter-quartile range, boxplots, stem-and-leaf plots.
 - b. Combinations and permutations.
 - c. The Poisson distribution.

- d. Statistical power.
- e. Chi-square.
- f. Analysis of variance.

MATH 1350L. Introduction to Data Analysis Using Technology

Course Description

The objective of this course is to expose students to basic data analysis techniques using computer methods to organize data, view and display data graphically for interpretation, to obtain statistics and to find proper tests for the interpretation of sampled data sets. Students learn various statistical diagnostics for analysis and interpretation in order to make comparisons between data sets. This course is supplemental to the main 1330 course which develops a detailed explanation of statistical practices. Graphic and computer methods for organizing and analyzing data are discussed using the Excel® spreadsheet software.

Student Learning Outcomes

1. Know how to use data sets, the variables within the dataset, their data type and how to import data sets between different software packages: Students will be able to know how to apply spreadsheet techniques to qualitative and quantitative datasets and understand basic sampling methods from populations.
2. Present data in graphically and descriptively using a spreadsheet software package: This means the student will be able to use graphical techniques to present data (e.g., histograms, boxplots), calculate descriptive statistics of datasets (means, standard deviations, medians), and to normalize datasets using the Z-score.
3. Compute models two-variable data using regression using a spreadsheet software package: Students will be able to obtain a regression line of a two-variable dataset, know how to calculate the correlation and r-squared values of a regression function, create scatter diagrams and be able to interpret potential regression functions that model the data. Student will also understand the ideas about residuals and residual plots using the software.
4. Know the concept of probability distributions using software: Students will be able to create probability distributions for discrete data sets and calculate probabilities using the spreadsheet software. Students will be able to understand the difference between sampling, population and data distributions, and understand the Central Limit Theorem.
5. Compute interval estimates for a point estimator (Mean, and Proportion) using spreadsheet software: Using computer software, students are able to estimate the population mean for a quantitative variable from the sample's estimated mean value and its associated confidence-interval: estimate the population proportion for a qualitative variable from the sample's proportion value and its associated confidence-interval: know how to calculate a sample size given a margin of error for a random variable, and explain the meaning of confidence level and margin of error. Students will perform exploratory data analysis using software to find potential outliers and skewed data distributions.
6. Perform hypothesis tests using spreadsheet software: Students will be able to perform a z-test or t-test to determine the validity or non-conclusive decision of a claim or conjecture about a population parameter, know the difference between Type-I and Type-II errors, and be able to explain the meaning of significance, the P-value and the significance level.

MATH 1351. Introduction to Statistics Support

Course Description:

Instructs students in the knowledge of basic mathematics necessary for success in Math 1350, Introduction to Statistics. Topics include basic computation of real numbers, rounding, simplifying expressions and fractions, solving simple algebraic equations, interval notation, inequalities, decimals, finding percent, scientific notation, properties of sets, slope-intercept form, absolute value, and other topics necessary for the calculation and interpretation of statistical formulas.

Student Learning Outcomes:

1. Basic computation of real numbers

- a. Identify rational and irrational numbers and subsets of real numbers (natural numbers, whole numbers, integers, etc.)
 - b. Add, subtract, multiply, and divide real numbers
 - c. Applying order of operations
 - d. Problem solving with real numbers
 - e. Plot numbers on the real number line
 - f. Compare real numbers using inequalities (less than, less than or equal to, greater than, etc.)
 - g. Convert inequalities to interval notation and interval notation to inequalities
 - h. Convert numbers between standard and scientific notation
2. Fractions, Decimals, and Percent
 - a. Convert between fractions and mixed numbers
 - b. Convert from decimal to fraction and fraction to decimal
 - c. Convert between fraction and percent and percent to fraction
 - d. Perform division, multiplication, addition, and subtraction of fractions and decimal numbers
 - e. Reduce fractions
 - f. Find Least Common Multiple
3. Properties of Sets
 - a. Find the union, intersection, and complement of sets
 - b. Recognize and apply the correct notation for sets
 - c. Express sets in set-builder notation
 - d. Represent sets visually using Venn diagrams
4. Algebraic Expressions, Equations, and Inequalities
 - a. Translate a verbal/written model to an algebraic model
 - b. Evaluate algebraic expressions
 - c. Manipulate algebraic expressions using commutative, associative, and distributive properties
 - d. Simplify algebraic expressions using the order of operations
 - e. Solve linear equations
 - f. Manipulate algebraic formulas
 - g. Solve word problems using linear equations
 - h. Graph linear equations
 - i. Solve linear inequalities
 - j. Express compound inequalities using inequality notation and graphically on the real number line
5. Absolute Value
 - a. Find the absolute value of a real number
 - b. Solve absolute value equations and inequalities
 - c. Graph solutions of absolute value equations on the real number line
 - d. Express solutions of absolute value equations using interval notation
6. Exponential and Radical Expressions
 - a. Evaluate an exponential and radical expression
 - b. Perform operations on exponential and radical expressions
 - c. Simplify exponential expressions using the rules of exponents
7. Cartesian Coordinate System and linear equations
 - a. Plot ordered pairs on the x-y plane
 - b. Create a scatter plot

- c. Graph linear equations
 - d. Express a linear equation in slope-intercept form
 - e. Calculate and interpret slope
8. Other topics may include
- a. Perform operations using scientific notation
 - b. Analyze graphs and tables
 - c. Compute area of simple geometric shapes such as rectangles and triangles

MATH 1430. Applications of Calculus I

Course Description

An algebraic and graphical study of derivatives and integrals, with an emphasis on applications to business, social science, economics and the sciences.

Student Learning Outcomes

Students will:

1. Find limits algebraically and graphically and use limits to analyze continuity.
2. Find the derivative of a function by applying appropriate techniques (limit of the difference quotient, general derivative rules, product rule, quotient rule, chain rule, and higher order derivatives).
3. Perform implicit differentiation. Use implicit differentiation to solve related rate application problems.
4. Use the derivative to describe the rate of change and slope of a curve in general and at particular points. Compare and contrast average rates of change to instantaneous rates of change.
5. Find the maxima, minima, points of inflections, and determine concavity of a function by applying the first and second derivatives. Use these results to sketch graphs of functions and to solve optimization problems in context.
6. Find the antiderivative and indefinite integral functions to include integration by substitution. Apply the Fundamental Theorem of Calculus in computing definite integrals of functions.
7. Approximate the area under the curve using Riemann sums.
8. Use the integral to determine the area under a curve and to find the accumulated value of a function in context.
9. Solve contextual problems by identifying the appropriate type of function given the context, creating a formula based on the information given, applying knowledge of algebra and calculus, and interpreting the results in context.
10. Communicate mathematical information using proper notation and verbal explanations.

MATH 1435. Applications of Calculus I

Course Description

Intuitive differential calculus with applications to engineering.

Student Learning Outcomes

Students will:

1. Find limits algebraically and graphically and use limits to analyze continuity.
2. Find the derivative of a function by applying appropriate techniques (limit of the difference quotient, general derivative rules, product rule, quotient rule, chain rule, and higher order derivatives).
3. Learn derivative rules for polynomial, exponential, logarithmic, trigonometric and inverse trigonometric functions.
4. Perform implicit differentiation. Use implicit differentiation to solve related rate application problems.
5. Find the maxima, minima, points of inflections, and determine concavity of a function by applying the first and second derivatives. Use these results to sketch graphs of functions and to solve optimization problems in context.
6. Find partial derivatives and find maxima, minima in three dimensions.
7. Find the linear approximation of a function.
8. Find Maclaurin and Taylor series.
9. Find limits via L'Hospital's rule.
10. Communicate mathematical information using proper notation and verbal explanations.

MATH 1440. Applications of Calculus II

Course Description

Topics in this second course of Applications of Calculus include functions of several variables, techniques of integration, an introduction to basic differential equations, and other applications.

Student Learning Outcomes

Students will:

1. Find definite and indefinite integrals using integration by parts, integral tables, and numerical integration.
2. Analyze multivariable functions using partial derivatives and double integrals, and apply these techniques to applications such as optimization, least squares, and volumes.
3. Solve differential equations graphically, numerically, and algebraically using separation of variables, and apply differential equations in context.
4. Apply differentiation and integration to other areas, for example to Taylor polynomials and Taylor series, probability, trigonometric functions, etc.

MATH 1480. Exploring Careers in Mathematics

Course Description

Introduction and preparation for students planning to major in Mathematics or Statistics. The course will emphasize career options, concentrations, research and job opportunities. We will also perform activities to engage students in the mathematical area.

Student Learning Outcomes

1. Identify and describe a range of career options in mathematics, including roles in academia, industry, government, and non-profit sectors.
2. Demonstrate an understanding of how certain core mathematical concepts, such as statistics, mathematical modeling, algebra, calculus, and discrete math, are applied in real-world job environments.
3. Analyze the educational qualifications necessary for various mathematical careers, including the value of advanced degrees, certifications, and specialized training.
4. Engage in self-reflection to identify their personal interests and strengths within the field of mathematics, which will help inform their decisions on potential career paths.

MATH 1510. Calculus I

Course Description

Introduces the intuitive, numerical and theoretical concepts of limits, continuity, differentiation and integration. Includes the study of extrema, curve sketching, and applications involving algebraic, exponential, logarithmic and trigonometric functions. Designed for mathematics, science and engineering majors.

Student Learning Outcomes

1. Limits
 - a. Use limit notation.
 - b. Compute limits or determine when a limit does not exist.
 - c. Use limits to decide if a function is continuous.
 - d. Use limits to decide if a function is differentiable.
 - e. Use limits to determine asymptotes.
2. Derivatives
 - a. Determine the derivative of a simple function, at a point as well as more generally, using the definition of the derivative.
 - b. Determine the derivatives of algebraic and transcendental functions using the General Power, Product, Quotient, Chain Rules, implicit differentiation and the linearity of the differential operator.

- c. Describe the meaning of the derivative as a rate of change in a variety of contexts.
 - d. Use derivatives to sketch graphs of functions with details showing critical points and their natures, inflection points, noting monotonicity, and concavity, connecting these to features found algebraically, such as intercepts and asymptotes.
 - e. Compute local linear approximation.
3. Integrals
- a. Compute definite integrals using the limit definition and sigma notation.
 - b. Approximate definite integrals using finite sums.
 - c. Compute indefinite integrals by identifying them with antiderivatives.
 - d. Compute definite and indefinite integrals using substitution.
 - e. Describe the meaning of the integral in a variety of contexts.
4. Applications of calculus
- a. Solve optimization problems, related rate problems and motion problems involving position, velocity, speed and acceleration using differentiation and integration.
 - b. Compute area bounded by functions and vertical lines.
 - c. Be able to apply theorems of calculus such as the Fundamental Theorem, the Intermediate Value Theorem, the Mean Value Theorem, the Mean Value Theorem of Integration, and the Extreme Value Theorem.

MATH 1511. Calculus and Analytic Geometry I

Course Description

Limits and continuity, theory and computation of derivatives, applications of derivatives, extreme values, critical points, derivative tests, L'Hopital's Rule.

Student Learning Outcomes

1. The goals are to present the concepts of calculus, stressing techniques, applications, and problem solving, and emphasizing numerical aspects such as approximations and order of magnitude.
2. Overall, the goals are to illustrate the power of calculus as a tool for modeling situations arising in physics, science, engineering and other fields.
3. In fulfillment of these goals, this and later courses will stress topics such as polynomial approximation, setting up integrals, as well as the use of appropriate technology

MATH 1512. Calculus I

Course Description

Limits. Continuity. Derivative: definition, rules, geometric interpretation and as rate-of-change, applications to graphing, linearization and optimization. Integral: definition, fundamental theorem of calculus, substitution, applications such as areas, volumes, work, averages.

Student Learning Outcomes

Students that successfully complete the course, will, by the end of the course, be able to

1. State, motivate and interpret the definitions of continuity, the derivative, and the definite integral of a function, including an illustrative figure, and apply the definition to test for continuity and differentiability. In all cases, limits are computed using correct and clear notation. Student is able to interpret the derivative as an instantaneous rate of change, and the definite integral as an averaging process.
2. Use the derivative to graph functions, approximate functions, and solve optimization problems. In all cases, the work, including all necessary algebra, is shown clearly, concisely, in a well-organized fashion. Graphs are neat and well-annotated, clearly indicating limiting behavior. English sentences summarize the main results and appropriate units are used for all dimensional applications.
3. Graph, differentiate, optimize, approximate and integrate functions containing parameters, and functions defined piecewise. Differentiate and approximate functions defined implicitly.

4. Apply tools from pre-calculus and trigonometry correctly in multi-step problems, such as basic geometric formulas, graphs of basic functions, and algebra to solve equations and inequalities.
5. State the main theorems of calculus correctly, including all conditions, and give examples of applications. These include the Intermediate Value Theorem, the Mean Value Theorem, the Extreme Value Theorem, and the Fundamental Theorem of Calculus.
6. Solve simple first and second order differential equations, either initial or boundary value problems, including problems where the derivative is given by a piecewise function, or when the initial value problem is described in words, such as in applications from physics, biology and engineering. Be familiar with the harmonic oscillator and describe period, amplitude, and phase shift of the trigonometric functions that appear.
7. Compute integrals using the method of substitution, including changing the bounds in the case of definite integrals.

MATH 1520. Calculus II

Course Description

Continues course of study begun in Calculus I. Covers integration techniques, numerical integration, improper integrals, some differential equations, sequences, series and applications.

Student Learning Outcomes

1. Integration
 - a. Determine the indefinite integrals and compute definite integrals of algebraic and transcendental functions using various techniques of integration including integration by parts, trigonometric substitution, and partial fraction decomposition.
 - b. Compute improper integrals using the appropriate limit definitions.
 - c. Solve problems involving separable differential equations.
2. Sequences and Series
 - a. Compute the limit of sequences.
 - b. Compute the sum of a basic series using its n th partial sum.
 - c. Compute the sum of geometric and telescoping series.
 - d. Determine if a series converges using the appropriate test, such as the n th term, integral, p -series, comparison, limit comparison, ratio, root, and alternating series tests.
 - e. Determine if a series converges absolutely, converges conditionally or diverges.
3. Properties of power series
 - a. Compute the radius and interval of convergence of a power series.
 - b. Compute the Taylor polynomials of functions.
 - c. Compute basic Taylor series using the definition.
 - d. Compute Taylor series using function arithmetic, composition, differentiation, and integration.
 - e. Compute limits with Taylor series.
 - f. Approximate definite integrals with Taylor series and estimate the error of approximation.
 - g. Determine the sum of a convergent series using Taylor series.
4. Applications of integration
 - a. Compute volumes and areas of surfaces of solids of revolution.
 - b. Compute length of curves.
 - c. Apply integration using alternative coordinate forms and using a parameter.

MATH 1521. Calculus and Analytic Geometry II

Course Description

Riemann sums, the definite integral, antiderivatives, fundamental theorems, techniques of integration, applications of integrals, improper integrals, Taylor polynomials, sequences and series, power series and Taylor series.

Student Learning Outcomes

1. Recognize the interplay between Riemann sums and definite integrals
2. Use the Fundamental Theorem of Calculus to compute definite and indefinite integrals
3. Demonstrate and understand of the relationship between the derivative and the definite integral
4. Evaluate integrals numerically using standard rules (midpoint, trapezoid, Simpson's)
5. Evaluate integrals analytically using standard methods (substitution, integration by parts, trigonometric substitution and identities, inverse functions and partial fractions
6. Use integration to solve problems in geometry, physics, science, engineering and other fields
7. Use appropriate methods such as L'Hôpital's Rule to evaluate improper integrals
8. Approximate functions using Taylor polynomials
9. Apply standard tests to determine convergence or divergence of sequences and series
10. Find a power series representation for a function and determine where it converges
11. Identify and evaluate first order differential equations

MATH 1522. Calculus II

Course Description

Transcendental functions, techniques of integration, numerical integration, improper integrals, sequences and series, Taylor series with applications, complex variables, differential equations.

Student Learning Outcomes

Students that successfully complete the course, will, by the end of the course, be able to

1. Know the definitions, graphs, special values, derivatives and integrals (when possible) of transcendental functions, including exponential, logarithmic, inverse trigonometric and hyperbolic functions.
2. Use the methods of substitution, integration by parts, partial fractions and trigonometric substitution to compute proper and improper integrals. Evaluate improper integrals using correct mathematical limit notation.
3. Use rectangles or trapezoids to approximate integrals. Explain the difference between a first order and a second order approximation method.
4. Solve separable differential equations. Plot direction fields and solution curves. Find equilibrium solutions.
5. State the definition of the value of a series, as well as necessary conditions for convergence. Use the definition to determine the value of a series. Determine the value of known Taylor series at particular points. State various tests for convergence, including all conditions, and apply them. Approximate alternating series and estimate the error.
6. Determine the asymptotic behavior of functions $f(x)$ as $x \rightarrow \pm\infty$, and the limit of indeterminate forms.
7. State the definition of the Taylor series of a function and describe its properties. Find Taylor series using the definition, or by substitution into, or differentiation or integration of known series, and determine their interval/radius of convergence. Approximate functions by Taylor polynomials within the domain of convergence and estimate the error. Include approximations of definite integrals or quantities depending on parameters, such as arise in applications in physics, biology and engineering.
8. Use Taylor series to derive Euler's formula for the exponential of a complex number. Evaluate sums, products, powers, roots, and exponentials of complex numbers. Evaluate integrals of complex functions.

MATH 1526. Vector Calculus

Course Description

An introduction to topics in two and three dimensions of vector calculus such as curl and divergence, line integrals and surface integrals, the Fundamental Theorem of Line Integrals, Green's Theorem, Stokes' Theorem and the Divergence Theorem will be covered.

Student Learning Outcomes

1. Compute line integrals and test for independence of path
2. State and use Green's Theorem, Stokes' Theorem, and the Divergence Theorem.

MATH 1531. Introduction to Higher Mathematics**Course Description**

Logic; sets, relations, and functions; introduction to mathematical proofs.

Student Learning Outcomes

1. The primary objective of this course is to serve as a bridge between the calculus courses you have taken, where the focus is on computations and solving problems, to more abstract mathematics courses.
2. In particular, we will discuss logical reasoning, definitions, proofs, and certain basic building blocks such as sets, functions, and relations.
3. By the end of the course, you should be able to understand and construct well--written proofs of basic mathematical arguments involving simple properties of the real numbers, integers, sets, functions, and relations using universal and existential quantifiers, absolute values and inequalities, modular arithmetic, and proof by induction.

MATH 1991. Undergraduate Research Experience in Math**Course Description**

Varies

Student Learning Outcomes

Varies

MATH 1996. Mathematics Topics**Course Description**

Topics to be announced in the Schedule of Classes. Maximum of 3 credits per semester.

Student Learning Outcomes

Varies

MATH 2088. Math Specialty**Course Description**

This course is used to transfer approved courses from other colleges and universities.

Student Learning Outcomes

Not Available

MATH 2110. Math for Teachers III**Course Description**

Investigates algebra from the viewpoint of the elementary curriculum with an emphasis on proportional and linear relationships. Connections to statistics, probability, data analysis, and geometry from the elementary curriculum are included. Problem solving is emphasized throughout.

Student Learning Outcomes

1. Analyze arithmetic.
Component 1: Graph functions.
Component 2: Analyze the behavior of different operations.
Component 3: Recognize operations required by problems involving geometric figures.
2. Apply mathematical concepts.
Component 1: Recognize growth factors in different dimensions.
Component 2: Solve problems involving congruent and similar objects.
Component 3: Analyze linear functions.
Component 4: Interpret probabilities.
3. Represent mathematical concepts.

Component 1: Interpret the results of probability experiments.

Component 2: Design simulations.

Component 3: Draw the image of a polygon given a specific transformation.

Component 4: Create graphs showing data.

Component 5: Create graphs of functions.

4. Communicate mathematical concepts.

Component 1: Use correct terminology and notation.

Component 2: Describe geometric objects including shapes and transformations.

Component 3: Translate between symbols, graphs, and verbal descriptions

Component 4: Describe data using graphs and descriptive statistics.

MATH 2115. Math for Middle School Teachers

Course Description

Development of mathematical concepts from the viewpoint of the middle school curriculum. Topics include: in-depth development of algebraic thinking, connections between algebra and geometry, and applications. Problem solving is emphasized throughout.

Student Learning Outcomes

Course Goal 1: Extend understanding of numbers and operations.

SLO 1.1: Analyze and perform operations on number sets beyond positive rationals and on variables.

SLO 1.2: Use visual models and symbols to represent real numbers and variables and their operations and move flexibly between representations.

Course Goal 2: Identify and use mathematical reasoning to explore deeper structure of algebra and geometry.

SLO 2.1: Analyze student work, validity of arguments, mathematical misconceptions.

SLO 2.2: Appropriately use and interpret algebraic problem-solving strategies and graphical representations.

SLO 2.3: Use informal arguments to explain geometric relationships (ex. transformations and Pythagorean Theorem).

SLO 2.4: Use informal arguments to explain 3-D geometry and measurement concepts.

Course Goal 3: Apply and extend understanding of algebra and geometry.

SLO 3.1: Apply proportional reasoning to solve application problems in the area of statistics and probability.

SLO 3.2: Solve application problems using algebraic reasoning and geometric models.

MATH 2118. Math for Elementary and Middle School Teachers III

Course Description

Algebra from the viewpoint of the elementary curriculum with emphasis on proportional and linear relationships. Also included: data analysis and other topics with connections to the elementary curriculum. Problem solving is emphasized throughout.

Student Learning Outcomes

Course Goal 1: Understand data analysis from the viewpoint of elementary school curriculum, such as making and interpreting dot plots, pictographs, and bar graphs.

SLO 1: By the end of the course, students will be able to display, analyze, and interpret data.

Course Goal 2: Know how to use appropriate vocabulary, notation, and reasoning in valid mathematical explanations.

SLO 2: By the end of the course, students will be able to construct valid mathematical explanations.

Course Goal 3: Understand problem solving in the context of mathematical applications.

SLO 3: By the end of the course, students will be able to model and solve a variety of mathematical applications using various approaches relevant to the K-8 curriculum.

Course Goal 4: Understand the interconnectedness of elementary mathematical concepts and relate these concepts to application problems.

SLO 4: By the end of the course, students will be able to describe real-world situations that model expressions and equations.

Course Goal 5: Understand algebraic concepts from the viewpoint of elementary school curriculum.

SLO 5: By the end of the course, students will be able to demonstrate understanding of algebraic concepts of the K-8 curriculum.

MATH 2132. Understanding Elementary Math I

Course Description

This is the first of two courses that focus on developing the mathematical understanding of students who are preparing to be licensed as Elementary Teachers.

Student Learning Outcomes

Chapter 1 Objectives (Mathematics and Problem Solving)

Students will be able to understand and explain:

1. The four-step problem solving process.
2. How to solve problems using various problem-solving strategies.
3. Finding patterns and determining if a pattern holds.
4. Deductive and inductive reasoning and when to use them.
5. Different types of sequences, such as arithmetic and geometric.
6. Finding the n th term of certain sequences.
7. Using differences to find a pattern for neither arithmetic nor geometric sequences.

Chapter 2 Objectives (Introduction to Logic and Sets)

Students will be able to understand and explain:

1. Quantifiers and their effects on statements.
2. Different forms of statements.
3. How to determine if two statements are logically equivalent.
4. How to develop logical arguments.
5. How to determine whether an argument is valid.
6. Set language and structure as applied to elementary mathematics.
7. Connections between finite sets and whole numbers.
8. Uses of one-to-one correspondence.
9. Relations between set operations and logic connectives.
10. Properties of set and logic operations.
11. Venn diagrams to sort and reason with data.

Chapter 3 Objectives (Numeration Systems and Whole Number Operations)

Students will be able to understand and explain:

1. Numbers, their origin, and their representation in numerals and models.
2. Different numeration systems, including the Hindu-Arabic system.
3. Place value and counting in base ten and other bases.
4. Issues in learning with different numeration systems.
5. Number relationships including comparing and ordering.
6. The meaning of addition and subtraction by studying various models and in turn learn addition and subtraction facts.
7. Properties of addition and subtraction and how to use them to develop computational strategies.
8. The inverse relationship between addition and subtraction.
9. Meanings of multiplication and division by examining various models.
10. The inverse relationship between multiplication and division.
11. Properties of multiplication and division and how to use them to develop computational strategies.
12. The special cases of multiplication and division by 0 and 1.

13. Models to develop algorithms for addition and subtraction.
14. Addition and subtraction algorithms including the standard algorithms and how to use them to solve problems.
15. Number bases other than ten to provide insight into base-ten algorithms.
16. Mental addition and subtraction computational skills and estimation techniques to check reasonableness of answers.
17. Properties of exponents and how these can be used to develop multiplication and division algorithms.
18. Models to develop algorithms for multiplication and division.
19. Multiplication and division algorithms and how to use them to solve problems.
20. Bases other than ten to provide insight into base-ten multiplication and division.
21. Mental multiplication and division skills and estimation techniques.

Chapter 4 Objectives (Number Theory)

Students will be able to understand and explain:

1. Divisibility, factors, and multiples.
2. Divisibility tests for 2, 3, 4, 5, 6, 8, 9, 10, and 11.
3. That the set of factors is finite, and the set of multiples is infinite for any given natural number.
4. Prime and composite numbers.
5. The number of divisors of any whole number.
6. The Fundamental Theorem of Arithmetic.
7. The factorization of whole numbers.
8. The greatest common divisor and the least common multiple of two or more whole numbers by using a variety of methods.
9. Applications of GCD and LCM to word problems and their solutions.
10. The Euclidean algorithm in relation to the greatest common divisor.

Chapter 5 Objectives (Integers)

Students will be able to understand and explain:

1. The meaning of the integers and their representation on a number line.
2. Models for addition and subtraction of integers.
3. Properties of addition and subtraction of integers.
4. Models for multiplication of integers.
5. Properties of multiplication of integers.
6. Integer division.
7. Order of operations on integers.
8. Inequalities with integers.

Chapter 6 Objectives (Rational Numbers and Proportional Reasoning)

Students will be able to understand and explain:

1. Different representations for rational numbers.
2. Equal fractions, equivalent fractions, and the simplest form of fractions.
3. Ordering of rational numbers.
4. Denseness property of rational numbers.
5. Addition and subtraction of rational numbers with like and unlike denominators.
6. Rational numbers as mixed numbers.
7. Properties of addition and subtraction of rational numbers.
8. Estimation with rational numbers.
9. Multiplication and division of rational numbers.
10. Properties of multiplication and division of rational numbers.
11. Estimation of multiplication and division with rational numbers.
12. Extension of exponents to include negative integers.

13. Ratios and their relation to rational numbers.
14. Proportions and their properties.
15. Scaling.

Chapter 7 Objectives (Rational Numbers as Decimals and Percent)

Students will be able to understand and explain:

1. Decimal notation.
2. Connections between fractions and decimals using various models and strategies.
3. Why terminating decimals occur and how to tell if a decimal will terminate.
4. Ordering terminating decimals.
5. How concrete models, drawings, and strategies can be used to develop efficient algorithms for decimal operations.
6. Exponential and scientific notation for decimals.
7. Strategies for decimal mental computations and estimations.
8. Why repeating decimals occur and how to tell if a decimal will repeat.
9. How a fraction can be converted to a repeating decimal and vice versa.
10. Ordering repeating decimals efficiently.
11. That $0.999999 \dots = 1$ and investigate various ways to show this is true.
12. Fractions, decimals, and percents as representations of rational numbers with conversions from one form to another.
13. Proportional relationships to solve percent problems.
14. Techniques to solve problems including discounts, interest, compound interest, and percent increase and decrease.
15. Strategies for percent mental computation and estimation.

MATH 2133. Understanding Elementary Math II

Course Description

This is the second of two courses that focus on developing the mathematical understanding of students who are preparing to be licensed as Elementary Teachers.

Student Learning Outcomes

Chapter 8 Objectives (Real Numbers and Algebraic Thinking)

Students will be able to understand and explain:

1. Real numbers
2. Operations on real numbers
3. n th roots and in particular square roots
4. how and are defined and why they are defined in this way
5. Expressions involving radicals and radical exponents
6. Variables to translate word phrases into algebraic expressions
7. Solving equations and word problems
8. The formulas for the n th term of arithmetic and geometric sequences
9. Properties of equality and equations
10. Solutions of equations using properties of equations
11. Solutions of word problems
12. The concept of a function including domain and range
13. Different representations of functions
14. Derivation of the formulas for the sum of n terms arithmetic and geometric sequences
15. The concept of a relation

Chapter 9 Objectives (Probability)

Students will be able to understand and explain:

1. How probabilities are determined

2. Experimental or empirical probabilities versus theoretical probabilities
3. Properties of probabilities
4. Mutually exclusive and non-mutually exclusive events
5. Geometric probabilities
6. Multistage experiments
7. Independent events
8. Conditional probability
9. Modeling games
10. Simulations in probability
11. Odds
12. Expected value

Chapter 10 Objectives {Data Analysis/Statistics}

Students will be able to understand and explain:

1. Designing experiments to collect data
2. Variability in data and how it relates to the study of statistics
3. The difference between a survey population and a sample population
4. Biased questions
5. Simple data analysis methods and interpretation across grade levels
6. Categorical and numerical data
7. Simple plots and graphs
8. Stem and leaf plots
9. Histograms and bar graphs
10. Circle graphs
11. Line graphs
12. Scatterplots for two variables
13. Relationship between a pair of variables using a scatterplot
14. Trend lines
15. Positive association, negative association, and no association

Chapter 11 Objectives (Introductory Geometry)

Students will be able to understand and explain:

1. Basic undefined and defined terms in geometry
2. Basic geometrical shapes and learn the notation associated with each shape
3. Attributes and properties of basic geometrical shapes and the relationships among them
4. Names, classifications, and measurement of angles
5. Properties of polygons
6. Naming and classifying triangles and quadrilaterals
7. Hierarchy among selected polygons
8. Symmetries and their relation to planar figures
9. Vertical, supplementary, and complementary angles
10. Parallel lines and angles associated with them
11. Measures of interior and exterior angles of polygons
12. Simple closed surfaces and polyhedral
13. How to draw three-dimensional shapes
14. Why there are only five regular polyhedral
15. Simple closed surfaces that are not polyhedral

Chapter 12 Objectives (Congruence and Similarity with Constructions)

Students will be able to understand and explain:

1. Geometric constructions leading to the SSS, SAS, and HL congruence properties
2. Isosceles triangle properties
3. Altitudes and perpendicular bisectors
4. Circles circumscribing triangles and quadrilaterals
5. Geometric constructions leading to the ASA and AAS congruence properties
6. Properties of quadrilaterals
7. Similar figures
8. Theorems for determining similarity for triangles
9. Properties of proportion for similar triangles
10. Indirect measurements using similar triangles

Chapter 14 Objectives (Area, Pythagorean Theorem, and Volume)

Students will be able to understand and explain:

1. The English system of linear measures
2. The metric system of linear measures
3. Conversions among measures
4. Dimensional analysis
5. Perimeter and circumference
6. Ratios of linear measures of similar figures
7. Areas of rectangles, parallelograms, triangles, kites, trapezoids, regular polygons, circles, and sectors of circles
8. Conversion of area units
9. Ratio of area measures of similar figures
10. Pythagorean theorem and its converse
11. Measures of sides in special right triangles
12. Distance formula
13. Equation of a circle
14. Surface areas of right prisms, right circular cylinders, right regular pyramids, right circular cones, and spheres
15. Volumes of prisms, cylinders, pyramids, cones, and spheres
16. Converting metric measures of volume
17. Converting English measures of volume
18. Ratios of volumes of similar figures
19. Measures of mass and capacity
20. Measures of temperature

MATH 2134. Fundamentals of Elementary Math II

Course Description

Geometry and measurement. Multiple approaches to solving problems and understanding concepts in geometry. Analyzing and constructing two- and three-dimensional shapes. Measurable attributes, including angle, length, area, and volume. Understanding and applying units and unit conversions. Transformations, congruence, and symmetry. Scale factor and similarity. Coordinate geometry and connections with algebra. Reasoning and communicating about geometric concepts. Taught primarily through student activities and investigations.

Student Learning Outcomes

1. The primary objectives are mathematical: to understand some of the basic concepts of geometry, and measurement with an appropriate level of rigor; to appreciate the historical, cultural and educational contributions and potential applications in real life situations; and to gain problem solving skills using these concepts.
2. The secondary goal is to appreciate the importance of this material in the elementary school curriculum.

MATH 2140. Introduction to Numerical Computing

Course Description

This course will introduce solutions of non-linear equations of one variable, solutions of linear equations in many variables (matrices), interpolation, approximation of integration and differentiation of functions, computational solutions of initial-value problems for ordinary differential equations, and programming with mathematical software.

Student Learning Outcomes

At the end of this course the student will be able to:

1. Find roots of non-linear equations
 - a. Bisection
 - b. Newton-Raphson
 - c. Secant
2. Interpolate functions using
 - a. Lagrange polynomials
 - b. Hermite polynomials
 - c. Cubic splines
3. Numerically differentiate functions
4. Numerically integrate functions with
 - a. Trapezoid rule
 - b. Simpsons rule
5. Solve initial-value problems
 - a. Euler's method
 - b. Runge-Kutta
6. Solving linear equations
 - a. Gaussian elimination
 - b. Iterative methods

MATH 2234. Fundamentals of Elementary Mathematics III**Course Description**

Probability, statistics, ratios, and proportional relationships. Experimental and theoretical probability. Collecting, analyzing, and displaying data, including measurement data. Multiple approaches to solving problems involving proportional relationships, with connections to number and operation, geometry and measurement, and algebra. Understanding data in professional contexts of teaching. Taught primarily through student activities and investigations.

Student Learning Outcomes

1. In order to teach a subject well you need not only to know the material that you will teach, but you need to know more than what you will teach, and know it well, in order to be able to answer questions, give alternate explanations when your students do not understand something, and be able to adjust to changes in the mathematical curriculum.
2. Furthermore, even if you hope to teach a certain grade, you should be prepared to teach anything between kindergarten and 8th grade.
3. You also need to be aware of where a student is coming from in order to make adjustments in their curriculum.
4. A strong elementary school teacher must understand where his/her students are headed in order to most effectively direct them there.
5. This is especially true in mathematics, where students continue to build on the concepts they learn each year.

MATH 2350. Statistical Methods**Course Description**

Exploratory data analysis. Introduction to probability, random variables and probability distributions. Concepts of Central Limit Theorem and Sampling Distributions such as sample mean and sample proportion. Estimation and hypothesis testing single population parameter for means and proportions and difference of two population parameters for means and proportions. Analysis categorical data for goodness of fit. Fitting simple linear regression model and inference for regression parameters. Analysis of variance for several population means. Techniques in data analysis using statistical packages.

Student Learning Outcomes

1. Summarize Data through graphs and Descriptive statistics.
 - a. Define qualitative and quantitative data.
 - b. Provide examples of a population, a sample, independent and dependent variables, parameters and statistics.
 - c. Construct and interpret histograms, stem plots, bar charts, and boxplot.
 - d. Summarize distributions with numerical measures such as mean, median, standard deviation, percentiles, interquartile range.
2. Present the concepts of probability.
 - a. Explain related to probability axioms (e.g., mutually exclusive events and independent events).
 - b. Apply applications of probability rules.
 - c. Apply Conditional probability and Bayes Rule.
3. Distinguish between discrete and continuous random variables.
 - a. Calculate probabilities using Binomial and Poisson distributions.
 - b. Calculate probabilities using the standard normal distribution by finding the area underneath the curve.
4. Explain the Central Limit Theorem.
 - a. Introduce the concept of a sampling distribution.
 - b. Discuss the distribution of the sample mean and sample proportion under repeated sampling.
 - c. Generate and interpret a sampling distribution using repeated sampling.
 - d. Determine if the Binomial and Poisson distribution can be approximated with the normal distribution.
5. Estimate a population parameter.
 - a. Determine confidence interval for population mean, proportion, difference of means, and difference of proportions.
 - b. Interpret the confidence interval and margin of error.
 - c. Explain the dependence of margin of error on sample size and confidence level.
6. Perform hypothesis tests for population parameters (population mean, proportion, difference of means, and difference of proportions).
 - a. Describe the logic and framework of the inference of hypothesis testing.
 - b. Make a decision using a p-value and draw an appropriate conclusion.
 - c. Distinguish between Type I and Type II errors.
 - d. Explain power of the test.
7. Perform Hypothesis Tests for Categorical data.
 - a. Determine and analyze Chi-square test for Independence.
 - b. Determine and analyze Chi-square test for Goodness of fit.
8. Analyze data using regression and correlation.
 - a. Construct scatterplots and analyze the scatter plots.
 - b. Calculate the linear correlation coefficient and determine whether a linear relationship exists between two variables.
 - c. Fit the least-squares regression line between two variables.
 - d. Predict the response variable from the regression line.
 - e. Apply statistical inference to regression parameters.
9. Perform analysis of variance.

- a. State hypotheses for the test of several population means.
 - b. Construct the AVOVA Table.
 - c. Explain the significance of multiple comparisons.
10. Demonstrate the appropriate use of technology (e.g., Excel®, an appropriate graphing calculator or other software (Minitab, SAS)).

Math 2371. Machine Learning

Course Description:

This course covers aspects of machine learning including supervised and unsupervised learning, clustering, classification, dimensionality reduction, logistic regression, neural networks, and time series. Prerequisite: MATH 1220. (3T+0L)

Student Learning Outcomes:

1. Explain the difference between supervised and unsupervised learning.
2. Use Python to perform data analysis algorithms.
3. Apply supervised learning techniques to data.
4. Apply unsupervised learning techniques to data.
5. Apply neural networks to classify data.
6. Use time series for prediction.

Math 2372. Data Analysis using R

Course Description

This course covers how to use R to perform statistical tests (t-test, ANOVA, Mann-Whitney U, Chi-squared), how to create graphs and visual representations of data, and how to program in R. Prerequisite: MATH 1350 (2T+0L)

Student Learning Outcomes

1. Perform statistical tests in R a. T-test b. ANOVA c. Mann-Whitney U d. Chi-squared test
2. Create visual representations of data with R a. Plots(xy) and bar graphs b. Box and whisker plots c. Distributions
3. Programming R to process data a. Loops b. Conditional statements c. Input and output

MATH 2410. Applied Ordinary Differential Equations

Course Description

An introduction to differential equations. Students will be able to classify, construct, and solve different types of equations. Systems of equations, Laplace transforms, series solutions, and numerical methods are introduced. This course is not designed for students seeking a degree in mathematics.

Student Learning Outcomes

Students will learn to verify solutions to differential equations, be able to classify differential equations by order, linearity, and homogeneity, and be able to identify an appropriate technique to solve the differential equation as outlined below.

1. First-order equations
 - a. Solve linear, separable, exact, and Bernoulli equations.
 - b. Use phase lines and direction fields to analyze the behavior of first-order equations.
2. Higher-order, constant-coefficient, linear equations
 - a. Solve linear, constant-coefficient homogeneous equations.
 - b. Solve linear, constant-coefficient non-homogeneous equations using undetermined coefficients and variation of parameters.
 - c. Demonstrate that a set of solutions is a fundamental one.
 - d. Determine a solution to an equation through reduction of order.
3. Laplace transforms
 - a. Compute Laplace transforms and inverse-Laplace transforms of basic functions.

- b. Solve initial-value problems using the Laplace transform.
 - c. Solve linear equations with discontinuous forcing functions involving the unit step function and the Dirac delta function.
 - d. Apply convolutions with Laplace transforms.
- 4. Systems of equations
 - a. Solve systems of linear, constant-coefficient, homogeneous equations.
 - b. Use a phase plot to analyze the behavior of a system of equations.
- 5. Series solutions and non-constant-coefficient linear equations
 - a. Determine a series solution of an equation about an ordinary point.
 - b. Determine a series solution of an equation about a regular singular point.
 - c. Determine the radius of convergence of a series solution.
- 6. Numerical methods
 - a. Use a computational program to approximate solutions to an equation.
 - b. Identify limitations of numerical methods.
 - c. Use a computational program to analyze the behavior an equation or system of equations.
- 7. Applications
 - a. Create a differential equation or system of equations that models a given application.
 - b. Analyze a differential equation the models a given application to determine the behavior of the model.

MATH 2415. Introduction to Linear Algebra

Course Description

Systems of equations, matrices, vector spaces and linear transformations. Applications to computer science.

Student Learning Outcomes

- 1. Use row reduction and echelon forms of a matrix to solve linear systems of equations.
- 2. Use matrix operations, inverse matrices, and matrix factorizations to solve matrix equations.
- 3. Study the properties of vector spaces and subspaces (e.g., the null and column spaces of a matrix); linear transformations, isomorphisms and kernels; linear independence, bases, and dimension.
- 4. Apply appropriate matrix manipulations to perform a change of basis.
- 5. Understand determinants and their properties.
- 6. Find eigenvalues and eigenvectors and use them to diagonalize matrices.
- 7. Understand inner product spaces and apply them to real-world problems.

MATH 2420. Applied Linear Algebra

Course Description

An introductory study of the analysis and application of systems of linear equations, vector spaces, matrices, and linear transformations, including computer-based linear algebra.

Student Learning Outcomes

- 1. Analyze and solve systems of equations.
 - a. Determine if a system is linear.
 - b. Determine if a system is consistent and whether or not solutions are unique.
 - c. Solve systems using row reduction and analyze the system using pivot positions and free variables.
 - d. Solve systems using matrix factorizations.
 - e. Solve systems using matrix inverses.
 - f. Apply Cramer's rule.
- 2. Analyze and use the properties of vectors and vector spaces.
 - a. Use vector algebra.
 - b. Determine whether or not a set of vectors is linearly independent.

- c. Determine whether or not a set of vectors and its operations constitute a vector space.
 - d. Determine whether or not a subset of a vector space is a subspace.
 - e. Determine whether or not a set of vectors spans or is a basis for a vector space.
 - f. Compute a basis for and determine the dimension of a vector space.
 - g. Compute the coordinates of a vector with respect to a basis.
 - h. Compute the transition matrix between two bases.
 - i. Determine whether a set and its product constitute an inner product space.
 - j. Compute lengths, angles, distances, and orthogonal projections of vectors.
 - k. Verify orthonormal bases and compute them using the Gram-Schmidt process.
3. Analyze and use the properties of matrices and linear transformations.
- a. Use matrix algebra.
 - b. Compute the inverse, determinant, transpose, and eigenpairs of a matrix.
 - c. Compute and apply decompositions of matrices, such as LU decompositions, singular-value decompositions, diagonalizations, and orthogonal diagonalizations of symmetric matrices.
 - d. Use the Invertible Matrix Theorem.
 - e. Compute a basis for the row, column, and null spaces of a matrix.
 - f. Determine the rank and nullity of a matrix and know how they are related.
 - g. Determine whether or not a transformation is linear.
 - h. Determine whether or not a transformation is injective (one-to-one), surjective (onto), or bijective (both).
 - i. Compute the standard matrix, kernel, and range of a linear transformation.
4. Solve applied problems and use technology
- a. Set up and solve applied problems such as flow networks, electric circuits, population dynamics, Markov chains, etc.
 - b. Solve least-squares problems.
 - c. Use a computer program to perform the computational outcomes above.

MATH 2430. Discrete Mathematics

Course Description

An introductory course encompassing set theory, logic, induction, number theory, matrices, combinatorics, graph theory, trees, and models of computation.

Student Learning Outcomes

Upon successful completion of the course, the student will:

1. Mathematical logic and Mathematical Reasoning.
 1. Know what propositions are and how to obtain their truth values.
 2. Be able to test for propositional equivalences using truth tables.
 3. Be able to work with predicates and quantifiers and give their truth values.
 4. Be able to prove and/or disprove basic results involving integers utilizing direct methods, contradiction, contra position and/or counterexample.
 5. Be able to prove results using mathematical induction.
2. Elementary Set Theory & Integer-Valued Functions.
 1. Be able to construct sets from basic properties and test for set membership.
 2. Be able to perform the basic operations on sets including union, intersection and complementation.
 3. Understand the meaning of cardinality of finite sets and certain infinite sets.
 4. Be able to represent sets using bit strings (optional).
 5. Be able to evaluate integer-valued functions.
 6. Be able to find the n th term of sequences given by formulas or by recurrence relations.
 7. Be able to find the sums of finite series.

3. Factorization, Prime Numbers, Modular Arithmetic and Matrices.
 1. Be able to apply prime factorizations of numbers to find greatest common divisors and least common multiples.
 2. Be able to use the Euclidean algorithm to find greatest common divisors.
 3. Be able to use modular arithmetic in applications.
 4. Be able to add, subtract and multiply matrices.
 5. Be able to perform basic operations and Boolean products for zero-one matrices.
4. Binary (Optional: Octal & Hexadecimal) Systems.
 1. Be able to convert decimal representations to binary [optional: octal and hexadecimal], and vice-versa.
 2. Be able to perform basic arithmetic in binary [optional: octal and hexadecimal], representations.
 3. Be able to convert binary representations to octal and hexadecimal representations and vice-versa (optional).
5. Combinatorics & Basic Probability.
 1. Be able to perform basic counting arguments involving addition and multiplication.
 2. Be able to use the pigeon-hole principle.
 3. Be able to solve basic problems involving permutations and combinations.
 4. Be able to calculate elementary discrete probabilities.
6. Graph Theory
 1. Be able to identify certain basic types of simple graphs (i.e., complete, cycles, bipartite, etc.).
 2. Be able to construct graphs from adjacency matrices and incidence matrices and vice versa.
 3. Be able to identify when certain types of graphs are isomorphic.

MATH 2431 Discrete Mathematics

Course Description

Not Available

Student Learning Outcomes

Not Available

MATH 2520. Foundations of Math Thinking

Course Description

Introduction to logic, methods of proof, and mathematical structures, with applications to set theory, relations, functions and analytic geometry.

Student Learning Outcomes

1. Understand the logic behind a proof or dis proof of a mathematical statement
2. Understand how to apply various strategies in proving a mathematical statement
3. Understand how quantifiers are used in a mathematical statement
4. Understand the symbolic language of logic and quantifiers
5. Understand how to apply proof techniques to various areas of mathematics
6. Understand how to read a proof
7. Improve students' ability to express their understanding of mathematical material.
8. Improve students' ability to think abstractly.
9. Improve students' ability to ask mathematical questions.
10. Improve students' ability to learn mathematics independently.

Math 2530. Calculus III

Course Description

Continuation of Calculus II including multivariate and vector calculus, level curves and surfaces, partial derivatives, gradient, directional derivatives, tangent planes, optimization, multiple integrals in Cartesian, cylindrical and spherical coordinate systems.

Student Learning Outcomes

1. Vectors in 3-dimensional space
 - a. Use vector notation correctly.
 - b. Perform vector operations, including dot product, cross product, differentiation and integration, and demonstrate their geometric interpretations.
 - c. Perform operations on vector valued functions and functions of a parameter.
2. Functions of multiple variables
 - a. Identify and graph the equations of cylinders and quadratic surfaces in 3-dimensional space.
 - b. Determine the domain of continuity of a vector valued function and of a function of multiple variables.
3. Applications of differentiation
 - a. Compute partial derivatives, generally and at a point, and sketch their graphical representation on a surface in space.
 - b. Recognize when the chain rule is needed when differentiating functions of multiple variables, parametric equations and vector valued functions, and be able to use the chain rule in these situations.
 - c. Compute curvature of a parameterized vector representation of a curve in 2- and 3-dimensional space and be able to explain its meaning.
 - d. Compute the unit tangent and unit normal vectors to a curve and be able to sketch them with the curve.
 - e. Computationally move among position vector, velocity vector, speed, and acceleration vectors; recognize and demonstrate their use as applied to motion in space.
 - f. Determine the equation of the tangent plane to a surface at a point.
 - g. Use the tangent plane to a surface to approximate values on the surface and estimate error in approximation using differentials.
 - h. Compute directional derivatives and represent them graphically relative to the inherent surface.
 - i. Compute the gradient vector; represent it graphically relative to the inherent surface and use it to maximize or minimize rate of change of the function.
 - j. Locate local and global maxima and minima of a function.
 - k. Use Lagrange multipliers to maximize output with one or two constraints.
4. Application of Integration
 - a. Compute arc length and be able to explain its derivation as a limit.
 - b. Calculate double and triple integrals independently and with their geometric representations as surfaces, areas and volumes.
 - c. Calculate iterated integrals in polar, cylindrical and spherical coordinate systems.

MATH 2531. Calculus III

Course Description

Vector operations, vector representation of planes and curves, functions of several variables, partial derivatives, gradient, tangent planes, optimization, multiple integrals in Cartesian, cylindrical and spherical coordinates, vector fields, line integrals and Green's theorem.

Student Learning Outcomes

Students that successfully complete the course, will, by the end of the course, be able to

1. **(Vector Operations)** Perform basic operations on vectors in 3-D: addition, subtraction, scalar multiplication, dot product. Visualize addition, subtraction and scalar multiplication geometrically, state geometric meaning of dot product and cross product, recognize and write down the equations defining lines and planes, and draw geometric information from the equations (such as a point on lines/planes, tangent and normal vectors, intersections)
2. **(Vector-valued Functions of One Variable)** Visualize given functions as curves in space, find functional parametrization of given curves, find their derivatives and interpret them as tangent vectors to curves; for functions describing the motion of a particle, interpret derivatives as velocity and acceleration; solve initial value problems.

3. **(Scalar-valued Functions of Several Variables)** Visualize functions of two variables by graphs in space or level curves in the plane; visualize functions of three variables by level surfaces in space; recognize and graph equations for conic sections and for surfaces of revolution; state what it means for a limit of a function of several variables to exist; compute partial derivatives, gradients, directional derivatives and understand their meanings, e.g. with respect to direction of fastest growth and tangent planes; compute the gradient of a function and state its geometric significance; solve min/max problems with or without constraints (using substitution or Lagrange multipliers for the former) explain why the Lagrange multiplier method works.
4. **(Double and Triple Integrals)** Compute by reducing to an iterated integral, by changing the order of integration, by changing from Cartesian coordinates to cylindrical or spherical coordinates and vice-versa; use double and triple integrals to compute areas, volumes, centers of mass.
5. **(Vector Fields)** Visualize basic vector fields by flow lines and integral curves; state the definition of a gradient (or conservative) vector field and how to recognize one and compute a potential function; compute the divergence and curl of a vector field; rules for differentiation; recognize permissible and non-permissible operations.
6. **(Line Integrals)** Compute line integrals such as arc length, work, circulation using the parametrization of a curve; compute using the Fundamental Theorem of Line Integrals when applicable; state Green's theorem (2-D), apply it to examples.

MATH 2532. Calculus III

Course Description

Vectors and vector operations in two and three dimensions, partial differentiation, multiple integration, topics in vector calculus in two and three dimensions.

Student Learning Outcomes:

1. Perform algebraic operations on vectors in the plane.
2. Describe lines, planes, and surfaces in 3-space.
3. Compute the tangent and normal vectors to space curves.
4. Compute tangential and normal components of acceleration.
5. Sketch functions of several variables.
6. Compute the tangent plane to a surface.
7. Describe and use the chain rule.
8. Compute extreme values of functions of several variables.
9. Compute multiple integrals.
10. Compute surface area, mass, and moments.
11. Compute line integrals and test for independence of path.
12. State and use Green's Theorem, Stokes' Theorem, and the Divergence Theorem.

MATH 2610. Elementary Mathematical Concepts I

Course Description

The fundamental operations; an intuitive development of whole numbers, integers, and rational numbers; elementary number theory; introduction to problem-solving strategies; and introduction to functions and modeling.

Student Learning Outcomes

Not Available

MATH 2625. Elementary Mathematical Concepts II

Course Description

Development of rational numbers, real numbers, functions of various degrees, statistics, and probability. A continued emphasis on building problem-solving ability.

Student Learning Outcomes

Making it a habit of mind to use Mathematical Practices, students in Mathematics 262 will acquire the in-depth content knowledge and skills necessary to facilitate student learning in Grades 3-5. The concept domains for these grades are indicated in the CCSSM and are listed as:

1. Operations and Algebraic Thinking: Represent and solve problems using the four basic operations, properties of operations, and identifying patterns.
2. Number and Operations in Base Ten: Place value in developing algorithms for operations on multi-digit numbers.
3. Number and Operations – Fractions: Develop understanding of proper fractions as numbers.
4. Measurement and Data: Identify measurable attributes, relative size, time, money, perimeter, area.
5. Geometry: Attributes defining categories, composition and decomposition of polygons - particularly as they relate to understanding fractions.

Medical Assistant (MAST)

MAST 1110. Medical Assistant Professionalism

Course Description

Provides an overview of the role of the medical assistant in the healthcare setting. Covers medical assistant scope of practice, legal principles, ethics, standard of care, duties, and roles. Emphasis is placed on professional and therapeutic communication, affective competencies of empathy and respecting diversity, and demonstration of legal and ethical behaviors specific to medical assisting.

Student Learning Outcomes

1. Respond to nonverbal communication and recognize personal boundaries.
2. Demonstrate respect for diversity, a professional response(s) to ethical issues, empathy for patients' concerns, and active listening.
3. Locate a state's legal scope of practice for medical assistants.
4. Apply HIPAA rules in regard to privacy and release of information.
5. Complete compliance reporting based on public health statutes and incident reports related to errors in patient care.
6. Report an illegal activity following the protocol established by the healthcare setting.

MAST 1112. Electrocardiogram Technician Basic

Course Description

Prepares students for employment as an Electrocardiogram Technician. Includes basic theory of the cardiovascular system, cardiac rhythm interpretation, 12 lead ECG lead placement, and ECG equipment trouble shooting. The course includes an advanced skills laboratory for "hands-on" practice and 16 hours of supervised clinical in the work environment assisting with ECG testing.

Student Learning Outcomes

1. Perform ECG's, including patient preparation, electrode placement, recording ECG's, mounting & upload of ECG to patient's chart.
2. Calculate a patient's heart rate and identify the heart rhythm from an ECG tracing.
3. Identify artifacts; waveform elements of the cardiac cycle, including variances related to ischemia, injury or infarction; as well as, major classifications of arrhythmias.
4. Prepare and monitor patient's for Holter monitoring and telemetry.
5. Prepare, conduct and monitor patients during stress testing.
6. Recognize factors that affect procedures and results, and take appropriate actions within predetermined limits when indicated, including patient compromise or complications.
7. Demonstrate professional conduct and interpersonal communication skills with patients, other health care professionals, and with the public.
8. Recognize the responsibilities of other health care personnel and interact with them with respect for their jobs and patient care.
9. Apply basic scientific principles in learning new techniques and procedures.
10. Relate electrocardiogram findings to common disease processes.

MAST 1114. Administrative Medical Assisting Skills I

Course Description

Introduction to administrative medical assisting including telephone techniques, appointment scheduling, maintaining accurate medical records, handling mail, written communications, daily accounting techniques, billing, collections, basics of transcription, and receptionist skills.

Student Learning Outcomes

1. Communication & Patient Interaction: Covers verbal/nonverbal communication, overcoming barriers, coaching patients, active listening, empathy, and telehealth roles.
2. Medical Law & Ethics: Includes HIPAA, malpractice, patient rights, licensure, compliance reporting, ethical behavior, and legal concepts like informed consent and negligence.
3. Healthcare Administration & Records: Addresses appointment scheduling, electronic health records, data backup, bookkeeping, insurance, and Explanation of Benefits (EOB).
4. Medical Theories & Psychology: Covers Maslow, Erikson, Kubler-Ross theories, coping mechanisms, self-boundaries, and diversity in patient care.
5. Ethical & Moral Responsibilities: Identifies personal and professional ethics, effects of morals on professional performance, risk management, and responding to ethical dilemmas.

MAST 1114L. Administrative Medical Assisting Skills I Assessment

Course Description

This course provides hands-on training in essential clinical and administrative skills required for medical assistants. Students will develop proficiency in responding to nonverbal communication, accurately using medical terminology in patient

interactions, and coaching patients on office policies and medical encounters. Additionally, students will apply HIPAA regulations regarding patient privacy and release of information while demonstrating appropriate responses to ethical issues in healthcare settings.

Student Learning Outcomes

1. Respond to nonverbal communication V.P.1
2. Correctly use and pronounce medical terminology in health care interactions V.P.2
3. Coach patients regarding: V.P.3
 - a. office policies
 - b. medical encounters
4. Demonstrate professional telephone techniques V.P.4
5. Document telephone messages accurately V.P.5
6. Using technology, compose clear and correct Correspondence V.P.6
7. Use a list of community resources to facilitate referrals V.P.7
8. Participate in a telehealth interaction with a patient V.P.8
9. Manage appointment schedule using established priorities VI.P.1
10. Schedule a patient procedure VI.P.2
11. Input patient data using an electronic system VI.P.3
12. Inform a patient of financial obligations for services Rendered VII.P.3
13. Interpret information on an insurance card VIII.P.1
14. Locate a state's legal scope of practice for medical assistants X.P.1
15. Apply HIPAA rules in regard to: X.P.2
 - a. privacy
 - b. release of information
16. Demonstrate appropriate response(s) to ethical issues

MAST 1115. Medical Assistant Clinical Procedures I

Course Description

This course provides comprehensive training for medical assistants, combining essential emergency preparedness and routine clinical procedures. Students will study emergency response procedures within a medical office, including first aid, infection control, medical asepsis, sterilization, and vital sign measurement. In addition, students will learn anatomy and physiology, diseases, and medical terminology.

Student Learning Outcomes

1. Identify requirements for essential clinical skills, including patient preparation, vital sign measurement, first aid, and infection control.
2. Describe sterilization, medical asepsis, and how to perform procedures such as wound care and dressing changes.
3. Demonstrate understanding of basic anatomy, physiology, and medical terminology, focusing on developing a strong vocabulary of medical terms and abbreviations.
4. Demonstrate understanding of major body systems, structures, and functions.
5. Demonstrate effective communication with diverse patient populations, quality assurance, infection cycles, body mechanics, and emergency response as well as prepared to assist with fundamental clinical procedures, navigate patient care, and work in a variety of healthcare settings.

MAST 1120. Medical Assistant Clinical Skills I

Course Description

Introduction to the clinical role of the medical assistant in medical office/clinic settings with skills and knowledge development in positive patient interactions, dosage calculations, principles of pharmacology and medication administration, infection control, patient coaching, nutrition and health promotion.

Student Learning Outcomes

1. Calculate proper dosages of medication for administration.
2. Apply mathematical computations to solve equations.
3. Convert among measurement systems.
4. Instruct a patient regarding a dietary change related to a patient's special dietary needs.
5. Respond to nonverbal communication.
6. Correctly use and pronounce medical terminology in health care interactions.
7. Coach patients regarding medical encounters.
8. Document patient care accurately in the medical record.
9. Demonstrate empathy for patients' concerns and active listening.
10. Recognize personal boundaries.

MAST 1120L. Medical Assistant Clinical Skills I Laboratory

Course Description

Provides hands-on practice of skills that assist the medical provider in the clinical setting. Students will practice vital signs, basic patient data collection, assisting with exams and treatments, infection control, and administering medications.

Student Learning Outcomes

1. Accurately measure and record blood pressure, temperature, pulse, respirations, height, adult weight, oxygen saturation.
2. Assist provider with a patient exam and use proper body mechanics.
3. Verify the rules of medication administration: right patient, right medication, right dose, right route, right time, right documentation.
4. Select proper sites for administering parenteral medication.
5. Administer oral and parenteral (excluding IV) medications.
6. Apply mathematical computations to solve equations, calculate proper dosages of medication for administration, and convert among measurement systems.
7. Participate in bloodborne pathogen training.
8. Perform handwashing and select appropriate barrier/personal protective equipment (PPE).
9. Demonstrate proper disposal of biohazardous materials: sharps and regulated waste.
10. Instruct a patient regarding a dietary change related to a patient's special dietary needs.
11. Correctly use and pronounce medical terminology in health care interactions and document patient care accurately in the medical record.
12. Coach patients regarding medical encounters, reassure patients and respond to nonverbal communication.
13. Use a list of community resources to facilitate referrals and participate in a telehealth interaction with a patient.

MAST 1125L. Medical Assistant Laboratory Procedures I

Course Description

An introduction to diagnostic procedures routinely performed in the medical office laboratory setting. This course will cover CLIA (Clinical Laboratory Improvement Amendments), waived hematology, chemistry, immunology, and microbiology testing. Federal Laboratory guidelines, quality control, and laboratory safety are also presented. Students learn to prepare patients for procedures, visits, and exams, with proper patient intake.

Student Learning Outcomes

1. Perform CLIA waived Laboratory testing in the medical office.
2. Screen and follow up on test results.
3. Identify procedures for obtaining, testing, transporting, analyzing and screening specimens.
4. Demonstrate methods of quality control and laboratory safety in the medical office laboratory setting.
5. Demonstrate and perform vital measurements.
6. Prepare patient for exam/office procedure.
7. Set up and organize sterile and surgical preparation.

MAST 1130. Intravenous (IV) Therapy Training

Course Description

A course designed to equip healthcare professionals with the introductory knowledge and skills that are necessary to safely and effectively administer intravenous therapies. Participants learn the fundamentals of IV therapy, including indications, contraindications, equipment selection, insertion techniques and complication management. Participants engage in hands-on practice sessions using simulation equipment to simulate real-world scenarios. Emphasis is placed on proper technique, infection control measures and patient safety.

Student Learning Outcomes

1. Describe the appropriate uses and clinical applications of intravenous (IV) therapy.
2. Identify various types of IV fluids and explain their specific indications.
3. Demonstrate an understanding of the anatomy and physiology of the vascular system as it relates to IV therapy.
4. Safely initiate, maintain, and discontinue peripheral IV lines following proper protocols.
5. Apply principles of aseptic technique and infection control during IV procedures.
6. Recognize and manage common IV-related complications.
7. Demonstrate competency in hands-on IV procedures through practical skill evaluations.

MAST 1180. Pharmacology for Medical Assisting

Course Description

Pharmacology for Allied Health. Three credit hours. Focuses on the classification of drugs, principles of drug administration, diseases treated with specific drugs as well as side effects and adverse reactions, drug overdose, and computation of drug doses including a review of basic math.

Student Learning Outcomes

1. Identify the classifications of medications including a. indications for use; b. desired effects; c. side effects; d. adverse reactions I.C.11
2. Define basic units of measurement: metric and house hold systems II.C.1. a-b
3. Identify abbreviations and symbols used in calculating medication dosages II.C.2
4. Calculate proper dosages of medication for administration II.P.1
5. Apply mathematical computations to solve equation II.P.4
6. Convert among measurement systems II.P.5
7. Discuss governmental legislation and regulation including FDA and DEA regulations
8. Explain the difference between the three names assigned to a drug.
9. Define the five controlled substance schedules and give examples of the drugs listed in each.
10. Define the classification of drugs and give examples of each.
11. Recognize common abbreviations and their meanings.

12. Discuss the appropriate steps in preparing and administering medications from any method within the scope of the medical assisting practice.
13. Describe problems associated with substance abuse.
14. State the medical assistant's role in recognizing substance abuse and the action to be taken when abuse is suspected.

MAST 1190. Clinical Skills & Concepts for Medical Assisting I

Course Description

A core course designed to provide an introduction to the theory, concepts, and skills needed for entry-level medical assisting positions. Content includes basic theory and concepts designed to support safe and effective practice as a medical assistant in ambulatory care settings. Includes a skills laboratory for hands-on practice and 96 hours of supervised clinical in the work environment.

Student Learning Outcomes

1. Apply theoretical knowledge associated with medical assisting in providing basic healthcare services.
2. Perform essential clinical skills within the medical assistant scope of practice in ambulatory clinic settings.
3. Recognize factors that affect procedures and results, and take appropriate actions with predetermined limits when indicated, including patient compromise or complications.
4. Demonstrate professional conduct and interpersonal communication skills with patients, other health care professionals, and with the public.
5. Recognize the responsibilities of other health care personnel and interact with them with respect for their jobs and patient care.
6. Apply basic scientific principles in learning new techniques and procedures.
7. Relate vital sign and laboratory findings to common disease processes.

MAST 1230 Electronic Medical Records

Course Description

Electronic Medical Records. Three credit hours. This course teaches students how to effectively enter patient data into an electronic medical record including history and physical exams, procedures, and physician/provider's encounter with patient. It also teaches students how to upload laboratory tests, radiologic reports, medications, immunizations, referrals, and consult reports. In addition, it prepares students to accompany a physician/provider into the exam room and enter data during the patient encounter.

Student Learning Outcomes

1. Administrative & Scheduling Tasks: Manage appointment schedules, schedule patient procedures, and input patient data into electronic systems.
2. Billing & Insurance Processing: Perform accounts receivable tasks (charges, payments, adjustments), enter billing information, complete insurance claims, and apply medical necessity guidelines.
3. Medical Coding & Compliance: Perform procedural and diagnostic coding, ensure HIPAA compliance (privacy & release of information), and follow legal and ethical guidelines.

MAST 1520. Medical Assistant Laboratory Skills

Course Description

Introduces the Medical Assistant to their role in the clinic's laboratory related to collection, testing, handling, processing and storage of specimens such as blood and urine, fecal samples and throat swabs. CLIA-waived tests, quality assurance and control, laboratory safety, patient preparation and diagnostic equipment are also discussed.

Student Learning Outcomes

1. Identify major organs; anatomical locations, structure and normal function across the life span; pathology, including signs and symptoms; and etiology of diseases of the human body's endocrine, pulmonology, and circulatory systems.
2. Identify diagnostic measure and Clinical Laboratory Improvement Amendments (CLIA) waived tests, treatment modalities and classifications of medications, including indications for use, desired effects, side effects, and adverse reactions of the endocrine, pulmonology and circulatory systems.
3. Describe surgical asepsis as practiced within an ambulatory care setting.
4. Recognize medical terms and abbreviations related to the human body's endocrine, pulmonology, circulatory systems, normal and abnormal results as reported in graphs and tables.
5. Identify safety techniques that can be used in responding to accidental exposure to needle sticks.
6. Explain clinical laboratory safeguards and the purpose of Safety Data Sheets (SDS) in a healthcare setting.
7. Discuss safety techniques that can be used in responding to accidental exposure to blood, body fluids, needle sticks and chemicals, the processes for disposal of biohazardous waste and chemicals, and quality assurance practices in healthcare.

MAST 1520L. Medical Assistant Laboratory Skills Laboratory**Course Description**

Provides hands-on practice of specimen collection, processing CLIA-waived tests in the clinical laboratory; setting up and assisting with multiple screening tests, and sterilizing equipment. Special attention is placed on empathy for the patient's concerns, critical thinking skills, quality control, documentation, and laboratory safety.

Student Learning Outcomes

1. Perform the following procedures: electrocardiography, venipuncture, capillary puncture, and pulmonary function testing.
2. Instruct and prepare a patient for a procedure or a treatment.
3. Perform a quality control measure.
4. Collect specimens and perform the following CLIA-waived tests: hematology chemistry, urinalysis, immunology, and microbiology.
5. Record laboratory test results into the patient's record.
6. Select appropriate barrier/personal protective equipment (PPE) and comply with safety practices.
7. Prepare items for autoclaving and perform sterilization procedures.
8. Demonstrate proper disposal of biohazardous sharps material and proper use of eyewash equipment.
9. Coach patients regarding medical encounters and document patient care accurately in the medical record.
10. Evaluate an environment to identify unsafe conditions.
11. Demonstrate the following: critical thinking skills, empathy for patients' concerns, active listening and reassuring patients.

MAST 1540. Medical Assistant Administrative Skills**Course Description**

Administrative topics include office technology, oral and written communications, new patient registration, appointment scheduling, application of HIPAA rules, handling of medical records, daily operations, self-awareness and patient orientation to office policies.

Student Learning Outcomes

1. Identify critical elements of an emergency plan for response to a natural disaster or other emergency.
2. Coach patients regarding office policies.

3. Demonstrate professional telephone techniques.
4. Using technology, compose clear and correct correspondence.
5. Manage appointment schedule using established priorities.
6. Schedule a patient procedure.
7. Input patient data using an electronic system.
8. Apply HIPAA rules in regard to privacy.
9. Document patient care accurately in the medical record.
10. Demonstrate critical thinking skills, empathy for patients' concerns, active listening, and self-awareness.

MAST 2010. Medical Assisting Clinical Skills II

Course Description

Introduces principles of assisting with patients in multiple medical specialties. Sterile procedures are also examined and discussed.

Student Learning Outcomes

1. Identify major organs and their anatomical location in each body system: digestive, muscular, nervous, reproductive, skeletal and urinary.
2. Describe structure and function of the human body across the life span.
3. Summarize the normal function of each body system digestive, muscular, nervous, reproductive, skeletal and urinary.
4. Discuss common pathology related to the digestive, muscular, nervous, reproductive, skeletal and urinary body systems including signs, symptoms, etiology, diagnostic measures, and treatment modalities.
5. Recognize Clinical Laboratory Improvement Amendments (CLIA) waived tests associated with common diseases.
6. Identify appropriate vaccinations based on an immunization schedule.
7. Identify normal and abnormal results as reported in graphs and tables.
8. Describe medical asepsis and surgical asepsis as practiced within an ambulatory care setting.
9. Examine the implications for failure to comply with Center for Disease Control (CDC) regulations in healthcare settings.
10. Relate medical terms and abbreviations to the digestive, muscular, nervous, reproductive, skeletal and urinary body systems.
11. Describe the basic concepts of Erickson's theory.

MAST 2010L. Medical Assistant Clinical Skills II Laboratory

Course Description

Provides laboratory based, hands-on practice of skills pertaining to sterile technique and the MA's role when assisting with minor surgical procedures performed in the medical office. Assisting with common procedures for patients in multiple medical specialties and skills for medical emergencies are also practiced.

Student Learning Outcomes

1. Identify appropriate vaccinations based on an immunization schedule.
2. Describe challenges in communication with different age groups.
3. Accurately measure and record weight, length and head circumference of infants.
4. Document patient information on a growth chart and document patient care accurately in the medical record.
5. Instruct and prepare a patient for a procedure or a treatment.
6. Assist provider with a patient exam.
7. Provide up-to-date documentation of provider/professional level CPR.

8. Perform first aid procedures for bleeding, diabetic coma or insulin shock, stroke, seizures, syncope and an environmental emergency.
9. Perform hand washing, wound care and dressing change.
10. Prepare and perform procedures within a sterile field.
11. Coach patients regarding medical encounters.
12. Perform an inventory of supplies while using proper body mechanics.
13. Demonstrate proper use of fire extinguishers.
14. Demonstrate critical thinking skills and empathy for patient's concerns.

MAST 2110. Medical Office Insurance and Finance

Course Description

The focus of this course is medical office bookkeeping procedures and processing of insurance claims. Areas covered include: banking and billing procedures, accounts receivable, collections, applying managed care and third- party guidelines, medical coding, completing insurance claim forms, utilizing and maintaining billing software.

Student Learning Outcomes

1. Perform accounts receivable procedures to patient accounts including posting charges, payments, adjustments
2. Input accurate billing information in an electronic system.
3. Inform a patient of financial obligations for services rendered.
4. Interpret information on an insurance card.
5. Verify eligibility for services.
6. Obtain precertification or preauthorization with documentation.
7. Complete an insurance claim form.
8. Assist a patient in understanding an Explanation of Benefits (EOB).
9. Perform procedural and diagnostic coding.
10. Utilize medical necessity guidelines.
11. Demonstrate critical thinking skills, empathy for patients' concerns and tactfulness.

MAST 2125L. Medical Assistant Laboratory Procedures Laboratory II

Course Description

Instructions and demonstrations of electrocardiography and respiratory testing. Topics also include anatomy and physiology and diseases and treatments of major body systems as a continuation of Medical Assistant Clinical Procedures I, as well as basic pharmacology, understanding of measurements, clinical application, side effects, and toxicities of medication use.

Student Learning Outcomes

1. Perform electrocardiography.
2. Perform respiratory testing.
3. Explain basic anatomy and physiology, diseases, and treatments of various body systems.
4. Perform maintenance of laboratory equipment and quality control.
5. Communicate with and instruct patients regarding diagnostic testing.
6. Accurately and safely perform laboratory testing and specimen preparation.

MAST 2210. Medical Assistant Clinical Procedures II

Course Description

This course expands on procedures performed in outpatient settings. It includes patient preparation, assisting with physical and specialty exams, office surgeries, and medical emergencies. Students will learn techniques for administering injections, performing ECGs, diagnostic imaging, and rehabilitative modalities. The course also covers pharmacology, medication administration, and drug calculations, diseases, and treatments of major body systems ensuring they are well-equipped for both routine procedures and critical situations in a healthcare environment.

Student Learning Outcomes

1. Perform diagnostic tests, managing patient care, maintaining sterile fields, and proper documentation.
2. Develop critical thinking, empathy, and effective communication, ensuring they can provide comprehensive care, manage emergencies, and support diverse patient needs in ambulatory settings.
3. Demonstrate medical and surgical asepsis, gain proficiency in medication administration, injections, assisting with exams, minor surgeries and phlebotomy.

MAST 2990. Medical Assistant Practicum**Course Description**

Varies

Student Learning Outcomes

Varies

MAST 2999. Medical Assistant Capstone**Course Description**

Varies

Student Learning Outcomes

Varies

Medical Laboratory Technician (MLTS)

MLTS 1110. Preparation for Medical Laboratory Sciences**Course Description**

An introduction to the Medical Laboratory industry and the skills necessary to succeed in laboratory education and careers. Includes college success skills, an overview of technical departments, and aspects of working and gaining employment in healthcare.

Student Learning Outcomes

1. Identify skills for successful completion of college level courses.
2. Discuss techniques for obtaining employment in a Medical Laboratory or related healthcare field.
3. Explain professionalism as it relates to patient care and being a member of a healthcare team.
4. Discuss specimen requirements and assays performed in medical laboratory departments.

MLTS 1112. Introduction to Basic Laboratory Skill, Urinalysis and Body Fluids**Course Description**

An introduction to the profession of medical diagnostic testing and the clinical laboratory. Content areas consist of: general laboratory safety, laboratory mathematics, general instrumentation, use of the microscope, urinalysis, and body fluids.

Student Learning Outcomes

1. List important milestones in the history of the clinical laboratory and describe the type of professionalism desired in clinical laboratory personnel.
2. Describe behavior consistent with the ethical practice of clinical laboratory medicine.

3. Apply principles of confidentiality for all patients and test results.
4. State the special knowledge and talent of other members of the health care team needed for quality patient care.
5. Explain the impact of federal and state regulatory agencies on the clinical laboratory.
6. Detail the transmission of the AIDS (HIV) virus and state how the virus affects the immune system.
7. Name other pathogens, in addition to the HIV virus, that could be transmitted by blood or body fluids.
8. List and describe safety hazards in the laboratory and discuss the proper techniques to avoid accidents.
9. Use basic metric systems for laboratory procedures and use formulas to calculate strengths of dilutions and solutions.
10. Discuss processing clinical specimens according to established procedures.
11. List and explain the basic laboratory procedures in clinical chemistry, hematology, coagulation, urinalysis, microbiology, and immunology/serology.
12. Evaluate quality control values.
13. Apply principles of safety, quality assurance and quality control.
14. Describe the composition, formation, and function of selected body fluids.
15. Explain the collection procedure for urine and other selected body fluids.
16. Evaluate the suitability of the body fluid specimens collected.
17. Exhibit an understanding of the anatomy and function of the renal system.
18. Perform a routine urinalysis and explain the principles of each test.
19. Evaluate laboratory test outcomes and correlate test results with patient condition(s).

MLTS 1120. MLT Specimen Collection and Processing

Course Description

This course is an introduction to the collection and processing of patient specimens for medical laboratory testing. Topics will focus on patient and laboratory safety, infection prevention and control, specimen integrity, blood collection equipment and supplies, collection of blood specimens, collection of specimens other than blood, and specimen storage and transport. This course is designed to meet the minimum requirements for entering the MLT program without prior experience as a phlebotomist or laboratory assistant. This course does not meet the requirements for training to gain employment as a phlebotomist or to be eligible for national certification exams.

Student Learning Outcomes

1. Describe infection prevention practices related to specimen collection, transport, or processing.
2. Describe proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.
3. Identify pre-analytical variables and procedural errors associated with specimen collection.
4. Identify appropriate blood collection equipment, additives, order of draw techniques, and venipuncture procedures.
5. Demonstrate blood collection procedures utilizing proper technique.

MLTS 1410. Clinical Urinalysis

Course Description

Introduces urine and body fluid analysis.

Student Learning Outcomes

1. Define disease states, etiologies, identifiable characteristics, and vocabulary specific to course.
2. Correlate laboratory tests with organ systems, anatomical and physiological functions, patient clinical presentation, treatments, and common disease states.

3. Describe principles, methodologies, clinical significance, and reference ranges, as well as proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.

MLTS 1410L. Clinical Urinalysis Laboratory

Course Description

Presents experiences for performing urinalysis and body fluid procedures.

Student Learning Outcomes

1. Identify laboratory safety equipment and explain laboratory safety protocol related to use of laboratory equipment and disposal of laboratory waste.
2. Demonstrate safe and proper use of laboratory equipment including, but not limited to: microscopes, centrifuges, spectrophotometers, and other specialized instrumentation.
3. Safely perform and practice procedures and techniques related to laboratory tests.
4. Employ critical thinking skills to analyze results as they relate to physiological functions, patient clinical presentation, and common disease states.

MLTS 1412L. Clinical Immunology and Serology Laboratory

Course Description

Presensts concepts of immunology and serology. Provides experience in serological testing on specimens.

Student Learning Outcomes

1. Define disease states, etiologies, identifiable characteristics, and vocabulary specific to course.
2. Correlate laboratory tests with organ systems, anatomical and physiological functions, patient clinical presentation, treatments, and common disease states.
3. Describe principles, methodologies, clinical significance, and reference ranges, as well as proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.
4. Identify laboratory safety equipment and explain laboratory safety protocol related to use of laboratory equipment and disposal of laboratory waste.
5. Demonstrate safe and proper use of laboratory equipment including, but not limited to: microscopes, centrifuges, spectrophotometers, and other specialized instrumentation.
6. Safely perform and practice procedures and techniques related to laboratory tests.
7. Employ critical thinking skills to analyze results as they relate to physiological functions, patient clinical presentation, and common disease states.

MLTS 1510. Clinical Hematology

Course Description

Presents concepts of hematology including blood and blood disorders.

Student Learning Outcomes

1. Define disease states, etiologies, identifiable characteristics, and vocabulary specific to course.
2. Correlate laboratory tests with organ systems, anatomical and physiological functions, patient clinical presentation, treatments, and common disease states.
3. Describe principles, methodologies, clinical significance, and reference ranges, as well as proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.

MLTS 1510L. Clinical Hematology Laboratory

Course Description

Presents experiences for performing the basic procedures in a hematology laboratory including the identification and enumeration of blood cells.

Student Learning Outcomes

1. Identify laboratory safety equipment and explain laboratory safety protocol related to use of laboratory equipment and disposal of laboratory waste.
2. Demonstrate safe and proper use of laboratory equipment including, but not limited to: microscopes, centrifuges, spectrophotometers, and other specialized instrumentation.
3. Safely perform and practice procedures and techniques related to laboratory tests.
4. Employ critical thinking skills to analyze results as they relate to physiological functions, patient clinical presentation, and common disease states.

MLTS 1511. Clinical Immunochemistry**Course Description**

Examines the theory principles for determining blood group typing, antibody detection and identification, cross matching and component therapy.

Student Learning Outcomes

1. Define disease states, etiologies, identifiable characteristics, and vocabulary specific to course.
2. Correlate laboratory tests with organ systems, anatomical and physiological functions, patient clinical presentation, treatments, and common disease states.
3. Describe principles, methodologies, clinical significance, and reference ranges, as well as proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.

MLTS 1511L. Clinical Immunochemistry Laboratory**Course Description**

Presents experiences for performing procedures in a blood bank.

Student Learning Outcomes

1. Identify laboratory safety equipment and explain laboratory safety protocol related to use of laboratory equipment and disposal of laboratory waste.
2. Demonstrate safe and proper use of laboratory equipment including, but not limited to: microscopes, centrifuges, spectrophotometers, and other specialized instrumentation.
3. Safely perform and practice procedures and techniques related to laboratory tests.
4. Employ critical thinking skills to analyze results as they relate to physiological functions, patient clinical presentation, and common disease states.

MLTS 1610L. Clinical Coagulation Laboratory**Course Description**

Presents basic coagulation concepts with practice performing the procedures. Also introduces advanced principles and procedures performed in the coagulation laboratory.

Student Learning Outcomes

1. Define disease states, etiologies, identifiable characteristics, and vocabulary specific to course.
2. Correlate laboratory tests with organ systems, anatomical and physiological functions, patient clinical presentation, treatments, and common disease states.

3. Describe principles, methodologies, clinical significance, and reference ranges, as well as proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.
4. Identify laboratory safety equipment and explain laboratory safety protocol related to use of laboratory equipment and disposal of laboratory waste.
5. Demonstrate safe and proper use of laboratory equipment including, but not limited to: microscopes, centrifuges, spectrophotometers, and other specialized instrumentation.
6. Safely perform and practice procedures and techniques related to laboratory tests.
7. Employ critical thinking skills to analyze results as they relate to physiological functions, patient clinical presentation, and common disease states.

MLTS 2114C. Clinical Microbiology Lecture and Laboratory

Course Description

Comprehensive current clinical study of bacteriology, mycology, and parasitology; macroscopic and microscopic identification; biochemical identification profiles; bacterial antibiotic susceptibility patterns; parasitic life cycles; pathology and epidemiology; introduction to rickettsiae and viruses.

Student Learning Outcomes

1. Demonstrate an understanding of the theories, principles, and procedures that comprise the science of Clinical Microbiology through both written and speaking assessment, and laboratory practical exercises.
2. Properly select and safely employ various laboratory instruments, procedures, methods, and techniques in the analysis of biological specimens with an emphasis on isolation and identification protocols for bacteria.
3. Correlate laboratory data with normal and abnormal body systems and functions with an emphasis upon infectious diseases.
4. Properly perform and interpret microbiology procedures.
5. Select and apply suitable problem-solving strategies in a practical laboratory environment.
6. Work cooperatively in classroom and laboratory settings with at least 80% accuracy and proficiency.

MLTS 2114. Clinical Microbiology

Course Description

Presents clinical bacteriology, mycology and parasitology including macroscopic and microscopic identification of organisms, antibiotic susceptibility testing, life cycles and the pathology and etiology of various diseases. Virology is introduced.

Student Learning Outcomes

1. Define disease states, etiologies, identifiable characteristics, and vocabulary specific to course.
2. Correlate laboratory tests with organ systems, anatomical and physiological functions, patient clinical presentation, treatments, and common disease states.
3. Describe principles, methodologies, clinical significance, and reference ranges, as well as proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.

MLTS 2114L. Clinical Microbiology Laboratory

Course Description

Identifies the microorganisms of clinical significance from specimens obtained from patients. Students utilize current methodologies and identification techniques.

Student Learning Outcomes

1. Identify laboratory safety equipment and explain laboratory safety protocol related to use of laboratory equipment and disposal of laboratory waste.
2. Demonstrate safe and proper use of laboratory equipment including, but not limited to: microscopes, centrifuges, spectrophotometers, and other specialized instrumentation.
3. Safely perform and practice procedures and techniques related to laboratory tests.
4. Employ critical thinking skills to analyze results as they relate to physiological functions, patient clinical presentation, and common disease states.

MLTS 2116C. Clinical Chemistry Lecture and Laboratory

Course Description

Theory, principles, and procedures applicable to clinical chemistry, focused on chemical analysis of blood and other bodily fluids using manual and automated techniques/methodologies. Application of laboratory testing in the diagnosis of disease processes with a review of pathophysiology

Student Learning Outcomes

1. Identify two methods used to produce clinical laboratory-grade water for use in the clinical laboratory.
2. Explain the terms sensitivity and specificity
3. Convert results from one-unit format to another.
4. List three items that should be monitored during the water-purification process.
5. Explain the difference between air-displacement and positive-displacement micropipettes.
6. Identify four types of glassware available for laboratory use.
7. Define the following terms: to contain (TC) and to deliver (TD) in reference to types of pipettes, molarity, molality, normality, thermocouple, percent solution, and hydrates.
8. Define the following wave parameters: amplitude, period, frequency.
9. Identify the significant regions of the electromagnetic spectrum (EMS) from lowest energy to highest energy levels.
10. Write the Nernst equation.
11. Write the chemical reactions for the PO₂ and PCO₂ electrode.
12. Define the following terms associated with electrochemical methods: potentiometer, amperometry, coulometry, conductance, resistivity, and voltammetry.
13. Identify five laboratory tasks associated with the preanalytical stages of laboratory testing.
14. List three techniques used to mix samples and reagents in an automated system.
15. List three drawbacks of total laboratory automation.

MLTS 2116. Clinical Chemistry

Course Description

Presents the principles and methods used in testing for chemical components in blood and other body fluids including basic instrumentation.

Student Learning Outcomes

1. Define disease states, etiologies, identifiable characteristics, and vocabulary specific to course.
2. Correlate laboratory tests with organ systems, anatomical and physiological functions, patient clinical presentation, treatments, and common disease states.
3. Describe principles, methodologies, clinical significance, and reference ranges, as well as proper specimen collection, handling, transport, and storage techniques for common and specialized laboratory tests.

MLTS 2116L. Clinical Chemistry Laboratory

Course Description

Presents experiences for performing the basic procedures used in a clinical chemistry laboratory including basic chemistry instrumentation.

Student Learning Outcomes

1. Identify laboratory safety equipment and explain laboratory safety protocol related to use of laboratory equipment and disposal of laboratory waste.
2. Demonstrate safe and proper use of laboratory equipment including, but not limited to: microscopes, centrifuges, spectrophotometers, and other specialized instrumentation.
3. Safely perform and practice procedures and techniques related to laboratory tests.
4. Employ critical thinking skills to analyze results as they relate to physiological functions, patient clinical presentation, and common disease states.

MLTS 2211. Clinical Hematology and Coagulation**Course Description**

Introduction to the theory and practice of clinical hematology. The course includes erythropoiesis, leukopoiesis, cell enumeration, the hemogram, white blood cell morphology, differentials, coagulation testing, platelets, routine manual methods, and correlation with pathologies.

Student Learning Outcomes

1. Practice laboratory safety as described in OSHA regulations including instructions in universal precautions.
2. Identify potential laboratory safety hazard situations and take appropriate actions to minimize injury to self and others.
3. Using established criteria, identify and evaluate a specimen as acceptable for hematology testing or coagulation studies.
4. Understand quality control needed to ensure the accuracy of all reported hematology and coagulation test results.
5. Understand instrument maintenance and calibrations as required to ensure optimal instrument performance.
6. Document quality control data, equipment maintenance, corrective actions when troubleshooting defective equipment, and test results.
7. Discuss hematopoiesis in terms of what, when, why, where, and how it happens.

MLTS 2271. Directed Clinical Practicum I**Course Description**

Supervised clinical practice in the clinical pathology department of affiliated hospitals; Field Laboratory experience includes rotations through urinalysis, clinical hematology and coagulation, and clinical chemistry

Student Learning Outcomes

1. Demonstrate the ability to apply classroom theory and student laboratory practice in an actual clinical laboratory setting.
2. Demonstrate the ability to prioritize and organize work in response to volume and emergency demands.
3. Demonstrate the ability to work cooperatively with other members of the health care team.
4. Demonstrate an understanding of professional and ethical standards of practice in interactions with clients and colleagues.
5. Follow the prescribed safety policies and practices of the clinical affiliate.
6. Demonstrate dependability and reliability in meeting all scheduled clinical hours by obtaining a grade of 70% or better in each of the clinical rotation area.

MLTS 2279. Med Laboratory Technician Clinical Experience

Course Description

Provides clinical practice in affiliated clinical laboratories with rotations through hematology/coagulation, urinalysis, microbiology, chemistry, and immunohematology departments.

Student Learning Outcomes

1. Use appropriate laboratory vocabulary, etiquette, and communication to demonstrate professionalism as a member of a healthcare team.
2. Perform laboratory procedures and techniques according to laboratory protocol.
3. Apply Quality Assurance and Quality Control processes used in the laboratory.
4. Demonstrate correct use, maintenance, calibration, and reagent handling for laboratory instrumentation.

MLTS 2712. MLT Laboratory Topics and Exam Prep

Course Description

This course is designed as a comprehensive review of chemistry, hematology/coagulation, immunology, immunohematology, microbiology, urinalysis and body fluids, and laboratory operations with a goal of preparing learners for national MLT level certification exams and maintenance of certification through continuing education.

Learners will be provided with opportunities to explore the role of the medical laboratory as a part of a healthcare team, gain understanding of the requirements for laboratory operations, and focus on clinical applications of laboratory technology.

Student Learning Outcomes

1. Demonstrate competence in studying for national MLT level certification exams.
2. Explain the importance of continuing education for certification maintenance.
3. Discover the roles and responsibilities of medical laboratory personnel as they relate to laboratory operations.
4. Demonstrate understanding of the principles, methodologies, and clinical applications of laboratory technology.

MLTS 2281. Directed Clinical Practicum II

Course Description

Supervised clinical practice in the clinical pathology department of affiliated hospitals; Field Laboratory experience includes rotations through clinical microbiology, immunohematology and serology.

Student Learning Outcomes

1. Demonstrate the ability to apply classroom theory and student laboratory practice in an actual clinical laboratory setting.
2. Demonstrate the ability to prioritize and organize work in response to volume and emergency demands.
3. Demonstrate the ability to work cooperatively with other members of the health care team.
4. Demonstrate an understanding of professional and ethical standards of practice in interactions with clients and colleagues.
5. Follow the prescribed safety policies and practices of the clinical affiliate.
6. Demonstrate dependability and reliability in meeting all scheduled clinical hours.
7. Obtaining a grade of "C" or better in written exams or quizzes and performance evaluation forms in each of the clinical rotation area.

Military Science and Leadership (MLSL)

MLSL 1101. Introduction to Leadership I

Course Description

MLSL 1110. Introduction to Army Leadership I

Course Description

This course provides an introduction to the Army and basic Soldier skills. Students receive an introduction to the Army Profession and examine what it means to be a professional in the U.S. Army. The overall focus is on developing fundamental knowledge and comprehension of the Army Leadership Requirements Model (ALRM) while understanding the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Students also begin learning map reading and land navigation.

Student Learning Outcomes

1. Identify and describe the Army leader attribute and competency categories described in the Army Leadership Requirements Model.
2. Analyze and demonstrate methods for creating and sustaining an organizational climate of trust, ensuring all individuals are treated with dignity and respect.
3. Develop and implement plans for prioritizing, planning, preparing, executing, evaluating, and assessing training within a military context.
4. Apply critical and creative thinking to solve problems and make decisions in Army scenarios.

MLSL 1110L. Introduction to Army Leadership I Laboratory

Course Description

In this weekly lab, students will apply initial instruction from MLSL 1110 on fieldcraft, first aid, and team building. The lab will be facilitated by MS III Cadets and supervised by MS IV's and cadre.

Student Learning Outcomes

1. Demonstrate proficiency in individual Soldier skills such as fieldcraft and first aid through practical exercises and assessments.
2. Explain and practice Army customs and courtesies in various scenarios, demonstrating appropriate behavior and respect.
3. Execute team, squad, and platoon movements, showcasing knowledge of tactical formations and commands.

MLSL 1120. Introduction to Army Leadership II

Course Description

This course introduces students to the personal challenges and competencies that are critical for effective leadership. Students learn how to develop personal life skills such as critical thinking, time management, goal setting, and communication. Students learn the basics of the communication process and the importance for leaders to develop the essential skills to effectively communicate in the Army.

Student Learning Outcomes

1. Identify and describe the Army leader attribute and competency categories as outlined in the Army Leadership Requirements Model.
2. Demonstrate methods for creating and sustaining an organizational climate of trust in which all individuals are treated with dignity and respect.
3. Develop plans for prioritizing, planning, preparing, executing, evaluating, and assessing training within a military context.
4. Apply critical and creative thinking skills to solve problems and make decisions in Army scenarios.

MLSL 1120L. Introduction to Army Leadership II Laboratory

In this weekly lab, students will apply initial instruction from MLSL 1110 on fieldcraft, first aid, and team building. The lab will be facilitated by MS III Cadets and supervised by MS IV's and cadre.

Student Learning Outcomes

1. Demonstrate proficiency in individual Soldier skills such as fieldcraft and first aid through practical exercises and assessments.
2. Explain and practice Army customs and courtesies in various scenarios, demonstrating appropriate behavior and respect.
3. Execute team, squad, and platoon movements, showcasing knowledge of tactical formations and commands.

MLSL 1129. Introduction to Military Fitness I

Course Description

This course provides a hands-on overview of the fitness requirements needed to serve in the U.S. Army. Students are introduced to, and expected to complete exercises and routines to build their individual strength, endurance, and speed to meet the demands of training and Soldier tasks.

Student Learning Outcomes

1. Identify and describe the key physical requirements for successful service in the U.S. Army.
2. Complete the Army Combat Fitness Test (ACFT) and achieve a passing score.
3. Complete the Combat Water Survival Test (CWST) and achieve a passing score.

MLSL 1130. Introduction to Military Fitness II

Course Description

This course provides a hands-on overview of the fitness requirements needed to serve in the U.S. Army. Students are introduced to and expected to complete exercises and routines to build their individual strength, endurance, and speed to meet the demands of training and Soldier tasks.

Student Learning Outcomes

1. Describe the physical requirements for service in the U.S. Army.
2. Pass the Army Combat Fitness Test (ACFT).
3. Pass the Combat Water Survival Test (CWST).

MLSL 2110. Foundations of Army Leadership I

Course Description

This course focuses on leadership and ethics. The course adds depth to the Cadets' knowledge of the different leadership styles. Cadets will conduct leadership analysis of famous leaders and self-assessment of their leadership style. The Army Profession is presented through understanding Culture Awareness, Values, Ethics, and how to apply both to different situations they may encounter as a leader. Army Values and Ethics and their relationship to the Law of Armed Conflict (LOAC) and philosophy of military service are presented through video clips and historical vignettes followed with small group discussions with cadets.

Student Learning Outcomes

1. Apply the Army leader attributes and competency categories described in the Army Leadership Requirements Model.
2. Design and implement strategies for creating and sustaining an organizational climate of trust in which all individuals are treated with dignity and respect.
3. Develop a systematic approach to prioritizing, planning, preparing, executing, evaluating, and assessing training exercises and demonstrate their execution
4. Use critical and creative thinking skills to analyze historical leaders and develop a personal leadership philosophy.

MLSL 2110L. Foundations of Army Leadership I Laboratory

Course Description

Cadets apply their knowledge outside the classroom in hands-on performance-oriented environments during the weekly lab, which is facilitated by MS III Cadets and supervised by MSIVs and cadre.

Student Learning Outcomes

1. Demonstrate proficiency in individual Soldier skills.
2. Apply Army customs and courtesies.
3. Demonstrate effective team, squad, and platoon movement drills by conducting exercises and adhering to tactical procedures.

MLSL 2120. Foundations of Army Leadership II

This course focuses on Army doctrine and decision-making. The course begins with analytical techniques, creative thinking skills, and the Army problem-solving process related to situations faced by leaders when making decisions. Troop Leading Procedures (TLPs) and Operations Orders (OPORDs) will lead Cadets to understand Army Doctrine and Symbolology. Squad tactics will be covered in classes on Offensive Operations and Defensive Operations inside of the Army's operating environmental concept of Multidomain Operations.

Student Learning Outcomes

1. Apply the Army leader attribute and competency categories from the Army Leadership Requirements Model by demonstrating their integration into various leadership plans.
2. Implement strategies to create and sustain an organizational climate of trust by developing plans that promote dignity and respect for all individuals.
3. Develop and apply an approach to prioritizing, planning, preparing, executing, evaluating, and assessing training by creating and demonstrating successful exercise plans in a practical setting.
4. Demonstrate critical and creative thinking to analyze complex decision-making scenarios related to Army doctrine and tactics, develop solutions, and present a decision-making strategy that addresses the challenges of Multidomain Operations, Offensive Operations, and Defensive Operations.

MLSL 2120L. Foundations of Army Leadership II Lab

Course Description

Cadets apply their knowledge outside the classroom in hands-on performance-oriented environments during the weekly lab, which is facilitated by MS III Cadets and supervised by MSIVs and cadre.

Student Learning Outcomes

1. Demonstrate proficiency in individual Soldier skills by successfully executing practical exercises as assessed by MS IVs and cadre.
2. Apply Army customs and courtesies in various lab scenarios and perform protocols correctly.
3. Coordinate team, squad, and platoon exercises by leading these exercises in a lab setting and adhering to tactical procedures.

MLSL 2129. Foundations of Military Fitness I

Course Description

This course provides a hands-on overview of the fitness requirements needed to serve in the U.S. Army. Students are introduced to, and expected to complete exercises and routines to build their individual strength, endurance, and speed to meet the demands of training and Soldier tasks.

Student Learning Outcomes

1. Summarize the physical requirements for service in the U.S. Army.
2. Pass the Army Combat Fitness Test (ACFT).
3. Pass the Combat Water Survival Test (CWST).

MLSL 2130. Foundations of Military Fitness II

Course Description

This course provides a hands-on overview of the fitness requirements needed to serve in the U.S. Army. Students are introduced to and expected to complete exercises and routines to build their individual strength, endurance, and speed to meet the demands of training and Soldier tasks.

Student Learning Outcomes

1. Summarize the physical requirements for service in the U.S. Army.
2. Pass the Army Combat Fitness Test (ACFT).
3. Pass the Combat Water Survival Test (CWST).

MLSL 2992. Directed Studies in Military Science

Course Description

Independent projects conducted under the direction of designated faculty.

Student Learning Outcomes

1. Identify and articulate key concepts and theories relevant to the specific topic of study by preparing a comprehensive research paper, report, portfolio, or presentation that synthesizes current knowledge and insights.

Mineral Engineering (MINE)

MINE 1110. Introduction to Mineral Engineering

Course Description

The fundamentals of geology and mineral resource exploration and development applied to engineering. The role of the mineral engineer in mining, exploration, and geotechnical engineering. Field trips to mining and construction operations as well as guest speakers from industry, government, and research.

Student Learning Outcomes

1. Students learn the general benefits of the mineral industry as well as the challenges involved in the industry.

MINE 2215. Health and Safety

Course Description

The roles of health and safety in the construction, operation, and maintenance of extractive mineral facilities. Federal and state health and safety codes. Laboratory and field work.

Student Learning Outcomes

1. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
2. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and social contexts.

Modern Languages (MLNG)

MLNG 1110. Approaches to Languages and Cultures

Course Description

An interdisciplinary approach to the interplay of languages and cultures in Europe and Asia. Focus on the role of language in comparative cultural practices and cross-cultural encounters.

Student Learning Outcomes

1. You will compare modes of thoughts and expressions, and processes across a range of historical periods and/or structures

2. You will recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives
3. You will draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought.

Music (MUSC)

MUSC 1110. Music Appreciation: Jazz

Course Description

This course explores the ideas of music in society and its cultural relevance and is designed to increase the students' appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and composers of music and become acquainted with knowledge and appreciation of Jazz from various cultures and times.

Student Learning Outcomes

1. Develop a vocabulary of musical terms and be able to describe music using those terms.
2. Demonstrate knowledge of composers, their music and their relationship to historical periods.
3. Recognize how music is played and plays a political, social, and cultural function.
4. Identify well-known pieces and the historical and social context in which they were composed.
5. Demonstrate basic understanding of music notation and musical communication.

MUSC 1115. Later Music Appreciation: Beethoven and Beyond

Course Description

This course provides an overview of the history of "classical music" in western cultures, with the inclusion of some music and musical forms of other cultures. The course is divided into four sections, each four weeks in length. The first section explores the basic elements of music and musical form, and includes information related to attending concerts. There will also be a consideration of the life and work of Beethoven as a transitional figure from Classicism to Romanticism. The remaining three sections explore Art music of the Romantic and Modern periods.

Student Learning Outcomes

At the end of this course, students will be able to:

1. Develop a vocabulary of musical terms, and be able to describe music using those terms.
2. Demonstrate knowledge of composers, their music and their relationship to historical periods.
3. Recognize how music played and plays a political, social, and cultural function.
4. Identify well-known pieces and the historical and social context in which they were composed.
5. Demonstrate basic understanding of music notation and musical communication.

MUSC 1120. Music Appreciation: Rock and Roll

Course Description

This course explores the ideas of music in society and its cultural relevance and is designed to increase the students' appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and composers of music and become acquainted with knowledge and appreciation of Rock and Roll music from various cultures and times.

Student Learning Outcomes

1. Develop a vocabulary of musical terms and be able to describe music using those terms.
2. Demonstrate knowledge of composers, their music and their relationship to historical periods.
3. Recognize how music played and plays a political, social, and cultural function.
4. Identify well-known pieces and the historical and social context in which they were composed.
5. Demonstrate basic understanding of music notation and musical communication.

MUSC 1125. Rock Combo

Course Description

Exploration and performance of contemporary pop/rock music selections from the 1960's through today, to gain a better understanding of popular music and performing as a small group ensemble as a rock band "using vocals, bass, guitar, drums, and keyboard."

Student Learning Outcomes

1. Develop the ability to incorporate basic principles of rock improvisation in their performance technique in order to raise their level of performance.
2. Apply principles of improvisation to standard pop music literature so that each participant is able to create a more sophisticated improvised solo (based on chord changes found in selected literature) that is logical and effectively incorporates the material covered in class.
3. Demonstrate a thorough working knowledge of the principal players involved in the stylistic development of the various periods related to popular music.

MUSC 1130. Music Appreciation: Western Music

Course Description

This course explores the ideas of music in society and its cultural relevance and is designed to increase the students' appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and composers of music and become acquainted with knowledge and appreciation of Western music from various cultures and times.

Student Learning Outcomes

1. Develop a vocabulary of musical terms and be able to describe music using those terms.
2. Demonstrate knowledge of composers, their music and their relationship to historical periods.
3. Recognize how music played and plays a political, social, and cultural function.
4. Identify well-known pieces and the historical and social context in which they were composed.
5. Demonstrate basic understanding of music notation and musical communication.

*Schools teaching a course that is not part of the common course will not use "Music Appreciation" as part of the course title.

MUSC 1135. Mariachi Ensemble

Course Description

Beginning to intermediate instruction in Mariachi music ensemble.

Student Learning Outcomes

Objective: Perform quality Mariachi music at as high a level as possible.

Competency: Students will perform, in addition to the ensemble repertoire: scales, arpeggios and genre-specific licks and riffs.

Objective: Foster an appreciation for all Mariachi styles.

Competency: Students will perform melodies and rhythm cells particular to various genres.

Objective: Develop the art of listening in ensemble settings.

Objective: Introduce all members of the ensemble to the basic elements of improvisation.

Competency: Students will "run changes" of "consecrated" chord progressions, in Mariachi literature and performance.

MUSC 1140. Music Appreciation: World Music

Course Description

This course explores the ideas of music in society and its cultural relevance and is designed to increase the students' appreciation of music as well as to enhance their listening skills. Students are introduced to various periods, styles, and

composers of music and become acquainted with knowledge and appreciation of World music from various cultures and times.

Student Learning Outcomes

1. Develop a vocabulary of musical terms, and be able to describe music using those terms
2. Demonstrate knowledge of composers, their music and their relationship to historical periods
3. Recognize how music played and plays a political, social, and cultural function
4. Identify well-known pieces and the historical and social context in which they were composed
5. Demonstrate basic understanding of music notation and musical communication

MUSC 1150. Basic Music Theory

Course Description

Not Available

Student Learning Outcomes

Not Available

MUSC 1153. Music Fundamentals

Course Description

Introduction to the elements of music, including basic notation, staves, clefs, major and minor scales and key signatures, time signatures, meters, rhythms, intervals, and triad qualities. For music majors who do not possess sufficient background for enrollment in Music Theory I: Basic Harmony and Voice-Leading.

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Read rhythmic and pitch notation in the most commonly used time signatures and clefs.
2. Understand and employ principal notational devices, such as accidentals, key signatures, time signatures, beams, flags, ties, and dots.
3. Identify and construct the most common scales, chords, and intervals of both classical and popular music.
4. Identify and construct inversions of triads and seventh chords, and read figured bass symbols.
5. Transpose simple melodies and progressions to other keys.
6. Analyze brief musical passages, whether presented visually or aurally.
7. Engage attentively and cognitively with works of music in any genre, and thereby become a more confident and competent listener and contributor to music-making in everyday life.

MUSC 1153L. Music Fundamentals Aural Lab

Course Description

Aural skill training for material covered in MUSC1153, with emphasis on rhythmic and melodic dictation, aural identification of intervals, scales and triad qualities, and sight-singing of rhythms, intervals, and simple melodies.

Student Learning Outcomes

At the conclusion of this course, student should be able to:

1. Sing, using solfège, the most common scales, chords, and intervals used in classical and popular music.
2. Write down in notation the same musical constructs presented aurally, using standard notational device such as accidentals, key signatures, time signatures, beams, flags, ties, and dots.
3. Engage attentively and cognitively with works of music in any genre, and thereby become a more confident and competent listener and contributor to music-making in everyday life.

MUSC 1155. Basic Song Writing

Course Description

Study of the fundamentals of songwriting, including song form, the writing of lyrics, and song accompaniment styles.

Student Learning Outcomes

At the conclusion of this course, student should be able to:

1. Compose an original song
2. Perform an original composition
3. Capture a performance of their own musical work

MUSC 1160. Music Theory I

Course Description

Introduces the fundamentals of tonal harmony and voice leading, focusing on four-voice writing and analysis of excerpts from music literature.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. All major, minor, harmonic, and melodic minor scales.
2. To correctly spell triads on all scale degrees of all scales and to notate them properly.
3. Key signatures of all scales and notate them properly.
4. Basic, simple and compound meters including note values, rests, dotted rhythms, and ties.
5. To analyze and harmonize basic four-part harmony writing to include theory rules of motion, voice leading, doubling, proper chord progression.
6. Correct application of diatonic seventh chords.
7. Common chord modulation.
8. Apply and utilize the seven theory elements listed above in analysis and harmonization of four-part music writing, and harmonic relationships.
9. Compose a simple piece of music correctly utilizing all basic harmonic rules.

MUSC 1165. Music Theory II

Course Description

Continuation of Music Theory I. Covers principles of harmony and voice leading, using all common diatonic triads and seventh chords. Introduces modulation, contrapuntal chord functions, and elementary structural analysis of excerpts from music literature.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Correctly analyze music containing secondary chords, borrowed chords (and the N6) and augmented 6th chords.
2. Correctly complete assignments to by understanding and applying figured bass.
3. Correctly complete assignments by harmonizing a melody line by applying knowledge SRM, and advanced chords structures.
4. Understand and apply phrase and period structure.

MUSC 1170. Vocal Ensemble I

Course Description

Small choral group (pop, rock, country), specializing in contemporary music. Audition required in fall. Students will have a performance obligation for fall, spring and summer (through end of July).

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. To perform a variety of choral literature suitable to a small group of singers.
2. To learn to sing with a smaller group of people by executing: A) Better Blend B) Better Balance C) Tonality D) Musicality E) Interpretation.
3. Perform with stage presence and movement without a director.

4. Work with a large and small PA system correctly.
5. Develop the ability to support and cooperate well with other members of the group and develop the empathetic feeling that makes for successful performing.
6. Develop in depth vocal technique and stylistic interpretation.

MUSC 1175. Audio Amplification I

Course Description

Introduction to sound reinforcement techniques; knowledge of amps, mics, mixing boards; cables, proper connections, etc.... Includes hands-on experience with sound systems in various performance situations. Some lab hours will fall during the class period, and some will occur at other times during the week as activities become available.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Choose equipment for and operate a live sound system.
2. Repair and troubleshoot live audio equipment.
3. Get a high-quality transparent mix.
4. Students will learn how to load-in, setup, operate, troubleshoot, and repair a live audio system.
5. Students will learn basic repair techniques for audio equipment.
6. Students will demonstrate their proficiency through testing in both simulated and live audio environments.

MUSC 1180. Elementary Harmony I

Course Description

Basic tertian harmonic principles, counterpoint, voice leading, and form will be explored in this course

Student Learning Outcomes

At the conclusion of this course, a music major student will be able to:

1. Understand the principles of music rudiments through application in harmony and analysis procedures.
2. Write first species counterpoint.
3. Harmonize root position harmonic progression.
4. Write and identify cadences.
5. Identify phrases and periods.

MUSC 1185. Elementary Harmony II

Course Description

This course is a continuation of Elementary Harmony I.

Student Learning Outcomes

1. There will be written assignments due for each class/chapter.
2. There will be extra assignments from other texts.
3. There will be a written test over each chapter.

MUSC 1190. Group Recital I, II, III, IV

Course Description

Recitals played on the school's auditorium, for the College and City Community, as a demonstration of the completion of a semester's worth of repertory, defined by each specific instructor of voice, instrument, arranging and composing, etc.

Student Learning Outcomes

Completion of the student's performance activities in each semester.

MUSC 1210. Fundamentals of Music for non-majors

Course Description

A beginning course in the fundamentals of music, this course includes notation, scales, key signatures and intervals. Aural comprehension is introduced through singing intervals, scales and triads and dictating simple rhythmic and melodic patterns and students explore the basic components of music.

Student Learning Outcomes

1. Demonstrate and apply standard notation of pitch, rhythm, scales, intervals, key signatures, triads, and simple melodic and harmonic composition.
2. Develop and improve basic aural skills.
3. Read musical notation.
4. Improve and expand understanding of fundamental musical techniques and concepts.

MUSC 1215. Group Violin I

Course Description

This course is primarily intended for non- music majors. Students will receive weekly instruction in optimal violin performance posture and bow hold and will learn basic scales and pieces in a group environment.

Student Learning Outcomes

1. Students will demonstrate appropriate care and maintenance of stringed instruments.
2. Students will demonstrate basic techniques and musical skills while stressing correct instrument positioning and bow hold.
3. Students will apply basic note reading skills in treble clef.
4. Students will utilize both pizzicato and arco techniques.
5. Students will practice and perform several one octave scales, simple exercises and songs.
6. Students will demonstrate the ability to perform assigned pieces individually and with other members of the class.

MUSC 1218. Group Violin II

Course Description

This course is primarily intended for non- music majors who have gained basic violin skills in Group Violin I class or through previous study of the violin. Students will receive weekly instruction in optimal violin performance posture and bow hold and will study more advanced scales, exercises and pieces in a group environment.

Student Learning Outcomes

1. Students will demonstrate a variety of techniques and musical skills while stressing correct instrument positioning and bow hold.
2. Students will demonstrate the ability to perform a variety of bow strokes.
3. Students will demonstrate fluency in treble clef note reading.
4. Students will practice and perform several two octave scales, intermediate level exercises and songs.
5. Students will demonstrate the ability to perform assigned pieces individually and with other members of the class.

MUSC 1220. Fundamentals of Piano for non-music majors

Course Description

This course will include instruction for non-music majors in beginning keyboarding skills. Students will develop their keyboard skills through practice and study of fundamentals.

Student Learning Outcomes

1. Develop technical skills in both hands to allow for ease in movement around the keyboard.
2. Develop growth in reading rhythmic melodic and harmonic music.
3. Demonstrate improved performance ability.
4. Demonstrate knowledge of all major and minor scales, triads, chord progressions, and four-part harmony.
5. Explain the importance of proper keyboarding practices.

MUSC 1225. Keyboard Harmony

Course Description

Emphasis on expanded harmonic progressions.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Extended four parts chord progression.
2. Use of inversions.
3. Inclusion of diatonic seventh chords with proper approach and resolution.
4. Traditional use of secondary dominants -with proper approach and resolution.

MUSC 1230. Sight Singing

Course Description

Enables the student to sing written melodies at first sight without the aid of a musical instrument. Topics include reading rhythmic notation, recognizing key signatures, seeing melodies as part of a scale, and learning the sounds of musical intervals.

Student Learning Outcomes

Upon successful completion of this course, students will be able to:

1. Quickly and accurately assign solfège syllables to notation in both major and minor keys.
2. Sing the following exercises with accurate solfège, given a starting pitch:
 - a. major, minor, and chromatic scales
 - b. major, minor, augmented, and diminished triads
 - c. any interval ascending or descending
 - d. major, minor, augmented, and diminished triads
 - e. all types of seventh chords in any position
3. Sing the following at sight, given the scale and starting pitch:
 - a. melodies in major and minor modes
 - b. melodies that modulate to closely related keys
4. Improvise melodies vocally given a rhythmic framework and tonal outline.

MUSC 1240. Sight Singing and Dictation

Course Description

Aural recognition of all diatonic intervals, melodic phrases, rhythms, scales, and triads.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Sight read pitches more accurately.
2. Tune their sight singing to a specific tonality.
3. Execute rhythms more accurately.
4. Students will utilize music theory skills.
5. Sight read (sing) scales, intervals, short melodies, and rhythms correctly.
6. Identify these same elements by writing them on staff paper from tonal memory upon music dictation played by the teacher, from the keyboard.

MUSC 1245. Sight Singing and Dictation II

Course Description

A continuation of Sight Singing and Dictation I with emphasis on four-part dictation.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Sight reading of extended melodies.
2. Singing intervals including augmented, diminished, M6 and Mi6, and M7 and Mi7.
3. Execute complex rhythms.
4. Identify these elements by writing them on staff paper upon dictation by the teacher from the keyboard.
5. Write two-part and chordal identification from musical dictation.

MUSC 1250. Class Voice I

Course Description

Laboratory experiences to help solve vocal problems and develop singing potential through group methods, emphasis on development of breathing, phonation, articulation and expression.

Student Learning Outcomes

1. Students will engage in guided singing exercises while applying healthy vocal technique.
2. Students will demonstrate knowledge of necessary elements in creating and leading appropriate vocal warm-ups and vocalizes.
3. Students will identify and understand vocal function and anatomy.
4. Students will apply methods for teaching rudimentary singing in groups.

MUSC 1260. Theory and Analysis I: Basic Harmony and Voice-Leading

Course Description

This is the first course in a four-semester sequence. Theory of musical structure, derived from close analytical study of musical works from the earliest notated sources to the present day. Solidification of fundamental knowledge (reading from notation; spelling and identifying scales, intervals, and chords), development of part-writing skills (in two and four voices, using figured bass and roman numerals), and introductory composition and improvisation in classical and related styles.

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Identify and construct (in all inversions) all diatonic triads and seventh chords (as found not only in Western classical music but also in pop, rock, and jazz).
2. Identify and construct major and minor scales in all keys, and all diatonic modes.
3. Understand how the most common sonorities function within simple phrases and harmonic progressions.
4. Analyze short musical passages presented either visually or aurally.
5. Approach such analysis not only vertically, in terms of chords, but also horizontally, in terms of melodies coordinated through to the principles of counterpoint.
6. Identify and label basic embellishing tones, such as neighbor and passing tones.
7. Read basic figured bass notation for diatonic passages.
8. Compose and improvise using simple tonic and dominant progressions.

MUSC 1260L. Theory and Analysis I Aural Lab: Basic Harmony and Voice-Leading

Course Description

This is the first course in a four-semester sequence. Development of practical musical skills related to both production (singing, tapping, conducting, performing on an instrument) and perception (active analytical listening, recognition and notation of auditorily presented melodic, rhythmic, and harmonic patterns). Solidification of basic analytical capacities (solfège) and introduction to aural analysis of larger constructs (melody and harmonic progression). Basics of improvisation with the voice and/or instruments.

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Sing, using solfège, the most common scales, modes, chords, and intervals used in classical and popular music, as well chromatic, whole-tone, and octatonic scales.

2. Write down in notation the same musical constructs presented aurally, using standard notational devices such as accidentals, key signatures, time signatures, beams, flags, ties, and dots.
3. Perform at the keyboard, with introductory fluency, all major and minor scales, all four types of triads, and all five types of seventh chord (in root position)
4. Read from notation (singing or playing) single lines of diatonic music in any of the twenty-four major and minor keys, and in any of the common meters.
5. Use standard conducting patterns for common meters while singing, reading, or listening.
6. Improvise (with the voice or on an instrument) using characteristic melodic and harmonic patterns.
7. Generalize from examples presented on paper to practical experiences with listening, performing, and improvising in real-time and in real-life musical contexts.

MUSC 1262. Group Guitar I

Course Description

Students will learn to read music and play melodies, chords and simple songs. Emphasis on classical curriculum, supplemented with instruction in other styles, including rock, blues and jazz.

Student must supply instrument (classical, nylon-string guitar).

Student Learning Outcomes

This class will focus on developing basic guitar skills with an emphasis on classical guitar technique. Students will complete this class with a working knowledge of the following elements:

1. Reading Chord diagrams, tablature, and standard music notation (1st and 2nd Positions- frets 0-V).
2. Classical/Fingerstyle Technique (single note and arpeggio patterns); Basic Open Chords & Strumming Patterns.
3. Solo & Ensemble Music;
4. Songs and basic accompaniment patterns

MUSC 1265. Theory and Analysis II: Diatonicism

Course Description

This is the second course in a four-semester sequence. Continued study of theoretical aspects of musical structure, derived from close analytical engagement with music from multiple time periods, with a primary focus on diatonic (non-chromatic) music. Continued solidification of basic musical capacities (reading and writing notation), with further development of higher-level capacities (contrapuntal writing in two parts, voice-leading in four parts, idiomatic harmonization of unaccompanied melodies and figured basses). Thorough study of the principles of harmonic progression in diatonic music, particularly through the analysis of classical works of the common-practice period.

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Identify, with ease and rapidity, the root, quality, and inversion of any presented diatonic sonority common to Western classical music (as well as pop, rock, and jazz).
2. Understand how these sonorities function within phrases, subphrases, periods, and harmonic progressions.
3. Understand how phrases both subdivide (into subphrases and motives) and combine (to form periods, double periods, and sentences).
4. Analyze diatonic passages presented either visually or aurally.
5. Approach such analysis not only vertically, in terms of chords, but also horizontally, in terms of melodies coordinated through to the principles of counterpoint, the use of nonharmonic tones for melodic purposes, and harmonies following idiomatic principles of progression.
6. Complete exercises in four-voiced texture from prompts such as figured basses, unfigured basses, and short melodies.
7. Compose and improvise based upon the above principles.
8. Reflect upon how the principles of musical organization vary in their usage over time, such as in response to social and economic pressures.

MUSC 1265L. Theory and Analysis II Aural Lab: Diatonicism

Course Description

This is the second course in a four-semester sequence. Continued development of practical musical skills related to both production (singing, tapping, conducting, performing on an instrument) and perception (active analytical listening, recognition and notation of auditorily presented melodies, rhythms, and harmonic patterns). Continued aural analysis involving extended diatonic melodies and harmonic progressions. Continued improvisatory exploration with voices and/or instruments.

Pre-requisite: Theory and Analysis I: Basic Harmony and Voice-Leading and Theory and Analysis I Aural Lab: Basic Harmony and Voice-Leading. Co-requisite: Theory and Analysis II: Diatonicism

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Sing, using solfège, the most common scales, modes, chords, and intervals used in classical and popular music, as well chromatic, whole-tone, and octatonic scales.
2. Write down in notation the same musical constructs presented aurally, using standard notational devices such as accidentals, key signatures, time signatures, beams, flags, ties, and dots.
3. Perform at the keyboard, with moderate fluency, all major and minor scales, all four types of triads, and all five types of seventh chord (in all inversions)
4. Sing, together with other students, passages in two-part counterpoint and four-part harmony, reading from notation.
5. Use standard conducting patterns while singing, reading, and listening to music.
6. Improvise (with the voice or on an instrument) using melodic and harmonic patterns encountered in this and the co-requisite lecture course.
7. Generalize from examples presented on paper to practical experiences with listening, performing, and improvising in real-time and in real-life musical contexts.

MUSC 1267. Group Guitar II

Course Description

For students who have completed Group Guitar I or have some basic guitar skills. Emphasis on classical curriculum, supplemented with instruction in other styles, including folk, rock, blues and jazz.

Student must supply instrument (classical, nylon-string guitar).

Student Learning Outcomes

This class will focus on furthering previous guitar skills (such as gained from Group Guitar I) with an emphasis on classical guitar technique. Students will complete this class with a working knowledge of the following elements:

1. Reading Music (1st through 5th Positions- frets 0-VIII);
2. Fingerstyle (classical) Technique (right hand single note, double note, arpeggio, and left-hand issues);
3. Chords & Strumming Patterns (rudimentary theory and chord construction, CAGED method movable bar chords);
4. Basic fretboard harmony.
5. Solo & Ensemble Music (2-to-4-part music);
6. Songs and accompaniment patterns

MUSC 1270. Literature of Music

Course Description

Introductory course briefly covering the development of art music in the Medieval, Renaissance, Baroque, Classical, Romantic & Twentieth Century periods, as well as jazz and world music as it pertains to New Mexico and the surrounding southwest areas (Native American, Hispanic, African American). Covers major composers, genres, stylistic traits and compositional techniques as the influences from other arts, cultures, and socio-historical events. Also seeks to develop abilities in listening, score analysis, writing, and research techniques.

Student Learning Outcomes

1. To have you increase your awareness and scope of musical knowledge and experience.
2. To develop critical listening skills/thinking skills. As with knowledge, not everything should be taken as absolute, and your opinions are important.
3. To develop writing and research skills through various assignments.

MUSC 1280. Musical Comedy Workshop**Course Description**

The study and performance of scenes from or whole productions within a musical comedy scope to include costuming, set, and set changes.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Demonstrate measurable understanding and accomplishment of music/dialogue
2. Develop characterization in dialogue, singing, and movement
3. Execute blocking and choreography.

MUSC 1290. Song and Its Role in Society**Course Description****Student Learning Outcomes**

By the end of this course the students will have a better understanding of the role of that music, specifically song, has played in the development of human nature. They will learn that the songs they listen to fall into 6 categories: Friendship, Joy, Comfort, Religion, Knowledge, and Love.

MUSC 1310. Recital Attendance**Course Description**

This course is for music students to attend and participate in a good number of convocation, concert, and recital performances, creating a wider appreciation for the performing arts.

Student Learning Outcomes

1. Encourage student observation of serious music
2. Provide opportunities for public performances
3. To create a greater sense of community within the student body

MUSC 1320. Applied Lessons I

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 1330. Applied Lessons II

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 1350. Computers in Music**Course Description**

Students learn about the latest computer-based technology in Music Integrated Digital Interface (MIDI) keyboard lab. Topics covered include musical composition, arranging, sequencing, and using musical resources on the internet.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Learn to set up and run a basic MIDI system.
2. Understand sequencing and publishing programs.
3. Integrate MIDI files into other programs – recording, publishing etc. – to fit the application as needed.

MUSC 1370. Introduction to String Pedagogy

Course Description

Introduction to foundational principles and practices in string pedagogy. Topics include lesson observation, analysis of teaching strategies, principles of physical setup and movement, sequencing of beginning instruction, and development of effective studio and group teaching skills. Observation or participation in supervised teaching settings may be included.

Student Learning Outcomes

1. Identify and apply key principles of string pedagogy related to posture, movement, tone production, and left- and right-hand coordination.
2. Analyze and evaluate teaching strategies observed in private and group lesson settings, developing understanding of effective sequencing and classroom management.
3. Develop and articulate basic lesson goals and strategies for beginning string instruction that integrate musical, physical, and cognitive development.
4. Demonstrate reflective awareness of one's own teaching and/or learning through written or verbal analysis, incorporating relevant pedagogical frameworks and terminology.
5. Communicate effectively and professionally in pedagogical contexts, including interactions with students, parents, and colleagues.

MUSC 1370L. String Pedagogy Laboratory

Course Description (2 semesters)

Group Lessons

New Interns are required to observe one class and teach in another. Their first lessons are "mini" lessons, lasting 5 minutes or longer, on a single topic. By the end of the second semester, they are expected to teach the full lesson. All incoming Interns have a Mentor Intern, who is a more experienced student. A "beginning" rubric, designed exclusively for new interns outline criteria upon which they will be assessed and graded. The rubric also shows weekly progress during the semester. Each Intern receives a semester summary from his/her class Coordinator [an experienced teacher who oversees each class]. All interns participate in planning and executing weekly recitals, special events, practice game, sharing concerts and the annual Gala Concert.

Private Lessons

Interns record three consecutive lessons with one student, and meet with Pedagogy Faculty, during the semester for a Video Assessment, where the lessons are observed and critiqued.

Student Learning Outcomes (2 semesters)

1. Students will recognize and evaluate activities they have presented during group and private lessons and be able to quickly change from non-productive activities to redirect attention of child or children.
2. Students will identify recognition skills, and how to utilize them. They will also be able to identify recall skills, as well as how and when to introduce them.
3. Students will sing in tune, and in the tessitura of their student(s), demonstrate enthusiasm, and manage pacing appropriate to the student's ages and content being taught.
4. Students will know fundamental steps in establishing posture and position of their students, as well as octave frame of the left hand. They also will understand and be able to explain and measure the length of each child's bow stroke.

MUSC 1375. Group Piano I

Course Description

Beginning group piano lessons designed primarily for students with little or no previous piano experience. Students are introduced to scales, chords, memorization and harmonization of simple melodies and rhythms.

Student Learning Outcomes

1. Demonstrate knowledge of notes and rests correctly within clefs and meters

5. Demonstrate and aurally recognize basic intervals
6. Demonstrate knowledge of one-octave scales and tonic and dominant chords in the ten easier keys
7. Demonstrate complete phrases with specific dynamics and articulation
8. Demonstrate ability to transpose simple melodies
9. Demonstrate ability to play simple melodies and rhythms on the piano

MUSC 1376. Group Piano for Music Majors II

Course Description:

Beginning repertoire, reading skill, chord and scale patterns. Not open to keyboard majors. Priority given to music majors and minors but open to all students. Student will learn beginning technical exercises, repertoire and sight-reading skills to help prepare them for the piano proficiency exam.

Student Learning Outcomes

1. Perform major and harmonic minor scales hands together (2 octaves) in selected keys.
2. Execute basic chord progressions (I-IV-I-V-I) & (i-iv-i-V-i) in root position, and triads & inversions with pedal in selected keys.
3. Perform major and minor arpeggios hands alone in selected keys (2 octaves).
4. Sight-read simple music with steady tempo and correct notes and rhythms.
5. Perform selected elementary-level solo and duet repertoire with correct technique and musicianship.
6. Demonstrate understanding of basic keyboard geography, hand coordination, and posture.
7. Prepare successfully for the Piano Proficiency Exam components introduced in this level.

MUSC 1377. Group Piano II

Course Description

Late elementary repertoire, sight-reading, moving out of the five-finger position, minor scale and chord patterns

Student Learning Outcomes

1. Demonstrate appropriate skills in playing scales with correct fingering and rhythm.
2. Demonstrate primary chords in all keys and inversions.
3. Demonstrate ability to play either a finished piece or work in progress before an audience of peers.

MUSC 1378. Group Piano for Music Majors II

Course Description

Late Elementary Repertoire, Sight-Reading moving out of the five-finger position, Major and minor scales and chord progressions. Late Elementary Repertoire, Sight-Reading moving out of the five-finger position, Major and minor scales and chord progressions. Students will learn elementary technical exercises, repertoire and sight-reading skills to help prepare them to be proficient at the piano at a late elementary level.

STUDENT LEARNING OUTCOMES

1. Demonstrate expanded scale and arpeggio proficiency in F, B, Db, Gb, f, b, bb, eb major and minor keys.
2. Perform increasingly more complex chord progressions and play triads & inversions & (I-IV-I-V-I) & (i-iv-i-V-i) root position chord progressions with pedal in selected keys.
3. Accurately sight-read pieces beyond the five-finger position with basic hand shifts.
4. Harmonize simple melodies using primary chords.
5. Perform elementary repertoire from four style periods with attention to articulation and dynamic contrast.
6. Exhibit improvement in rhythmic control and hand independence.
7. Demonstrate preparedness for mid-term and final evaluations including cumulative technique from Piano I and evaluations including cumulative technique from Piano I and II.

MUSC 1379. Introduction to Aural Skills

Course Description

Development of music notation, aural perception, rhythm, and sight singing.

Student Learning Outcomes

the goal of this course is two-fold,

1. to more fully develop your basic skills as a musician, and
2. that you come to understand how and why these basic skills will enable you to more fully develop your particular area(s) of expertise in music.

MUSC 1380. Aural Skills I**Course Description**

Development of music reading, aural perception, rhythm and sight singing.

Student Learning Outcomes

1. An integrated study and application of the fundamentals of music involving rhythm, notation, melody, tonality, harmony, texture, form, analysis, arranging, composition, sight singing, ear training, and dictation, and the development of these skills.
2. Develop a thorough grounding in the fundamentals of music (rhythm, notation, melody, tonality, harmony, texture, form, analysis, arranging, composition, sight singing, ear training, and dictation) to improve every aspect of the student's musicianship.
3. To more fully develop your basic skills as a musician, and to understand why these basic skills will enable one to more fully develop one's particular area(s) of expertise in music.
4. The application of these theory skills will gradually be made clear throughout the course of the semester.

MUSC 1385. Aural Skills II**Course Description**

Development of music reading, aural perception, rhythm and sight singing.

Student Learning Outcomes

1. An integrated study and application of the fundamentals of music involving rhythm, notation, melody, tonality, harmony, texture, form, analysis, arranging, composition, sight singing, ear training, and dictation, and the development of these skills.
2. Develop a thorough grounding in the fundamentals of music (rhythm, notation, melody, tonality, harmony, texture, form, analysis, arranging, composition, sight singing, ear training, and dictation) to improve every aspect of the student's musicianship.
3. To more fully develop your basic skills as a musician, and to understand why these basic skills will enable one to more fully develop one's particular area(s) of expertise in music.
4. The application of these theory skills will gradually be made clear throughout the course of the semester.

MUSC 1410. Introduction to Music Education**Course Description**

This course is an overview of teaching in the music classroom through readings and observations. Students will be introduced to the skills needed to become a reflective educator, develop observation techniques, and demonstrate knowledge of the current state of the profession.

Student Learning Outcomes

1. Make observations and analyze the current state of musical education in public schools
2. Describe characteristics of good teaching in music
3. Articulate a personal philosophy of music education
4. Reflect on personal strengths and weaknesses as a teacher of music

MUSC 1415. Introduction to Music

Course Description:

Elementary music theory and study of music history by period, composer, and composition.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Pass a moderately strict examination covering all basic music theory items learned in the first 8 weeks of this course.
2. Pass a moderately strict examination covering composers, forms, structures, classical compositions, etc. from each historical era.
3. Apply this knowledge of music theory and history when attending public music events, when aesthetically listening to any form of music presented in contemporary media, or when challenged to provide music assistance at a community organization, school, or church.

MUSC 1420. Introduction to Music History

Course Description

This course for students with some background in music and assumes the ability to read music, as well as experience in listening to music and analyzing by ear.

Student Learning Outcomes

A firm grasp of the major musical periods as well as key terminology, composers and aural identification of period music.

MUSC 1430. Choral Conducting

Course Description

Covers basic knowledge of beat patterns, terminology, stylistic traits, and problem solving in choral rehearsal and performance.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Correctly analyze and prepare choral literature for rehearsals.
2. Conduct choral rehearsals with correct use of conducting techniques, expressive technique, attention to areas of choral sound – i.e., Blend, balance, tuning, etc.
3. Present one or more prepared pieces for performance.

MUSC 1440. Class Voice I

Course Description

Group instruction in voice and vocal pedagogy for instrumental Music Education majors, offering basic principles of healthy vocal production with particular attention to diction, development of vocal range, and the ability to impart that knowledge to elementary, junior and/or high school age students

Student Learning Outcomes

1. Provide the basic understanding of healthy vocal production. Including, but is not limited to, the following topics: Expanding vocal range; Learning how to practice and learn songs effectively and efficiently; Provide basic understanding of vocal pedagogy; Introduction to diction.
2. Aims to equip students with the ability to impart that knowledge to elementary, junior and/or high school age students.

MUSC 1450. Ear Training I

Course Description

To develop the ability to accurately hear, identify, sing and notate musical elements including rhythm, melody, intervals and harmony

Student Learning Outcomes

1. Counting rhythms at sight using the Eastman Counting System.
2. Singing melodies at sight using solfege syllables.
3. Writing out rhythmic patterns.
4. Writing out melodic patterns.
5. Identifying and singing intervals.
6. Identifying and singing chord/triad qualities.

MUSC 1451. Ear Training II

Course Description

To develop the ability to accurately hear, identify, sing and notate musical elements including rhythm, melody, intervals and harmony.

Student Learning Outcomes

1. Counting rhythms at sight using the Eastman Counting System.
2. Singing melodies at sight using solfege syllables.
3. Writing out rhythmic patterns.
4. Writing out melodic patterns.
5. Identifying and singing intervals.
6. Identifying and singing chord / triad qualities.

MUSC 1460. Music Theory I

Course Description

Introduction to vocabulary and syntax of 4-voice 18th c. chorale music through study and harmonic analysis.

Student Learning Outcomes

To learn the vocabulary and syntax of 4-voice 18th c. chorale music through study and harmonic analysis.

MUSC 1461. Music Theory II

Course Description

Expansion of vocabulary and syntax of 4-voice 18th c. chorale music through study, harmonic analysis, and part writing.

Student Learning Outcomes

To expand and apply the vocabulary and syntax of 4-voice, 18th c. chorale music through study, harmonic analysis, and part writing.

MUSC 1470. Functional Piano I

Course Description

Scales, chords, memorization. Harmonization of simple melodies with the ability to play simple melodies and rhythms.

Student Learning Outcomes

1. 5 finger hand position in all keys
2. I-IV-I-V7-I cadences in all keys
3. One octave scales with hands together in C, G, D and F (major and minor).
4. Root position cross--over triads, solid and broken (major and minor).
5. Simple sight reading, harmonizing and transposition.
6. Prepared pieces from the textbook.
7. Simple improvisation.
8. Play 2 simple vocal exercises.
9. Identify intervals, key signatures and chords.
10. Correct posture and hand position.
11. Musical issues such as phrasing, slurs and dynamics.

12. Good practice habits and techniques.

MUSC 1471. Functional Piano II

Course Description

Scales, chords, memorization. Harmonization of simple melodies with the ability to play simple melodies and rhythms. May be taken for unlimited credit. Restricted to music majors. No S/U option.

Student Learning Outcomes

1. Two octave scales with hands separate in C, G, D, A, E, B and F (major and minor).
2. I-IV-I-V-V7-I cadences in above mentioned keys in root position and 1st inversion.
3. Simple sight reading, harmonization and transposition.
4. Prepared pieces from the book.
5. Simple improvisation.
6. Identify intervals, key signatures and chords.
7. Correct posture and hand position.
8. Musical issues such as phrasing, slurs and dynamics.
9. Good practice habits and techniques.

MUSC 1472. Functional Piano III

Course Description

For music majors preparing for the Piano Proficiency Examination.

Student Learning Outcomes

1. Keys learned in previous semesters, adding F# and C# (D flat).
2. Secondary dominant chords added to cadence patterns.
3. Two-octave, root position arpeggios, major and minor.
4. Intro to chord charts, harmonization.
5. More difficult sight--reading and transpositions.
6. More difficult prepared pieces.
7. Accompany a piece for any instrument on the Mid--Term Recital (required).

MUSC 1475. Fundamentals of Piano II (non-music majors)

Course Description

Continuation of Fundamentals of Piano I (non-music majors).

Student Learning Outcomes

1. Students will continue to develop their keyboard skills, increasing their ability to play scales, arpeggios, and chords and more complex pieces.
2. Students will be able to fluently perform major and minor triads in all keys, with several triads from select keys in 1st and 2nd inversions.
3. Students will be able to perform primary chord progressions in all major and minor keys.
4. Students will be able to play major scales in all keys and harmonic minor scales in most keys.
5. Students will learn concepts related to dominant 7th chords and be able to harmonize a given melody with them and perform chord progressions containing them.
6. Students will be introduced to simple left-hand accompaniments such as Alberti bass and be able to harmonize simple melodies using them.
7. Students will learn more complex solo repertoire involving hand crossings, use of the pedal, more complex interactions between left and right hand, dynamic shading, articulation and phrasing.

MUSC 1510. Applied Courses

Course Description

Applied Courses for Performance Concentration.

Student Learning Outcomes

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 1511. Applied Courses for Non-Performance Concentration**Course Description**

Applied Courses for Non-Performance Concentration.

Student Learning Outcomes

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 1512. Applied Courses for Non-Majors**Course Description**

Applied Courses for Non-Majors.

Student Learning Outcomes

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 1513. Applied Courses for Basic Applied Skills**Course Description**

Applied Courses for Basic Applied Skills.

Student Learning Outcomes

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 1520. Class Guitar I**Course Description**

Basic Instruction in classical guitar from beginning to intermediate level.

Student Learning Outcomes

Upon completion of this course, students should be able to demonstrate knowledge of the positions of the guitar, in reading and performing pieces, as well as major and minor scales.

MUSC 1540. Orchestral Instruments**Course Description**

Group instruction in orchestral instruments and guitar. Open only to students pursuing the Bachelor of Music Education or the Bachelor of Music String Pedagogy or Theory and Composition concentrations. Specific areas are announced in the class schedule each semester.

Student Learning Outcomes

Not Available

MUSC 1545. Class Violin**Course Description**

Not Available

Student Learning Outcomes

Not Available

MUSC 1560. Class Bass

Course Description

Basic instruction in bass from beginning to intermediate level.

Student Learning Outcomes

Students will play major and minor scales and arpeggios on the first seven positions of the bass guitar and perform transcribed bass lines from several genres that employ the instrument, from blues and rock to funk and hip-hop, from Latin dance music (salsa) to Brazilian and American Popular music.

MUSC 1570. Class Saxophone**Course Description**

Basic instruction in saxophone from beginning to intermediate level.

Student Learning Outcomes

Students will gain skills in beginning saxophone techniques.

Students will gain skills and learn representative beginning repertoire in saxophone.

MUSC 1610. Ensemble – Guitar II**Course Description**

Not Available

Student Learning Outcomes

Not Available

MUSC 1620. Major Ensemble II:**Course Description**

This course is an exploration of major ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of major ensemble through study of musical history, as well as various practice exercises and performances.

Student Learning Outcomes

1. Improve performance skills.
2. Develop and improve performance skills in a group setting.
3. Develop understanding and interpretation within the context of music history.
4. Refine and improve technical ability.
5. Demonstrate proper technique and usage.

MUSC 1640. Digital Music Production Techniques**Course Description**

You will expand on the skills learned in Digital Audio Production and progress from the technical to the procedural and aesthetic aspects of recording.

Student Learning Outcomes

1. This course will help students to use the studio as an additional tool for making music, besides his or her personal music abilities.
2. Activities will include the establishment of a workflow, making music with the software (Logic), Recording MIDI, editing and arranging MIDI, composing with samples and loops, recording audio, editing and arranging audio, working with notation and with picture and to and from FCP, surround, mixing and mastering, exporting, sharing and other application workflows.
3. Hands on practice in digital music production in a state-of-the-art production lab.

MUSC 1890. Introductory Teaching Practicum**Course Description**

Provides first-year music education majors with practical teaching experience in music classrooms. Assists in evaluating the music education candidate's suitability for a music teaching career in terms of musicianship, leadership, communication ability, and personal dispositions.

Student Learning Outcomes

Not Available

MUSC 1891. Music Practicum

Course Description

Music Practicum complements MUS 1103 and the performance classes in Music (Piano I & II, Guitar) by providing on-the-job musical training or performance. Requires students to complete a minimum of 45 hours in a community, professional, or educational music production.

Student Learning Outcomes

Varies based on practicum experience/assignment

MUSC 2100. Piano Proficiency

Course Description

Exam for Music Majors only to demonstrate basic level of piano proficiency in Repertoire, Sight Reading, Scales, Chords and Arpeggios. Harmonization and Score Reading are also required for Music Education Majors.

Student Learning Outcomes

At the end of the course students will demonstrate through an exam their ability to:

1. Perform two contrasting repertoire pieces from differing time periods, one with pedal,
2. Sight reading skills
3. Mastery of all scales – Major and minor 2 octaves hands together,
4. Mastery of all arpeggios 2 octaves hands alone,
5. Mastery of I-IV-I-V-I chord progressions, all keys Major and minor, all inversions with pedal.

Music Education Majors will demonstrate through an exam their ability to:

6. Harmonize two different melodies with varying accompaniment styles
7. Play any two parts of two SATB vocal scores.

MUSC 2110. Chamber Ensemble:

Course Description

This course is an exploration of chamber ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of chamber ensemble through study of musical history, as well as various practice exercises and performances.

Student Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2120. Major Ensemble:

Course Description

This course is an exploration of major ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of major ensemble through study of musical history, as well as various practice exercises and performances.

Student Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2130. Jazz Ensemble

Course Description

This course is an exploration of jazz ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of jazz ensemble through study of musical history, as well as various practice exercises and performances.

Student Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage
6. Develop and improve improvisation skills

MUSC 2132. Percussion Ensemble

Course Description

Study and performance of contemporary percussion ensemble literature.

Student Learning Outcomes

1. Improve performance skills
2. Develop and improve performance skills in a group setting
3. Develop understanding and interpretation within the context of music history
4. Refine and improve technical ability
5. Demonstrate proper technique and usage

MUSC 2135. Women's Ensemble

Course Description

This is a class for female group vocal participation through study of choral singing techniques and choral literature. You will be required to sing parts.

Student Learning Outcomes

1. Objective: Perform quality music at as high a level as possible.
Competency: Students will perform, in addition to the ensemble repertoire: scales, arpeggios and genre-specific licks and riffs.
2. Objective: Foster an appreciation for all musical styles.
Competency: Students will perform melodies and rhythm cells particular to various genres.
3. Objective: Develop the art of listening in ensemble settings.
Offer great music to the campus and at-large community.

MUSC 2140. Introduction to Composition

Course Description

This course helps students develop techniques for composing notated music through creative projects and compositions. Readings and discussions about developing a personal style are augmented by a broad array of listening's.

Student Learning Outcomes

1. Students can demonstrate rudimentary proficiency in producing written music for classical instruments.
2. Students can demonstrate rudimentary proficiency in producing creative audio based on field recordings.
3. Students can create coherence in musical composition through clear development of musical ideas.
4. Students can create complex musical gestures through coordinated use of multiple musical parameters.
5. Students can demonstrate an awareness of modern and contemporary music through creative work.
6. Students can demonstrate an awareness of modern and contemporary music through written responses to listening.
7. Students can thoughtfully reflect upon and engage in discussion about the creative process.

MUSC 2150. American Popular Music History

Course Description

The music of America is a multi-cultural blend whose roots are found in Africa, on Broadway, in the Caribbean and South America, at the Grand Ole Opry and in Native American and Pacific American music. By examining those roots we trace the development of jazz, rhythm and blues, folk, and rock and its various descendants. Listening includes in-class and web-based musical examples for outside of class listening. Students' presentations on areas of interest serve as capstone projects.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Be familiar with the history of the African American, European American, Latin American, Caribbean, and Native American subcultures.
2. Understand and be able to recognize the musical styles and instruments that were/are being used by these groups.
3. Be able to identify the components of modern American pop music that were derived from these sub-cultures.

MUSC 2151. An Introduction to World Music, Jazz and Music Research

Course Description

Introduces world music and jazz within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works. A major component will be the development of effective research and scholarly writing skills for the music major or minor.

Student Learning Outcomes

1. This course will cover fundamental concepts and styles associated with world music (ethnomusicology), jazz and popular music, an overview of the Western European tradition, and an intense focus on research and writing about music.
2. Emphasis will be placed on writing skills as they apply to the college experience in general and the world of music education and performance in particular.
3. Students will become acquainted with the diverse ways cultures create and are affected by their respective musical arts.
4. Focus will be on style evolution, forms, genres, composers, literature, and, where appropriate, performers.

MUSC 2160. Music Today

Course Description

This course is a study of music in the United States, how Western art music, folk music, sacred music, and popular music developed from America's early beginnings to modern times, with a focus on the societal history that shaped the music to its modern cultural influences.

Student Learning Outcomes

1. Define musical styles and the historical background of modern musical eras.
2. Recognize the evolution of music in the United States from Stephen Foster through composers and performers.
3. Apply listening skills to a variety of musical styles and gain an appreciation for unfamiliar musical styles.

MUSC 2165. Traditions in Flamenco

Course Description

You will study the traditions of Flamenco music and dance from Spain, beginning with early styles to present day techniques.

Student Learning Outcomes

Students will be able to perform Flamenco music and dance from Spain, beginning with early styles to present day techniques.

MUSC 2170. Chamber Music I**Course Description**

This course is an exploration of chamber ensembles, allowing students to develop their abilities with their instruments in a group setting. Students will gain a broader understanding of chamber ensemble through study of musical history, as well as various practice exercises and performances.

Student Learning Outcomes

1. Improve performance skills.
2. Develop and improve performance skills in a group setting.
3. Develop understanding and interpretation within the context of music history.
4. Refine and improve technical ability.
5. Demonstrate proper technique and usage.

MUSC 2190. Recital**Course Description**

Recitals played on the school's auditorium, for the College and City Community, as a demonstration of the completion of a semester's worth of repertory, defined by each specific instructor of voice, instrument, arranging and composing, etc.

Student Learning Outcomes

Completion of the student's performance activities in each semester.

MUSC 2210. Diction I**Course Description**

This course is designed to prepare students for singing in multiple languages using concepts of the International Phonetic Alphabet. Students will work to master the basics of phonetic singing to improve their overall musical abilities.

Student Learning Outcomes

1. Correctly and consistently form vowel and consonant sounds when speaking and singing in multiple languages
2. Correctly and consistently transcribe texts in multiple languages using the International Phonetic Alphabet
3. Understand and explain the International Phonetic Alphabet's usage and symbols
4. Develop and apply the concept of lyric diction to singing
5. Gain fluency, accuracy, and confidence in pronunciation of sung text

MUSC 2220. Diction II**Course Description**

This course serves as a continuing study in the concepts of the International Phonetic Alphabet. Students will continue to improve and practice their diction to develop their singing and musical abilities in order to begin the mastery of lyric diction.

Student Learning Outcomes

1. Correctly and consistently form vowel and consonant sounds when speaking and singing in multiple languages
2. Correctly and consistently transcribe texts in multiple languages using the International Phonetic Alphabet
3. Understand and explain the International Phonetic Alphabet's usage and symbols
4. Develop and apply the concept of lyric diction to singing.
5. Gain fluency, accuracy, and confidence in pronunciation of sung text.
6. Demonstrate ability to notate song texts according to IPA standards

MUSC 2230. History of Rock, Rap and Popular Music**Course Description**

Not Available

Student Learning Outcomes

Not Available

MUSC 2240. Music History and Literature: Antiquity through Baroque**Course Description**

Surveys Western art music within a historical and cultural context, considering significant musical figures, forms, genres, styles, and representative works from antiquity through the end of the Baroque era. An additional emphasis will be given to effective research and scholarly writing skills. Restricted to: M ED, MUS majors.

Student Learning Outcomes

The purpose of the course is to survey the beginning history of music from the earliest ancient times through the Baroque period, ca. 1750.

MUSC 2250. Aural Skills III**Course Description**

Continuation of Aural Skills II. Studies sight-singing of chromatic melodies in major and minor keys (in four clefs).

Student Learning Outcomes

Function as independent thinkers and as members of collaborative groups.

Use the internet to communicate effectively through e-mail and other communication tools.

MUSC 2255. Aural Skills IV**Course Description**

Continuation of Aural Skills III. Studies sight singing of chromatic and atonal melodies. Includes dictation of one through four voice examples. Identifies sonorities studied in Music Theory IV. Detection of pitch and rhythmic performance errors.

Student Learning Outcomes

1. Function as independent thinkers and as members of collaborative groups.
2. Use the internet to communicate effectively through e-mail and other communication tools.

MUSC 2260. Music Theory III**Course Description**

Continuation of Music Theory II. Reviews melodic and rhythmic figurations. Covers dissonance and chromaticism, including modal mixture, seventh chords with added dissonance, Neapolitan sixth chord, and augmented sixth chords. Provides structural analysis of musical excerpts.

Student Learning Outcomes**MUSC 2265. Music Theory IV****Course Description**

Focuses on advanced chromaticism including modal mixture, altered dominants, voice leading, and chromatic harmony in larger contexts. Also examines impressionism, neoclassicism, jazz and contemporary music.

Student Learning Outcomes

Students will demonstrate their understanding of advanced chromaticism including modal mixture, altered dominants, voice leading, and chromatic harmony in larger contexts. Also examines impressionism, neoclassicism, jazz and contemporary music. Students will also make structural analysis of musical excerpts.

MUSC 2270. Music Composition

Course Description

Private Lessons for Majors (may be repeated for credit) Required of all music majors. One half hour lesson per week for one credit. One-hour lesson per week for two credits. One-hour lesson plus a seminar per week or equivalent for three credits. Music majors must attend a one-hour weekly Studio Class.

Student Learning Outcomes

Private lessons in music composition with the goal of studying and assimilating the essential techniques and materials of contemporary idioms. A prescribed systematic utilization of these new techniques and materials will be explored to assist the student in developing their own unique personal style.

MUSC 2280. Jazz Theory

Course Description

Chords, modes, aural skills, basic keyboard skills and harmonization techniques in the jazz and commercial idioms. Study of standard jazz tunes and transcriptions of recorded jazz solos.

Student Learning Outcomes

By participating in Jazz Theory, students will better perform, identify and address key features of jazz theory, improvisation, composition and arranging including:

1. the major scale and its modes,
2. idiomatic pulse and articulations,
3. idiomatic phrases called "licks,"
4. critical recordings
5. essential artists and
6. extended major, minor, augmented and diminished chords.

MUSC 2290. Vocal Coaching

Course Description

The purpose of this course is to prepare the vocal student for optimal practice habits and performance in concert, recital, and auditions. In an individualized format, the coach will assist the student vocalist in preparation for the performance of operatic and art song repertoire with special focus on rehearsal strategies, diction, style, interpretation, translation resources, performance practice, ensemble, and audition preparation. Repertoire preparation will include operatic arias as well as art song literature in English, French, German, Italian, Spanish and other languages. Repertoire suitable for the individual student will be assigned by the voice teacher and prepared with the vocal coach.

Student Learning Outcomes

Not Available

MUSC 2310. Sound and Music Technology

Course Description

This course serves as an overview of current technologies and principles for the recording and production of sound, and the use of computer-based technologies for the production of music.

Student Learning Outcomes

1. Demonstrate fundamental knowledge of techniques and practices of music recording and production
2. Demonstrate ability to properly use computer-based technologies to produce and record music
3. Demonstrate ability to create music recordings
4. Work with a variety of recording, production, and sound reinforcement tools
5. Apply basic and mixed editing techniques
6. Use audio editing and file management techniques
7. Demonstrate knowledge of music technology vocabulary

8. Explain and understand the development of various music technologies

MUSC 2315. Introduction to Improvisation

Course Description

This is an introductory course in musical improvisation. Initial preparatory activities—including playing familiar tunes by ear, singing, call and response sequences, and ear training exercises—are designed to establish a sense of tonality, a sense of meter (rhythm), and “ear-hand coordination.” Basic aspects of jazz harmony, vocabulary, style, and literature are introduced during the latter part of the semester. This course is the first of a four-semester sequence in improvisation.

Student Learning Outcomes

1. The student will improve performance skills
2. The student will develop and improve ear-hand coordination in order to successfully execute melodies on a musical instrument without the benefit of notated sheet music.
3. The student will develop and improve the ability to recognize by ear and implement harmonic and melodic elements of a song for the purposes of improvisation, including the melody, the root progression, and guide tone movement.

MUSC 2320. Theory and Analysis III: Chromaticism

Course Description

This is the third course in a four-semester sequence. Continued study of theoretical aspects of musical structure, derived from close analytical engagement with music from multiple time periods, with a primary focus on chromatic music. Further development of higher-level capacities (contrapuntal writing in two parts, voice-leading in four parts, idiomatic harmonization of unaccompanied melodies and figured basses). Thorough study of the principles of harmonic progression in chromatic music (including the use of sequences, applied chords, tonicization/modulation, mixture, Neapolitan sixths, and augmented sixths), particularly through the analysis of works of European concert music from the late-classical and early romantic periods.

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Identify the root, quality, and inversion of any presented applied-chord sonority common to Western classical music (as well as pop, rock, and jazz), including both dominant-type and diminished-type applied chords.
2. Explain how these non-diatonic sonorities function within phrases, subphrases, and progressions to either emphasize, tonicize or modulate to other key areas.
3. Continue a given two-chord model (or melody-and-bass fragment) according to the common harmonic sequence patterns.
4. Explain how smaller-scale structures like phrases and periods combine to form larger formal structures such as binary form.
5. Analyze passages such as these, whether presented either visually or aurally.
6. Approach such analysis not only vertically, in terms of chords, but also horizontally, in terms of melodies coordinated through to the principles of counterpoint and harmonies following idiomatic principles of progression.
7. Complete exercises in four-voiced texture based on these techniques and principles from prompts such as figured basses, unfigured basses, and unharmonized melodies.
8. Compose and improvise using the techniques of chord application, tonicization, modulation, and harmonic sequence.
9. Identify and construct additional advanced chromatic harmonies, such as Neapolitan chords, augmented-sixth chords, and mixture chords.
10. Reflect upon how the principles of musical organization vary in their usage over time, such as in response to social and economic pressures.

MUSC 2320L. Theory and Analysis III Aural Lab: Chromaticism

Course Description

This is the third course in a four-semester sequence. Continued development of practical musical skills related to both production (singing, tapping, conducting, performing on an instrument) and perception (active analytical listening, recognition and notation of auditorily presented melodies, rhythms, and harmonic patterns), focused in particular upon chromatic harmonic procedures such as those developed in the late-classical and early romantic periods of Western art music. Continued practice in auditory analysis and improvisation with the voice and/or instruments.

Pre-requisite: Theory and Analysis II: Diatonicism and Theory and Analysis II Aural Lab: Diatonicism. Co-requisite: Theory and Analysis III: Chromaticism

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Sing, using solfège, the most common scales, modes, chords, and intervals used in classical and popular music, as well chromatic, whole-tone, and octatonic scales.
2. Write down in notation the same musical constructs presented aurally, using standard notational devices such as accidentals, key signatures, time signatures, beams, flags, ties, and dots.
3. Perform at the keyboard, with moderate fluency, standard harmonic progressions incorporating such devices as applied chords, tonicizations, modulations, mixture chords, and Neapolitan and augmented-sixth chords (including reading from figured bass notation).
4. Sing, together with other students, passages in two-part counterpoint and four-part harmony which include the above chromatic devices.
5. Use standard conducting patterns while singing, reading, and listening to music.
6. Improvise (with the voice or on an instrument) using melodic and harmonic patterns characteristic of the material studied in this and the co-requisite lecture course.
7. Generalize from examples presented on paper to practical experiences with listening, performing, and improvising in real-time and in real-life musical contexts.

MUSC 2322. Jazz Improvisation I

Course Description

This course is an introduction to improvising in the modern jazz idiom. Students will address basic tools for developing a command of the harmonic, melodic and rhythmic elements necessary for improvising authentically in the language of modern jazz, including scales, arpeggios, licks and practice strategies for incorporating these into the student's improvisations. Topics for discussion will include, but not be limited to, common song forms in mainstream jazz, the blues, performance practice, rhythmic, style and "feel" elements. The improvisations of important jazz artists will serve as a reference. This course is the second of a four-semester sequence in improvisation.

Student Learning Outcomes

1. The student will improve performance skills.
2. The student will learn and be able to execute idiomatic jazz improvisation vocabulary over typical harmonic progressions.
3. The student will develop an idiomatic musical style and interpretive skills in performing jazz melodies and improvisational phrases.
4. The student will recognize idiomatic song forms and blues progressions by ear.

MUSC 2325. Theory and Analysis IV: Enharmonicism and Post-Tonality

Course Description

This is the fourth course in a four-semester sequence. Continued study of theoretical aspects of musical structure, derived from close analytical engagement with music from multiple time periods, with a primary focus on enharmonic practices in late-romantic classical music and post-tonal practices of early twentieth-century classical music. Extension of basic chromatic procedures (sequences, applied chords, tonicization/modulation, mixture, Neapolitan sixths, and augmented

sixths) to remote relations requiring enharmonic interpretation. Introduction to methods of analysis for music not structured according to traditional European principles.

Student Learning Outcomes

1. Identify readily the root, quality, and inversion of all sonorities found in common-practice Western classical music (applied chords, mixture chords, Neapolitan and augmented-sixth chords, altered dominant chords, and common-tone diminished chords), as well as the techniques used to tonicize and modulate to both closely related and remote keys.
2. Construct and use the same harmonies and techniques in shorter phrases and longer passages.
3. Continue a given two-chord model (or melody-and-bass fragment) using various applied-chord and chromatic variants of common harmonic sequence patterns.
4. Comprehend the large-scale organizational principles of works in sonata form, rondo form, and ternary form (in coordination smaller-scale principles such as phrase, period, and binary-form organization).
5. Analyze longer passages and entire musical works (in common-practice and later styles), whether presented either visually or aurally.
6. Employ enharmonic reinterpretation to tonicize and modulate to remote keys.
7. Derive the prime form of a pitch-class set.
8. Compose and improvise using several of these techniques.
9. Reflect upon how the principles of musical organization vary in their usage over time, such as in response to social and economic pressures.

MUSC 2325L. Theory and Analysis IV Aural Lab: Enharmonicism and Post-Tonality

Course Description

This is the fourth course in a four-semester sequence. Continued development of practical musical skills related to both production (singing, tapping, conducting, performing on an instrument) and perception (active analytical listening, recognition, and notation of auditorily presented melodies, rhythms, and harmonic patterns), focused in particular upon Western art music of the late-romantic and early twentieth-century periods. Continued practice in auditory analysis and improvisation with voice and/or instruments.

Student Learning Outcomes

By the end of the semester, students proceeding satisfactorily through the course should be able to:

1. Sing or arpeggiate, using solfège (whether movable or fixed), the vast diversity of scales, modes, and chords found not only in late-nineteenth and early-twentieth-century classical music, but also in jazz and popular music (including but not limited to the whole-tone, octatonic).
2. Sing post-tonal (non-diatonic) melodic exercises constructed from interval successions or pitch-class sets.
3. Write down in notation these same musical constructs when presented aurally, using standard notational devices such as accidentals, key signatures, time signatures, beams, flags, ties, and dots.
4. Perform at the keyboard harmonic progressions incorporating such devices as standard chromaticisms (applied chords, tonicizations, modulations, mixture chords, Neapolitan chords, and augmented-sixth chords), newly introduced chromaticisms (common-tone diminished-seventh and augmented-sixth chords), and enharmonic reinterpretation (e.g., respelled diminished-seventh and augmented-sixth chords);
5. Sing, together with other students, passages in two-part counterpoint and four-part harmony which include the above chromatic and enharmonic devices.
6. Perform (and conduct to) rhythmic patterns involving complex metrical devices (such as syncopations, triplets, and polyrhythms) in standard and asymmetrical (non-isochronous) meters.
7. Improvise (with the voice or on an instrument) using melodic and harmonic patterns characteristic of the material studied in this and the co-requisite lecture course.
8. Generalize from examples presented on paper to practical experiences with listening, performing, and improvising in real-time and in real-life musical contexts.

MUSC 2327. Early Music Ensemble

Course Description

This is an ensemble class that focuses on music of the medieval, Renaissance and/or Baroque eras, utilizing period instruments.

Student Learning Outcomes

1. Demonstrate performance proficiency on period instruments relevant to the repertoire studied, including proper technique and tone production appropriate to the historical style.
2. Interpret and perform selected works from the Medieval, Renaissance, and/or Baroque eras with stylistic accuracy, including historically informed phrasing, articulation, and ornamentation.
3. Rehearse and perform collaboratively within a small or large ensemble setting, exhibiting strong ensemble skills such as listening, blending, and timing.
4. Apply knowledge of historical performance practices to musical preparation and performance, including the use of facsimile or modern notation, figured bass realization (if applicable), and appropriate vocal or instrumental technique.
5. Prepare and organize performance materials in a professional manner, including music binding, page turn preparation, and (for singers) correct text underlay and pronunciation.
6. Demonstrate individual preparation and accountability by learning assigned parts outside of class and contributing effectively during rehearsals.
7. Identify and describe key characteristics of early music styles and forms and articulate the differences among musical practices of the medieval, Renaissance, and Baroque periods.
8. Adapt prior musical knowledge and skills to unfamiliar historical instruments seeking support when needed to overcome technical challenges.
9. Present a public performance of early music repertoire, exhibiting both technical competence and stylistic understanding in an ensemble context.

MUSC 2330. Applied Lessons III

These courses are not expected to transfer and students will have to take a placement test upon transfer

MUSC 2340. Applied Lessons IV

These courses are not expected to transfer and students will have to take a placement test upon transfer

MUSC 2345. Class Piano I

Course Description

For music majors with little or no previous training in piano.

Student Learning Outcomes

1. Play major and minor five-finger patterns in various keys.
2. Play all white key major scales one-octave; hands separate and hands together with fluency.
3. Play all white key minor scales one octave; hands separate with fluency.
4. Play a I – IV $^{6/4}$ – I – V $^{6/5}$ – I chord progression in all major keys.
5. Perform elementary level piano repertoire in various styles.
6. Play and transpose simple melodies using primary chords.
7. Sight-read elementary level repertoire.
8. Be comfortable with rhythmic and melodic patterns that help the student to understand musical structure and form.
9. Understand basic music theory and musical terms so that the student can apply them to their performance.

MUSC 2350. Class Piano II

Course Description

Continuation of Class Piano I.

Student Learning Outcomes

1. Students will gain skills in beginning piano techniques.
2. Students will gain skills and learn representative repertoire in Piano.

MUSC 2355. Class Piano III**Course Description**

Continuation of Class Piano II.

Student Learning Outcomes

1. Students will gain skills in intermediate piano techniques.
2. Students will gain skills and learn representative repertoire in Piano.

MUSC 2360. Class Piano IV**Course Description**

Continuation of Class Piano III

Student Learning Outcomes

1. Play all major scales two-octaves and white key minors; hands separate with fluency.
2. Play a I – IV ^{6/4} – I – V ^{6/5} – I chord progression in all major keys and minor keys; hands together with syncopated pedal.
3. Play a four-part hymn with syncopated pedal.
4. Improvise simple melodies using I, IV, and V chords using various meters.
5. Play simple melodies by ear with harmonization.
6. Perform late elementary/early intermediate level piano repertoire in various styles.
7. Play and transpose simple melodies harmonizing with chords.
8. Accompany another student (instrumental or vocal) with a late beginner/early intermediate level accompaniment
9. Sight-read elementary level repertoire.
10. Be comfortable with rhythmic and melodic patterns that help the student to understand musical structure and form.
11. Understand basic music theory and musical terms so that the student can apply them to their performance.

MUSC 2370. String Pedagogy**Course Description**

This course develops advanced pedagogical understanding through supervised teaching, lesson observation, video analysis, and reflective practice. Students apply research- and evidence-based methods to plan, teach, and assess beginning through intermediate string instruction in both private and group settings.

Student Learning Outcomes

1. Apply and refine instructional strategies for beginner through intermediate string students in both private and group settings.
2. Plan, implement, and assess lessons and curricula using research- and evidence-based approaches to string pedagogy.
3. Analyze and synthesize pedagogical principles from readings, video, and live observations to improve teaching effectiveness.
4. Demonstrate professionalism and reflective practice through written analysis, video review, and peer/instructor feedback.
5. Collaborate effectively with mentors, peers, and families in instructional settings, demonstrating ethical and professional standards of conduct.

6. Compile and curate a comprehensive personal teaching resource that documents strategies, repertoire, and reflection for future use as a pedagogue.

MUSC 2370L. String Pedagogy Laboratory

Course Description (2 semesters)

Laboratory for applied teaching in the UNM String Lab School. Students deliver private and group lessons, complete structured observations, submit lesson plans and teaching videos, and engage in feedback cycles supporting reflective, ethical, and professional practice.

Student Learning Outcomes

1. Apply and refine instructional strategies for beginner through intermediate string students in both private and group settings.
2. Plan, implement, and assess lessons and curricula using research- and evidence-based approaches to string pedagogy.
3. Analyze and synthesize pedagogical principles from readings, video, and live observations to improve teaching effectiveness.
4. Demonstrate professionalism and reflective practice through written analysis, video review, and peer/instructor feedback.
5. Collaborate effectively with mentors, peers, and families in instructional settings, demonstrating ethical and professional standards of conduct.
6. Compile and curate a comprehensive personal teaching resource that documents strategies, repertoire, and reflection for future use as a pedagogue.

MUSC 2376. Group Piano for Music Majors III

Course Description

Intermediate repertoire, reading skill, chord and scale patterns.

Student Learning Outcomes

1. Demonstrate scale and arpeggio fluency in Ab, Eb, Bb, g#, c#, f# major and minor keys (2 octaves, hands together).
2. Perform triads & inversions & (I-IV-I-V-I0 & (i-iv-i-V-i) root position chord progressions fluently across all covered keys with pedal.
3. Sight-read intermediate-level music with greater rhythmic and harmonic complexity.
4. Perform intermediate-level solo and duet repertoire from all style periods with musicality and technical control.
5. Apply musicianship skills such as voicing, phrasing, and balance in repertoire.
6. Integrate technical and interpretive skills to prepare for upper-division proficiency requirements.

MUSC 2378. Group Piano for Music Majors IV

Course Description

Late intermediate to early advanced Repertoire and Sight-Reading. Review of scales and chords

Student Learning Outcomes

1. Demonstrate mastery of all technical components from Piano 1–3 (scales, arpeggios, chords, progressions, and inversions).
2. Sight-read late intermediate-level music with accuracy and fluency.
3. Perform two contrasting late intermediate solo pieces with expressive interpretation and technical assurance, using pedal.
4. Execute score reading or accompaniment skills with independence of hands and voices.
5. Display comprehensive readiness for the Piano Proficiency Requirement (MUSC 2100).
6. Demonstrate ongoing growth in musicianship, including dynamic control, stylistic awareness, and interpretation.
7. Apply consistent and effective practice habits to maintain and improve performance skills.

MUSC 2410. Music for the Elementary Classroom

Course Description

An introductory or refresher course for current or future elementary classroom teachers. Musical experiences which relate to all age groups at the elementary level will be covered, including students with special needs.

Student Learning Outcomes

1. Comprehend basic music reading skills including rhythmic and melodic notation.
2. Know and be able to successfully teach lessons which communicate these basic skills.
3. To develop skills in playing classroom instruments.
4. To examine methods, materials and resources for teaching music.
5. Create and teach lessons that demonstrate understanding of basic music skills, theories of child development, and best practices in music education.
6. Explore teaching and learning strategies that promote interdisciplinary thinking through the arts in the elementary classroom.

MUSC 2415. Music for the Classroom Teacher

Course Description

This is a multifaceted music skills course to assist Elementary Education majors in preparing and teaching music in their classrooms. No previous musical training is necessary.

Student Learning Outcomes

Students will be able to teach basic elements of music in Elementary Education.

MUSC 2420. Comprehensive Musicianship

Course Description

This course will help you develop practical skills that will serve you well as a musician. Although some of the course material is conceptual, most of it is experiential, and the exercises and drills we will work through during class meetings form the essential core of the course.

Student Learning Outcomes

1. Develop skills in music reading, analysis, singing, playing, and listening
2. Learn effective practice techniques

MUSC 2430. Mixed Chorus

Course Description

University Singers. Letter grades will be given for all ensembles. (May be repeated for credit.) Open to all students including music majors and music minors.

Student Learning Outcomes

1. To develop and demonstrate healthy vocal techniques: posture, breathing, tone placement, diction, and expression;
2. To develop and use a knowledge of music reading: pitch, rhythm, symbols, and vocabulary;
3. To develop the skill of singing independently and cooperatively in a group;
4. To develop an understanding of varied historical performance practices and to convey these styles in performance with appropriate historical vocalism and ornamentation;
5. To develop competency in both presenting concerts and being constructively critical and self-evaluative about your own performing;
6. To develop and broaden levels of musical thinking in order to promote life-long learning and long-term participation in the choral arts.

MUSC 2440. Gospel Choir II

Course Description

A continuation of Gospel Choir I with group vocal participation through study of song literature and performance of gospel music. Part singing will be included.

Student Learning Outcomes

Objective: Perform quality Gospel music at as high a level as possible.

Competency: Students will perform, in addition to the ensemble repertoire: scales, arpeggios and genre-specific licks and riffs.

Objective: Foster an appreciation for all Gospel musical styles.

Competency: Students will perform melodies and rhythm cells particular to various genres.

Objective: Develop the art of listening in ensemble settings.

Offer great music to the campus and at-large community.

MUSC 2445. History of Jazz II**Course Description**

You will continue your study of the history of jazz, covering bebop (c. 1950) through the present. You will learn to recognize and describe the major styles in jazz, the most important proponents of each style, and the musical elements that determine each style.

Student Learning Outcomes

Students will be able to identify major Jazz styles and its performers and to describe the elements of each style from the 1950s to the present day.

MUSC 2450. Class Voice II**Course Description**

In this continuation of Class Voice I, you will be presented with more advanced development of singing techniques.

Student Learning Outcomes

Objective: Perform quality music at as high a level as possible.

Competency: Students will perform, in addition to the ensemble repertoire: scales, arpeggios and vocal warm-ups.

Objective: Foster an appreciation for all musical styles.

Competency: Students will perform melodies and rhythm cells particular to various genres.

Objective: Develop the art of listening in ensemble settings.

MUSC 2451. Ear Training III**Course Description**

Continuation of MUSC 1451, advanced sight singing, dictation.

Student Learning Outcomes

1. Count rhythms at sight using the Eastman Counting System
2. Sing melodies at sight and prepared using Solfege syllables
3. Write out rhythmic patterns
4. Write out melodic patterns
5. Identify and singing intervals
6. Identify and sing chord / triad qualities
7. Write out harmonic dictation

MUSC 2452. Ear Training IV**Course Description**

Continuation of MUSC 2451, advanced sight singing, dictation

Student Learning Outcomes

1. Count rhythms at sight using the Eastman Counting System
2. Sing scales and sequences as assigned for the level
3. Sing melodies at sight using solfege syllables
4. Write out rhythmic patterns in both simple and compound meters
5. Write out melodic patterns in both major and minor tonalities
6. Identify, label and sing intervals
7. Identify, label and sing chords and extended harmonic qualities, i.e., V7 and inversions
8. Write out harmonic progressions in both two- and four-part forms including secondary dominants and modulations.
9. Accurately detect melodic and rhythmic errors in dictation examples

MUSC 2460. Music Theory III

Course Description

Analysis of Baroque and Classical Music. Vocabulary and syntax of 18th and 19th c. Western art music through study, chordal/formal analysis, and composition. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. To learn and apply the vocabulary and syntax of 18th and 19th c. Western art music through study, chordal/formal analysis, and composition.
2. Topics covered include:
 - a. Two-Voice Eighteenth Century Counterpoint
 - b. Fugue
 - c. Borrowed Chords
 - d. Neapolitan 6th Chords
 - e. Augmented 6th Chords
 - f. Sonata Form
 - g. Rondo Form.

MUSC 2461. Music Theory IV

Course Description

Analysis of Romantic, Post-Romantic, Impressionist, and Twelve-Tone Music. Vocabulary and syntax of late 19th and early 20th c. Western art music through study, micro/macro analysis, and composition.

Student Learning Outcomes

To learn and apply the vocabulary and syntax of late 19th and early 20th c. music through study, micro/macro analysis, and composition.

MUSC 2470. Functional Piano IV

Course Description

For music majors preparing for Piano Proficiency Examination. May be taken for unlimited credit. Restricted to music majors. No S/U option.

Student Learning Outcomes

1. Keys learned in previous semesters, adding A flat, E flat, and B flat
2. Secondary dominant chords added to cadence patterns, all inversions
3. Arpeggios, all inversions
4. More difficult sight--reading and transpositions
5. More difficult prepared pieces
6. Four-part pieces (hymns)

7. Accompany a piece for any instrument on the Mid--Term Recital (required) Score reading and transposition

MUSC 2510. Applied Courses

Course Description

Applied Courses for Performance Concentration.

Student Learning Outcomes

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 2511. Applied Courses for Non-Performance concentration

Course Description

Applied Courses for Non-Performance Concentration.

Student Learning Outcomes

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 2512. Applied Courses for Non-majors

Course Description

Applied Courses for Non-majors.

Student Learning Outcomes

These courses are not expected to transfer, and students will have to take a placement test upon transfer.

MUSC 2520. Class Guitar II

Course Description

This course is a continuation of the introductory course in Guitar. The main focus is to provide learning tools to enable the students to progress rapidly throughout the semesters to come. Sight Reading, Rhythm and Rhythm Guitar techniques are the main subjects to be studied this semester.

Student Learning Outcomes

Improve the student's sight-reading abilities by helping him/her to develop quarter note triplets, introduction to 8va reading in the fifth position, study the second position, cut time, half note triplets, sixteenth note triplets, thirty second notes, phrasing, shifting positions, count 3/4 in one, reading and implied harmony, study the third position, odd meter, and study the seventh position.

Provide Jazz Guitar students a structured step-by-step approach to developing a skilled performance of several rhythmic styles.

- o Min7(b5) chords
- o Reading Charts
- o 7th and min7(b5) chords with fourth string root
- o Basic Moves
- o The five patterns
- o Cycle of fourths
- o Voicing
- o Formulas for 7th chords
- o Dom7th chord shapes
- o Minor 7th chord shapes
- o Major 7th chord shapes
- o Connecting the patterns
- o Inversions
- o Augmented triads

- o Rhythmic Interpretation
- o Harmonized scales with different patterns.

MUSC 2525. Class Flamenco Guitar II

Course Description

Not Available

Student Learning Outcomes

Not Available

MUSC 2540. Class Classical Guitar II

Course Description

You will continue your study of classical guitar with more complex music, techniques, and rhythms, and emphasis on ornamentation and presentation of classical music.

Student Learning Outcomes

Upon completion of this course, students should be able to demonstrate knowledge of the positions V - IX of the classical guitar, in reading and performing pieces by Sor, Aguado, Carcassi, Carulli and Giuliani, as well as major and minor scales.

MUSC 2549. Jazz Keyboard Theory

Course Description

Music theory as applied to jazz music. Introduction to chord/scale theory, chord nomenclature, common harmonic progressions and substitutions. Keyboard includes basic jazz chord voicings and progressions.

Student Learning Outcomes

1. Identify and apply jazz chord/scale relationships through written analysis and practical keyboard demonstration.
2. Demonstrate fluency in jazz chord nomenclature, including the ability to interpret and notate extended and altered chords.
3. Analyze and construct common jazz harmonic progressions, including ii–V–I, turnarounds, and common chord substitutions.
4. Apply basic jazz theory concepts—including intervals, scales, and chord functions—in the context of jazz idioms.
5. Perform standard jazz chord voicings (e.g., rootless voicings, drop-2, shell voicings) on the piano keyboard with proper voice leading.
6. Realize jazz progressions at the keyboard, demonstrating rhythmic accuracy, harmonic fluency, and stylistic consistency.
7. Complete written assignments that accurately reflect understanding of jazz theoretical principles and their applications.
8. Translate theoretical knowledge to practical musicianship through consistent keyboard practice and in-class performance assessments.
9. Evaluate harmonic choices in jazz compositions and improvisations using appropriate theoretical vocabulary and analytical tools.
10. Demonstrate self-directed learning by preparing

MUSC 2550. Jazz Keyboard Skills I

Course Description

You will learn to realize jazz harmonies at sight from lead sheets or other progressions.

Student Learning Outcomes

This class is designed to help students realize jazz harmonies at sight from lead sheets or other chord progressions. It assumes that students are willing to practice an average of 30-45 minutes a day outside of class. The student must have

access to a piano or quality keyboard outside of class, and must own and practice with a metronome. II-V-I key - all 12 keys together.

MUSC 2560. Jazz Keyboard Skills II

Course Description

You will learn to realize jazz harmonies at sight from lead sheets or other progressions.

Student Learning Outcomes

In this continuation of Jazz Keyboard Skills I, you will learn to realize jazz harmonies at sight from lead sheets or other progressions.

MUSC 2610. Accompaniment Resource

Course Description

The student meets with a piano accompanist for 30 minutes each week. Available only for music majors taking Applied Music Lesson in voice, brass, woodwinds, or composition.

Student Learning Outcomes

Students will:

1. Find and direct the power of personal creativity and self-expression.
2. Develop the ability to understand and perform in various styles.
3. Exercise the skills of problem solving and be able to meet new musical challenges.
4. Learn discipline required for performing.

MUSC 2630. Digital Audio Recording

Course Description

A continuation of Audio Amplification with emphasis on advanced recording techniques. Track recording into digital format; computerized digital editing with knowledge of WaveLab, Cakewalk, MasterTrax and other music editing programs. Individual and group lab projects required. Lab hours are scheduled throughout the week.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Choose equipment for and operate a recording studio.
2. Repair and troubleshoot recording equipment.
3. Get a high-quality transparent mix.

MUSC 2650. Class Voice III

Course Description

An applied music course in advanced voice that presents vocal techniques beyond the intermediate singer's level. Major topics include a basic knowledge of German singing diction, the International Phonetic Language, and the necessary practical application and performance of German and English vocal literature for the advanced voice student.

Student Learning Outcomes

1. Sing in German and English with correct diction.
2. Sing four songs in at least two languages, including two songs memorized, for public performance.
3. Demonstrate ease and confidence in the performance of solo repertoire.

MUSC 2655. Class Voice IV

Course Description

An applied music course in advanced voice that presents Bel Canto vocal techniques at an advanced singer's level. Major topics include a basic knowledge of French singing diction, a review of the International Phonetic Alphabet, and the

necessary practical application and performance of French, German, Italian, and English vocal literature for the advanced voice student.

Student Learning Outcomes

1. Demonstrate pronunciation similarities and differences employed in the singing of English, Italian, German, and French songs.
2. Identify and pronounce the International Phonetic Alphabet (IPA) symbols necessary to the French language.
4. Demonstrate correct French diction in singing of song(s) assigned in class.
5. Demonstrate improved pronunciation skills of English, Italian, or German songs.

MUSC 2660. Class Voice V**Course Description**

Not Available

Student Learning Outcomes

Not Available

MUSC 2710. Private Lessons: Piano**Course Description**

Required of all music majors. One half hour lesson per week for one credit. One-hour lesson per week for two credits. One-hour lesson plus a seminar per week or equivalent for three credits. Music majors must attend a one-hour weekly Studio Class.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through their instrument.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for instrument.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performances on their instrument.

MUSC 2710. Private Lessons: Woodwind Instruments**Course Description**

Private Lessons for Majors (may be repeated for credit) Required of all music majors. One half hour lesson per week for one credit. One-hour lesson per week for two credits. One-hour lesson plus a seminar per week or equivalent for three credits. Music majors must attend a one-hour weekly Studio Class.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through their instrument.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for instrument.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performances on their instrument.

MUSC 2710. Private Lessons: Vocal

Course Description

Private Lessons for Majors (may be repeated for credit) Required of all music majors. One half hour lesson per week for one credit. One-hour lesson per week for two credits. One-hour lesson plus a seminar per week or equivalent for three credits. Music majors must attend a one-hour weekly Studio Class.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through their voice.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for voice.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performances on their voice.

MUSC 2710. Private Lessons: Secondary Instrument

Course Description

Private lessons for music majors on instruments (and voice) other than their principal instrument.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through their instrument/voice.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for instrument/voice.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performances on their instrument/voice.

MUSC 2710. Private Lessons for the Non-Major

Course Description

Studio instruction in voice, keyboard, percussion, string or wind instruments for students not majoring in music.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through their instrument/voice.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for instrument/voice.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performances on their instrument/voice.

MUSC 2710. Private Lessons: Brass Instruments

Course Description

Private Lessons for Majors (may be repeated for credit) Required of all music majors. One half hour lesson per week for one credit. One-hour lesson per week for two credits. One-hour lesson plus a seminar per week or equivalent for three credits. Music majors must attend a one-hour weekly Studio Class.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through their instrument.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for instrument.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performances on their instrument.

MUSC 2710. Private Lessons: Percussion Instruments

Course Description

Private Lessons for Majors (may be repeated for credit) Required of all music majors. One half hour lesson per week for one credit. One-hour lesson per week for two credits. One-hour lesson plus a seminar per week or equivalent for three credits. Music majors must attend a one-hour weekly Studio Class.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through their instrument.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for instrument.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performances on their instrument.

MUSC 2710. Private Lessons: Electronic Media

Course Description

Private Lessons for Majors (may be repeated for credit) Required of all music majors. One half hour lesson per week for one credit. One-hour lesson per week for two credits. One-hour lesson plus a seminar per week or equivalent for three credits. Music majors must attend a one-hour weekly Studio Class.

Student Learning Outcomes

1. To stimulate thought concerning life and music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through electronic media.
3. To enhance the fundamental musical knowledge of the student.
4. To provide the musician with opportunities to expand their musical creativity through improvisatory performance through electronic media.

MUSC 2720. Chamber Singers / Swanee Singers

Course Description

Open by audition only to all students, including music majors and music minors.

Student Learning Outcomes

1. To develop and demonstrate healthy vocal techniques: posture, breathing, tone placement, diction, and expression.
2. To develop and use a knowledge of music reading: pitch, rhythm, symbols, and vocabulary.
3. To develop the skill of singing independently and cooperatively in a group.
4. To develop an understanding of varied historical performance practices and to convey these styles in performance with appropriate historical vocalism and ornamentation.
5. To develop competency in both presenting concerts and being constructively critical and self-evaluative about your own performing.
6. To develop and broaden levels of musical thinking to promote life-long learning and long-term participation in the choral arts.

MUSC 2730. Wind Symphony

Course Description

Open by audition only to all students, including music majors and music minors. (May be repeated for credit.)

Student Learning Outcomes

1. To stimulate thought concerning life and instrumental music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with the experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through his/her instrument.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for band.
4. To instill in students a commitment to life-long learning.
5. To promote personal growth through the rehearsal and performance of music of high quality.
6. To encourage students to continue to perform and consume music following graduation.

MUSC 2730. Marching Band

Course Description

Letter grades will be given for all ensembles. (May be repeated for credit.) 2000-level ensembles are open to all students including music majors and music minors.

Student Learning Outcomes

1. To stimulate thought concerning life and instrumental music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with the experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through his/her instrument.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for band.
4. To instill in students a commitment to life-long learning.
5. To promote personal growth through the rehearsal and performance of music of high quality.
6. To encourage students to continue to perform and consume music following graduation.

MUSC 2730. Symphonic Band

Course Description

Letter grades will be given for all ensembles. (May be repeated for credit.) 2000-level ensembles are open to all students including music majors and music minors.

Student Learning Outcomes

1. To stimulate thought concerning life and instrumental music teaching/performance as evidenced through verbalization and behavior demonstrating the abilities to logically analyze, criticize, and choose alternatives that exist within some value orientation.
2. To provide the musician with the experiences that will enable them to communicate musical thoughts/ideas in a unique and personal manner through his/her instrument.
3. To enhance the fundamental musical knowledge of the student through the performance of original and transcribed works for band.
4. To instill in students a commitment to life-long learning.
5. To promote personal growth through the rehearsal and performance of music of high quality.
6. To encourage students to continue to perform and consume music following graduation.

MUSC 2735. Spirit Marching Band**Course Description**

The Spirit Marching Band performs at all UNM home football games and select away games. The marching band is open to all students at UNM and CNM and supports both instrumental and visual units. Each member receives a monetary stipend upon completion of the season. Maximum of 8 credit hours allowed toward degrees in the College of Fine Arts, in the College of Education, and in the B.A. Liberal Arts and B.I.S.I. degrees; maximum of 4 credit hours allowed towards degrees in other colleges.

Student Learning Outcomes

1. To cultivate within the student a value system that encourages community service.
2. To provide the performer with experiences that will enable them to communicate thoughts/ideas/emotions in a unique and personal manner using his/her instrument, body, and physical motion.
3. To instill in students a commitment to life-long learning.
4. To promote personal growth through the rehearsal and performance of music, choreography, and drill of high quality.
5. To encourage students to continuously participate in and support artistic performances following graduation.

MUSC 2740. Pride Marching Band**Course Description**

The Pride Marching Band performs at all NMSU home football games and select away games. The marching band is open to all students at NMSU and supports both instrumental and visual units.

Student Learning Outcomes

1. To cultivate within the student a value system that encourages community service.
2. To provide the performer with experiences that will enable them to communicate thoughts/ideas/emotions in a unique and personal manner using his/her instrument, body, and physical motion.
3. To instill in students a commitment to life-long learning.
4. To promote personal growth through the rehearsal and performance of music, choreography, and drill of high quality.
5. To encourage students to continuously participate in and support artistic performances following graduation.

MUSC 2790. Introduction to Sound and Music Production**Course Description**

Students will begin to design their own hybrid production music using Digital Audio Workstations, recording, plug-ins, and midi instruments. Working together in small groups, students will also work on generating and responding to aesthetic and technical critique and utilizing music composition fundamentals.

Student Learning Outcomes

1. Students will demonstrate a clear grasp of the underlying principles of sound and electronic audio.
2. Students will create original sound/music from midi-based tools, employing detailed decision making and DAW techniques.
3. Students will create original sound/music from recorded audio that employs editing and processing techniques.
4. Students will develop a practice of thoughtful listening including reflecting upon and assessing their own creative work as well as the creative work of their colleagues and formulate ideas and suggestions.
5. Students will create original music that demonstrates an understanding of music fundamentals

MUSC 2810. Pro Tools Fundamentals

Course Description

Covers the basic principles of digital music production, recording and editing, from initial set up to final mixdown. Involves recording instruments, recording vocals, MIDI sequencing audio looping. Upon the successful completion of exams, the "user" level certificate will be available from Avid.

Student Learning Outcomes:

1. Understand basic principles of digital music production.
2. Understand basic principles of recording and editing.
3. Understand basic principles of MIDI sequencing and audio looping.
4. Set up Pro Tools for music production.
5. Setup, save, edit and transfer Pro Tools session files.
6. Capture a performance of instrumental and MIDI music.

MUSC 2992. Applied Music I

Course Description

Individual instruction to develop technique, musicianship, performance and improvisational skills, as well as knowledge of significant repertoire. May be repeated up to 16 credits. Consent of Instructor required. Restricted to: Music and Music Education majors. Traditional Grading with RR. Restricted to Las Cruces campus only.

Student Learning Outcomes

Native American and Hispano Studies (NAHS)

NAHS 1110. Introduction to Native American /Hispano Cultural Studies

Course Description

This course will serve as an introduction to the variety of topics that will be addressed in the three thematic areas that are the core of the Indo/Hispano Cultural Studies Minor. The course will expose students to the historical, cultural, social, economic and environmental evolution of the people that are indigenous or of mixed heritage that are centrally located in the Southwest, with specific inferences to those residing in Northern New Mexico, emphasizing the numerous interconnections they have made with other people and cultures, and to illustrate how these people have survived adversity through a lengthy history of adaptation and struggle.

Student Learning Outcomes

At the conclusion of this course, students should be able to:

1. Understand historical foundations for contemporary Native American/Hispano communities and societies.
2. Recognize and elaborate on the complex cultural dynamics of Native American and Hispano communities and cultural groups.
3. Explore and identify relationships of Native American/Hispano culture with deeper understandings of community, land, environment and place.
4. Think critically of media and artistic representation of Native American/Hispano communities.
5. Comprehend Native American/Hispano relationships and articulations with social institutions such as education, governance and cultural agencies.
6. Develop self-awareness and insight to importance of Native American/Hispano language, literature and popular culture.

NAHS 2110. Introduction to-Hispano Ethnicity and Identity Formation

Course Description

This course will provide students with foundational concepts and discussions regarding the complex relationships of Native American/ Hispano ethnic group alignment and the various social practices and contexts for dynamic identity formation. Identity formation discourses include community and place identity, socioeconomic and class identifications, gender and sexual orientation, transnational and border identifiers; Mestizaje and Indigenista orientations.

Student Learning Outcomes

At the conclusion of this course, student should be able to:

1. Analyze and discuss different theories of ethnicity and identity politics.
2. Identify and research different social and linguistic contexts where dynamic process of identity formation are embodied.
3. Develop and present insights into personal areas of identity formation and developmental trajectories.
4. Recognize and embrace self-reflection strategies that permit exploration into identity formation.

Native American Studies (NATV)

NATV 1150. Introduction to Native American Studies

Course Description

This course surveys the significance of Native American Studies through an inter-disciplinary approach to two areas of academic concentration: Indigenous Learning Communities, and Leadership and Building Native Nations.

Student Learning Outcomes

1. Students will develop a general understanding of the various concentration areas in Native American Studies throughout the United States.
2. Students will identify the contributions of various academic disciplines to Native American Studies.
3. Students will understand the intricacies and intersections of Indigenous scholarship in Native American Studies.
4. Students will articulate the importance of Native American Studies as a stand-alone discipline in academia.
5. Students will be able to connect community issues in both Native and Non-Native America to concepts taught in Native American Studies.

NATV 2088. Native American Studies Specialty

This course allows students to apply computer information technology elective credit towards a Native American Studies program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

NATV 2110. Sociopolitical Concepts in Native America

Course Description

This course examines a body of politics identified with Native America specific to historical and contemporary relevance for understanding Native American/Indigenous/American Indian nations and communities. Students are challenged to identify issues and debates based on selected readings, films; case examples; and guest presentations to engage in informed discussions about the socio-political experience of Native Americans within the U.S. and indigenous peoples internationally, including 'global' activist movements.

The course will use a seminar discussion format to present key (theoretical-methodological) approaches to developing a critical understanding of social and political issues impacting Native Americans today. To make the 'intangible' i.e., thinking, values, and belief systems but not limited to policies and political behavior, cultural expression that result in tangible actions affecting Native American peoples. Students are expected to develop and refine their skills in articulating verbal and written critiques of sociopolitical concepts identified.

Student Learning Outcomes

Not Available

NATV 2120. The Native American Experience

Course Description

Introductory survey of Native American History, culture and contemporary issues. Students read literature by and about Native Americans covering a variety of topics including tribal sovereignty, federal policy, activism, economic development, education and community life.

Student Learning Outcomes

1. Apply cultural and historical context to text about Native Americans (by Natives and non-Natives).
2. Analyze texts about Native Americans in relation to tribal sovereignty, federal policy, activism, economic development, education and community life.
3. Evaluate texts by and about Native Americans from an NAS perspective.

NATV 2140. Research Issues in Native America

Course Description

In this course, you will critically examine research theories, methodologies, and practices of various academic disciplines used to study Native Americans. You will review research databases and collections pertaining to Native Americans. The course focuses on developing your research skills and places an emphasis on the impact and value of research for Native communities.

Student Learning Outcomes

1. Critically examines research theories, methodologies, and practices of various academic disciplines used to study Native Americans.
2. Apply Indigenous-based theory, research methods, and ethics to critical leadership issues in Native American communities.
3. Conduct research by creating research questions, examining theories and methods, incorporating formatting styles, navigating academic databases, and writing a literature review aligned with community needs and interests.

NATV 2315. Language Recovery, Revitalization and Community Renewal

Course Description

Examines Native language loss from the boarding school era to current trends in language planning and revitalization. Special emphasis is placed on the importance of language to culture and on current community renewal efforts by Native people.

Student Learning Outcomes:

1. Examine the nature of language, culture, and identity across Indigenous cultures, genders, ages, and regions.
2. Evaluate the current state of language change across Indigenous communities.
3. Compare ideologies about the significance of language.
4. Analyze current language revitalization models and programs implemented by Indigenous communities and schools.

NATV 2315. Indigenous Language Revitalization and Community Renewal

Course Description

Examines Indigenous language change from the boarding school era to current trends in language planning and revitalization. Special emphasis is placed on the importance of language to culture and on current community renewal efforts by Indigenous people.

Student Learning Outcomes

1. Examine the nature of language, culture, and identity across Indigenous cultures, gender, age, and regions.
2. Evaluate the current state of language change across Indigenous communities.
3. Compare diverse ideologies about the significance of language.
4. Analyze current language revitalization models and programs implemented by Indigenous communities and schools.

NAVA 2315. Language Recovery, Revitalization and Community Renewal

Course Description

Examines Native language loss from the boarding school era to current trends in language planning and revitalization. Special emphasis is placed on the importance of language to culture and on current community renewal efforts by Native people.

Student Learning Outcomes:

1. Examine the nature of language, culture, and identity across Indigenous cultures, genders, ages, and regions.
2. Evaluate the current state of language change across Indigenous communities.
3. Compare ideologies about the significance of language.
4. Analyze current language revitalization models and programs implemented by Indigenous communities and schools.

Natural Resources (NATR)

NATR 2110C. General Ecology

Course Description: Ecological principles and concepts for organisms, populations, and communities are introduced. Ecosystem structure and function, population dynamics, species interactions, species diversity and habitat associations, evolutionary ecology, and classical hypothesis dominating the field of ecology are emphasized.

Student Learning Outcomes

As a result of completing this course, the student will be able to:

1. Explain the principles of living organisms interacting with each other and their environment.
2. Connect energy flow and nutrient cycling to interactions and relationships of organisms in ecosystems.
3. Recognize a variety of ecotones based upon landscape characteristics including vegetation types, topography, climate, and soils.
4. Understand cause and effect of multiple use management on ecological communities.
5. Understand the basic principles of population ecology, natural history and evolution as it pertains to species adaptations and ecosystem function.
6. Develop the ecological foundation to build upon as they continue their natural resource curriculum.

NATR 2996. Topics in Natural Resources

Course Description

Field techniques used to manage rangeland resources are introduced.

Topics include stocking rates, range improvements, economics, noxious weeds, and survey methods. Field trips are required.

Student Learning Outcomes

Primary objectives upon completion of this course are:

1. Students will utilize line transect methods in the measurement of ground cover and inventory techniques to categorize species composition and ground cover.
2. Students will classify important range plant species by family, genus, and species by appropriate field techniques.
3. Student will identify all classes of domestic and commercial livestock that utilize public and private lands including predominant wildlife species.
4. Students will learn to assess range condition using current methodology, applying carrying capacity projections to each range site.
5. Students will identify basic anatomy, physiology and nutritional requirements of livestock and wildlife species in varying range settings.
6. Student will recognize grazing methods practiced on Tribal, Federal, and private lands and apply principles and methods for habitat and range improvement.
7. Students will understand current economic and climatic settings affecting range management practices and decisions.
8. Students will apply cumulative knowledge including soil science, plant physiology, and ecology to recognize vegetative communities and apply appropriate management considerations.

Natural Science (NTSC)

NTSC 1110. Physical Science for Teachers

Course Description

Introduces the science of geology, chemistry, physics and astronomy, with emphasis on the sciences processes, inquiry and the integration of technology. This course is activity based utilizing problems and issues-based approach.

Student Learning Outcomes

1. Contrast physical and chemical reactions.
 - a. Explain chemical bonds.
 - b. Explain atoms and their relationships to elements.
2. Examine the three types of plate boundaries.
 - a. Explain plate tectonics.
 - b. Restate theory of continental drift.
3. Differentiate formation of sedimentary, igneous, and metamorphic rocks.
 - a. Explain the rock cycle.
 - b. Discuss history of the earth in relation to greenhouse and icehouse cycles.
 - c. Contrast principles of relative, radiometric, and paleo magnetic dating of rocks.
4. Determine a mineral's physical properties.
 - a. Define mineral.
 - b. List physical properties of minerals and how they relate to elements.
5. Examine Newton's laws of motion.
 - a. Discuss Newton's three laws of motion.
 - b. Discuss Newton's law of universal gravitation.
6. Examine origin of the universe.
 - a. Discuss big bang theory.
 - b. Explain theory of the cosmological constant.
7. Contrast planets and stars.
 - a. Define differences among planets.
 - b. Define differences among stars.
8. Examine origin of the sun and moon.
 - a. Explain the influence of the sun and moon on fluid movements, including weather phenomena on earth.
 - b. Contrast lunar and solar eclipses.
 - c. Differentiate between the sun and moon.

NTSC 1120. Life Science for Teachers

Course Description

Uses activities for the study of science topics including botany, cell biology, genetics, microbiology and zoology with emphasis on science processes, inquiry and the integration of technology.

Student Learning Outcomes

1. State cell theory.
 - a. Differentiate between prokaryotic and eukaryotic cells.
 - b. Discuss cell function and structure.
2. Demonstrate understanding of Mendelian genetics and inheritable traits.
 - a. Define genetic crosses.
 - b. Explain DNA transfer.
3. Explain cellular respiration and photosynthesis.
 - a. Locate sites of cellular respiration.
 - b. Distinguish cellular use of energy resources.

- c. Associate photosynthesis and cellular respiration with energy utilization.
- 4. Distinguish the evolutionary process and adaptation outcomes.
 - a. Review evolutionary theory.
 - b. List evidence of evolution.
- 5. Determine the reasons for classification.
 - a. List taxonomic features.
 - b. Differentiate biodiversity of all living things.
 - c. Discuss basics of classification system.
- 6. Examine human systems.
 - a. List human systems.
 - b. Define components and functions of systems.
 - c. Associate human life with functioning systems.
- 7. Compare global biomes.
 - a. List diverse systems.
 - b. Differentiate components within these systems.
 - c. Contrast regional systems.

NTSC 2110. Environmental Science for Teachers

Course Description

Introduces major issues in environmental science with emphasis on science processes, scientific investigations and field-based activities, and the integration of technology. Course topics include current issues on population, healthy ecosystems, and natural resources.

Student Learning Outcomes

- 1. Examine major water issues.
 - a. Identify specific types of water pollutants.
 - b. Discuss water cycle.
 - c. Contrast different methods of water conservation.
- 2. Determine the relationships between components of an ecosystem.
 - a. Identify components to an ecosystem.
 - b. Discuss possible disturbances and their causes in an ecosystem.
 - c. Review the meaning of j-curves and s-curves in animal populations.
- 3. Analyze problems in food supply issues.
 - a. Explain the green revolution.
 - b. Identify food supply issues and their underlying causes.
 - c. Discuss issues of pesticides and herbicides in the environment.
 - d. Identify problems in modern day agriculture.
 - e. Contrast productive and unproductive soils.
- 4. Examine differences in human population between the developing versus the developed world.
 - a. List underlying factors that influence family size.
 - b. Identify possible solutions to growing populations.
 - c. Discuss ecological footprint in the developing versus the developed world.
 - d. Contrast solutions to ecosystem degradation and human consumption.
- 5. Contrast solutions to urban sprawl.
 - a. Identify origins of urban sprawl.
 - b. Define sustainability.
 - c. Discuss the five principles of sustainability.
 - d. Distinguish between Neolithic, industrial, and environmental revolutions.

- e. Identify environmental impacts of urban sprawl.
6. Contrast global solutions to the energy crisis.
 - a. Cite differences between renewable and non-renewable energy sources.
 - b. Identify origins of fossil fuels.
 - c. Discuss human interest in fossil fuels from a historical perspective.
 - d. Identify origins of renewable energy sources.
 - e. Discuss human interest in renewable energy.
7. Examine different solutions for addressing the global decline in biodiversity.
 - a. Define biodiversity.
 - b. Differentiate between instrumental value and intrinsic value of species.

Navajo (NAVA)

NAVA 1110. Navajo I

Course Description

The purpose of this beginning class is to develop listening, speaking, reading and writing skills to communicate at an elementary level. The course will use a communicative approach for students to learn about the fundamentals of vocabulary, grammar, conversation, and Navajo cultures.

Student Learning Outcomes

1. Gain a basic understanding of the Navajo sound system, including the sounds of the alphabet: vowel, consonants, diphthongs, high/low tones, nasal, and glottal stop.
2. Obtain and utilize Navajo words and phrases through demonstration of the written and spoken language.
3. Demonstrate the ability to use, combine, and integrate basic grammatical structures into meaningful sentences, including subjects, objects, and verbs.
4. Hold conversations concerning everyday situations with an elementary degree of fluency.
5. Understand and utilize both formal and informal Navajo language, such as ceremonial, classroom, home, and professional settings.
6. Develop an understanding and appreciation of Navajo, including values, traditions, works of art, and individual perspectives on evolving cultures.
7. Utilize critical thinking skills to make thoughtful cross-cultural comparisons and connections among beliefs, social interactions, and cultural practices.

NAVA 1120. Navajo II

Course Description

Navajo II is a continuation of Beginning Navajo I. The purpose of this course is to enhance speaking, reading and writing of Navajo. The course will use a communicative approach for students to learn and utilize more complex vocabulary and grammar for reading, writing, and conversing in the language.

Student Learning Outcomes

1. Obtain, develop, and continue to build upon the basic Navajo sound system learned in Beginning Navajo I, including the sounds of the alphabet: vowel, consonants, diphthongs, high/low tones, nasal, and glottal stop.
2. Demonstrate increased knowledge of Navajo words and phrases through written and spoken Navajo.
3. Integrate and apply grammatical structures into more complex sentences, including subjects, objects, and verbs.
4. Hold conversations concerning everyday situations with an advanced-beginner degree of fluency.
5. Understand and utilize both formal and informal Navajo language, such as ceremonial, classroom, home, and professional settings.
6. Develop a more advanced understanding and appreciation of Navajo, including values, traditions, works of art, and individual perspectives on evolving cultures.

7. Utilize critical thinking skills to make thoughtful cross-cultural comparisons and connections among beliefs, social interactions, and cultural practices.

NAVA 1130. Beginning Navajo Reading and Writing

Course Description

This course is for students who want to learn to read and write Navajo. Lectures are presented exclusively in Navajo. Students will develop reading and writing skills while increasing intercultural awareness and understanding of Navajo communities and the significance of Navajo language in the past and the present, along with its contributions to Native American cultures.

Student Learning Outcomes

1. Develop reading skills including the recognition and pronunciations of Navajo words using diacritic markings, as well as reading basic Navajo texts.
2. Demonstrate the ability to use, combine, and integrate grammatical structures into sentences through reading and writing.
3. Show accuracy in writing at an elementary level to express feelings, emotions, and topics of interest.
4. Enhance knowledge and utilization of Navajo words and phrases through writing.
5. Understand and utilize both formal and informal written language.
6. Develop an understanding of and appreciation for Navajo literacy through values, traditions, works of art, and individual perspectives on evolving cultures.
7. Utilize critical thinking skills to make thoughtful cross-cultural comparisons and connections among beliefs, social interactions, and cultural practices through writing and reading of Navajo

NAVA 1150. Navajo Medical

Course Description

Using a chart of the human body, students will locate and name the body part in question. In a primary care context, student will say phrases such as 'breath in', 'breath out', 'show me where it hurts', 'open your mouth', 'say aaah', and so forth. Historical narratives highlight the difference in beliefs of wellness. One such belief is that being fat is not seen as a health concern among some Navajos. Therefore, it's essential to understand some of the beliefs to help a patient.

Student Learning Outcomes

1. By the end of the course, students will be able to speak basic medical Navajo.
2. By the end of the course, students will be able to will identify terminology for body parts
3. By the end of the course, students will be able to identify medical terminology needed for primary care contexts.

NAVA 1210. Navajo Cultural Arts

Course Description

This course introduces students to Navajo Cultural Arts through explorations of Diné history, philosophy, and life ways. Lectures and in-class demonstrations offer tools for sash belt weaving, basketry, and moccasin making. The course culminates in projects that require students to demonstrate their technical and artistic expertise.

Student Learning Outcomes

Upon completion of the course, students will be able to:

1. Retell oral traditions concerning sash belt weaving, basketry, and moccasin making.
2. Design and produce a sash belt.
3. Design and produce a Navajo basket.
4. Design and produce a set of Navajo moccasins.
5. Demonstrate appreciation for Navajo Cultural Traditions in relationship to Navajo Cultural Arts.

NAVA 1310. Navajo Rug Weaving I

Course Description

Introduction to the processes and techniques of Navajo weaving, including preparation of the wool, setting up the loom and warp, weaving techniques, and design elements. Basic origin stories and the history of Navajo rug weaving will also be covered.

Student Learning Outcomes

Upon completion of the course, students will be able to:

1. Understand the oral tradition and the history of Navajo weaving. Identify the significance of the upright loom and weaving tools, and identify traditional, regional, and non-regional Navajo rug styles.
 - a. Understand the oral history of Navajo weaving.
 - b. Know the historical background of Navajo rugs.
 - c. Identify the different names and types of Navajo rugs.
2. Gain a basic understanding of Navajo weaving by preparing the wool, dying wool, and setting up the loom and the warp.
 - a. Learn vocabulary words used with weaving and naming tools.
 - b. Prepare, gather, process, and spin the wool.
 - c. Dye wool.
 - d. Prepare the loom and warp.
 - e. Spin the side-string and spacing string.
3. Learn the basic weaving techniques and designs.
 - a. The weaving process:
 1. Warping and twining
 2. Mounting the bound warp on the dowel
 3. Mounting the warp on the loom
 4. Making the heddles and shed rod
 5. Holding the batten and comb
 6. Weaving the first rows
 7. Using the heddle and shed rod
 8. Adding new wool (string)
 9. Repairing a broken warp
 - 10). Learning hooked joint, square, and diamond shapes
 - b. Create a basic rug design using the three (3) basic designs.
 - c. Learn the "Finishing Technique" of traditional Navajo Rug Weaving.

NAVA 1320. Navajo Rug Weaving II

Course Description

Continuation of NAVA 1310 which will include further development of the processes and techniques of Navajo weaving, with a special emphasis on advanced weaving techniques and design.

Student Learning Outcomes

Upon completion of the course, students will be able to:

1. Know the oral tradition and the history of Navajo weaving in depth. Identify the significance of the upright loom and weaving tools. Identify traditional, regional, and non-regional Navajo rug styles.
 - a. Understand the oral history of Navajo weaving.
 - b. Know the historical background of Navajo rugs.
 - c. Identify the different names and types of Navajo rugs.
2. Demonstrate Navajo weaving by preparing the wool, dying wool, and write a step by step process of setting up the loom, the warp, and weaving.
 - a. Learn vocabulary words used with weaving and naming tools.

- b. Prepare, gather, process, and spin the wool.
- c. Dye wool.
- d. Prepare the loom and warp.
- e. Spin the side-string and spacing string.
- 3. Learn additional weaving techniques and designs.
 - a. The weaving process:
 - 1) Warping and twining
 - 2) Mounting the bound warp on the dowel
 - 3) Mounting the warp on the loom
 - 4) Making the heddles and shed rod
 - 5) Holding the batten and comb
 - 6) Weaving the first rows
 - 7) Using the heddle and shed rod
 - 8) Adding new wool (string)
 - 9) Repairing a broken warp
 - 10) Learning hooked joint, square, and diamond shapes
 - b. Create an intermediate rug design using the three (3) basic designs.
 - c. Learn the “Finishing Technique” of traditional Navajo Rug Weaving.
 - d. Produce a completed Navajo Rug.
 - e. Assist and mentor beginning students in setting up their looms.

NAVA 1330. Navajo Rug Weaving III

Course Description

Continuation of NAVA 1310 and NAVA 1320 which will include further development of the processes and techniques of Navajo weaving, with a continued emphasis on advanced weaving techniques and design.

Student Learning Outcomes

Upon completion of the course, students will be able to:

- 1. Know the oral tradition and the history of Navajo weaving in depth. Identify the significance of the upright loom and weaving tools. Identify traditional, regional, and non-regional Navajo rug styles.
 - a. Understand the oral history of Navajo weaving.
 - b. Know the historical background of Navajo rugs.
 - c. Identify the different names and types of Navajo rugs.
- 2. Demonstrate Navajo weaving by preparing the wool, dying wool, and write a step by step process of setting up the loom, the warp, and weaving.
 - a. Learn vocabulary words used with weaving and naming tools.
 - b. Prepare, gather, process, and spin the wool.
 - c. Dye wool.
 - d. Prepare the loom and warp.
 - e. Spin the side-string and spacing string.
- 3. Learn additional weaving techniques and designs.
 - a. The weaving process:
 - 1. Warping and twining
 - 2. Mounting the bound warp on the dowel
 - 3. Mounting the warp on the loom
 - 4. Making the heddles and shed rod

5. Holding the batten and comb
6. Weaving the first rows
7. Using the heddle and shed rod
8. Adding new wool (string)
9. Repairing a broken warp
- 10). Learning hooked joint, square, and diamond shapes
- b. Create an advanced rug, sash belt, and/or saddle cinch design using eye dazzler, circular, pictorial, and other regional patterns.
- c. Learn the “Finishing Technique” of traditional Navajo Rug Weaving.
- d. Produce an advanced, completed Navajo Rug.
- e. Assist and mentor beginning and intermediate students in setting up their looms.

NAVA 2110. Navajo III

Course Description

Not Available

Student Learning Outcomes

1. Able to read, write and speak Navajo at the intermediate level.
2. Converse on topics related to family, clan relationships, education, transportation and movement by using the correct number of participants and eating traditional Navajo foods with correct eating verbs.
3. Apply the correct paradigm patterns to verbs from above.
4. Use essential grammar concepts.
5. Converse using a vocabulary of 100 verbs.

NAVA 2120. Navajo IV

Course Description

Not Available

Student Learning Outcomes

1. By the end of the course, students will be able to read and write at intermediate levels.
2. By the end of the course, students will be able to relate a story from Navajo Times (a weekly paper).
3. By the end of the course, students will be able to converse using a vocabulary of 150 verbs.

NAVA 2130. Intermediate Navajo Language (Writing)

Course Description

This a Navajo Writing course for Navajo speakers continues from NAV 2110. This course is not suitable for non- Navajo speakers.

Student Learning Outcomes

Not Available

NAVA 2135. Navajo Oral Tradition & Styles

Course Description

Examines philosophical thoughts discussed by Navajo elders by listening to and analyzing various oral styles including storytelling, oratory, prayers, and lectures. English and Navajo instruction. Offered in collaboration with Dine College (NIS 261)

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. become familiar with Navajo world view through the study of Navajo oral traditions.
2. discuss the characters, teachings, language, and ceremonial connections.

3. report on Navajo and other Native American speeches and treaty negotiation.
4. value the Navajo traditions by critiquing the traditional way of lecturing and counseling.
5. research a coyote story and tell the story in the classical language.
6. give a speech in the original oral traditional style.
7. explain and analyze ceremonial and informal prayers.

NAVA 2210. Navajo Culture

Course Description

Introduces the basic values of Diné Society, past and present, including the clan system, the philosophy of duality, rites and passages, and the Navajo creation story.

Student Learning Outcomes

Not Available

NAVA 2220. Navajo History

Course Description

Introduces the history and culture of the Navajo people from the earliest times to the present. The course will examine cultural change, the interaction of the Navajo with other native groups and especially with European peoples.

Student Learning Outcomes

Upon successful completion of the course, student will be able to:

1. Demonstrate a knowledge of historical events
 - a. Understand the chronology of Navajo history
2. Understand the causes and processes involved in the growth and development of the Navajo over time, including:
3. Understand the historical roots of the contemporary world
 - a. Will understand the relationships between the institutions, conflicts, and values of today as the legacy of our predecessors
 - b. Will express their understanding in papers and classroom discussion
4. Appreciate the study of history.
 - a. Will enable students to relate events of the past to their own lives and times.
5. Will appropriately use these concepts in tests, papers, and in classroom discussion
6. Understand historical methods
 - a. Critical analysis of texts and argument
 - b. Interpretation of evidence
 - c. Conduct research in a variety of media
 - d. Cites sources appropriately

NAVA 2230. Navajo Government

Course Description

This course is a study of the history, nature, organization, and operation of Navajo tribal government. It concentrates on the evolution of Navajo tribal government since its beginning in the 1920's, and examines the legal and political basis for, and the functions of, Navajo tribal government today.

Student Learning Outcomes

Upon successful completion of the course, students will be able to:

1. Demonstrative understanding of the origin and development of Navajo Government.
2. Describe the history of Navajos' relations with federal, state and local governments and the effects of those relations on Navajo Government.
3. Analyze the effects of colonization by differing forces, at different times, on Navajo Nation status and relations with federal, state and local governments today.

4. Analyze contemporary issues in Navajo Nation politics, including sovereignty, law, justice, indigenous rights, language and culture shift, economic development, repatriation, and activism.
5. Evaluate the impact of historical events on current tribal challenges and issues.
6. Demonstrate appreciation for the strength of the Navajo people in contemporary America

NAVA 2315. Language Recovery, Revitalization and Community Renewal

Course Description

Examines Native language loss from the boarding school era to current trends in language planning and revitalization. Special emphasis is placed on the importance of language to culture and on current community renewal efforts by Native people.

Student Learning Outcomes:

1. Examine the nature of language, culture, and identity across Indigenous cultures, genders, ages, and regions.
2. Evaluate the current state of language change across Indigenous communities.
3. Compare ideologies about the significance of language.
4. Analyze current language revitalization models and programs implemented by Indigenous communities and schools.

NAVA 2240. Diné Philosophy of Education

Course Description

Examines Dine philosophical thought regarding metaphysics, epistemology, aesthetics, ethics, religion, and traditional social structure.

Student Learning Outcomes

Upon completion of the course, students will be able to develop:

1. An understanding of Navajo origins.
2. An understanding of Navajo identity.
3. A broader perspective on the history of the Navajo People according to mythology.
4. Insight into the values and relationship of Navajo principles.
5. An understanding of the origins of some of these principles.
6. An understanding of the Navajo's perception of the environment.
7. An understanding on one's roles and responsibilities in terms of the Navajo worldview.
8. An understanding of Navajo organization of knowledge, as designed to promote a life-style becoming an ideal life, as espoused in the Blessing Way.
9. A better understanding of Navajo values, through study of the traditional Navajo values.

NAVA 2996. Topics in Navajo

Course Description

Varies

Student Learning Outcomes

Varies

Naval Science (NVSC)

NVSC 1110 Principles and Concepts of Naval Science

Course Description

Introduction to the naval service, customs, traditions, courtesies, and naval officers' communities.

Student Learning Outcomes

1. Analyze the origins and usage of naval customs and traditions, including military courtesies, basic etiquette, military protocol, and social customs.

2. Explain command relationships and organizational structures, including operational and administrative chains of command, military officer and enlisted rank/paygrade structures, and Navy and Marine Corps community duties and responsibilities.
3. Demonstrate proper uniform wear and military grooming standards according to Navy and Marine Corps regulations

NVSC 1111L. Naval Professional Laboratory

Course Description

To provide Naval Reserve Officer Training Corps students with the tools and opportunities to ensure service readiness and mission accomplishment; enhance professional and personal growth and development; and enable life-long learning.

Student Learning Outcomes

1. Exhibit proper uniform wear and military grooming standards as required by Navy regulations.
2. Understand and articulate the role of commissioned officers as members of the U.S. Armed Forces and know the obligations and responsibilities assumed by taking the oath of office and accepting a commission including the Constitutional requirement for civilian control.
3. Identify and explain Naval programs and policies regarding safety, financial management, harassment and hazing, educational opportunities, equal opportunity, legal matters, diversity, operational stress control, suicide prevention, and general military training.

NVSC 1120 Navy and Marine Corp Fitness

Course Description

This course will develop, enhance and solidify physical fitness levels of future Navy and Marine Corps officers. It will incorporate various core, cardio and muscle strengthening events.

Student Learning Outcomes

1. Understand and apply Naval standards for physical readiness, nutrition, and weight control.
2. Achieve personal physical fitness standards by passing Navy or Marine Corps physical fitness tests.
3. Maintain a fit military appearance in accordance with Navy or Marine Corps body fat percent and/or height-weight standards.

NVSC 1150. Naval Ship Systems I

Course Description

Introduction to naval engineering systems concepts and practices. Topics include ship design, compartmentation, ship stability, damage control, firefighting and ship propulsion systems.

Student Learning Outcomes

1. Apply the concepts of work, power, and efficiency to the analysis of propulsion systems.
2. Describe the basic principles of electrical power generation, distribution, and electrical safety.
3. Explain the basic principles of fluid dynamics and their relevance to naval engineering.

NVSC 2202. Sea Power

Course Description

This course surveys U.S. naval history from the American Revolution to the present. Included is an in-depth discussion of the geopolitical theory of Mahan and other historical figures. Emphasis is on major developments in naval strategy, tactics, technology and the effects of the relevant political climate.

Student Learning Outcomes

1. Comprehend the relationship of sea power to national interest and maritime strategy in both peace and war.
2. Know the impact and significance of geography and Sea Lines of Communication on maritime strategy and naval operations.
3. Know the mission of the U.S. Navy as described in maritime strategy.

4. Know the evolution of the Navy and Marine Corps including the origins of the service along with prominent leaders and their contributions.
5. Know the role naval forces played in the national strategies and policies of the United States in both peacetime and war.
6. Comprehend the historical evolution of sea power and its effects on world history.

NVSC 2150. Naval Ship Systems II

Course Description

Principles of naval weapons systems. Topics include sensors and detection systems, computational systems, tracking systems, weapon delivery systems, the fire control problem and new developments in weapon systems integration.

Student Learning Outcomes

1. Identify the designations, characteristics, capabilities, and missions of ships, aircraft, and weapon systems of the U.S. Navy, Marine Corps, and Strategic Sealift Command.
2. Explain the basic theory and use of radar, sonar, and fire-control systems.
3. Describe the operating principles and common applications of platform weapon systems.

NVSC 2203. Navigation

Course Description

Offers theory, principles and procedures of ship coastal and celestial navigation.

Student Learning Outcomes

1. Comprehend the theory and practice of navigation at sea:
 - A. Comprehend the longitude/time relationship.
 - B. Demonstrate time conversion and time zone determination.
 - C. Know the correct procedures to determine the time of sunrise and sunset.
 - D. Know the theory and use of electronic navigation systems, including:
 - a. Basic principles of radar navigation.
 - b. Operating principles of GPS and navigation chart datum.
 - E. Comprehend the uses of navigational datums and the various chart projections.
 - F. Know chart symbology particularly those symbols pertaining to hazards and dangers.
 - G. Know how to select the proper charts both paper and electronic and how to determine chart accuracy and reliability.
 - H. Apply correct plotting procedures when navigating in pilot water, including:
 - a. Apply the six rules of dead reckoning in keeping a plot of ship movements.
 - b. Comprehend the definitions of the terms: track, speed of advance, speed over ground, PIM, EP, LOP, and relative bearing.
 - c. Know turn and danger bearings.
 - d. Demonstrate the ability to plot and interpret fixes and running fixes.
 - I. Know the advantages, disadvantages, and applications of gyro and magnetic compasses:
 - a. Apply terrestrial navigation methods to determine compass error.
 - b. Apply magnetic variation to a given location.
 - c. Know the concept of deviation and the use of the digital flux gate magnetic compass.
 - J. Know the capabilities and limitations of various instruments used in piloting to determine direction, speed, distance, and depth of water.
 - K. Know the essential publications and records used in navigation and comprehend their value.
 - L. Know the characteristics and application of various aids to navigation in piloting and comprehend their importance in safe navigation, including: buoyage systems IALA; lights/daymarkers; radar beacons/markers.

- M. Apply correct procedures in planning and plotting approaches to harbors and anchorages.
 - N. Comprehend tidal action and know tide classifications and reference planes.
 - O. Demonstrate the ability to use the Current Triangle to find course made good, speed made good, set, drift and compensating course and speed to negate set and drift.
 - P. Know environmental weather factors affecting Naval operations.
 - Q. Know the sources of environmental products/predictions/ forecasts available to Naval units underway.
 - R. Know the impact of hazardous weather conditions on surface and flight operations at sea.
2. Comprehend relative motion and demonstrate capability to solve problems associated with relative motion:
 - A. Comprehend the theory of relative motion as graphically displayed by the geographic and relative plot.
 - B. Comprehend the significance of bearing drift and apply bearing drift to determine relative motion.
 - C. Demonstrate the ability to compute target angle.
 - D. Comprehend the speed triangle and the relative plot associated with maneuvering board.
 - E. Demonstrate the use of the maneuvering board to accurately:
 - a. Determine the closet point of approach, CPA and time of CPA of an approaching vessel.
 - b. Determine the true course and true speed of a maneuvering ship.
 - c. Determine course, speed, and time for proceeding to a new station or to intercept another vessel.
 - d. Determine an avoidance course of a given target.
 - e. Know the Rules of the Road preventing collisions at sea.

NVSC 2204. Naval Operations

Explores naval ship operations, tactical formations and dispositions; relative motion tactical plots and maneuvering boards are analyzed.

Student Learning Outcomes

1. Discuss the theory of relative motion as it applies to vessels at sea and learn methods to quickly and accurately compute maneuvering solutions.
2. Learn the fundamentals of the U.S. Navy's systems of communications used on sea-going vessels.
3. Discuss the many issues relating to ship handling and Naval Officers' responsibility.
4. Gain a broad understanding of the doctrines of Naval Warfare, Command and Control, and Joint Operations.
5. Upon completion, you will be prepared as line officers in the United States Navy.

NVSC 2231. Evolution of Warfare

Course Description

The purpose of Evolution of Warfare is to imbue students with an understanding of the origins of modern warfighting theory through an analysis of historical philosophies, domains, tactics and technology. Through a study of military history, students explore the timeless fundamentals of armed conflict as well as the central role of innovation. They will apply these fundamental warfighting concepts to historic amphibious and expeditionary operations through guided analysis and decision games.

Student Learning Outcomes

1. Explain core elements of U.S. Marine Corps warfighting culture
2. Comprehend baseline USMC doctrine.
3. To develop the students' critical thinking skills as they pertain to warfare.
4. Comprehend the major cultural, technological, and doctrinal transformations in warfare.
5. To develop fundamental USMC officer skills of writing, analytical thinking, professional writing, and public speaking.
6. Evaluate historical lessons from the development of warfare and apply them to assess how military leaders remain forward thinking.

7. Describe and compare contemporary conventional and irregular warfare using historical examples to explain how warfare has evolved over time.
8. Explain why military leaders must remain vigilant to changes in the character and conduct of warfare.

NVSC 2241. Leadership and Management

Course Description

Explores the structure and principles of naval leadership and management.

Student Learning Outcomes

1. Describe what leadership is, what a leader does, and how leadership is measured.
2. Demonstrate self-awareness in the context of leadership, to include promotion of leadership integrity.
3. Comprehend and examine prominent classical and contemporary leadership theories.
4. Understand and describe the relationship between ethics, moral courage, and leadership.
5. Develop leadership skills to include public speaking and teamwork.

NMNC 1110. Introduction to Nursing Concepts

Course Description

Introduces the nurturing student to the concepts of nursing practice and conceptual learning.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Integrate knowledge from nursing pre- and co-requisites into a conceptual learning model. [L1.3/P3; L1.6/P6].
2. Apply conceptual learning to select nursing concepts. [L1.6/P6].
3. Define personal values, beliefs, and attitudes about health and wellness. [L1.1/P1].
4. Describe importance of identifying patient safety issues. [L1.2/P2].
5. Describe roles and values of nursing and members of the healthcare team. [L1.5/P5].
6. Describe standards and regulations that apply to nursing practice. [L1.4/P4].

Course Competencies

Upon successful completion of this course, the student will:

1. Recognize one's own values, beliefs and attitudes. [L1.1/P1].
2. Recognize the need for health care access of diverse populations. [L1.1/P1].
3. Identify sources for evidence-based practice. [L1.3/P3].
4. Identify the difference between traditional or routine and evidence-based approaches to care. [L1.3/P3].
5. Identify evidence-based protocols and/or pathways used in nursing care. [L1.3/P3].
6. Define scope of practice in various education/practice environments. [L1.4/P4].
7. Identify information sources for healthcare policy. [L1.4/P4].
8. Describe ethics in relation to healthcare. [L1.4/P4].
9. Demonstrate effective collaboration with peers and faculty. [L1.5/P5].
10. Demonstrate effective communication with peers and faculty. [L1.5/P5] .

NURS 1135. Principles of Nursing Practice

Course Description

This course introduces the nursing student to the application of concepts through clinical skills in seminar, laboratory, and/or clinical settings. Principles of communication, assessments, safety, and interventions including accurate calculation, measurement, and administration of medications will be included.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Describe the different types and characteristics of communication in professional nursing practice. [L1.5/P5].
2. Utilize the concepts presented in Level One nursing courses in the application to the care of the patient. [L1.1; L1.6/P1; P6].
3. Demonstrate the principles of safety during the implementation of nursing skills. [L1.2/P2].
4. Demonstrate the learned skills in patient-based scenarios. [L1.6/P6].
5. Utilize the nursing process to provide safe and effective care. [L1.2/P2].

Course Competencies

Upon successful completion of this course, the student will:

1. Express one's own values, beliefs and attitudes in a respectful manner. [L1.1/P1].
2. Identify potentially harmful situations. [L1.2/P2].
3. Identify near misses and clinical errors. [L1.2/P2].
4. Perform identified skills to promote patient safety. [L1.2/P2].
5. Perform medication administration safely and accurately. [L1.2/P2].
6. Verbalize awareness of patient/family preferences and values. [L1.3/P3].
7. Identify and compare various communication styles. [L1.4/P4].
8. Identify interpersonal communication styles for the situation. [L1.4/P4].
9. Identify appropriate advocacy role related to patient safety using nursing interventions. [L1.4/P4].
10. Demonstrate effective collaboration with peers in the learning environment. [L1.5/P5].
11. Demonstrate effective communication with peers and faculty. [L1.5/P5].
12. Identify own areas for personal and professional growth. [L1.5/P5].
13. Identify or discuss the differences in the roles of health care team members. [L1.5/P5].
14. Document interventions using available technology. [L1.6/P6].
15. Select appropriate equipment for use in patient care. [L1.6/P6].

NMNC 1210. Health and Illness Concepts I

Course Description

This course will focus on health and illness concepts across the lifespan. Concepts covered are related to homeostasis/regulation, sexuality/reproductive, protection/movement and emotional processes.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Describe the scope, risk factors, physiologic processes, attributes, and clinical management of selected concepts and exemplars across the lifespan. [L2.3/P3].
2. Discuss evidence based practices and healthcare standards of care related to the concepts/exemplars of the course. [L2.2/P2, L2.3/P3, L2.4/P4].
3. Explain the collaboration necessary related to the concepts/exemplars of the course. [L2.5/P5].
4. Utilize informatics and resources related to the concepts/exemplars of the course. [L2.6/P6].
5. Integrate considerations of normal physiology and healthy adaptations into nursing practice of patients across the lifespan. [L2.3/P3] .

NMNC 1220. Health Care Participant

Course Description

This course introduces the nursing student to the attributes of the health care participant as an individual, a family, or a community.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Identify values, beliefs and attitudes towards health and illness of the health care participant. [L2.1/P1].
2. Articulate the role of nursing in relation to the health of vulnerable populations and elimination of health disparities. [L2.2/P2].
3. Describe the protective and predictive factors which influence the health of families, groups, communities, and populations. [L2.3/P3].
4. Describe the use of evidence-based practices to guide health teaching, health counseling, screening, outreach, disease and outbreak investigation, referral, and follow-up throughout the lifespan. [L2.3/P3].
5. Describe the use of information and communication technologies in preventive care. [L2.6/P6].
6. Examine the health care and emergency preparedness needs of the local community and state of New Mexico. [L2.2/P2].
7. Identify clinical prevention and population focused interventions with attention to effectiveness, efficiency, cost effectiveness, and equity. [L2.2/P2].

NMNC 1230. Nursing Pharmacology

Course Description

This course introduces the nursing student to pharmacologic nursing practice from a conceptual approach.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Identify the nurse's professional role related to pharmacotherapeutics in diverse populations across the lifespan. [L2.5/P5].
2. Identify safety issues and minimize risk potential associated with pharmacotherapeutics and complementary and alternative medicine. [L2.2/P2].
3. Utilize evidence-based information integrating pharmacologic and pathophysiologic concepts to guide medication therapeutics. [L2.3/P3].
4. Describe health-care system protocols related to pharmacotherapeutics. [L2.4/P4].
5. Identify methods for communication with the health care team related to pharmacotherapeutics. [L2.5/P5].
6. Utilize informatics systems related to pharmacotherapeutics. [L2.6/P6].

7. Describe common classes of drugs that are used in health care, including pharmacokinetics, pharmacodynamics, and pharmacotherapeutics. [L2.2/P2].

NMNC 1235. Assessment and Health Promotion

Course Description

This course introduces the nursing student to the assessment of and the health promotion for the health care participant as an individual, a family, or a community. This course uses seminar, laboratory and/or clinical settings.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Assess physical health including a focus on the health/illness beliefs, values, attitudes, developmental level, functional ability, culture, and spirituality of the participant. [L2.1/P1].
2. Assess family health including a focus on family health history, environmental exposures, and family genetic history to identify current and future health problems. [L2.2/P2].
3. Collaborate with a community to assess their health needs. [L2.1/P1].
4. Utilize community assessment data and evidence-based practice as basis for identifying community health needs. [L2.3/P3].
5. Document health assessments in electronic health record or written formats. [L2.5/P5, L2.6/P6].
6. Share community assessment data with other healthcare professionals to identify needed interventions. [L2.5/P5].
7. Explain the role of the nurse in relation to advocacy for the health care recipient. [L2.2/P2].

Course Competencies

Upon successful completion of this course, the student will:

1. Identify patient's values, beliefs and attitudes. [L2.1/P1].
2. Effectively communicate patient's values, preferences and expressed needs. [L2.1/P1].
3. Recognize the need for health care access related to diverse populations. [L2.1/P1].
4. Anticipate, identify, and eliminate potentially harmful situations in a wellness setting with guidance. [L2.2/P2].
5. Identify system contributions to clinical errors and near misses in a wellness setting, with guidance. [L2.2/P2].
6. Implement evidence-based procedures to reduce harm, promote safety, and improve care in a wellness setting with guidance. [L2.2/P2].
7. Describe the relationship between evidence and clinical practice. [L2.3/P3].
8. Assess outcomes of care when using evidence-based approaches, with guidance. [L2.3/P3].
9. Demonstrate knowledge of evidence-based protocols/pathways when providing nursing care. [L2.3/P3].
10. Illustrate scope of practice within assigned education/practice environments. [L2.4/P4].
11. Use various communication styles appropriate to team member roles. [L2.4/P4].
12. Identify resources related to healthcare policy, finance, and regulatory environments. [L2.4/P4].
13. Identify ethical issues within assigned education or practice environments. [L2.4/P4].
14. Advocate health promotion for healthcare consumers. [L2.4/P4].
15. Demonstrate understanding of the nursing role within an interprofessional team. [L2.5/P5].
16. Communicate effectively with the inter-professional team members in order to initiate shared decision making. [L2.5/P5].
17. Illustrate awareness of own strengths and limitations as a team member. [L2.5/P5].
18. Illustrate ability to work effectively as a team member. [L2.5/P5].
19. Demonstrate planning and documentation of nursing care using available technology in health promotion settings. [L2.6/P56].
20. Identify appropriate resources that will aid patients in continuing wellness or decreasing exacerbations of diseases. [L2.6/P6].
21. Safely operate appropriate technology in the wellness setting. [L2.6/P6].

NMNC 2310. Health and Illness Concepts II

Course Description

This course will cover health and illness concepts across the lifespan with the focus on chronic conditions. Concepts covered are related to oxygenation and hemostasis, homeostasis and regulation, protection and movement, and cognition and behavior processes.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Relate the scope, risk factors, physiologic processes, attributes, and clinical management of selected concepts and exemplars across the lifespan. [L3.2/P2].
2. Investigate evidenced-based practice, standards of nursing care, and factors to improve safety related to selected concepts and exemplars. [L3.3/P3, L3.4/P4].
3. Examine how members of the health care team collaborate in the delivery of care related to selected concepts and exemplars. [L3.5/P5].
4. Discuss available technology for the delivery of nursing care. [L3.6/P6].
5. Apply selected health and illness concepts to the nursing care of patients across the lifespan. [L3.3/P3].

NMNC 2320. Professional Nursing Concepts I

Course Description

This course covers foundational concepts for professional development, including selected professional attributes and care competencies.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Examine the ethical values, virtues, principles, and policies that guide the moral delivery of health care. [L3.1/P1].
2. Relate the nurse's interpretation of patient needs, concerns, and health problems with nursing decisions. [L3.2/P2].
3. Discuss the factors which motivate individuals, groups, and organizations to deliver quality nursing care. [L3.3/P3].
4. Determine how interactions of health care team members provide quality patient care. [L3.5/P5].

NMNC 2335. Care of Patients with Chronic Conditions

Course Description

The focus of this course is to provide safe, evidence-based nursing care for patients with chronic conditions, across the lifespan in a variety of settings. This course builds upon curricular concepts. This course is a combination of lab and clinical.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Demonstrate ethical practice in the delivery of nursing care to patients with chronic conditions. [L3.1/P1].
2. Apply understanding of the principles of safe nursing care for patients with chronic conditions. [L3.2/P2].
3. Demonstrate knowledge of appropriate evidence-based protocols when providing nursing care to patients with chronic conditions. [L3.3/P3].
4. Apply understanding of appropriate health care policy, finance, and regulatory environments in the care of patients with chronic conditions. [L3.4/P4].
5. Communicate effectively with patients with chronic conditions and health care team members. [L3.5/P5].
6. Demonstrate an understanding of the technology used in the care of patients with chronic conditions. [L3.6/P6].
7. Utilize the nursing process to deliver nursing care to patients with chronic conditions. [L3.1/P1, L3.2/P2, L3.3/P3, L3.4/P4, L3.5/P5, L3.6/P6].

Course Competencies

Upon successful completion of this course, the student will:

1. Apply patient's values, beliefs and attitudes to the patient's plan of care. [L3.1/P1].

2. Using effective communication, apply the patient's expressed values, beliefs, and attitudes to nursing care. [L3.1/P1].
3. Identify health care resources for diverse patient populations at the local, regional, and national levels. [L3.1/P1].
4. Identify factors present in clinical settings that promote or hinder a culture of safety and caring. [L3.2/P2].
5. Anticipate, identify, and eliminate potentially harmful situations in nursing the patient with chronic illness. [L3.2/P2].
6. Interpret and evaluate system contributions and staff response to clinical errors and near misses in nursing the patient with chronic illness, with guidance. [L3.2/P2].
7. Implement evidence-based procedures to reduce harm, promote safety, and improve care in nursing the patient with chronic illness, with guidance. [L3.4/P4].
8. Analyze gaps between local/clinical site and best practice and system factors that support or hinder adoption of best practices. [L3.5/P5].
9. Apply evidence in providing care to patients with chronic health problems. [L3.3/P3].
10. Identify patient/family preferences and values and their effect on the delivery of optimal care. [L3.1/P1].
11. Assess outcomes of care when using evidence-based approaches. [L3.3/P3].
12. Implement evidence-based protocols/pathways when providing nursing care. [L3.4/P4].
13. Demonstrate clinical competency in care delivery to the chronic patient in lab and practice settings. [L3.4/P4].
14. Use effective communication style with team members in care of patients with chronic illness. [L3.5/P5].
15. Identify how healthcare policy, finance, and regulatory environments relate to the care of patients with chronic illness. [L3.4/P4].
16. Demonstrate ethical practice in the delivery of care to patients with chronic illness. [L3.4/P4].
17. Advocate for patients with chronic illness. [L3.5/P5].
18. Collaborate effectively within the inter-professional team, with guidance. [L3.5/P5].
19. Build on own strengths and compensate for limitations as a team member. [L3.5/P5].
20. Recognize leadership behaviors and begin to incorporate these behaviors into nursing practice. [L3.5/P5].
21. Document planning, implementation and evaluation of nursing care of patients with chronic illness using available technology. [L3.6/P6].
22. Incorporate health care resources in sharing health information with patients with chronic illness. [L3.6/P6].
23. Safely operate appropriate technology in the delivery of care to chronically ill patients. [L3.6/P6].

NMNC 2410. Health and Illness Concepts III

Course Description

This course will cover health and illness concepts, with the focus on acute conditions across the lifespan. Concepts covered are related to homeostasis/regulation, oxygenation/hemostasis, protection/movement and, emotional processes.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Anticipate healthcare participants risk for potentially harmful situations related to the concepts/exemplars of the course. [L4.2/P2].
2. Integrate evidence-based practices and healthcare standards of care related to the concepts/exemplars of the course. [L4.3/P3, L4.4/P4].
3. Differentiate the multiple roles of the health care team related to the concepts/exemplars of the course. [L4.5/P5].
4. Integrate use of appropriate technology related to the concepts/exemplars of the course. [L4.6/P6].
5. Interrelate risk factors, concepts, physiologic processes, patient attributes and clinical management of the exemplars covered in this course. [L4.1/P1].

NMNC 2435 Clinical Intensive I

Course Description

This is the first of two Level Four clinical courses in which the student will apply the curricular concepts in the management of care participants with acute conditions across the lifespan. This course is a combination of seminar, lab, and clinical.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Integrate nursing practice concepts into their professional nursing practice. [L4.1/P1]
2. Integrate diverse patient values into plan of care for patients with acute illness. [L4.1/P1]
3. Interpret and analyze factors and system contributions that impact the quality and safety of nursing practice. [L4.2/P2]
4. Integrate an evidence-based approach in the delivery and evaluation of nursing care to acutely ill patients across the lifespan. [L4.3/P3]
5. Evaluate the use of policies and procedures within the acute care setting. [L4.4/P4]
6. Effectively collaborate with the healthcare team in the delivery of patient care. [L4.5/P5]
7. Integrate use of appropriate technology for the delivery of nursing care to acutely ill patients. [L4.6/P6]

Course Competencies

Upon successful completion of this course, the student will:

1. Integrate patient's values, beliefs and attitudes into the patient plan of care. [L4.1/P1]
2. Using effective communication, integrate patient's expressed values, beliefs, and attitudes in nursing care. [L4.1/P1]
3. Integrate the use of resources to meet health care needs for diverse patient populations. [L4.1/P1]
4. Analyze factors present in clinical settings that promote or hinder a culture of safety and caring. [L4.2/P2]
5. Anticipate, identify, and eliminate potentially harmful situations in an acute care setting with minimal guidance. [L4.2/P2]
6. Interpret and evaluate system contributions and staff response to clinical errors and near misses in an acute care setting, with minimal guidance. [L4.2/P2]
7. Implement evidence-based procedures to reduce harm, promote safety, and improve care in an acute care setting with minimal guidance. [L4.2/P2]
8. Design methods to introduce best and/or evidence-based practice within an acute care setting. [L4.3/P3]
9. Incorporate patient/family preferences and values into an evidenced-based plan of care for participants with acute health problems. [L4.3/P3]
10. Apply evidence-based approaches to care for participants with acute health problems. [L4.3/P3]
11. Modify care based on evidence-based protocols/pathways when providing care for participants with acute health problems. [L4.3/P3]
12. Demonstrate clinical competency with the acute care patient in lab and practice settings. [L4.4/P4]
13. Use effective communication style with appropriate team members in care of patients with acute illness. [L4.5/P5]
14. Identify how healthcare policy, finance, and regulatory environments relates to the care of patients with acute illness. [L4.4/P4]
15. Demonstrate ethical practice in the delivery of care to patients with acute illness. [L4.4/P4]
16. Advocate for patients with acute illness. [L4.5/P5]
17. Begin to integrate the collaborative role of the nurse effectively within the inter-professional team. [L4.5/P5]
18. Engage effectively in shared decision making to provide quality patient care. [L4.5/P5]
19. Create supportive relationships with team members to leverage diverse skills. [L4.5/P5]
20. Demonstrate ability to function as team member or leader. [L4.5/P5]
21. Document planning, implementation and evaluation of nursing care of patients with acute illness using available technology. [L4.6/P6]
22. Incorporate health care resources in sharing health information with patients with acute illness. [L4.6/P6]
23. Safely operate appropriate technology in the delivery of care to acutely ill patients. [L4.6/P6]

NMNC 2445. ADN Capstone

Course Description

The synthesis, integration, and application of concepts to professional nursing practice will be applied in the final clinical course to ensure readiness to enter practice.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Synthesize and integrate nursing practice concepts into their professional nursing practice. [L5.1/P1]
2. Engage in professional nursing practice that is patient-centered and appropriate for diverse individuals, families, and communities. [L5.1/P1]
3. Integrate principles of quality improvement and safety into nursing practice within healthcare organizations and systems. [L5.2/P2]
4. Deliver nursing care that is evidence-based. [L5.3/P3]
5. Demonstrate leadership behaviors through the application of policies that apply to healthcare delivery. [L5.4/P4]
6. Engage in effective interprofessional collaboration in the delivery of healthcare for quality patient outcomes. [L5.5/P5]
7. Utilize technologies for the management of information and in the delivery of patient care. [L5.6/P6]

Course Competencies

Upon successful completion of this course, the student will:

1. Provide patient-centered care that is respectful to diverse values, beliefs, and attitudes. [L5.1/P1]
2. Implement patient-centered care regarding patient values, preferences and expressed needs. [L5.1/P1]
3. Support the increase of health care access of diverse patient populations. [L5.1/P1]
4. Promote a culture of safety through anticipating and eliminating potentially harmful situations. [L5.2/P2]
5. Collaborate in systems analysis when clinical errors or near misses occur to reduce harm, minimize blame, and encourage transparency. [L5.2/P2]
6. Design and implement evidence-based procedures to reduce harm, promote safety, and improve care. [L5.2/P2]
7. Base care and care planning on evidence and clinical expertise. [L5.3/P3]
8. Incorporate patient/family preferences and values with application of evidence for delivery of optimal health care. [L5.3/P3]
9. Utilize evidence in determining best clinical practice. [L5.3/P3]
10. Consult with clinical experts in developing evidence-based protocols/ pathways. [L5.3/P3]
11. Function competently within own scope of practice as a member or leader of the healthcare team. [L5.4/P4]
12. Communicate with team members, adapting own style of communicating to needs of the team and situation. [L5.4/P4]
13. Demonstrate basic knowledge of healthcare policy
14. Use an ethical framework to evaluate the impact of policies of healthcare, especially for vulnerable populations. [L5.4/P4]
15. Advocate for consumers and the nursing profession. [L5.4/P4]
16. Collaborate effectively with nursing and inter-professional teams. [L5.5/P5]
17. Foster open communication, mutual respect, and shared decision-making to achieve quality patient care. [L5.5/P5]
18. Assume role of team member or leader based on the situation. [L5.5/P5]
19. Demonstrate methods of documentation. [L5.6/P6]
20. Identify valid and credible sources of health information that are accessible to health care consumers. [L5.6/P6]
21. Identify appropriate technology to use in delivering patient care. [L5.6/P6] Nursing (NURS)

Nursing (NURS)

NURS 1110. Introduction to Practical Nursing Concepts

Course Description

Introduction to the concepts of nursing practice and conceptual learning. Students define personal values, beliefs, and attitudes about health and wellness. Provides opportunities for students to describe the importance of identifying patient safety issues, the roles and values of the practical nurse and members of the health care team, and specific standards/regulations that apply to practical nursing practice.

Student Learning Outcomes

1. Integrate knowledge from practical nursing pre-/co-requisites into a conceptual learning model.
2. Apply conceptual learning to selected practical nursing concepts.
3. Define personal values, beliefs, and attitudes about health and wellness.
4. Describe importance of identifying patient safety issues.
5. Describe roles and values of practical nursing and members of the health care team.
6. Describe standards and regulations that apply to practical nursing practice.

NURS 1114L. Introduction to Health Assessment Laboratory

Course Description

This course provides the framework for preparing students to perform comprehensive health assessments on patients across the lifespan. Emphasis is placed on taking a thorough nursing history, performing physiological, psychological, sociological, cultural, and spiritual assessments, as well as identification of stressors and health risks. Laboratory experiences provide an opportunity to practice assessment skills on patients across the lifespan in a variety of settings.

Student Learning Outcomes

1. Perform a comprehensive assessment that includes the psychological, sociological, cultural, spiritual and familial history aspects of the adult patient.
2. Interpret assessment data to determine patient safety and health risks, as well as personal and environmental stressors.
3. Plan and provide individualized, health-related teaching for adult patients.
4. Utilize appropriate verbal, written and electronic communication skills during patient interview, physical assessment and documentation process.
5. Use information technology to access evidence-based sources to determine the implications of identified genetic and health risks.
6. Demonstrate professional accountability and maintain confidentiality while performing physical assessments.
7. Recognize the importance of selected profession related concepts as they pertain to providing and directing safe, quality patient care.

NURS 1120. Principles of Practical Nursing Practice

Course Description

This course introduces the nursing student to the application of concepts through clinical skills in seminar, large and small group activities, laboratory, and/or clinical settings. Principles of communication, assessment, safety, and interventions, including accurate calculations, measurement, and administration of medications will be included.

Student Learning Outcomes

1. Describe the different types and characteristics of communication in professional practical nursing practice.
2. Utilize the concepts of communication and patient safety in the application in the care of the patient.
3. Demonstrate the principles of safety during the implementation of practical nursing skills bedside skills.
4. Demonstrate the learned skills in patient-based scenarios.
5. Utilize the nursing process to provide safe and effective care.

NURS 1121C. Fundamentals of Nursing Lecture and Laboratory

Course Description

This course will introduce the nursing student to foundational theoretical concepts of professional nursing practice, the nursing process, and fundamental nursing skills. It includes developmental concepts related to clients across the lifespan. Clinical experiences in various healthcare settings will provide the student with the opportunity to apply learned skills to provide total care to meet client needs and to develop care planning skills related to actual problems.

Student Learning Outcomes

1. Describe personally held values, attitudes, and beliefs related to health and wellness.
2. Describe scopes of practice, roles and values of health care team members.
3. Describe an evidence-based practice approach to provision of patient care and professional nursing practice across the lifespan.
4. Identify policies, procedures, standards of care and nursing leadership and management skills related to the provision of professional nursing care.
5. Describe strategies that reduce the risk of harm to self and others.
6. Identify essential information that must be available in a common database to support patient care across the lifespan.

NURS. 1125. Medical Surgical Nursing I

Course Description

This course introduces nursing care and management of the adult client with common medical-surgical conditions.

Student Learning Outcomes

1. Recognize personally held values and demonstrate assessment of the values held by diverse patients, as well as their preferences and expressed needs related to health and wellness.
2. Communicate with other members of the healthcare team to establish a plan to meet the needs of individuals, including commonly occurring chronic and acute health care problems throughout the lifespan.
3. Compare an individualized patient care plan utilizing an evidence-based approach for patient(s) across the lifespan to outcomes for the patient(s).
4. Demonstrate adherence to policies, procedures, and standards of care for the provision of care in healthcare delivery systems.
5. Apply strategies to reduce the risk of harm to self or others while providing professional nursing care.
6. Utilize varied communication technologies, electronic healthcare databases, and electronic health records to plan nursing care for patients with chronic illnesses across the lifespan.

NURS 1125L. Medical/Surgical Nursing I Clinical

Course Description

Clinical experiences provide the student an opportunity to apply theoretical concepts and implement safe patient care to adults in a variety of settings.

Student Learning Outcomes

1. Patient Centered Care: Recognize personally held values and demonstrate assessment of the values held by diverse patients, as well as their preferences and expressed needs related to health and wellness.
2. Teamwork and Collaboration: Communicate with other members of the healthcare team to establish a plan to meet the needs of individuals, including commonly occurring chronic and acute health care problems throughout the lifespan.

3. Evidenced Based Practice: Prepare an individualized patient care plan utilizing an evidence- based approach for patient(s) across the lifespan to outcomes for the patient(s).
4. Quality Improvement: Demonstrate adherence to policies, procedures, and standards of care for the provision of care in healthcare delivery systems.
5. Safety: Apply strategies to reduce the risk of harm to self or others while providing professional nursing care.
6. Informatics: Utilize varied communication technologies, electronic healthcare databases, and electronic health records to plan nursing care for patients with chronic illnesses across the lifespan.

NURS 1130. LPN Health and Illness Concepts I

Course Description

Covers health and illness concepts across the lifespan, as they relate to the practical nurse's caregiver and discipline-specific roles, with the focus on wellness and common variations. Concepts covered are related to homeostasis/regulation, sexuality/reproductive, protection/movement, and emotional processes.

Student Learning Outcomes

1. Describe the scope, risk factors, physiologic processes, attributes, and clinical management of selected concepts and exemplars across the lifespan.
2. Discuss evidence-based practices and health care standards of care related to the concepts/exemplars of the course.
3. Explain the collaboration necessary related to the concepts/exemplars of the course.
4. Utilize informatics and resources related to the concepts/exemplars of the course.
5. Integrate considerations of normal physiology and healthy adaptations into nursing practice of patients across the lifespan.

NURS 1131. Foundations of Pharmacology

Course Description

This course provides the nursing student with an introduction to the foundations of pharmacology including: science of drug action, principles of medication administration, accurate calculation of drug doses, medication therapy across the lifespan, application of medications to treat health alterations, normal and adverse responses by the client to medication therapy, medication safety, medication regulation, national patient safety goals, and appropriate nursing interventions to achieve the desired goals of medication therapy.

Student Learning Outcomes

1. Recognize personally held values and demonstrate assessment of the values held by diverse patients, as well as their preferences and expressed needs related to pharmacological therapy.
2. Communicate with other members of the healthcare team to establish a plan to meet the needs of individuals, including commonly related to adverse or side effects of pharmacological therapy throughout the lifespan.
3. Compare an individualized patient care plan utilizing an evidence-based approach for patient(s) across the lifespan to outcomes related to the administration of pharmacological therapy.
4. Demonstrate adherence to policies, procedures, and standards of care for the administration of pharmacological therapy in healthcare delivery systems.
5. Apply strategies to reduce the risk of harm to self or others while providing professional nursing care.
6. Utilize varied communication technologies, electronic healthcare databases, and electronic health records to plan nursing care for the administration of pharmacological therapy across the lifespan.

NURS 1133. Pharmacology in Nursing

Course Description

This course introduces the nursing student to pharmacological nursing practice across the lifespan utilizing a conceptual approach. The student identifies the nurse's professional role related to pharmacotherapeutics in diverse populations. Safety issues and minimization of risk potential associated with pharmacotherapeutics, complementary, and alternative medicines are discussed. Evidence-based pharmacological and pathophysiological concepts are integrated to guide medication therapeutics. Health care system protocols, communication methods, and informatics related to pharmacotherapeutics are included in the course content. Common drug classes and the pharmacotherapeutics, pharmacodynamics, and pharmacotherapeutics associated with each class are included in this course.

Student Learning Outcomes

1. Identify the nurse's professional role related to pharmacotherapeutics in diverse populations across the lifespan.
2. Identify safety issues and minimize risk potential associated with pharmacotherapeutics and complementary and alternative medicine.
3. Utilize evidence-based information integrating pharmacologic and pathophysiologic concepts to guide medication therapeutics.
4. Describe health-care system protocols related to pharmacotherapeutics.
5. Identify methods for communication with the health care team related to pharmacotherapeutics.
6. Utilize informatics systems related to pharmacotherapeutics.
7. Describe common classes of drugs that are used in health care, including pharmacokinetics, pharmacodynamics, and pharmacotherapeutics.

NURS 1134. Foundation of Nursing Skills and Assessment

Course Description

This course provides nursing students with introductory nursing knowledge related to performance of nursing skills and assessment including: techniques of fundamental nursing care, basic and intermediate nursing skills, and foundational physical assessment techniques associated with care across the lifespan.

Student Learning Outcomes

1. Describe personally held values, attitudes, and beliefs related to health and wellness as measured by:
 - a. Describe modifications to nursing care based on client cultural and religious influences.
 - b. Demonstrate physical assessment skills for clients across the lifespan utilizing appropriate equipment and techniques.
2. Describe scopes of practice, roles and values of health care team members as measured by:
 - a. Identify independent and collaborative nursing interventions.
3. Describe an evidence-based practice approach to provision of patient care and professional nursing practice across the lifespan as measured by:
 - a. Demonstrate safe performance of basic nursing procedures;
 - b. Identify quality sources of information to verify skills and interventions are based on evidence.
4. Identify policies, procedures, and standards of care related to the provision of professional nursing care as measured by:
 - a. Identify need/situation where reporting of incident/event/irregular occurrence/variance is appropriate.
5. Describe strategies that reduce the risk of harm to self and others as measured by:
 - a. Identify methods utilized to provide safe and effective care;
 - b. Identify and document changes in patient status.
6. Identify essential information that must be available in a common database to support patient care across the lifespan as measured by:

- a. Select standard technology utilized to provide basic care to clients across the lifespan; b. Identify approved abbreviations and standard terminology for documenting care.

NURS 1134L. Foundation of Nursing Skills and Assessment Laboratory

Course Description

This course provides nursing students with introductory nursing knowledge related to performance of nursing skills and assessment including: techniques of fundamental nursing care, basic and intermediate nursing skills, and foundational physical assessment techniques associated with care across the lifespan.

Student Learning Outcomes

1. Describe personally held values, attitudes, and beliefs related to health and wellness.
2. Describe scopes of practice, roles and values of health care team members.
3. Describe an evidence-based practice approach to provision of patient care and professional nursing practice across the lifespan.
4. Identify policies, procedures, and standards of care related to the provision of professional nursing care.
5. Describe strategies that reduce the risk of harm to self and others.
6. Identify essential information that must be available in a common database to support patient care across the lifespan.

NURS 1140. LPN Health Care Participant

Course Description

This course introduces the attributes of the health care participant as an individual, a family, or a community as they relate to the practical nurse's caregiver and discipline-specific roles.

Student Learning Outcomes

1. Identify values, beliefs, and attitudes toward health and illness of the health care recipient.
2. Articulate the role of practical nursing in relation to the health of vulnerable populations and elimination of health disparities.
3. Describe the protective and predictive factors that influence the health of families, groups, communities, and populations.
4. Describe the use of evidence-based practical nursing practices to guide health teaching, health counseling, screening, outreach, disease and outbreak investigation, referral, and follow-up throughout the lifespan.
5. Describe the use of information and communication technologies in preventive care.

NURS 1150. LPN Nursing Pharmacology

Course Description

An introduction to pharmacological nursing practice across the lifespan utilizing a conceptual approach. The student identifies the nurse's professional role related to pharmacotherapeutics in diverse populations. Safety issues and minimization of risk potential associated with pharmacotherapeutics, complementary, and alternative medicines are discussed. Evidence-based pharmacological and pathophysiological concepts are integrated to guide medication therapeutics. Common drugs classes and the pharmacotherapeutics, pharmacodynamics, and pharmacokinetics associated with each are included in this course.

Student Learning Outcomes

1. Identify values, beliefs, and attitudes toward health and illness of the health care recipient.
2. Articulate the role of practical nursing in relation to the health of vulnerable populations and elimination of health disparities.

3. Describe the protective and predictive factors that influence the health of families, groups, communities, and populations.
4. Describe the use of evidence-based practical nursing practices to guide health teaching, health counseling, screening, outreach, disease and outbreak investigation, referral, and follow-up throughout the lifespan.
5. Describe the use of information and communication technologies in preventive care.

NURS 1153. Medication and Dosage Calculation

Course Description

Techniques of dosage calculation for medication and fluid administration.

Student Learning Outcomes

1. Accurately calculate drug dosages.
2. Identify and define terms and symbols applicable to pharmacology and administration of drugs.
3. Identify the role of the nurse regarding drug therapy.
4. Identify the legal and ethical responsibilities of the nurse regarding medication administration and teaching.
5. Identify measures to safely administer medications via any of the acceptable routes of administration.
6. Discuss the basic principles of pharmacokinetics as it relates to each of the classes of pharmaceuticals.

NURS 1154C. Physical Assessment Laboratory and Clinical

Course Description

Beginning techniques of physical assessment by systems will be presented using the nursing process as a guide for providing safe client centered care throughout the life span. Laboratory and clinical experiences will provide an opportunity to practice assessment skills on patients across the lifespan in a variety of settings.

Student Learning Outcomes

1. Describe and demonstrate the purpose, guidelines, safety factors, and equipment necessary for performing a physical exam.
2. Discuss and demonstrate techniques necessary to facilitate communication to obtain a health history.
3. Identify and demonstrate correct documentation of each body system.
4. Define ethical/legal implications as they relate to documentation and the physical assessment exam.
5. Identify and discuss the nutritional implications as they relate to the physical assessment exam.
6. Recognize key terms, exam techniques, and the anatomy and physiology on the assessment of each body system.
7. Discuss developmental and cultural differences in performing a physical assessment.
8. Identify and discuss components of the nursing process focusing on assessment and beginning to recognize self-care deficits.
9. Identify opportunities to promote self-care assessment within the physical exam.
10. Identify methods by which caring behaviors facilitate the nurse-patient relationship in the performance of a physical assessment.

NURS 1154. Physical Assessment

Course Description

Beginning techniques of physical assessment by systems will be presented using the nursing process as a guide for providing safe client centered care throughout the life span. Laboratory experiences provide an opportunity to practice assessment skills on patients across the lifespan in a variety of settings.

Student Learning Outcomes

1. Discuss the purpose, guidelines, safety factors, and equipment necessary for performing a physical exam.

2. Discuss and demonstrate techniques necessary to facilitate communication to obtain a health history.
3. Identify and demonstrate correct documentation of each body system.
4. Define ethical/legal implications as they relate to documentation and the physical assessment exam.
5. Identify and discuss the nutritional implications as they relate to the physical assessment exam.
6. Recognize key terms, exam techniques, and the anatomy and physiology on the assessment of each body system.
7. Discuss developmental and cultural differences in performing a physical assessment.
8. Identify and discuss components of the nursing process focusing on assessment and beginning to recognize self-care deficits.
9. Identify opportunities to promote self-care assessment within the physical exam.
10. Identify methods by which nursing behaviors facilitate the nurse-patient relationship in the performance of a physical assessment.

NURS 1157C. Maternal/Child Health Deviations Lecture/Laboratory

Course Description

This course introduces the student to the concepts and principles of nursing care of the family from conception to adolescence. Utilizing the assessment, analyzing, planning, and implementation phases of the nursing process (the Care map), the student focuses on the supportive-educative nursing system to assist members of the family in meeting self-care requisites and how they are affected by the health deviations common to each developmental level beginning with conception and ending with adolescence. Knowledge gained in theoretical instruction is then applied to the patient care situation. After an introduction to the necessary clinical skills in the campus laboratory setting, students will participate in clinical experiences with the focus on the family from conception to adolescence. The assessment, analysis, planning, and implementation phases of the nursing process are emphasized as a tool to assist patients in meeting universal and developmental self-care requisites. Utilizing the nursing process, the student provides safe, client-centered care to diverse clients and families. Theoretical instruction is applied to client care situations. Students collaborate with clients, families, and the interdisciplinary team in meeting health care needs. Experiences may occur in the physician's office, local health department, day care centers, schools, or the hospital.

Student Learning Outcomes

1. Determine how values of clients, families and medical personnel impact the involvement of clients in their health care related to maternal/child and pediatric clients.
2. Implement individualized client care utilizing an evidenced based approach related to maternal/child and pediatric clients.
3. Choose health protection, health promotion, and disease prevention strategies in the care of maternal/child and pediatric clients.
4. Apply the scope, risk factors, physiologic processes, and clinical management strategies to maternal/child and pediatric clients.
5. Choose resources for continuity of client care related to maternal/child and pediatric clients.
6. Give examples of significant information to report to other disciplines.
7. Apply the principles of delegation in the provision of client care with maternal/child and pediatric clients.
8. Utilize evidenced based information to implement a plan of care and employ nursing interventions for maternal/child and pediatric clients.
9. Use the principles of ethical practice in the delivery of nursing care for maternal/child and pediatric clients.
10. Apply policies, procedures and standards of care related to maternal/child and pediatric in the provision of client care.

NURS 1157. Maternal/Child Health Deviations

Course Description

This course provides the intermediate nursing student with an in-depth review of care of the childbearing woman, family structures and roles, and nursing care of the child from birth through adolescence. Emphasis includes the care of pre-partum, intra-partum and postpartum clients, the neonate and health deviations in pediatric clients. Clinical experiences in the simulation laboratory, the community, and acute care settings will provide the student with the opportunity to apply learned skills to provide total care to meet needs of up to two adult, neonatal, or pediatric clients and to apply care planning skills related to actual, psychosocial and potential problems. Students must be concurrently enrolled in both the lecture and laboratory sections of the course. Students must be admitted into the Nursing Program to enroll in this course.

Student Learning Outcomes

1. Utilize diverse patients' values, preferences, and expressed needs to drive development of the plan of care for the child bearing woman (19-65 years) and pediatric client (newborn-18).
2. Evaluate ability to function within own scope of practice as a member of the healthcare team to deliver care to individuals and families across the lifespan with complex health alterations as it relates to the child bearing woman (19-65 years) and pediatrics.
3. Demonstrate the use of evidence-based approaches for the delivery and evaluation of care to patients across the lifespan as it relates to the child bearing woman (19-65 years) and pediatric client (newborn-18).
4. Formulate a plan of care for the provision of care in healthcare delivery systems using policies, procedures and standards of care as it relates to the child bearing woman (19-65 years) and pediatric client (newborn-18).
5. Interpret effective use of strategies to reduce risk of harm to self or others while providing professional nursing care including evidence-based practice, national patient safety goals, and core measures as it relates to the child bearing woman (19-65 years) and pediatric client (newborn-18).
6. Utilize information management tools to monitor outcomes of care processes and deliver nursing care to patients with chronic or acute illness across the lifespan as it relates to the child bearing woman (19-65 years) and pediatric client (newborn-18).

NURS 1160. LPN Assessment and Health Promotion

Course Description

This course introduces the nursing student to the assessment of and the health promotion for the health care participant as an individual, a family, or a community as it relates to the practical nurse's caregiver and discipline-specific roles. This course uses seminars, laboratory, and/or clinical settings.

Student Learning Outcomes

1. Assess physical health including a focus on the health/illness beliefs, values, attitudes, developmental level, functional ability, culture, and spirituality of the participant.
2. Assess family health including a focus on family health history, environmental exposures, and family genetic history to identify current and future health problems.
3. Collaborate with a community to assess their health needs.
4. Utilize community assessment data and evidence-based practice as a basis for identifying community health needs.
5. Document health assessments.
6. Demonstrate collaboration with other health care professionals to identify needed interventions.
7. Explain the role of the practical nurse in relation to advocacy for the health care recipient.

NURS 1170. LPN Health and Illness Concepts II

Course Description

This course will cover health and illness concepts across the lifespan, as they relate to the practical nurse's caregiver and discipline-specific roles. Concepts covered are related to oxygenation and hemostasis and regulation, protection and movement, and cognitive and behavioral processes.

Student Learning Outcomes

1. Relate the scope, risk factors, physiologic processes, attributes, and clinical management of selected concepts and exemplars across the lifespan.
2. Investigate evidence-based practice, standards of nursing care, and factors to improve safety related to selected concepts and exemplars.
3. Examine how members of the health care team collaborate in the delivery of care related to selected concepts and exemplars.
4. Discuss available technology for the delivery of nursing care related to selected concepts and exemplars.
5. Apply selected health and illness concepts to the nursing care of patients across the lifespan.

NURS 1190. Re-Entry First Year Nursing

Course Description

This is a refresher course for re-entry students on nursing concepts found in first year nursing courses using the NMNEC competencies which provide the organizing framework for the nursing program. Clinical simulation opportunities are designed to facilitate application of fundamental concepts through care of diverse populations in a variety of settings across the health care continuum.

Student Learning Outcomes

1. Recognize and assess diverse patients' values related to health.
2. Apply safety measures to well patient populations.
3. Implement evidence-based practices in care of well populations across the lifespan.
4. Adhere to policies and procedures in healthcare delivery settings.
5. Communicate with other healthcare providers to meet the needs of well patients.
6. Utilize informatics for well patient care.

NURS 1193. Nursing 1st Year Tutorial

Course Description

This course is designed to assist the 1st year nursing student to achieve success by developing critical thinking and problem-solving skills. This course will augment content with a focus on simple health deviations, including concepts relative to health promotion and maintenance. The nursing process is utilized to provide evidenced based, safe client centered care. Students are expected to apply clinical judgment, communicate and collaborate with clients and the interdisciplinary team for clients.

Student Learning Outcomes

1. Demonstrate the ability to organize their time to improve study habits.
2. Identify effective study strategies.
3. Incorporate interventions into the plan of care while remaining aware of the cultural, spiritual and ethical needs of the client.
4. Demonstrates skill in using client care technologies that support safe client care.
5. Demonstrate effective writing skills by using information systems.
6. Demonstrate clinical judgement and problem-solving skills by utilizing the nursing process as a guide in providing nursing care and rational to clients with simple health deviations.

NURS 1194. Nursing 2nd Year Skills Tutorial

Course Description

This course is designed to assist the 2nd year nursing students to achieve success by developing critical thinking and problem-solving skills. The course focuses on how to learn required content in the most efficient manner and preparation for the licensure exam.

Student Learning Outcomes

1. Incorporate the concepts and principles derived from the biological, developmental, social, nutritional, and computer sciences and nursing knowledge that relate to the nursing care of clients with complex health deviations.
2. Demonstrate critical thinking and problem-solving techniques in caring for clients with complex health deviations.
3. Utilize NCSBN Clinical Judgement Model to identify problems, prioritize them, and to aid in applying solutions to the highest priority.

NURS 1195. Essential Skills for the Sophomore Nursing Student**Course Description**

This course is designed to assist the incoming sophomore nursing student achieve success in the clinical and didactic portion of the nursing curriculum.

Student Learning Outcomes

1. Utilize nursing knowledge as a guide for incorporating concepts and principles derived from the behavioral, social, developmental, and computer sciences to provide rationale for nursing care.
2. Utilize the beginning skills of interpersonal relations in establishing a therapeutic relationship with patients.
3. Perform safely the technical skills identified.
4. Demonstrate critical thinking and problem-solving skills by utilizing the nursing process as a guide in providing nursing care to patients with simple health deviations.

NURS 1989 Nursing Externship**Course Description**

Building on clinical skills and concepts from Level 1, Level 2, and/or Level 3, this optional clinical course uses the New Mexico Nursing Education Consortium competencies. This intensive clinical course provides students with an opportunity to provide supervised total nursing care for select patients. Under the guidance of faculty, San Juan Regional Medical Center nurses, and the clinical scholar, students will spend 144 hours reinforcing and refining clinical competency and clinical reasoning skills learning in prior nursing courses.

Student Learning Outcomes

1. Recognize and assess diverse patients' values related to health.
2. Apply safety measures to acute care patient populations.
3. Implement evidence-based practices in care of acute care populations across the lifespan.
4. Adhere to policies and procedures in healthcare delivery settings.
5. Communicate with other healthcare providers to meet the needs of acute care patients.
6. Utilize informatics for the acute care patient.

NURS 2181. Maternal/Newborn Nursing**Course Description**

This course provides an integrative, family-centered approach to the care of mothers and newborns. Emphasis is placed on normal and high-risk pregnancies, normal growth and development, family dynamics and the promotion of healthy behaviors in patients.

Student Learning Outcomes

1. Explain the normal and abnormal physiologic and psychological changes that occur during pregnancy and how these changes guide antepartum nursing care
2. Describe the stages of labor and birth, the identification and nursing management of intrapartum complications, and the nursing management of both spontaneous births and cesarean deliveries within a family-centered framework.
3. Discuss the physiologic and psychological changes of the postpartum period and the nursing interventions used to manage normal recovery, provide family-centered education, and identify/intervene in abnormal complications
4. Describe the physiologic transition of the newborn to extrauterine life and the nursing care required for both the healthy newborn and the at-risk infant.
5. Examine principles of women's health promotion, preventive care, and common gynecologic concerns across the lifespan.

NURS 2181L. Maternal/Newborn Nursing Clinical

College Description

Clinical experiences provide the student with an opportunity to apply theoretical concepts and implement safe patient care to mothers and newborns in selected settings.

Student Learning Outcomes

1. Participate in the safe nursing management of a laboring patient.
2. Perform accurate post-partum physical assessments of mothers and newborns, distinguishing between normal findings and potential complications.
3. Provide safe nursing care that meets the physical and emotional needs of the mother, newborn, and family.
4. Participate in an outpatient prenatal clinic visit OR analyze prenatal health records to monitor fetal growth, maternal wellness, and pregnancy risks.
5. Provide health education to mothers regarding their own care and the care of their newborn
6. Integrate wellness screenings, family planning (contraception), and reproductive health education into discharge planning for new mothers.

NURS 2182. Pediatric Nursing

Course Description

This course provides an integrative, family-centered approach to the care of children. Emphasis is placed on normal growth and development, family dynamics, common pediatric disorders and the promotion of healthy behaviors in patients.

Student Learning Outcomes

1. Describe the legal and ethical principles that guide pediatric nursing care.
2. Describe expected physical and psychosocial developmental milestones, types of play, and age-appropriate assessment findings.
3. Identify nursing priorities and appropriate plans of care for common acute and chronic pediatric health conditions.
4. Explain the principles of atraumatic care, family-centered care, and cultural sensitivity when supporting children and families during illness and hospitalization.
5. Describe age-appropriate communication and education strategies for pediatric patients and their families.
6. Outline nursing strategies for health promotion, immunization education, and prevention of communicable and age-specific environmental health risks.

NURS 2182L. Pediatric Nursing Clinical

Course Description

Clinical experiences provide the student with an opportunity to apply theoretical concepts and implement safe patient care to children in selected settings.

Student Learning Outcomes

1. Participate in safe, developmentally appropriate nursing care for infants, children, and adolescents.
2. Perform age-appropriate physical, developmental, and behavioral assessments of pediatric patients
3. Apply the nursing process (clinical judgment) to plan and implement care for children experiencing common acute and chronic health conditions.
4. Demonstrate family-centered nursing care when supporting children and their caregivers during illness and hospitalization.
5. Communicate effectively with pediatric patients and families using developmentally appropriate language and teaching strategies.
6. Participate in health promotion strategies through education related to immunizations, growth and development, and injury prevention.

NURS 2190. Re-Entry Second Year Nursing

Course Description

This is a refresher course for re-entry students on nursing concepts found in second year nursing courses using the NMNEC competencies which provide the organizing framework for the nursing program. Clinical simulation opportunities are designed to facilitate application of fundamental concepts through care of diverse populations in a variety of settings across the health care continuum.

Student Learning Outcomes

1. Incorporate diverse patient values, beliefs, and attitudes into plan of care for patients with chronic illness.
2. Identify and interpret factors for improvement in patient safety and nursing practice.
3. Utilize an evidence-based practice approach to the delivery and evaluation of nursing care to chronically ill patients across the lifespan.
4. Utilize policies and procedures within the health care setting.
5. Participate as a member of the healthcare team in the delivery of care.
6. Utilize appropriate technology for the delivery of nursing care to chronically ill patients.

NURS 2205. Professional Issues in Practical Nursing

Course Description

An overview of professional issues related to the role of the practical nurse (PN) or licensed practical nurse (LPN). Students learn about the LPN role according to the New Mexico Nurse Practice Act. Scope of practice and legal accountability are reviewed. Other topics include ethical and legal responsibilities of the LPN role, delegation of duties, and the role of the LPN as part of a health care team. On successful completion of this course, students are eligible to take the National Council Licensure Examination-Practical Nurse (NCLEX-PN).

Student Learning Outcomes

1. Describe elements of the New Mexico Nurse Practice Act that pertain to PN/LPN practice.
2. Identify the legal responsibilities of the PN/LPN role.
3. Explain the application of ethics to PN/LPN practice.
4. Describe the PN/LPN scope of practice.
5. Compare the duties that can be delegated to and delegated by PN/LPNs and Registered Nurses.
6. Identify the role of the PN/LPN as part of the health care team.

NURS 2210. Pharmacological Requisites of the Childbearing Family

Course Description

Basic concepts of pharmacology including pharmacokinetics, pharmacodynamics, and pharmacotherapeutics, and their relationship to nursing care will be discussed focusing on medications commonly utilized with the childbearing family. Medication classes to be discussed include labor and delivery, analgesic, vitamins, respiratory, gynecological, endocrine, and anti-microbial/anti-infective drugs.

Student Learning Outcomes

1. Incorporate the values, preferences and expressed needs of maternal/child and pediatric clients in the administration of pharmacotherapeutics to these clients.
2. Apply principles of teaching/learning in education maternal/child and pediatric clients on the use, adverse effects and interactions of pharmacotherapeutic agents.
3. Explain how members of the health care team collaborate in the delivery of pharmacotherapeutics to maternal/child and pediatric clients.
4. Discuss pharmacokinetics and pharmacodynamics of drugs specific to the maternal/child and pediatric client.
5. Apply evidenced based information to the administration of pharmacotherapeutics to maternal/child and pediatric clients.
6. Give examples of policies, procedures and standards of care related to pharmacotherapeutics utilized in the care of maternal/child and pediatric clients.

NURS 2212. Professional Issues in PN Practice

Course Description

This course offers an overview of professional issues related to the role of the practical nurse (PN) or licensed practical nurse (LPN). Students learn about the LPN role according to the New Mexico Nurse Practice Act. Scope of practice and legal accountability are reviewed. Other topics include ethical and legal responsibilities of the LPN role, delegation of duties, and the role of the LPN as part of a health care team. On successful completion of this course and Level 3 of the Nursing Program, students can submit a request to the NMBON to take the NCLEX-PN.

Student Learning Outcomes

1. Describe elements of the New Mexico Nurse Practice Act that pertain to PN/LPN practice
2. Identify the legal responsibilities of the PN/LPN role.
3. Explain the application of ethics to PN/LPN practice.
4. Describe the PN/LPN scope of practice.
5. Compare the duties that can be delegated to and delegated by PN/LPNs and Registered Nurses.
6. Identify the role of the PN/LPN as part of the health care team.

NURS 2214C. Psychiatric Mental Health Nursing Theory and Clinical

Course Description

Nursing theory and practice as it relates to the care of the client experiencing psychosocial health deviations. The role of the nurse is discussed along with the ethical and legal aspects of care for the client with psychosocial disorders. Building upon the communication skills of listening and responding, the student develops the therapeutic skills of interpersonal relationships.

Student Learning Outcomes

1. Describe the effects of psychosocial deviations on the client's ability to maintain self-care.
2. Describe therapeutic communication and explain how to employ therapeutic interpersonal skills in the nurse-client relationship.

3. Analyze the influence of cultural elements on his/her attitudes and behaviors toward mental health and mental illness.
4. Utilize the nursing process to assist client's experiencing psychosocial health deviations.
5. Identify nursing interventions to meet the safety needs of the client with a psychosocial health deviation.
6. Analyze the legal and ethical issues regarding the client with a psychosocial health deviation.

NURS 2214. Psychiatric Mental Health Nursing Theory

Course Description

This course will allow the nursing student to develop skills necessary to provide nursing care for clients with mental health problems in various health care settings including: common mental health disorders, psychosocial dysfunction, psychosocial safety/substance abuse issues, violence, suicide, restraints, developmental age related pathophysiology, psychopharmacology, cultural/religious considerations, grief/loss, promotion of mental health, and therapeutic communication

Student Learning Outcomes

1. Recognize personally held values and demonstrate assessment of the values held by diverse patients, as well as their preferences and expressed needs related to health and wellness.
2. Communicate with other members of the healthcare team to establish a plan to meet the needs of individuals, including commonly occurring chronic and acute health care problems throughout the lifespan.
3. Compare an individualized patient care plan utilizing an evidence-based approach for patient(s) across the lifespan to outcomes for the patient(s).
4. Demonstrate adherence to policies, procedures, and standards of care for the provision of care in healthcare delivery systems.
5. Apply strategies to reduce the risk of harm to self or others while providing professional nursing care.
6. Utilize varied communication technologies, electronic healthcare databases, and electronic health records to plan nursing care for patients with chronic illnesses across the lifespan.

NURS 2214L. Psychiatric Mental Health Nursing Clinical

Course Description

This course will allow the nursing student to develop skills necessary to provide nursing care for clients with mental health problems in various health care settings including: common mental health disorders, psychosocial dysfunction, psychosocial safety/substance abuse issues, violence, suicide, restraints, developmental age related pathophysiology, psychopharmacology, cultural/religious considerations, grief/loss, promotion of mental health, and therapeutic communication. Selected clinical learning experiences in the simulation Laboratory, acute care, and community settings will allow the student to develop ability to develop: proficiency in performance of nursing skills, collaborative skills with clients, families, peers and health care team members, care planning skills related to patient actual, psychosocial, and potential problems in the delivery of total nursing care to meet needs of one client across the life span with acute/chronic mental health needs.

Student Learning Outcomes

1. Recognize personally held values and demonstrate assessment of the values held by diverse patients, as well as their preferences and expressed needs related to health and wellness.
2. Communicate with other members of the healthcare team to establish a plan to meet the needs of individuals, including commonly occurring chronic and acute health care problems throughout the lifespan.
3. Compare an individualized patient care plan utilizing an evidence-based approach for patient(s) across the lifespan to outcomes for the patient(s).

4. Demonstrate adherence to policies, procedures, and standards of care for the provision of care in healthcare delivery systems.
5. Apply strategies to reduce the risk of harm to self or others while providing professional nursing care.
6. Utilize varied communication technologies, electronic healthcare databases, and electronic health records to plan nursing care for patients with chronic illnesses across the lifespan.

NURS 2215. Pharmacological Requisites of Simple Health Deviations

Course Description

Basic concepts of pharmacology including pharmacokinetics, pharmacodynamics, and pharmacotherapeutics, and their relationship to nursing care are addressed focusing on medications related to the psychiatric, gastrointestinal, musculoskeletal, gynecological, hematological, and anti-neoplastic client.

Student Learning Outcomes

1. Identify and discuss each of the major classifications of drugs and drugs within the class, including the pharmacokinetics and pharmacodynamics involved for the following body systems: Central Nervous System; Immune/Hematological; Gastrointestinal; Musculoskeletal.
2. Discuss the relationship between the use of pharmaceuticals and the treatment of disease in clients with health deviations.
3. Discuss the importance of client education as it relates to each classification of drug presented, especially in preventing drug-drug and food drug interactions.
4. Describe the role of the nurse in safe medication administration to clients with simple health deviations.

NURS 2216. Pharmacological Requisites of Complex Health Deviations

Course Description

Basic concepts of pharmacology including pharmacokinetics, pharmacodynamics, and pharmacotherapeutics, and their relationship to nursing care is examined focusing on medications related to complex health deviations. Drug classes to be discussed include cardiovascular, renal, endocrine, and neurological.

Student Learning Outcomes

1. Apply principles of teaching/learning in educating clients on the use, adverse effects and interactions of pharmacotherapeutic agents used to treat complex health deviations.
2. Collaborate with members of the health care team in the delivery of pharmacotherapeutics to clients with complex health deviations.
3. Give examples of commonly prescribed drugs used to treat clients with complex health deviations and related pharmacokinetics and pharmacodynamics.
4. Discuss the relationship between the use of pharmacotherapeutics and the treatment of disease in clients with complex health deviations.
5. Identify safety issues and minimize risk potential associated with pharmacotherapeutics.

NURS 2225. Medical Surgical Nursing II

Course Description

This course focuses on the care of adult clients with complex medical/surgical health problems. Emphasis is placed on helping clients and their families cope with alterations in body functions. Concepts of pharmacology, health promotion and education, evidence-based practice, and interdisciplinary collaboration will be integrated throughout the course.

Student Learning Outcomes

1. Utilize diverse patients' values, preferences, and expressed needs to drive development of the plan of care for the adult client with acute illness.
2. Evaluate ability to function within own scope of practice as a member of the healthcare team to adult clients with acute illness.
3. Demonstrate the use of evidence-based approaches for the delivery and evaluation of care to patients across the lifespan as it relates to adult clients with acute illness.
4. Formulate a plan of care for the provision of care in healthcare delivery systems using policies, procedures and standards of care as it relates to adult clients with acute illness.
5. Interpret effective use of strategies to reduce risk of harm to self or others while providing professional nursing care including evidence-based practice, national patient safety goals, and core measures as it relates to adult clients with acute illness.
6. Utilize information management tools to monitor outcomes of care processes and deliver nursing care to adult clients with acute illness.

NURS 2225L. Medical Surgical Nursing Clinical II

Course Description

Clinical experiences provide the student an opportunity to apply theoretical concepts and implement safe care to clients and selected groups in a variety of settings.

Student Learning Outcomes

1. Utilize diverse patients' values, preferences, and expressed needs to drive development of the plan of care for the adult client with acute illness.
2. Evaluate ability to function within own scope of practice as a member of the healthcare team to adult clients with acute illness.
3. Demonstrate the use of evidence-based approaches for the delivery and evaluation of care to patients across the lifespan as it relates to adult clients with acute illness.
4. Formulate a plan of care for the provision of care in healthcare delivery systems using policies, procedures and standards of care as it relates to adult clients with acute illness.
5. Interpret effective use of strategies to reduce risk of harm to self or others while providing professional nursing care including evidence-based practice, national patient safety goals, and core measures as it relates to adult clients with acute illness.
6. Utilize information management tools to monitor outcomes of care processes and deliver nursing care to adult clients with acute illness.

NURS 2235. Medical Surgical Nursing III

Course Description

This course focuses on advanced concepts of nursing care as they relate to patients across the lifespan with complex, multisystem alterations in health. Emphasis is placed on implementing time management and organizational skills while managing the care of patients with multiple needs and collaborating with the interdisciplinary team. Complex clinical skills, as well as priority setting, clinical judgment, and tenets of legal and ethical practice, are integrated throughout the course.

Student Learning Outcomes

1. Integrate the values, preferences, attitudes, and expressed needs of the acutely ill patient into the plan of care related to the care of the adult client with complex health deviations.

2. Integrate the contributions of other members of the healthcare team into the delivery of nursing care for individuals across the lifespan with complex or multi-system health alterations related to the care of the adult client with complex health deviations.
3. Discriminate between valid and invalid reasons for modifying evidence-based clinical practice based on clinical expertise or patient/family preferences in the creation of a plan of care for delivery and evaluation of care for patients across the lifespan related to the care of the adult client with complex health deviations.
4. Evaluate the use of policies, procedures and standards of care in healthcare delivery systems and adapt the care as appropriate related to the care of the adult client with complex health deviations.
5. Interpret and analyze effective use of strategies to reduce risk of harm to self or others while providing professional nursing care, creating a structure for implementation of evidence- based practice, national patient safety goals, and core measures in the care of the adult client with complex health deviations.
6. Integrate use of appropriate technology and information management tools to support safe delivery of care to the adult client with complex health deviations.

NURS 2235L. Medical Surgical Nursing III Clinical

Course Description

Clinical experiences provide the student an opportunity to apply theoretical concepts and implement safe care to clients and selected groups in a variety of settings. Experiences that facilitate entry into practice are included in this practicum.

Student Learning Outcomes

1. Integrate the values, preferences, attitudes, and expressed needs of the acutely ill patient into the plan of care related to the care of the adult client with acute, chronic, or complex health deviations.
2. Integrate the contributions of other members of the healthcare team into the delivery of nursing care for individuals across the lifespan with complex or multi-system health alterations related to the care of the adult client with acute, chronic, or complex health deviations.
3. Discriminate between valid and invalid reasons for modifying evidence-based clinical practice based on clinical expertise or patient/family preferences in the creation of a plan of care for delivery and evaluation of care for patients across the lifespan related to the care of the adult client with acute, chronic, or complex health deviations.
4. Evaluate the use of policies, procedures, and standards of care in healthcare delivery systems and adapt the care as appropriate related to the care of the adult client with acute, chronic, or complex health deviations.
5. Interpret and analyze effective use of strategies to reduce risk of harm to self or others while providing professional nursing care, creating a structure for implementation of evidence- based practice, national patient safety goals, and core measures in the care of the adult client with acute, chronic, or complex health deviations.
6. Integrate use of appropriate technology and information management tools to support safe delivery of care to the adult client with acute, chronic, or complex health deviations.

NURS 2246C. Health Deviations I

Course Description

Introduction to medical/surgical clients, whose health care needs are routine and predictable. Focus is on simple health deviations, including concepts relative to health promotion and maintenance. The nursing process is utilized to provide evidenced based, safe client centered care. Students are expected to apply clinical judgment, communicate and collaborate with clients and the interdisciplinary team in providing care for a group of two to three clients.

Student Learning Outcomes

1. Incorporate interventions into the plan of care while remaining aware of the cultural, spiritual and ethical needs of the client (1)

2. Utilize the beginning skills of interpersonal relations in establishing a therapeutic relationship with diverse clients and families. (2)
3. Demonstrates skill in using client care technologies that support safe client care. (2)
4. Demonstrate effective writing skills by using information systems and writing the entire nursing process at a level of 76% or better.
5. Demonstrate clinical judgement and problem solving skills by utilizing the nursing process as a guide in providing nursing care and rationale to clients with simple health deviations.
6. Assist members of the interdisciplinary team in the planning of safe client care and evidence based practice outcomes for clients with simple health deviations.
7. Operate within the ethical and legal responsibilities of nursing and society as they relate to the client with simple health deviations.
8. Utilize knowledge from current research studies and evidence based practice applicable to the care of clients when assessing, analyzing, planning, implementing, and evaluating nursing care.
9. Demonstrate behavior that reflects the values and ethics of the nursing profession.: Integrate the client's value system, culture, or religious beliefs while maintaining a non-judgmental attitude; Select to be respectful and courteous; Share compassion and empathy; Integrate therapeutic interpersonal skills; Integrate genuine concern for the client and his/her welfare; Select discharge planning as one method of preparing the client for self-care; Integrate the concepts of confidentiality and privacy at all times; Share a commitment and ownership to nursing; Promote safety and quality improvement as an advocate of nursing care.
10. Demonstrate knowledge of delegation, management, and leadership skills. (4)

NURS 2256C. Health Deviations II

Course Description

Concepts and principles applied to clients with complex health deviations. Building upon knowledge gained in Health Deviations I, focus will be on acutely ill clients. The nursing process continues to serve as a guide to provide safe, client centered care. The student collaborates with the interdisciplinary team in all aspects of client care. Student experiences the role of the staff nurse under the guidance and direction of the nursing instructor.

Student Learning Outcomes

1. Apply each step of the nursing process as a method of organizing the nursing care for patients with complex health deviations.
2. Discuss the patient's health care needs that occur as a result of complex health deviations.
3. Explain methods the nurse can employ in allowing the patient to assume the right and responsibility for his own care.
4. Incorporate the concepts and principles derived from biological, developmental, social, nutritional and computer sciences and nursing knowledge that relate to the nursing care of patients with complex health deviations.
5. Explain the roles and functions of the members of the health care team including ancillary personnel as they relate to the care of patients with complex health deviations.
6. Explain the rationale for the performance of the following technical skills : EKG monitoring; Rhythm strip interpretation; Hemodynamic monitoring and interpretation; Tracheal suctioning.

Varies

NURS 2999. LPN Capstone

Course Description

The focus of this course is applying practical nursing skills in clinical settings that include schools, clinics, hospitals, and long-term care facilities. This course gives the practical nursing student an opportunity to work with individuals and families across the lifespan with chronic, acute, and complex medical conditions.

Student Learning Outcomes

1. Engage in practical nursing practice appropriate to a new graduate.
2. Integrate diverse patient values into plan of care for assigned patients.
3. Recognize and practice system contributions that impact the quality and safety of practical nursing practice.
4. Engage in an evidence-based approach in the delivery and evaluation of practical nursing care to assigned patients across the lifespan.
5. Practice in accordance with policies and procedures in the assigned health care setting.
6. Collaborate with the health care team in the delivery of patient care.
7. Demonstrate the appropriate use of informatics in the management of information and in the delivery of patient care as a practical nurse.

Nursing Assistant (NUAS)

NUAS 1110C. Nursing Assistant Theory and Laboratory

Course Description

Equips students with the fundamental knowledge and skills necessary for providing safe and effective care to patients in various healthcare settings. Through a combination of theoretical instruction and practical experience, students will gain a comprehensive understanding of the Nursing Assistant role. Students experience a practical application of the Nursing Assistant role.

Student Learning Outcomes

1. Identify factors that promote safe, effective, age appropriate, ethical and culturally competent care.
2. Provide safe, effective, age appropriate, and culturally competent care in an ethical manner.
3. Perform basic nursing assistant skills related to various healthcare settings and various populations, respecting patients mental health and social needs.
4. Communicate effectively with patients, families, and members of the healthcare team.

NUAS 1110L. Nursing Assistant Laboratory

Course Description

Equips students with the fundamental skills necessary for providing safe and effective care to patients in various healthcare settings. Through laboratory experiences, students will practice Nursing Assistant skills.

Student Learning Outcomes

1. Practice safe, effective, age appropriate, and culturally competent care in an ethical manner.
2. Perform basic nursing assistant skills in the laboratory.

NUAS 1110. Nursing Assistant Theory

Course Description

Equips students with the fundamental knowledge necessary for providing safe and effective care to patients in various healthcare settings. Through theoretical instruction, students will gain a comprehensive understanding of the Nursing Assistant role.

Student Learning Outcomes

1. Identify factors that promote safe, effective, age appropriate, ethical and culturally competent care.

NUAS 1115. Nursing Assistant Clinical

Course Description

Synthesizes fundamental skills necessary for providing safe and effective care to patients in various healthcare settings. Students experience a practical application of the Nursing Assistant role.

Student Learning Outcomes

1. Provide safe, effective, age appropriate, and culturally competent care in an ethical manner.
2. Perform basic nursing assistant skills related to various healthcare settings and various populations, respecting patients mental health and social needs.
3. Communicate effectively with patients, families, and members of the healthcare team.

NUAS 1120. Nursing Assistant Supplemental Skills

Course Description

This course provides additional theory and laboratory instruction and practice of basic patient care skills required for Nursing Assistants. Skills practiced include patient assistance with activities of daily living, personal care, transfer and positioning, vital sign measurement, intake and output measurement, restorative care, and communication. Reinforces topics in preparation for state certification exams.

Student Learning Outcomes

1. Describe the Nursing Assistant's role and responsibilities.
2. Identify patient's rights when performing patient care skills.
3. Demonstrate appropriate written and verbal communication skills.
4. Perform safe and competent nursing care skills.
5. Exhibit professional behaviors while practicing skills.

Nursing Refresher (NRRF)

NRRF 2110C Nurse Refresher

Course Description

Designed to provide nurses with an active or expired New Mexico nursing license (RN or LPN) with an opportunity to learn current best practices in assessment, pharmacology, dosage calculation and medical surgical nursing.

Student Learning Outcomes

1. Review and update knowledge and skills essential in the practice of nursing, particularly clinical judgement.
2. Identify new trends and developments in the nursing care of diverse clients.
3. Develop independent learning and self-evaluation skills as a means of maintaining professional competency.
4. Increase confidence in knowledge and skills for providing nursing care.

5. Describe appropriate nursing care within the scope of practical/registered nursing, as applicable.

NRRF 2190. Nurse Refresher Clinical Application

Course Description

Course is designed to provide nurses with an opportunity to update their practice in a medical surgical or skilled nursing facility.

Student Learning Outcomes

1. Review and update knowledge essential in the practice of nursing, particularly clinical judgement.
2. Apply new trends and developments in the nursing care of diverse clients.
3. Practice independent self-study and self-evaluation skills as a means of maintaining professional competency.
4. Increase confidence in knowledge and skills for providing nursing care.
5. Provide appropriate nursing care within the scope of practical/registered nursing, as applicable.

Nuclear Engineering (NUCE)

NUCE 1110. Introduction to Nuclear Engineering

Course Description

An introduction to the profession of nuclear engineering; current research in this field; career choices; guidance and advice on curricular matters and effective study techniques for nuclear engineering students.

Student Learning Outcomes:

1. Have an understanding of the breadth of the nuclear engineering field and its impact on society.
2. Know about potential career paths for graduates in nuclear engineering.
3. Be aware of the ethical and professional obligations of nuclear engineers.
4. Be aware of support available to nuclear engineering students through the department, the School of Engineering, and UNM to help them succeed in their studies.
5. Have acquired entry level skills related to the curriculum such as knowledge of safety procedures, use of laboratory equipment, and basic tools used by nuclear engineers.

NUCE 1112. Nuclear Engineering Professional Skills

Course Description

This course will develop the professional skills and traits necessary for a successful nuclear engineering career.

Student Learning Outcomes

1. Develop confidence giving public presentations and build familiarity with presenting techniques.
2. Develop effective technical writing techniques.
3. Develop effective networking and communication techniques.
4. Learn to work and lead effectively in a team environment.
5. Gain familiarity with basic financial literacy and other life skills.

NUCE 2213. Laboratory Electronics for Nuclear, Chemical and Biological Engineers

Course Description

Basic DC and AC circuits including capacitors and inductors and their applications in radiation measurement equipment and chemical process parameter measurements. Oscilloscopes, Op Amps, and Sensors and their use in the CBE and NE laboratories. General basis in coding and coding techniques.

Student Learning Outcomes

1. Gain proficiency in using multimeters.

2. Learn and understand fundamental electrical CONCEPTS of AC and DC circuits, including but not limited to current, voltage, resistance, AC waveforms analysis, and inductive and capacitive reactance and impedance.
3. Create, use and debug simple and complex electrical circuits during laboratory exercises.
4. Identify and analyze series, parallel, and series-parallel resistive DC circuits.
5. Identify and analyze balanced and unbalanced Wheatstone bridges.
6. Identify and analyze the practical application and efficacy of diodes.
7. Identify and analyze series, parallel, and series-parallel capacitive and inductive DC and RLC AC circuits.
8. Gain useful and practical knowledge so students can recognize, analyze, and mitigate electrical hazards safely and competently.
9. Gain a working knowledge of and determine appropriate applications for various flow, temperature, and pressure sensors.
10. Identify and analyze RC integrating and differentiating circuits, RL integrating and differentiating circuits, for both single and repetitive input pulses.
11. Identify and calculate the gain of inverting and non-inverting op-amp circuits.
12. Gain understanding of the application and output data from oscilloscopes. (NE)
13. Develop programs using LabView software to aid data acquisition, analysis, simulations and visualization.

NUCE 2220. Principles of Radiation Protection

Course Description

Nuclear reactions, decay, interactions of physical radiation with matter, methods of radiation detection and biological effects of radiation, external and internal dosimetry. Open-ended exercises and design project.

Student Learning Outcomes

1. Students should be able to describe the different modes of radioactive decay and calculate Q-values for each process.
2. Students should be able to describe how heavy charge particles interact with matter and determine the range of such particles in different media.
3. Students should be able to describe how electrons and positrons interact with matter and determine the range of such particles in different media.
4. Students should be able to describe how electromagnetic radiation interacts with matter, identify the dominant mechanism and calculate the energy absorption from the interactions.
5. Students should be able to describe how different detectors detect radiation and provide the advantages and disadvantages of each type of detector for the various types of radiation.
6. Students should be able to describe how radiation interacts with the body and what effects might be seen for the various types and levels of radiation.
7. Students should be able to discuss the current DOE and NRC standards for radiation dose.

NUCE 2230. Principles of Nuclear Engineering

Course Description

Introduction to nuclear engineering and nuclear processes; neutron interactions with matter, cross sections, fission, neutron diffusion, criticality, kinetics, chain reactions, reactor principles, fusion and the nuclear fuel cycle. Includes open-ended exercises.

Student Learning Outcomes

1. Understand and apply physics to nuclear engineering problems.
2. Calculate atomic number densities and compounds and mixtures.
3. Define fission, fissionable, fertile.
4. Sketch binding energy curves and cross-section curves.

5. Calculate fractional energy loss of neutrons in scattering processes.
6. Use sub-critical, critical, and supercritical correctly when describing reactors.
7. Calculate infinite multiplication factors.
8. Explain the function of reflectors.
9. Use the one-group critical solutions to solve for critical masses and dimensions of bare reactors.
10. Sketch the nuclear fuel cycle and main features of pressurized water and boiling water reactors.

Nutrition (NUTR)

NUTR 1010. Personal and Practical Nutrition

Course Description

This class presents nutrition concepts from a practical viewpoint that can be applied to your personal goals. Current and controversial topics in nutrition that are of concern to the consumer will be included. Topics may vary but will address issues of individual nutrient needs, nutrition throughout the life cycle, alternative eating patterns and nutrition as part of disease prevention. This class fulfills the nutrition requirement for culinary arts but is not the course required for nursing majors. A computerized dietary analysis personalizes some of the information for the students.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Discuss influences of food and lifestyle on health.
 - a. List classes of nutrients.
 - b. Identify the components of a healthy diet.
 - c. Discuss the role of nutrition on chronic disease.
 - d. Discuss nutrient recommendations during life stages.
 - e. Identify factors which impact food choices.
2. Explain how food preparation affects nutritional quality.
3. Identify safe food handling practices.
 - a. State safe cooking/storage temperatures.
 - b. Explain principles of infection control.
4. Identify credible sources of nutritional information.

NUTR 1010L. Personal and Practical Nutrition Laboratory

Course Description

This course introduces non-science majors to the basic science of nutrition. Information required to understand a variety of nutrition topics currently in the news affecting our community and society, and to promote nutritional science literacy in the public arena, will be presented. Students will investigate their own dietary practices using dietary assessment tools and apply the scientific principles of human nutrition to promote personal health and well-being. Case studies, problems and laboratory exercises will contribute to the process of scientific inquiry and help students to value science as a way to develop reliable nutrition knowledge.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Employ critical thinking by interpreting information from data represented in charts, graphs, tables and spreadsheets.
2. Evaluate scientific research using the scientific method.
3. Utilize various anthropometric methods for dietary assessment.
4. Determine and analyze personal risk factors for chronic disease.
5. Demonstrate food preparation techniques and the effect on nutritional quality.
6. Utilize mathematical techniques to evaluate and solve scientific problems.

7. Relate science to personal, social or global impact with discussions on current controversial nutrition topics and sustainability.
8. Communicate effectively about scientific ideas and topics in oral and/or written formats.

NUTR 1015. Nutrition Fundamentals and Medical Nutrition Therapy

Course Description

This course explores the fundamentals of nutrition science and medical nutrition therapy for various conditions and disease states. Topics covered include basic nutrition science, including macronutrients, micronutrients, vitamins, minerals, water, general dietary recommendations, as well as medical nutrition therapy basics such as scope of practice, screening for nutritional risks, assessment of dietary intake, dietary modifications for various health conditions, and care planning in the Nutrition Care Process. The course is intended for students enrolled in the Dietary Manager Certification program.

Student Learning Outcomes

Upon completion of the course, a student will be able to:

1. List classes of nutrients.
2. Identify the components of a healthy diet.
3. Discuss influences of food and lifestyle on health.
4. Discuss the role of nutrition on chronic disease.
5. Identify credible sources of nutrition information.
6. Calculate basic nutritional needs of patients including individualized energy, protein, and fluid needs.
7. Plan a diabetic diet menu using both carbohydrates counting and the ADA Exchange List systems.
8. List major dietary restrictions and interventions associated with various medical disorders and diseases such as diabetes, CVD, gastrointestinal, liver, and renal disease.
9. Analyze medical and dietary information and appropriately perform a nutritional screening.
10. Implement steps in the Nutrition Care Process.
11. Demonstrate appropriate documentation of nutrition assessment and intervention in the medical record.
12. Report responsibilities legally allowed for the Certified Dietary Manager in their scope of practice.
13. Describe major nutritional concerns through the lifecycle.
14. Discuss the various methods of nutrition support.

NUTR 1020. Sports Nutrition

Course Description

This course will explore the role of nutrition in physical performance of competitive and Recreational sports participants.

Student Learning Outcomes

Upon completion of the course, a student will be able to:

1. Identify the role nutrition plays in exercise performance.
2. Identify differences in substrate utilization across different forms of exercise.
3. Apply research-based concepts to develop nutrition-based plans for a variety of Exercise conditions.

Course Description

This course explores the fundamentals of non-commercial foodservice and dining services management for dietary managers, with a focus on quantity food production, meal service, and food safety and sanitation in care centers, schools, correctional facilities, hospitals, and employee feeding venues. The topics covered include standardized recipes, food production systems, preparation of nourishments and supplements, client satisfaction, quality processes, sanitation, and safe food handling. The course is intended for students enrolled in the Dietary Manager Certification program.

Student Learning Outcomes

Upon completion of the course, a student will be able to:

1. Identify types of food service production, meal service and menus.

2. Understand the role of the Certified Dietary Manager in foodservice operations.
3. Identify factors affecting menu planning.
4. Explain the importance of a standardized recipe as a management tool.
5. Evaluate the quality and accuracy of meal service.
6. Write specifications for purchasing, production, and preparation of food.
7. Understand types of nutritional support and their role in client care.
8. Evaluate client food acceptance and satisfaction of menu.

NUTR 1060. Foodservice Management

Course Description

This course explores the fundamentals of non-commercial foodservice and dining services management for dietary managers, with a focus on quantity food production, meal service, and food safety and sanitation in care centers, schools, correctional facilities, hospitals, and employee feeding venues. The topics covered include standardized recipes, food production systems, preparation of nourishments and supplements, client satisfaction, quality processes, sanitation, and safe food handling. The course is intended for students enrolled in the Dietary Manager Certification program.

Student Learning Outcomes

Upon completion of the course, a student will be able to:

1. Identify types of food service production, meal service and menus.
2. Understand the role of the Certified Dietary Manager in foodservice operations.
3. Identify factors affecting menu planning.
4. Explain the importance of a standardized recipe as a management tool.
5. Evaluate the quality and accuracy of meal service.
6. Write specifications for purchasing, production, and preparation of food.
7. Understand types of nutritional support and their role in client care.
8. Evaluate client food acceptance and satisfaction of menu.

NUTR 1090. Dietary manager Clinical I

Course Description

This course provides a learning experience in clinical and community environments with emphasis on developing skills in Nutrition/Medical Nutrition Therapy and Sanitation/Food Safety. This is a coordinated supervised practice field experience requiring a minimum of 90 hours and is required for students seeking a certificate in the Dietary Managers Program. The course prepares learners to complete nutritional assessments and care plans for patients; describe the nutritional needs of people across the life cycle; prepare menus and transpose these to modified diets; develop infection control program based on principles of sanitation; and develop a preventative accident program to reduce work related accidents.

Student Learning Outcomes

Upon completion of the course, a student will be able to:

1. List and discuss examples of ethical considerations for the food and nutrition professional.
2. Describe the basic tenants of patient confidentiality according to the Health Insurance Portability and Accountability Act of 1006 (HIPPA).
3. Apply basic concepts and principles of nutrition and medical nutrition therapy in the screening of clients and provide basic medical nutrition therapy under the supervision of a registered dietitian.
4. Interpret and accurately document nutrition data in the medical record.
5. Effectively communicate client information to other health professionals.

6. Develop and evaluate effectiveness of client care plans.
7. Demonstrate proficiency in following requirements of local, state and federal regulations.
8. Participate in regulator agency surveys.
9. Plan and provide appropriate meal service to clients.
10. Demonstrate proficiency in the protection of food in all phases of storage, preparation, holding, service and transportation using HACCP guidelines.
11. Demonstrate ability to manage physical facilities to ensure compliance with safety and sanitation regulations.
12. Demonstrate ability to manage care, maintenance and use of facility equipment.

NUTR 1110. Nutrition for Health

Course Description

This course provides an overview of general concepts of nutrition, which can be applied to food choices that support a healthy lifestyle. The cultural, psychological, physiological and economic implications of food choices are explored.

Student Learning Outcomes:

1. Define the basic nutritional concepts as they pertain to nutritional science.
2. Develop basic literature searching skills to identify reliable nutritional information.
3. Apply basic knowledge to real life situations in class discussion.

NUTR 1120. Dietary Guidelines

Course Description

A presentation and explanation in detail of the Dietary Guidelines for Americans developed by the U.S. Department of Agriculture (U.S.D.A.) and the U.S. Department of Health and Human Services.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recall, interpret and explain each of the Dietary Guidelines and U.S.D.A. nutrition education tools.
2. Translate the Dietary Guidelines into a diet and exercise program.
3. List and describe methods to select and prepare food which are consistent with the Dietary Guidelines for Americans.
4. Identify risk factors related to disease prevention.

NUTR 1190. Dietary Manager Clinical II

Course Description

This course provides a learning experience in clinical and community environments with emphasis on developing skills in Management of Food Service Operations and Human Resource Management. Focus areas include quality improvement and evaluation of service, meal planning, recipe development, safe and sanitary food procurement and production methods, facility layout and design, staffing, marketing, and financial management. This is a coordinated supervised practice field experience requiring a minimum of 90 hours and is required for students seeking a certificate in the Dietary Manager Program.

Student Learning Outcomes

Upon completion of the course, a student will be able to:

1. Demonstrate the ability to supervise the production of food that is safe, high quality, meets budget, is aesthetically pleasing, and reflects current nutrition practices.
2. Apply management principles to human resource functions, facility management, planning and goal setting, and development and measurement of outcomes and quality improvement.
3. List and discuss examples of ethical considerations for the food and nutrition professional.
4. Describe the basic tenants of patient confidentiality according to the Health Insurance Portability and Accountability Act of 1006 (HIPPA).

5. Demonstrate proficiency in following requirements of local, state and federal regulations.
6. Participate in regulator agency surveys
7. Plan and provide appropriate meal service to clients.
8. Demonstrate proficiency in the protection of food in all phases of storage, preparation, holding, service and transportation using HACCP guidelines.
9. Demonstrate ability to manage physical facilities to ensure compliance with safety and sanitation regulations.
10. Demonstrate ability to manage care, maintenance and use of facility equipment.

NUTR 1996. Topics in Nutrition

Course Description

Varies

Student Learning Outcomes

Varies

NUTR 2110. Human Nutrition

Course Description

This course provides an overview of nutrients, including requirements, digestion, absorption, transport, function in the body and food sources. Dietary guidelines intended to promote long-term health are stressed.

Student Learning Outcomes

1. Evaluate sources of nutrition information for reliability.
2. Identify elements of a nutritious diet.
3. Describe the digestion, transport, and absorption of nutrients.
4. Describe the importance of nutrition in weight control and health.
5. Identify nutritional needs as they relate to the life cycle and performance.
6. Describe behavior modification techniques that promote good health.
7. Evaluate popular nutrition trends for scientific accuracy and effectiveness.
8. Develop skills in the planning and assessing of healthy meal plans.
9. Describe the role of food choices in the development of chronic disease.
10. Describe the role of food in the promotion of a healthful lifestyle.

NUTR 2120. Seminar I – Becoming a Nutrition Professional

Course Description

This course will introduce students to the field experience, careers, and professions in nutrition.

Student Learning Outcomes

1. Describe career options within the fields of Nutrition & Dietetics.
2. Outline the HNDS field experience process.
3. Explain the educational pathways in HNDS.
4. List requirements for admission into the HNDS Dietetics pathway.
5. Begin an HNDS student portfolio.
6. Discuss the importance of personal responsibility & accountability.

NUTR 2130. Nutrition in the Life Cycle

Course Description

A presentation and explanation of the specific nutritional needs and recommendations for all phases of the human life cycle: pregnancy, infancy, childhood, adolescence, adulthood, and the elderly.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Outline the nutritional concerns and the nutrient requirements throughout the life cycle.
2. Identify risk factors related to the various stages of the life cycle.
3. Formulate guidelines for an adequate healthy diet for all stages of the life cycle.
4. Identify food sources of major nutrients.

NUTR 2140. Community Nutrition

Course Description

An exploration of food and nutrition issues and programs related to individuals, families, and groups living in a defined area.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Explain community nutrition problems.
2. Design programs to alleviate identified community nutrition problems.
3. Plan strategies to market community nutrition programs.
4. Evaluate community nutrition programs.

NUTR 2150. Nutrition in Chronic Disease

Course Description

Review of the relationship between nutrition and obesity, diabetes, hypertension, heart disease, and cancer. Dietary strategies for prevention and management of these chronic diseases are also examined.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify major chronic diseases and their nutritional relationships.
2. Identify nutritional recommendations for the prevention and treatment of the five major chronic diseases.
3. Describe the practical application of nutritional recommendations for the prevention and management of the five major chronic diseases.

NUTR 2160. Culinary Nutrition

Course Description

A combination of the science of nutrition and current dietary recommendations with the culinary arts. Strategies and techniques used to prepare healthful and appetizing food are explored and demonstrated. Information needed to meet the specialized dietary and health needs of individuals and groups is provided. Menu development, modification, and analysis are reviewed.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recall the major categories of nutrients.
2. Identify food sources of nutrients.
3. Recall and explain current dietary recommendations.
4. Translate dietary recommendations into culinary strategies and techniques needed to prepare healthful food.
5. Analyze, modify, and develop menus that reflect current dietary recommendations.
6. Select and prepare healthful foods without compromising flavor and appeal.
7. Recognize the special dietary needs of individuals and groups.

NUTR 2170. Diabetes Management

Course Description

This course reviews the prevention and management of various types of diabetes. Included is information on blood glucose control, insulin and medications, nutrition and exercise recommendations, and the prevention of complications.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the various types of diabetes.
2. Describe strategies for prevention of diabetes.
3. Summarize and explain the management of diabetes including blood sugar control and monitoring insulin and medications, recommendations for exercise and diet.
4. Describe the complications of diabetes.

NUTR 2996. Topics in Nutrition

Course Description

Varies

Student Learning Outcomes

Varies

Occupational Therapy Assistant (OTAP)

OTAP 1220. Introduction to Occupational Therapy Assistant

Course Description

This course includes the historical development and philosophy of the profession. Emphasis is on the roles and responsibilities of the occupational therapy assistant, occupation in daily life; educational requirements; current health care environment; and moral, legal, and ethical issues. Laboratory section focuses on development of professional behaviors and attitudes required for healthcare students and practitioners.

Student Learning Outcomes

1. Discuss the history, principles, and language of occupational therapy.
2. Differentiate between the roles and training of Occupational Therapists and Occupational Therapy Assistants, including the delivery of service.
3. Demonstrate beginning therapeutic and health care professional skills.

OTAP 1230. Functional Kinesiology in OT

Course Description

Study of musculoskeletal and nervous systems and human movement as it relates to Occupational Therapy Assistants, including assessment procedures and intervention techniques.

Student Learning Outcomes

1. Analyze human motion related to functional outcomes.
2. Identify normal and abnormal movement.
3. Perform selected movement assessments and techniques.
4. Identify components and functions of the nervous system and perform selected sensory and nervous system related assessments and techniques.

OTAP 1240. Analysis of OT Interventions I

Course Description

This course is the study of the language of Occupational Therapy using the occupational therapy practice framework as a guide. Students will analyze various activities and occupations, with an emphasis on safe implementation of therapeutic interventions used in occupational therapy.

Student Learning Outcomes

1. Describe the role that occupation and activity have in the history and philosophy of occupational therapy.
2. Demonstrate beginning understanding of the therapeutic process.

3. Identify various occupations or activities designed to enhance occupational performance for selected disabilities or diseases.
4. Demonstrate basic safety, problem solving, and management of resources used for occupations or activities related to OT interventions.
5. Explain Occupational Therapy Practice Framework (OTPF) terminology by analyzing selected occupations or activities.
6. Demonstrate basic documentation skills.

OTAP 1250. Documentation for OT

Course Description

This course provides students with the knowledge and skills to write accurate and professional documentation for reimbursement of occupational therapy services. Formats reviewed include narrative, SOAP (subjective, objective, assessment, plan), and DAP (data, assessment, plan) notes among others. Topics include documentation throughout the stages of the occupational therapy process, intervention plans, and increasing observational skills.

Student Learning Outcomes

1. Utilize Occupational Therapy Practice Framework (OTPF) and medical terminology effectively to document selected occupations or activities.

OTAP 1252. Fieldwork Level I-A

Course Description

A health-related work-based learning experience that enables the student to apply specialized occupational theory, skills, and concepts. Direct supervision is provided by the clinical professional. A minimum of 70 hours.

Student Learning Outcomes

1. Demonstrate positive work behaviors.
2. Demonstrate critical thinking skills by accurately reporting observations and through safe clinic practices.
3. Demonstrate effective communication skills.

OTAP 1260. Pathophysiology and Occupational Therapy

Course Description

Pathology and general health management of diseases and injuries across the lifespan encountered in occupational therapy treatment settings. Includes etiology, symptoms, and the client's physical and psychological reactions to disease and injury.

Student Learning Outcomes

1. Identify characteristics of diseases and conditions.
2. Identify the effects of diseases and conditions on occupational performance.
3. Identify occupation-based interventions.

OTAP 1270. Growth and Development in OT

Course Description

General principles of occupational performance throughout the lifespan.

Student Learning Outcomes

1. Identify and adapt age appropriate occupations.
2. Identify factors which affect occupational performance.
3. Select appropriate intervention strategies for this population.

OTAP 1280. Analysis of OT interventions II

Course Description

This course is a continuation of OTAP 1240: Analysis-Occupations & Interventions I. Emphasis is on advanced techniques and applications used in traditional and non-traditional practice settings.

Student Learning Outcomes

1. Demonstrate ability to select, prioritize, and plan occupations or activities to implement for specific populations.
2. Demonstrate ability to teach others implementation techniques (i.e., compensatory strategies) to enhance occupational performance and/or use of equipment for specific populations, occupations or activities.
3. Demonstrate ability to implement safety while using techniques and equipment.
4. Demonstrate advanced documentation skills.
5. Demonstrate ability to promote occupational therapy to selected audiences.

OTAP 1992. Directed Studies in Occupational Therapy Assistant

Course Description

Varies

Student Learning Outcomes

Varies

OTAP 1996. Topics in Occupational Therapy Assistant

Course Description

Varies

Student Learning Outcomes

Varies

OTAP 2210. Mental Health and OT Interventions

Course Description

Study of the promotion of mental health through occupational therapy assessment/evaluation tools and intervention strategies using various frames of reference. Includes a survey of conditions and use of group process and group dynamics.

Student Learning Outcomes

1. Identify and explain psychiatric diagnoses and medical treatments
2. Identify components that impact the health and wellness and occupational functioning in individuals with mental illness.
3. Demonstrate ability to effectively select, plan, conduct, modify, and document evidenced-based evaluations and intervention strategies to facilitate occupational performance and participation for individuals with mental illness

OTAP 2220. Elders and OT Interventions II

Course Description

Occupational performance of elders. Includes assessment/evaluation tools and techniques and intervention strategies in various frames of references, and regulatory factors specific to this population.

Student Learning Outcomes

1. Identify components that impact the health, wellness, and functioning in elders.
2. Demonstrate ability to effectively select, plan, conduct, modify, and document evidenced-based evaluations and intervention strategies to facilitate occupational performance and participation for elders based on case studies or scenarios.

3. Identify how regulatory factors impact health services for elders, including effective documentation skills.

OTAP 2250. Occupational Therapy Prep

Course Description

This course teaches the student program development in terms of administrative functions of occupational therapy, consulting skills and participation in program implementation. The students review for the certification examination.

Student Learning Outcomes

1. Demonstrate knowledge of applicable national requirements for credentialing and requirements for licensure, certification, or registration under state laws.
2. Demonstrate knowledge of occupational therapy ethics and standards of practice.
3. Demonstrate the ability to participate in the development, marketing, and management of service delivery options.
4. Identify the systems and structures that create federal and state legislation and regulations and their implications and effects on practice.
5. Demonstrate knowledge of various reimbursement systems (e.g., federal, state, third party, private payer) and documentation requirements that affect the practice of occupational therapy.
6. Participate in the documentation of ongoing processes for quality improvement and implement program changes as needed to ensure quality of services. Under the direction of an administrator, manager, or OT, collect, organize, and report on data for evaluation of client outcomes.
7. Identify the potential impact of current policy issues and the social, economic, political, geographic, or demographic factors on the practice of occupational therapy.
8. Articulate to consumers, potential employers, colleagues, third-party payers, regulatory boards, policymakers, other audiences, and the general public both the unique nature of occupation as viewed by the profession of occupational therapy and the value of occupation support performance, participation, health, and well-being.
9. Effectively communicate and work inter-professionally with those who provide services to individuals and groups in order to clarify each member's responsibility in executing an intervention plan.

OTAP 2332. Fieldwork Level I-B

Course Description

A health-related work-based learning experience that enables the student to apply specialized occupational theory, skills, and concepts. Direct supervision is provided by the clinical professional. A minimum of 70 hours.

Student Learning Outcomes

1. Demonstrate positive work behaviors
2. Demonstrate critical thinking skills in safe clinic practices and by accurately reporting observations
3. Demonstrate effective communication skills

OTAP 2340. Pediatrics and OT Interventions

Course Description

Occupational performance of newborns through adolescents including assessment/evaluation tools and techniques and intervention strategies using various frames of references, and regulatory factors specific to this population.

Student Learning Outcomes

1. Differentiate and analyze developmental theories and milestones, and components of health and wellness in the pediatric population.

2. Demonstrate ability to effectively select, plan, conduct, modify, and document evidence-based evaluations and intervention strategies to facilitate occupational performance and performance for the pediatric population, based on case information.
3. Identify how regulatory factors impact health services for the pediatric population.

OTAP 2350. Physical Function and OT Interventions

Course Description

Physical function to promote occupational performance. Includes assessment/evaluation tools and techniques, and intervention strategies of various frames of reference for physical disabilities.

Student Learning Outcomes

1. Identify medical treatment of selected physical diseases, conditions, and disabilities.
2. Analyze components that impact the health and wellness and occupational functioning in individuals with physical disabilities.
3. Utilize evaluation tools and intervention techniques related to select OT frames of reference.
4. Demonstrate ability to effectively select, plan, modify, and share data from evidence-based evaluations and the status of intervention strategies to facilitate occupational performance and participation for individuals with physical disabilities, based on case information.

OTAP 2360. Health Care Management in OT

Course Description

Explore the roles of the occupational therapy assistant in health care delivery. Topics include documentation, reimbursement, credentialing, ethical standards, health care team role delineation, management techniques, analysis of professional literature, promotion of the profession, certification, licensure, and effective job search strategies.

Student Learning Outcomes

1. Demonstrate professional behaviors.
2. Identify basic management and business strategies required for effective healthcare delivery.

OTAP 2372. Fieldwork Level II-A

Course Description

A health-related work-based learning experience that enables the student to apply specialized occupational theory, skills, and concepts. Direct supervision is provided by the clinical professional. 280-320 hours AND 8 weeks is required.

Student Learning Outcomes

1. Demonstrate fundamentals of occupational therapy practice by maintaining an ethical and safe clinical environment.
2. Demonstrate understanding of the occupational therapy philosophy, the roles of occupational therapy personnel, and make evidence-based decisions.
3. Demonstrate ability to gather data, administer selected assessment tools, assist with interpretation of the information and collaborate with the Occupational Therapist to establish client centered, occupation-based goals.
4. In collaboration with the occupational therapist practitioner, the student will design, implement and modify occupation based therapeutic interventions using therapeutic interactions to meet the treatment goals of clients.
5. Demonstrate professionalism through verbal and written communications with peers, staff, clients and family members.
6. Demonstrate professional work behaviors including responding to feedback, time management, interpersonal skills and respect for cultural diversity.

OTAP 2373. Documentation for OT-II-A

Course Description

Students will apply their advanced knowledge and skills to write accurate and professional documentation for reimbursement of occupational therapy services based on the work-based learning experiences of OTAP 272. Topics include documentation throughout the stages of the occupational therapy process, intervention plans and review of evidence.

Student Learning Outcomes

1. Utilize Occupational Therapy Practice Framework (OTPF) and medical terminology effectively to document selected occupations or activities.

OTAP 2374. Fieldwork Level II-B**Course Description**

A health-related work-based learning experience that enables the student to apply specialized occupational theory, skills, and concepts. Direct supervision is provided by the clinical professional. 280-320 hours AND 8 weeks is required.

Student Learning Outcomes

1. Demonstrate fundamentals of occupational therapy practice by maintaining an ethical and safe clinical environment.
2. Demonstrate understanding of the occupational therapy philosophy, the roles of occupational therapy personnel, and make evidence-based decisions.
3. Demonstrate ability to gather data, administer selected assessment tools, assist with interpretation of the information and collaborate with the Occupational Therapist to establish client centered, occupation-based goals.
4. In collaboration with the occupational therapist practitioner, the student will design, implement and modify occupation based therapeutic interventions using therapeutic interactions to meet the treatment goals of clients.
5. Demonstrate professionalism through verbal and written communications with peers, staff, clients and family members.
6. Demonstrate professional work behaviors including responding to feedback, time management, interpersonal skills and respect for cultural diversity.

OTAP 2375. Documentation for OT-II-B**Course Description**

Students will apply their advanced knowledge and skills to write accurate and professional documentation for reimbursement of occupational therapy services based on the work-based learning experiences of OTAP 272. Topics include documentation throughout the stages of the occupational therapy process, intervention plans and review of evidence.

Student Learning Outcomes

1. Utilize Occupational Therapy Practice Framework (OTPF) and medical terminology effectively to document selected occupations or activities.

OTAP 2992. Directed Studies in Occupational Therapy Assistant**Course Description**

Varies

Student Learning Outcomes

Varies

OTAP 2996. Topics in Occupational Therapy Assistant**Course Description**

Office Technology (OTEC)

OTEC 1101. Beginning Keyboarding

Course Description

Develops proper keyboarding technique to achieve speed and accuracy. A minimum average of 25 wpm on three five-minute timings is required.

Student Learning Outcomes

Students completing this course will:

1. Demonstrate proper keyboarding techniques.
2. Key the numeric keypad by touch.
3. Type straight copy at a minimum rate of 25 GWAM for 5 minutes with no more than 5 errors using the proper touch method (backspace key not allowed on timed writings).

OTEC 1102. Keyboard Skillbuilding

Course Description

Continues development of speed and accuracy. A minimum average speed of 35 wpm on three five-minute timings is required.

Student Learning Outcomes

Students completing this course will:

1. Demonstrate proper keyboarding techniques.
2. Type straight copy at a minimum rate of 35 GWAM for 5 minutes with no more than 5 errors using the proper touch method. To be submitted for credit, timings must have no more than 5 errors (errors are not deducted from gross speed).

OTEC 1103. Keyboard Skillbuilding II

Course Description

Continues development of speed and accuracy. A minimum average speed of 45 wpm on three five-minute timings is required.

Student Learning Outcomes

Students completing this course will:

1. Demonstrate proper keyboarding techniques.
2. Type straight copy at a minimum rate of 45 GWAM for 5 minutes with no more than 5 errors using the proper touch method. To be submitted for credit, timings must have no more than 5 errors (errors are not deducted from gross speed).

OTEC 1125. Writing, Proofreading and Editing

Course Description

Develop proofreading skills: punctuation, grammar, spelling and usage errors. Edit documents for appropriate content, conciseness, clarity and point of view. Compose effective business letters, e-mails, memos, and reports.

Student Learning Outcomes

1. Apply document formatting standards for professional business correspondence.
2. Apply standard proofreader's marks when proofreading and editing.
3. Proofread and edit letters, memos, reports, and other business documents to produce a professional copy.
4. Review English mechanics (spelling, grammar, punctuation, and format).

5. Write business memos, letters, e-mails, and informal reports.
6. Rewrite and edit the message for organization, clarity, complete information, and conciseness.
7. Produce the message utilizing the correct design and format.

OTEC 1170. Business Telephone Techniques

Course Description

Presents concepts to develop effective speaking, listening and questions skills. Methods for handling income calls, outbound call, customer orders, customer problems and customer complaints.

Student Learning Outcomes

1. Define telephone safety and security.
2. Correctly pronounce and clearly enunciate words.
3. Demonstrate Active Listening Skills and communicating using positive language.
4. Identify Telephone features such as conference calls and call forwarding.
5. Analyze and assess voice messages.
6. Demonstrate proper netiquette communications skills using e-mail.

OTEC 1175. Computers in the Medical Office

Course Description

Introduces tasks performed in a medical office utilizing a computerized software package, including scheduling appointments, gathering and recording patient information, recording diagnoses and procedures, billing patients, filing insurance claims, recording payments and preparing reports.

Student Learning Outcomes

1. Identify the core functions of electronic health record programs.
2. Describe the Health Insurance Portability and Accountability Act (HIPAA) regarding privacy of electronic records.
3. Describe the function of the file maintenance utilities using medical database software.
4. Identify and describe the basic concepts common to most medical insurance plans including defining the major types of medical insurance plans.
5. Demonstrate basic appointment scheduling tasks using medical database software, including creating and editing patient appointments.
6. Describe the types of transactions recorded in a medical office.
7. Demonstrate how to enter different types of payment and charge transactions using database software.
8. Demonstrate ability to use medical database software to enter patient records, enter insurance payments, apply insurance payments to charges, enter capitation payments, and create patient statements.
9. Demonstrate report generation in medical database software.

OTEC 2201. Document Production and Integration

Course Description

Create and format documents to develop business document production skill. Presents advanced applications for document integration.

Student Learning Outcomes

Students completing this course will:

1. Develop business document production skill by utilizing Microsoft Office to create a wide variety of business documents including medical and legal office applications.
2. Demonstrate an introductory knowledge of Access by creating a database and utilizing the database to perform specific administrative tasks.
3. Demonstrate integration of documents, spreadsheets, databases and presentation software.

OTEC 2260. Business Procedures

Course Description

Covers office procedures, technology, human relations, ethics, telecommunications and job portfolio.

Student Learning Outcomes

Demonstrate knowledge of an office professional's duties by:

1. Demonstrating strategies and tools for organizing your work area.
2. Demonstrating effective techniques for handling telecommunication.
3. Identifying unethical behavior in the workplace.
4. Demonstrating qualities of an effective team member.
5. Identifying methods for handling incoming and outgoing mail.
6. Planning and arranging domestic and international travel.
7. Planning a business meeting.
8. Demonstrating qualities of effective leaders.

Demonstrate knowledge of the job application process by:

1. Developing skills and qualities necessary for the administrative profession.
2. Completing an employment application, compose a letter of application, and prepare a resume for a specific administrative position.
3. Completing a mock interview

OTEC 2270. Medical Transcription

Course Description

Reinforces medical terminology and develops proficiency in transcribing medical reports, forms, and other types of medical communications using correct format, grammar, punctuation, number, abbreviation, symbol, and metric measurement rules.

Student Learning Outcomes

1. Transcribe a variety of medical reports, letters, and memorandums according to the American Association for Medical Transcription (AAMT) and Joint Commission on Accreditation of Healthcare Organizations (JCAHO) guidelines.
2. Apply correct grammar, word usage, and format or style.
3. Use punctuation, capitalization, abbreviations, and numbers correctly.
4. Demonstrate mastery of terminology, spelling, editing/proofreading, and transcribing skills.

Outdoor Leadership Studies (OLST)

OLST 1110. Rock Climbing

Course Description

This course begins with a class orientation session, followed by a 'ground school' session and two days of field experience on the 'rock'. Rock climbing history, equipment, technique and safety system management will be the curriculum focus as students gain knowledge and practical skills in the basics of technical rock climbing.

Student Learning Outcomes

Throughout the course students will learn about and become familiar with climbing's rich history, technical climbing equipment, safety system management, trip logistics, and safety protocols.

OLST 2110. Skills for the Outdoor Leader

Course Description

Student Learning Outcomes

1. Demonstrate appropriate LNT campsite selection and departure; list 7 LNT principles.

2. Ability to plan an outdoor trip for a group.
3. Ability to plan a nutritious menu to meet dietary requirements.
4. Ability to light and manage open fire.
5. Describe appropriate methods of minimum impact hygiene.
6. Demonstrate appropriate construction of a latrine and a cathole.
7. Demonstrate the safe use of three different types of camp stoves and their repair.
8. Tie 6 common knots and explain the application of their use.
9. Be able to identify 10 native plants of the Gila Region and 5 common birds.
10. Demonstrate the ability to use a map and compass to navigate a route.
11. Demonstrate the ability to construct a variety of shelters (tents and tarps) and explain the utility of each in particular settings.
12. Demonstrate the ability to interpret clouds and weather patterns.
13. Demonstrate the ability to properly size and select a backpack.
14. Demonstrate the ability to choose appropriate outdoor apparel.

OLST 2120. Fundamentals of Search & Rescue

Course Description

Designed to teach concepts and techniques for the safe location and evacuation of injured persons in backcountry environments. The goal of the course is to expose students to the critical thinking and analysis skills necessary to safely affect a variety of SAR activities. Material covered will include: an overview of Search and Rescue (SAR) systems, legal issues, physiology, fitness, survival and improvisation, clothing, safety in SAR environments, ready pack considerations/contents, personal equipment, navigation, SAR resources and technology, travel skills, tracking, basic search theory and operations, and basic rescue equipment and operation. A field practicum and National Association for Search and Rescue certification exam are part of the course.

Student Learning Outcomes

1. Define the components of SAR operations.
2. List the major responsibilities for search and rescue.
3. Describe the components of ICS and their functions.
4. List and prioritize the necessities of life.
5. Explain the survival situation plan (STOP) Stay, Think, Observe, Plan.
6. List the similarities or differences and advantages or disadvantages of the different natural and synthetic materials used for SAR clothing.
7. Describe and demonstrate the function of each of the layers of clothing.
8. Differentiate between a 24-hour ready pack and urban ready pack.
9. Demonstrate the use of a 24-hour ready pack.
10. Describe advantages and disadvantages of the equipment used for SAR.
11. Demonstrate the use of personal SAR equipment.
12. Demonstrate traveling skills used for his/her environment.
13. Define, describe, and identify the signs and symptoms, and describe the treatment of common medical emergencies during SAR operations.
14. List and differentiate between at least three types of maps used in SAR.
15. Identify, define, and demonstrate the use of the topographical maps.
16. Define the plotting methods or grid systems and demonstrate the ability to use them to determine the coordinates for a given point.

17. Describe the parts of the compass and demonstrate the ability to use it.
18. Describe the navigational functions used in map and compass.
19. Demonstrate the ability to navigate during daylight and nighttime hours.
20. Differentiate between the two basic categories of search tactics (Passive and Active).
21. Describe the primary types of active search tactics.
22. Describe the techniques and methods used for search tactics.
23. List and demonstrate at least five of the searching or tactical skills needed by field searchers.
24. Explain why SAR personnel search for clues not subject.
25. List the information needed by the searcher when alerted.
26. Define and demonstrate the functions of the search crew positions.
27. Define track or print, sign, and step-by-step tracking as well as demonstrate the step-by-step tracking procedures.
28. List at least two materials used in rope and at least two types of design used in rope, as well as list at least five of the rules of rope etiquette.
29. List the different advantages and disadvantages of materials used in carabiner.
30. Describe the advantages and disadvantages of at least two types of stretchers or litters.
31. List at least five common radio procedures and guidelines.
32. Describe the basic legal philosophy concerning searcher knowledge, training, physical abilities, equipment, discipline, and control.

Patient Care Technician (PACA)

PACA 1020. Patient Care Technician

Course Description

Provides instruction needed to function as a Patient Care Technician including communication with patients and the healthcare team, medical terminology, principles of sterile technique, urinary catheterization, 12-lead EKG acquisition, venipuncture, point of care testing and other concepts related to the care of a patient in an acute care setting.

Student Learning Outcomes

1. Communicate effectively using verbal, non-verbal, electronic and written techniques.
2. Demonstrate positive attitude and maintains ethical standards.
3. Recall commonly used medical terminology and medical abbreviations.
4. Describe the role and scope of practice of the patient care technician.

PACA 1090. Patient Care Tech Clinical Experience

Course Description

Provides students who have successfully completed the Patient Care Tech course with clinical experience in an acute care setting or clinic. Students will perform the skills within the role of the patient care tech on various inpatient units. Background check and drug screen required.

Student Learning Outcomes

1. Demonstrate the principle of teamwork in interactions with health care personnel, patients, and families.
2. Perform patient care skills within the scope of practice for the Patient Care Technician Perform clerical duties related to the patients chart and Health Unit Coordinator procedures for admission, transfer, and discharge of patients.

PACA 1092L. Patient Care Technician Laboratory

Course Description

Provides supervised practice in a Laboratory and simulation setting of concepts and skills related to caring for the hospitalized patient.

Student Learning Outcomes

1. Communicate effectively using verbal, non-verbal, electronic and written techniques.
2. Perform duties and skills in a safe and competent manner.
3. Perform patient care technician skills and procedures using learned techniques.
4. Demonstrate competency in measurement skills.

PACA 1110. Personal Care Attendant**Course Description**

Students prepare to work as a Personal Care Attendant in home healthcare, as independent contractors/self-employment, or to provide care for a relative. Course includes lectures, group learning, video instruction, workbook exercises, instructor demonstrations, hands-on skills practice, and exams. The course consists of 80 total clock hours -- 64 hours lecture and stills Laboratory; 16 hours job shadowing in a home healthcare or assisted living facility.

Student Learning Outcomes

1. Demonstrate basic caregiver skills with emphasis on patient safety.
2. Define and use basic medical Terminology as well as define and demonstrate knowledge of basic anatomy and physiology.
3. Demonstrate how to conduct themselves with basic professionalism, demonstrate and practice HIPPA regulations on Privacy and demonstrate competence in basic caregiver skills.

Peace Studies (PCST)

PCST 1110. Introduction to Peace Studies**Course Description**

Introduction to peace research. Primary content of Peace Studies Program; focuses on the concepts of peace/war, security/conflict, and violence/non-violence. Special emphasis on non-violent conflict resolution, human rights, and social/environmental justice issues.

Student Learning Outcomes

1. Students will carry out critical analysis and engagement with complex, interdependent global systems and legacies (natural, physical, social, cultural, economic, and political) and their implications for people's lives and the earth's sustainability.
2. Students will explore issues/objects/works through collection and analysis of evidence that result in informed conclusions/judgments, understanding and analysis of critical literacy and ethics pertaining to the dynamics of diversity, equity, inclusion and social change.
3. Students will examine habits of mind characterized by the comprehensive exploration of issues, ideas, artifacts and events related to diversity, equity and inclusion before accepting or formulating an opinion or conclusion.
4. Students will demonstrate the capacity to combine or synthesize existing ideas, images, or expertise in original ways.
5. Students will prepare, purposeful presentations designed to increase knowledge, foster understanding, or promote change in listener's values, beliefs, or behaviors pertaining to the dynamics of diversity, equity, inclusion and social change.
6. Students will develop and express ideas in writing and learning in many genres and styles using different writing technologies, mixing texts, data and images that relate to the dynamics of diversity, equity, inclusion and social change.

PCST 2110. Global Issues

Course Description

The global context of patterns of development in nation-states with an emphasis on industrializing countries. Selected topics of social, economic and cultural change. Inequality, war, reform and revolution in global perspective. Meets New Mexico Lower-Division General Education Common Core Curriculum Area IV: Social/Behavioral Sciences.

Student Learning Outcomes

1. Students will carry out critical analysis and engagement with complex, interdependent global systems and legacies (natural, physical, social, cultural, economic, and political) and their implications for people's lives and the earth's sustainability.
2. Students will examine habits of mind characterized by the comprehensive exploration of issues, ideas, artifacts and events related to intersectionality, diversity, equity and inclusion before accepting or formulating an opinion or conclusion.
3. Students will demonstrate the capacity to combine or synthesize existing ideas, images, or expertise in original ways.
4. Students will prepare, purposeful presentations designed to increase knowledge, foster understanding, or promote changes in listener's values, beliefs, or behaviors pertaining to the dynamics of intersectionality, diversity, equity, inclusion and social change.
5. Students will demonstrate the ability to know a need for information or visual literacy and understanding of the dynamics of historic and contemporary inequality and how they shape individual and community power, biases, structural arrangements and social justice bias.
6. Students will enact behaviors and efforts and interact with others on the team to enhance the quality and quantity of contributions made to team discussions.
7. Students will design, evaluate and implement strategies to answer open-ended questions in multiple ways.
8. Students will work to make a difference in the civic life of communities and develop the combination of knowledge, skills and values and motivation to make a difference.
9. Students will develop their cognitive, affective and behavioral skills and characteristics to support effective and appropriate interaction in a variety of cultures.
10. Students will develop their ethical self-identity as they practice ethical decision-making skills while learning how to describe and analyze positions on ethical issues.
11. Students will engage in self-reflection regarding one's own history and position in contemporary U.S. society as well as in a global context.
12. Student learners will connect perspectives and integrate relevant experience and academic knowledge from multiple disciplines.

Petroleum Engineering (PETR)

PETR 1110. Introduction to Petroleum Engineering

Course description

Introduction to energy supply and demand. Define reservoir, drilling and production aspects of petroleum engineering. Included are professionalism and ethics in the work environment.

Student Learning Outcomes

1. Students will understand basic concepts of the petroleum engineering profession from drilling, production and reservoir to geology and surface facilities.
2. Students will become aware of the pros and cons of all energy sources and the impact each has to the state, country, and world.
3. Students will be introduced to the ethical code of conduct and then recognize the appropriate action for a series of ethical situations from the oilfield.
4. Students will obtain a history of the oilfield and discuss current events with regards to fossil fuels.
5. Students will be introduced to SPE and how the organization promotes continuous learning.

PETR 1111. Computer Applications in Petroleum Engineering

Course Description

Development of algorithms in Excel™ to solve petroleum engineering problems: gas z-factor, static and flowing gradients, pump design, well testing functions and others.

Student learning Outcomes

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to communicate effectively with a range of audiences.

PETR 2245. Petroleum Fluid

Course Description

Characteristics and properties of reservoir fluids. Representation of fluid property data for computer uses with models and regression.

Student Learning Outcomes

1. Learn the formation of crude oil from the remains of ancient marine organisms.
2. Learn the fundamentals of phase-equilibrium thermodynamics applied in petroleum engineering applications.
3. Learn the physical and chemical properties of petroleum fluids.
4. Learn to estimate the gas and crude oil properties using the field data.
5. Use Microsoft Excel Spreadsheet to solve engineering problems.

PETR 2245L. Petroleum Fluid Laboratory

Course Description

Characterize pressure, volume and temperature relationships using virtual simulation and Laboratory measurement of reservoir fluid properties.

Student Learning Outcomes

1. Learn the physical and chemical properties of petroleum fluids
2. Learn to read industry-standard PVT report, analysis the PVT experiments in the lab.
3. Learn to estimate oil and gas properties using the field data. They learn how to tune an EOS to predict the fluid properties in different pressure and temperature.

Pharmacy Technician (PHAR)

PHAR 1003. Pharmacy Calculations

Course Description

Provides skills in pharmaceutical calculations necessary for safely compounding and preparing prescriptions or other pharmacy products.

Student Learning Outcomes

1. Perform mathematical calculations to solve for the correct answer when given mathematical problems using Roman numerals, Arabic numerals, fractions, apothecary symbols, and decimals.
2. Perform mathematical calculations to solve for the correct answer when given mathematical problems involving conversion of weights and measures and direct ratio and proportion.
3. Calculate or measure finished dosage forms as specified by the prescription/medication order.
4. Convert among the measurement systems, depending upon the desired endpoint.
5. Determine the correct amounts of ingredients for a compounded product.
6. Perform mathematical calculations essential to the duties of pharmacy technicians in a variety of settings.

PHAR 1011. Pharmacy Technician Introduction

Course Description

Provides a discussion of the pharmacy technician, pharmacist, and other healthcare occupation roles in the healthcare environment. Emphasizes the history of pharmacy, state and federal laws, ethics, professional standards of practice, prescription preparation, inventory management, and institutional drug distribution.

Student Learning Outcomes

1. Describe the pharmacy technician's role, pharmacist's role, and other occupations in the healthcare environment.
2. Describe the pharmacy technician's role in the medication-use process
3. Define the Pharmacists' Patient Care Process and describe the role of the pharmacy technician in the patient care process.
4. Describe and apply state and federal laws pertaining to processing, handling and dispensing of medications including controlled substances.
5. Describe state and federal laws and regulations pertaining to pharmacy technicians.
6. Recognize that differences exist between states regarding state regulations, pertaining to pharmacy technicians, and the processing, handling and dispensing of medications.
7. Describe pharmacy compliance with professional standards and relevant legal, regulatory, formulary, contractual, and safety requirements.
8. Describe how state laws and regulations determine what activities associated with collection of patient specific information can be delegated by the pharmacist to technicians.
9. Discuss accepted procedures in inventory control of medications, equipment, and devices.
10. Choose proper procedures and communication channels to use in the event of a product recall or shortage, a medication error, or identification of another problem.

PHAR 1140. Pharmacy Technician

Course Description

This course is a review of the basic concepts and applications of pharmacy technology. It includes the laws and regulations and the pharmacy profession, reading and interpreting prescriptions, dosage calculations and conversions, blood and lymph systems, IV flow rates, prescriptions, drug compounding, dispensing of prescriptions, inventory, billing and reimbursement. It also provides a review of practical applications of pharmacy technician.

Student Learning Outcomes

1. Knowledge to start and complete the process of filling a prescription and utilize inventory control, billing and reimbursement systems.
2. Effectively communicate using proper medical and pharmaceutical terminology.
3. Identify the top 200 drug list put out by the FDA.
4. Exhibit the needed skills, knowledge and professionalism to become employed in a facility.

PHAR 1141. PTCB Test Prep and Exam

Course Description

A comprehensive review of topics found on the Pharmacy Technician Certification Board (PTCB) exam. This course is designed to prepare the student to sit for the Pharmacy Technician Certification Exam (PTCE). The exam will be required at the end of this course.

Student Learning Outcomes

1. Students will recognize names, classes and usage of the Top 200 FDA drug list
2. Students will demonstrate understanding of the federal requirements applicable to the Pharmacy industry.

3. Students will apply patient safety and quality assurance techniques.
4. Students will demonstrate skills necessary for order entry and processing.
5. Students will study and sit for the PTCB exam.

PHAR 1192L. Pharmacy Technician Processes Laboratory

Course Description

Focuses on the fundamentals of current pharmacy practice and technology, including basic pharmacy skills including reading and entering prescription/medication orders into a computer software program, Labeling, packaging and dispensing medications, and inventory management in various pharmacy settings. Patient safety, drug safety, and patient service are introduced and practiced.

Student Learning Outcomes

1. Demonstrate active and engaged listening skills.
2. Apply interpersonal skills, including negotiation skills, conflict resolution, customer service, and teamwork.
3. Assist pharmacists in collecting, organizing, and recording demographic and clinical information for the Pharmacist Patient Care Process.
4. Receive, process, and prepare prescriptions/medication orders for completeness, accuracy, and authenticity to ensure safety.
5. Assist pharmacists in the identification of patients who desire/require counseling to optimize the use of medications, equipment, and devices.
6. Prepare patient-specific manufactured medications for distribution.
7. Prepare non-patient-specific manufactured medications for distribution.
8. Assist pharmacists in preparing, storing, and distributing medication products including those requiring special handling and documentation.
9. Assist pharmacists in the monitoring of medication therapy.
10. Maintain pharmacy facilities and equipment.
11. Apply quality assurance practices to pharmaceuticals, durable and non-durable medical equipment, devices, and supplies.
12. Use current technology to ensure the safety and accuracy of medication dispensing.
13. Collect payment for medications, pharmacy services, and devices.
14. Use accepted procedures in purchasing pharmaceuticals, devices, and supplies.
15. Apply patient- and medication-safety practices in aspects of the pharmacy technician's roles.
16. Recognize accepted procedures utilized in identifying and disposing of expired medications.

PHAR 1316. Pharmacy Technician Pharmacology I

Course Description

Presents a study of therapeutic categories and classifications of drugs that affect the Central Nervous System (CNS) and Skeletal Muscles exploring the pharmacologic and mechanism of actions, adverse effects, side effects, drug interactions, and disease prevention concepts.

Student Learning Outcomes

1. Describe wellness promotion and disease prevention concepts.
2. Demonstrate basic knowledge of anatomy, physiology and pharmacology, and medical terminology relevant to the pharmacy technician's role.
3. Describe investigational drug process, medications being used in off-Laboratoryel indications, and emerging drug therapies.

4. Distinguish between the different pharmacologic actions and adverse effects that Sympathomimetic/lytic, parasympathomimetic/lytic, skeletal muscle relaxants, local anesthetics, sedative-hypnotic, antipsychotic, anxiolytic, antidepressants, psychomotor stimulants, lithium, and psychotomimetic drugs produce.
5. Interpret medication orders and identify the various classifications of drug therapy.
6. Match various prescription and non-prescription medication to the specific drug classification and indication for use.
7. Describe the use and side effects of prescription medications, nonprescription medications, and alternative therapies (e.g., herbal products, dietary supplements, homeopathy, lifestyle modification) used to treat common disease states.

PHAR 1710. Intermediate Pharmacy Technician

Course Description

Provides a discussion of the pharmacy technician and pharmacist roles in medication management services and direct patient care in various practice settings. This course emphasizes quality assurance measures, basic safety, and emergency preparedness procedures as described by Occupational Safety and Health Administration (OSHA), National Institute of Occupational Safety and Health (NIOSH), United States Pharmacopeia (USP) and other quality organizations.

Student Learning Outcomes

1. Identify pharmacist and pharmacy technician roles in medication management services.
2. Define federal and state laws governing the substitution of medication products.
3. Compare and contrast the provision of direct patient care in various patient-care settings.
4. Describe Food and Drug Administration product tracking, tracing and handling requirements.
5. Describe Occupational Safety and Health Administration (OSHA), National Institute of Occupational Safety and Health (NIOSH), and United States Pharmacopeia (USP) requirements for prevention and treatment of exposure to hazardous substances (e.g., risk assessment, personal protective equipment, eyewash, spill kit).
6. Describe OSHA requirements for prevention and response to blood-borne pathogen exposure (e.g., accidental needle stick, post-exposure prophylaxis).
7. Describe OSHA Hazard Communication Standard (i.e., "Employee Right to Know").
8. Describe best practices regarding quality assurance measures according to leading quality organizations.
9. Compare advantages and disadvantages of different dosage forms and routes of administration, including manufactured and compounded products.
10. Define accepted procedures in delivery and documentation of immunizations.
11. Give examples how pharmacy technicians assist pharmacists in responding to emergent patient situations, safely and legally.
12. Identify basic safety and emergency preparedness procedures applicable to pharmacy services.

PHAR 1716. Pharmacy Technical Pharmacology II

Course Description

Presents a study of therapeutic categories and classifications of drugs that affect the Central Nervous System (CNS) and Cardiovascular System exploring the pharmacologic and mechanism of actions, adverse effects, side effects, drug interactions, and disease prevention concepts.

Student Learning Outcomes

1. Distinguish between the different pharmacologic actions and adverse effects that antiepileptic, antiparkinson, general anesthetics, opioid analgesics, nonopioid analgesics, nonsteroidal anti-inflammatories, anti-gout, antiarrhythmic, antianginal, diuretics, antihypertensive, anticoagulants, coagulants, nutritional therapy, hypolipidemic, and antianemic drugs produce.

2. Interpret medication orders and identify the various classifications of drug therapy.
3. Match various prescription and non-prescription medication to the specific drug classification and indication for use.
4. Describe the use and side effects of prescription medications, nonprescription medications, and alternative therapies (e.g., herbal products, dietary supplements, homeopathy, lifestyle modification) used to treat common disease states.
5. Summarize point of care testing & CLIA waivers.
6. Describe investigational drug process, medications being used in off-Laboratoryel indications, and emerging drug therapies.

PHAR. 1792. Non-sterile UPS Compounding Laboratory-Hazardous & Non-Hazardous Preparations

Course Description

Provides a study and practice of compounding non-sterile preparations according to current United States Pharmacopeia (USP) chapters, National Institute of Occupational Safety and Health (NIOSH) Hazardous Drug List, Occupational Safety and Health Administration (OSHA) guidelines, and Board of Pharmacy regulations.

Student Learning Outcomes

1. Practice and adhere to effective infection control procedures.
2. Prepare patient-specific non-sterile compounded medications for distribution.
3. Prepare non-patient-specific non-sterile compounded medications for distribution.
4. Assist pharmacists in preparing, storing, and distributing non-sterile compounded medication products including those requiring special handling and documentation.
5. Describe basic concepts related to preparation for non-sterile compounding.
6. Prepare medications requiring moderate and high level non-sterile compounding as defined by USP (e.g., suppositories, tablets, complex creams).
7. Prepare or simulate non-sterile chemotherapy/hazardous drug preparations per applicable, current USP Chapters.
8. Prepare simple non-sterile medications per applicable USP chapters (e.g., reconstitution, basic ointments and creams).
9. Use information from Safety Data Sheets (SDS), National Institute of Occupational Safety and Health (NIOSH) Hazardous Drug List, and the United States Pharmacopeia (USP) to identify, handle, dispense, and safely dispose of hazardous medications and materials.
10. Assist pharmacists in preparing medications requiring compounding of non-sterile products.

PHAR 1996. Pharmacy Technician Topics

Course Description

Varies

Student Learning Outcomes

Varies

PHAR 2010. Pharmacy Technician Professionalism

Course Description

Provides practical aspects of successful employment, patient service, and pharmacy professionalism including lifelong learning, Board of Pharmacy registration and national certification requirements.

Student Learning Outcomes

1. Describe how the practice setting is used to contribute to the development of new medication products.

2. Discuss resources (e.g., journals, newsletters, educational conferences) for staying current with advances in pharmacy practice (e.g., automation, medication therapy, devices).
3. Describe the process and responsibilities required to obtain and maintain registration and/or licensure to work as a pharmacy technician.
4. Communicate clearly and effectively, both verbally and in writing.
5. Practice the importance of maintaining competency through continuing education and continuing professional development.
6. Review federal and state pharmacy law and regulations, explain workplace (non-pharmacy) laws, and demonstrate knowledge of ethical conduct expectations in the pharmacy setting.
7. Compose or rewrite a professional pharmacy technician resume and Cover Letter.
8. Identify the national pharmacy technician certification (PTCE) application process and maintenance requirements.

PHAR 2016. Pharmacy Technician Pharmacology III

Course Description

Presents a study of therapeutic categories and classifications of drugs that affect the Respiratory System, Digestive System, Endocrine System, and Immune System exploring the pharmacologic and mechanism of actions, adverse effects, side effects, drug interactions, and disease prevention concepts.

Student Learning Outcomes

1. Describe investigational drug process, medications being used in off-Laboratoryel indications, and emerging drug therapies.
2. Summarize point of care testing.
3. Distinguish between the different pharmacologic actions and adverse effects that antihistaminic, mast cell stabilizer, antiasthmatic, agents for COPD, peptic ulcers, GERD, antiemetic, agents that affect intestinal motility, adrenal steroids, gonadal hormones, oral contraceptives, erectile dysfunction, agents affecting the thyroid and parathyroid glands, bone affecting agents, pancreatic hormones and antidiabetic, antidiuretic hormone and oxytocin, antibacterial, antifungal, antiviral, antiprotozoal, anthelminthic, antiseptics, disinfectants, antineoplastic, and immunopharmacologic drugs produce.
4. Interpret medication orders and identify the various classifications of drug therapy
5. Match various prescription and non-prescription medication to the specific drug classification and indication for use.
6. Describe the use and side effects of prescription medications, nonprescription medications, and alternative therapies (e.g., herbal products, dietary supplements, homeopathy, lifestyle modification) used to treat common disease states.

PHAR 2090. Pharmacy Technical Clinical

Course Description

Provides the opportunity for practical experience applying skills gained through classroom and Laboratory instruction, within institutional and community pharmacies.

Student Learning Outcomes

1. Demonstrate ethical conduct.
2. Present an image appropriate for the profession of pharmacy in appearance and behavior.
3. Demonstrate a respectful and professional attitude when interacting with diverse patient populations, colleagues, and professionals.
4. Apply self-management skills, including time, stress, and change management.

5. Apply problem solving skills to troubleshoot common technical, systematic, and processing errors in the pharmacy setting.
6. Maintain confidentiality of patient information, and understand applicable state and federal laws.
7. Assist the pharmacist in collecting, organizing, and evaluating information for direct patient care, drug use review, and departmental management.
8. Assist the pharmacist in monitoring the practice site for compliance with federal, state and local laws, regulations and professional standards.
9. Purchase pharmaceuticals, devices, and supplies according to an established purchasing program.
10. Assist the pharmacist in assuring the continuous quality control improvement of pharmacy services.
11. Identify the pharmacy department's process for preventing medication misadventures.
12. Organize and efficiently manage work whether performed alone or as part of a team.
13. Assist the pharmacist in screening prescriptions/medical orders for completeness and authenticity and preparing and distributing medications.

PHAR 2092. Sterile USP Compounding Laboratory-Hazardous and Non-Hazardous Preparations

Course Description

Provides a study and practice of compounding sterile preparations according to current United States Pharmacopeia (USP) chapters, National Institute of Occupational Safety and Health (NIOSH) Hazardous Drug List, Occupational Safety and Health Administration (OSHA) guidelines, and Board of Pharmacy regulations.

Student Learning Outcomes

1. Practice and adhere to effective infection control procedures.
2. Prepare patient-specific sterile compounded medications for distribution.
3. Prepare non-patient-specific sterile compounded medications for distribution.
4. Assist pharmacists in preparing, storing, and distributing sterile compounded medication products including those requiring special handling and documentation.
5. Describe basic concepts related to preparation for sterile compounding.
6. Prepare compounded sterile preparations per applicable, current USP Chapters.
7. Prepare or simulate sterile chemotherapy/hazardous drug preparations per applicable, current USP Chapters.
8. Use information from Safety Data Sheets (SDS), National Institute of Occupational Safety and Health (NIOSH) Hazardous Drug List, and the United States Pharmacopeia (USP) to identify, handle, dispense, and safely dispose of hazardous medications and materials.
9. Demonstrate ability to perform Aseptic Manipulations by completing contaminant free Media Fill Challenge Tests.

PHAR 2510. Advanced Pharmacy Technician

Course Description

Presents an introduction to the knowledge and skills required for achieving Advanced Pharmacy Technician competencies. Current trends, initiatives, goals, and issues in the profession of pharmacy are emphasized.

Student Learning Outcomes

1. Apply critical thinking skills, creativity, and innovation.
2. Demonstrate the ability to effectively and professionally communicate with other healthcare professionals, payors and other individuals necessary to serve the needs of patients and practice.
3. Describe investigational drug process, medications being used in off-Laboratory indications, and emerging drug therapies.
4. Describe further knowledge and skills required for achieving advanced competencies.

5. Process, handle, and demonstrate administration techniques and document administration of immunizations and other injectable medications.
6. Describe major trends, issues, goals, and initiatives taking place in the pharmacy profession.
7. Support wellness promotion and disease prevention programs.

PHAR 2515. Advanced Pharmacy Technician Medication and Patient Safety

Course Description

Expands Medication and Patient Safety practice concepts introduced in the Entry-Level courses. Error reduction strategies are discussed using current Institute for Safe Medication Practices (ISMP) guidelines. Pharmacy Technician roles in the Medication Reconciliation and Transition of Care processes are introduced and practiced.

Student Learning Outcomes

1. Identify both active and latent failures that contributed to a described event or hazardous condition.
2. Match the latent failures of a described event or hazardous condition to ISMP's Key Elements of the Medication Use System Distinguish between human error, at risk behavior, and reckless behavior associated with the active failures.
3. Identify error-reduction strategies for latent failures.
4. Summarize risk identification theory and select methods that could be used for identifying similar, repeated, or new risks.
5. Describe the Medication Reconciliation process.
6. Describe the Transition of Care process.
7. Practice Active Listening techniques in the patient interview process.
8. Develop open ended questions used in the Medication Reconciliation process.
9. Communicate effectively with other Transition of Care Healthcare Professionals.

PHAR 2520. Advanced Pharmacy Technician Informatics

Course Description

Provides an introduction to Pharmacy Informatics. Focuses on key technologies and the role the Information Technology and Pharmacy teams play in increasing Medication Safety.

Student Learning Outcomes

1. Describe pharmacy informatics.
2. Discuss the various roles and responsibilities of individuals during the implementation process in pharmacy informatics.
3. Compare and contrast the major differences between the IT department and the Pharmacy IT team.
4. Discuss how medication Safety is improving within the Electronic Order Entry Systems.
5. Identify the key technologies used across the medication use spectrum.

PHAR 2592L. Advanced Pharmacy Technician Laboratory

Course Description

Provides the opportunity to manage, supervise, and verify the work of pharmacy technicians or other healthcare professionals in a simulated pharmacy setting. Simulated patient point of care testing and immunization techniques are practiced. Communication with healthcare professionals and patients is emphasized.

Student Learning Outcomes

1. Demonstrate capability to manage or supervise pharmacy technicians in matters such as conflict resolution, teamwork, and customer service.
2. Apply supervisory skills related to human resource policies and procedures.

3. Apply the appropriate medication use process to investigational drugs, medications being used in off-Laboratoryel indications, and emerging drug therapies as required.
4. Process, handle, and demonstrate administration techniques and document administration of immunizations and other injectable medications.
5. Verify measurements, preparation, and/or packaging of medications produced by other healthcare professionals.
6. Perform point-of-care testing to assist pharmacist in assessing patient's clinical status.
7. Demonstrate the ability to effectively and professionally communicate with other healthcare professionals, payors and other individuals necessary to serve the needs of patients and practice.

PHAR 2690. Advanced Pharmacy Technical Clinical

Course Description

Provides the opportunity for practical experience applying advanced skills gained through classroom and Laboratory instruction, within institutional and community pharmacies.

Student Learning Outcomes

1. Apply accepted procedures in purchasing pharmaceuticals, devices, and supplies.
2. Apply accepted procedures in inventory control of medications, equipment, and devices.
3. Manage drug product inventory stored in equipment or devices used to ensure the safety and accuracy of medication dispensing.
4. Assist the pharmacist in providing medication management services.
5. Assist in the operational activities that support the Pharmacists' Patient Care Process.
6. Monitor pharmacy compliance using professional standards and relevant legal, regulatory, formulary, contractual, and safety requirements.
7. Support wellness promotion and disease prevention programs.
8. Initiate, verify, and manage the adjudication of billing for complex and/or specialized pharmacy services and goods.

PHAR 2999. Advanced Pharmacy Technician Capstone

Course Description

Varies

Student Learning Outcomes

Varies

Philosophy (PHIL)

PHIL 1115. Introduction to Philosophy

Course Description

In this course, students will be introduced to some of the key questions of philosophy through the study of classical and contemporary thinkers. Some of the questions students might consider are: Do we have free will? What is knowledge? What

is the mind? What are our moral obligations to others? Students will engage with and learn to critically assess various philosophical approaches to such questions.

Student Learning Outcomes

1. Comprehend and differentiate between various philosophical approaches to questions within fields such as metaphysics, epistemology, ethics, and aesthetics.
2. Critically evaluate various philosophical arguments and positions.

PHIL 1120. Logic, Reasoning, and Critical Thinking

Course Description

The purpose of this course is to teach students how to analyze, critique, and construct arguments. The course includes an introductory survey of important logical concepts and tools needed for argument analysis. These concepts and tools will be used to examine select philosophical and scholarly texts.

Student Learning Outcomes

1. Comprehend components of arguments.
2. Acquire a general understanding of the essential logical concepts needed for argument analysis, such as validity, soundness, deduction, and induction.
3. Critically assess arguments with an aim toward identifying what constitutes effective and reasonable argument strategies.
4. Learn to identify common logical fallacies.
5. Apply knowledge of argumentation principles to philosophical and scholarly texts.

PHIL 1130. Contemporary Moral Issues

Course Description

This course will introduce students to and engage them in the philosophical analysis of contemporary moral issues. Students will read and discuss texts dealing with various controversial social issues, which might include health care access, physician-assisted suicide and euthanasia, the death penalty, incarceration, war, and terrorism.

Student Learning Outcomes

1. Understand and analyze various textual arguments on contemporary moral issues.
2. Demonstrate the ability to critically read, write, and discuss contemporary moral issues from the standpoint of a variety of ethical theories.

PHIL 1135. Introduction to Asian Philosophies

Course Description

For as long as human beings have recorded their thoughts, they have shown an interest in what it means to be a human being of good character, a useful citizen within society and a fulfilled and contented person. In this course we shall examine how several thinkers from India and China have approached this problem. Some have provided anecdotes from which the reader is expected to extract an important lesson, while others have written more systematic essays or set out programs for the cultivation of virtue and guidelines of appropriate conduct. The class will combine background lectures and class discussion of assigned readings.

Student Learning Outcomes

1. Identify some of the core problems in the philosophical tradition in Asian philosophies.
2. Identify and compare various philosophical assumptions and viewpoints of Asian philosophies, including their own and those of their society.
3. Compare and analyze the ideas and arguments of various Asian philosophical viewpoints, including their own.

PHIL 1140. Philosophy and World Religions

Course Description

A philosophical enquiry into the religious life; an introduction to philosophical questions about religions focused on consideration of some of the traditional approaches to God and what it means to be religious.

Student Learning Outcomes

1. Identify and describe philosophical theories regarding religion
2. Develop and enhance your critical thinking skills, particularly in the evaluation of arguments about the truth or applicability of particular religious or secular viewpoints.
3. Analyze the teachings of world religions by describing their similarities and differences.
4. Explain the philosophical beliefs, practices, and ethical standards of the major world religions as well as emerging religious movements.
5. Explain how each religion evolved historically, philosophically, and spiritually as well as the contemporary ideas and practices each religion.

PHIL 1145. Philosophy, Law, and Ethics

Course Description

An introduction to practical problems in moral, social, political, and legal philosophy. Topics to be discussed may include ecology, animal rights, pornography, hate speech on campus, same-sex marriage, justice, abortion, terrorism, treatment of illegal immigrants, and New Mexican Aboriginal Peoples' land claims.

Student Learning Outcomes

1. The aim of this course is to familiarize students with some of the ethical and philosophical issues that arise in connection with laws/legality in general and criminal and constitutional law in the U.S. in particular.
2. It examines issues in moral philosophy, political philosophy, and philosophy of law.

PHIL 1146. Ethics and Values in STEM (previous title -Philosophy in Science and Engineering)

Course Description

In this course, students learn about research ethics and the social responsibilities of scientists and engineers. They also examine the diverse roles for values throughout research and development in STEM, including judgments about funding, methodology, communication, and public engagement. The course introduces students to pressing questions about justice, equality, and democracy related to the responsibilities for technological development by surveying issues in areas such as computer science, environmental justice, global ethics, health equity, and military ethics.

Student Learning Outcomes

By the end of class, students will be able to:

1. Construct and defend arguments about ethics in science and engineering, avoiding logical fallacies and responding to strong objections.
2. Write creative and analytic essays about ethical issues in science and engineering, based on charitable readings of other scholars and with clear structure.
3. Conduct basic research in scholarly literature related to ethics and STEM.
4. Collaborate fairly with team members in a group to analyze an ethical problem and weigh different perspectives and solutions.
5. Describe the rights and responsibilities of researchers, participants, and technologists.
6. Recognize how value judgments shape the process of research and development.
7. Weigh the ethical risks and benefits of funding sources, including governmental, industrial, and philanthropic.
8. Consider and evaluate diverse viewpoints in research or policy making locally and globally, accounting for gender, race, ethnicity, class, nationality, and financial conflicts of interest; and
9. Deliberate over their social responsibility for technological development and the burden of social consequences.

PHIL 1150. Philosophy of Play

Course Description

Play is everywhere in our thinking, speaking, and behaving we “play hardball,” “play the fool,” “play devil’s advocate,” we play “for real, for all it’s worth” and for “just fooling.” We “play along” and “play around,” play some things “up” and others “down,” we wait to see how “things will play out” When we want to get even with somebody, we say “two can play that game.” Play is for bucking authority (“when the cat’s away, the mice will play”) and for conforming to it (“play along with”) Play is about fairness (we like a “level playing field”), but we “play dirty” too. We use play as an excuse - “I’m just playing with you; can’t you take a joke?” - and as a way to deceive others (“playing someone for a fool”). Quitters “roll over and play dead,” while responsible people “play their part.” Often the things that are most everywhere and ordinary are the things we investigate and understand the least. The purpose of this class is to investigate play: what it is, how it works, what it does and contributes, and what’s at stake in play.

Student Learning Outcomes

This course will develop your

1. Knowledge of the three major philosophical fields (metaphysics, epistemology, and values) and key philosophical methods (skepticism, logic, analysis, reflection, and judgment)
2. Understanding of the workings of play in language and culture, academic disciplines and professional fields, creativity and growth
3. Understanding of ethics and play
4. Ability to use play to enhance your thinking and working
5. Ability to articulate your philosophical understanding clearly and effectively, orally and in writing

PHIL 1155. Philosophy of Music

Course Description

This is an introductory course in the philosophy of music. This course will focus on two general themes. The first will concern the nature of music: What is music? Why is music important? How can we distinguish good music from bad music? The second will reflect upon how specific pieces of music speak to certain traditional philosophical problems, perhaps in a way unique to music. We will draw examples from a wide variety of musical genres, from classical music, gospel, jazz and blues to folk, rock, punk and rap. Students will be encouraged to think philosophically about their preferred musical form.

Student Learning Outcomes

The aim of this course is to introduce some important philosophical questions and methods in such a way as to develop the student's ability for abstract logical thinking and critical analysis of arguments and ideas while fostering an understanding of our philosophical heritage through focus on music. By the end of the course students will be able to

1. Understand and articulate some of the leading philosophical theories of music,
2. Justify through philosophical argumentation their own views on issues in the philosophy of music, and
3. Through reflection on pieces of music articulate and address their own views on some perennial philosophical issues. A student's success in this class depends on how well he/she meets these goals.

PHIL 1160. History of Philosophy

Course Description

Not Available

Student Learning Outcomes

Not Available

PHIL 2040. Science and Gender

Course Description

This course introduces students to the complex interplay between science and gender, with special attention to intersections with sexuality, race, and ethnicity. We analyze the concepts of “sex” and “gender” by critically investigating the nature/nurture debates about sex differences. The course further prompts students to think more broadly about gender in science in discussions over bias, values, and scientific objectivity. Throughout the course, we also survey different critical

approaches to biomedicine involving women's health and LGBTQ medicine, e.g., breast cancer, HIV/AIDS, and reproductive health.

Student Learning Outcomes

By the end of class, students will be able to:

1. Construct and clearly communicate arguments about sex/gender/sexuality and science; and defend their judgments with charity and without logical fallacies.
2. Write and research essays about contemporary scientific debates over gender with analytic structure that engage with popular and scholarly conversations.
3. Recognize how human cultures and value judgments shape the process of science and the practice of medicine, including dichotomies (e.g., nature/culture, sex/gender), biases (e.g., heteronormativity, Eurocentrism), and standpoints (e.g., Black feminism, disability rights).
4. Evaluate critically scientific studies in terms of their assumptions about sex, gender, sexuality, etc., and their methodology; and analyze how to improve their theories, inferences, and objectivity.

PHIL 1996. Topics in Philosophy

Course Description

Varies

Student Learning Outcomes

Varies

PHIL 2110. Introduction to Ethics

Course Description

This course introduces students to the philosophical study of morality and will explore questions concerning our human obligations to others and related issues. Students may be asked to relate various approaches to ethics to present-day ethical debates and their own lives.

Student Learning Outcomes

1. Differential between various ethical theories, which may include virtue ethics, deontology, and consequentialism.
2. Critically evaluate various ethical theories and positions.

PHIL 2117. Ethics and Sustainability

Course Description

This course provides a broad survey of ethics with an emphasis on sustainability. Students will acquire an understanding of the fundamental's normative ethical theory, and theories of justice through analysis of moral arguments that arise through consideration of topics in sustainability. The course will also provide opportunities for practice making moral arguments.

Writing Intensive.

Student Learning Outcomes

1. Analyze, and critique the moral arguments of others.
2. Explain and apply normative ethical theories in the context of sustainability.
3. Explain leading theories of justice in the context of sustainability.
4. Demonstrate the ability to create original moral arguments relevant to issues in sustainability, both written and oral.
5. Explain basic concepts in sustainability, such as the three basic dimensions of sustainability--environmental health, social equity, and economic sustainability.

PHIL 2120. Biomedical Ethics

Course Description

The course examines ethical theories against the reality of current issues in the medical professions and in the fields of bio research. Topics such as euthanasia, genetic experimentation, informed consent, abortion and human and animal experimentation are studied from widely different ethical perspectives.

Student Learning Outcomes

1. Identify strengths and weaknesses of various ethical theories and conceptions of rights.
2. Apply various ethical theories and conceptions of rights to current issues within biomedical ethics.
3. Summarize and examine various positions and arguments in current issues within biomedical ethics.

PHIL 2125. Comparative World Religions**Course Description**

A comparative exploration of major world religions, including Islam, Taoism, Hinduism, Buddhism, Confucianism, Judaism, Christianity, Native-American, and Zen traditions. Emphasis is placed on the historical and philosophical contexts of these religions and on their common and diverse values, theories of reality, knowledge, and beauty.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand the nature of a comparative analysis of religious traditions
2. Describe the historical contexts of the major religious traditions wherein the similarities and differences among them are identified.
3. Describe the cultural contexts of the major religious traditions wherein the similarities and differences between them are identified.
4. Describe the philosophical contexts of the major traditions wherein the metaphysical, epistemological, ethical, and aesthetic similarities and differences between them are identified.

PHIL 2130. Environmental Ethics**Course Description**

This course will be an introductory survey of approaches to the ethical responsibilities humans have to the environment. Students will explore the ethical issues raised by the way humans engage with the environment in areas that might include science, engineering, and technology.

Student Learning Outcomes

1. Examine the human relationship to the environment against the background of classical and contemporary ethical theories.
2. Comprehend central controversies and assumptions in contemporary environmental ethics.
3. Comprehend the connections between environmental ethics, science, engineering, business, technology, and public policy.

PHIL 2135. Ethics of Technology**Course Description**

Provides a forum for discussion of the ethical and social problems arising from the uses of computers and technology.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Apply different moral theories to the issues covered in the course
2. Apply techniques for moral decision-making in problematic situations
3. Critique positions and arguments in contemporary technology debates

PHIL 2136. Understanding Technoscientific Controversies**Course Description**

This science and technology studies course challenges students to think more carefully and critically about technoscientific environmental problems and controversies, such as climate change, vaccine hesitancy, genetic engineering, pharmaceutical drugs, and nuclear energy. Students will examine the cognitive, cultural, economic, ethical, political, and communicative roots of disagreement, learning to recognize that these issues are not solved by presenting a “balanced view” of both sides or by simply informing “ignorant” opponents. Students will apply these thinking skills in order to develop more productive and empathic solutions to tenacious and highly polarized public conflicts.

Student Learning Outcomes

1. Discern and describe how subjective judgements influence scientific decisions about what to study, how to study it, and how to deal with uncertainty.
2. Recognize and articulate past experiences, trust, and moral commitments influence whether people embrace, or reject, particular scientific facts or technologies.
3. Uncover how values are laundered through ostensibly scientific rhetoric about public issues.
4. Explore more productive and democratic pathways for reconciling disagreements about enduring.

PHIL 2140. Professional Ethics

Course Description

This course focuses on some of the ethical issues that arise in the context of professional life. Beginning with an overview of several major ethical theories, the course will consider how these theories, which traditionally concern personal morality, apply to life in a professional setting. The course will focus on issues that might include lying and truth-telling, whistleblowing, confidentiality, the obligations of businesses toward the public, and the ethical concerns of privacy in journalism. Using a combination of readings, case studies, and discussion, students will explore these issues by critically evaluating ethical principles and also applying them to real-world settings.

Student Learning Outcomes

1. Gain a basic understanding of major ethical theories.
2. Engage in informed critical discussion on the nature of professionalism and the ethical challenges inherent in professionalism.
3. Recognize and analyze the types of ethical challenges and moral dilemmas that confront members of a range of professions, such as in business, engineering, and medical.
4. Relate ethical concepts and materials to ethical problems in specific professions both in writing and in discussion.

PHIL 2145. Survey of the New Testament

Course Description

This course will examine philosophic and religious topics within the Western tradition, starting with the Greek philosophers and moving to the modern time period. Additionally, the course will weave in eastern thought. Central to the course will be emphasizing the capacity to think logically and critically. We will examine Figures studied will include most of the following: Plato Aristotle, Descartes, Berkely. Hume, Kant, Mill and Nietzsche and may include others.

Student Learning Outcomes

Not Available

PHIL 2150. Morality and Society

Course Description

This course will focus on the philosophical analysis of contemporary moral issues. Students will read and discuss texts dealing with various controversial social issues, which might include health care access, physician-assisted suicide and euthanasia, the death penalty, incarceration, war, and terrorism.

Student Learning Outcomes

1. Understand and analyze various textual arguments on contemporary moral issues.

2. Demonstrate the ability to critically read, write, and discuss contemporary moral issues from the standpoint of a variety of ethical theories.

PHIL 2160. Philosophy in Film

Course Description

In this course we will be using films (and discussions of particular films and filmmaking techniques), along with an assortment of more "traditional" academic texts, as a means to explore important philosophical themes and debates. It is intended to be an introduction not only to philosophy but also critical thinking.

Student Learning Outcomes

1. Students will analyze and critically interpret significant and primary texts.
2. Students will compare art forms, modes of thought and expression, and processes across a range of historical periods and/or structures (such as political, geographic, economic, social, cultural, religious, and intellectual).
3. Students will recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
4. Students will draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought.
5. Students will possess an understanding of the present that is informed by an awareness of past heritages in human history, arts, philosophy, religion, and literature, including the complex and interdependent relationships among cultures.

PHIL 2165. Navajo Philosophy

Course Description

Examines Dine philosophical thought regarding metaphysics, epistemology, aesthetics, ethics, religion, and traditional social structure.

Student Learning Outcomes

Upon completion of the course, the student will be able to develop:

1. An understanding of Navajo origins.
2. An understanding of the Navajo identity.
3. A broader perspective on the history of the Navajo People according to mythology.
4. Insight into the values and relationship of Navajo principles.
5. An understanding of the origins of some of these principles.
6. An understanding of the Navajo's perception of the environment.
7. An understanding on one's roles and responsibilities in terms of the Navajo worldview.
8. An understanding of Navajo organization of knowledge, as designed to promote a lifestyle becoming an ideal life, as espoused in the Blessing Way.
9. A better understanding of Navajo values, through study of the traditional Navajo values.

PHIL 2210. Early Modern Philosophy

Course Description

This course is an introductory survey of early modern Western philosophy. Through an in-depth reading of primary source material, this course will examine the traditions of Rationalism and Empiricism that emerged during the seventeenth and eighteenth centuries. Concepts to be discussed might include theories of knowledge and metaphysics, early modern scientific thought, and theories of the self.

Student Learning Outcomes

1. Analyze philosophical arguments from philosophical texts of the early modern period, including the thesis that the author is trying to establish, as well as the premises and intermediate statements that allegedly entail the conclusion.

2. Identify fundamental questions peculiar to philosophy as a discipline in Western thought, including questions of metaphysics, epistemology, and ethics through the reading of primary texts.
3. Summarize and compare various responses to these fundamental questions and how they change through time throughout the early modern period.

PHIL 2220. Greek Philosophy

Course Description

This course is an introductory survey of early and classical Greek philosophy. The course will include discussion of such philosophers as the Pre-Socratics, the Sophists, Socrates, Plato and Aristotle. Topics to be discussed may include the beginnings of scientific thought, theories of the self, the concept of being, virtue ethics, happiness, and theories of justice.

Student Learning Outcomes

1. Acquire a general understanding of the cultural and intellectual contexts out of which early and classical Greek philosophy arose.
2. Summarize and examine the basic philosophical theories of the early and classical Greek philosophers, which might cover their conceptions of knowledge, ethics, metaphysics, and political philosophy.
3. Identify and compare the various approaches and answers to fundamental questions asked by Greek philosophers.

PHIL 2225. Greek Thought

Course Description

An introductory survey of early and classical Greek philosophy, literature, and history. Figures: the Pre-Socratics, Socrates, Plato and Aristotle; Homer and Sophocles; Herodotus and Thucydides.

Student Learning Outcomes

At the conclusion of the course, students should be able to:

1. Identify and discuss major intellectual or philosophical themes within the assigned works.
2. Discuss the assigned works within the context of ancient Greek cultural attitudes, intellectual thought, history, or some combination thereof.
3. Discuss ways in which ancient Greek attitudes and intellectual ideas connect to or differ from those of the modern world.

PHIL 2230. Philosophical Thought

Course Description

In this course, students will grapple with some of the key questions of philosophy through the study of classical and contemporary thinkers. Students will become familiar with the perennial problems in subfields of philosophy such as metaphysics, epistemology, ethics, and aesthetics. They will learn to approach these problems both critically and sympathetically.

Student Learning Outcomes

1. Comprehend and differentiate between various philosophical approaches to questions within fields such as metaphysics, epistemology, ethics, and aesthetics.
2. Critically evaluate various philosophical arguments and positions.
3. Identify the differences that characterize the major subfields of philosophy.

PHIL 2240. Introduction to Existentialism

Course Description

The aim of this course is to introduce students to the tradition of existential philosophy through a careful reading of philosophical texts by authors, such as Kierkegaard, Nietzsche, Sartre, de Beauvoir, and Heidegger.

Student Learning Outcomes

1. Comprehend and analyze positions defended by authors who have contributed to the existentialist tradition, such as Kierkegaard, Nietzsche, Sartre, de Beauvoir, and Heidegger.
2. Identify and comprehend recurring themes in the existentialist tradition, including authenticity, freedom, and meaninglessness.
3. Develop an appreciation for how authors in the existentialist tradition depart from previous philosophical thinking about reality, knowledge, and values.

PHIL 2255. Western Philosophy

Course Description

Western Philosophy will introduce you to

- major philosophical problems, systems, and thinkers in the western tradition
- the language and methodology of philosophy
- evaluating and applying philosophical concepts and theories
- the role of philosophy in the study and practice of other areas such as science
- politics, and religion
- one form of eastern philosophy, Taoism, for comparison.

Student Learning Outcomes

By the end of the course, you will need to demonstrate that you

1. Have a working understanding of the philosophical texts covered in the class
2. Can use philosophical methods effectively to formulate, consider, and explore your ideas and experience
3. Can write about philosophical texts, concepts, and processes in original, sophisticated, and perceptive ways while using academic conventions of citation and style.

PHIL 2310. Business Ethics

Course Description

Business Ethics is a philosophy course that studies ethical theory and applies it to contemporary ethical and social problems that arise in the practice of business. These will include concerns with how businesses affect employees, stakeholders, governments, economics, and the environment. This will entail concerns about how society should cope with certain kinds of problems of production and distribution, for instance, how it should distribute wealth or regulate commerce.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Identify the strengths and weaknesses of different moral theories and conceptions of rights.
2. Apply different moral theories and conceptions of rights to the issues covered in the course.
3. Analyze positions and arguments in contemporary business ethics debates.

Phlebotomy (PHLB)

PHLB 1110C. Phlebotomy Concepts Lecture and Laboratory

Course Description

A special course covering the basic concepts and skills involved in phlebotomy and laboratory procedures. The first half of the course includes didactic instruction (60 hours) of basic anatomy and physiology, medical terminology, medical legal and ethical issues, patient care, best practices, and quality assurance. The Laboratory (10 hours) addresses collection and handling of blood and non-blood specimens, patient communication skills, and ethical considerations. Prepare students for clinical skills rotations. Course standards are based on the Clinical Laboratory Standards Institute, Needlestick Prevention Act, Joint Commission, 2008 National Safety Goals, OSHA, and CDC.

The second half of the course includes application of skills through 90 hours practicum, providing hands on experiences in a supervised work environment collecting blood specimens from patients at local Laboratory draw facilities. Prepare students for employment and entry level phlebotomist in health care settings.

Student Learning Outcomes

1. Identify basic Anatomy and Physiology as it pertains to the circulatory system to effectively locate veins for blood collection.
2. Perform various blood collection techniques, including venipuncture and capillary puncture, while adhering to healthcare regulations and facility safety and infection control protocols.
3. Identify variables that affect procedures and results; take appropriate corrective action when needed.
4. Demonstrate infection control measures, including the use of personal protective equipment (PPE) and proper disposal of biohazardous materials.
5. Demonstrate skills to communicate effectively with patients, including explaining procedures, addressing concerns, and ensuring patient comfort during blood collection.
6. Practice proper procedures for labeling, handling, and transporting blood specimens to maintain integrity and prevent contamination.
7. Meet requirements to sit for the Phlebotomist Certification Exam, Including 100 clinical hours (10 Laboratory hours+90 rotation hours) and 100 successful unassisted venipunctures.

PHLB 1110. Phlebotomy Concepts

Course Description

An examination of concepts of phlebotomy and venipuncture procedures along with basic anatomy and physiology, medical terminology, medical legal and ethical issues, patient care, best practices, and quality assurance.

Student Learning Outcomes

1. Discuss the evolution of phlebotomy and the role of a practicing phlebotomist.
2. Describe the structure of the health care delivery system.
3. Identify the concepts of infection control and other safety protocols as they relate to the role of the phlebotomist.
4. Define and correctly use selected medical terms in their proper context.
5. Discuss basic anatomy and physiology, to include the circulatory system, as it relates to the role of the phlebotomist.
6. Identify appropriate blood collection equipment, additives, order of draw techniques, and venipuncture procedures.
7. Describe quality assurance as it pertains to phlebotomy.
8. Identify legal and ethical issues and considerations pertaining to phlebotomy.
9. Describe effective communication with patients and members of the healthcare team.

PHLB 1110L. Phlebotomy Concepts Laboratory

Course Description

A Laboratory course in which students practice phlebotomy procedures. Major topics include collection and handling of blood and non-blood specimens, patient communication skills, and ethical considerations.

Student Learning Outcomes

1. Apply best practice guidelines for patient, Laboratory, and personal safety.
2. Demonstrate an understanding of Laboratory work equipment and quality control measures.
3. Utilize appropriate equipment and supplies need to collect blood by venipuncture.
4. Demonstrate correct technique for venipuncture blood collection using evacuated tube system, syringe, and/or butterfly.
5. Demonstrate actions taken for patient complications and special conditions pertaining to blood collection.
6. Implement professional communication behaviors with patients and members of the health care team.

PHLB 1112. Phlebotomy Clinical

Course Description

A course providing clinical experience in phlebotomy. Students work in a health-care setting, collect blood and non-blood specimens, and provide patient care.

Student Learning Outcomes

1. Practice phlebotomy in accordance with established standards of practice and institutional policies and procedures.
2. Participate as a member of the phlebotomy health care team.
3. Use verbal and nonverbal communication that promotes caring and fosters therapeutic relationships with patients and members of the health care team.
4. Use cultural and age-appropriate interventions when performing phlebotomy procedures.
5. Maintain professional accountability and responsibility when performing phlebotomy procedures.

PHLB 1115. Introduction to Phlebotomy

Course Description

An introductory course in which students practice phlebotomy procedures. The general topics included are collection and handling of blood and non-blood specimens, patient communication skills, and ethical considerations.

Student Learning Outcomes

1. Apply best practice guidelines for patients, Laboratory, and personal safety.
2. Demonstrate an understanding of phlebotomy work equipment and quality control measures.
3. Utilize appropriate equipment and supplies needed to collect blood by venipuncture.
4. Demonstrate correct technique for venipuncture blood collection using evacuated tube system, syringe, and/or butterfly.
5. Demonstrate suitable problem-solving strategies in a practical laboratory environment.
6. Apply professional communication behavior strategies with patients and members of the health care team.

PHLB 1120. Special Practices in Phlebotomy

Course Description

This phlebotomy course focuses on the theory of capillary blood collection, specialized blood and non-blood specimen collection, handling, and processing including point-of-care testing (POCT). Other topics include expanded considerations of medical terminology and non-cardiac anatomy and physiology. Review of material to prepare the student for the national certification exam is included.

Student Learning Outcomes

1. Explain pre-analytical variables, complications, and procedural errors associated with blood collection.
2. Describe the procedures for the collection, processing, and handling of capillary blood samples, arterial blood gases, and special blood and non-blood specimen collections.
3. Define Point-of-Care testing (POCT) to include the instruments used.
4. Explain the Laboratory Information System (LIS) and how it supports the laboratory processes.

PHLB 1160. Phlebotomy Exam Review

Course Description

This course is designed to prepare phlebotomy students for the Phlebotomy Certification Exam through the American Society of Clinical Pathologists. Topics include a review of phlebotomy theory, anatomy, infection control, blood collection procedures, nonblood specimen collection, and point of care testing.

Student Learning Outcomes

1. Identify the phlebotomist role in patient identification, preparation, specimen collection, specimen handling, and specimen delivery.
2. Identify the major arm veins.
3. Identify the various types of antiseptics used in phlebotomy.
4. Identify the various elements of the order of draw.
5. Identify the various supplies used in an ETS, Syringe, and Butterfly draw.
6. Identify the criteria for specimen rejection.

PHLB 1190. Phlebotomist Basic

Course Description

This course provides the latest information, techniques, skills, and equipment for blood and specimen collection based on the standards of the Clinical and Laboratory Standards Institute, Needlestick Prevention Act, Joint Commission 2008 National Patient Safety Goals, OSHA and CDC. An advanced skills Laboratory is included in the course to provide a "hands-on" practice experience and a 30 hour practicum in a supervised work environment collecting blood and specimens on actual patients for Laboratory tests. Attendance is mandatory. Prepares students for employment as a phlebotomist in health care settings. Requires a "C" or better to pass. Upon successful completion of the course, student has the opportunity to test for National Healthcareer Certification.

Student Learning Outcomes

1. Demonstrate use of available resources and equipment pertinent to the role of a phlebotomist.
2. Employ concepts of medical asepsis and infection control.

PHLB 1990. Phlebotomy Practicum

Course Description

Varies

Student Learning Outcomes

Varies

PHLB 2996. Phlebotomy Topics

Course Description

Varies

Student Learning Outcomes

Varies

Physical Education (PHED)

PHED 1110. Dance:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

Student Learning Outcomes

Varies

PHED 1140. Zumba:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1160. The Art of Dancing

Course Description

The Art of Dancing is a course for students who wish to learn to dance or to improve their dancing. Emphasis is on ballroom dancing with techniques for dancing the Fox Trot, Waltz, Tango, Rumba, La Conga, Samba Jitterbug and the Lindy Hop. Students will be introduced to ballroom etiquette, will understand the elements of leading and following, and will be able to tell what kind of dance the orchestra is playing.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

- I. Introduction Students will:
 - A. Define dancing as an art.
 - B. Demonstrate the walking step, or one step.
 - C. Develop dance form.
 1. Define the line of direction.
 2. Demonstrate walking correctly.
 3. Understand the man's instructions.
 4. Understand the girl's instructions.
 - D. Keep time to music and develop a sense of rhythm.
- II. Dances Students will:
 - A. Demonstrate the Fox Trot.
 - B. Demonstrate the Waltz.
 - C. Demonstrate the Tango.
 - D. Demonstrate the Rumba.
 - E. Demonstrate La Conga.
 - F. Demonstrate the Samba.
 - G. Demonstrate the Little Foot.
 - H. Demonstrate the Jitterbug.
 - I. Demonstrate the Lindy Hop.
- III. Etiquette

PHED 1210. Basketball:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1230. Individual Sport:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1280. Volleyball:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1290. Team Sport:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1290. Team Sport: Pickleball Beginner Level I

Course Description

This introductory course is designed for students who are new to pickleball. Emphasis is placed on fundamentals skills, rules, scoring, and court awareness. Students will learn proper grip, footwork, and stroke mechanics while developing confidence through drills and modified games. Instruction focuses on forehand and backhand groundstrokes, serving, returning, and safe play.

Student Learning Outcomes

1. Identify and apply pickleball rules and terminology.
2. Demonstrate proper stroke mechanics and basic shot control.
3. Serve legally and maintain simple rallies.
4. Exhibit teamwork, communications, and sportsmanship.

PHED 1290. Team Sport: Pickleball Beginner Level II

Course Description

Designed for players who possess basic skills and understanding of pickleball rules, this course advances shot consistency, placement, and control. Students will refine serves, returns, volleys, and dinks, while learning more complex elements such as third shot drops, transitions, and doubles positioning. Emphasis is placed on teamwork, communication, and court strategy. Competitive drills and structured match play helps students apply tactics for effective selection and game management.

Student Learning Outcomes

1. Execute consistent serves, returns, and third shot drops.
2. Perform volleys and dinks under game conditions.
3. Demonstrate movement through transition zones.
4. Communicate effectively with partners during doubles play.
5. Apply strategic thinking and decision making in competitive situations.

PHED 1290. Team Sport Pickleball Intermediate Level I

Course Description

This course is intended for experienced players seeking to refine advanced techniques and develop strategic awareness for competitive play. Students will work on advanced dinking, resets, third-shot decision making, and transition zone movement. Topics include defense recovery, anticipation, partner formations, and match strategy. Instruction emphasizes precision, adaptability, and mental composure under pressure. Regular match play and performance feedback prepare students for tournament or league level competition.

Student Learning Outcomes

1. Execute advanced shot types with precision and control.
2. Adjust strategies dynamically in response to opponents tactics.
3. Apply advanced doubles formations and teamwork.

4. Demonstrate composure and ethical play and competition.
5. Compete effectively in structured match environments.

PHED 1310. Swim I:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1320. Aqua Fit:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1330. Lifeguarding:

Course Description:

Skills training for a non surf lifeguard. The course will include Standard First Aid and CPR certification.

Student Learning Outcomes:

1. To help the student become aware of the common hazards associated with various types of aquatic facilities and to develop the knowledge and skills to eliminate or minimize such hazards.
2. To help the student develop the skills necessary to recognize a person in distress or in a drowning situation and to effectively rescue that person.
3. To help the student understand their responsibility to their employer, fellow employees and especially to the patrons of their facility.
4. To provide explanations, demonstrations, practice and review of the rescue skills essential for lifeguarding.
5. To instill in the students an understanding and appreciation for the responsibilities, swimming skills and additional duties of lifeguarding.
6. To develop more advanced swimming skills to assist in a water rescue.

PHED 1410. Yoga:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1420. Stretch/Relax:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1430. Pilates:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1440. Tai Chi

Course Description

Introduces the practice and philosophy of Tai Chi. Students will use breathing, alignment, precise body mechanics and soft, graceful movements to develop their understanding of the practice.

Student Learning Outcomes

1. Demonstrate basic skills, principles, and breathing techniques that are needed to practice Tai Chi.
2. Demonstrate relaxation and revitalization techniques through Tai Chi skills.
3. Apply the principles of alignment, stretching, and relaxation to the Tai Chi postures.
4. Demonstrate specific Tai Chi poses and postures.

5. Understand and explain the history of Tai Chi.
6. Recognize the benefits of Tai Chi practice.

PHED 1460. Conditioning:**Course Description**

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1510. Training:**Course Description**

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1610. Fitness for Life**Course Description**

An introduction to current physical activity guidelines emphasizing activities that improve the five health-related components of fitness. Current principles and guidelines of fitness and nutrition are used as the foundation for designing an individualized exercise program.

Student Learning Outcomes

1. Describe the most current physical activity guidelines.
2. Interpret individual fitness assessment and apply results to personal fitness goals.
3. Identify and explain the six fitness principles.
4. Execute a safe and effective exercise regimen.
5. Demonstrate an understanding of basic nutrition as it relates to the U.S. Dietary Guidelines.
6. Demonstrate the skills to create aerobic, resistance training and stretching programs based on individual fitness assessment results and lifetime goals.

PHED 1620. Fitness:**Course Description**

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1620. Fitness: Concepts in Physical Education**Course Description**

A foundation in the historical development; the physiological, psychological, and sociological components; current trends; contemporary issues and the professional elements of physical education.

Student Learning Outcomes

1. Explain the history, purpose, benefits, and philosophy of physical education (PE).
2. Identify the duties and challenges in PE.
3. Identify, develop, and implement organizational and instructional methods in PE that align with state content standards with benchmarks.
4. Create and assess appropriate instructional resources that meets learner developmental needs in the psychomotor, cognitive, and affective domains.
5. Understand assessment tools to measure student learning in the psychomotor, cognitive, and affective domains.
6. Use a variety of formal and informal assessment techniques that are developmentally appropriate and congruent with physical activity learning goals that align with state content standards with benchmarks.

PHED 1630. Career Fitness:**Course Description**

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1670. Aerobics:**Course Description**

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1710. Martial Arts:**Course Description**

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1810. Muay Thai Boxing Fundamentals**Course Description**

An introduction to Muay Thai boxing. Students will learn the basic techniques, skills and practice, including kicks, punches, elbows, knees and basic combinations with partners on Thai pads and solo on punching bags. Students will increase flexibility, strength, balance and cardiovascular health. Emphasis is placed on safety, injury prevention, conditioning, flexibility and clear communication.

Student Learning Outcome

1. Demonstrate, name and perform at a basic level the striking skills and movements of Muay Thai boxing including: jab, cross, hooks, uppercuts, roundhouse kicks, teeps, skip knees, straight knees, round knees and six elbows.
2. Demonstrate the respect and tradition associated with the practice of Muay Thai boxing including the wai.
3. Demonstrate at a basic level safe and accurate Thai pad holding for each strike.
4. Demonstrate and practice the principles of Muay Thai boxing and Conscious Combat including informed and active consent, clear verbal communication, respect of boundaries and integration of instructor feedback.

PHED 1810. Muay Thai Boxing Intermediate**Course Description**

Students will hone the techniques, skills and practice of Muay Thai boxing including kicks, punches, elbows, knees and more complex combinations. Students will learn to defend from attack and respond. Students will practice partner drills while wearing protective equipment or holding pads. Students will increase speed, balance, flexibility, strength and cardiovascular health. Emphasis is placed on safety, injury prevention, conditioning, physical form, accuracy and clear communication.

Student Learning Outcomes

1. Demonstrate, name and perform the striking skills and movements of Muay Thai boxing including: jab, cross, hooks, uppercuts, roundhouse kicks, teeps, skip knees, straight knees, round knees and six elbows.
2. Demonstrate, name and perform basic defenses of Muay Thai boxing including: parry, slip, evade, arm and leg blocks and block-and-returns.
3. Demonstrate safe and accurate Thai pad and focus mitt holding for each of the above strikes.
4. Demonstrate how to put on protective gear and move through a safe offense/defense round with a partner.
5. Demonstrate and practice the principles of Muay Thai boxing and Conscious Combat including informed and active consent, clear verbal communication, respect of boundaries and integration of instructor feedback.

PHED 1810. Muay Thai Boxing Advanced**Course Description**

Advanced techniques, skills and practice of Muay Thai boxing including striking combinations of Muay Thai kicks, punches, elbows, knees and defense against strikes. Partner drills, including optional light sparring wearing protective equipment and advanced pad-holding skills. Shadow boxing, heavy bag work and increased cardio and conditioning drills. Emphasis is placed on proper Muay Thai form, efficacy of strikes, defenses and skills as a training partner, clear communication, safety and injury prevention.

Student Learning Outcomes

1. Demonstrate, name and perform the striking skills and movements of Muay Thai boxing including: jab, cross, hooks, uppercuts, roundhouse kicks, teeps, cut kicks, clinch, skip knees, straight knees, round knees, clinch, elbows and advanced variations of these strikes.
2. Demonstrate, name and perform basic defenses of Muay Thai boxing including: parry, slip, evade, arm and leg blocks, catch, counter, guard, feint, block-and-returns.
3. Demonstrate safe and accurate Thai pad and focus mitt holding for each of the above strikes as well as complex combinations of these strikes.
4. Demonstrate how to effectively use protective gear and move through a safe offense/defense round with a partner
5. Demonstrate and practice the principles of Muay Thai boxing and Conscious Combat including informed and active consent, clear verbal communication, respect of boundaries and integration of instructor feedback

PHED 1830. Running:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1910. Outdoor Experience:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1950. Rodeo:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 1996. Topics in Physical Education

Course Description

Varies

PHED 2110. Dance II

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 2120. Health Life Skills and Personal Wellness

Course Description

This course has been designed to provide students with the knowledge and skills necessary to cultivate a holistic approach to well-being by giving students effective strategies for achieving and maintaining a balanced and fulfilling life, including coping skills to navigate the challenges of college life. Through a combination of lectures, discussions, activities, and self-reflection, students will explore various dimensions of wellness and develop practical strategies to enhance their overall health and vitality.

Student Learning Outcomes

- 1 Explain the principles of wellness, emphasizing the significance of exercise, nutrition, and wellbeing for sustaining health throughout life.
- 2 Describe effective strategies and methodologies to enhance wellness.
- 3 Develop individualized goals pertaining to various facets of wellness to promote personal growth and fulfillment.
- 4 Evaluate personal wellness levels to establish baseline and monitor progress towards specific goals across diverse dimensions of well-being.

- 5 Participate in a self-tailored wellness regimen, integrating introspective assessments to monitor personal progress effectively.
- 6 Critically assess and refine wellness plans based on alterations in wellness evaluations and personal reflections, ensuring continuous alignment with evolving health and fitness aspirations.

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 2430. Pilates II:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 2440. Tai Chi II

Course Description

A program of Tai Chi designed for students to further their study of physical and energy movements for health, defense and longevity. Students will be introduced to part II of the Wu style Tai Chi short form.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Apply the principles of alignment, stretching and relaxation to the Tai Chi postures
2. Demonstrate an understanding of part I of the Wu Tai Chi short form
3. Demonstrate "Push Hands"
4. Demonstrate the progression of part II of the Wu Tai Chi short form

PHED 2460. Conditioning II:

Course Description

Individual sections vary based on topic content; “audience”; type or level of participation.

PHED 2510. Training II:**Course Description**

Individual sections vary based on topic content; “audience”; type or level of participation.

Physical Science (PHSC)

PHSC 1110C. Physical Science for General Education I

Course Description

This course is designed for students who need a physical science requirement. Topics include mechanics, physics, and forms of energy, chemistry, earth science, and astronomy. Students will be expected to form logical ideas about science.

Student Learning Outcomes

1. Understand science as a way of knowledge.
2. Have a basic knowledge about the way the universe works.
3. Understand basic physics and mechanics.
4. Understand forms of energy.
5. Understand basic chemistry.
6. Understand the basic structure of the earth and how it functions as a planet in our solar system.
7. Understand stars, planets and celestial bodies and their function.

PHSC 1120. Forensic Science I

Course Description

An introduction to forensic science, emphasizing the multi-disciplinary approach required to document, understand, and solve forensic problems. Topics for this course include those on general science and applying scientific methods to answer questions of interest to the legal system. Case studies will be used to illustrate how science was used to solve crimes.

Student Learning Outcomes

1. Develop and utilize skills of scientific inquiry, asking questions, gathering, analyzing and interpreting data, drawing conclusions, predicting, and communicating results.
2. Develop an awareness of forensic science issues that may impact learners and introduce the different techniques used to analyze a variety of crimes.
3. Evaluate information and interpret graphs and charts to make informed forensic science decisions.
4. Enhance academic skills including the use of electronic resources.

PHSC 1120L. Forensic Science I Lab

Course Description

Forensic Science is the application of science to law. This lab component provides overview of the basic techniques utilized by forensic scientists in the lab in analyzing common types of physical evidence that includes analysis of fingerprints, fiber analysis, trace evidence, poisons, body fluids, DNA analysis, and blood spatters. Students are also taught the proper collection, preservation, and documentation of various samples. Once the evidence has been processed, the student will use critical thinking skills to interpret the evidence in the context of the case.

Student Learning Outcomes

Upon completion of this course, students will have an understanding of:

1. Developing and utilizing skills of scientific inquiry, asking questions, gathering, analyzing and interpreting data, drawing conclusions, predicting, and communicating results.
2. Developing and awareness of forensic science issues that may impact learners and introduce the different techniques used to analyze a variety of crimes.
3. The history and development of forensic sciences.
4. The proper procedures for collecting, preserving, and documenting physical evidence.
5. The handling, value, and capabilities of DNA evidence.
6. The various types and analysis methods of physical and trace evidence.
7. Serology and blood spatter analysis.

PHSC 1130. Forensic Science II

Course Description

This course is designed to introduce students to recognition, documentation and collection of physical evidence in a practical environment such as law enforcement. Course material will be presented in such a manner as to allow practical application of proper technique, limited analysis and presentation in the field. A laboratory component of the course will be conducted in concert. The criminal justice field is an identified fast-paced, exciting profession with continued significant job growth.

Student Learning Outcomes

Not Available

PHSC 1130L. Forensic Science II Lab

Course Description

Covers correct police procedure for processing a crime scene and recognizing evidence. Forensic photography and collection of physical evidence are examined. Specific skills studied include collection of fingerprints and footprints, toolmark evidence collection, blood splatter analysis, and forensic analysis of firearms.

Student Learning Outcomes

A successful student will learn basic skills in scientific methodology, proper laboratory safety, and proper measuring techniques & equipment. A successful student will have beginner's skill in recognition, collection and preservation of physical evidence, as well as techniques on testing physical evidence.

Physics (PHYS)

PHYS 1105. Physics & Society

Course Description

If you are curious about how common things work, about physics that is relevant to social and political issues, or just about the natural world in general, Physics and Society is just the course for you! No previous background in physics or mathematics (beyond high school algebra) is required or expected. Just bring a lively curiosity and a dedication to learning new things.

Student Learning Outcomes

Not Available

PHYS 1110. Explorations in Physics

Course Description

This course will introduce students to university resources, pre-professional student societies, learning strategies to help strengthen academic performance, and will explore career paths for graduates. Students will also discuss the roles of physicists in society, physics research being performed at and nearby New Mexico Higher Education Institutions, and what the latest discoveries in physics tell us about nature and the universe.

Student Learning Outcomes

1. Describe effective learning strategies for science/engineering classes.
2. Give examples of impactful scientists from groups underrepresented in physics and describe their career paths.
3. Research examples of positions open to physics majors.
4. Identify critical components of an effective resume.
5. Write a professional cover letter for an internship/undergraduate research application.
6. Discuss the boundaries of ethical science and give an example of an accidental breach of ethics.
7. Describe the societal impact of misinformation about scientific results or research.
8. Explore ways scientists can engage with the general public to shape the discourse of knowledge or the ways scientists are perceived.
9. List some of the burning questions current physicists are trying to answer.
10. Establish a sense of community within the department, the university, and the greater physics world.

11. Discover useful resources to help with academic success and avoid pitfalls while pursuing a physics degree.
12. Better understand the value of a physics degree, and what can be expected entering the workforce or academia.
13. Understand and discuss how the field of physics connects with the issues and problems facing society today.

PHYS 1111. Introductory Computational Physics

Course Description

Introduction to computational techniques for the solution of physics-related problems.

Student Learning Outcomes

1. Use computers for visualizing and analyzing data.
2. Apply techniques of structured programming and software development.
3. Trouble shoot and debug programs.

PHYS 1112. Introductory Physics for the Health Sciences

Course Description

Algebra-level introduction to topics required for the Health Sciences including basic mechanics (including sound, mechanical waves and fluids), heat and thermodynamics, electricity and magnetism, optics and electromagnetic waves, atomic and nuclear physics and applications to medical imaging.

Student Learning Outcomes

1. The objective of the course is to familiarize the student with the concepts and methods used in the underlying physics associated with various Health Science disciplines.
2. The course will demonstrate how the basic principles of mechanics, thermodynamics, electricity, magnetism, electromagnetic waves and optics can be applied to solve particular problems in Health Sciences applications. Introduces the student to selected topics in modern physics including quantum physics, atomic and nuclear physics.

PHYS 1112L. Introductory Physics for the Health Sciences Lab

Course Description

A series of laboratory experiments associated with the material presented in PHYS 1112.

Co-requisite: PHYS 1112 Introductory Physics for the Health Sciences.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Become familiar with correct laboratory procedures.
2. Be able to identify laboratory apparatus.
3. Use of laboratory safety equipment.
4. Be able to use common laboratory apparatus.
5. Become confident in collecting, organizing, and presenting data in a scientific form.
6. Be able to use graphs, units, and formulas to analyze data.
7. Be able to use technology for locating scientific literature, gathering data, and problem-solving.
8. Be capable of recognizing and using sound scientific information for the betterment of the community.

PHYS 1115. Survey of Physics

Course Description

Overview of the concepts and basic phenomena of physics. This course provides a largely descriptive and qualitative treatment with a minimum use of elementary mathematics to solve problems. No previous knowledge of physics is assumed.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Apply concepts of classical mechanics (such as velocity, acceleration, force, inertia, momentum, torque, work, energy) to simple static and dynamic systems.
2. Apply concepts of thermodynamics (such as heat, temperature, internal energy, entropy) to simple processes.
3. Apply concepts of electricity and magnetism (such as fields, potential, charge conservation, static and dynamic induction) to simple circuits, motors, and other simple electrical contrivances.
4. Apply simple geometric and wave optics in simple situations.

Optional Student Learning Outcomes

1. Apply quantum theory in simple situations such as the Bohr model of the atom, dual nature of light, atomic spectra.
2. Apply simple concepts of relativity.

PHYS 1115L. Survey of Physics Laboratory

Course Description

A series of laboratory experiments associated with the material presented in PHYS 1115.

Co-requisite: PHYS 1115 Survey of Physics

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Test ideas using modern laboratory equipment.
2. Estimate experimental uncertainties.
3. Use computers to analyze and report laboratory results.
4. Draw appropriate conclusions from quantitative scientific observations.
5. Accurately and clearly communicate the results of scientific experiments.

PHYS 1115C. Survey of Physics with Lab

Course Description

Overview of the concepts and basic phenomena of physics. This course provides a largely descriptive and qualitative treatment with a minimum use of elementary mathematics to solve problems. No previous knowledge of physics is assumed. Includes laboratory.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Apply concepts of classical mechanics (such as velocity, acceleration, force, inertia, momentum, torque, work, energy) to simple static and dynamic systems.
2. Apply concepts of thermodynamics (such as heat, temperature, internal energy, entropy) to simple processes.
3. Apply concepts of electricity and magnetism (such as fields, potential, charge conservation, static and dynamic induction) to simple circuits, motors, and other simple contrivances.
4. Apply simple geometric and wave optics in simple situations.
5. Test ideas using modern laboratory equipment.
6. Estimate experimental uncertainties.
7. Use computers to analyze and report laboratory results.
8. Draw appropriate conclusions from quantitative scientific observations.
9. Accurately and clearly communicate the results of scientific experiments.

Optional Student Learning Outcomes

1. Apply quantum theory in simple situations such as the Bohr model of the atom, dual nature of light, atomic spectra.
2. Apply simple concepts of relativity.

PHYS 1121. Introduction to Applied Physics

Course Description

This course is designed to introduce the concepts of physics focusing on kinematics, newton's law, and mechanical energy at a slower pace. Students who have difficulty with general problem-solving should take this course before Algebra-based Physics. The course will teach and give improved insight into mechanical phenomena of the physical world and show the role that mechanics plays in many facets of our life. Students will gain an appreciation of those physicists and mathematicians who made significant contributions to our current understanding of the world as it exists today.

Student Learning Outcomes:

1. Apply principles of Newtonian mechanics to predict or calculate the translational motion of particles in one or higher dimensions using algebra.
2. Demonstrate an understanding of the physical principles, such as Newtonian laws of mechanics and Newton's theory of gravitation.
3. Apply the work and energy principle to understand energy transfer and solve the problem with kinetic energy and potential energy.

PHYS 1121L. Introduction to Applied Physics Laboratory

Course Description

A series of laboratory experiments associated with the material presented in PHYS 1121.

Co-requisite: PHYS 1121 Introduction to Applied Physics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Become familiar with correct laboratory procedures.
2. Be able to identify laboratory apparatus.
3. Use of laboratory safety equipment.
4. Be able to use common laboratory apparatus
5. Become confident in collecting, organizing, and presenting data in a scientific form.
6. Be able to use graphs, units and formulas to analyze data.
7. Be able to use technology for locating scientific literature, gathering data and problem solving.
8. Be capable of recognizing and using sound scientific information for the betterment of the community.

PHYS 1125. The Physics of Music

Course Description

Introduction for non-science majors to basic concepts, laws, and skills in physics, in the context of a study of sound, acoustics, and music.

Optional Topics: Basics of music theory, modes, temperaments, consonance and dissonance: Building acoustics: Connections to other physical topics such as but not limited to: cosmology, microwave background radiation, quantum theory, Bohr model, entropy, electromagnetic waves and special relativity, string theory.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Demonstrate converting units and other aspects of dimensional analysis in the working of numerical problems.
2. Apply basic classical mechanics to static and dynamic fluids, including Archimedes' principle and Bernoulli's principle.
3. Apply the general properties of waves to simple models of musical instruments.
4. Demonstrate knowledge of basic operating principles of wind, string, and percussion instruments.
5. Demonstrate knowledge of how objectively measurable properties of sound waves correspond to the perceptions of pitch, loudness, and timbre.

6. Demonstrate understanding of the description of vibrations and waves in terms of Fourier's Theorem and normal modes.
7. Demonstrate understanding of vocalization in terms of physical principles such as resonance and fluid dynamics.
8. Demonstrate understanding of how the ear works.

PHYS 1125L. Physics of Music Lab

Course Description

Experiments to accompany PHYS 1125.

Co-requisite: Physics of Music

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Draw appropriate conclusions from quantitative scientific experiments.
2. Accurately and clearly communicate the results of scientific experiments.
3. Test ideas using modern laboratory equipment.
4. Use computer to analyze and report laboratory results.

PHYS 1131. Technical Physics

Course Description

This course covers the principles of mechanics, heat, and electricity as applied to automotive technology. This course is designed for students in the ASEP (GM), ASSET (FM), and Automotive Technology (AT) training programs and does not count as a lab science course.

Student Learning Outcomes

Upon completion of Technical Physics, students should be able to:

1. Convert between metric and customary units.
2. Convert units within the metric and customary systems.
3. Solve kinematics problems with distance, speed, velocity, acceleration.
4. Find the stopping distance of an automobile under certain conditions.
5. Demonstrate the difference between a vector and a scalar.
6. Find the cornering acceleration.
7. Describe the process of torque transmission via the transmission system.
8. Explain centripetal and centrifugal forces.
9. Demonstrate and apply Newton's laws of motion.
10. Determine the rotational force of a vibrating component.
11. Apply the relation between torque and force.
12. Find the force of friction of a physical situation involving automobiles
13. Find the coefficient of friction.
14. Demonstrate the difference between static friction and kinetic friction.
15. Determine the maximum safe speed in a turn.
16. Determine the force of friction given the coefficient of friction.
17. Demonstrate the importance of balance in rotating automotive systems.
18. Demonstrate rotational inertia of a rolling object.
19. Apply angular kinematical relations to find angular displacement, angular velocity, and angular acceleration.
20. Find the centripetal force of a rotating object.
21. Calculate the work done and the power of a physical process.
22. Find the brake horsepower for a dynamometer Prony brake setup.
23. Calculate the efficiency of an engine.
24. Demonstrate simple machines.

25. Demonstrate the different classes of simple machines.
26. Find the IMA and AMA of a simple machine.
27. Find the efficiency of a machine.
28. Explain and apply the concepts of potential and kinetic energies.
29. Apply the law of energy conservation
30. Calculate the momentum and impulse of automotive systems.
31. Demonstrate stress and strain.
32. Find the proper bolt size and grade based on applied torque
33. Find the stress and strain applying the relations of stress and strain.
34. Discuss the three ways of heat transfer.
35. Explain the importance of insulation in the automobile.
36. Find the amount of heat flow of a system.
37. Find the specific heat capacity of a system.
38. Calculate the expansion or contraction of an object subject to a temperature change.
39. Explain how a radiator works.
40. Demonstrate the basic properties of waves.
41. Demonstrate how sound works.
42. Apply the sound relationship.
43. Demonstrate intensity, pitch, frequency, speed of sound, and sound speed in various media.
44. Describe the characteristics of light waves.
45. Find the frequency and period of a wave.
46. Demonstrate the Doppler Effect.
47. Find the index of refraction.

PHYS 1209C. Introduction to Laboratory Physics

Course Description

Physics 1209C will be your hands-on introduction into the fascinating wonderful world of physics. You will learn about how Sir Isaac Newton got hit on the head with an apple (or did he?) and toppled over 2000 years of Aristotelian physics. You will (safely) launch projectiles into the air and be delighted when your physics knowledge enables you to predict exactly where they will land. You will finally be able to quantify the many physics phenomena you have witnessed but not yet had the pleasure of describing mathematically. The course is an algebra-based introduction covering kinematics, Newtonian mechanics, and conservation principles; it is taught in a laboratory setting, with emphasis on hands-on work, the scientific method, and formal laboratory reports.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of particles in one and two dimensions.
2. Apply the mathematics of vectors to the principles of Newtonian mechanics.
3. Demonstrate converting units and other aspects of dimensional analysis in the working of numerical problems.
4. Explain the scientific method.
5. Test ideas using modern laboratory equipment.
6. Draw appropriate conclusions from quantitative scientific observations.
7. Accurately and clearly communicate the results of scientific experiments.

PHYS 1230. Algebra-based Physics I

Course Description

An algebra-based treatment of Newtonian mechanics. Topics include kinematics and dynamics in one and two dimensions, conservation of energy and momentum, rotational motion, equilibrium, and fluids.

Optional topics may include (some schools include these in Physics I, others in Physics II): sound: waves: heat: oscillatory motion and thermodynamics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Demonstrate converting units and other aspects of dimensional analysis in the working of numerical problems.
2. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of particles in one and two dimensions.
3. Apply principles of Newtonian mechanics to predict and account for simple phenomena modeled by the motion of a rigid body in two dimensions.
4. Apply Newton's theory of gravitation to circular orbits and demonstrate understanding of how Kepler's laws of planetary motion provide the empirical foundation for Newton's theory.
5. Apply the mathematics of vectors to the principles of Newtonian mechanics.
6. Apply principles of Newtonian mechanics to the case of static and dynamic incompressible fluids, including Archimedes' and Bernoulli's principles.

Optional Student Learning Outcomes

1. Describe the fundamental properties of periodic motion.
2. Explain and apply the basic concepts of sound and wave motion.
3. Explain the basic concepts of heat and thermodynamics.

PHYS 1230L. Algebra-based Physics I Laboratory

Course Description

A series of laboratory experiments associated with the material presented in PHYS 1230.

Pre- or co-requisite: PHYS 1230 Algebra-based Physics I

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Explain the scientific method.
2. Test ideas using modern laboratory equipment.
3. Estimate experimental uncertainties using statistical methods.
4. Use computers to analyze and report laboratory results.
5. Draw appropriate conclusions from quantitative scientific observations.
6. Accurately and clearly communicate the results of scientific experiments.

PHYS 1230C. Algebra-based Physics I Lecture + Laboratory

Course Description

Combined PHYS 1230 and PHYS 1230L

PHYS 1231. Problems in Algebra-based Physics I

Course Description

This is a supplemental course for Algebra-based Physics I.

Student Learning Outcomes

Not Available

PHYS 1240. Algebra-based Physics II

Course Description

The second half of a two-semester algebra-based introduction to Physics. This course covers electricity, magnetism and optics.

Optional Topics (some schools include these in Physics I, others in Physics II): sound; waves; heat; thermodynamics; oscillatory motion; and modern physics

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Be able to state Coulomb's Law and Gauss's laws and apply them.
2. Apply the concepts of electric charge, electric field and electric potential to solve problems.
3. Analyze simple DC and AC circuits.
4. Apply the Lorentz force to solve problems.
5. Apply Faraday's law of induction (and Lenz's law) to solve problems.
6. Apply ray optics to practical lens systems such as microscopes and corrective lenses.
7. Apply the wave nature of light to the phenomena of reflection, refraction, and diffraction.

Optional Student Learning Outcomes

1. Describe the fundamental properties of periodic motion.
2. Explain and apply the basic concepts of sound and wave motion.
3. Explain the basic concepts of heat and thermodynamics.
4. Explain the basic concepts of quantum theory and special relativity.

PHYS 1240L. Algebra-based Physics II Laboratory

Course Description

A series of laboratory experiments associated with the material presented in PHYS 1240.

Pre- or co-requisite: PHYS 1240 Algebra-based Physics II.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Explain the scientific method.
2. Test ideas using modern laboratory equipment.
3. Estimate experimental uncertainties using statistical methods.
4. Use computers to analyze and report laboratory results.
5. Draw appropriate conclusions from quantitative scientific observations.
6. Accurately and clearly communicate the results of scientific experiments.

PHYS 1240C. Algebra-based Physics II Lecture + Laboratory

Course Description

Combined PHYS 1240 + PHYS 1240L

PHYS 1241. Problems in Algebra-based Physics II

Course Description

This is a supplemental course for Algebra-based Physics II.

Student Learning Outcomes

Not Available

PHYS 1310. Calculus-based Physics I

Course Description

A calculus level treatment of classical mechanics and waves, which is concerned with the physical motion concepts, forces, energy concepts, momentum, rotational motion, angular momentum, gravity, and static equilibrium.

Optional Topics may include (some schools include these in Physics I, others in Physics II): oscillations; waves; sound; and thermodynamics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Describe the relationships among position, velocity, and acceleration as functions of time.
2. Use the equations of kinematics to describe motion under constant acceleration.
3. Analyze linear motion using Newton's laws, force, and linear momentum.
4. Analyze rotational motion using torque and angular momentum.
5. Analyze motion using work and energy.

Optional Student Learning Outcomes

1. Describe and apply the fundamental properties of waves, oscillations, and periodic motion.
2. Describe and apply the laws of thermodynamics.

PHYS 1310L. Calculus-based Physics I Laboratory

Course Description

A series of laboratory experiments associated with the material presented in Calculus-based Physics I. Students will apply the principles and concepts highlighting the main objectives covered in coursework for Calculus-based Physics I.

Co-requisite: Calculus-based Physics I

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Experience the relationship between theory and experiment.

PHYS 1310C. Calculus-based Physics I Lecture + Laboratory

Course Description

Combined PHYS 1310 + PHYS 1310L

PHYS 1311. Problems in Calculus-based Physics I

Course Description

This is a supplemental course for Calculus-based Physics I.

Student Learning Outcomes

Not Available

PHYS 1320. Calculus-based Physics II

Course Description

A calculus level treatment of classical electricity and magnetism. It is strongly recommended that this course is taken at the same time as Calculus-based Physics II laboratory.

Optional Topics may include (some schools include these in Physics I, others in Physics II): oscillations; waves; sound; and thermodynamics.

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Apply the concepts of electric charge, electric field and electric potential to solve problems.
2. Sketch the electric field in the vicinity of point, line, sheet, and spherical distributions of static electric charge.
3. Sketch the magnetic field in the vicinity of line, ring, sheet, and solenoid distributions of steady current.
4. Describe the relationship between electric field and electric potential.
5. Calculate the Lorentz force on a moving charge for simple geometries of the fields and use it to analyze the motion of charged particles.
6. Apply the integral forms of Maxwell's equations.
7. Calculate the energy of electromagnetic fields.
8. Analyze DC circuits.

Optional Student Learning Outcomes

1. Describe the function of simple lenses.
2. Describe two-slit interference.
3. Describe interference by a slit and a circular aperture.
4. Analyze AC circuits.
5. Describe and apply the fundamental properties of waves, oscillations, and periodic motion.
6. Describe and apply the laws of thermodynamics.

PHYS 1320L. Calculus-based Physics II Laboratory**Course Description**

A series of Laboratory experiments associated with the material presented in Calculus-Based Physics II. Students will apply the principles and concepts highlighting the main objectives covered in coursework for Calculus-Based Physics II.

Co-requisite: Calculus-based Physics II

Student Learning Outcomes

Upon completion of this course, the student will be able to:

1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Experience the relationship between theory and experiment.

PHYS 1410. Introduction to Weather and Climate

Course Description

This course is an introductory course to weather and climate, suitable for any NMT major. When taken with the lab (offered spring semester), it may serve as a degree requirement for lab science course (consult your degree requirements from your major department). It introduces physics concepts that are covered in more detail in PHYS 1310 & 1320; these include energy, momentum, angular momentum, Newton's second law and thermodynamics. It covers the basic structure and composition of the atmosphere, atmospheric circulations, atmospheric stability, radiative transfer, and the energy balance of the atmosphere.

Student Learning Outcomes

By the end of this course, students will

1. Distinguish weather from climate and know the major components of the climate system.
2. Be able to draw and identify the thermodynamic layers of the atmosphere and be able to identify the major source of heating for the troposphere and stratosphere.
3. Identify the major processes that contribute to the atmospheric energy cycle. They will be able to calculate the mean surface temperature of the Earth in the absence of an atmosphere.
4. Understand the seasonal cycle and identify internal and external forces that influence energy balance.
5. Be able to determine atmospheric stability and make general predictions based on temperature and moisture in soundings.
6. Understand why it is so difficult to understand convection, identify sources of uncertainty in weather models, and understand limitations of climate models.
7. Have some experience in data analysis, including familiarity with Matlab.
8. Know how to identify "good" and "bad" literature regarding climate science.
9. Understand what positive and negative feedbacks are, and give examples of each as they relate to the atmosphere.
10. Have read and analyzed several outside sources of information, including peer-reviewed journal articles and excerpts from the executive summary of the IPCC report.

PHYS 1996. Topics in Physics

Course Description

Varies.

Student Learning Outcomes

Varies.

PHYS 2110. Mechanics

Course Description

Newtonian mechanics.

Student Learning Outcomes

1. Describe matter as particles or extended objects, analyze forces or torques acting on it, and apply Newton's laws to determine if the object is in equilibrium or predict any change in the motion of such an object.
2. Apply vector algebra to predict motion or analyze interactions in one or two dimensions.
3. Apply techniques of conservation laws (linear momentum, energy, angular momentum) to determine the effect of interactions that are internal or external to the system studied.
4. Analyze systems in simple harmonic motion and explain qualitatively under what condition a driven oscillating system shows the phenomenon of resonance.
5. Use multiple representations to build, interpret and communicate a model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.

6. Given two or more cases, perform a ranking task by evaluating the similarities (comparison) or differences (contrast) in the cases and applying physics principles.
7. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
8. Analyze real-world phenomena by defining and formulating the question or problem, constructing simplified idealized models (and stating their limitations), and applying appropriate mathematical reasoning to make predictions or explain a phenomenon or function.
9. Communicate effectively with audiences of different scientific backgrounds by recognizing their needs and making the communication relevant and impactful.
10. Work collegially and collaboratively in diverse teams both as a leader and as a member in pursuing a common goal.

PHYS 2110L. Experimental Mechanics

Course Description

Laboratory experiments associated with the material presented in PHYS 2110. Science majors.

Student Learning Outcomes

Laboratory experiments associated with the material presented in PHYS 2110. Science majors.

1. Test scientific questions or ideas using appropriate laboratory equipment.
2. Collect experimental data and evaluate the outcomes of an experiment qualitatively and quantitatively.
3. Estimate measurement uncertainty.
4. Apply appropriate methods of analysis to raw data, including graphical or statistical methods, and computer-based tools.
5. Draw appropriate conclusions from quantitative scientific data.
6. Communicate the process and the outcomes of an experiment and reflect on possible revisions in the procedure.
7. Work effectively as part of a team.
8. Demonstrate professional responsibility.

PHYS 2111. Supplemental Instruction for PHYS 2110

Course Description

This optional workshop as a supplement to PHYS 2110. The tutorial sessions focus on reasoning and hands-on problem solving.

Student Learning Outcomes

1. Analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. In the contexts of concepts and physical laws discussed in PHYS 2110, apply quantitative analysis to solve problems, including the use of scientific notation, unit conversion and vector algebra.
4. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. Develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2115. General Physics

Course Description

You will study optics and modern physics.

Student Learning Outcomes

Students will learn the following concepts during the course.

1. Relativity (time dilation and length contraction).
2. Blackbody radiation.
3. Atomic spectra.

4. Photoelectric effect.
5. Particle physics and wave particle duality.
6. Uncertainty principle.
7. Nuclear physics.
8. Cosmology (time permitting).
9. Lenses.
10. Refraction and reflection.
11. Interference.

PHYS 2115L. General Physics Lab

Course Description

You will engage in laboratory experiences supportive of PHYS 2115, for which this course is a Co-requisite.

Student Learning Outcomes

Labs will be designed to supplement the following lecture concepts.

1. Relativistic simulations.
2. Lenses and focusing.
3. Refraction and reflection.
4. Interference.

PHYS 2120. Heat, Light, and Sound

Course Description

Calculus-level treatment of thermodynamics, geometrical and physical optics, and sound.

Student Learning Outcomes

1. Analyze real world phenomena that meet specific needs and use scientific judgement to draw conclusions.
2. Use multiple representations to build, interpret and communicate scientific models, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. Analyze oscillations and wave phenomena.
4. Analyze properties of sound waves.
5. Analyze properties of light using interference and diffraction.
6. Analyze light propagation through media using index of refraction and optical apparatus.
7. Analyze optical systems using light propagation.
8. Analyze the laws of thermodynamics and use them to describe processes in gases and other states of matter.

PHYS 2120L. Heat, Light, and Sound Laboratory

Course Description

Laboratory experiments associated with the material presented in PHYS 2120. Science majors.

Student Learning Outcomes

1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Understand the relationship between theory and experiment.

PHYS 2121. Supplemental Instruction to PHYS 2120

Course Description

This optional workshop supplements PHYS 2120 "Heat, Light, and Sound". Students actively apply concepts and methods introduced in PHYS 2120 to problem solving and quantitative analysis..

Student Learning Outcomes

1. analyze real world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomena or function.
2. use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. in the contexts of concepts and physical laws discussed in PHYS 2120, apply quantitative analysis to solve problems involving wave propagation and interference, geometric optics, heat transfer and thermodynamics.
4. self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2140. Electricity and Magnetism

Course Description

Charges and matter, the electric field, Gauss law, the electric potential, the magnetic field, Ampere's law, Faraday's law, electric circuits, alternating currents, Maxwell's equations, and electromagnetic waves.

Student Learning Outcomes

1. Analyze real-world phenomena by deciding what information is relevant and constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomenon or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. Use a physics problem-solving strategy: i. Identify relevant concepts. ii. Introduce and study simplified models. iii. Use symmetry arguments. iv. Establish the relation between known and unknown quantities. v. Calculate a quantitative result using appropriate mathematical methods. vi. Self-check reasonableness of assumptions and solutions.
4. Analyze/predict the interaction of charged particles, dipoles, or conductors with electric or magnetic fields. Apply concepts of force, work, or energy.
5. Describe sources of electric fields or magnetic fields and calculate field vectors for a point in space.
6. Apply Gauss's law to calculate electric fields for symmetric charge distributions or to determine surface charges on conductors in electrostatic equilibrium.
7. Apply Ampere's law and the Law of Biot-Savart to calculate magnetic fields.
8. Evaluate if magnetic flux changes and if an electric field or electric current is induced. Determine the direction of the induced current or the non-Coulomb electric field by applying Lenz's law. Apply Faraday's law to relate the rate of change of magnetic flux with the magnitude of emf induced.
9. Calculate and discuss properties of electric circuits (dc) with resistors, capacitors, and inductors applying Kirchhoff's rules or Ohm's law.
10. Discuss how the presence of a capacitor or an inductor modifies the behavior of a (dc) circuit and determine the time dependence of the current.
11. For a series RLC-circuit (or RC, LC, RL) with an ac-voltage source apply the concept of impedance or reactance to calculate the current through or voltages across each of the circuit elements, especially in the low-frequency limit, high-frequency limit, or at the resonant frequency.

PHYS 2140L. Electricity and Magnetism Laboratory

Course Description

Laboratory experiments associated with the material presented in PHYS 2140.

Student Learning Outcomes

1. Develop a reasonable hypothesis.
2. Work effectively as part of a team.
3. Take measurements and record measured quantities to the appropriate precision.
4. Estimate error sources in experimental techniques.
5. Apply appropriate methods of analysis to raw data, including using graphical and statistical methods via computer-based tools.
6. Determine whether results and conclusions are reasonable.
7. Present experimental results in written form in appropriate style and depth.
8. Understand the relationship between theory and experiment.

PHYS 2141. Supplemental Instruction to PHYS 2140

Course Description

Optional workshop as a supplement to PHYS 2140. The tutorial sessions focus on reasoning and hands-on problem solving.

Student Learning Outcomes

1. Analyze real-world phenomena by constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain a phenomenon or function.
2. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
3. In the contexts of concepts and physical laws discussed in PHYS 2140, apply quantitative analysis to solve problems, including the use of symmetry to study electric and magnetic fields. Practice concepts of calculus applied to charge and current distributions.
4. Self-check reasonableness of assumptions and solutions, making use of limiting cases or symmetry arguments.
5. Develop learning strategies and use metacognition to promote thinking in the discipline.

PHYS 2230. General Physics for Life Sciences I

Course Description

This algebra-based introduction to general physics covers mechanics, waves, sound, and heat. Special emphasis is given to applications in the life sciences. This course is recommended for students in the life sciences and those preparing for the physics part of the MCAT.

Student Learning Outcomes

Students will:

1. Modeling:
 - a. Analyze real-world phenomena by deciding what information is relevant and constructing simplified idealized models and appropriate mathematical reasoning to make predictions or explain phenomena or function.
 - b. Use multiple representations to build, interpret and communicate the model, including visual representations such as sketches or diagrams, mathematical expressions, graphs, or text.
 - c. Critique assumptions and determine how to test the validity of a model and use the comparison of experimental data and prediction to refine the model.
2. Conceptual understanding:
 - a. Describes the motion of any object in terms of displacement, velocity, and acceleration.
 - b. Analyze external forces acting on an object and determine if a system is in equilibrium or relate the net force to changes in motion.
 - c. Predict or analyze motion using conservation laws for energy and momentum.
 - d. Analyze forces and torques for a rigid object in static equilibrium.
 - e. For a static fluid determine pressure and the buoyant force.
 - f. Apply idealized models of fluid flow to the circulatory system.

- g. Describe the properties of pressure waves known as “sound”, apply the model of standing waves to musical instruments and discuss how sound is used to sense the environment.
 - h. Predict qualitative changes in the internal energy of a thermodynamic system when energy has been transferred due to work or heat and justify those predictions using conservation of energy (First law of thermodynamics).
 - i. Identify which heat transfer processes occur in a described situation.
3. Quantitative reasoning:
- a. Use a physics problem-solving strategy:
 - i. Identify relevant concepts.
 - ii. Introduce and study simplified models.
 - iii. Use symmetry arguments.
 - v. Establish the relation between known and unknown quantities.
 - vi. Calculate a quantitative result using appropriate mathematical methods.
 - vi. Self-check reasonableness of assumptions and solutions.
 - b. Use scientific notation accurately and convert units if necessary.
4. Communicating scientific information:
- a. Interpret or generate graphs or other visual representations and be able to switch between various representations including text, mathematical description, or diagrams.

PHYS 2230L. Laboratory to General Physics for Life Sciences I

Course Description

Laboratory experiments in topics associated with material presented in PHYS 2230G.

Student Learning Outcomes

Not Available

PHYS 2240. General Physics for Life Sciences II

Course Description

This algebra-based course covers electricity, magnetism, light, atomic physics, and radioactivity. Special emphasis is given to applications in the life sciences. This course is recommended for students in the life sciences and those preparing for the physics part of the MCAT.

Student Learning Outcomes

- 1. Modeling:
 - a. analyze real world phenomena by constructing simplified idealized models (an abstract description) that allow making predictions or explaining a phenomena or function.
 - b. use multiple representations to build and communicate the model, including sketches, mathematical expressions, diagrams or graphs.
 - c. decide what information is relevant and critique assumptions and models of others.
 - d. determine how to test the validity of a model and use comparison of experimental data and prediction to refine the model.
- 2. Conceptual understanding:
 - a. electric or magnetic fields can be used to describe interactions of objects that contain charges with their surroundings.
 - b. changes that occur as a result of interactions are constrained by conservation laws (such as conservation of energy, conservation of charge or conservation of nucleon number).
 - c. many macroscopic properties of materials can be described using microscopic models or related to their geometry.
 - d. electromagnetic radiation can be modeled as a wave or as fundamental particles (photons).

- e. the direction of propagation of a wave may change when it encounters a boundary surface between two media of different properties (reflection or refraction).
- f. the spontaneous radioactive decay of nuclei is described by probability.
- 3. Quantitative reasoning:
 - a. apply quantitative analysis and appropriate mathematical reasoning to describe or explain phenomena.
 - b. use scientific notation accurately and convert units if necessary.
- 4. Communicating scientific information:
 - a. interpret or generate graphs or other visual representations (e.g. field lines, equipotential lines) and be able to switch between various representations including text, mathematical description, or diagrams.

PHYS 2240L. Laboratory to General Physics for Life Sciences II

Course Description

Laboratory experiments in topics associated with material presented in PHYS 222G.

Student Learning Outcomes

Not Available

PHYS 2250. Comprehensive Physics I

Course Description

A treatment of physics for science and engineering students from a modern point of view. The subject is logically developed starting with optics and the theory of relativity. Quantum and classical mechanics are then introduced. This course is required for physics majors.

Student Learning Outcomes

1. Demonstrate understanding of wave motion, interference and diffraction as well as its geometric optics limit.
2. Understand of the geometric spacetime approach to special relativity.
3. Be able to explain how the analogous wave nature of matter leads to the understanding of the quantum world.
4. Apply mathematical reasoning, particularly vector analysis and calculus, to solve real world physics problems and from that develop spatial reasoning and visualization.
5. Show the ability to read the textbook with comprehension and communicate about it clearly.

PHYS 2250L. Comprehensive Physics Laboratory I

Course Description

Laboratory experiments from the subject matter of Comprehensive Physics I.

Student Learning Outcomes

1. Demonstrate good record-keeping skills.
2. Ability to make decisions based on their own data.
3. Competency to report findings using guidelines from relevant physics journals.

PHYS 2251. Comprehensive Physics II

Course Description

Continuation of Comprehensive Physics I. Attempts to probe successively smaller scales are explored. The four forces of nature; practical applications of gravity and electromagnetism. Dynamics of large numbers of particles are introduced, resulting in applications to the everyday world. This course is required for physics majors

Student Learning Outcomes

1. Understand the properties of the specific particles found in Nature.

2. Identify and describe the four fundamental forces and the particles they operate upon (the "Standard Model of particle physics").
3. Describe and compare the different ways of explaining the concept of a force in physics.
4. Apply mathematical reasoning, particularly vector analysis and calculus, to solve real world physics problems and from that develop spatial reasoning and visualization.
5. Show the ability to read the textbook and peer-reviewed literature with comprehension and communicate about it clearly.

PHYS 2251L. Comprehensive Physics Laboratory II

Course Description

Laboratory experiments from the subject matter of Comprehensive Physics II.

Student Learning Outcomes

1. Demonstrate good record-keeping skills.
2. Ability to make decisions based on their own data.
3. Competency to report findings using guidelines from relevant physics journals.

PHYS 2310. Calculus-based Physics III

Course Description

This course, the third in the calculus-based sequence for science and engineering students, is a study of optics and topics in modern physics.

Student Learning Outcomes

The overall objective is that the students can describe physical phenomena using a variety of models and develop certain analytical skills associated with problem solving. By the end of the course, the student should be able to:

1. Recognize Maxwell's equations.
2. Describe the nature of electromagnetic radiation in terms of electric and magnetic fields.
3. Solve new and different problems dealing with the propagation, polarization and energy transport of electromagnetic radiation.
4. Sketch ray diagrams showing the geometrical behavior of light in reflection and refraction.
5. Use the wave nature of light to solve new and different interference and diffraction problems.
6. State the postulates of special relativity and solve related problems.
7. Analyze experimental evidence for the quantum nature of matter and energy.
8. Appreciate and predict the consequences of the wave nature of matter.
9. Identify the Schrödinger equation and interpret its solutions.
10. Describe the basic principles of nuclear physics (time permitting).

PHYS 2310L. Calculus-based Physics III Laboratory

Course Description

Physics 2310L is a companion course to Physics 2310 covering topics in geometrical optics, wave optics and modern physics at the calculus level. Lab activities mirror and enhance lecture topics. Hands on experiments involving data collection and analysis give students a better conceptual framework for understanding physics. Geometrical and wave optical phenomena are deeply probed.

Student Learning Outcomes

This course serves to reinforce concepts presented in lecture and to familiarize you with various experimental techniques.

Lab students will:

1. Communicate and cooperate as a team to accomplish technical goals.
2. Read and interpret procedural instructions.
3. Gather and analyze data using electronic and optical devices.

4. Observe optical, wave and particle phenomena.
5. Relate observed phenomena to mathematical and physical models.
6. Use basic laboratory equipment (e.g., timer, balance, rods, clamps, etc.).

PHYS 2311. Problems in Calculus-based Physics III

Course Description

Problem solving and demonstrations related to General Physics.

Student Learning Outcomes

Not Available

PHYS 2415. Computational Physics

Course Description

This class is designed as an introduction to programming for the undergraduate physics major. The class begins with no assumption of prior programming experience. An emphasis will be on building strong programming skills using the MATLAB programming environment. Applications and examples will include data analysis (curve fitting and optimization), simulating physical systems, solving systems of linear equations and Monte Carlo techniques.

Student Learning Outcomes

Not Available

PHYS 2420. Computational Physics I

Course Description

This course will introduce a programming language and basic algorithms that can be used to solve introductory physics problems (e.g. statics, relative motion, projectile motion) with a computer. Most of the problems will be deterministic in nature and will have analytical solutions that the students will be able to use to verify their numerical solutions. The course will also cover topics related to data analysis and visualization.

Student Learning Outcomes

1. Reinforce knowledge of concepts from classical mechanics, including force, conservation of momentum, and conservation of energy.
2. Identify fundamental physics principles applicable to different physical problems.
3. Understand the difference between analytical and numerical approaches to problem solving.
4. Create computational models of physics problems based on fundamental principles.
5. Use appropriate programming methods to solve physics problems that can't be solved analytically.
6. Analyze and interpret computational model results critically evaluating advantages and limitations.
7. Communicate results of computations effectively through code output and scientific writing.

PHYS 2425. Computational Physics II

Course Description

This course will go more in depth into numerical methods to solve problems involving the numerical solution of differential equations (oscillations, orbital motion, waves and vibrations.) different algorithms will be compared to determine their level of accuracy and applicability. The course will explore other aspects of physics that cannot be solved using deterministic algorithms (e.g. random walks).

Student Learning Outcomes

1. Reinforce knowledge of concepts from electricity and magnetism, including the electric field, Gauss's Law, electric potential, Ampere's law, Faraday's Law, Maxwell's equations, and electromagnetic waves.
2. Identify fundamental physics principles applicable to different physical problems.
3. Create computational models of physics problems based on fundamental principles.

4. Use and understand the differences between numerical algorithms for solving differential equations.
5. Use nondeterministic methods (e.g. random walks) to solve physics problems.
6. Analyze and interpret computational model results critically evaluating advantages and limitations.
7. Communicate results of computations effectively through code output and scientific writing.

Physical Therapist Assistant (PTAP)

PTAP 1110. Orientation to Physical Therapist Assistant

Course Description

Provides PTA students with fundamental information related to the profession of physical therapist assistant.

Student Learning Outcomes

1. Differentiate between the roles and responsibilities of the PTA, PT, and other members of the interdisciplinary health care team.
2. Recognize ethical and legal issues that affect the physical therapy profession.
3. Demonstrate an understanding for effective use of health literature.
4. Identify quality assurance activities used in physical therapy settings.
5. Recognize various models of disability.
6. Demonstrate appropriate communication strategies to foster relationships with patients, families, the supervising physical therapist, other healthcare providers, and members of the community.
7. Demonstrate the ability to effectively perform written physical therapy documentation.
8. Critical Thinking.
9. Identify career development and lifelong learning activities for the PTA.
10. Identify administrative components of the operation of a physical therapy service.

11. Recognize professional/community organizations that provide opportunities for volunteerism, advocacy, and leadership.
12. Demonstrate appropriate professional behaviors, shown by obtaining Beginner level for all Professional Behaviors on the Professional Behaviors Assessment Tool.

PTAP 1111. Functional Anatomy and Kinesiology

Course Description

The structure and function of the musculoskeletal system will be covered with an emphasis on the mechanical aspect of human motion. Basic physical principles and the existing relationship with biomechanical principles will also be covered. Students will be introduced to normal posture as well as the normal gait cycle and common gait deviations seen in the rehabilitation setting.

Student Learning Outcomes

1. Compare osteokinematics, arthrokinematics, and biomechanics related to the human body by visual and verbal demonstration.
2. Demonstrate the ability to palpate bony structures, muscular structures, and connective structures.
3. Differentiate between normal posture and postural deviations on simulated patients based on the established plan of care.
4. Identify the components of the normal gait cycle on a simulated patient.
5. Explain normal musculoskeletal system structure and function.

PTAP 1115. Orientation to Physical Therapy Practice

Course Description

This course will provide an orientation to physical therapy as a profession, legal aspects of physical therapy practice, the interdisciplinary healthcare team, cultural diversity, communication skills, medical terminology and documentation, introductory aseptic techniques, body mechanics, and safety procedures.

Student Learning Outcomes

1. Describe the New Mexico State Rules and regulations for the physical therapy practice and other legal issues related to the physical therapy profession.
2. Analyze historical legislation that impacts patient care.
3. Differentiate between the role of the PTA, PT and other health care providers.
4. Identify the importance of the American Physical Therapy Association.
5. Analyze legal and ethical issues related to physical therapy care.
6. Explain patient confidentiality issues related to physical therapy care.
7. Identify the effect of personality types and learning styles on physical therapy care.
8. Explain the effect of patient diversity on physical therapy care.
9. Explain the importance of accurate and thorough documentation.
10. Explain basic concepts related to the APTA Guide for Physical Therapist Practice.
11. Demonstrate awareness of body mechanics to maintain personal and patient safety.
12. Explain appropriate reactions to dangerous/emergency situations.
13. Demonstrate proper use of infection control techniques.
14. Examine the physical therapy process from initial patient interaction to discharge.
15. Analyze the importance of evidence-based practice.
16. Describe the importance of career development and lifelong learning.
17. Identify the importance of health and wellness promotion in physical therapy.

PTAP 1120. Exercise and Mobility

Course Description

This course will integrate didactic instruction with skill performance to introduce students to therapeutic interventions aimed at improving functional mobility including patient preparation, wheelchair management, bed mobility, and transfers. The exercise module will introduce students to exercise physiology and the performance of various exercises commonly seen in the rehabilitation setting.

Student Learning Outcomes

1. Perform basic data collection techniques necessary for patient interaction.
2. Perform safe and effective positioning techniques on a simulated patient within the established PT plan of care.
3. Perform proper draping technique for a simulated patient.
4. Perform different types of transfers safely and effectively on a simulated patient within the written PT plan of care.
5. Perform different bed mobility techniques safely and effectively on a simulated patient within the established PT plan of care.
6. Demonstrate the proper operation of a basic wheelchair and its parts.
7. Performs functional training safely and effectively on a simulated patient within the established PT plan of care.
8. Compose a basic therapeutic exercise program using background information, concepts, and models covered for a simulated patient based on the established PT plan of care.
9. Discuss anatomy and physiology of muscle tissue and how exercise can affect the body physiologically.
10. Initiate and progress a basic range of motion program the different types of exercise with a simulated patient based on the established PT plan of care using the key concepts involved with range of motion exercises.
11. Initiate and progress a basic resistance exercise program the different types of exercise with a simulated patient based on the established PT plan of care using the key concepts involved with resistance.
12. Initiate and progress a basic aerobic exercise program the different types of exercise with a simulated patient based on the established PT plan of care using the key concepts involved with aerobic exercise.
13. Initiate and progress a basic stretching program the different types of exercise with a simulated patient based on the established PT plan of care using the key concepts involved with mobility and flexibility training.
14. Initiate and progress a basic posture, balance, and stabilization program with a simulated patient based on the established PT plan of care.
15. Initiate and progress a basic aquatic program with a simulated patient based on the established PT plan of care using the key concepts involved with aquatic exercise.
16. Initiate a work-conditioning program with consideration of job related tasks for a simulated patient within the established PT plan of care.

PTAP 1121. Patient Care Skills

Course Description

This course provides a foundation in essential patient care skills. The focus is on implementing components of interventions, performing data collection, monitoring patient health and responses to treatment, interpreting data for quality assurance, and completing documentation in accordance with legal and ethical standards. Core skills include measuring vital signs, motor function training (mobility, transfers, and gait), wound management, and patient education.

Student Learning Outcomes

1. Apply current knowledge, theory, and clinical judgment to ensure patient and provider safety, incorporating the patient/client perspective and environmental factors, in alignment with the plan of care established by the physical therapist.
2. Demonstrate competence in performing components of data collection skills essential for carrying out the plan of care by administering appropriate tests and measures related to the principles and techniques of patient care.
3. Identify when an intervention should not be performed due to clinical indications or when the direction to perform the intervention is beyond that which is appropriate for the physical therapist assistant.
4. Demonstrate competence in implementing selected components of interventions related to the principles and techniques of patient care identified in the plan of care established by the physical therapist.
5. Implement the American Physical Therapy Association (APTA) standards, policies, and documents that provide guidance regarding PT and PTA scope of practice, communication, documentation, and interaction with the patient and members of the healthcare team.

PTAP 1130. PTA Concept: Musculoskeletal

Course Description

This course will introduce the etiology and pathology of various musculoskeletal conditions. Data collection introduced in this course will cover MMT and goniometry. A variety of thermal, mechanical and electromagnetic modalities will be presented as well as performed. Students will complete a variety of case studies to integrate the data collection and intervention skills appropriate for the diagnoses studied.

Student Learning Outcomes

1. Identify the anatomy, physiology, and pathophysiology of a variety of musculoskeletal conditions that have an implication on PTA intervention.
2. Perform essential data collection measurements safely and effectively for musculoskeletal conditions based on the established PT plan of care.
3. Perform safe and effective use of superficial heat and cold modalities on a simulated patient based on the established PT plan of care.
4. Perform deep heat modalities safely and effectively on a simulated patient within the established PT plan of care.
5. Perform athermal modalities safely and effectively on a simulated patient within the established PT plan of care.
6. Perform electrotherapeutic modalities safely and effectively on a simulated patient within the established PT plan of care.
7. Perform mechanical modalities safely and effectively on a simulated patient within the established PT plan of care.
8. Perform massage techniques including myofascial release, soft tissue mobilization, trigger point release, and transverse friction techniques safely and effectively on a simulated patient within the established PT plan of care.
9. Safely administer treatments involving application of biofeedback.
10. Administer an evidence-based treatment session within the PT plan of care for patients with various musculoskeletal disorders.
11. Use information gathered from special tests presented in the PT evaluation for PTA intervention and data collection.
12. Integrate knowledge of normal gait training and balance/coordination training to provide safe intervention to a simulated patient with musculoskeletal dysfunction based on the established PT plan of care.
13. Demonstrate ability to complete a thorough and concise review of a journal article.
14. Identify activities in violation and support of the Guide for Conduct of the Physical Therapist Assistant, the Standards of Ethical Conduct, and the Values Based Behaviors for the Physical Therapist Assistant.

PTAP 1140. Integrated Clinical Experience

Course Description

Clinical observation and practice of physical therapy interventions and data collection are included. Knowledge from previous general education coursework and previous/concurrent PTA courses is applied.

Student Learning Outcomes

1. Perform basic data collection and interventions under supervision.
2. Communicate effectively with patients and the healthcare team.
3. Demonstrate safe patient handling and treatment behaviors.
4. Participate in discharge preparation and patient education.
5. Apply PTA skills across multiple clinical settings.
6. Demonstrate professional responsibility and social accountability.

PTAP 1150. PTA Concepts: Neuromuscular

Course Description

This course will introduce the etiology and pathology of various neurological conditions. Data collection introduced in this course will cover such neurological topics as sensory testing, balance assessment, perceptual functioning. A variety of neurorehabilitation treatment interventions will be presented as well as performed. Modules related to orthotic and prosthetic use will also be included. Students will complete a variety of case studies to integrate the data collection and intervention skills appropriate for the diagnoses studied.

Student Learning Outcomes

1. Identify the anatomy, physiology, and pathophysiology of a variety of neurological conditions that have an implication on PTA intervention.
2. Apply basic neurological principles to the treatment of pediatric patients within the established PT plan of care.
3. Perform data collection measurements safely and effectively for neurological conditions based on the established PT plan of care.
4. Demonstrate various intervention approaches commonly seen when working in neurological rehabilitation.
5. Identify the use of orthotic devices with patients with neurological dysfunction.
6. Integrate knowledge of evidence-based intervention and data collection for the neurological system to complete a case study from completion of the PT evaluation to recommendation for discharge reevaluation.
7. Demonstrate ability to complete a thorough and concise review of a journal article.
8. Perform all classroom activities and examinations with considerations of the Guide for Conduct of the Physical Therapist Assistant, the Standards of Ethical Conduct, and the Values Based Behaviors for the Physical Therapist Assistant.
9. Identify legal issues related to physical therapy care.

PTAP 1530L. Physical Agents Laboratory

Course Description

This lab course will study the biophysical principles, assessment, and application of therapeutic physical agents with specific emphasis on indications, contraindications, medical efficacy, and physiological effects. Additionally this course will introduce proper documentation of physical agents and corresponding patient responses.

Apply the principles of a variety of physical agents utilized in a physical therapy treatment as well as educate mock patients and explain outcome assessments to supervising physical therapists.

The student will be able to properly document the physical agents utilized and the corresponding mock patient responses.

Student Learning Outcomes

1. Critical Thinking

- a. Recognize when modifications for a physical agent are required due to clinical indications and when communication should occur with the supervising physical therapist.
 - b. Modify physical agent parameters from within the physical therapist's plan of care based on mock patient response.
 - c. Utilize knowledge of PTA scope of practice by knowing when to report changes in patient status to supervising physical therapist.
 - d. Assess pain utilizing appropriate pain scales
 - e. Modify physical agent treatment within the physical therapist's plan of care based on mock patient response to mock patients complaints of pain.
2. Professional Behaviors
 - a. Demonstrate effective interview and communication skills in collecting mock patient information.
 - b. Maintain treatment area (lab) through inspection of equipment, linens, and other necessary supplies.
 - c. Demonstrate at least 50% of the Professional Behaviors at an intermediate level or higher.

PTAP 1151. The Profession of Physical Therapy

Course Description

This course introduces prospective Physical Therapist Assistant students to the profession and allows for career exploration related to physical therapist assistant.

Student Learning Outcomes

1. Differentiate between the role of PTA, PT, and other health care providers.
2. Explore the different career opportunities in PT/PTA.
3. Organize, write and present a topic related to physical therapy.

PTAP 1155.Pre-PTA Anatomy Fundamentals

Course Description

This course introduces the prospective PTA student to in-depth anatomy and physiology of systems particularly important to the profession of physical therapy. Systems include muscular, skeletal, neuromuscular, cardiovascular and respiratory.

Student Learning Outcomes

1. Demonstrate understanding of the musculoskeletal system.
2. Demonstrate understanding of human body osteokinematics orthokinematics.
3. Identify and palpate common anatomical surface landmarks.

PTAP 1160. Plan of Care Implementation

Course Description

Students will complete multiple case studies aimed at integrating and advancing previously learned data collection and intervention skills to prepare the student for implementation of the PT plan of care.

Student Learning Outcomes

1. Communicate an understanding of the PT evaluation for a variety of musculoskeletal and neurological diseases.
2. Compose an intervention plan within the PT plan of care for a variety of patients with musculoskeletal and neuromuscular diagnoses.
3. Adapt an intervention plan to include appropriate and safe progression of activities.
4. Appreciate the role of the PTA in the discharge process.
5. Demonstrate ability to appropriately communicate with the physical therapist.
6. Appropriately communicate with the patient and/or family members in a variety of situations.

7. Demonstrate ability to communicate with the healthcare team.
8. Adapt patient care strategies based on participation in quality improvement activities.
9. Perform classroom activities consistent with the Guide for Conduct of the Physical Therapist Assistant, Standards of Ethical Conduct, and Values-Based Behaviors.

PTAP 1220. Clinical Kinesiology

Course Description

Covers physiological and kinesiological fundamentals as they relate to physical therapy.

Student Learning Outcomes

1.DATA COLLECTION AND INTERVENTIONS

- a. Describe how force, torque, and levers affect human movement.
- b. Identify the origin, insertion, action, and innervation for the muscles of the human body.
- c. Describe the alignment of the trunk and extremities at rest and during activities.
- d. Identify the components of normal gait mechanics and the gait cycle.
- e. Identify typical gait abnormalities for selected conditions.
- f. Cite normal and minimal functional range of motion values for the major joints of the human body.
- g. Perform functional range of motion and goniometric measurements on a lab partner for peripheral and spinal joint motions.
- h. Apply knowledge of musculoskeletal anatomy and kinesiology to basic principles of movement, stretching, and activation of the muscles of the upper extremity, lower extremity and trunk.
- i. Identify the musculoskeletal mechanisms responsible for respiration.
- j. Utilize correct spelling and pronunciation of medical terminology related to the body as a whole in order to communicate with accuracy and precision.
- k. Apply medical terminology associated with clinical kinesiology.
- l. Accurately identify and palpate anatomical surface landmarks.
- m. Describe the location and primary function of supporting structures for joints.
- n. Compare the three types of ROM: Active, Passive and Active-assisted.

2.COMMUNICATION

- a. Verbally articulate the bony limitations and muscular functions of selected movements.
- b. Accurately document data collected on joints and muscles of the trunk, upper extremities, and lower extremities, including range of motion.
- c. Translate the medical terminology of the body as a whole into everyday language in order to communicate clearly with patients and families/caregivers.

3.CRITICAL THINKING

- a. Distinguish between prime movers and secondary movers for identified movements.
- b. Differentiate reliability and validity as they relate to goniometry.

4.PROFESSIONAL BEHAVIORS

1. Demonstrates professional behavior evident by the following:
 - a. Timeliness.
 - b. Contributing ideas and asking questions proactively without being disruptive.
 - c. Uses active listening skills and engaging in all class and lab activities.
 - d. Participating equally and respectfully in group work, building on others' ideas.
 - e. Showing initiative with program and professional content.
 - f. Respectful verbal and nonverbal communication with peers and faculty.

- g. Accept and learn from constructive criticism received during peer and faculty skill checks.
- h. Contributing to a positive learning environment.

PTAP 1230. PTA Pathophysiology

Course Description

This course covers the disease processes most commonly seen in physical therapy patients. Etiology, pathology, pathophysiology, signs and symptoms, diagnosis, treatment and prognosis are covered for each disease process.

Student Learning Outcomes

1. Recognize the terminology associated with the study of pathophysiology
2. Identify the signs, symptoms, etiology, methods of diagnosis, and treatment of disorders and diseases related to:
 - a. the immune system
 - b. the endocrine and metabolic systems
 - c. the integumentary system
 - d. the musculoskeletal system
 - e. the digestive system
 - f. the cardiopulmonary system
 - g. the urinary system
 - h. the reproductive system
 - i. the nervous system
 - j. the circulatory and lymphatic system
 - k. genetic disorders
 - l. hepatic and biliary system
3. Identify the signs, symptoms, etiology, methods of diagnosis, and treatment for common types of cancer.
4. Describe the associations certain pathologies have regarding age, gender, race, and Ethnicity.
5. Identify common Laboratory values, including blood analysis data.
6. Describe the impact certain pathologies may have on physical therapy treatment.
7. Describe the importance of health screening and disease prevention.
8. Outline the physiological changes that occur to the human body with aging.
9. Demonstrate the ability to educate a mock patient in exercise or activity precautions related to a specific disease or disorder.
10. Describe the disorders and conditions resulting from trauma.
11. Identify the impact mental disorders may have on physical therapy treatment.

PTAP 1290. PTA Procedures I

Course Description

This course is the first of two courses that introduces students to procedures performed by physical therapists and physical therapist assistants. This course combines the theory behind the procedures with development of the skills for providing therapeutic modalities that will be performed in the clinical setting later in the program.

Student Learning Outcomes

1. Accurately assess vital signs, pain and Anthropometrical measurements.
2. Recognize and demonstrate appropriate infection control techniques.
3. Demonstrate proper preparation and body mechanics for physical therapy treatment.
4. Demonstrate the ability to correctly perform safe gait training and associated activities.
5. Demonstrate the ability to perform a variety of bed mobility techniques and patient transfers in a safe manner.

6. Demonstrate appropriate uses of wheelchairs in physical therapy.
7. Demonstrate the ability to safely perform range of motion (ROM) for the major joints of the upper and lower extremities.
8. Describe various Activities of Daily Living (ADL).
9. Demonstrate the ability to safely perform cryotherapy and superficial thermal physical agents.
10. Demonstrate the ability to safely perform therapeutic massage techniques.
11. Identify correct spelling and pronunciation of medical terms related to the body as a whole in order to communicate with accuracy and precision.

PTAP 1292. PTA Supplemental Laboratory I

Course Description

For PTA first term students to gain skills practice in PTA Laboratory rooms with an instructor. Provides Physical Therapy Assistant students participation in supervised learning and review of basic and specialized practices in the field of Physical Therapy such as: Anatomy and Physiology, Clinical Kinesiology, Gait and Transfer procedures. Allows PTA students opportunity to review in preparation for PTA exit competencies.

Student Learning Outcomes

1. Communication
 - A. Exhibit appropriate communication techniques during classroom assignments and assessments.
2. Critical thinking
 - A. Discuss ways of improving effectiveness of care through self and peer assessments.
 - B. Utilize problem solving models to assess clinical case studies.
3. Professional behavior
 - A. Demonstrate intermediate level Professional Behaviors in all interactions with patients, family members/caregivers, physical therapy personnel, classmates, and instructors.

PTAP 1321. Functional Anatomy

This course provides an essential foundation for muscle anatomy and function. The focus will provide knowledge of the musculoskeletal and nervous systems and applicable skills to interact with patients effectively, collect data by administering appropriate tests and measures (e.g., measuring joint movement, testing muscle strength), interpret data for quality assurance, and complete accurate documentation following legal and ethical guidelines.

Student Learning Outcomes

1. Apply knowledge of musculoskeletal anatomy and kinesiology to describe normal and abnormal human movement.
2. Demonstrate competence in performing musculoskeletal data collection skills, including goniometry, manual muscle testing, and posture analysis, and describe findings using appropriate professional terminology.
3. Analyze relationships between structure and function to identify clinical significance of joint motions, force couples, and companion motions.
4. Differentiate common musculoskeletal pathologies and associated functional deficits relevant to PTA practice.
5. Analyze relationships between musculoskeletal structure and function to explain human movement patterns.

PTAP 1350. PTA Pathophysiology

Course Description:

This course provides an essential foundation for understanding pathologies associated with the various body systems commonly treated within the scope of work of a physical therapist assistant. Recognition of pathologies and their impact on

the clients/patients presented in this course will improve clinical judgment and decision-making skills for treatment considerations.

Student Learning Outcomes

1. Explain the basic mechanisms of disease, including etiology, pathophysiology, epidemiology, and clinical manifestations, as they relate to physical therapy practice.
2. Classify major pathologies across body systems and recognize their clinical presentations relevant to patient care.
3. Integrate knowledge of pharmacological agents, including prescription and non-prescription medications, with their implications for therapy interventions.
4. Demonstrate understanding of the PTA's role in prevention, health promotion, and disease management across the lifespan

PTAP 1411. Therapeutic Exercise

Course Description

This course will build upon the knowledge of muscle anatomy, function, and orthopedic conditions and introduce foundational concepts of therapeutic exercise to aid clients/patients in preventing and recovering from injury. Students will learn to follow clinical practice guidelines and use clinical judgement to effectively apply therapeutic exercises to improve client/patient functional status. Students will continue to perform data collection, monitor patient health, illness, and/or response to treatment, interpret data for quality assurance, and complete accurate documentation following legal and ethical guidelines.

Student Learning Outcomes

1. Apply foundational principles of therapeutic exercise to improve orthopedic function, prevent injury, and support recovery within the PT plan of care.
2. Interpret data such as MMT grades, ROM values, and postural or gait findings to select and implement appropriate therapeutic exercise interventions.
3. Analyze patient response to therapeutic exercise to determine when modification, progression, or discontinuation of an intervention is required, and when to defer to the supervising PT.
4. Implement evidence-based therapeutic exercise interventions for common orthopedic pathologies, including flexibility, strengthening, balance, gait, and functional training.
5. Practice professional standards in documentation, communication, and patient/caregiver instruction specific to therapeutic exercise interventions.

PTAP 1511. Applied Modalities

Course Description:

This course will build upon knowledge of phases of inflammation and healing and cover the theory and practice of applying physical agents/modalities in rehabilitation. This course will provide practical details for using clinical judgment and reasoning to select and apply specific physical agents within intervention parameters to optimize patient outcomes safely and effectively. Students will also perform data collection, monitor patient health, illness, and response to treatment, interpret data for quality assurance, and complete accurate documentation following legal and ethical guidelines. Applicable skills include manual therapy, cryotherapy, thermotherapy, ultrasound, electrotherapy, other modalities, and patient education.

Student Learning Outcomes

1. Explain the principles, mechanisms of action, and physiological effects of common physical agents, including electrotherapy, thermal agents, ultrasound, diathermy, compression, massage, and biofeedback.

2. Differentiate indications, contraindications, and precautions of therapeutic modalities to ensure safe and effective patient care within the PTA scope of practice.
 3. Select and justify appropriate modality interventions and parameters based on patient diagnoses, presentation, and established PT plan of care.
 4. Demonstrate safe and accurate setup and application of therapeutic modalities, adhering to evidence-based guidelines and professional standards.
- Document and communicate modality use, patient responses, and education provided, using appropriate professional language and format.

PTAP 1520. Therapeutic Exercise

Course Description

This course covers the fundamentals of exercises used in physical therapy to help patients improve their health, especially with respect to recovery from injury or disease. Students will study the theory behind these exercises as well as practice them in the Laboratory setting.

Student Learning Outcomes

1. Apply therapeutic exercise techniques related to: joint and muscle flexibility, strength and endurance training, body mechanics and postural stabilization, balance, coordination, agility training, and aerobic conditioning.
2. Determine the applicability of therapeutic exercise procedures including safety, indications and contraindications.
3. Determine response/success of the treatment.
4. Design and implement appropriate therapeutic exercise progressions.
5. Effectively document treatment plans and progress.
6. Communicate patient outcomes clearly and professionally.

PTAP 1530. Orthopedics for PTA

Course Description

This course covers the theory aspect of orthopedics as it relates to physical therapy. Students will study pathologies associated with orthopedics as well as assessment and treatment of patients with orthopedic problems.

Student Learning Outcomes

1. Describe common disorders and disease of orthopedics.
2. Describe disorders and diseases of the spine and extremities.
3. Discuss orthopedic surgeries as they relate to the spine and extremities.
4. Explain physical therapy management related to orthopedic problems.
5. Address physical therapy interventions related to orthopedic abnormal gait patterns.

PTAP 1540. Clinical Neurology and Management

Course Description

This course covers the theory specific to neurological diseases as they relate to physical therapy along with assessment and treatment of patients with a history of neurological deficit.

Student Learning Outcomes

1. Explain development and function of the nervous system.
2. Apply techniques related to neurological developmental theories.
3. Review and demonstrate appropriate treatment programs associated with neurological conditions.

PTAP 1550. Physical Agents

Course Description

This course prepares students for safe and effective application of physical agents in the treatment of patients.

Student Learning Outcomes

1. Describe the mechanisms of actions, indications, contraindications, precautions and treatment procedures for applied physical agents.
Application of modalities such as:
cryotherapy
heat therapy
ultrasound
traction
2. Identify common conditions and disorders that require treatment with physical agents.

PTAP 1611. Clinical Neuroanatomy

Course Description

This course provides an essential foundation for neuroanatomy to treat neurologically impaired patients and recognize the impact of health and fitness sustained over the lifespan on motor skill performance. Students will learn about the structures and functions of the central and peripheral nervous systems; sensory and motor development, motor learning, motor control, and motor behaviors that occur across the lifespan; and recognize the role of a PTA in neurological assessment and care.

Student Learning Outcomes

1. Associate the structures and functions within the nervous system with its relevance to sensory awareness, processing, and motor function.
2. Examine the impact of health and fitness (physical activity) sustained over the lifespan on motor skill performance.
3. Identify the interactions among sensory input, sensory processing, and motor learning that can be used to retrain the motor system.
4. Discuss the role of a PTA in primary, secondary, and tertiary neurological care throughout the client's/patient's lifespan.

PTAP 2010. PTA Procedures II

Course Description

This course is the second of two courses that introduces students to procedures performed by physical therapist assistants. This course combines the theory behind the procedures with development of the skills for providing therapy that will be performed in the clinical setting as part of the program.

Student Learning Outcomes

1. Perform clinical procedures related to:
wound care
massage
cardiac rehabilitation
pediatrics safely and competently
2. Gives examples of the physical therapist assistant's role in falls prevention, health, wellness and community education.
3. Describes the processes related to medical billing and coding as they relate to physical therapy.

PTAP 2090. Clinical Practicum I

Course Description

This course applies skills and knowledge learned in the PTA theory and laboratory courses to direct patient care in clinical settings. This course is integrated with PTA 2010. Students will be under the direct supervision of a clinical professional.

Student Learning Outcomes

1. Demonstrates proficiency in applying therapeutic techniques, therapeutic exercise and functional training related to physical therapy.
2. Communicates effectively with patients, healthcare professionals and staff in the clinical setting.
3. Operates in a safe and competent manner in the clinical setting.
4. Demonstrates professional behavior consistent with the expectations of a physical therapist assistant.
5. Demonstrates ability to do effective problem solving related to clinical issues.
6. Demonstrates competent resource management.

PTAP 2192L. PTA Supplemental Laboratory II

Course Description

For PTA second term students to gain skills practice in PTA Laboratory rooms with an instructor. Provides Physical Therapy Assistant students with the opportunity for additional learning and practice of PTA skills in the areas of: Therapeutic Exercise/Orthopedics and Neuro-developmental techniques within the campus Laboratory. Encourages preparation for required clinical practicums.

Student Learning Outcomes

1. COMMUNICATION
 - A. Exhibit appropriate communication techniques during classroom assignments and assessments.
2. CRITICAL THINKING
 - A. Discuss ways of improving effectiveness of care through self and peer assessments.
 - B. Utilize problem solving models to assess clinical case studies.
3. PROFESSIONAL BEHAVIOR
 - A. Demonstrate intermediate level Professional Behaviors in all interactions with patients, family members/caregivers, physical therapy personnel, classmates, and instructors.

PTAP 2209. Concepts: Other Systems

Course Description

This course will introduce the etiology and pathology of various conditions of the cardiopulmonary, integumentary, endocrine, gastrointestinal, and urogynecological systems. Data collection and intervention instruction in this course is aimed at addressing the various body systems encountered in the rehabilitation setting. Examples include wound care, cardiovascular rehabilitation, pulmonary hygiene, and pelvic floor strengthening. Students will complete a variety of case studies to integrate the data collection and intervention skills appropriate for the diagnoses studied.

Student Learning Outcomes

1. Perform data collection and intervention on simulated pulmonary patients within the established PT plan of care.
2. Perform data collection and intervention on simulated wound and burn patients within the established PT plan of care.
3. Perform data collection and intervention within the PT plan of care for a patient with circulatory dysfunction.
4. Perform physical therapy data collection and intervention with simulated patients with immune, endocrine, digestive, renal, urinary and reproductive systems safely and effectively within the established PT plan of care.
5. Recognize specific critical care devices in special environments.

6. Appreciate the role of the PTA in health promotion and wellness initiatives.
7. Integrate knowledge of evidence-based intervention and data collection for multiple systems to complete a case study from completion of the PT evaluation to recommendation for discharge reevaluation.
8. Perform data collection and intervention within the PT plan of care for a geriatric patient.
9. Demonstrate ability to complete a thorough and concise review of a journal article.
10. Perform all classroom activities and examinations with considerations of the Guide for Conduct of the Physical Therapist Assistant, the Standards of Ethical Conduct, and the Values Based Behaviors for the Physical Therapist Assistant.
11. Identify legal issues related to physical therapy care.

PTAP 2210. Advanced Plan of Care Implementation

Course Description

This course is the culmination of the student's didactic preparation for clinical internship. Students will complete multiple case studies aimed at advancing to entry-level implementation of the PT plan of care related to both data collection and intervention from initial treatment to recommendation for discharge re-evaluation.

Student Learning Outcomes

1. Communicate an understanding of the PT evaluation for a variety of diseases, including patients with multi-system dysfunction.
2. Compose an intervention plan within the PT plan of care for a variety of diseases, including patients with multi-system dysfunction.
3. Adapt an intervention plan to include appropriate and safe progression of activities.
4. Interprets the role of the PTA in the discharge process.
5. Demonstrate ability to appropriately communicate with the physical therapist.
6. Appropriately communicate with the patient and/or family members in a variety of situations.
7. Demonstrate ability to communicate with the healthcare team.
8. Adapt patient care strategies based on participation in quality improvement activities.
9. Perform classroom activities consistent with the Guide for Conduct of the Physical Therapist Assistant, Standards of Ethical Conduct, and Values-Based Behaviors.
10. Accommodate to the psychosocial effects that having multiple medical conditions has on patients, their families, and their caregivers.

PTAP 2211. Neurological Rehabilitation

Course Description:

This course will build upon the knowledge of neuroanatomy and patient care skills and focus on evidence-based neurological rehabilitation approaches to assist the client/patient across the lifespan to gain functional movement and, in turn, improve their quality of life. Students will learn to analyze and treat clients/patients with movement dysfunction caused by neurological insult and follow the plan of care; perform data collection, monitor patient health, illness, and response to treatment; interpret data for quality assurance; and complete accurate documentation following legal and ethical guidelines. Students will also learn to empower the client/patient to be actively engaged in their functional recovery.

Student Learning Outcomes

1. Interpret and differentiate neurological assessment findings (e.g., cranial nerves, sensory/motor exams, reflexes, coordination, balance) to support clinical decision-making within the PTA scope.
2. Analyze clinical presentations of common neurological pathologies (CVA, TBI, SCI, MS, ALS, PD) and relate impairments to functional limitations and participation restrictions.

3. Implement and adapt evidence-based interventions for neurological rehabilitation, including exercise, functional training, and motor learning strategies, across rehabilitation phases and patient conditions.
4. Promote patient and caregiver safety, independence, and participation by applying appropriate precautions, compensatory strategies, and education in neurological care.
5. Demonstrate professional communication and documentation specific to neurological rehabilitation, in accordance with APTA standards and interprofessional collaboration.

PTAP 2215. Professional Issues

Course Description

This course explores a variety of professional aspects that are related to physical therapy. Topics include ethical and legal considerations, team dynamics, preparing for board exams and licensure, etc.

Student Learning Outcomes

1. Demonstrate preparedness for national PTA board examinations.
2. Discusses career opportunities and pathways related to physical therapist assistants.
3. Recites the process for obtaining and maintaining professional licensure.

PTAP 2220. Clinical Practicum I

Course Description

This course is the first of two that offers clinical practice of physical therapy interventions and data collection under the supervision of a clinical instructor. Knowledge from previous general education coursework and previous/concurrent PTA courses is applied. Clinical Practicum I will entail seven consecutive weeks of full-time clinical experience.

Student Learning Outcomes

1. Ensure patient, self, and environmental safety during all clinical interactions.
2. Demonstrate professional clinical behaviors, accountability, and ethical practice.
3. Communicate effectively with patients, families, supervising PT, and healthcare team members.
4. Apply clinical problem-solving and critical thinking to implement the PT plan of care.
5. Perform safe and effective data collection and treatment interventions within the established PT plan of care.
6. Demonstrate competence in documentation, resource management, and quality improvement.
7. Engage in evidence-based learning and professional development.

PTAP 2231. Clinical I

Course Description:

This course is a 6-week, full-time clinical externship that provides hands-on experience in direct patient care. Students follow the schedule of the clinical instructor(s) and are expected to demonstrate intermediate-level skills as outlined in the Clinical Performance Instrument (CPI).

Student Learning Outcomes

1. Apply knowledge, skills, and clinical decision-making during patient/client care, incorporating evidence-based strategies.
2. Evaluate personal performance using the Clinical Performance Instrument (CPI), incorporating feedback with a growth mindset.
3. Achieve at least Intermediate-level performance on all applicable criteria of the Clinical Performance Instrument.
4. Adhere to legal practice standards, including federal, state, and institutional regulations related to patient care and documentation.

5. Demonstrate ethical and professional behaviors consistent with the APTA Guide for Conduct of the PTA and the Standards of Ethical Conduct.

PTAP 2240. Seminar in Physical Therapy

Course Description

This course is intended to assist the student with transitioning from student to practicing PTA. A review of current trends in therapy (as seen in the clinical practicum courses) and preparation for employment will be the main focus of the course. Students will also participate in a review course for the National Physical Therapy Examination (NPTE) for the PTA.

Student Learning Outcomes

1. Develop and implement a personal plan for career development and lifelong learning.
2. Demonstrate understanding of the PTA's role in clinical education and professional service.
3. Prepare for employment as a Physical Therapist Assistant.
4. Plan and execute a study strategy for the NPTE for PTAs.
5. Demonstrate readiness for the NPTE for PTAs.

PTAP 2241. Advanced Practice

Course Description:

This is a comprehensive course that requires a higher level of practice. This course will focus on applying advanced-level skills and knowledge to medically complex client/patient cases safely and competently while managing risk to achieve improved patient experiences and outcomes, as well as improve clinical leadership skills. This will require a combination of advanced and distinctly increased clinical and analytical skills, knowledge, clinical reasoning, attitude, and experience.

Student Learning Outcomes

1. Apply evidence-based resources to clinical decision-making for safe and effective patient progression within the PT plan of care.
2. Manage increasingly complex patients and tasks within the PTA scope of practice.
3. Demonstrate professional leadership through time management, productivity, skilled care, and defensible documentation that supports reimbursement.
4. Recognize and appropriately respond to emergent patient conditions and report illegal, unethical, or unsafe acts to the appropriate authority.
5. Perform duties consistent with the APTA Guide for Conduct of the PTA and the Standards of Ethical Conduct to meet professional and patient expectations.

PTAP 2250. Clinical Practicum II

Course Description

This course is the second of two that offers clinical practice of physical therapy interventions and data collection under the supervision of a clinical instructor. Knowledge from previous general education coursework and previous/concurrent PTA courses is applied. Clinical Practicum II will entail seven consecutive weeks of full-time experience.

Student Learning Outcomes

1. Demonstrates an Entry-Level rating in safety.
2. Demonstrates an Entry-Level rating in clinical behaviors.
3. Demonstrates an Entry-Level rating in accountability.
4. Demonstrates an Entry-Level rating in cultural competence.
5. Demonstrates an Entry-Level rating in communication.

6. Demonstrates an Entry-Level rating in self-assessment and lifelong learning.
7. Demonstrates an Entry-Level rating in clinical problem solving.
8. Demonstrates an Entry-Level rating in administration of data collection skills necessary to safely administer the PT plan of care.
9. Demonstrates an Entry-Level rating in administration of interventions contained in the PT plan of care.
10. Demonstrates an Entry-Level rating in documentation.
11. Demonstrates an Entry-Level rating in resource management.
12. Performs in-service or other formal educational activity appropriate to delivery of physical therapy services.

PTAP 2251. Licensure Preparation

Course Description

This is a comprehensive course that will assist in preparing students for the National Physical Therapy Exam (NPTE) for the Physical Therapist Assistant. This course will provide a review of concepts introduced and reinforced throughout the curriculum. Students will complete practice exams, review responses, and provide an explanation/rationale for the answer options selected. Students will receive ongoing feedback and support throughout the course to prepare for the NPTE.

Student Learning Outcomes

1. Develop effective standardized test-taking strategies including critical reasoning skills and anxiety management techniques.
2. Integrate and apply accumulated knowledge gained from previous academic courses and clinical experience to licensure examination practice tests.
3. Analyze personal practice exam outcomes and formulate a detailed plan of study to prepare for the licensure examination based on individual strengths and weaknesses.
4. Exhibit readiness for the National Physical Therapy Examination (NPTE) for PTAs by achieving the minimum required score on a Practice Exam & Assessment Tool (PEAT) exam or by completing a remediation plan.

PTAP 2261. Clinical II

Course Description:

This course is an 8-week, full-time clinical externship that provides advanced experience in direct patient care. Students follow the schedule of the clinical instructor(s) and are expected to demonstrate entry-level skills as outlined in the Clinical Performance Instrument (CPI).

Student Learning Outcomes

1. Apply knowledge, skills, and clinical reasoning to patient/client care with increasing independence, integrating evidence-based strategies across a variety of conditions.
2. Evaluate performance using the Clinical Performance Instrument (CPI), incorporating supervisor and peer feedback to refine skills with a growth mindset.
3. Achieve a minimum rating of Advanced Intermediate on all applicable CPI performance criteria.
4. Adhere to legal, ethical, and professional standards while demonstrating initiative and accountability in patient care.
5. Demonstrate effective communication and collaboration with patients, caregivers, and interprofessional team members to support safe and inclusive care.

PTAP 2290. Clinical Practicum II

Course Description

This course applies skills and knowledge learned in the PTA theory and Laboratory courses to direct patient care in clinical settings. Students will be under the direct supervision of a clinical professional.

Student Learning Outcomes

1. Demonstrates proficiency in applying therapeutic techniques, therapeutic exercise and functional training related to physical therapy.
2. Communicates effectively with patients, healthcare professionals and staff in the clinical setting.
3. Operates in a safe and competent manner in the clinical setting.
4. Demonstrates professional behavior consistent with the expectations of a physical therapist assistant.
5. Demonstrates ability to do effective problem solving related to clinical issues.
6. Demonstrates competent resource management.

Plumbing (PLMB)

PLMB 1105. Basic Plumbing, Safety and Pipe Fitting

Course Description

An introduction to basic plumbing, safety and pipe fitting. This course will introduce students to today's complex and sophisticated plumbing systems and the career opportunities available. Major topics include safety, tools, materials, equipment, and procedures. The course will introduce students to installation and repair techniques as well as development in materials, fixtures and appliances. The program will cover both hands, the proper use of plumbing tools and customer service for employment skills.

Student Learning Outcomes

1. Develop the students skills in general safety rules and plumbing procedures, including the proper care and use of all tools. The student will learn how to develop good safety skills.
2. Use the appropriate name and select the correct plumbing item to match and perform the proper plumbing tasks.
3. Be able to describe different plumbing tasks and plumbing systems in order to perform installation or perform repairs.
4. Be able to properly determine piping material for the plumbing installation tasks.
5. Accurately install specific piping in relation to horizontal and vertical positions, by selecting and using trade tools and mathematics.
6. Use efficient methods to acquire and apply new knowledge and skills.
7. Be able to organize ideas and communicate orally and in writing.

PLMB 1111. Plan Reading/Drawing

Course Description

This course will emphasize the skills needed to properly interpret building prints and the ability to draw isometric sketches in the field to be pre-fabricated in a shop environment. Areas covered include basic drawing tools, measuring tools and lettering; graphic symbols for pipes, fittings and valves; interpretations of technical diagrams; interpretation of isometric drawings; and drawing three view, plan view and elevation view representations.

Student Learning Outcomes

1. Demonstrate proper use of an architect's scale.
2. Identify graphic symbols for various pipes, valves and fittings.
3. Interpret technical diagrams correctly of various piping schemes for installation.
4. Prepare isometric drawings based on assigned schemes.
5. Drawing Interpretation and Plan Read

PLMB 1112. Plumbing I

Course Description

Covers orientation to the trade. Students will learn about materials used in the plumbing industry and the different types of plumbing fixtures. It includes task-oriented projects in which the students apply many of the skills and knowledge that are presented through the National Center for Construction and Education Research (NCCER) Plumbing Program.

Student Learning Outcomes

1. Students will have the knowledge about the plumbing history, safety, and tools of the trade.
2. Introduction to math for the plumbing field and plumbing blueprints.
3. Ability to work with copper tubing, cast iron, steel pipe, plumbing fixtures, drain waste vent systems and water distribution systems.
4. Students will master installation of plumbing fixtures.

PLMB 1113. Plumbing II

Course Description

Provides students the opportunity to gain more practice in the skills and knowledge learned in Plumbing I. Students will install fixtures and run the various plumbing supply lines from Plumbing Level I. The course included hands on projects in which the students apply many of the competencies that have been presented through the National Center for Construction and Education Research (NCCER) Plumbing Program.

Student Learning Outcomes

1. Students will have the knowledge about the plumbing history, safety, and tools of the trade.
2. Introduction to math for the plumbing field and plumbing blueprints.
3. Ability to work with copper tubing, cast iron, steel pipe, plumbing fixtures, drain waste vent systems and water distribution systems.
4. Students will master installation of plumbing fixtures.

PLMB 1114. Use and Care of Tools

Course Description

Areas to be covered include, but are not limited to: Proper tool use; Tool care and maintenance; Safety; Ladders and scaffolds; Measurement and layout tools; Hand and power tools; Pipe Joining Tools; and Specialty tools. apprentices need to know the type and assembly methods of pipe, valves, and fittings, as well as obtain the skills to install various joint connections.

Student Learning Outcomes

1. Identify key tools used in the piping industry.
2. Perform appropriate maintenance on tools.
3. Demonstrate safe usage of hand and power tools.
4. Demonstrate proper inspection of ladders and scaffolds for safe usage.
5. Demonstrate the proper use of pipe joining tools.

PLMB 1115. Introduction to Gas Fitting and Combustion Venting

Course Description

An introduction to the installation of piping and venting for natural gas and liquid petroleum systems. Topics include piping design, fuel combustion piping systems and domestic hot water systems. The course will also cover the proper installation of gas piping system; clockwise and orifice sizing. Be able to install venting valves, regulators, and electrical systems controls.

Student Learning Outcomes

1. Select and safely use the proper tools needed to install gas burning equipment.
2. Identify and describe potential hazards faced when installing gas distribution systems designed to transport natural gas and liquid petroleum.
3. Perform code searches using required codebooks.
4. Use shop drawings to size supply lines and select, thread and install approved piping, tubing, and vent connectors.
5. Properly identify and match appliance gas requirements for supply piping and combustion venting.
6. Locate, understand written documents such as manufacturer's manuals, graphs and piping schedule.
7. Recognize problems and evaluate to perform proper repair.

PLMB 1117. Soldering and Brazing

Course Description

This course focuses on the joining methods of soldering & brazing which include, Safety and safe work practices; Theory of soldering and brazing; Types and uses of copper tube; Solders, brazing rod, and fluxes; Joint preparation and assembly; Heating equipment and tools; Soldered and brazed joints; and Performance tests for soldering and brazing.

Student Learning Outcomes

1. Identify the proper solders, fluxes and brazing rod for assigned joining procedures.
2. Select proper heat source, tools and preparation material for assigned joining procedures.
3. Measure, cut, and assemble connections according to industry standards.
4. Demonstrate proper soldering process to pass visual inspection by the CWI.
5. Demonstrate proper brazing process to pass visual inspection by the CWI.
6. Obtain the UA Soft Solder (UA-SS1) and UA Brazing (UA-51) certifications.

PLMB 1125. Drain/Waste/Vent and Gray Water

Course Description

Covers the layout and design of drain and vent systems in residential and commercial buildings including those using gray water systems. Topics include safety requirements, tools and materials, proper installation, maintenance and principles of gravity, air pressure, DWV sizing, storm drainage, sewers and sewage treatment, private sewage disposal systems, and alternate water source drainage systems.

Student Learning Outcomes

1. Select and properly use tools to assemble and cut cast iron, plastic, and steel pipes.
2. Design and assemble an actual drain, waste and vent system that meets code.
3. Explain trap installation and uses in different applications.
4. Apply accepted code practices to different piping systems used in gray water, drain, waste and vent configurations.

PLMB 1130. Water Piping Systems

Course Description

Introduces layout and design of water piping systems as well as the installation of plumbing fixtures.

Student Learning Outcomes

1. Describe safety requirements when using certain tools and equipment commonly found on water piping installation site and when installing fixtures.
2. Distinguish between potable and non-potable water systems, concerning the degree of health hazard when handling and installing a distribution system, or repairing one.
3. Identify and select different approved type pipe, fittings, and connectors, which correspond to Code installation procedures.

4. Follow detailed manufacturer fitting/fixture measurements for correct installation.
5. Install pipe/fitting assemblies corresponding to acceptable regulations, requirements and testing methods.
6. Use efficient methods to acquire and apply new knowledge and skills.
7. Perform basic computations and approaches practical problems by appropriately choosing from a variety of mathematical techniques.
8. Organize ideas and communicates orally and in writing.
9. Locate, understand and interpret written information in prose and in documents such as manuals, graphs, and schedules.
10. Recognize problems, evaluates and implements a plan of action.

PLMB 1140. Pumps and Motors

Course Description

An introduction to various pump and motor operations, starting with proper hydraulic sizing and electrical demand requirements. Topics include electrical power and hydraulic components of pumping water. This course presents the fundamentals commonly related to the study of the mechanical properties of water, including liquid pressure, liquid flow, pumping dynamics, and hydrostatics or fluid mechanics.

Student Learning Outcomes

1. Describe the advantages and the limitations of different pumps.
2. Calculate the flow of liquid through piping systems.
3. Calculate the pressure drop in pipes, valves, and fittings.
4. Safely operate various pumps and motors and maintain a safe working environment.
5. Troubleshoot pumps.
6. Prepare daily operations reports of on pump performance.

PLMB 1150. Trades Math

Course Description

Includes basic arithmetic, whole numbers, fractions and decimals. Covers volumes, weight measurements and basic algebra as it applies to plumbing.

Student Learning Outcomes

After successful completion of this course, 71% passing based on multi-diverse evaluations, upon completion of this course students will be able to perform the following tasks:

1. Identify formulas/terms that are related to plumbing calculations.
2. Compute common plumbing problems dealing with but not limited to areas, volumes and capacities.
3. Design and properly size (D.W.V., water and gas) plumbing systems, using UPC numerical tables and graphs.
4. Calculate gallons, flow and velocities of water systems.
5. Provide accurate answers to problems involving grade/slope/fall.
6. Demonstrate fitting allowance measurements for simple and complex piping offsets.

PLMB 1205. Water Supply Systems and Backflow Prevention

Course Description

Covers the design and application of water delivery systems used for domestic and commercial potable drinking water. The course will concentrate on water pipe sizing as well as types of materials and fittings. Water supply sources and treatment. Cross connection prevention will be covered as well as the hands-on use of backflow prevention and test gauges.

Student Learning Outcomes

1. Design water systems and piping requirements using proper fittings and line sizing techniques that satisfy plumbing code requirements.
2. Describe and use different types of pipe and tubing, fittings, and designs and demonstrate proper applications of fitting locations in water systems.
3. Identify potential cross connection locations and correct problems.
4. Identify the proper backflow device needed to protect various types of water systems.
5. Ability to pass certification in backflow prevention.

PLMB 1212. Rigging and Signaling

Course Description

This course delves deeper into heavy commercial and industrial rigging and culminate in an Industrial Rigging Certification. Areas to be covered are Inspections of various wire and synthetic slings; Safe working load limits; Sling lifting angles; Inspection of all rigging hardware; Eyebolts; Spreader beams; Man baskets; Mechanical advantage; Critical lift design; Lift calculation form; Rigging hook-up; Crane set-up; Site preparation; Boom truck operations; Ariel platforms; Tower cranes; and crane signaling.

Student Learning Outcomes

1. Demonstrate correct preparation of a heavy lift plan.
2. Demonstrate correct inspection of slings for use in a lift.
3. Demonstrate correct inspection of lifting hardware.
4. Demonstrate correct use of slings, chain hoists and come-a-longs on an assigned lift.

PLMB 1215. Service Plumbing, Repair, and Maintenance

Course Description

This course will provide the student with a basic understanding of the theory and practices of fixture installation and the use of various types of fixtures. Fixtures in both residential and commercial applications will be explored. Topics covered include plumbing fixtures; installation practices; institutional fixture and equipment; fixture controls; and appliances and accessories.

Student Learning Outcomes

1. Demonstrate correct practices and safety requirements when repairing plumbing fixtures/appliances.
2. Use appropriate name and select appropriate items to match and perform specific plumbing tasks.
3. Measure and calculate plumbing layouts.
4. Organize ideas and communicates orally and in writing.
5. Specify piping in relation to horizontal and vertical installation positions and to above and below ground placement of fitting.
6. Use applied math to determine pipe placement in offset setting.
7. Identify ADA installation specification for fixtures.
8. Demonstrate residential and commercial lavatory installation.
9. Recognizes problems, evaluates and implements a plan of action.

PLMB 1230. Boilers and Hydronic Systems

Course Description

An introduction to boilers and hydronic systems. Students will study fundamental hydronic heating concepts, heat load design, estimating, heating sources, the properties of water as it relates to hydronics, system components, heating control panels, and distribution piping systems. Included air management and piping materials.

Student Learning Outcomes

1. Demonstrate a working knowledge of hydronic radiant heating systems including heating load design and estimating system annual space heating energy usage and annual space heating costs for different fuels including solar thermal.
2. Evaluate various heating sources, boilers, and boiler systems and explain their relationship to the properties of water used as the medium to transfer heat.
3. Select the proper fittings, tubing, materials, circulators/pumps, and distribution piping configurations needed to install and service a hydronic heating system.
4. Identify and discuss various types of hydronic heating exchangers, wiring, control components, hydronic radiant panel heating, expansion tanks and air removal.

PLMB 1235. Pipes, Valves, Fitting**Course Description**

In this course students will explore various pipe materials and wall thicknesses as they apply to specific field applications, as well as the numerous valves and fitting used to joint these materials. Areas covered include pipe, pipe fittings, flanges and gaskets; methods of joining pipe; understanding the functions of valves; internal components of valves; pipe hangers, supports, anchors, guides and fasteners.

Student Learning Outcomes

1. Identify pipes of different materials and their key usages and limitations.
2. Perform proper joining methods to industry standards.
3. Identify pipes of different materials based on color coding and specifications.

PLMB 1240. Plastic Piping Installer**Course Description**

In this course students will learn about the many types of plastic piping, uses and limitations as well as the numerous glues and primers used to join them. Plastic piping advantages and disadvantages will be covered as well as the characteristics of them.

Student Learning Outcomes

1. Identify pipes of different materials based on color coding and specifications.
2. Demonstrate knowledge of plastic pipe advantages and disadvantages.
3. Identify fittings and proper orientation.
4. Identify proper glues and primers based on given material and conditions.
5. Identify differences in supports and hangers for plastic piping as opposed to other materials.
6. Obtain UA Solvent Welding Certification.

PLMB 1310. Metallurgy**Course Description**

This course first Introduces Metallurgy, a study of the effect of welding on metallurgical structure and properties of weld joints. The study of the influence of crystal and grain structure of metals on the mechanical, physical, and chemical properties of metals.

Student Learning Outcomes

1. The student will show knowledge of metallurgical structure and weld regions.
2. The student can identify problems in welding with visual, qualitative and quantitative identification techniques.
3. The student can demonstrate knowledge of the effects of welding on both physical and mechanical properties.

4. The student can identify welding stress and corrosive resistance on welds.

PLMB 1320. Layout and Design

Course Description

This course begins examining the principles and practices of metal fabrication including layout, design, and support techniques. Students are exposed to basic weld pipe, weld fittings, weld symbols, offsets, supports, and screwed pipe. Related math calculations and cutting techniques are utilized to prepare students for entry into pipe fitting related fields.

Student Learning Outcomes

1. Show competency in following safety protocol.
2. Properly read and identify various weld symbols and layout drawing types.
3. Can properly measure and layout basic projects following blueprints.
4. Can identify weld fittings and types of pipe.
5. Can identify supports.

PLMB 1321. Solar Thermal Systems

Course Description

Introduces thermal solar systems including accessing, installing, and evaluating fully operational solar water heating systems.

Student Learning Outcomes

1. Assess, install, and evaluate fully operational solar water heating systems.

PLMB 1330. Cutting and Beveling

Course Description

Students will be introduced to Cutting, Beveling & Safety Protocols by exploring protocols and procedures for safety of cutting with various methods, including oxy fuel gas cutting, plasma cutting, chop saws, and portable band saws. The course will also address jobsite safety and hazardous substances. Methods of grinding, beveling, cutting, gouging will be explored. Weld joints, types & designs will be studied.

Student Learning Outcomes

1. Show competency when using various cutting techniques.
2. Identify weld joints, types and designs in various applications.
3. Demonstrate jobsite safety with regard to cutting, arc welding, and hazardous substances.

PLMB 1331. Energy and Water Conservation Systems

Course Description

Introduces the newest energy-saving techniques for homes and commercial applications as they relate to the plumbing field. Including gray water, geo- thermal, energy design and application (LEED). Emphasis on energy-saving appliances and low water consumption fixtures.

Student Learning Outcomes

Describe alternative energy technologies, energy efficiency methods, energy efficiency investment analysis, geothermal systems, water management and water efficiency methods.

PLMB 1340. Shielded Metal Arc Welding (SMAW)

Course Description

This course explores fundamental theory and application of Shielded Metal Arc Welding (SMAW) process and proper welding equipment setup. Introductory skills for pipe and plate welding are covered leading to skillfulness in equipment setup, pre-weld fit up, filler metal alloys, and welding in various positions.

Student Learning Outcomes

1. Show knowledge and competency in the SMAW process.
2. Can complete plate welding in horizontal, vertical and overhead positions to competency as measured by visual pass by CWI.
3. Demonstrate knowledge of pipe welding and positions.
4. Demonstrate knowledge of filler alloys.

PLMB 1350. Basic Electricity

Course Description

This course provides apprentices with information on electrical devices, circuits, and electric measuring instruments as they relate to the installation of mechanical equipment and piping systems. In the coming weeks, students will learn more about theory and practice in Electrical safety; Fundamentals of electricity and electric circuits; Magnetism and electromagnetism; Direct and alternating currents; Circuits and transformers; Inductance and capacitance. The course will also include the topic of Electrical controls which are a critical part in the efficient operation of mechanical systems. Understanding how flow rates and velocities can be affected by the proper electrical control helps the apprentice better recognize characteristics of an inefficient system. Topics covered include Essentials of control systems; Fundamentals of measurement; Types of automatic controls; Auxiliary control equipment; Electrical diagrams; Capacitors and single-phase motors; Application of thermostats and actuators; Float, temperature and pressure controls; and Overview of controls of refrigerant systems.

Student Learning Outcomes

1. Identify basic electrical devices and materials.
2. Identify the relationship of volts, amps and ohms.
3. Demonstrate low voltage wiring of sensors from transformers to fixtures.
4. Demonstrate proficiency in calculating the conversion of watts to horsepower.
5. Demonstrate troubleshooting procedures for low voltage systems.
6. Identify the various needs of controls based on a particular system.
7. Determine flow rates and make adjustments to obtain peak performance.
8. Demonstrate successful interpretations of wiring diagrams for electrical controls.
9. Demonstrate troubleshooting procedures for electrical controls.

PLMB 2182. Plumbing Apprenticeship I

Course Description

This course provides basic safety, health and education training for construction workers. Training is provided in the recognition, avoidance, abatement and prevention of safety and health hazards in workplaces in the construction industry. It also provides information on the employer's responsibilities, workers' rights and how to file a complaint. It also trains Apprentices in the proper use and care of hand and power tools. Areas to be covered include, but are not limited to, Proper tool use; Tool care and maintenance; Safety; Ladders and scaffolds; Measurement and layout tools; Hand and power tools; Pipe Joining Tools; and Specialty tools. apprentices need to know the type and assembly methods of pipe, valves, and fittings, as well as obtain the skills to install various joint connections. Finally, the course also focuses on the joining methods of soldering & brazing which include, Safety and safe work practices; Theory of soldering and brazing; Types and uses of

copper tube; Solders, brazing rod, and fluxes; Joint preparation and assembly; Heating equipment and tools; Soldered and brazed joints; and Performance tests for soldering and brazing.

Student Learning Outcomes

1. Describe six different types of violations used by OSHA and give a brief description of each.
2. Describe the concept of the General Duty clause.
3. List the general safety and health training provisions of Subpart C.
4. Identify the safety procedures used to prevent trenching and shoring fatalities and injuries.
5. Determine whether hearing protection is needed in situational examples, using the formula to calculate exposure.
6. Identify the OSHA Fatal Four categories.
7. Describe three general requirements for safe rigging.
8. Identify the safety procedures used prevent crane fatalities and injuries.
9. Identify key tools used in the piping industry.
10. Perform appropriate maintenance on tools.
11. Demonstrate safe usage of hand and power tools.
12. Demonstrate proper inspection of ladders and scaffolds for safe usage.
13. Demonstrate the proper use of pipe joining tools.
14. Identify the proper solders, fluxes and brazing rod for assigned joining procedures.
15. Select proper heat source, tools and preparation material for assigned joining procedures.
16. Measure, cut, and assemble connections according to industry standards.
17. Demonstrate proper soldering process to pass visual inspection by the CWI.
18. Demonstrate proper brazing process to pass visual inspection by the CWI.
19. Obtain the UA Soft Solder (UA-SS1) and UA Brazing (UA-51) certifications.

PLMB 2210. Mechanical Code

Course Description

This course students will gain insight into the 2015 Uniform Mechanical Code and the 2015 New Mexico Mechanical Code. Regulations and guidelines for proper installation will be explored in preparation for the New Mexico State Gasfitters License for Journeyman Certification which is a requirement within this program. Topics covered include Administration; Definitions; General Regulations; Combustion air; Chimneys and vents; Installation of Specific appliances; Boilers and pressure vessels; Hydronics; and Fuel gas piping.

Student Learning Outcomes

1. Correctly calculate and identify a confined space.
2. Correctly calculate vent connector sizing on boilers.
3. Correctly calculate for combustion air.
4. Correctly calculate for a fuel gas piping system.
5. Ability to obtain a state issued Journeyman Gasfitter License.

PLMB 2211. Plumbing Code

Course Description

In this course students will gain insight into the 2015 Uniform Plumbing Code and the 2015 New Mexico Plumbing Code. Regulations and guidelines for proper installation will be explored in preparation for the New Mexico State Plumbing License for Journeyman Certification which is a requirement within this program. Topics covered include Administration; Definitions; General Regulations; Plumbing Fixtures; Water heaters; Water Supply, Sanitary Drainage; Indirect Wastes; Vents; Traps and interceptors; Storm Drainage; and Fuel gas piping.

Student Learning Outcomes

1. Correctly calculate a water supply and distribution system.
2. Correctly calculate a drainage and vent system.
3. Correctly calculate vent connector sizing on a water heater.
4. Correctly calculate for confined space.

PLMB 2212. Pipefitter Installer Code**Course Description**

The Pipefitting Installer course will coach the apprentice on how to properly locate required rules and regulations in the Uniform Mechanical Code book in effect as it pertains to the State Pipefitting Installers License testing. Topics covered include administrative rules, definitions, general regulations and the rules of installing piping for combustion air, vents, boilers/steam vessels, hydronics and process piping. Proper pipe/tubing data, valves, fittings and joints as well as their limitations in various systems will be discussed. Pipe offsets & welding take off calculations will also be covered.

Student Learning Outcomes

1. Show competency in location information in the code book and NMAC quickly & accurately.
2. Can quickly locate clearance, installation and safety device requirements for boilers, steam vessels and hydronic systems.
3. Can properly locate rules and regulations on Hazardous Process Piping and safety standards associated with it.
4. Can site proper pipe/tubing data, valves, fitting and joints associated with various installations presented by the instructor.
5. Can correctly perform offset and fitting take-off calculations.
6. Has the capability of taking and passing the State Examination for Journeyman Pipefitter Installer License.

PLMB 2282. Plumbing Apprenticeship II**Course Description**

This course delves deeper into heavy commercial and industrial rigging and culminate in an Industrial Rigging Certification. Areas to be covered are Inspections of various wire and synthetic slings; Safe working load limits; Sling lifting angles; Inspection of all rigging hardware; Eyebolts; Spreader beams; Man baskets; Mechanical advantage; Critical lift design; Lift calculation form; Rigging hook-up; Crane set-up; Site preparation; Boom truck operations; Ariel platforms; Tower cranes; and crane signaling.

Student Learning Outcomes

1. Demonstrate correct preparation of a heavy lift plan.
2. Demonstrate correct inspection of slings for use in a lift.
3. Demonstrate correct inspection of lifting hardware.
4. Demonstrate correct use of slings, chain hoists and come-a-longs on an assigned lift.
5. Demonstrate correct crane signals to crane operator.
6. Pass written and hands-on exam for certification.

PLMB 2300. Pneumatic Controls**Course Description**

This course will introduce students to pneumatic controls. Although they are slowly being phased out, there are many legacy systems still in operation today that work fine. This course deals mainly with troubleshooting existing systems. Areas to be explored are Control loops and air supply; Control valves and dampers; Axillary devices; Receiver controllers and transmitters; Ventilation, heating, cooling and humidity control; and Year-round control.

Student Learning Outcomes

1. Identify air compressor and air dryer components.
2. Determine proper air-line adjustments to obtain peak performance.
3. Demonstrate successful interpretations of air piping diagrams for pneumatic controls.
4. Demonstrate troubleshooting procedures for pneumatic controls.

PLMB 2382. Plumbing Apprenticeship III

Course Description

This course will emphasize the skills needed to properly interpret building prints and the ability to draw isometric sketches in the field to be prefabricated in a shop environment. Areas covered include basic drawing tools, measuring tools and lettering; graphic symbols for pipes, fittings and valves; interpretations of technical diagrams; interpretation of isometric drawings; and drawing three view, plan view and elevation view representations. Students will also explore various pipe materials and wall thicknesses as they apply to specific field applications, as well as the numerous valves and fitting used to joint these materials. Areas covered include pipe, pipe fittings, flanges and gaskets; methods of joining pipe; understanding the functions of valves; internal components of valves; pipe hangers, supports, anchors, guides and fasteners. Finally, students will also learn about the many types of plastic piping, uses and limitations as well as the numerous glues and primers used to join them. Plastic piping advantages and disadvantages will be covered as well as the characteristics of them.

Student Learning Outcomes

1. Demonstrate proper use of an architect's scale.
2. Identify graphic symbols for various pipes, valves and fittings.
3. Interpret technical diagrams correctly of various piping schemes for installation.
4. Prepare isometric drawings based on assigned schemes.
5. Drawing Interpretation and Plan Reading.
6. Identify pipes of different materials and their key usages and limitations.
7. Perform proper joining methods to industry standards.
8. Identify pipes of different materials based on color coding and specifications.
9. Demonstrate knowledge of plastic pipe advantages and disadvantages.
10. Identify fittings and proper orientation.
11. Identify proper glues and primers based on given material and conditions.
12. Identify differences in supports and hangers for plastic piping as opposed to other materials.
13. Obtain UA Solvent Welding Certification.
14. Identify various valves and describe their intended purposes.
15. Describe major components of the most commonly used valves.
16. Identify common supports, hangers and anchors.
17. Identify proper tables used to find industry minimum standards for spacing of horizontal and vertical supports.

PLMB 2482. Plumbing Apprenticeship IV

Course Description

This course will provide the student with a basic understanding of the theory and practices of fixture installation and the use of various types of fixtures. Fixtures in both residential and commercial applications will be explored. Topics covered include plumbing fixtures; installation practices; institutional fixture and equipment; fixture controls; and appliances and accessories. This course will explore the history of water supply systems and the importance of clean potable water sources for human civilization as it has developed into modern day systems. Topics covered include introduction to water supply systems; pipe materials; water supply sources and treatment; distribution systems; building supply systems; water heating; and water conservation.

Student Learning Outcomes

1. Identify ADA installation specification for fixtures.
2. Demonstrate proper installation of floor mounted and wall hung water closets.
3. Demonstrate residential and commercial lavatory installation.
4. Demonstrate bathtub and shower installations.
5. Demonstrate drinking fountain and water cooler installations.
6. Demonstrate proper electric and gas water heater installations.
7. Identify major events that cause the evolution of water supply systems.
8. Install a basic water piping system.
9. Identify water fixture appurtenances needing in various water supply systems.
10. Demonstrate proficiency in calculating water fixture units.
11. Identify the proper backflow device needed to protect municipal water systems.
12. Identify water properties in different states and how that affects piping systems.

PLMB 2582. Plumbing Apprenticeship V

Course Description

This course will cover historical perspectives and drainage system improvement; piping materials and fittings; traps and fixtures connections; sanitary drainage installation; vent systems; DWV sizing; storm drainage; sewers and sewage treatment; private sewage disposal systems; and alternate water source drainage systems. The course will also emphasize the importance of proper installations of gas. Properties of gas and the combustion process will be covered as well as gas piping systems; clocking and orifice sizing; air supply and venting; valves and regulators; and electrical systems and controls.

Student Learning Outcomes

1. Identify advantages of a healthy drainage system.
2. Identify the differences in drainage and venting fittings.
3. Describe the importance of traps as they apply to drainage.
4. Demonstrate the ability to properly size a drainage system.
5. Describe how a healthy private sewage system work.
6. Identify local regulations and codes pertaining to alternate water source drainage systems.
7. Identify the various properties of gas.
8. Install a basic gas piping system.
9. Demonstrate de-rating calculations for proper orifice sizing.
10. Identify proper vent material and sizing based on the fuel type and output Btu's.
11. Demonstrate the proper placement and positioning of gas regulators both in and outside of the building.
12. Demonstrate proper troubleshooting procedures for gas systems.
13. Demonstrate proficiency in testing and finding leaks in a gas piping system.

PLMB 2682. Plumbing Apprenticeship VI

Course Description

The Introduction to Service Plumbing course will stress safety on the service call for the installer, occupant and property. The class will concentrate on important soft skills needed for the service technician dealing directly with the customer. Comprehensive service tickets protect all parties involved and will be stressed in this course. The apprentice will become familiar with service tools, safeguards and their proper use that are not normally used in new construction projects.

Student Learning Outcomes

1. Demonstrate competency when conducting a safety pre-inspection on the job site.
2. Use new skills to deal face-to-face with customers and demonstrate skill to defuse confrontational customers.
3. Demonstrate properly how to complete a comprehensive service ticket to protect the customer, the technician, and the company.
4. Identify and demonstrate use service-related tools properly and safely.

PLMB 2782. Plumbing Apprenticeship VII

Course Description

The Gas Appliances course delves into gas appliances in more depth with the student testing recall from previous courses. Areas to be covered are conventional, high efficiency, direct vent and tankless water heater troubleshooting, repair and replacement. Sizing gas lines will be revisited, fusion joints and expansion tank sizing & installation will be covered. Troubleshooting furnace issues and repair, along with orifice sizing and sediment trap requirements by code will be examined. Natural gas safety will be discussed at length.

Student Learning Outcomes

1. Show competency when conducting a safety pre-inspection on the job site
2. Can quickly isolate common water heater & furnace problems
3. Properly install, replace, and retrofit common water heaters and furnaces
4. Perform necessary calculations for correct gas supply lines and expansion tanks to current code standards
5. Correctly perform HDPE fusion joints to industry specification and tolerances
6. Perform derating/orifice sizing calculations and sediment trap installation to code standards

PLMB 2882. Plumbing Apprenticeship VIII

Course Description

In this course students will gain insight into the 2015 Uniform Mechanical Code and the 2015 New Mexico Mechanical Code. Regulations and guidelines for proper installation will be explored in preparation for the New Mexico State Gasfitters License for Journeyman Certification which is a requirement within this program. In addition, students will also gain insight into Pipefitting Installation which will coach the apprentice on how to properly locate required rules and regulations in the Uniform Mechanical Code book in effect as it pertains to the State Pipefitting Installers License testing. Topics covered include administrative rules, definitions, general regulations and the rules of installing piping for combustion air, vents, boilers/steam vessels, hydronics and process piping. Proper pipe/tubing data, valves, fittings and joints as well as their limitations in various systems will be discussed. Pipe offsets & welding take off calculations will also be covered

Student Learning Outcomes

1. Correctly calculate and identify a confined space.
2. Correctly calculate vent connector sizing on boilers.
3. Correctly calculate for combustion air.
4. Correctly calculate for a fuel gas piping system.
5. Obtain a state issued Journeyman Gasfitter License.
6. Correctly calculate a water supply and distribution system.
7. Correctly calculate a drainage and vent system.
8. Correctly calculate vent connector sizing on a water heater.
9. Correctly calculate for confined space.
10. Obtain a state issued Journeyman Pipefitter License.
11. Identify air compressor and air dryer components.
12. Determine proper air-line adjustments to obtain peak performance.
13. Demonstrate successful interpretations of air piping diagrams for pneumatic controls.
14. Demonstrate troubleshooting procedures for pneumatic controls.

PLMB 2883. Plumbing Apprenticeship IX

Course Description

This course begins examining the principles and practices of metal fabrication including layout, design, and support techniques. Students are exposed to basic weld pipe, weld fittings, weld symbols, offsets, supports, and screwed pipe. Related math calculations and cutting techniques are utilized to prepare students for entry into pipe fitting related field

Students will then be introduced to Cutting, Beveling & Safety Protocols by exploring protocols and procedures for safety of cutting with various methods, including oxy fuel gas cutting, plasma cutting, chop saws, and portable band saws. The course will also address jobsite safety and hazardous substances. Methods of grinding, beveling, cutting, gouging will be explored. Weld joints, types & designs will be studied.

Student Learning Outcomes

1. Show competence in following safety protocol.
2. Will properly read and identify various weld symbols and layout drawing types.
3. Can properly measure and layout basic projects following blueprints.
4. Can identify weld fittings and types of pipe.
5. Can identify supports.
6. Show competency when using various cutting techniques.
7. Identify weld joints, types and designs in various applications.
8. Demonstrate jobsite safety with regard to cutting, arc welding, and hazardous substances.

PLMB 2884. Plumbing Apprenticeship X

Course Description

This course first Introduces Metallurgy, a study of the effect of welding on metallurgical structure and properties of weld joints. The study of the influence of crystal and grain structure of metals on the mechanical, physical, and chemical properties of metals.

Student Learning Outcomes

1. Show knowledge of metallurgical structure and weld regions.
2. Identify problems in welding with visual, qualitative and quantitative identification techniques.
3. Demonstrate knowledge of the effects of welding on both physical and mechanical properties.
4. Identify welding stress and corrosive resistance on welds.

PLMB 2885. Plumbing Apprenticeship XI

Course Description

This course explores fundamental theory and application of Shielded Metal Arc Welding (SMAW) process and proper welding equipment setup. Introductory skills for pipe and plate welding are covered leading to skillfulness in equipment setup, pre-weld fit up, filler metal alloys, and welding in various positions.

Student Learning Outcomes

1. Show knowledge and competency in the SMAW process.
2. Can complete plate welding in horizontal, vertical and overhead positions to competency as measured by visual pass by CWI.
3. Demonstrate knowledge of pipe welding and positions.
4. Demonstrate knowledge of filler alloys.

PLMB 2886. Plumbing Apprenticeship XII

Course Description

In this course students will study the gas installer code as identified in the Uniform Mechanical Code that is being enforced by the State as it pertains to Natural Gas Installers License testing. The class will build on previous instruction and delve into administrative rules, definitions, general regulations and the rules of installing various systems, safety devices required including water-heaters, boilers, pressure vessels, piping and introduction to thermal energy systems. The Uniform Mechanical Code book will be used as well for Pipefitting installation as it pertains to Pipefitting Installer License testing. The topics covered are administrative rules, definitions, general regulations and the rules of installing piping for combustion air,

vents, boilers/steam vessels, hydronics and process piping. Proper piping/tubing data, valves, fittings and joints as well as their limitations in various systems will be covered. Pipe offsets and welding take off calculations will also be covered.

Student Learning Outcomes

1. Show competency in locating information in the mechanical code book and State Administrative Code regulations quickly and accurately.
2. Identify confined spaces for appliance and accurately determine the proper method for bringing combustion air to those appliances.
3. Properly identify chimney and venting requirements and clearances that must be adhered to by code.
4. Identify in the codes, proper installation safety devices and clearances associated with boilers, hydronic systems and solar thermal energy requirements.
5. Can pass their state examination for Journeyman Gas Installer.
6. Can quickly locate clearance, installation and safety device requirements for boilers, steam vessels and hydronic systems.
7. Properly locate rules and regulations on Hazardous Process piping and associated safety standards.
8. Able to site proper pipe/tubing data, valves, fitting and joints associated with various installations.
9. Correctly perform offset and fitting take-off calculations.
10. Can pass their state examination for Journeyman Pipefitter Installer License.

PLMB 2996. Topics in Plumbing

Course Description

Specific topics to be announced in Schedule of Classes.

Student Learning Outcomes

Varies

Political Science (POLS)

POLS 1110. Introduction to Political Science

Course Description

This course covers fundamental concepts in political science, such as political theories, ideologies, and government systems.

Student Learning Outcomes

1. Construct reasoned civic discourse to advocate a stance or examine alternate positions.
2. Identify fundamental concepts and theories in political science.
3. Analyze data and information to gain a deeper understanding of the material.
4. Articulate how the public influence and are influenced by politics.
5. Identify and compare government systems from democracy to authoritarian, as well as models of analysis of contemporary international relations.

POLS 1111. Introductory Government Seminar

Course Description

Introduction to the government major. Designed to assist students in planning college experience and preparing for upper division course work and research.

Student Learning Outcomes

1. This course is designed for the “beginning” government major.
2. Its goal is to improve your educational experience at the university and within the Department of Government. In this class we hope to develop some basic skills necessary for successful completion of a degree in Government.
3. These include the skills of critical reading, critical writing, oral presentation and research methods.
4. Additionally, we will use this seminar to introduce you to Government faculty, to plan your government degree and to acquaint you with the services and opportunities the department and the university has to offer.

5. Finally, we hope to begin the discussion of where you will go next, when you complete your degree in Government.

POLS 1120. American National Government

Course Description

This course explains the role of American national government, its formation and principles of the Constitution; relation of state to the national government; political parties and their relationship to interest groups. This course also explains the structure of the legislative, executive, and judicial branches.

Student Learning Outcomes

Students should be able to:

1. Explain the historical and political foundations of the government of the United States.
2. Explain the precursors to, and the development and adoption of the United States Constitution.
3. Explain the United States federal system, the basics of federalism, and the changing relationship of state and federal power.
4. Describe the power, structure and operation of the main institutions of government, namely the legislative, executive, judicial, and the federal bureaucracy.
5. Explain the development and role of political parties and interest groups.
6. Identify the constitutional basis of civil rights and civil liberties and their changing interpretation; and
7. Describe the role of demographics, public opinion and the media in American politics.

POLS 1130. Issues in American Politics

Course Description

This course is designed to introduce the students to the contemporary study of American political issues. The course analysis of government policies, examining various approaches to the economy, democracy and the structure and the function of American political institutions.

Student Learning Outcomes

1. Explain the basic themes and concepts of political science and their application to contemporary issues.
2. Explain the major forces, interests, and institutions of American democratic politics.
3. Describe and define how beliefs, assumptions, and values are influenced by factors such as politics, geography, economics, culture, biology, history, and social institutions.

POLS 1140. The Political World

Course Description

This course introduces politics with emphasis on the ways people can understand their own political systems and those of others in a greater depth. This course will help in becoming more responsible and effective in the political world.

Student Learning Outcomes

1. Compare different viewpoints on major political issues.
2. Demonstrate critical thinking skills and abilities in regard to political problems, trends, and developments.
3. Grasp the significance of government actions.
4. Identify bias in news reporting.
5. Demonstrate a better understanding of the world and show appreciation for the richness of political cultures in the world and be able to apply political science theories and concepts to real world cases.
6. Be able to communicate, written and orally, in an informed and effective way about the political world
7. Demonstrate knowledge and understanding of their own rights and obligations as citizens.
8. Obtain an understanding of foundational aspects of both political theory and practice among countries throughout the world, which includes current political issues and their relevance to politics in general.

POLS 1150. Navajo Government

Course Description

This course will provide a survey of Navajo politics ranging from the underlying tribal organizations and the colonial concept of democracy to the political behavior of the Navajo electorate. The structure and function of historical Navajo leadership, the impact of American political structures imposed on the Navajo people, and contemporary political issues within the context of decolonization will all be discussed. This course will also explore how Navajo tribal members interact with governmental institutions to form public policy, the political principles upon which the Navajo Nation rests, and the dynamics of tribal institutions such as: the tribal-federal relationship, the Navajo Nation Code, the Navajo Nation Council, the Navajo Executive, the Navajo Nation Judiciary, the Tribal bureaucracy, the Chapter system, and tribal interest groups. The role of the media in shaping public opinion, as well as the value of political knowledge and civic engagement, will also be investigated.

Student Learning Outcomes

1. Demonstrate the ability to think critically regarding political trends and developments, with particular focus on the Navajo Nation and government
2. Demonstrate the ability to communicate effectively
3. Demonstrate strong analytical writing skills
4. Demonstrate knowledge and understanding of the fundamental concepts and theories used in Navajo government
5. Be able to apply the political theories and concepts of the Navajo Nation to real-world case studies
6. Be able to evaluate political theories and ideas, either in light of empirical evidence or on theoretical grounds
7. Demonstrate knowledge and understanding of the rights and obligations of both the Navajo government and Navajo citizens

POLS 1996. Topics in Political Science**Course Description**

A course exploring a topic not covered by the standard curriculum but of interest to faculty and students in a particular semester.

Student Learning Outcomes

Varies

POLS 2110. Comparative Politics**Course Description**

This course introduces comparative politics by examining the political history, social and economic structures, and contemporary political institutions and behavior, with focus on occurrences in countries representing diverse cultures, geographies, and levels of development.

Student Learning Outcomes

1. Identify different political and economic regimes in a range of representative countries
2. Assess tradeoffs among various political and economic regimes.
3. Compare and contrast the differences among cultures and subcultures, and the connections between politics and culture in different countries.
4. Describe the major issues facing a range of representative countries today.
5. Explain the connections between historical events and phenomena, on the one hand, and contemporary political and economic systems, on the other.

POLS 2120. International Relations**Course Description**

This course covers the analysis of significant factors in world politics, including nationalism, national interest, political economy, ideology, international conflict and collaboration, balance of power, deterrence, international law, and international organization.

Student Learning Outcomes

1. Explain the interrelationships between countries and people in the world.
2. Demonstrate an awareness of current events in the world.
3. Describe several theories of International Relations.
4. Explain and identify theories of power and decision making among states in the world.
5. Describe and evaluate issues that relate to International Politics, and how individuals are affected by them.
6. Describe the role of Intergovernmental Organizations in International Politics.
7. Identify the role war plays in International Politics.
8. Explain how economics is intertwined with International Politics.
9. Demonstrate an understanding of role of international terrorism and its impacts on global diplomacy.
10. Articulate how beliefs, assumptions, and values are influenced by factors such as politics, geography, economics, culture, history, government, and social institutions.

POLS 2130. Political Ideas/Introduction to Political Theory

Course Description

This course offers an introductory survey of political theory. Emphasis is placed on (1) textual analysis of primary sources and on (2) scholarly analysis of the foundational questions and methods central to the academic study of political ideas. Studying political ideas involves thinking about a) the very definition of political theory itself, b) what one would need to know to make evidence-based claims about political theory texts and c) why and how the study of political theory leads political scientists into the exploration of “essentially contested concepts.” More specifically, throughout the semester, we will explore questions relating to 1) what is the definition of political theory; 2) why/how are interpretative disputes at the core of political theory and 3) how have major political theories/ideas—democracy, liberalism, conservatism, socialism, liberation theory, and fascism—changed and developed over time? In sum, this is a survey course on the history of political ideas.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Effectively communicate critical analysis about the political ideologies which influence and inform politics, political institutions, and political systems
 - a. describe and analyze how ideologies affect the exercise of power in the political world.
 - b. explain how political ideologies relate to methods of political participation.
 - c. explain the ideologies of various political systems.
2. demonstrate an understanding of the value of diversity of thought.
3. demonstrate academic preparedness for advanced study through scholarly analysis.

POLS 2140. Introduction to Political Analysis

Course Description

What makes the field of Political Science a science? What are the variety of research methods and tools for analysis employed by scholars? The goal of this course is to introduce students to the scientific process by political scientists. The interpretation and analysis of data is also essential for almost any career that a political science major might pursue. Lawyers and lobbyists, politicians and professors all need to be able to read and understand reports in which numerical summaries of data (i.e., statistics) are used as evidence to support an argument or point of view. These professionals need to ascertain whether these statistics are being used appropriately. In addition, many of these professionals need to do their own statistical analysis. This course introduces students to statistics and the scientific study of politics. Students will learn why statistics are useful, how to interpret a variety of statistics, how to analyze data to generate their own statistics, and how to

tell whether their statistics support their own argument. Students will also learn how to apply the scientific research process to their own research questions by completing a research design project.

Student Learning Outcomes

Students will demonstrate

1. Ability to think critically regarding political problems, trends, and developments by evaluating the use of statistics as applied to research questions.
2. Ability to communicate effectively by presenting and writing a research design project.
3. Strong analytical writing skills by writing a research design project.
4. Knowledge and understanding of fundamental concepts in political science by using those concepts throughout the course.
5. Ability to apply political science theories to real-world cases by making general theoretical explanations and formulating hypotheses.
6. Ability to evaluate theories in light of empirical evidence by applying inferential statistics and hypothesis testing.
7. Knowledge and understanding of their rights and obligations as a citizen by evaluating the use (and misuse) of statistics in political debate and in daily life.

POLS 2150. Public Policy and Administration

Course Description

The objective of this introductory course in public policy and public administration is to provide students with a basic understanding of the ways that government deals with problems affecting society. We will explore the political tools used to address public policy problems, as well as the political environment in which public policies are formed. Additionally, several specific public policy problems will be discussed during the semester. For each topic, we will try to understand the goals that the government and society seem to be seeking, alternative means for achieving those goals, the costs and benefits of the various alternatives, and the impact of politics on those goals. We will primarily examine policymaking at the national level, but we will also look at some examples at the state and local level.

Student Learning Outcomes

1. Understand what we mean by "public policy".
2. Be able to apply your knowledge of the policy process to any issue or topic that may confront you in your professional or personal life.
3. Be able to critically analyze policies, and to find the strengths and weaknesses in partisan or news media depictions of policy issues.
4. Learn and enhance your critical and analytical thinking skills.
5. Be able to write a position paper about public policy.

POLS 2160. State and Local Government

Course Description

This class is an introductory course designed to familiarize students with the institutions, politics, and policies of state and local governments in the United States. An underlying assumption of this course is that states and localities are the center of a stable and viable democracy. As such, a major objective of the course is the empowerment of each student through knowledge; that is, to provide students with the understanding, analytical and political skills, and motivation to become an active and knowledgeable part of state and local government and politics. The problems addressed at the state and local levels are usually highly contentious and controversial because they hit people close to their homes. Through this class, students will learn how to become effective solvers of those problems.

Student Learning Outcomes

Not available

POLS 2170. State and Local Politics

Course Description

Analyze state and local politics, using New Mexico and other states as examples.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Explain the place of state and local governments in the federal system.
2. Explain and analyze political and governmental problems and issues confronting states and localities.
3. Express informed views and opinions regarding state and local governments and politics in America.
4. Participation in the state and local political process.
5. Use case studies as an analytical tool in order to think critically about American state and local political and governmental issues and problems.

POLS 2180. Ethnic Politics**Course Description**

This course is designed to investigate the problems and political activities of various minority groups in the United States. The course first addresses the historical and political ways in which racial and ethnic minorities have been discriminated against. The course then addresses strategies used by minorities for change, including voter registration drives, running for public office, litigation, and protest. A very important component of this exploration is the role of class in minority group empowerment strategies and in official responses to minority demands. With Hispanos/Latinos as the primary group being analyzed, this investigation addresses minority issues such as the history and ongoing legacy of civil rights empowerment efforts. Next is an in-depth examination of issues related to Hispanos/Latinos, African Americans and Native Americans. The course concludes with an exploration of intergroup relations, the role of gay and lesbian issues in minority politics, as well as of the future of ethnicity in the U.S. While this course refers to several minority groups in the U.S., the focus is on the experiences of Hispanos/Latinos, African Americans, Native Americans and Asian and Pacific Island Americans.

Student Learning Outcomes

Not Available

POLS 2190. Introduction to Political & Economic Systems**Course Description**

This course is designed to provide students with an understanding of some of the major issues and problems associated with different political and economic systems. It is to introduce the basic political and economic concepts to students and familiarize them with key definitions and problems of theoretical formulations as applied to the real world. However, the goal of this course is threefold: the first is to instill in students a mode of critical thinking and reasoning. The second is to teach students the values of a democratic political system. Indeed, the achievement of Democratic objectives, in an interdependent globalizing world without integration, shared responsibilities, benefits and values will be impossible. The third is to acquaint students with compatibility or incompatibility of globalization with democratization. Hence, this course, by adopting a critical frame of analysis, tends to promote quality thinking and reasoned judgment geared toward the realization of progressive change in a complex transitional world. However, the emphasis of this course will be on the prevailing contradictions between autocracy, democracy and globalization.

Student Learning Outcomes

Upon completion of this course, students are expected to accomplish the following goals:

1. Able to realize the meaning of democracy and the reasons for transitional problems to liberal democracy in the 3rd world countries including China and Russia.
2. Know the differences between the free market and command economies.
3. Realize demand and supply side economic theories.
4. Able to see if the U.S. political system can be used as a model of democracy for other countries.
5. Should know what the obstacles are for economic development in the third world countries.
6. Able to distinguish reform from revolutionary change.

7. Able to present arguments for and against cases studied.
8. Know whether or not there is a useful distinction between authoritarian, democratic and religious political systems.
9. Comprehend Global Islamic Politics.
10. Realize the Paradox's of Globalization.
11. Understand the underlying reasons for globalization and global polarization.
12. Think critically and analytically.

POLS 2210. New Mexico Government

Course Description

An exploration of New Mexico government including the historical roots of our political system, our relationship with the federal government, and an inside view of the working of politics in the state capital and in our communities.

Student Learning Outcomes

Not Available

POLS 2220. Native American Politics

Course Description

Examines Native American political issues and government dynamics in contemporary and historical times. Themes include history and structures of tribal government; cultural issues; intergovernmental dynamics; and the role of tribal politics in contemporary Native American life.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Demonstrate understanding of the histories of tribes' first contact with white outsiders;
2. Compare and contrast different forms of tribal government as they exist today.
3. Describe the history of relations with federal, state and local governments and the effect of these relations on tribal governments.
4. Analyze the effects of colonization by differing forces, at different times, on tribal status and relations with federal, state and local governments today.
5. Demonstrate ability to coherently and intelligently discuss the following issues in Native American politics – sovereignty, law and justice, indigenous rights, economic development, repatriation, and activism.
6. Demonstrate ability to evaluate effect of past history on current tribal situations and issues.
7. Demonstrate appreciation of strengths of Native peoples in contemporary America.

POLS 2230. Political Ideas

Course Description

A critical examination of ideas such as justice, democracy, freedom, citizenship, and others, through an exploration of political thought from ancient to contemporary times.

Student Learning Outcomes

1. Demonstrate knowledge and understanding of political philosophies espoused by writers from various traditions.
2. Demonstrate ability to critique, analyze, and synthesize the various philosophical readings.
3. Demonstrate ability to theories presented in the writings, to political practices as experienced in everyday life.
4. Demonstrate ability to link the theory and practice taught in class to one's own life experiences.
5. Participate actively in class discussions.
6. Communicate understanding of one's own views and the views of others, in oral and written format.
7. Display ability to listen to, and respect, various points of view.
8. Demonstrate sensitivity to a variety of cultural backgrounds and viewpoints, in class discussions and in written work.

POLS 2240. Public Policy and Social Change

Course Description

This course will provide an overview of the structures and processes of public policy. This course will examine how social change is brought about through the actions of various agents including interest groups, advocacy coalitions, and executive, legislative and judicial policy processes. Also listed as HMSV 2360, Public Policy and Social Change.

Student Learning Outcomes

1. Be able to describe the governmental structures and processes by which policy is made.
2. Demonstrate understanding of the policy advocacy process.
3. Be able to describe the process of policy implementation.
4. Engage in analysis of policy issues and solutions from a number of different points of view.
5. Demonstrate ability to critique various theoretical frameworks that are used to analyze the policy process.
6. Think critically about policy issues and processes.
7. A copy of this approved syllabus is on file in the dean's office.
8. Demonstrate ability to find information relevant to policy issues and processes.
9. Demonstrate ability to formulate an action plan for policy advocacy, implementation, and evaluation.

POLS 2260. Politics Among Nations (Writing Intensive)**Course Description**

A study of the major theories and issues in international politics. The course covers four primary issue areas: 1) Concepts and theories of international relations; 2) War and security; 3) The global economy; and 4) Emerging issues in international relations.

Student Learning Outcomes

1. The student will be able to articulate an understanding of the relationship between states and the function of international organizations in an anarchic international system.
2. The student will demonstrate knowledge of specific theories of international relations, specific historical events (World Wars, the Cold War), and issues that affect international relations (trade, development, alliances, civil wars).
3. The student will be able to identify, explain, and critically assess hypotheses which purport to explain outcomes in international relations.

POLS 2270. The Chicano Experience in the United States**Course Description**

This course is designed as an introduction to the study of the culture, heritage, and socio-political experience of the Mexican American people in the United States with special emphasis on the Southwest. Students are expected to engage in a civic, political, artistic, or any social justice project that would reflect on contemporary or historical Chicano experience.

Student Learning Outcomes

Not Available

POLS 2280. Minorities and Politics**Course Description**

This course will focus primarily upon the incorporation of minorities in mainstream politics and their role in the formation of governing coalitions in some of the largest urban regions of the country. Central to this approach will be the examination of the impact of these governing coalitions on the participation of minorities in the political process. Particular focus will be placed on African Americans, Latinos, Native Americans, and Asian Americans as they seek to incorporate into governing coalitions.

Student Learning Outcomes

POLS 2310. The American Presidency**Course Description**

You will study the presidency as an institution of power and of leadership and its relation to other political institutions.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Explain the historical and political foundations of the presidency of the United States.
2. Explain the precursors to, and the development and adoption of the United States Constitution and its establishment of the presidency.
3. Explain the United States federal system, the balance of powers, the electoral college, as it applies to the presidency.
4. Describe the power, structure and operation of the presidency as one of the main institutions of government
5. Explain the role of political parties and interest groups in the presidency.
6. Describe the role of demographics, public opinion and the media in American presidency.

POLS 2993. Workshop in Political Science**Course Description**

Specific topics to be announced in Schedule of Classes.

Student Learning Outcomes

Population and Public Health (POPH)

POPH 1110. Introduction to Population and Public Health**Course Description**

Introduction to Population Health provides a population perspective on the multi-level determinants of health, disease, and injury; the programs, policies and services that protect and promote health and prevent disease; the analytic tools used by population health professionals; and sources of information for evidence-based decision making. Students will develop a population health perspective through experiential learning activities.

Student Learning Outcomes

1. Curriculum Objective 1 (CO1):

- a. Describe historical systems, policies, and events impacting population health
- b. Describe historical systems that addressed population health
- c. Identify policies that impact population health both positively and negatively
- d. Identify events that have impacted population health at the local, national and global levels
2. Curriculum Objective 2 (CO2):
 - a. Identify and describe factors affecting the health of a community
 - b. Analyze determinants of health/disease
 - c. Synthesize and communicate the responses to the determinants of health/disease
 - d. Describe the role of policy as they apply to population health
3. Curriculum Objective 3 (CO3):
 - a. Describe priorities for population health interventions, identify sources and the quality of existing health data
 - b. Use population data to assist in determining the needs of a population for the purposes of designing programs, formulating policy, and conducting research or training.
4. Curriculum Objective 4 (CO4):
 - a. Describe the institutions, systems, and essential services of public health
 - b. Identify governmental and nongovernmental organizations at the local, state, national and global levels.
 - c. Describe the essential services of public health and how they integrate into our health systems
5. Curriculum Objective 5 (CO5):
 - a. Define relevant population health terms like morbidity, mortality, prevalence, outcomes, health promotion, health determinant, health disparity, social justice and health equity.
 - b. Synthesize the terms into communication on the status, programs and policy to address population health issues.
6. Curriculum Objective 6 (CO6):
 - a. Develop and apply critical thinking and analytical skills to population health issues
 - b. Demonstrate effective communication and information retrieval skills through a variety of essential media to advance population health

POPH 1120. Global Health Challenges and Responses

Course Description

This course will introduce students to the main concepts of global public health, and the critical links between public health and social and economic development. Students will get an over-view of the determinants of health, how health status is measured, and the influences of various factors, including social, economic, and political issues on the health of individuals and of communities. Students will also review the burden of disease, who is most affected by different disease burdens, risk factors, and key measures to address the burden of disease in cost-effective ways. Special attention will be paid to health system issues.

Student Learning Outcomes

1. Demonstrate an understanding of key public health concepts, including: the demographic and epidemiological transitions, the burden of disease, the impact of key health conditions on individuals and on communities, and critical issues in the organization and delivery of health services.
2. Demonstrate an understanding of the various determinants of health, with particular concern for communicable/infectious disease, nutrition, reproductive health, education, and environmental issues.
3. Demonstrate an understanding of the burden of disease in various regions of the world, how it varies both within and across countries, and how the disease burden can be addressed in cost-effective ways.

4. Demonstrate an understanding of the multi-directional links between health, social, political, and economic factors, and the operational linkages between health and equity.
5. Demonstrate an understanding of the critical health issues from the point of maternal and child health and armed/violence conflict.
6. Demonstrate an understanding of challenges and trends globally that relate to the challenges faced in New Mexico.

POPH 1130. Introduction to Community Health Worker

Course Description

This course provides an overview of the history and introduction to the CHW profession, including scope of practice, roles, competencies, attributes and qualities. It provides practice-based guidelines for professional conduct, ethics and boundaries, confidentiality and informed consent. It exposes students to professional organizations, encourages professional identity and development; and reviews the processes for CHW certification in New Mexico.

Community Health Workers are frontline public health workers who are trusted members of the communities they serve. They are also known as Community Health or Wellness Advisors, Tribal CHRs, health advocates, care navigators, promotores de salud, and many similar titles. CHWs facilitate access to services, improve quality, and reduce health inequities by serving as bridges between their communities and health/social service systems. CHWs build individual and community capacity by increasing health knowledge and through self-sufficiency activities such as outreach, community education, informal counseling, social support, and advocacy. They provide practical services to underserved populations, working with individuals, families, communities, and lawmakers. CHWs can be found working in health systems, human service organizations, schools, faith communities, behavioral health agencies, community health centers, and Tribal programs.

Student Learning Outcomes

1. Discuss the history and impact of CHWs in improving individual and community health
2. Describe the CHW scope of practice and competencies, and the role of CHWs on the multidisciplinary care team
3. Discuss and apply standards for ethical thinking and behavior, and for maintaining professional boundaries
4. Describe and apply professional guidelines pertaining to confidentiality, duty to report, and informed consent
5. Demonstrate self-awareness and self-care practices
6. Develop strategies for organization, prioritization, and time management of workload
7. Communicate professionally and effectively with other members of the care team, referral sources, and partners
8. Develop affiliations, professional identity, and leadership opportunities via public health networks and organizations
9. Appreciate and develop practices for staying current on important health issues and trends, engaging in continuing education, and life-long learning
10. Explain the standards, processes, and three pathways for voluntary CHW certification in New Mexico.

POPH 1140. Clinical Basics for Frontline Workers

Course Description

This course prepares students with basic skills for providers in clinical and home health settings, fire fighters, first responders, ski patrollers, bike patrollers, law enforcement and for anyone interested in volunteering with a fire department. This course includes BLS CPR certification, First Aid Certification, Blood Borne Pathogens, vital signs, and opioid overdose reversal.

Student Learning Outcomes

1. Accurately define and utilize basic medical terminology.
2. Describe and apply Universal Precautions when performing screenings and responding to emergencies.
3. Perform basic vital signs.
4. Perform single-rescuer and team basic life support competently upon assessment, with a focus on high-quality CPR and team dynamics.
5. Perform basic first aid including splinting, bleeding control, making a tourniquet, and use of an epi-pen.
6. Respond to opioid overdose emergencies utilizing opioid overdose protocols.

POPH 1150. Mental Health First Responder

Course Description

Mental Health First Aid introduces participants to the risk factors and warning signs of mental health problems, builds an understanding of the importance of early intervention, and reviews common supports. Includes evidence-based strategies for responding to suicide risk and thoughts of self-harm. Students will learn to offer initial help to someone in a mental health or substance use crisis through a 5-step action plan, with the ultimate goal to connect persons to appropriate professional, peer, social, and self-help care. The program also teaches the common risk factors and warning signs of specific types of illnesses like anxiety, depression, substance use, bipolar disorder, and schizophrenia. Participants are introduced to local mental health resources, national organizations, support groups, and online tools for mental health and addictions treatment and support. Participants will also be trained in identifying, responding to, and administering medication (NARCAN) to reverse opioid overdoses.

Student Learning Outcomes

1. Recognize the signs that someone may be dealing with a mental health problem or crisis.
2. Reach out to someone who may be dealing with a mental health problem or crisis.
3. Assess for risk of suicide or self-harm.
4. Actively and compassionately listen to someone in distress.
5. Offer a distressed person basic “first aid” level information and reassurance about mental health problems.
6. Assist a person who may be dealing with a mental health problem or crisis to seek professional help.
7. Assist a person who may be dealing with a mental health problem or crisis to connect with community, peer, and personal supports.
8. Gain insight into one’s own views and feelings about mental health problems and disorders.
9. Recognize and correct misconceptions about mental health and mental illness.
10. Identify and treat opioid overdose emergencies with NARCAN.

POPH 2010. Fundamentals of One Health

Course Description

This course will facilitate learning vocabulary, reinforce the principles of disease processes, and explore the relationship of diseases to public/population health domains such as population-based preventive medicine and screening, health policy and law, ethics, cultural competence, economics, and prevention. Lectures will facilitate inclass discussion of ecological, biomedical, public, and population health aspects of health and disease.

Student Learning Outcomes

1. Explain One Health, Environmental, and Zoonotic Diseases.
2. Recognize determinants of health, particularly concerning communicable/infectious disease and environmental issues.
3. Describe fundamental biologic concepts of the disease process as they relate to public health.
4. Describe the role of host and environmental factors in determining susceptibility and resistance to disease.
5. Build practical oral and written communication skills for communicating with lay and public health audiences.
6. Investigate population health challenges and trends related to the challenges faced in New Mexico, the Southwest Region, the nation, and the world.

POPH 2020. Community Health Work: Frameworks, Principles and Practices for Direct Service

Course Description

This course provides a broad introduction to public health as the framework for providing direct services to individuals, with focus on the ecological model, health equity, and healthcare systems. It provides in-depth skills practice for providing effective service within that framework, including interpersonal and communication skills, cultural humility, and client-

centered, strength-based approaches. It applies those core skills to an array of scenarios including conducting client interviews, managing and resolving conflict, working on a care team, and delivering health literate, trauma-informed care.

Student Learning Outcomes

1. Define health and public health and apply the ecological model to understanding the social determinants of health in individuals, groups, and communities.
2. Discuss the concept of health as a human right; advocate and work for health equity and inclusion.
3. Discuss and demonstrate CHW roles and responsibilities in advocating for social justice, and the connection to health.
4. Plan a client interview demonstrating the client-centered approach (empathy, non-judgment, strengths-based).
5. Create safety for and work effectively with individuals and groups impacted by stigma, trauma and incarceration.
6. Describe and demonstrate cultural humility principles and practices for working with diverse clients & communities.
7. Define, negotiate, mediate, and resolve conflict; demonstrate insight into one's own conflict style.

POPH 2030. Health Coaching and Health Promotion

Course Description

This course provides a strong foundation in health coaching and health promotion, with a focus on working with individuals from a broader public health lens. It offers strategies and skills for supporting client-centered behavior change including action planning, motivational interviewing, and communication skills. It identifies barriers to change such as stigma and bias, gaps in health literacy, and offers strategies for addressing those barriers. Lessons learned will be applied to scenarios involving harm reduction, and the self-management of chronic conditions. Using the HEAL model, students will explore practical frameworks and guidelines for promoting health, delivering health education, and accessing and communicating reliable health information

Student Learning Outcomes

1. Conduct client-centered health coaching sessions utilizing communication skills (OARS), stages of change theory, motivational interviewing, goal setting, and action planning.
2. Describe and effectively work with common barriers to changing health behaviors, including bias, stigma, and trauma.
3. Describe risk/harm reduction; identify and utilize strategies to reduce health risk and harm.
4. Identify common chronic conditions and discuss related inequities in disease rates among populations.
5. Explain and analyze the concept of patient empowerment in the self-management of chronic conditions.
6. Define health literacy and utilize strategies for closing health literacy gaps to improve health outcomes.
7. Research and analyze sources of health and digital health information for authority, bias, and currency.
8. Explain general guidelines for healthier eating and drinking, as well as for regular activity or exercise.
9. Demonstrate a 5-step approach to providing health education to individuals about nutrition, physical activity, or other health topics.

POPH 2040. Health Navigation and Service Coordination

Course Description

This course provides an overview of models, skills, tools, resources, and considerations for providing strengths-based health navigation and service coordination with clients. Rooted in principles of client-centered practice developed in PHLS 2020, and motivational approaches to planning change in PHLS 2030, this course will explore best practices for planning, conducting and documenting case-finding and recruitment, establishing and maintain relationship via client interviewing, developing service plans, making and tracking meaningful referrals, and building client self-efficacy and self-reliance. Addresses the importance of building relationships with referral sources and agencies.

Student Learning Outcomes

1. Describe the scope, roles, and tasks of community health workers in health navigation and service coordination.
2. Describe and utilize common methods for case-finding, in-reach, and outreach for various population groups.

3. Assess client needs, resources, strengths, risks, and readiness, and create a navigation/service coordination plan that builds client capacity and self-reliance.
4. Conduct and document a client interview utilizing an array of interpersonal, communication, and planning skills.
5. Demonstrate client-centered principles and practices in working with individuals and families including empathy, sensitivity, kindness, non-judgment, advocacy, and respect for client autonomy.
6. Discuss and explain confidentiality and clients' rights in the context of service provision.
7. Identify and facilitate access to enrollment in healthcare programs, benefits, services, and community resources; make and track meaningful referrals.
8. Organize, document, and track components of service plans, including goals, referrals, and appointments.
9. Establish and maintain relationships with referral sources and agencies.
10. Advocate for clients to support timely, accessible, and culturally/linguistically competent care & services
11. Identify and address systems barriers to quality, accessible care and services.
12. Discuss and develop self-awareness, boundaries, and strategies for working with unique or challenging scenarios.

POPH 2050. Health Education and Facilitation

Course Description

This course provides an overview of the major approaches, models, skills, and knowledge needed to plan, facilitate, and evaluate basic health education presentations for groups in clinical and community settings. It provides a similar overview to planning and facilitating groups and group processes for a variety of health-related purposes. The course offers an experiential immersion into principles of adult learning and explores related media and instructional strategies. It addresses common challenges in group education and facilitation and promotes best practices for the professional development and self-care of educators and facilitators including cultural humility, boundaries, confidentiality, supervision, and managing power dynamics.

Student Learning Outcomes

1. Identify different types of training and training approaches that CHWs may facilitate, including popular education, participatory learning, and problem-based learning.
2. Discuss some of the ways that people learn new information and skills.
3. Identify and respond to common challenges faced by training facilitators.
4. Develop a training plan, including learning goals and outcomes; deliver and evaluate the training.
5. Identify and describe different types of groups, and the unique benefits of group work.
6. Explain four stages of group work; analyze the roles and task of facilitators at each stage.
7. Analyze how issues of power and authority, including the facilitator's, influence group dynamics and processes.
8. Discuss the importance of self-reflection and evaluation for facilitators and apply it to one's work.
9. Discuss & apply ethics to group work, including issues of cultural humility, boundaries, confidentiality, supervision.
10. Design and facilitate their own group; document group proceedings, agendas, and minutes.

POPH 2060. Community Health Outreach, Assessment and Advocacy

Course Description

This course provides an overview of various approaches, models, methods, and considerations for doing public health work in community spaces and settings: conducting home visits, health outreach, community organizing, and advocacy for improving community health. Students will learn to utilize a wide range of tools central to this work including environmental scans, community health assessments, surveys, focus groups, canvassing, and PhotoVoice. We will explore the unique role of the health worker in advocating for communities, surfacing community-identified priorities, and activating and building community-based leadership. Addresses a wide range of considerations related to this aspect of community health work including building relationships and trust, ethics, confidentiality, and safety.

Student Learning Outcomes

1. Describe the role of CHWs/CHRs in home visiting, health outreach, community assessment, community health advocacy.
2. Discuss and demonstrate the qualities of successful outreach workers and advocates that enable them to build relationships and trust in community.
3. Plan, conduct, and document home visits and environmental assessments utilizing guidelines for common courtesies and safety.
4. Discuss the different indications, types, and levels of health outreach; plan a health outreach campaign in a targeted community.
5. Discuss the CHW /CHR interface with formal and informal community leaders, and in building community capacity & leadership.
6. Conduct, document, and share results of a strengths-based community diagnosis utilizing tools such as mapping, surveys, scans, canvassing, and focus groups, applying health literacy principles.
7. Describe the five-step Community Action Model (CAM) and utilize it to develop a community organizing plan.
8. Train, support, and mobilize community members to self-advocate around health issues and priorities.
9. Develop and deliver a policy-advocacy presentation to community leaders/policymakers utilizing PhotoVoice.
10. Discuss ethical considerations related to conducting home visiting, community outreach, and advocacy including issues of cultural humility, boundaries, confidentiality, and supervision.

POPH 2210. Population Health: Introduction to Social, Cultural, Behavioral Theory

Course Description

This online asynchronous course exposes students to the purpose and application of social science and behavioral science theories used in population health. We will examine and apply theories that help us understand behavior and that inform and strengthen population health practices including theories of behavior change as applied to individuals and their social networks, theories of community change, and the influence of theory on organizational structures and programs. We will discuss how theories can be used to understand and interpret health and social problems. We will use readings, class discussions, and individual and group assignments to understand the individual, social, environmental, and cultural factors that influence behavior within and outside systems.

Student Learning Outcomes

1. Describe how the Socioecological Model (SEM) serves as a foundation for how theory is used in population health.
2. List and describe the key constructs of the Socioecological Model, the Health Belief Model, the Transtheoretical Model, the Social Cognitive Theory, the Theory of Planned Behavior, the Social Network Theory, the Diffusion of Innovation Theory, and other theories and explain how each might be applied to develop effective public health interventions.
3. Compare and contrast the strengths and weaknesses of population health theories at each socioecological level.
4. Defend the importance of using theory to design, test, and evaluate interventions to advance population health.
5. Summarize criticisms regarding each model of health behavior change and explain why these models may not be adequate to account for all observed health behaviors.
6. Describe the importance of health promotion, communication approaches and social marketing, coalitions, community organizations, advocacy, and culture in promoting behavior change at each level of the socioecological model.

POPH 2300. Introduction to Environmental and Occupational Health

Course Description

This course introduces basic concepts of environmental health and occupational health within a public health context. Environmental and occupational hazards will be explored in relation to government regulatory measures and prevention strategies taken to manage health risks within the general population and at the workplace.

Student Learning Outcomes

1. Recognize and assess real-life environmental and occupational health issues and events.
2. Describe and illustrate through case example how knowledge and understanding of exposure pathways informs risk management and provides opportunity for hazard control and risk reduction measures.
3. Describe the opportunities, challenges, and limitations of risk communication for effective risk management of environmental and occupational hazards.
4. Describe how regulatory frameworks at different levels of government are employed to control environmental and occupational hazards and exposures in the US.
5. Describe ways in which disadvantaged and vulnerable populations may be disproportionately burdened by environmental and occupational hazards.

POPH 2410. Fundamentals of Health Care Finance

Course Description

This course will introduce basic concepts of health care finance: access, affordability, quality, and portability.

Student Learning Outcomes

1. Discuss the advantages and disadvantages of various business models in healthcare.
2. Evaluate the impact of different reimbursement mechanisms (e.g., fee-for-service, capitation, value-based care) on the financial risk of healthcare organizations.
3. Develop and assess program budgets under diverse operational scenarios.
4. Explain and apply cost accounting methods, such as activity-based costing, and pricing strategies that utilize cost-accounting data.
5. Demonstrate financial analysis techniques, including breakeven analysis, capital investment analysis, and risk analysis, in healthcare decision-making.

POPH 2996. Population and Public Health Topics

Course Description

Varies

Student Learning Outcomes

Varies

Portuguese (PORT)

PORT 1110. Portuguese I

Course Description

Designed for students with no previous exposure to Portuguese, this course develops basic listening, speaking, reading, and writing skills. This is an introductory course aimed at teaching the student to communicate in Portuguese in everyday situations.

Student Learning Outcomes

1. Communicate and exchange information about familiar topics using phrases and simple sentences, sometimes supported by memorized language.
2. Can handle most short social interactions in everyday situations by asking and answering simple questions.
3. Can write short messages and notes on familiar topics related to everyday life.
4. Can often understand words, phrases, and simple sentences related to everyday life.
5. Can recognize pieces of information and sometimes understand the main topic of what is being said.
6. Can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.
7. Can sometimes understand the main idea of what they have read.
8. Can make connections between beliefs, behaviors and cultural artifacts of the Portuguese-speaking world and make informed cross-cultural comparisons.

PORT 1120. Portuguese II**Course Description**

A continuation of Portuguese I, students will develop a broader foundation in skills gained during the first semester, including understanding, speaking, reading and writing Portuguese. Students will also gain more in-depth knowledge of Portuguese-speaking cultures.

Student Learning Outcomes

1. Participate in conversations on a number of familiar topics using simple sentences.
2. Handle short social interactions in everyday situations by asking and answering simple questions.
3. Write about familiar topics and present information using a series of simple sentences.
4. Understand the main idea in short, simple messages and presentations on familiar topics.
5. Understand the main idea of simple conversations that they overhear.
6. Understand the main idea of short and simple texts when the topic is familiar.
7. Can begin to narrate and describe simple events in the past.
8. Can make broader connections between beliefs, behaviors and cultural artifacts of the Portuguese-speaking world, and make informed cross-cultural comparisons.

PORT 1135L. Portuguese Language Lab**Course Description**

A self-paced language lab designed to accelerate, reinforce and support all levels of Portuguese. The course provides an opportunity to practice and strengthen listening, speaking, reading and writing skills through the use of software, audio and video tapes, and other technologies.

Student Learning Outcomes

Student Learning Outcomes: At the conclusion of this course, the student should be able to demonstrate progress in the following areas:

1. Pronunciation.
2. Vocabulary.
3. Grammatical structure.
4. Reading and listening comprehension skills.
5. Writing and speaking skills.
6. History and culture of the language-speaking world.

PORT 2140. Intermediate Portuguese and Brazilian Culture

Course Description

This is an intermediate Portuguese language course which assumes prior knowledge and some experience with Portuguese. The course uses a variety of language teaching approaches to help the students achieve the mastery of all four basic language skills: listening, speaking, reading and writing. At the same time students will become familiar with some of the most important cultural traits of Brazil.

Student Learning Outcomes

1. Engage fluently and confidently in Portuguese across diverse registers and contexts, demonstrating nuanced linguistic proficiency.
2. Navigate conversations across different timeframes, discussing events, experiences, individuals, locations, and objects while adeptly managing social interactions with cultural sensitivity in everyday scenarios.
3. Demonstrate writing proficiency across different temporal contexts and levels of formality, composing coherent paragraphs with logically structured sentences and pertinent details on familiar or personally significant topics, as well as current events, expressing experiences, reactions, viewpoints, and suggestions effectively.
4. Analyze oral, written, and multimedia texts across a broad spectrum of familiar subjects, identifying main ideas, grasping idiomatic expressions, and comprehending most details across various temporal contexts and levels of formality.

5. Demonstrate cultural competency by understanding and appropriately responding to cultural nuances, norms, and practices inherent in the Portuguese-speaking world, including awareness of regional variations and social customs, enhancing effective engagement and interaction in diverse cultural contexts.

PORT 2211. Brazilian Culture in English: Music, Art, Film and Literature

Course Description:

This course will look at Brazilian culture through music, film, art, and literature. In particular, the course will examine topics including environmental activism, race relations, gender, sexuality, class conflict, and migration through a wide variety of cultural representations from the diverse regions of Brazil.

Student Learning Outcomes:

1. Can engage in discussions about key Brazilian cultural production in culturally appropriate ways
2. Students can draw comparisons and parallels between Brazilian cultural production and culture from their countries
3. Students can identify major theoretical and analytical trends towards Brazilian cultural production, particularly in relations to ideas of racial democracy.
4. Students can work collaboratively to achieve project goals.
5. Students can locate sources by searching electronic and traditional databases
6. Students can describe the importance of considering diverse perspectives.

Professional Physical Education (PRPE)

PRPE 2110. Introduction to Athletic Training

Course Description

An introduction to the field of athletic training and the basis for prevention and treatment of athletic injuries. In order to maintain accreditation requirements, this course is unique to UNM and may not be replaced with a transferred course from another institution.

Student Learning Outcomes

1. PHP 8 Identify the necessary components to include in a preparticipation physical examination as recommended by contemporary guidelines (e.g., American Heart Association, American Academy of Pediatrics Council on Sports Medicine & Fitness).
2. PHP 9 Explain the role of the preparticipation physical exam in identifying conditions that might predispose the athlete to injury or illness.
3. PHP 10 Explain the principles of the body's thermoregulatory mechanisms as they relate to heat gain and heat loss.
4. PHP 11 Explain the principles of environmental illness prevention programs to include acclimation and conditioning, fluid and electrolyte replacement requirements, proper practice and competition attire, hydration status, and environmental assessment (e.g., sling psychrometer, wet bulb globe temperatures [WBGT], heat index guidelines).
5. PHP 12 Summarize current practice guidelines related to physical activity during extreme weather conditions (e.g., heat, cold, lightning, wind).
6. PHP 20 Summarize the basic principles associated with the design, construction, fit, maintenance, and reconditioning of protective equipment, including the rules and regulations established by the associations that govern its use.
7. PHP 24 Summarize the general principles of health maintenance and personal hygiene, including skin care, dental hygiene, sanitation, immunizations, avoidance of infectious and contagious diseases, diet, rest, exercise, and weight control.
8. PHP 25 Describe the role of exercise in maintaining a healthy lifestyle and preventing chronic disease.
9. PHP 29 Explain the basic concepts and practice of fitness and wellness screening.

10. PHP 32 Describe the role of nutrition in enhancing performance, preventing injury or illness, and maintaining a healthy lifestyle.
11. PHP 33 Educate clients/patients on the importance of healthy eating, regular exercise, and general preventative strategies for improving or maintaining health and quality of life.
12. PHP 34 Describe contemporary nutritional intake recommendations and explain how these recommendations can be used in performing a basic dietary analysis and providing appropriate general dietary recommendations.
13. PHP 35 Describe the proper intake, sources of, and effects of micro- and macronutrients on performance, health, and disease.
14. PHP 36 Describe current guidelines for proper hydration and explain the consequences of improper fluid/electrolyte replacement.
15. PHP 37 Identify, analyze, and utilize the essential components of food labels to determine the content, quality, and appropriateness of food products.
16. PHP 38 Describe nutritional principles that apply to tissue growth and repair.
17. PHP 39 Describe changes in dietary requirements that occur as a result of changes in an individual's health, age, and activity level.
18. PHP 40 Explain the physiologic principles and time factors associated with the design and planning of pre-activity and recovery meals/snacks and hydration practices.
19. PHP 41 Identify the foods and fluids that are most appropriate for pre-activity, activity, and recovery meals/snacks.
20. PHP 42 Explain how changes in the type and intensity of physical activity influence the energy and nutritional demands placed on the client/patient.
21. PHP 43 Describe the principles and methods of body composition assessment to assess a client's/patient's health status and to monitor changes related to weight management, strength training, injury, disordered eating, menstrual status, and/or bone density status.
22. AC 1 Explain the legal, moral, and ethical parameters that define the athletic trainer's scope of acute and emergency care.
23. AC 36 Identify the signs, symptoms, interventions and, when appropriate, the return-to-participation criteria for:
24. AC 36d heat illness including heat cramps, heat exhaustion, exertional heat stroke, and hyponatremia
25. AC 36e exertional sickling associated with sickle cell trait
26. AC 36f rhabdomyolysis
27. TI 21 Explain the federal, state, and local laws, regulations and procedures for the proper storage, disposal, transportation, dispensing (administering where appropriate), and documentation associated with commonly used prescription and nonprescription medications.
28. TI 24 Explain the major concepts of pharmacokinetics and the influence that exercise might have on these processes.
29. TI 25 Explain the concepts related to bioavailability, half-life, and bioequivalence (including the relationship between generic and brand name drugs) and their relevance to the patient, the choice of medication, and the dosing schedule.
30. PS 2 Explain the theoretical background of psychological and emotional responses to injury and forced inactivity (e.g., cognitive appraisal model, stress response model).
31. PS 11 Describe the role of various mental healthcare providers (e.g., psychiatrists, psychologists, counselors, social workers) that may comprise a mental health referral network.
32. PS 12 Identify and refer clients/patients in need of mental healthcare.
33. PS 14 Describe the psychological and sociocultural factors associated with common eating disorders.
34. PS 15 Identify the symptoms and clinical signs of substance misuse/abuse, the psychological and sociocultural factors associated with such misuse/abuse, its impact on an individual's health and physical performance, and the need for proper referral to a healthcare professional.
35. HA 1 Describe the role of the athletic trainer and the delivery of athletic training services within the context of the broader healthcare system.

36. HA 2 Describe the impact of organizational structure on the daily operations of a healthcare facility.
37. HA 3 Describe the role of strategic planning as a means to assess and promote organizational improvement.
38. HA 5 Describe basic healthcare facility design for a safe and efficient clinical practice setting.
39. HA 9 Identify the components that comprise a comprehensive medical record.
40. HA 18 Describe the basic legal principles that apply to an athletic trainer's responsibilities.
41. HA 23 Identify and explain the recommended or required components of a pre-participation examination based on appropriate authorities' rules, guidelines, and/or recommendations.
42. PD 1 Summarize the athletic training profession's history and development and how current athletic training practice has been influenced by its past.
43. PD 4 Explain the role and function of state athletic training practice acts and registration, licensure, and certification agencies including (1) basic legislative processes for the implementation of practice acts, (2) rationale for state regulations that govern the practice of athletic training, and (3) consequences of violating federal and state regulatory acts.
44. PD 6 Explain the process of obtaining and maintaining necessary local, state, and national credentials for the practice of athletic training.

PRPE 2120. Teaching Fundamental Motor Skills

Course Description

This course is designed to provide physical education majors an overview of traditional and non-traditional teaching methods that can be used to teach physical education, focusing on upper elementary and junior high age students. Strong emphasis will be put on progressions and tactical teaching methods and styles. Evaluation and assessment processes will be emphasized as well as incorporating a fitness component into each lesson with proper warm-up and cool down techniques. Each student will lead the class in a number of hands-on practical experiences with immediate feedback to begin learning the pros and cons of teaching physical education, improving each student's skill and knowledge in planning and teaching physical education.

Student Learning Outcomes

By the end of the semester students will be able to:

1. Demonstrate knowledge of skill themes and movement concepts that are developmentally appropriate for junior high and high school age students, during PE lessons. (COE: Understandings 1,3,4, Practices 1,2,3)
 - NM Comp for Entry PE Teachers: **(NMAC 6.64) 1 a,b,c,h, 2 b,c, 6 a,c,f**
 - Assessment: Activity Leader, Exam, Student Notebook
2. Demonstrate how PE meet National and State Standards in Physical Education (COE: Understanding 4,6, Practices 3)
 - NM Comp for Entry PE Teachers: **(NMAC 6.64) 1 d, 6 a**
 - Assessment: PE major lesson plans
3. Demonstrate knowledge of appropriate teaching progressions of skill themes and movement concepts for PE. (COE: Understanding 1,3,4, Practices 1,2,3,4)
 - NM Comp for Entry PE Teachers: Competencies 1, 6
 - Assessment: Block plans, Lesson plans, Student Notebook
4. Demonstrate strategies for diversity and modification with learning styles, developmental levels, culture, gender, age through implementation of different teaching styles and methods. (COE: Understanding 3,4, Practices 2)
 - NM Comp for Entry PE Teachers: Competencies 2,3,4,6,7
 - Assessment: Peer Teaching, Lesson plans, Exam, Student Notebook
5. Demonstrate the ability to accurately self and peer evaluate teaching performances. (COE: Understandings 1, Practices 1,2,3)
 - NM Comp for Entry PE Teachers: Competencies 1,3,4,5,6,7,9
 - Assessment: Peer Teaching, Rubrics Assignment
6. Construct an organized activity notebook to assist instruction (COE: Understanding 1,2,3,4, Practices 1,3)

- NM Comp for Entry PE Teachers: Competencies 1,2,3,4,5,6,7,8.
 - Assessment: Student Notebook
7. Demonstrate effective instructional and management behaviors during peer teaching experiences. (COE: Understanding 1,2,4, Practices 1,2,3,4)
- NM Comp for Entry PE Teachers: Competencies 4,5,6,7
 - Assessment: Peer Teaching, Notebooks

PRPE 2125. Teaching Sport and Physical Activity

Course Description

This course is designed to provide physical education majors an overview of traditional and non-traditional teaching methods that can be used to teach physical education, focusing on upper elementary and junior high age students. Strong emphasis will be put on progressions and tactical teaching methods and styles. Evaluation and assessment processes will be emphasized as well as incorporating a fitness component into each lesson with proper warm-up and cool down techniques. Each student will lead the class in a number of hands-on practical experiences with immediate feedback to begin learning the pros and cons of teaching physical education, improving each student's skill and knowledge in planning and teaching physical education.

Student Learning Outcomes

By the end of the semester students will be able to:

1. Demonstrate knowledge of skill themes and movement concepts that are developmentally appropriate for junior high and high school age students, during PE lessons. (COE: Understandings 1,3,4, Practices 1,2,3)
 - NM Comp for Entry PE Teachers: **(NMAC 6.64) 1 a,b,c,h, 2 b,c, 6 a,c,f**
 - Assessment: Activity Leader, Exam, Student Notebook
2. Demonstrate how PE meet National and State Standards in Physical Education (COE: Understanding 4,6, Practices 3)
 - NM Comp for Entry PE Teachers: **(NMAC 6.64) 1 d, 6 a**
 - Assessment: PE major lesson plans
3. Demonstrate knowledge of appropriate teaching progressions of skill themes and movement concepts for PE. (COE: Understanding 1,3,4, Practices 1,2,3,4)
 - NM Comp for Entry PE Teachers: Competencies 1, 6
 - Assessment: Block plans, Lesson plans, Student Notebook
6. Demonstrate strategies for diversity and modification with learning styles, developmental levels, culture, gender, age through implementation of different teaching styles and methods. (COE: Understanding 3,4, Practices 2)
 - NM Comp for Entry PE Teachers: Competencies 2,3,4,6,7
 - Assessment: Peer Teaching, Lesson plans, Exam, Student Notebook
7. Demonstrate the ability to accurately self and peer evaluate teaching performances. (COE: Understandings 1, Practices 1,2,3)
 - NM Comp for Entry PE Teachers: Competencies 1,3,4,5,6,7,9
 - Assessment: Peer Teaching, Rubrics Assignment
8. Construct an organized activity notebook to assist instruction (COE: Understanding 1,2,3,4, Practices 1,3)
 - NM Comp for Entry PE Teachers: Competencies 1,2,3,4,5,6,7,8.
 - Assessment: Student Notebook
9. Demonstrate effective instructional and management behaviors during peer teaching experiences. (COE: Understanding 1,2,4, Practices 1,2,3,4)
 - NM Comp for Entry PE Teachers: Competencies 4,5,6,7
 - Assessment: Peer Teaching, Notebooks

PRPE 2130. Athletic Training Observation Lab

Course Description

This course will focus on the professional development and responsibilities in the profession of athletic training. Materials addressed will include, but not limited to blood-borne pathogens training; pre-participation examinations; basic wrapping skills; protective equipment; environmental considerations; and basic human anatomy. Students in this course will be introduced to the clinical aspects of athletic training and UNM-ATEP policies. In order to maintain accreditation requirements, this course is unique to UNM and may not be replaced with a transferred course from another institution.

Student Learning Outcomes

- PHP 7 Implement disinfectant procedures to prevent the spread of infectious diseases and to comply with Occupational Safety and Health Administration (OSHA) and other federal regulations.
- PHP 8 Identify the necessary components to include in a preparticipation physical examination as recommended by contemporary guidelines (e.g., American Heart Association, American Academy of Pediatrics Council on Sports Medicine & Fitness).
- PHP 9 Explain the role of the preparticipation physical exam in identifying conditions that might predispose the athlete to injury or illness.
- PHP 10 Explain the principles of the body's thermoregulatory mechanisms as they relate to heat gain and heat loss.
- PHP 11 Explain the principles of environmental illness prevention programs to include acclimation and conditioning, fluid and electrolyte replacement requirements, proper practice and competition attire, hydration status, and environmental assessment (e.g., sling psychrometer, wet bulb globe temperatures [WBGT], heat index guidelines).
- PHP 12 Summarize current practice guidelines related to physical activity during extreme weather conditions (e.g., heat, cold, lightning, wind).
- PHP 13 Obtain and interpret environmental data (wet bulb globe temperature [WBGT], sling psychrometer, lightning detection devices) to make clinical decisions regarding the scheduling, type, and duration of physical activity.
- PHP 14 Assess weight loss and hydration status using weight charts, urine color charts, or specific gravity measurements to determine an individual's ability to participate in physical activity in a hot, humid environment.
- PHP 18 Explain strategies for communicating with coaches, athletes, parents, administrators, and other relevant personnel regarding potentially dangerous conditions related to the environment, field, or playing surfaces.
- PHP 20 Summarize the basic principles associated with the design, construction, fit, maintenance, and reconditioning of protective equipment, including the rules and regulations established by the associations that govern its use.
- PHP 25 Describe the role of exercise in maintaining a healthy lifestyle and preventing chronic disease.
- PHP 43 Describe the principles and methods of body composition assessment to assess a client's/patient's health status and to monitor changes related to weight management, strength training, injury, disordered eating, menstrual status, and/or bone density status.
- PHP 44 Assess body composition by validated techniques.
- PHP 45 Describe contemporary weight management methods and strategies needed to support activities of daily life and physical activity.
- AC 21 Explain aseptic or sterile techniques, approved sanitation methods, and universal precautions used in the cleaning, closure, and dressing of wounds.
- AC 22 Select and use appropriate procedures for the cleaning, closure, and dressing of wounds, identifying when referral is necessary.
- AC 27 Explain the role of core body temperature in differentiating between exertional heat stroke, hyponatremia, and head injury.
- AC 28 Differentiate the different methods for assessing core body temperature.
- AC 30 Explain the role of rapid full body cooling in the emergency management of exertional heat stroke.
- AC 36 Identify the signs, symptoms, interventions and, when appropriate, the return-to-participation criteria for:
 - AC 36d heat illness including heat cramps, heat exhaustion, exertional heat stroke, and hyponatremia
 - AC 36e exertional sickling associated with sickle cell trait

- AC 36f rhabdomyolysis
- AC 36i asthma attacks
- AC 36j systemic allergic reaction, including anaphylactic shock
- AC 36m hypothermia, frostbite
- AC 36o local allergic reaction
- AC 39 Select and implement the appropriate ambulatory aid based on the patient's injury and activity and participation restrictions.
- HA 10 Identify and explain the statutes that regulate the privacy and security of medical records.
- HA 18 Describe the basic legal principles that apply to an athletic trainer's responsibilities.
- HA 23 Identify and explain the recommended or required components of a pre-participation examination based on appropriate authorities' rules, guidelines, and/or recommendations.

PRPE 2135. Athletic Training Clinical I

Course Description

The subject matter of this course is designed to study the principles of protective athletic equipment, splinting, taping and bandaging techniques, and emergency procedures. Material addressed will include but not limited to: minimal standards of protection, materials used to decrease forces, tissue characteristics, emergency action planning, prevention and treatment of environmental conditions, and basic injury record keeping.

Student Learning Outcomes

- PHP 19 Instruct clients/patients in the basic principles of ergo dynamics and their relationship to the prevention of illness and injury.
- PHP 21 Summarize the principles and concepts related to the fabrication, modification, and appropriate application or use of orthotics and other dynamic and static splints.
- PHP 22 Fit standard protective equipment following manufacturers' guidelines.
- PHP 23 Apply preventive taping and wrapping procedures, splints, braces, and other special protective devices.
- CE 1 Describe the normal structures and interrelated functions of the body systems.
- CE 13 Obtain a thorough medical history that includes the pertinent past medical history, underlying systemic disease, use of medications, the patient's perceived pain, and the history and course of the present condition.
- AC 2 Differentiate the roles and responsibilities of the athletic trainer from other pre-hospital care and hospital-based providers, including emergency medical technicians/ paramedics, nurses, physician assistants, and physicians.
- AC 3 Describe the hospital trauma level system and its role in the transportation decision-making process.
- AC 4 Demonstrate the ability to perform scene, primary, and secondary surveys.
- AC 5 Obtain a medical history appropriate for the patient's ability to respond.
- AC 6 When appropriate, obtain and monitor signs of basic body functions including pulse, blood pressure, respiration, pulse oximetry, pain, and core temperature. Relate changes in vital signs to the patient's status.
- AC 7 Differentiate between normal and abnormal physical findings (e.g., pulse, blood pressure, heart and lung sounds, oxygen saturation, pain, core temperature) and the associated pathophysiology.
- AC 37 Select and apply appropriate splinting material to stabilize an injured body area.
- TI 16 Fabricate and apply taping, wrapping, supportive, and protective devices to facilitate return to function.
- HA 21 Develop comprehensive, venue-specific emergency action plans for the care of acutely injured or ill individuals.
- HA 22 Develop specific plans of care for common potential emergent conditions (e.g., asthma attack, diabetic emergency).
- HA 30 Describe the role and functions of various healthcare providers and protocols that govern the referral of patients to these professionals.

- CIP 2 Select, apply, evaluate, and modify appropriate standard protective equipment, taping, wrapping, bracing, padding, and other custom devices for the client/patient in order to prevent and/or minimize the risk of injury to the head, torso, spine, and extremities for safe participation in sport or other physical
- activity.

PRPE 2140. Evaluation of Athletic Injuries - Extremities

Course Description

This course is designed to provide information relative to assessment techniques and procedures that are essential to properly evaluate orthopedic and athletic injuries. Information gained during this course will provide athletic training students with a systematic evaluation process that can be applied to all athletic related injuries to the extremities, neck, head, trunk and torso. In order to maintain accreditation requirements, this course is unique to UNM and may not be replaced with a transferred course from another institution.

Student Learning Outcomes

- EBP 1 Define evidence-based practice as it relates to athletic training clinical practice.
- EBP 2 Explain the role of evidence in the clinical decision-making process.
- CE 1 Describe the normal structures and interrelated functions of the body systems.
- CE 2 Describe the normal anatomical, systemic, and physiological changes associated with the lifespan.
- CE 3 Identify the common congenital and acquired risk factors and causes of musculoskeletal injuries and common illnesses that may influence physical activity in pediatric, adolescent, adult, and aging populations.
- CE 4 Describe the principles and concepts of body movement, including normal osteokinematics and arthrokinematics.
- CE 6 Describe the basic principles of diagnostic imaging and testing and their role in the diagnostic process.
- CE 7 Identify the patient's participation restrictions (disabilities) and activity limitations (functional limitations) to determine the impact of the condition on the patient's life.
- CE 11 Explain the creation of clinical prediction rules in the diagnosis and prognosis of various clinical conditions.
- CE 12 Apply clinical prediction rules (e.g., Ottawa Ankle Rules) during clinical examination procedures.
- CE 13 Obtain a thorough medical history that includes the pertinent past medical history, underlying systemic disease, use of medications, the patient's perceived pain, and the history and course of the present condition.
- CE 14 Differentiate between an initial injury evaluation and follow-up/reassessment as a means to evaluate the efficacy of the patient's treatment/rehabilitation program, and make modifications to the patient's program as needed.
- CE 15 Demonstrate the ability to modify the diagnostic examination process according to the demands of the situation and patient responses.
- CE 18 Incorporate the concept of differential diagnosis into the examination process.
- CE 20 Use standard techniques and procedures for the clinical examination of common injuries, conditions, illnesses, and diseases including, but not limited to:
- CE 20a history taking
 - CE 20b inspection/observation
 - CE 20c palpation
 - CE 20d functional assessment
 - CE 20e selective tissue testing techniques / special tests
 - CE 20f neurological assessments (sensory, motor, reflexes, balance, cognitive function)
- CE 21 Assess and interpret findings from a physical examination that is based on the patient's clinical presentation. This exam can include:
 - CE 21a Assessment of posture, gait, and movement patterns
 - CE 21b Palpation
 - CE 21d Assessment of quantity and quality of osteokinematic joint motion

- CE 21e Capsular and ligamentous stress testing
- CE 21f Joint play (arthrokinematics)
- CE 21g Selective tissue examination techniques / special tests
- CE 21h Neurologic function (sensory, motor, reflexes, balance, cognition)
- AC 5 Obtain a medical history appropriate for the patient's ability to respond.
- AC 39 Select and implement the appropriate ambulatory aid based on the patient's injury and activity and participation restrictions.
- CIP 4 Perform a comprehensive clinical examination of a patient with an upper extremity, lower extremity, head, neck, thorax, and/or spine injury or condition. This exam should incorporate clinical reasoning in the selection of assessment procedures and interpretation of findings in order to formulate a differential diagnosis and/or diagnosis, determine underlying impairments, and identify activity limitations and participation restrictions. Based on the assessment data and consideration of the patient's goals, provide the appropriate initial care and establish overall treatment goals. Create and implement a therapeutic intervention that targets these treatment goals to include, as appropriate, therapeutic modalities, medications (with physician involvement as necessary), and rehabilitative techniques and procedures. Integrate and interpret various forms of standardized documentation including both patient-oriented and clinician-oriented outcomes measures to recommend activity level, make return to play decisions, and maximize patient outcomes and progress in the treatment plan.
- CIP 6 Clinically evaluate and manage a patient with an emergency injury or condition to include the assessment of vital signs and level of consciousness, activation of emergency action plan, secondary assessment, diagnosis, and provision of the appropriate emergency care (e.g., CPR, AED, supplemental oxygen, airway adjunct, splinting, spinal stabilization, control of bleeding).

PRPE 2145. Evaluation of Athletic Injuries – Trunk & Torso

Course Description

This course is designed to provide information relative to assessment techniques and procedures that are essential to properly evaluate orthopedic and athletic injuries. Information gained during this course will provide athletic training students with a systematic evaluation process that can be applied to all athletic related injuries to the extremities, neck, head, trunk and torso. In order to maintain accreditation requirements, this course is unique to UNM and may be not be replaced with a transferred course from another institution.

Student Learning Outcomes

- EBP 1 Define evidence-based practice as it relates to athletic training clinical practice.
- EBP 2 Explain the role of evidence in the clinical decision-making process.
- CE 21 Assess and interpret findings from a physical examination that is based on the patient's clinical presentation. This exam can include:
 - CE 21i Cardiovascular function (including differentiation between normal and abnormal heart sounds, blood pressure, and heart rate)
 - CE 21j Pulmonary function (including differentiation between normal breath sounds, percussion sounds, number and characteristics of respirations, peak expiratory flow)
 - CE 21k Gastrointestinal function (including differentiation between normal and abnormal bowel sounds)
 - CE 21m Ocular function (vision, ophthalmoscope)
 - CE 21n Function of the ear, nose, and throat (including otoscopic evaluation)
- AC 5 Obtain a medical history appropriate for the patient's ability to respond.
- AC 23 Use cervical stabilization devices and techniques that are appropriate to the circumstances of an injury.
- AC 24 Demonstrate proper positioning and immobilization of a patient with a suspected spinal cord injury.
- AC 34 Explain the importance of monitoring a patient following a head injury, including the role of obtaining clearance from a physician before further patient participation.
- AC 36 Identify the signs, symptoms, interventions and, when appropriate, the return-to-participation criteria for:

- AC 36a sudden cardiac arrest
- AC 36b brain injury including concussion, subdural and epidural hematomas, second impact syndrome and skull fracture
- AC 36c cervical, thoracic, and lumbar spine trauma
- HA 12 Use a comprehensive patient-file management system for appropriate chart documentation, risk management, outcomes, and billing.
- PD 9 Specify when referral of a client/patient to another healthcare provider is warranted and formulate and implement strategies to facilitate that referral.
- CIP 4 Perform a comprehensive clinical examination of a patient with an upper extremity, lower extremity, head, neck, thorax, and/or spine injury or condition. This exam should incorporate clinical reasoning in the selection of assessment procedures and interpretation of findings in order to formulate a differential diagnosis and/or diagnosis, determine underlying impairments, and identify activity limitations and participation restrictions. Based on the assessment data and consideration of the patient's goals, provide the appropriate initial care and establish overall treatment goals. Create and implement a therapeutic intervention that targets these treatment goals to include, as appropriate, therapeutic modalities, medications (with physician involvement as necessary), and rehabilitative techniques and procedures. Integrate and interpret various forms of standardized documentation including both patient oriented and clinician-oriented outcomes measures to recommend activity level, make return to play decisions, and maximize patient outcomes and progress in the treatment plan.
- Revised 1/2016 3
- CIP 6 Clinically evaluate and manage a patient with an emergency injury or condition to include the assessment of vital signs and level of consciousness, activation of emergency action plan, secondary assessment, diagnosis, and provision of the appropriate emergency care (e.g., CPR, AED, supplemental oxygen, airway adjunct, splinting, spinal stabilization, control of bleeding).

PRPE 2150. Motor Learning and Performance

Course Description

Psychological and neurophysiological factors related to the development of motor skills, emphasis on the teacher's role in facilitating learning.

Student Learning Outcomes

By the end of this course, the student will be able to:

1. Demonstrate knowledge of the learning and developmental process throughout the lifespan.
2. Discuss current trends and issues in motor learning and development research.
3. View theoretical positions of motor behavior from various conceptual viewpoints.
4. Discuss the interaction of cognitive and motor learning and development throughout the lifespan.
5. Describe the socialization process and its effect on motor learning and development.
6. Differentiate the components of basic fundamental movement patterns.

PRPE 2155. Tests & Measurements

Course Description

Designed to provide exercise science professionals, physical education professionals, athletic trainers, and future PT/OT students the knowledge of, and ability to select and administer fitness, skill, cognitive and affective measurement and evaluation techniques for various populations. Let's prepare you for your future!

Student Learning Outcomes

At the conclusion of this course, you should be able to:

1. Differentiate between testing, measurement, and evaluation
2. Differentiate between reliability, validity, and objectivity
3. Assess physical fitness parameters, sport-related skills and motor ability

4. Correctly perform basic statistical analyses using Excel®
5. Create graphs and tables in accordance with APA guidelines
6. Develop basic skills in scientific style of writing
7. Critically evaluate scientific writing
8. Identify aspects of fitness assessment and research indicative of ethical treatment of clients and subjects.

PRPE 2160. Physical Education Skills and Content

Course Description

This course is designed to provide physical education majors an overview of traditional and nontraditional teaching methods that can be used to teach PE. Strong emphasis will be put on developmentally appropriate lessons focusing on progressions and tactical teaching methods and styles. Each student will lead the class in a number of hands-on practical experiences with immediate feedback to begin learning the pros and cons of teaching physical education, improving each student's skill and knowledge in planning and teaching PE.

Student Learning Outcomes

By the end of the semester students will be able to:

- Demonstrate knowledge of skill themes and movement concepts that are developmentally appropriate for junior high and high school age students, during PE lessons. (COE: Understandings 1,3,4, Practices 1,2,3)
 - NM Comp for Entry PE Teachers: (NMAC 6.64) 1 a,b,c,h, 2 b,c, 6 a,c,f
 - Assessment: Activity Leader, Exam, Student Notebook
- Demonstrate how PE meet National and State Standards in Physical Education (COE: Understanding 4,6, Practices 3)
 - NM Comp for Entry PE Teachers: (NMAC 6.64) 1 d, 6 a
 - Assessment: PE major lesson plans
- Demonstrate knowledge of appropriate teaching progressions of skill themes and movement concepts for PE. (COE: Understanding 1,3,4, Practices 1,2,3,4)
 - NM Comp for Entry PE Teachers: Competencies 1, 6
 - Assessment: Block plans, Lesson plans, Student Notebook
- Demonstrate strategies for diversity and modification with learning styles, developmental levels, culture, gender, age through implementation of different teaching styles and methods. (COE: Understanding 3,4, Practices 2)
 - NM Comp for Entry PE Teachers: Competencies 2,3,4,6,7
 - Assessment: Peer Teaching, Lesson plans, Exam, Student Notebook
- Demonstrate the ability to accurately self and peer evaluate teaching performances. (COE: Understandings 1, Practices 1,2,3)
 - NM Comp for Entry PE Teachers: Competencies 1,3,4,5,6,7,9
 - Assessment: Peer Teaching, Rubrics Assignment
- Construct an organized activity notebook to assist instruction (COE: Understanding 1,2,3,4, Practices 1,3)
 - NM Comp for Entry PE Teachers: Competencies 1,2,3,4,5,6,7,8.
 - Assessment: Student Notebook
- Demonstrate effective instructional and management behaviors during peer teaching experiences. (COE: Understanding 1,2,4, Practices 1,2,3,4)
 - NM Comp for Entry PE Teachers: Competencies 4,5,6,7
 - Assessment: Peer Teaching, Notebooks

PRPE 2165. Kinesiology

Course Description

A study of the musculoskeletal system as it relates to movement, physical activity and exercise performance. This course will introduce students to basic neuromuscular and biomechanical principles of human movement. Muscle origin, insertion and actions will also be covered.

Student Learning Outcomes

1. You will be able to recall the name, location, and function of anatomical structures
2. You will be able to recall the following during closed-book, multiple choice or short answer examinations:
 - Body movements and the plane they occur in.
 - Basic mechanisms and terminology of bone growth
 - Classification of specific structures (i.e.: type of joint, type of bone, type of muscle, part of the skeleton).
 - Direction of muscle fibers, general muscle attachment sites and actions
 - Basic concepts in Biomechanics (laws of motion, levers, mechanical advantage, etc.)
3. You will be able to demonstrate your knowledge and understanding of the functions of the musculoskeletal system in producing and controlling human movement through movement analysis exercises
4. You will be able to apply biomechanical principles to physical activity, exercise performance, and sport skills
5. You will also be able to analyze physical activity in terms of musculoskeletal components.

PRPE 2170. Teaching Fitness Concepts

Course Description

This course is designed to provide physical education preservice teacher candidates a basic background in exercise and health related fitness concepts. Planning, conducting and evaluating lessons in the area of fitness will be emphasized. The five health-related fitness components will be highlighted. Teacher candidates will participate in various fitness assessments; preparing, conducting, and evaluating each assessment area of fitness and learning how to develop goals and activities for behavior change. Teacher candidates will also complete a physical education teaching field experience with homeschool children the last six weeks of the course.

Student Learning Outcomes

Course outcomes align with the College of Education Conceptual Framework and the New Mexico competencies for Entry Level Physical Education Teachers. Upon completion of the course each student/pre-service teacher will have the ability to:

- Demonstrate knowledge concerning children's health topics. (COE "Understanding")
 - NM Comp for Entry PE Teachers: Content Knowledge
 - (Understanding 3, 4; Practices 2)
 - NM Comp for Entry PE Teachers (NMAC 6.64) 4 b, c, d, e, f, g, h
 - Assessment: Case Studies, Group Presentations, Lesson Plans, Notebook/Fitness Assessment Project, Exams
- Demonstrate knowledge of the different fitness concepts. (COE "Understanding")
 - NM Comp for Entry PE Teachers: Content Knowledge
 - (Understanding 1, 4; Practices 1, 2, 3)
 - NM Comp for Entry PE Teachers (NMAC 6.64) 1 a, b, h; 2 a, b, c; 3 a, b; 5 b, d; 6 b, c, f; 7 a, e
 - Assessment: Case Studies, Group Presentation, Lesson Plans, Notebook/Fitness Assessment Project, Exams
- Demonstrate effective planning, teaching, and assessment in a fitness concepts lesson. (COE "Understanding" & "Practice")
 - NM Comp for Entry PE Teachers: Content Knowledge, Planning and Instruction, Diverse Learners,
 - Learner Assessment
 - (Practice 2, 3)
 - NM Comp for Entry PE Teachers (NMAC 6.64) 1 a, b, c, d, h; 2 a, b, c, d; 3 a, b, c; 4 a, b, c, d, e, f, g, h; 5 a, c; 6 a, b, c, d, e, f, g, h, i, j, k; 7 a, b, c, d, e; 8 a, b, c

- Assessment: Group Presentation, Notebook/Fitness Assessment Project, Lesson Plans, Home-School Student Instruction
- Demonstrate effective planning, preparation, and implementation for fitness assessments in cardiovascular fitness, muscular strength, muscular endurance, flexibility, and body composition. (COE “Understanding”)
 - NM Comp for Entry PE Teachers: Content Knowledge, Growth and Development, Diverse Learners, Planning and Instruction, Learner Assessment
 - (Understanding 1, 2, 4; Practices 1, 2, 3, 4)
 - NM Comp for Entry PE Teachers (NMAC 6.64) 4 a, b, c, d, e, f, g, h; 5 a, c, e; 6 a, b, c, d, f, g, h, j, k; 7 a, b, c
 - Assessment: Case Studies, Notebook/Fitness Assessment Project, Exams
- Demonstrate effective presentation of a fitness concept lesson, peer teaching classmates, and teaching home-school teacher candidates. (COE “Practice”)
 - NM Comp for Entry PE Teachers: Content Knowledge, Growth and Development, Diverse Learners, Management and Motivation, Communication, Planning and Instruction, Learner Assessment, Reflection and Professional Development
 - (Understanding 1, 2, 4; Practices 1, 2, 3, 4)
 - NM Comp for Entry PE Teachers (NMAC 6.64) 4 a, b, c, d, e, f, g, h; 5 a, c, e; 6 a, b, c, d, f, g, h, j, k; 7 a, b, c
 - Assessment: Case Studies, Group Presentation, Lesson Plans, Home-School Student Instruction, Notebook/Fitness Assessment Project, Exams
- Participate in the Fitness gram fitness tests and other assessments for the five health-related fitness components. (COE “Practice”)
 - NM Comp for Entry PE Teachers: Learner Assessment
 - (Practices 1, 2, 3, 4)
 - NM Comp for Entry PE Teachers (NMAC 6.64) 1 a, b, c, d, h; 2 b, c; 3 a; 6 c, k
 - Assessment: Notebook/Fitness Assessment Project
- Demonstrate teaching skills by teaching physical education lessons to home-school teacher candidates. (COE “Practice”)
 - NM Comp for Entry PE Teachers: Content Knowledge, Growth and Development, Diverse Learners, Management and Motivation, Communication, Planning and Instruction, Learner Assessment, Reflection and Professional Development, Collaboration
 - (Understanding 1, 3; Practices 2,3,5)
 - NM Comp for Entry PE Teachers (NMAC 6.64) 1 a, b, d, h; 2 b, c; 3 a, b; 6 a, b, f
 - Assessment: Lesson Plans, Exams, Notebook

PRPE 2175. Introduction to Sport Pedagogy

Course Description

This course is designed to provide teacher candidates with an overview of effective and best practices for becoming a professional physical education teacher and to develop the beginning skill set of a high-quality educator. The teacher candidates will be given the opportunity to observe professional physical education teachers in their classrooms, from Albuquerque Public Schools. Teacher candidates will participate twice a week in a one-hour seminar and assist a physical education teacher in the classroom, two hours per week.

Student Learning Outcomes

Upon successful completion of this course, it is expected that teacher candidates will be able to:

1. demonstrate their knowledge concerning the duties and responsibilities of professional physical educators,
 - Assessment of objective: reflection, exams
 - (COE: Understandings 1, 3, 4)
 - NM Comp for Entry PE Teachers NMAC 6.64: Content Knowledge 1 a, b, c, d, h

2. demonstrate their understanding of effective teaching practices,
 - Assessment of objective: reflection, exams
 - (COE: Understanding 1, 3, 4, 5, 7; Practices 1, 3, 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Planning and Instruction 6 a
3. demonstrate their ability to work effectively with children,
 - Assessment of objective: cooperating teacher assessment
 - (COE: Understanding 1, 3, 4, 5, 7; Practices 1, 3, 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Content Knowledge 1 a, b, c, d, h; Planning and Instruction 6 b, f
4. demonstrate their understanding of developmentally appropriate activities for elementary and secondary level students,
 - Assessment of objective: exams, brochure, bulletin board
 - (COE: Understanding 1, 3, 4, 5, 7; Practices 1, 3, 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Content Knowledge 1 a, b, c, d, h; Planning and Instruction 6 b, f
5. demonstrate professional behavior,
 - Assessment of objective: cooperating teacher assessment
 - (COE: Identities 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Reflection and Professional Development 8 c
6. critically reflect on situations that arise in the course of a teacher's day,
 - Assessment of objective: reflections
 - (COE: Understanding 1, 3, 4, 5, 7; Practices 1, 3, 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Growth and Development 2 a, b, c; Planning and Instruction 6 a, c, f, g
7. critically reflect on the professionalism of being a physical education teacher (i.e. taking advantage of participating in NMAAHPERD).
 - Assessment of objective: reflections
 - (COE: Identities 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Reflection and Professional Development 8 c
8. critically assess the role of physical education in the physical development of children,
 - Assessment of objective: reflections
 - (COE: Understanding 1, 3, 4, Practices 1, 3)
 - NM Comp for Entry PE Teachers NMAC 6.64: Learner Assessment 7 a, c
9. create a developmentally appropriate bulletin board that is designed to motivate and educate a child about content commonly taught in physical education, and to advocate for quality physical education,
 - Assessment of objective: bulletin board
 - (COE: Understanding 1, 3, 4, 5, 7; Practices 1, 3, 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Growth and Development 2 a, b, c; Planning and Instruction 6 a, c, f, g
10. create an attractive brochure that is designed to inform parents, teachers, administrators, and other school community members about a quality physical education program and the outcome of a physically educated student,
 - Assessment of objective: brochure/newsletter
 - (COE: Understanding 1, 3, 4, 5, 7; Practices 1, 3, 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Growth and Development 2 a, b, c; Planning and Instruction 6 a, c, f, g
11. demonstrate beginning level skills of a pre-service professional physical educator in the following areas: (a) leading small group activities, (b) administer skills tests, (c) setting up equipment, (d) providing feedback and motivation to students, and (e) leading discussions and explanations,
 - Assessment of objectives: cooperating teacher assessment
 - (COE: Identities 4, 5)
 - NM Comp for Entry PE Teachers NMAC 6.64: Reflection and Professional Development 8 c

Psychology (PSYC)

PSYC 1110. Introduction to Psychology

Course Description

This course will introduce students to the concepts, theories, significant findings, methodologies, and terminology that apply to the field of psychology.

Student Learning Outcomes

Upon completion of the course students should be able to:

1. Explain how the scientific method and psychological research methodologies are used to study the mind and behavior.
2. Recall key terms, concepts, and theories in the areas of neuroscience, learning, memory, cognition, intelligence, motivation and emotion, development, personality, health, disorders and therapies, and social psychology.
3. Explain how information provided in this course can be applied to life in the real world.
4. Identify the major theoretical schools of thought that exist in psychology as they relate to the self, the culture, and the society.

PSYC 1115. Introduction to the Psychology Major

Course Description

This course is designed to give Psychology majors the knowledge and tools they need to get the most out of the major and assist them in making informed decisions about career choices in Psychology. There are two main goals for this course. The first is to provide students with helpful tools and resources to enhance their experience as a Psychology major. The second goal is to delineate the knowledge and skills that students are expected to acquire with a Psychology degree and to convey how these can be applied in their future academic, professional, and personal endeavors beyond graduation. During the semester, students will discuss the subdisciplines of Psychology and explore career options with varying levels of education. Students will learn about course requirements for the Psychology major and experiential learning opportunities available outside the classroom.

Student Learning Outcomes

1. Demonstrate knowledge and understanding of the subdisciplines of Psychology.
2. Demonstrate knowledge and understanding of the requirements of the Psychology major and experiential opportunities available to Psychology majors.
3. Identify career opportunities available to individuals with varying levels of education in Psychology and related fields (e.g., BA, MA, PhD, etc.).
4. Adopt strategies to prepare for future success in a job search or graduate school application.
5. Exhibit information literacy skills (e.g., literature searches, use of APA format) that will facilitate success in future Psychology courses.
6. Identify personal attributes as a student, areas of Psychology that are aligned with personal strengths, and strategies to make the most of personal strengths as a student.

PSYC 1120. Education & Career in Psychology

Course Description

Not Available

Student Learning Outcomes

Not Available

PSYC 1130. Introduction to Substance Abuse Studies

Course Description

This survey course offers an overview of the biological, psychological, and sociological aspects of drug and alcohol abuse and addiction and an overview of substance abuse problems in the family, school, and industry. Consideration will be given to current research, attitudes toward drugs, theories of drug addiction and treatment, and Licensed Alcohol and Drug Abuse Counselor requirements in the state of New Mexico.

Student Learning Outcomes

1. Examine theories and principles related to substance abuse and addiction.
2. Analyze influences and views on substance abuse and addiction from different cultural and religious traditions.
3. Examine factors and consequences of substance abuse problems in the family, school, and industry.
4. Explore research contributions to understanding substance abuse and addiction.
5. Evaluate interventions used to avert and treat substance abuse and addiction.
6. Demonstrate critical thinking skills through the study of substance abuse and addiction.
7. Demonstrate knowledge of Licensed Alcohol and Drug Abuse Counselor requirements in the state of New Mexico.

PSYC 1140. Psychology of Drug and Alcohol Abuse

Course Description

The physiological and behavioral effects of alcohol and other drugs will be examined. Emphasis is placed on the psychopharmacology of commonly abused substances, the disease concept of chemical dependency, and on current research.

Student Learning Outcomes

1. Explore theories related to the physiological and behavioral effects of alcohol and other drugs.
2. Analyze current research and empirical evidence regarding physiological and behavioral effects of alcohol and other drugs.
3. Examine psychopharmacology of commonly abused substances.
4. Evaluate theories of substance use, abuse, and addiction.
5. Demonstrate critical thinking skills through thoughtful completion of assignments related to substance use, abuse, and addiction.
6. Demonstrate competence in effective interpersonal and academic communication skills.

PSYC 1150. Human Relations

Course Description

Students are introduced to psychology as a science that includes the study of human relations, using various theories of personality and group dynamics. Topics surveyed include psychology of self, personality theory, parenting, life span development, learning, therapies, and psychological disorders.

Student Learning Outcomes

With 70% accuracy, in a faculty-generated exam, students will:

1. Explain the Psychology of Self.
2. Define Personality Theory.
3. Define and explain Psychotherapies and Psychological disorders.
4. Explain theories related to the human experience at each stage of life.
5. Define and discuss Conscientiousness, hypnosis, Meditation and variations of sleep.
6. Compare and contrast function and dysfunction awareness.
7. Explain the steps involved in building a life path and career through educational opportunities.

PSYC 1160. Communication and Counseling Skills

Course Description

An introduction to basic communication skills and strategies for the helping professions, such as social work and mental-health counseling. The history, theory, and areas of practice in the helping professions will be explored through lecture and experiential activities. Special emphasis will be placed on the influence of personal and professional values of one's development as a service provider in a multicultural society.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Articulate different approaches and theories that provide the foundation for mental health counseling, social work and psychology.
2. Evaluate the different areas of practice and the career opportunities available in each profession.
3. Explain how values influence their perception of individual and societal problems and how counseling professionals respond to these problems.
4. Distinguish different strategies in assisting others and the making of appropriate referrals.

PSYC 1170. Psychology of Success

Course Description

The purpose of this course is to provide students the opportunity to explore the big ideas regarding what contributes to success in all areas of life.

Student Learning Outcomes

1. Demonstrate an understanding of key concepts in positive psychology and their real life impact.
2. Explore and apply the concept of fixed and growth mindsets to current and future stages of life.
3. Summarize the elements of PERMA and their contributions to success and happiness.
4. Appraise personal character strengths and virtues in order to develop a strategy for personal success.
5. Develop a zest of life-long learning.
6. Integrate the power of grit and gratitude into a quest for success.

PSYC 1175. Interpersonal and Career Development

Course Description

An introductory study of communication and interpersonal relationships in the service occupations.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. Create an individual definition of success.
2. Define Psychology and cite its four major goals.
3. Describe the components of identity.
4. Cite the benefits of self-awareness.
5. Explain how personality, skills and interests relate to career choice.
6. Explain the characteristics and importance of well-set goals.
7. Describe several strategies for relieving stress.
8. Explain why self-acceptance is important for high self-esteem.
9. Explain the link between positive thinking and good health.
10. Connect critical thinking and the decision-making process.
11. Contrast intrinsic and extrinsic motivations.
12. Cite ways to overcome fear of failure or fear of success.
13. Explain the criteria for effective time management and money management.
14. Practice several skills necessary for effective speaking and active listening.
15. Explain the relationship between stereotypes, prejudice and empathy.
16. Explain how to handle conflict effectively.

PSYC 1180. Science & Pseudoscience

Course Description

This course examines methods for determining whether given claims are science or pseudoscience. Several controversial topics will be explored, with emphasis on coming to objective decisions about such claims. Topics include logical fallacies, the scientific method, creationism, global warming and climate change, hidden codes in the Bible, relativity theory, 9/11 truth conspiracy claims, dark matter, UFO sightings, perpetual motion devices, quantum mechanics, quack medical claims, and more.

Student Learning Outcomes

By the end of this course, students will learn how

1. To tell the difference between science and pseudoscience;
2. To explain how science advances, and what makes science different from pseudoscience;
3. How psychological reasons can explain some acceptance of pseudoscience;
4. The methods pseudoscientists use to fool lots of people;
5. To understand examples of successful and revolutionary scientific findings, and be able to contrast these with pseudoscience; and finally, and
6. To improve communication, writing, investigative and debunking skills.

PSYC 1190. Human Factors in Science & Engineering

Course Description

This course explores how human capabilities and limitations influence decision making and performance and how scientists and engineers can use knowledge of these factors to design. We will focus on how cognitive processes and biases in perception, attention, memory and problem-solving influence performance. Examples of “human error” and ways in which error can be averted will be studied. Comparisons will be made between human and artificial intelligence.

Student Learning Outcomes

By the end of this course, students should:

1. Describe the importance of human factors in science and engineering.
2. Understand the limitations and biases in human information processing, and the relevance of those limitations to science, engineering, and your daily lives.
3. Explain the differences in expertise of scientists, engineers, designers, and typical system users.
4. Know how to apply human factors principles to design of systems and processes to reduce “human error.”

PSYC 2110. Social Psychology

Course Description

This course is an introduction to the scientific study of human social influence and interaction, and explores how an individual’s actions, emotions, attitudes and thought processes are influenced by society and other individuals.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Identify concepts, theories, scientific methods, and research findings relevant to social psychology.
2. Explain how situational, social, and individual factors influence behavior.
3. Apply social psychological concepts to real-life events, current social issues and problems, and one's own life.

PSYC 2120. Developmental Psychology

Course Description

Study of human physical and psychological change and stability from a lifespan development perspective.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Explain theories, methods and research findings of lifespan developmental psychology.
2. Describe the interaction between physical, cognitive, and psychosocial development across the lifespan.
3. Compare and contrast major developmental theories and discuss what each brings to or adds to the study of lifespan developmental psychology.
4. Identify factors that influence psychological development across the lifespan.
5. Apply basic principles of developmental psychology to one's own life experiences.
6. Analyze historical and cultural factors that influence development across the lifespan.

PSYC 2130. Adolescent Psychology

Course Description

Study of human physical and psychological change and stability from adolescence through the emerging adulthood years.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Explain how scientific methodologies are applied to the study of adolescent psychology.
2. Describe major theories explaining adolescent behavior.
3. Identify the relationships between sociocultural factors and adolescent behavior.
4. Evaluate the impact of family structure, teachers, and peers on development during adolescence.
5. Describe the influence of cognitive development on adolescent behavior.

PSYC 2140. Child Psychology

Course Description

Study of human physical and psychological change and stability from conception through the late childhood years.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Interpret infant and child behavior in terms of developmental norms.
2. Describe physical and psychological milestones and issues pertaining to infants and children.
3. Explain major theories of infant and child development.
4. Analyze sociocultural factors contributing to the development of infants and children.
5. Explain the impact of family structure, teachers, and peers on development of infants and children.
6. Connect theories, research, and practical applications of the study of humans from conception through the childhood years.

PSYC 2160. Basic Counseling Techniques

Course Description

In this course, you will become acquainted with basic counseling skills, including active listening techniques such as paraphrasing, summarization, attending behaviors, and focusing; emphasis is on rehearsal of skills.

Student Learning Outcomes

Upon successful completion of this course, each student will demonstrate the ability to:

1. The student will be able to distinguish between stages of treatment: exploration, insight, and action
2. The student will develop a visual journal filled with different journal prompts that can be used in psychoeducational groups and personal counseling.
3. The student will practice critical thinking and active, personal reflection (introspection) by exploring some important themes related to psychological health and personal growth.
4. The student will demonstrate their knowledge of counseling skills with applied practice in triads (with a mock therapist, a mock client, and an observer).
5. The student will gain first-hand experience with incorporating visual work with verbal, written work.

6. The student will be exposed to the development and history of visual journals by examining the work of Carl Jung and some current counselors and art therapists who advocate for the use of visual journals.

PSYC 2170. Psychology as a Profession

Course Description

This capstone course focuses on preparing students for future academic and career opportunities by cultivating critical thinking, problem-solving, and communication skills. Students will integrate and apply their psychological knowledge through hands-on fieldwork and research experiences, while reflecting on their academic growth and developing key professional competencies. The course includes practice in APA writing style, the creation of a literature review related to a potential internship or research project, and the initiation of a comprehensive e-portfolio highlighting students' projects, experiences, and skills, serving as a valuable resource for job applications and continued education.

Student Learning Outcomes

Upon completion of the course students should be able to:

1. Application of Psychological Knowledge: Students will integrate and apply key psychological concepts and theories through hands-on fieldwork and research experiences.
2. Critical Thinking and Problem-Solving: Students will demonstrate enhanced critical thinking and problem-solving skills by analyzing real-world psychological issues and developing evidence-based solutions.
3. Professional Writing and Research Skills: Students will develop proficiency in APA writing style and produce a literature review related to a potential internship or research project, demonstrating their ability to conduct and communicate research.
4. Reflective Practice and Professional Development: Students will reflect on their academic journey, identifying strengths, personal growth, and areas for further development in both academic and professional contexts.
5. Portfolio Development for Career and Academic Advancement: Students will begin building a comprehensive e-portfolio that showcases their projects, skills, and experiences, which will serve as a tool for job applications and further educational pursuits.

PSYC 2171. Writing and Careers in Psychology

Course Description:

Expectations for psychology majors and exploration of career options. Emphasis on APA writing and information literacy skills, success within the major, and career path planning.

Student Learning Outcomes:

Students who successfully complete this course should

1. Learn to use appropriate language, conventions, organization, supporting evidence, and content to effectively communicate in writing for the purpose and audience (written communication student learning outcome).
2. Learn to use appropriate language, conventions, elocution, poise, organization, supporting evidence, and content to effectively communicate through the spoken word for the purpose and audience (verbal communication student learning outcome).
3. Identify, locate, evaluate, and use information effectively and responsibly to increase understanding (information literacy student learning outcome).
4. Analyze, synthesize or deconstruct, interpret and evaluate information and concepts to solve problems (critical thinking student learning outcome).
5. Understand major areas of psychology and begin to plan for a future career (practical student learning outcome).

PSYC 2210. Abnormal Psychology

Course Description

This course provides students with an introduction to the field of abnormal psychology. Subject areas include history, methods, theories, etiologies, classification and treatment of disorders.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Recognize terms used within the field of abnormal psychology.
2. Compare various methods for defining abnormal behavior.
3. Evaluate the development of classification systems that define “normal” and “abnormal” from historical, social, and cultural contexts.
4. Critically evaluate the symptoms and etiologies of mental health disorders in the current psychological diagnostic system.
5. Describe treatment modalities for mental health disorders.
6. Identify biological and psychological processes in mental health disorders.

PSYC 2220. Cognitive Psychology

Course Description

The course provides an overview of human cognitive processes such as attention, perception, memory, language, categorization, decision-making, reasoning, and problem solving. Includes methods, theories, and applications.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Describe research findings in the major areas of human cognition.
2. Differentiate the research methods used to study the various topics in cognitive psychology.
3. Apply theories of cognition to the results of laboratory research.
4. Apply the research on cognitive psychology to topics in the real world.

PSYC 2221. Applied Psychology

Course Description

Explanation of the psychological principles of everyday living. Emphasizes motivation, learning of intelligent behavior, and applications of psychology to social issues.

Student Learning Outcomes

The objective of this course is to orient students to the personality characteristics, interpersonal competencies, ethical decision-making skills, and other professional traits associated with pursuing a career in a helping profession. By the end of the course you should be able to:

1. Identify the requirements for becoming a helping professional, characteristics of a skilled helper, and cultural factors that impact helping professionals
2. Explain your personal strengths and weaknesses as a potential helper.
3. Demonstrate appropriate helping strategies based upon the special characteristics of clients.
4. Compare the capabilities that individual, family, group, community, and online interventions offer you as a future helper.
5. Identify the ethical and legal issues that impact helping professionals
6. Analyze the potential impact of your future ethical and professional standards as a helping professional
7. Explain how your role as a helping professional is impacted by your professional affiliation and ethical principles
8. Analyze how worsening personal problems and increasing stress can impact the kinds and quality of our responses to life and the people around us.

PSYC 2230. Psychology of Adjustment

Course Description

This course focuses on the individual's adjustment to society, and the application of psychological principles to the understanding of adjustment.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Explain the internal and external factors associated with the psychology of adjustment.
2. Evaluate contributions from psychology to adjustment concepts and processes.
3. Describe the different explanations of how individuals adjust to their environments.
4. Describe how self-identities develop and how they affect relations with others.
5. Identify resources available for assistance with adjustment-related concerns.

PSYC 2240. Psychology of Personality

Course Description

Theories of personality introduces students to the major theories in the development of personality. Students will analyze in detail the major theories of personality including psychoanalytic, behavioral, social learning, humanistic and trait theory. Students will have the opportunity to apply these theories in practical examples and applications whenever possible and appropriate.

Student Learning Outcomes

1. Demonstrate an understanding of the major theories in the development of personality.
2. Develop the ability to gather information from multiple resources and synthesize this information.
3. Develop skills to evaluate critically psychological concepts and the influence of contextual factors including social class, ethnicity, and family processes.
4. Apply important theoretical concepts to experiences encountered outside of the classroom.

PSYC 2250. Brain and Behavior

Course Description

A general survey of the biological foundations of behavior and mental processes. Students will gain an understanding of anatomy, physiology, and chemistry of the nervous system and their relationships to human behavior.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Identify and describe basic neuroanatomical structures and functions.
2. Identify and describe chemical processes of the nervous system.
3. Apply course concepts to psychological processes, such as learning, memory, sensation, perception, drive states, sleep, and language.
4. Apply course concepts to psychological disorders, such as schizophrenia and mood and anxiety disorders.
5. Describe the techniques used to study the relationship between brain and behavior.

PSYC 2260. Positive Psychology

Course Description

This course provides students with an introduction to the scientific study of factors contributing to optimal human functioning and well-being.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Explain the aim and scope of positive psychology.
2. Describe central research questions, theories, concepts, and methodologies used in the study of positive psychology.
3. Evaluate psychological factors that contribute to a sense of well-being.
4. Demonstrate applications of core concepts of Positive Psychology in their personal lives.

PSYC 2270. Psychology of Learning and Memory

Course Description

This course provides an overview of how information is acquired, stored, retrieved, and manifested in the behavior of human and non-human animals.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Describe the theories, research methods, procedures, and findings pertaining to classical conditioning, operant/instrumental conditioning, and observational learning.
2. Describe the theories, research methods, procedures, and findings relevant to the study of memory.
3. Analyze everyday situations in terms of psychological explanations of learning and memory.

PSYC 2280. Introduction to Clinical Psychology

Course Description

Introduces the field of clinical psychology including a discussion of historical development, growth of the field, current training methods, ethics of practice, the nature of interviewing and assessment, various therapeutic techniques, and current areas of clinical practice.

Student Learning Outcomes

The student who successfully completes this course will be able to:

1. Identify the development of the field of clinical psychology as a separate field within psychology.
2. Describe the diverse professional activities of clinical psychologists.
3. Identify the major testing instruments and research methods available to clinical psychologists as well as demonstrate a basic understanding of interpretive strategies.
4. Identify various ethical concerns, preventative strategies, and therapeutic strategies utilized in the treatment of psychological disorders.

PSYC 2285. Experimental Psychology

Course Description

Basic concepts and research methodology in the study of behavior; emphasis on experimental design, control, and laboratory methods.

Student Learning Outcomes

The student who successfully completes this course will be able to:

1. Have a good understanding of the scientific method and how it can be applied to the study of Psychology.
2. Familiar with potential problems inherent in different research methods.
3. Able to recognize confounds in experiments and know how to try to control them.
4. Design your own well-controlled experiment and carry it out.
5. Report on the results of your experiment in an APA style research paper.

PSYC 2285L. Experimental Psychology Laboratory

Course Description

Laboratory methods and experiments investigating behavior, cognitive processes, and neuropsychology.

Student Learning Outcomes

By the end of this course, you will

1. Have a good understanding of the scientific method and
2. How it can be applied to the study of Psychology, as well as science, in general.
3. Know potential problems with different research methods.
4. Recognize confounds in experiments and know how to control them.
5. Design an experiment and carry it out.

6. Write research papers in APA format.

PSYC 2290. Principles of Treatment

Course Description

This course involves studies of the various treatment approaches used with alcohol and drug abusers with an emphasis on the principles that govern their effective application. There will be a focus on Intervention, Assessment, and Treatment Plan Development with the substance abuser resulting in meaningful change and a better quality of life.

Student Learning Outcomes

Successful completion of the course implies that the student, with 70% accuracy, should be able to:

1. Identify and explain the use of various treatment approaches employed with drug and alcohol abusers that will result in successful outcomes.
2. Demonstrate how to conduct an Intervention, Assessment, and Plan Development for and appropriate Treatment Plan for a drug/alcohol abuser.
3. Interview and then prepare a short-written report on a person in recovery identifying the salient factors that ensure a successful recovery for a drug/alcohol abuser.

PSYC 2310. Drugs and Behavior

Course Description

The course provides a general introduction to the effects of alcohol, opiates, and other major classes of psychoactive drugs on the central nervous system, emphasizing the relationship between physiological, psychological, and behavioral effects of drugs.

Student Learning Outcomes

1. Present a classification of drugs that includes the type, effect, legal status, and addiction potential.
2. Explain how drugs affect the brain and behaviors in humans.
3. Distinguish between licit and illicit drugs.
4. Explain which drugs have high potential for dependency.
5. Define dependency and understand the process of how individuals develop drug dependencies.
6. Explain principles of prevention and treatment of drug dependencies.
7. Explain how some people may have a predisposition to become or not become drug dependent.
8. Explain how the research methods in psychopharmacology inform current methods of treatment.

PSYC 2311. A Study of Substance Abuse through Learning

Course Description

Physiological and psychological impact of drug use on human behavior. Emphasizes practical applications of intervention and prevention in the community.

Student Learning Outcomes

1. Describe the role that gender, ethnicity, and age have in alcohol and drug use.
2. Learn past and current perspectives of addiction.
3. Distinguish between different types of abuse-able drugs and be able to classify them.
4. Describe the role of addiction and criminal behavior.
5. Discuss the Models and Theories of Drug Dependence and Addiction.
6. Discuss the definitions of Substance Abuse, Dependence Addiction.
7. Acquaint themselves with the effects of Addictive Behavior on Family Systems.
8. Discuss Disorders Co-Occurring with Substance Abuse.
9. Discuss how important the concepts of Prevention, Intervention and Treatment in drug addiction.
10. Discuss Alcohol/Drug Recovery Treatment Relapse Prevention
11. Discuss the role of AA/NA in Recovery Treatment.

12. Through attendance of a Drug Court Hearing students will be knowledgeable of the role of Drug Courts in prevention and treatment of drug addiction.

PSYC 2315. Drug and Alcohol Assessment, Referral, and Treatment Methods

Course Description

You will study the twelve core functions and global criteria of alcohol and other substance abuse, including: screening, intake, orientation, assessment, crisis intervention, treatment planning, counseling, case management, client education, referral, report and record keeping, and consultation with other professionals in regard to client treatment and services. Attention will be given to the ethical considerations involved in the therapeutic process. In this course, you will devote six clock hours to ethics of the substance abuse counselor.

Student Learning Outcomes

1. Examine the mandated principles of the twelve core functions and global criteria of alcohol and other substance abuse.
2. Analyze influences and views on substance abuse and addiction from various cultural and religious traditions.
3. Evaluate research contributions and empirical evidence related to interventions and effective practices used to avert and treat substance abuse and addiction.
4. Study and demonstrate knowledge of ethical principles, standards, and policies as related to provision of treatment for substance abuse.
5. Demonstrate competence in effective communication skills.
6. Demonstrate critical thinking skills through the thoughtful completion of reading assignments and through written discourse.
7. Demonstrate knowledge of Licensed Alcohol and Drug Abuse Counselor requirements in the state of New Mexico.

PSYC 2320. Health Psychology

Course Description

This course examines how biological, psychological, and social factors interact with and affect different areas within health. Course will cover the role of stress in illness, coping with illness, pain management, and the role of health behavior in health and disease.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Describe psychological models and practices that can sustain health from holistic perspectives involving the body and mind.
2. Identify specific approaches students can employ in their own and others' lives to improve health.
3. Describe and analyze social, cultural, economic, and political influences on health and psychology.
4. Identify various models of intervention to explain and address health-related issues.
5. Analyze health- and psychology-related information presented in the media and through other methods.

PSYC 2325. Prevention of Drug and Alcohol Abuse

Course Description

This course, Prevention of Drug and Alcohol Abuse, examines effective programs and strategies used in the schools and in the community that prevent substance abuse and related problems. Emphasis is on how to design an appropriate, effective prevention program in either the schools or the community, which will prevent or reduce the incidence of drug or alcohol abuse in a particular high-risk population.

Student Learning Outcomes

Successful completion of the course implies that the student, with 70% accuracy, should be able to:

1. Overview - Students will:
 - a. Understand the concept of prevention as it relates to drug education.

- b. Explain the terms and concepts of drug education.
 - c. Learn how to identify high-risk population groups in drug education.
- 2. In Defining Drug Problems Students will:
 - a. Learn the history of illegal drug use in America.
 - b. Understand the history of alcohol and tobacco use up to the present.
 - c. Learn to identify high-risk populations with drug and alcohol problems.
- 3. In Alcohol & Tobacco Use Students will:
 - a. Understand the dynamics of alcohol and tobacco use and advertising.
 - b. Explain the role of Government Regulations of alcohol & tobacco use.
 - c. Describe the consequences of drug & alcohol use.
- 4. In Illegal Drug Use and Problems, Students will:
 - a. Explain stimulant drugs & the problems they cause.
 - b. Explain depressant drugs and the problems they cause.
 - c. Explain narcotic drugs and the problems they cause.
 - d. Explain hallucinogen drugs and the problems they cause.
 - e. Explain marijuana and the problems it causes.
- 5. In Violence Associated with Drugs & Alcohol, Students will:
 - a. Learn the nature & extent of violence in the schools and in the community.
 - b. Understand the relationship between drugs & violence.
 - c. Describe strategies for the prevention of violence.
- 6. Single Focus Students will:
 - a. Understand the public-health approach to drug & alcohol abuse.
 - b. Explain the dimensions of prevention including risk and protective factors.
 - c. Describe the prevention programs of the past.
 - d. Describe the characteristics of unsuccessful programs of the past.
- 7. In Current Prevention Programs that Work, Students will:
 - a. Understand community program models for prevention of drug & alcohol abuse.
 - b. Explain prevention programs that work.
- 8. In Planning and Implementing a Drug and Alcohol Curriculum, students will:
 - a. Understand the process of selecting a drug and alcohol curriculum.
 - b. Use proven strategies, practices, and programs that work with drug and alcohol curriculum.
- 9. In Early Intervention, Students will:
 - a. Learn to observe and recognize drug/alcohol impairment.
 - b. Learn to conduct an intervention with either youth or adults.
 - c. Describe how to make suitable referral for treatment of a drug/ alcohol abuser.

PSYC 2330. Psychology of Human Sexuality

Course Description

Exploration of the psychological, physiological, cultural, social and individual factors that influence sexual behavior, sex roles, and sex identity.

Student Learning Outcomes

Upon completion of the course, students should be able to:

- 1. Describe central research questions, theories, concepts, and methodologies used in the study of human sexuality.
- 2. Distinguish between myths and realities related to sexuality.
- 3. Explain changes in sexuality across the lifespan.
- 4. Describe the interactions of biological, psychological, and sociocultural dimensions in human sexuality.
- 5. Identify issues related to sexual health.

6. Explain complex and diverse issues related to human sexuality.

PSYC 2335. Performance Psychology

Course Description

Mental Training for Peak Performance is designed as a vehicle to provide you with a working knowledge of applied sport/performance psychology in order to help you develop and implement an effective mental skills training (MST) program that will help you more fully reach your performance potential in your endeavors. This is a hands-on course oriented towards helping you develop the psychological skills necessary to “become the best performer you can be.”

Student Learning Outcomes

1. Understand the role psychological factors play in sport performance,
2. Understand how various mental skills and tools could be used to improve performance, enhance enjoyment, and help students develop life skills,
3. Understand various implementation strategies necessary for the development of the key psychological skills,
4. To log goal-setting progress, evaluate its effectiveness, and fine-tune implementation strategies to enhance program effectiveness,
5. To be able to apply the knowledge of various mental tools and skills in real life situations.

PSYC 2340. Psychology of Personal Growth & Interpersonal Relations

Course Description

Students will apply psychological insights and principles to better understand themselves and their relationships with others and the world in order to live more effectively. Such topics as self-identity, role of emotions in behavior, love, relationships, health and stress, sexuality, death, meaning and values, forgiveness, and non-violent communication will be explored. This course is experiential in nature with an emphasis on dialogue and group activities.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of the Dynamics and Theories of Adjustment and Interpersonal Relationships.
2. Show an ability to apply the theoretical approaches presented to their own lives through journal writing and other communication and introspective techniques.
3. Explore topics of their own interest through the study of the research in the field and a written report.

PSYC 2350. Psychology of Gender

Course Description

This course explores gender as a psychological construct that influences our behavior in multiple contexts and will focus on a variety of psychological theories and research on gender. Topics include the learning of gender roles, ways of knowing, mental health, sexuality, family issues, and workplace issues.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate knowledge of psychological theories and research on gender
2. Demonstrate knowledge of biological theories pertaining to sex and gender
3. Critique and apply psychological theories that attempt to explain gender differences
4. Critique psychological research on gender-related topics
5. Identify how gender influences social interactions in everyday life
6. Articulate some cultural and historical differences regarding accepted gender roles

PSYC 2360. Psychology and Film

Course Description

Changing perceptions of mental illness are investigated by screening popular films and documentaries. Readings and lectures on psychiatric disorders are linked to films that offer students a unique opportunity to see realistic manifestations of “madness.” An appreciation for the cinema’s ability not only to reflect but also to affect our perceptions of abnormal behavior and treatment is stressed.

Student Learning Outcomes

The student who successfully completes this course will be able to:

1. Describe the major psychological disorders and their impact on the individual and society.
2. Identify research methods and analyze issues concerning psychological disorders.
3. Apply concepts learned to popular films.

PSYC 2370. Cultural Psychology

Course Description

This course explores the field of cultural psychology: the scientific study of the ways in which cultural forces shape human thought, emotion, and behavior. As a sub-discipline of psychology; cultural psychology emphasizes the influence of culture on human behavior and examines topics in psychology from a multicultural, multi-ethnic perspective. While the course will cover a broad range of topics, emphasis will be placed on core issues in cultural psychology.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify, orally and in writing, key historical events and figures leading to the birth of cultural psychology in the 1960s.
2. Define and describe the major concepts and issues in cultural psychology as assessed via course examinations, class discussion, and writing assignments.
3. Recognize the strengths and limitations of qualitative and quantitative methods in cultural psychology.
4. Explain, in writing, why all psychology is cultural.
5. Recognize the relationships between culture, race, and ethnicity.
6. Demonstrate tolerance for human diversity.
7. Critically evaluate the field via written examinations, out-of-class papers and in-class oral and written responses.

PSYC 2380. Death and Dying

Course Description

Examines the psychological, emotional and sociological aspects of death in American Culture. This course is designed to provide the student with a greater understanding of death and the dying process, including exposure from the consumer's perspective of the death industry.

Student Learning Outcomes

The student who successfully completes this course will be able to:

1. Demonstrate knowledge of the logistics, costs, and consumer related implications of planning standard funeral services in the U.S.
2. Articulate personal thoughts and beliefs about death and dying, and if and/or how these thoughts have evolved from the beginning of the course to the end of the course.
3. Identify research methods associated with psychological research in death and dying.

PSYC 2390. Educational Psychology

Course Description

This course explores the practical application of psychological principles to teaching and learning. Contemporary issues in Education will also be discussed.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe theories of learning.
2. Discuss motivation and its impact on learning.
3. Describe what makes an effective classroom environment.
4. Discuss and develop methods for evaluating learning.

PSYC 2430. Human Relations

Course Description

This course is an introduction to the behavioral sciences as they apply to management. It includes a study of individual behavior as it relates to leadership traits, individual behavior in organizations, and related subjects of motivation and leadership. There is also a consideration of perceptions, attitudes, and values as they affect management decisions and actions.

Student Learning Outcomes

Upon successful completion of this course, the student should be able to:

1. describe the interpersonal communication process;
2. discuss the group problem solving and decision making process;
3. recognize cross-cultural relations and diversity;
4. describe conflict resolution skills;
5. demonstrate effective leadership skills including motivation and helping others develop and grow;
6. identify ethical business behavior;
7. define the correlation between stress management and personal productivity; and
8. utilize job search and career management tools.

PSYC 2440. Family Systems Theory

Course Description

This course examines different theoretical approaches including major systems theories, strategies, and techniques of family therapy. It emphasizes the application of counseling interventions with struggling or dysfunctional family structures.

Student Learning Outcomes

Upon successful completion of this course, each student will demonstrate the ability to:

1. Understand systems theory and the important concepts associated with the major theories in family therapy
2. Describe family problems (issues or dysfunction) from a behavioral, social, and psychological.
3. Demonstrate various skills (including genogram, etc.) associated with the practice of family therapy
4. Discuss the historical roots and development family therapy.
5. Describe the differences between individual and family therapy
6. Apply class material to explore the students own family dynamics
7. Evaluate and apply theories of family therapy in analysis of case material (written and in film) from a multifaceted perspective.

PSYC 2445. Parenting Skills

Course Description

This class is designed to look at strategies, skills, insights, and resources for students interested in improving the well-being of children

Student Learning Outcomes

Students will be able to:

1. Explain the course of child development
2. Identify and describe healthy early child development.
3. Analyze parenting theory to provide positive guidance and discipline for children in the home and in diverse group situations

4. Define the parenting role within one's culture and American society as well as apply strategies that promote healthy self-confidence in family and community relationships.
5. Define what family is and explain alternatives to biological parenting and the changing nature of the family unit.
6. Identify high-risk families while demonstrating through discussion how to mitigate risk through intervention.

PSYC 2510. Statistical Principles for Psychology

Course Description

This course covers introductory-level topics in statistics that are applicable to psychological research. Both descriptive and inferential statistics are covered. Topics include applying statistical formulas to psychological data and interpreting the results of statistical analyses.

Student Learning Outcomes

Upon completion of the course, students should be able to:

1. Identify statistical methods used in the analysis of psychological research.
2. Apply appropriate statistical methods to the analysis of data.
3. Interpret the results of statistical analyses of data.
4. Evaluate the use of statistics in psychological literature.

PSYC 2520. Research Methods and Statistics in Psychology

Course Description

Designed to develop students' APA writing, research, and statistics skills in psychology. Students will engage in information search and APA writing tasks and will learn to collect and analyze data within descriptive, inferential, and non-parametric research designs

Student Learning Outcomes

Students who successfully complete this course should:

1. Develop and improve fundamental APA scientific writing skills (written communication student learning outcome).
2. Develop an understanding of how to conduct basic scientific research in psychology.
3. Develop an understanding of how to select and use statistical tests and how to use statistical software to analyze data collected in research project.
4. Develop and improve scientific verbal presentation skills (verbal communication student learning outcome).

PSYC 2611. Introduction to Ecopsychology

Course Description

Introduces students/ learners to the theory of Ecopsychology, to its cultural and historical roots, and to a variety of nature-based counseling practices. The course will survey significant literature in this field and will invite discussion and experiential learning. The class will meet outdoors at various times and will include one weekend excursion.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify primary concepts outlined in Ecopsychological theory.
2. Understand current findings regarding the physical and emotional benefits of time spent in outdoor settings.
3. Identify the benefits and challenges regarding work with groups in outdoor settings.
4. Trace the evolution of healing practices which occur in natural settings beginning with models from various cultural backgrounds.
5. Describe current practices in nature-based counseling.
6. Apply important psychological concepts learned in the course to a variety of vocational opportunities in related fields.
7. Have an experiential understanding of the individual and group benefits derived from Ecopsychology.

PSYC 2621. Introduction to Adventure Therapy

Course Description

Introduces students/ learners to the practice of Adventure Therapy, the historical evolution of this methodology, its ties to experiential education, and the process of facilitating specific Adventure Therapy practices. Experiential learning, combined with assigned readings, will be a hallmark of this class and students will spend a significant amount of time involved in interactive activities, many of which will be outdoors. The class will include one weekend of participatory activities.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand the foundational concepts of experiential education as they apply to Adventure Therapy.
2. Trace the history of Adventure Therapy as a therapeutic modality and its applications in various settings.
3. Explain the facilitated wave model and accompanying individual and group assessment, facilitation, and evaluation practices.
4. Understand and utilize "Leave no Trace" principles.
5. Describe current best practices in Adventure Therapy.
6. Apply important psychological concepts learned in the course to a variety of vocational opportunities in related fields.
7. Have an experiential understanding of the individual and group benefits derived from Adventure Therapy.

PSYC 2810. Study Abroad Images & Insights

Course Description

A study abroad class in which students visit ancient sites in Greece. The influence of the classical Greek archetypes and their mythic patterns on human experience and behavior will be studied. The powerful inner forces of the archetypes personified by Greek gods, goddesses, and heroes will be explored. The Archaic, Classical, and Hellenistic images of the gods, goddesses, heroes, and mythological stories as they are represented on architecture and in sculpture and painting will be examined from an art historical perspective. Art from the Byzantine period including Christian archetypal imagery in the form of icon painting will be introduced in both an historical and contemporary context.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify the concepts of archetypal psychology and symbolism found in mythology and ancient Greek art history.
2. Apply the concepts of archetypal psychology as they are relevant to one's personal experience and consciousness.
3. Demonstrate the ability to be a culturally competent and responsible traveler with an expanded worldview.
4. Articulate some of the major stylistic trends and concepts behind artworks from ancient Greece.
5. Develop a basic knowledge and appreciation for Byzantine iconography as it relates to archetypal ideals in an historical and contemporary context.

PSYC 2990. Practicum

PSYC 2991. Directed Studies in Psychology

Course Description

An advanced capstone course in psychology that provides students with an opportunity to focus on areas of personal interest and specialization within the discipline of psychology. Under the supervision of psychology faculty, students will develop academic research papers or projects in selected areas of psychology. This course is intended for students who are

majoring will offer opportunities for students to integrate and synthesize material from the core requirements in psychology and prepare them to transfer to a four-year institution. Students will take the capstone course during their final semester.

Student Learning Outcomes

At the conclusion of this course, the student should be able to demonstrate the following in specifically chosen areas of psychology:

1. Theory and content of major concepts and theoretical perspectives
2. Research methods
3. Critical thinking skills, skeptical inquiry, and the scientific approach
4. Application of psychological principles to personal, social, and organizational issues
5. Values in psychology
6. Personal development and insight into their own and others' behavior and mental processes

Public Administration (PADM)

PADM 2110 Public Leadership for Social Change

Course Description

Addressing modern societal problems depends on the collaboration of key players from all levels of government, nonprofit organizations, commercial businesses and more. This course prepares students to contribute to improving social problems through a hands-on approach centered around the core theme of public leadership for social change.

Student Learning Outcomes:

1. Map the influence that key political actors and stakeholders have in the policy-making arena locally in your own community.

2. Describe the core values of public service by examining the gaps between theory and practice.
3. Use data and evidence to frame a public issue(s).
4. Compose a compelling story to encourage data-driven decision-making practices.
5. Compile a cohesive set of public service values that you and your peers believe are non-negotiable with compelling reasons as to why.
6. Communicate clearly and succinctly in spoken presentations.
7. Develop persuasive writing skills.
8. Recognize your own power, influence, and implicit bias in all collaborative efforts with your peers and a community organization.

Public Health Science (PHLS)

PHLS 1110. Personal Health & Wellness

Course Description

A holistic and multi-disciplinary approach towards promoting positive lifestyles. Special emphasis is placed on major problems that have greatest significance to personal and community health. Topics to include nutrition, stress management, fitness, aging, sexuality, drug education, and others.

Student Learning Outcomes

1. Students will identify, describe and explain human health behaviors and how they are influenced by social structures, institutions, and processes within the contexts of complex and diverse communities. Students should: Develop an understanding of self and the world by examining content and processes used by social and behavioral sciences to discover, describe, explain, and predict human behaviors and social systems.
2. Students will articulate how beliefs, assumptions, and values are influenced by factors such as politics, geography, economics, culture, biology, history, and social institutions. Students should: Enhance knowledge of social and cultural institutions and the values of their society and other societies and cultures in the world.
3. Students will describe ongoing reciprocal interactions among self, society, and the environment. Students should: Understand the interdependent nature of the individual, family/social group, and society in shaping human behavior and determining quality of life.
4. Students will apply the knowledge base of the social and behavioral sciences to identify, describe, explain, and critically evaluate relevant issues, ethical dilemmas, and arguments. Students should: Articulate their role in a global context and develop an awareness and appreciation for diverse value systems in order to understand how to be good citizens who can critically examine and work toward quality of life within a framework of understanding and justice.

PHLS 1111. Introduction to Health Science

Course Description

Introduction to computational techniques for the solution of physics-related problems.

Student Learning Outcomes

Not Available

PHLS 1120. Introduction to Community Health Care

Course Description

Overview of current health care delivery systems and organization structure, third-party payers, facility ownership, patient rights and quality care. Procedures for determining care payment eligibility are also covered. Covers public financing available to clients as well as non-governmental third-party insurance. Provides information relevant to health care organizations to include workplace behavior, communication and teamwork, legal issues and decision making in the health care setting.

Student Learning Outcomes

1. Discuss current health care delivery systems and organization structure, third- party payers, facility ownership, patient rights, and quality care.
2. Identify procedures for determining care payment eligibility.
3. Determine public financing options available to clients as well as non- governmental third-party insurance.
4. Discuss information relevant to healthcare organizations to include workplace behavior, communication and teamwork, legal issues, and decision making in the health care setting.
5. Display cultural humility for individuals, groups and other department.
6. Discuss chronic disease management and medication management.
7. Enable others to increase health literacy and health promotion through capacity building.
8. Enable individuals and groups to advocate for change in their society.

Describe coordination of services for clients and families.

4. Demonstrate interpersonal skills in building positive, effective client relationships that promote learning, growth and self-efficacy.
5. Identify and describe elements of home and home visiting safety and relevant infection control practices.
6. Demonstrate accurate home visit documentation and information entry into the home visiting data base.

PHLS 1125. Community Health Worker Fundamentals

Course Description

This course provides an interdisciplinary introduction to Community Health Work. It provides students with the opportunity to learn the theory and skills to function as a community health worker. This course introduces the CHW student to the profession of community health, effective communications skills and interpersonal skills needed to work effectively in the community.

Student Learning Outcomes

- 1.The Community Health Worker Profession.
 - 1.1 Scope of practice & history of the profession.
 - 1.1.1 Describe the history, role, & impact of CHWs/CHRs in improving individual & community health.
 - 1.1.2 Describe the NM CHW Scope of Practice
 - 1.2 CHW code of ethics, professional boundaries, and self care.
 - 1.2.1 Define the CHW Code of Ethics and demonstrate performance of ethical behavior as a CHW.
 - 1.2.2 Identify & explain the boundaries of the CHW role, how to establish boundaries with clients, & the role of a CHW on multi-disciplinary teams.
 - 1.2.3 Describe & utilize self-awareness and self-care practices.
 - 1.3 Public health concepts & approaches.
 - 1.3.1 Describe the determinants of health & recognize how they impact health needs & priorities.
 - 1.4 Client-centered approach.
 - 1.4.1 Describe a client-centered approach.
 - 1.5 Cultural humility & competence.
 - 1.5.1 Recognize and appropriately respond to the beliefs, values, culture, and languages of the Individuals/ communities being served.
 - 1.6 Organizational & professional skills.
 - 1.6.1 Prioritize, activities & effectively manage time.
 - 1.7 CHW certification & professional development.
 - 1.7.1 Describe & access national & state CHW professional organizations & training resources.

- 1.7.2 Explain the NM CHW voluntary certification policy & process for obtaining certification (including grandfathering).
- 1.7.3 Identify and utilize tools and resources for CHW professional development.
- 2. Effective Communication Skills.
 - 2.1 Observation & non-verbal communication.
 - 2.1.1 Identify & respond to non-verbal communication.
 - 2.1.2 Use appropriate body language & other non-verbal communication skills in communicating with individuals.
 - 2.2 Verbal communication.
 - 2.2.1 Communicate with individuals in a non-judgmental & appropriate manner.
 - 2.2.2 Speak & write to individuals in their preferred language at an appropriate literacy level (obtain interpreters if unable to communicate in clients preferred language).
 - 2.2.3 Describe client rights, confidentiality , & health information in clear language & assess client comprehension.
 - 2.2.4 Practice active & reflexive listening & attend to client concerns.
 - 2.2.5 Ask open ended questions to gather client information & elicit perspectives & needs.
 - 2.2.6 Utilize affirming statement to provide positive reinforcement.
 - 2.2.7 Use summary statements to review in formation & establish mutual understanding.
 - 2.2.8 Use written & visual materials that convey information clearly & respectfully.
 - 2.2.9 Utilize basic group communication & facilitation skills when speaking to groups.
 - 2.2.10 Provide professional appropriate feedback to other members of care team.
 - 2.3 Negotiate, mediate, & resolve conflict.
 - 2.3.1 Assist individuals & groups in managing & resolving conflicts.
 - 2.4 Documentation.
 - 2.4.1 Report relevant information to others succinctly, accurately, and in appropriate format.
 - 2.4.2 Document information in an effective, efficient, and timely manner.

PHLS 1126. Health Promotion

Course Description

This course introduces the student to basic skills needed to be proficient as a Community Health Worker. Topics include health coaching skills, service coordination skills and technical teaching skills.

Student Learning Outcomes

- 1. Health Coaching Skills Aspects of Competency Training Standards.
 - 4.1 Health promotion & disease prevention.
 - 4.1.1 Provide information about health risks & possible problems in a manner that allows clients & families to face current of potential problems with minimal fear and avoidance.
 - 4.1.2 Define, provide tools, & implement preventive health measures with clients & the community Behavior change strategies Maintenance & relapse prevention.
 - 4.2.1 Utilize various motivational approaches to gather clients health goals & priorities.
 - 4.2.2 Identify & strategize coaching interventions using the stages of change model.
 - 4.2. Utilize behavior change strategies to collaboratively develop, implement, and revise health goals & self-management plans with clients.
 - 4.2.4 Respect & actively support clients choices and preferences.
 - 4.3.1 Identify & integrate formal & informal resources to support client choices & preferences.
 - 4.3.2 Document information in an effective, efficient, and timely manner.
- 2. Service Coordination Skills Aspects of Competency Training Standards.
 - 5.1 Case finding & recruitment.

- 5.1.1 Identify high risk clients or clients with unmet needs.
 - 5.1.2 Record & maintain information on clients, referrals, & appointments.
 - 5.2 Navigation & linking to services.
 - 5.2.1 Develop & document lists of clients, partnership networks and institutional resources, to address individual, family, & community needs & to improve service delivery.
 - 5.2.2 Establish & maintain relationships with staff at referral organizations.
 - 5.2.3 Refer clients to appropriate service providers & confirm that appointments were kept.
 - 5.2.4 Advocate effectively with others so that clients receive needed care in timely manner.
 - 5.2.5 Train clients how to follow-up on referrals and provide support as needed.
 - 5.2.6 Facilitate client enrollment into appropriate programs.
 - 5.2.7 Serve as a liaison between organizations & specific groups.
 - 5.3 Case Management.
 - 5.3.1 Help improve access to resources by identifying barriers, documenting details, & developing strategies to remove them.
 - 5.3.2 Provide information & support to individuals to self advocate.
- 3. Technical Teaching Skills Aspects of Competency Training Standards.
 - 8.1 Adult learning principles.
 - 8.1.1 Utilize adult learning principles & methods to motivate, inspire, and promote learning in 1-on-1 and group settings.
 - 8.1.2 Use training strategies & techniques that address various learning styles.
 - 8.1.3 Provide reliable information appropriate to the needs of the learner.
 - 8.2 Health education with individuals & groups.
 - 8.2.1 Plan & organize presentation, training sessions, workshops & other activities.
 - 8.2.2 Identify and select audience appropriate training materials.
 - 8.2.3 Identify & explain training program goals & objectives.
 - 8.2.4 Support active & equal participation in groups.
 - 8.2.5 Seek & incorporate feedback from training participants.
 - 8.2.6 Evaluate the effectiveness of training program.
 - 8.2.7 Operate commonly used audiovisual equipment.
 - 8.3 Effective Meetings.
 - 8.3.1 Planning meeting agenda & manage time appropriately.

PHLS 1150. Community Health Worker Training

Course Description

An introductory course that trains students to become community health workers (CHW) who assist individuals and communities in adopting and maintaining positive health behaviors. Topics include the roles of the CHW, adult learning principles, and skill development in such areas as advocacy, health coaching and leadership development.

Student Learning Outcomes

1. Describe the role, scope of practice, and certification requirements for the Community Health Worker.
2. Demonstrate understanding of principles of adult learning in health education and health promotion activities.
3. Demonstrate positive interpersonal skills in working with clients in the community.
4. Demonstrate effective health coaching skills that appropriately educates and guides clients.
5. Describe how the Community Health Worker acts as an advocate on behalf of their clients and community.
6. Demonstrate effective communication skills in a professional and culturally sensitive manner.

PHLS 1160. Community Health Worker Training II

Course Description

Completes the training required to apply for the Community Health Worker certificate offered by the state of New Mexico. Topics include effective communication skills, clinical support skills, service coordination skills, and community assessment.

Student Learning Outcomes

1. Demonstrate effective communication skills with clients, medical providers and community contacts.
2. Demonstrate professional and culturally sensitive behaviors in the role as a community health worker.
3. Describe effective service-coordination skills needed for case management and navigation through the health care system.
4. Develop a community assessment plan.
5. Demonstrate an understanding of how to competently perform clinical skills.

PHLS 1311. Home Visitor Training I

Course Description

First of two courses that prepares students to enter the community as a Home Visitor. This course focuses on foundational concepts and practice, including the Home Visitor role, responsibilities, communication, service coordination, relationship building, home safety, and documentation. Successful completion of this course is required for enrollment in HLCR 132. Prospective students who have been convicted of a felony are advised to contact CYFD/state department of health for employment or state certification.

Student Learning Outcomes

1. Apply the roles and responsibilities of the Home Visitor to ethics in practice, client privacy, client rights, and client observation.
2. Demonstrate communication skills that are sensitive to individual age, gender, culture, condition, and family role.
3. Describe coordination of services for clients and families.
4. Demonstrate interpersonal skills in building positive, effective client relationships that promote learning, growth and self-efficacy.
5. Identify and describe elements of home and home visiting safety and relevant infection control practices.
6. Demonstrate accurate home visit documentation and information entry into the home visiting data base.

PHLS 1322. Home Visitor Training II Specialty Care

Course Description

The second of two courses that prepares students to enter the community as a Home Visitor. This course focuses on family and community assessment, developmental education, family/client empowerment, use of parallel process/health coaching, management of home visits, and starting a career. Successful completion of this course qualifies the student to obtain a Community Health Worker Certificate.

Prospective students who have been convicted of a felony are advised to contact the CYFD/state department of health to determine their eligibility for employment or state certification.

Student Learning Outcomes

1. Apply Home Visitor role to educating families on parenting opportunities and challenges in the prenatal, postpartum, infant, and toddler periods.
2. Demonstrate effective relationship building and coaching skills that educate, guide and empower families.
3. Identify and analyze how parallel process affects participants in a relationship with regards to emotional regulation.

4. Demonstrate effective communication and interventions for participants requiring support and redirection in a parallel process.
5. Demonstrate time management skills needed in managing visits, documentation, ongoing training and supervisory and team meetings.
6. Analyze the Home Visitor's role in supporting family stability and capacity building through community knowledge and assessment.
7. Describe other opportunities for the home visitor role and demonstrate how to be successful in starting a related career.

PHLS 1990. Community Health Worker Practicum

Course Description

Varies

Student Learning Outcomes

Varies

PHLS 2020. Community Health Work: Frameworks, Principles and Practices for Direct Service

Course Description

This course provides a broad introduction to public health as the framework for providing direct services to individuals, with focus on the ecological model, health equity, and healthcare systems. It provides in-depth skills practice for providing effective service within that framework, including interpersonal and communication skills, cultural humility, and client-centered, strengths-based approaches. It applies those core skills to an array of scenarios including conducting client interviews, managing and resolving conflict, working on a care team, and delivering health literate, trauma-informed care.

Student Learning Outcomes

1. Define health and public health and apply the ecological model to understanding the social determinants health in individuals, groups, and communities.
2. Discuss the concept of health as a human right, advocate and work for health equity and inclusion.
3. Discuss and demonstrate CHW roles and responsibilities in advocating for social justice, and the connection to health.
4. Plan a client interview demonstrating the client-centered approach (empathy, non-judgment, strengths-based).
5. Create safety for and work effectively with individuals and groups impacted by stigma, trauma and incarceration.
6. Describe and demonstrate cultural humility principles and practices for working with diverse clients & communities.
7. Define, negotiate, mediate, and resolve conflict; demonstrate insight into one's own conflict style.

PHLS 2030. Health Coaching and Health Promotion

Course Description

This course provides a strong foundation in health coaching and health promotion, with a focus on working with individuals from a broader public health lens. It offers strategies and skills for supporting client-centered behavior change including action planning, motivational interviewing, and communication skills. It identifies barriers to change such as stigma and bias, gaps in health literacy, and offers strategies for addressing those barriers. Lessons learned will be applied to scenarios involving harm reduction, and the self-management of chronic conditions. Using the HEAL model, students will explore practical frameworks and guidelines for promoting health, delivering health education, and accessing and communicating reliable health information

Student Learning Outcomes

1. Conduct client-centered health coaching sessions utilizing communication skills (OARS), stages of change theory, motivational interviewing, goal setting, and action planning

2. Describe and effectively work with common barriers to changing health behaviors, including bias, stigma, and trauma
3. Describe risk/harm reduction; identify and utilize strategies to reduce health risk and harm
4. Identify common chronic conditions and discuss related inequities in disease rates among populations
5. Explain and analyze the concept of patient empowerment in the self-management of chronic conditions
6. Define health literacy and utilize strategies for closing health literacy gaps to improve health outcomes
7. Research and analyze sources of health and digital health information for authority, bias, and currency
8. Explain general guidelines for healthier eating and drinking, as well as for regular activity or exercise
9. Demonstrate a 5-step approach to providing health education to individuals about nutrition, physical activity, or other health topics

PHLS 2040. Health Navigation and Service Coordination

Course Description

This course provides an overview of models, skills, tools, resources, and considerations for providing strengths-based health navigation and service coordination with clients. Rooted in principles of client-centered practice developed in PHLS 2020, and motivational approaches to planning change in PHLS 2030, this course will explore best practices for planning, conducting and documenting case-finding and recruitment, establishing and maintain relationship via client interviewing, developing service plans, making and tracking meaningful referrals, and building client self-efficacy and self-reliance. Addresses the importance of building relationships with referral sources and agencies.

Student Learning Outcomes

1. Describe the scope, roles, and tasks of community health workers in health navigation and service coordination.
2. Describe and utilize common methods for case-finding, in-reach, and outreach for various population groups.
3. Assess client needs, resources, strengths, risks, and readiness, and create a navigation/service coordination plan that builds client capacity and self-reliance.
4. Conduct and document a client interview utilizing an array of interpersonal, communication, and planning skills.
5. Demonstrate client-centered principles and practices in working with individuals and families including empathy, sensitivity, kindness, non-judgment, advocacy, and respect for client autonomy.
6. Discuss and explain confidentiality and clients' rights in the context of service provision.
7. Identify and facilitate access to enrollment in healthcare programs, benefits, services, and community resources; make and track meaningful referrals.
8. Organize, document, and track components of service plans, including goals, referrals, and appointments.
9. Establish and maintain relationships with referral sources and agencies.
10. Advocate for clients to support timely, accessible, and culturally/linguistically competent care & services
11. Identify and address systems barriers to quality, accessible care and services.
12. Discuss and develop self-awareness, boundaries, and strategies for working with unique or challenging scenarios.

PHLS 2050. Health Education and Facilitation

Course Description

This course provides an overview of the major approaches, models, skills, and knowledge needed to plan, facilitate, and evaluate basic health education presentations for groups in clinical and community settings. It provides a similar overview to planning and facilitating groups and group processes for a variety of health-related purposes. The course offers an experiential immersion into principles of adult learning and explores related media and instructional strategies. It address common challenges in group education and facilitation and promotes best practices for the professional development and

self-care of educators and facilitators including cultural humility, boundaries, confidentiality, supervision, and managing power dynamics.

Student Learning Outcomes

1. Identify different types of training and training approaches that CHWs may facilitate, including popular education, participatory learning, and problem-based learning.
2. Discuss some of the ways that people learn new information and skills.
3. Identify and respond to common challenges faced by training facilitators.
4. Develop a training plan, including learning goals and outcomes; deliver and evaluate the training.
5. Identify and describe different types of groups, and the unique benefits of group work.
6. Explain four stages of group work; analyze the roles and task of facilitators at each stage.
7. Analyze how issues of power and authority, including the facilitator's, influence group dynamics and processes.
8. Discuss the importance of self-reflection and evaluation for facilitators and apply it to one's work.
9. Discuss & apply ethics to group work, including issues of cultural humility, boundaries, confidentiality, supervision.
10. Design and facilitate their own group, document group proceedings, agendas, and minutes.

PHLS 2060. Community Health Outreach, Assessment and Advocacy

Course Description

This course provides an overview of various approaches, models, methods, and considerations for doing public health work in community spaces and settings: conducting home visits, health outreach, community organizing, and advocacy for improving community health. Students will learn to utilize a wide range of tools central to this work including environmental scans, community health assessments, surveys, focus groups, canvassing, and PhotoVoice. We will explore the unique role of the health worker in advocating for communities, surfacing community-identified priorities, and activating and building community-based leadership. Addresses a wide range of considerations related to this aspect of community health work including building relationships and trust, ethics, confidentiality, and safety.

Student Learning Outcomes

1. Describe the role of CHWs/CHRs in home visiting, health outreach, community assessment, community health advocacy.
2. Discuss and demonstrate the qualities of successful outreach workers and advocates that enable them to build relationships and trust in community.
3. Plan, conduct, and document home visits and environmental assessments utilizing guidelines for common courtesies and safety.
4. Discuss the different indications, types, and levels of health outreach; plan a health outreach campaign in a targeted community.
5. Discuss the CHW /CHR interface with formal and informal community leaders, and in building community capacity & leadership.
6. Conduct, document, and share results of a strengths-based community diagnosis utilizing tools such as mapping, surveys, scans, canvassing, and focus groups, applying health literacy principles.
7. Describe the five-step Community Action Model (CAM) and utilize it to develop a community organizing plan.
8. Train, support, and mobilize community members to self-advocate around health issues and priorities.
9. Develop and deliver a policy-advocacy presentation to community leaders/policymakers utilizing PhotoVoice.
10. Discuss ethical considerations related to conducting home visiting, community outreach, and advocacy including issues of cultural humility, boundaries, confidentiality, and supervision.

PHLS 2110. Foundations of Health Education

Course Description

Role and responsibility of the health educator with emphasis on small group dynamics, oral and written communication skills, building community coalitions and introduction to grant writing.

Student Learning Outcomes

By the conclusion of this course, students successfully completing this course should be able to:

1. Define health, three levels of prevention, health education and health promotion, and describe the major determinants of health.
2. Describe the 7 major areas of responsibility, major competencies and sub-competencies of a professional health educator and the CHES's possible roles in various community health settings.
3. Describe and examine the historical context and development of the profession of health education.
4. Identify and critique major processes and practices of health education programming.
5. Describe the steps involved in conducting needs assessments, program and intervention planning, implementation, and program evaluation.
6. Identify, examine and describe elected health behavior change theories and models and explore possible applications in health education practice.
7. Describe and discuss the process of community mobilization and building of a community coalition.
8. Identify health issues and describe effective methods/strategies in health education advocacy.
9. Describe and discuss the future trends and issues in the professional preparation and practice of professional health educators.
10. Demonstrate effective and appropriate oral and written communication skills for health education professionals.

PHLS 2120. Essentials of Public Health

Course Description

The course will focus on principles and major areas of public health, including ecological and total personal concept of health care system, epidemiological approaches to disease prevention and control.

Student Learning Outcomes

Upon completion of the course, students will be able to:

1. Understand the sources of public health data, and how to interpret that information.
2. Access existing health related data.
3. Analyze health related data.
4. Identify populations for health education programs.
5. Incorporate data analysis and principles of community organization.
6. Interpret results from evaluation and research.
7. Infer implications from findings for future health-related activities.
8. Have a basic understanding of health topics faced by various populations.

PHLS 2400. Health Systems, Services and Policies

Course Description

This course provides an overview of the US and New Mexico health systems and the main policies that shape them, including the complex infrastructure of public health and the health care system; its performance compared to other health care systems; the key interest groups that shape the health policies; and the main policy challenges, scenarios for improvement, and proposals for change. The course also describes how health policies impact populations and health equity outcomes and includes an introduction to the policy making process, with particular attention to policy design. The purpose of the course is to increase the knowledge and analytical skills of undergraduate students in the field of population health and related areas of knowledge and practice.

Student Learning Outcomes

1. Identify common concepts related to health care systems, services, and health policy.

2. Understand historical and current developments in the US and New Mexico health care system/services/policies.
3. Identify the most important programs and systems at the tribal, state, and federal levels (Indian Health Service, Medicare, and Medicaid, among others).
4. Understand the relationship between political processes and health policy.
5. Identify the impact of social determinants of health and health equity in health policy discussions.
6. Identify key policy design utilized in the creation and implementation of health policy in the US and New Mexico.

PHLS 2410. Fundamentals of Health Care Finance

Course Description

This course will introduce basic concepts of health care finance: access, affordability, quality, and portability.

Student Learning Outcomes

1. Discuss the advantages and disadvantages of various business models in healthcare.
2. Evaluate the impact of different reimbursement mechanisms (e.g., fee-for-service, capitation, value-based care) on the financial risk of healthcare organizations.
3. Develop and assess program budgets under diverse operational scenarios.
4. Explain and apply cost accounting methods, such as activity-based costing, and pricing strategies that utilize cost-accounting data.
5. Demonstrate financial analysis techniques, including breakeven analysis, capital investment analysis, and risk analysis, in healthcare decision-making.

Pueblo Indian Studies (PINS)

PINS 1110. Introduction to Pueblo Indian Studies

Course Description

Bepowaveh - Welcome! This course will provide an introduction to the Pueblo experiences of New Mexico by drawing upon historical contacts, relations, literature and stories. Our class material will include lectures, films, guest speakers and site visits to important historical places and collections.

Student Learning Outcomes

At the end of the semester students will:

1. Gain a broader understanding of the diverse cultures and histories of
2. Pueblo people and nations
3. Develop strong critical thinking and writing skills
4. Deepen an understanding of the scholarly field of Pueblo Indian Studies

PINS 2110. Native American Literature I

Course Description

This course will introduce students to the literature produced by Native American authors as well as explore issues relevant to the study of Native American literature. The course will also introduce the basic elements of literary analysis.

Student Learning Outcomes

1. Read representative texts by Native American authors from various indigenous cultures and historical backgrounds.
2. Identify the historical and cultural forces that have shaped Native American literature.
3. Demonstrate an understanding of the diversity of oral traditions, written texts, and other media used in Native American literature.

PINS 2120. Native American Literature II

Course Description

Involves critical reading and discussions of writings by Native American writers of fiction (short stories and novels) and poetry.

Student Learning Outcomes

1. Situate conventional literary texts alongside other cultural forms in which Native peoples have exercised self-representation, always being careful to locate writers and texts within their appropriate historical and tribal/cultural contexts.
2. Gain a more complicated understanding of and appreciation for the diversity and complexity of Native American intellectual and cultural production
3. Develop a historically-nuanced grasp of some of the major issues, questions, and concerns that run throughout Indian Country today, specifically the relationship between cultural production, federal policies, and contemporary movements toward Native sovereignty and self-determination.
4. Consistently work to hone close, critical reading skills applicable to a variety of textual forms and intellectual/professional contexts
5. Develop capacities to engage in thoughtful, collegial and critical debate around questions of race, class, gender, sexuality, nation, citizenship and belonging.

PINS 2130. Pueblo Indian History

Course Description

You will study academic approaches to historical studies of Pueblo Indians in New Mexico and Arizona from pre-Columbian to the present using archival sources, ethno-historical resources and federal records.

Student Learning Outcomes

1. Gain a broader understanding of the histories of Pueblo people and nations
2. Develop strong critical thinking and writing skills
3. Broaden understandings of historical methods and approaches

PINS 2140. Pueblo Arts, Crafts, and Culture

Course Description

You will be introduced to this course through stories which accompany hands-on learning in various arts and crafts as told in the Pueblos for daily life and the transmission of cultural practices and knowledge. The course is taught by social scientists, along with artists in beadwork, fabric work, wood carving, storytelling, and more.

Student Learning Outcomes

By the end of the course, students will be able to:

Relate the stories which accompany hands-on learning in various arts and crafts as told in the Pueblos for daily life and the transmission of cultural practices and knowledge

PINS 2150. Pueblo Indian Women's Lives

Course Description

You will survey anthropological, sociological, historical, life history, arts and crafts, and other writing by and about Pueblo Indian women. Topics will vary.

Student Learning Outcomes

SLOs will vary by topic

PINS 2991. Research Topics in Pueblo Indian Studies

Radiologic Technology (RADT)

RADT 1115. Fundamentals of Radiographic Imaging**Course Description**

This course provides students with an in-depth knowledge of radiographic exposure techniques and the factors affecting radiographic image quality. It covers digital imaging with related accessories and emphasizes radiographic critique for diagnostic quality control. Additionally, the course reinforces radiologic fundamentals, introducing instrumentation and technology used in digital imaging. Topics include capturing, processing, displaying, and managing digital images, as well as exposure techniques and exposure indicators. Laboratory activities provided to reinforce radiographic concepts.

Student Learning Outcomes

1. Explain the principles of radiation production, image formation, and digital imaging systems.
2. Demonstrate proper techniques for exposure selection, scatter control, and radiation protection.
3. Compare radiographic digital imaging systems, assessing their advantages and limitations.
4. Evaluate radiographic images for technical accuracy and apply necessary adjustments.
5. Apply quality control measures and automatic exposure control to ensure optimal imaging outcomes.

RADT 1130L. Introduction to Radiographic Imaging Applied Clinic Skills**Course Description**

Applied clinical skills Laboratory to provide the student with an in-depth knowledge of radiographic exposure technique and the factors affecting radiographic image quality.

Student Learning Outcomes

1. Demonstrate techniques for radiographic scatter control and grid utilization.
2. Apply exposure selection principles.
3. Analyze and utilize automatic exposure control in imaging.
4. Assess radiographic images for technical accuracy and make necessary adjustments.
5. Apply radiation protection methods for patients and personnel.
6. Utilize radiographic equipment and apply quality control measures.

RADT 1140. Radiographic Positioning I**Course Description**

This course covers the fundamental principles and techniques of diagnostic radiography, including radiographic procedures, patient positioning, terminology, and the mechanics of image production. Students will learn and apply these concepts to the upper and lower extremities, chest, abdomen, and pelvis/hip. The course emphasizes radiographic anatomy, particularly osteology and arthrology, as it relates to routine radiographic procedures.

Student Learning Outcomes

1. Master radiographic terminology related to positioning, projection, anatomy, medical abbreviations, positioning aids, accessory equipment, and lead markers, explaining their function and application.
2. Evaluate patient care considerations.
3. Explain the basic principles of radiation protection.
4. Describe the basic principles of image acquisition, display, and standards, including common errors, appearance characteristics, procedural factors, and corrective actions.
5. Evaluate orders, requests, and diagnostic reports.

RADT 1140L. Radiographic Positioning I Laboratory

Course Description

Applied clinical skills Laboratory in radiographic procedures and positioning concepts, techniques, terminology, and mechanics related to upper and lower extremities, chest, abdomen and pelvis/hip.

Student Learning Outcomes

1. Apply knowledge of radiographic procedures, including routine and special views, to clinical simulations for the chest, abdomen, and upper and lower extremities.
2. Demonstrating understanding of positioning considerations.
3. Analyze radiographic images.
4. Apply the basic principles of radiation protection.
5. Apply basic principles of image acquisition, display, and standards, considering common errors, appearance characteristics, procedural factors, and corrective actions.

RADT 1140C. Radiographic Positioning/Laboratory I

Course Description

This course covers the fundamental principles and techniques of diagnostic radiography, including radiographic procedures, patient positioning, terminology, and the mechanics of image production. Students will learn and apply these concepts to the upper and lower extremities, chest, abdomen, and pelvis/hip. The course emphasizes radiographic anatomy, particularly osteology and arthrology, as it relates to routine radiographic procedures. Instruction includes lecture, demonstration, positioning Laboratory, and clinical observation.

Student Learning Outcomes

1. Master radiographic terminology related to positioning, projection, anatomy, medical abbreviations, positioning aids, accessory equipment, and lead markers, explaining their function and application.
2. Apply knowledge of radiographic procedures, including routine and special views, to clinical simulations for the chest, abdomen, and upper and lower extremities, demonstrating understanding of positioning considerations.
3. Analyze radiographic images.
4. Evaluate patient care considerations.
5. Explain and apply the basic principles of radiation protection.
6. Describe the basic principles of image acquisition, display, and standards, including common errors, appearance characteristics, procedural factors, and corrective actions.
7. Evaluate orders, requests, and diagnostic reports.

RADT 1150. Radiographic Positioning II

Course Description

Continuation of Radiographic Positioning I including a study of the osteology and arthrology of the thorax, vertebral column, skull, facial bones, and sinuses. Discussion and demonstration of the related standard and special radiographic projections presents the fundamentals of radiographic anatomy, positioning, and terminology used in routine fluoroscopic procedures of the gastrointestinal and genitourinary tract with discussion and demonstration of the related radiographic projections.

Student Learning Outcomes

1. Identify preparation and positioning aides for Radiological Procedures.
2. Identify evaluation criteria to determine acceptable radiographs.
3. Identify anatomy and physiology for Radiological Procedures.
4. Show use of patient care and radiation protection practices in Radiological Procedures.

RADT 1150L. Radiographic Positioning II Laboratory

Course Description

Continuation of Radiographic Positioning I. Applied Clinical Skills Laboratory: Includes vertebral column, skull, facial bones, sinuses, gastrointestinal, urinary, and fluoroscopic procedures.

Student Learning Outcomes

1. Model knowledge of radiographic procedures, including routine fluoroscopic procedures.
2. Evaluate positioning considerations.
3. Demonstrate Radiological Procedures and apply proper patient position and CR placement to obtain proper evaluation criteria.

RADT 1150C. Radiographic Positioning/Laboratory II

Course Description

This course is a continuation of Radiographic Positioning I, focusing on the osteology and arthrology of the thorax, vertebral column, skull, facial bones, and sinuses. It includes the study and demonstration of standard and special radiographic projections, as well as routine fluoroscopic procedures of the gastrointestinal and genitourinary systems. Applied clinical skills Laboratory provides hands-on experience with radiographic positioning, anatomy, and terminology related to these areas.

Student Learning Outcomes

1. Identify preparation and positioning aides for Radiological Procedures.
2. Identify evaluation criteria to determine acceptable radiographs.
3. Identify anatomy and physiology for Radiological Procedures.
4. Show use of patient care and radiation protection practices in Radiological Procedures.
5. Model knowledge of radiographic procedures, including routine fluoroscopic procedures.
6. Evaluate positioning considerations.
7. Demonstrate Radiological Procedures and apply proper patient position and CR placement to obtain proper evaluation criteria.

RADT 1154. sRadiographic Anatomy and Physiology

Course Description

Basic A&P for radiographic application. Includes a systems approach to body structures and organs as they relate to anatomical projections, radiographic identification, and various imaging modalities.

Student Learning Outcomes

1. Identify and Laboratory the anatomy associated with diagnostic X-ray images.
2. Critique x-ray images for the presence or absence of anatomy in deciding whether the x-ray is appropriately positioned and diagnostic for radiologist assessment.
3. Locate anatomical systems based on background knowledge of typical anatomical locations and identify normal course of system function for appropriate positioning, patient instructions, and x-ray imaging.
4. Apply knowledge in a testing environment mimicking what is expected for the ARRT Registry.

RADT 1175. Introduction to Radiologic Technology and Patient Care**Course Description**

This course provides a foundational overview of the radiology profession, encompassing basic patient care skills, professional standards, and ethical/legal principles. Students will learn essential skills such as patient transportation, vital sign assessment, and effective communication, while also being introduced to specific radiographic patient care techniques including history taking, immobilization, managing medical emergencies, and the administration of contrast media and radiopharmaceuticals. Additionally, the course will cover core concepts of radiation protection, and basic and specialized procedures, all within the framework of professional ethics and terminology.

Student Learning Outcomes

1. Demonstrate a working knowledge of medical terminology, procedures, and the roles of various healthcare professionals, including those specializing in medical imaging and radiologic sciences.
2. Critically analyze medical reports, orders, and requests, applying evidence-based practices to inform patient care decisions.
3. Evaluate patient health status using vital signs, Laboratory tests, pain assessments, and patient records, and respond appropriately to medical emergencies and traumatic injuries.
4. Implement infection control protocols, utilizing appropriate procedures, equipment, and knowledge of infectious pathogens.
5. Explain drug classifications, administration routes, safety practices, and the use of contrast agents in radiography.
6. Apply ethical principles and legal considerations to healthcare scenarios, including informed consent and navigating ethically complex situations.
7. Exhibit professional behavior in healthcare settings, demonstrating effective communication, cultural sensitivity, and an understanding of the psychological aspects of patient care.

RADT 1175L. Introduction to Radiologic Technology and Patient Care Laboratory**Course Description**

This course provides a foundational overview of the radiology profession, encompassing basic patient care skills, professional standards, and ethical/legal principles. Students will complete skills laboratory and simulation exercises to demonstrate competency in patient transportation, vital sign assessment, venipuncture, and effective communication, while also being introduced to specific radiographic patient care techniques, including history taking, immobilization, managing medical emergencies, and the administration of contrast media and radiopharmaceuticals.

Student Learning Outcomes

1. Demonstrate a working knowledge of medical terminology, procedures, and the roles of various healthcare professionals, including those specializing in medical imaging and radiologic sciences.
2. Critically analyze medical reports, orders, and requests, applying evidence-based practices to inform patient care decisions.

3. Evaluate patient health status using vital signs, Laboratory tests, pain assessments, and patient records, and respond appropriately to medical emergencies and traumatic injuries.
4. Implement infection control protocols, utilizing appropriate procedures, equipment, and knowledge of infectious pathogens.
5. Explain drug classifications, administration routes, safety practices, and the use of contrast agents in radiography.
6. Apply ethical principles and legal considerations to healthcare scenarios, including informed consent and navigating ethically complex situations.
7. Exhibit professional behavior in healthcare settings, demonstrating effective communication, cultural sensitivity, and an understanding of the psychological aspects of patient care.

RADT 1190. CT Equipment and Methodology

Course Description

Skill development in the operation of computed tomographic equipment, focusing on routine protocols, image quality, and quality assurance and radiation protection.

Student Learning Outcomes

1. Demonstrate acquisition of comprehensive technical knowledge by obtaining a seventy-five percent or greater on all quizzes and exam assessments (this is in alignment with the scoring expectations for the national registry exam).
2. Manipulate and choose the appropriate scan parameters and technical factors on CT equipment while applying the technical science supporting the decision.
3. Demonstrate appropriate use of post-processing options and provide diagnostic quality images.
4. Abide by radiation safety and dosimetry standards for patient care by demonstrating ALARA standards.
5. Select CT scan manipulations for optimal demonstration of anatomic region, according to protocol (i.e. delayed imaging, multiplanar reconstructions, filters, etc.) and with safe use of iodinated contrast mediums.
6. Recognize and reduce factors that may inhibit diagnostic image quality.

RADT 1191. Computed Tomography (CT) Imaging and Equipment

Course Description

This course serves as an introduction to computed tomography (CT) for current radiologic technology students. Course will include information on clinical equipment and application of x-rays in CT, CT image formation, evaluation, and archiving, patient radiation safety and dose, and patient interactions and management for imaging.

Student Learning Outcomes

1. Demonstrate acquisition of comprehensive technical knowledge by obtaining a seventy-five percent or greater on all quizzes and exam assessments (this is in alignment with the scoring expectations for the national registry exam).
2. Identify critical components of CT system equipment and what their purposes are in creating a CT image.
3. Identify CT parameters which allow for safely administering radiation dose; particularly to pediatric patients.
4. List and define the steps required to acquire a CT image, including the theory behind x-ray interaction/absorption/attenuation, detector capabilities, appropriate reconstruction options, and computer equipment.
5. Identify image display functions and radiology informatic options.
6. Identify the major technical components of image display in CT and common artifacts, including how to reduce artifacts.

RADT 1215. Introduction to Radiation Safety for Radiologic Technologists

Course Description

This course is an introduction to radiation protection topics that are common to Radiography and Nuclear Medicine. Topics to be covered include radiation units, radioactivity, radiation sources, background radiation, biological effects of radiation, dose limits, radiation shielding, methods of dose reduction, and regulations.

Student Learning Outcomes

1. Demonstrate understanding of radiation physics, including radioactive decay, various types of radiation, modes of radioactive decay, and radiation interaction with matter.
2. List and recognize the effects of radiation in living tissue, including cellular, tissue, and systemic responses as well as factors affecting radiosensitivity.
3. Differentiate between different types of radiation-producing equipment used in medical imaging.
4. Maintain effective radiation safety practices to minimize patient, occupational, and public exposure from different types of radiation-producing equipment used in medical imaging.
5. Differentiate between different types of radiation detection equipment and understand their application in monitoring radiation intensity and contamination.
6. Recognize a radioactive spill and take appropriate steps to minimize the spread of contamination.
7. Comply with current federal, state, and institutional regulations regarding ionizing radiation.

RADT 1520. Radiation Biology and Protection

Course Description

This course explores the biological effects of ionizing radiation on human cells and tissues, including genetic, somatic, short-term, and long-term effects. It covers radiation measurements, policies, and protection measures for technologists, patients, and others, emphasizing minimizing exposure and basic protection methods. The course also reviews current regulations and recommendations by the NRC and ICRP.

Student Learning Outcomes

1. Radiobiology: Explain fundamental principles, molecular/cellular aspects, early/late radiation effects, and related regulations/terminology.
2. Radiation Protection: Describe health physics, protection design, and patient/personnel dose management, including methods to limit radiation exposure.
3. Human Biology & Ionization: Discuss relevant aspects of human biology and the consequences of ionization in human cells.
4. Cellular Response to Radiation: Examine factors affecting cell radiosensitivity, direct/indirect effects of radiation, dose-response relationships, and the significance of LD50/30 and LD50/60.

RADT 1811. Radiographic Positioning I Clinical Experience

Course Description

Introduction to the clinical environment. Students will complete administrative duties, perform basic diagnostic radiography exams and provide patient care under the direct/indirect supervision of a qualified registered radiologic technologist as required and assigned.

Student Learning Outcomes

1. Demonstrate the ability to safely produce diagnostic radiographic images.
2. Appropriately position patients, identify radiographic anatomy and pathological conditions.

RADT 1812. Radiographic Positioning II Clinical Experience

Course Description

Clinical Experience: Students will complete administrative duties, perform diagnostic radiography exams, and provide patient care under the direct/indirect supervision of a qualified registered radiologic technologist as required and assigned.

Student Learning Outcomes

1. Demonstrate the ability to safely produce diagnostic radiographic images.
2. Appropriately position patients, identify radiographic anatomy and pathological conditions.
3. Model effective communication skills.

RADT 1825. Clinical Education I

Course Description

Introduction to the clinical environment. Students will complete administrative duties, perform diagnostic radiography exams and provide patient care under the direct/indirect supervision of a qualified registered radiologic technologist as required and assigned. Course offered in the fall semester only.

Student Learning Outcomes

1. Become familiar with the department and hospital layout, and with the basic departmental and hospital operations procedures of each major clinical facility.
2. Gather information for a given patient exam from when the request is received in the radiology department to the time when the images and reports are resulted.
3. Identify patient demographics on images.
4. Become competent and familiar with any and all radiographic/fluorographic equipment they are assigned to work with.
5. Know and follow the Policies and Procedures listed in the student handbook.
6. Responsible for any additional homework or class work that is deemed necessary and assigned by the program faculty.
7. Turn in their personal dosimeters as needed or upload readings in Canvas monthly.
8. Use positive forms of nonverbal communication to assist in patient care.
9. Anticipate and provide basic patient care and comfort with warmth, understanding, and empathy.
10. Show appreciation of the patient's mental factors and react accordingly.
11. Show recognition and appreciation of the diversity of the patient's ethnic backgrounds and react accordingly.
12. Exhibit the appropriate response when their performance and quality of work is evaluated.
13. Show adaptability in dealing with a wide range of patient types and conditions.
14. Show a level of confidence which is consistent with their training experience.
15. Understand the professional role of a radiologic technologist and consistently display a professional attitude.
16. Support the profession's code of ethics and comply with the profession's scope of practice.

RADT 1826. Clinical Education II

Course Description

Continuation of Clinical Education I. Students will complete administrative duties, perform diagnostic radiography exams, and provide patient care under direct/indirect supervision of a qualified registered radiologic technologist as required and assigned. Course offered in the spring semester only.

Student Learning Outcomes

1. Familiarize themselves with all radiographic/fluorographic equipment they are assigned to work with.
2. Familiarize themselves with the department and hospital layout, and with the basic departmental and hospital operational procedures of each assigned clinical facility.
3. Process paperwork for a given patient exam from the time the request is received in the radiology department.

4. Transport a patient safely from the patient room to the radiology department and back to the patient room by wheelchair or stretcher.
5. Correctly mark exams and process images including patient information as specified by each clinical site type of equipment; CR, and or DR.
6. Know and follow the Policies and Procedures listed in the student handbook.
7. Submit film badges monthly for radiation readings.
8. Use nonverbal communication.
9. Anticipate and provide basic patient care and comfort with warmth, understanding, and empathy.
10. Show appreciation of patients' mental factors and react accordingly.
11. Show recognition and appreciation of the diversity of patients' ethnic backgrounds and react accordingly.
12. Exhibit the appropriate responses when their performance and quality of work is evaluated.
13. Show adaptability in dealing with a wide range of patient types and conditions.
14. Show a level of confidence which is consistent with their training experience.
15. Understand the professional role of a radiologic technologist and consistently displays a professional attitude.
16. Support the profession's code of ethics and comply with the profession's scope of practice.

RADT 1830. Clinical Experience I

Course Description

Introduces students to Radiologic Technology as a health science profession. Includes an introduction to the clinical setting, radiology and hospital organization, radiation protection and monitoring, ethical and legal issues of medical imaging, confidentiality, to include diversity and anti-discrimination issues in employment situations, professional organizations, professional development, accreditation and credentialing and computers in the workplace.

Student Learning Outcomes

1. Continue attaining clinical competencies in Extremities, Abdominal & Chest Radiography.
2. Begin process of investigating radiographic special procedures UGI, IVP, & BE.
3. Attend Direct Clinical Instruction Skull/Facial bones, Spine/Sacrum/Coccyx, Fluoroscopy, Pediatrics.

RADT 1997. Radiologic Technology Independent Study

Course Description

Varies

Student Learning Outcomes

Varies

RADT 2110. Radiographic Imaging I

Course Description

Covers film and electronic imaging with related accessories. Employs radiographic film critique to emphasize the methods of diagnostic quality control.

Student Learning Outcomes

1. Define ,state and describe radiation and its discovery.
2. Describe , state and list the qualities of X-ray beam formation.
3. Define ,differentiate and explain radiographic Image formation.
4. Define, describe and state radiographic Image properties: photographic & geometric.
5. Describe, list and demonstrate radiographic scatter control and grid utilization.
6. Describe and explain radiographic film and digital image receptors.

7. Define, explain and describe radiographic Sensitometry.
8. Define ,differentiate and recognize radiographic exposure selection.
9. Define, analyze explain how automatic exposure control works.
10. Explain, define and identify how digital imaging systems work.

RADT 2111. Fundamentals of Radiography II

Course Description

Continuation of concepts in image production to include prime factors, exposure, scatter, and image characteristics. Presents the fundamentals of radiographic positioning and terminology used in non-routine skeletal trauma, pediatric, and mobile imaging with discussion and demonstration of the related radiographic projections. Students will participate in Laboratory simulation of procedures covered. Course offered in the summer semester only.

Student Learning Outcomes

1. Describe anatomy and functions.
2. On diagrams and radiographs, identify specific anatomy.
3. Define specific terms related to conditions and procedures.
4. Describe the effect of body habitus on the location of normal anatomy.
5. List the basic and special positions or projections to include size and type of image receptor, central ray location, direction and angulation of the central ray, and anatomy best demonstrated.
6. Discriminate between acceptable and unacceptable radiographs and describe how positioning or technical errors can be corrected.
7. Given various hypothetical situations, identify the correct modification of a position and/or exposure factors to improve the radiographic image.
8. Using a peer, position for basic and special projections of the various systems.
9. Identify the steps and safety measures to be followed during a venipuncture procedure.
10. List safety measures to be followed before and during the injection of an iodinated contrast media.
11. Discuss common clinical applications for tomography.
12. Explain positioning principles that must be observed during trauma radiography.
13. List general patient preparation requirements for procedures of the pediatric patient.
14. Explain the safe use of radiographic equipment in surgery.
15. Describe common radiographic procedures performed in surgery.

RADT 2250. Radiographic Image Critique

Course Description

This course reviews radiographs, evaluating anatomy and technical quality, including positioning and technique. Students learn to make adjustments and reinforce concepts through classroom activities.

Student Learning Outcomes

1. Optimal Projections & Labeling: State key components of optimal projections, properly display body structures, and accurately Laboratoryel projections using markers and annotations.
2. Comprehensive Imaging Knowledge: For all major body regions (chest, abdomen, extremities, pelvis, shoulder girdle, bony thorax, spine, skull): identify anatomy, state technical data, identify positioning errors, describe considerations for special conditions (air-fluid levels, motion, pathology), and discuss adaptive techniques.
3. Digital Imaging: Demonstrate familiarity with digital image acquisition, errors, and display.
4. Image Analysis: Perform image analysis, including appearance standards, characteristics, procedural factors, and corrective actions.

RADT 2404. Radiographic Special Modalities

Course Description

Introduction and discussion of various special procedures and modalities including but not limited to: interventional radiography, computed tomography, magnetic resonance imaging, nuclear medicine, radiation therapy, ultrasound.

Student Learning Outcomes

1. Attain basic knowledge of the various imaging modalities and differentiate between images produced by those modalities.
2. Explain general equipment requirements.
3. Identify various contrast agents used by different modalities and define potential contraindications.
4. Explain the use of artificial intelligence for the various modalities.

RADT 2408. Radiographic Pathology

Course Description

This course explores the pathology of major body systems and corresponding radiographic imaging techniques. Students learn about disease processes (etiology, signs/symptoms, diagnosis, and treatment) and identify pathological signs on various images, emphasizing radiography. Fundamental anatomy and physiology are integrated, focusing on anatomical projections, radiographic identification, and imaging modalities (including CT and MRI).

Student Learning Outcomes

1. Describe and identify anatomical structures on diagrams and radiographs.
2. Classify and explain pathological conditions affecting major body systems.
3. Identify pathologies, assess radiographic appearance, and evaluate imaging accuracy.
4. Define key terms, use medical abbreviations, and understand diagnostic reports.
5. Position patients correctly, assess images, and apply technical adjustments.
6. Identify radiation types, effects, and imaging modalities for diagnosis and treatment.
7. Critique images, locate pathology, and demonstrate readiness for certification exams.

RADT 2410. Radiographic Physics and Equipment

Course Description

This course offers a comprehensive exploration of the physical principles of diagnostic radiography, covering radiologic physics, imaging theory, and quality assurance. Students will examine atomic structure, electromagnetism, X-ray production and interaction, exposure factors, scatter control, and image characteristics. The curriculum also includes digital fluoroscopy, X-ray circuitry, and an introduction to advanced imaging modalities such as mammography, CT, and MRI.

Student Learning Outcomes

1. Explain the structure of atoms and types of radiation.
2. Describe X-ray production and factors affecting image quality.
3. Explain photon interactions with matter.
4. Identify key components of the X-ray circuit and X-ray tube.
5. Apply physics and math principles to radiographic procedures and equipment.
6. Analyze radiographic images for accuracy and quality.

RADT 2811. Clinical Experience I

Course Description

Clinical Experience: Students will complete administrative duties, perform diagnostic radiography exams, and provide patient care under the direct/indirect supervision of a qualified registered radiologic technologist as required and assigned.

Student Learning Outcomes

1. Demonstrate the ability to safely produce diagnostic radiographic images.
2. Appropriately position patients, identify radiographic anatomy and pathological conditions.
3. Demonstrate effective communication skills.
4. Accurately document/record data in accordance with clinical site policies and procedures.

RADT 2812. Clinical Experience II

Course Description

Clinical Experience: Students will complete administrative duties, perform diagnostic radiograph exams, and provide patient care under direct/indirect supervision of a qualified registered radiologic technologist as assigned. Evening/weekend, CT, and OR rotations will be offered where available.

Student Learning Outcomes

1. Demonstrate the ability to safely produce diagnostic radiographic images.
2. Appropriately position patients, identify radiographic anatomy and pathological conditions.
3. Demonstrate effective communication skills.
4. Accurately document/record data in accordance with clinical site policies and procedures.
5. Demonstrate the ability to use independent judgement.
6. Analyze radiographic images for technical and positioning accuracy to make modifications as needed.
7. Conduct themselves in a professional manner to function effectively as a member of the healthcare team.

RADT 2813. Clinical Experience III

Course Description

Clinical Experience: Students will complete administrative duties, perform diagnostic radiography exams, and provide patient care under the direct/indirect supervision of a qualified registered radiologic technologist as required and assigned. Evening/weekend, CT and OR rotations will be offered where available.

Student Learning Outcomes

1. Demonstrate the ability to safely produce diagnostic radiographic images.
2. Be able to appropriately position patients, identify radiographic anatomy and pathological conditions.
3. Demonstrate effective communication skills.
4. Accurately document/record data in accordance with clinical site policies and procedures.
5. Demonstrate the ability to use independent judgement.
6. Analyze radiographic images for technical and positioning accuracy to make modifications as needed.
7. Conduct themselves in a professional manner to function effectively as a member of the healthcare team.
8. Identify opportunities for professional growth within medical imaging sciences.

RADT 2814. Special Modalities Clinical Experience IV

Course Description

Clinical Experience: Special rotations in advanced imaging modalities to include but are not limited to nuclear medicine, sonography, mammography, MRI, CT, interventional radiology, and cardiac catheterization Laboratory.

Student Learning Outcomes

1. Identify, compare, and evaluate various specialized modalities in medical imaging, including but not limited to Computed Tomography (CT), Magnetic Resonance Imaging (MRI), Ultrasound, Nuclear Medicine, and Interventional Radiology.
2. Demonstrate principles, applications, and patient care considerations associated with each modality, as well as the role of advanced imaging in diagnosis and treatment within the healthcare setting.
3. Demonstrate effective communication skills.
4. Conduct themselves in a professional manner to function effectively as a member of the healthcare team.
5. Identify various opportunities for professional growth within medical imaging sciences.
6. Develop and refine professional job-seeking skills, including crafting an effective resume and cover letter, preparing for interviews, and demonstrating workplace professionalism.

RADT 2817. Cross Sectional Anatomy for Medical Imaging

Course Description

Anatomic relationships that are present under various sectional orientations as depicted by computed tomography or magnetic resonance imaging.

Student Learning Outcomes

1. Identify and Laboratoryel the anatomy associated with the topical outline in diagnostic CT images.
2. Critique CT images for the presence or absence of anatomy and pathology in deciding whether the image is appropriately positioned and diagnostic for radiologist assessment.
3. Locate anatomical systems and possible pathology based on background knowledge of typical anatomical locations and identify normal course of system function for appropriate positioning, patient instructions, and CT imaging.

RADT 2818. Clinical Experience I (Computed Tomography)

Course Description

A basic, introductory health-related, work-based learning experience that enables students to apply specialized occupational theory, skills, and concepts. The clinic professional provides direct supervision.

Student Learning Outcomes

1. Complete at least 55 high-quality CT scans while maintaining good standing.
2. Engage appropriately with patients using verbal and nonverbal communication at a beginner level.
3. Identify necessary Laboratory values for contrast-enhanced CT exams at a beginner level.
4. Evaluate personal/occupational radiation exposure and explain CT dose measurement.
5. Use post-processing tools to produce diagnostic-quality images and adjust CT parameters for optimal imaging and contrast.

RADT 2819. Clinical Experience II (Computed Tomography)

Course Description

An intermediate health-related work-based learning experience that enables students to apply specialized occupational theory, skills, and concepts. The clinic professional provides direct supervision.

Student Learning Outcomes

1. Complete at least 100 high-quality CT scans while maintaining good standing.
2. Engage appropriately with patients using verbal and nonverbal communication.
3. Identify necessary Laboratory values for contrast-enhanced CT exams.
4. Evaluate personal/occupational radiation exposure and explain CT dose measurement.

5. Use post-processing tools to produce diagnostic-quality images and adjust CT parameters for optimal imaging and contrast safety.

RADT 2820. Clinical Experience III (Computed Tomography)

Course Description

Advanced health-related work-based learning experience that enables the student to apply specialized occupational theory, skills and concepts. Direct supervision is provided by the clinic professional. Upon completion, students will be able to assume most of the duties of an experienced imaging professional in Computed Tomography.

Student Learning Outcomes

1. Complete at least 125 high-quality CT scans while maintaining good standing.
2. Engage appropriately with patients using verbal and nonverbal communication.
3. Identify necessary Laboratory values for contrast-enhanced CT exams.
4. Evaluate personal/occupational radiation exposure and explain CT dose measurement.
5. Use post-processing tools to produce diagnostic-quality images and adjust CT parameters for optimal imaging and contrast safety.

RADT 2824. Clinical Education III

Course Description

Continuation of Clinical Education II. Students will complete administrative duties, perform diagnostic radiography exams, and provide patient care under the direct/indirect supervision of a qualified registered radiologic technologist as required and assigned. Evening and OR rotations will be offered where available.

Student Learning Outcomes

1. Familiarize themselves with all radiographic/fluorographic equipment they are assigned to work with.
2. Familiarize themselves with the department and hospital layout, and with the basic departmental and hospital operational procedures of each assigned clinical facility.
3. Process paperwork for a given patient exam from the time the request is received in the radiology department.
4. Transport a patient safely from the patient room to the radiology department and back to the patient room by wheelchair or stretcher.
5. Correctly mark exams and process images including patient information as specified by each clinical site type of equipment; CR, and or DR.
6. Know and follow the Policies and Procedures listed in the student handbook.
7. Submit film badges monthly for radiation readings.
8. Use nonverbal communication.
9. Anticipate and provide basic patient care and comfort with warmth, understanding, and empathy.
10. Show appreciation of patients' mental factors and react accordingly.
11. Show recognition and appreciation of the diversity of patients' ethnic backgrounds and react accordingly.
12. Exhibit the appropriate responses when their performance and quality of work is evaluated.
13. Show adaptability in dealing with a wide range of patient types and conditions.
14. Show a level of confidence which is consistent with their training experience.
15. Understand the professional role of a radiologic technologist and consistently displays a professional attitude.
16. Support the profession's code of ethics and comply with the profession's scope of practice.

RADT 2825. Clinical Education IV

Course Description

Continuation of Clinical Education III. Students will complete administrative duties, perform basic diagnostic radiograph exams, and provide patient care under direct/indirect supervision of a qualified registered radiologic technologist as assigned. Evening and OR rotations will be offered where available. Course offered in the fall semester only.

Student Learning Outcomes

1. Familiarize themselves with all radiographic/fluorographic equipment they are assigned to work with.
2. Familiarize themselves with the department and hospital layout, and with the basic departmental and hospital operational procedures of each assigned clinical facility.
3. Process paperwork for a given patient exam from the time the request is received in the radiology department.
4. Transport a patient safely from the patient room to the radiology department and back to the patient room by wheelchair or stretcher.
5. Correctly mark exams and process images including patient information as specified by each clinical site type of equipment; film, CR, and or DR.
6. Know and follow the Policies and Procedures listed in the student handbook.
7. Submit film badges monthly for radiation readings.
8. Use nonverbal communication.
9. Anticipate and provide basic patient care and comfort with warmth, understanding, and empathy.
10. Show appreciation of patients' mental factors and react accordingly.
11. Show recognition and appreciation of the diversity of patients' ethnic backgrounds and react accordingly.
12. Exhibit the appropriate responses when their performance and quality of work is evaluated.
13. Show adaptability in dealing with a wide range of patient types and conditions.
14. Show a level of confidence which is consistent with their training experience.
15. Understand the professional role of a radiologic technologist and consistently displays a professional attitude.
16. Support the profession's code of ethics and comply with the profession's scope of practice.
17. Acquire all required performance evaluations (competencies).
18. Ten mandatory general patient care activities (completed these 1st semester).
19. 36 mandatory imaging procedures.
20. 15 elective imaging procedures selected from the list of 34 procedures.
 - a. One of the 15 elective imaging procedures must be selected from the head section: and
 - b. Two of the 15 elective imaging procedures must be selected from the fluoroscopy studies section, one of which must be either upper GI or contrast enema.

RADT 2826 Clinical Education V

Course Description

Students will complete administrative duties, perform basic diagnostic radiography exams, and provide patient care under the direct/indirect supervision of a qualified registered radiologic technologist as required and assigned. Evening, and OR, and specialized modality rotations will be offered where available.

Student Learning Outcomes

1. Familiarize themselves with all radiographic/fluorographic equipment they are assigned to work with.
2. Familiarize themselves with the department and hospital layout, and with the basic departmental and hospital operational procedures of each assigned clinical facility.
3. Process paperwork for a given patient exam from the time the request is received in the radiology department.
4. Transport a patient safely from the patient room to the radiology department and back to the patient room by wheelchair or stretcher.

5. Correctly mark exams and process images including patient information as specified by each clinical site type of equipment; film, CR, and or DR.
6. Know and follow the Policies and Procedures listed in the student handbook.
7. Submit film badges monthly for radiation readings.
8. Use nonverbal communication.
9. Anticipate and provide basic patient care and comfort with warmth, understanding, and empathy.
10. Show appreciation of patients' mental factors and react accordingly.
11. Show recognition and appreciation of the diversity of patients' ethnic backgrounds and react accordingly.
12. Exhibit the appropriate responses when their performance and quality of work is evaluated.
13. Show adaptability in dealing with a wide range of patient types and conditions.
14. Show a level of confidence which is consistent with their training experience.
15. Understand the professional role of a radiologic technologist and consistently displays a professional attitude.
16. Support the profession's code of ethics and comply with the profession's scope of practice.
17. Acquire all required performance evaluations (competencies).
 - a. Ten mandatory general patient care activities (completed these 1st semester)
 - b. 36 mandatory imaging procedures
 - c. 15 elective imaging procedures selected from the list of 34 procedures
 - d. One of the 15 elective imaging procedures must be selected from the head section: and
 - e. Two of the 15 elective imaging procedures must be selected from the fluoroscopy studies section, one of which must be either upper GI or contrast enema.

RADT 2830.Clinical Experience II

Course Description

A continued development of competencies under direct supervision and continuous practice of basic procedures learned in positioning I and II and Radiographic Imaging I. Independent and intermediate level of performance in selected procedures, film processing and film critiques. Assistance in a variety of patient care needs, safety issues, PACS and dye exposure.

Student Learning Outcomes

1. Continue attaining clinical competencies in Extremities, Abdominal & Chest Radiography.
2. Begin process of investigating radiographic special procedures UGI, IVP, & BE.
3. Attend Direct Clinical Instruction:
 - a. Skull/Facial bones
 - b. Spine/Sacrum/Coccyx
 - c. Fluoroscopy
 - d. Pediatrics

RADT 2831. Clinical Experience III

Course Description

Continues course of study with indirect supervision, a continued development of competence and practice in basic positioning. Independent/intermediate level of performance in selected procedures, film processing and film critiques. Assists in a variety of patient care activities.

Student Learning Outcomes

1. Complete ten clinical competencies in Extremities, Abdominal & Chest and other mandatory or elective
2. ARRT Radiography competencies.

3. Finish radiographic special procedures competencies, UGI, IVP, & BE.

RADT 2832. Clinicval Experience IV

Course Description

Continues course of study with instruction and practice in a clinical facility under indirect/close supervision. Student will continue to develop competencies. Observation, involvement and assistance in special procedures and special imaging modalities. Review of radiographs, preparation for employment as radiologic technologists.

Student Learning Outcomes

1. Complete ten clinical competencies in Extremities, Abdominal & Chest and other mandatory or elective ARRT Radiography competencies or 40 totals.
2. Finish radiographic special procedures competencies, UGI, IVP, & BE.
3. Have completed 40 clinical competencies by end of term.

Range Science (RGSC)

RGSC 1110. The Range Science Profession

Course Description

Introduction to scientific disciplines and career opportunities in rangeland science and management.

Student Learning Outcomes

1. To introduce students to the Range Science program and to a variety of career opportunities in Range Science.
2. To develop an individualized course curriculum that prepares the student to achieve their career goals.
3. To examine opportunities to gain practical work experience through internships and cooperative employment.

RGSC 2110. Introduction to Rangeland Management

Course Description

This course covers the principles of managing and understanding pasture and rangelands. Plant physiology and ecology, plant communities and rangeland sustainability and how they relate to livestock production and wildlife management will be discussed.

Student Learning Outcomes

1. Understand rangeland management operations.
2. Identify rangeland plants.
3. Gain a perspective of watershed management.
4. Discuss the management of rangeland resources.
5. Understand the process of rangeland evaluation through a broad understanding of monitoring and production of these rangelands.
6. Gain a perspective of the correlation of rangelands and the economic principles guiding resource management.
7. Understand the process of rangeland condition.
8. Understand the concepts of stocking rates and usage of rangelands.
9. Gain a broad perspective of different classes of land ownership; Tribal, federal, private and state.
10. Recognize vegetative communities, ecological sites, plant physiology and application to rangeland management considerations.

RGSC 2996. Topics in Range Science

Course Description

Specific subjects and credits announced in the Schedule of Classes.

Student Learning Outcomes

Varies

Religion (RELG)

RELG 1110. Introduction to World Religions

Course Description

This course introduces major world religions and the scholarly methods of the academic study of religion.

Religions covered may include Hinduism, Buddhism, Confucianism, Daoism, Judaism, Christianity, Islam and/or New Religious Movements.

Student Learning Outcomes

1. Students will demonstrate knowledge of the origins, history, development, and characteristics of each religion.
2. Recognize and distinguish the beliefs, practices, and features of each religion.
3. Analyze various primary religious texts.

RELG 1120. Introduction to the Bible

Course Description

Introduction to the Bible is an introductory study of the structure and content of the Hebrew and Christian Scriptures. This class provides the context and reading skills for study and investigation of the Bible and its influence upon western culture and religion.

Student Learning Outcomes

1. Students will demonstrate knowledge of the context for the composition of Biblical texts.
2. Analyze Biblical texts and identify major characters and themes.
3. Demonstrate knowledge of the use and interpretation of Biblical texts in various religious traditions.
4. Choose and apply appropriate academic methods as applied to Biblical interpretation.

RELG 1123. Hebrew Bible

Course Description

An introduction to the history, beliefs, practices, and development of the Hebrew and later Jewish religion as reflected in the Hebrew Biblical Scriptures, using a historical and critical approach, with attention given to understanding its socio-cultural and political environment.

Student Learning Outcomes

1. Trace the chronology of the myths, history, and ideas found in the Hebrew Bible emphasizing significant events, personalities, and cultural settings.
2. Identify the various literary genres present in the Hebrew Bible.
3. Identify aspects of the different moral, ethical, and theological messages of the Hebrew Bible.

RELG 1126. New Testament

Course Description

An introduction to the history, beliefs, practices, and development of the early Christian religion as reflected in the New Testament, using a historical and critical approach, with attention given to understanding its socio-cultural and political environment.

Student Learning Outcomes

1. Students will demonstrate knowledge of the chronology of the history of early Christian belief and practice, emphasizing significant events, personalities, and diverse cultural settings as they influenced the development of the faith.
2. Students will be able to identify and explain core theories, methods, and approaches to study of the New Testament.
3. Students will be able to identify and explain aspects of the moral, ethical, and theological messages of the New Testament.

RELG 1510. Life of Christ

Course Description

The Life of Christ is a course that examines the life of Christ with regard to the events and teachings of Jesus as recorded in the Synoptic gospels namely, Mathew, Mark and Luke. It is also an introduction in the field of textual and synoptic criticism.

Student Learning Outcomes

Student Learning Outcomes correspond to: assisting the students in understanding who Jesus Christ is, the events that took place in His life and His teachings according to the Synoptic gospel writers, recognizing the differences among the synoptic writers and the arrangement of events in Christ's life and empowering the students through resources.

RELG 1520. Religion and the Arts

Course Description

Introduction to the relationship between religion and culture as reflected in the arts. Surveys the roles and functions of visual, performing, and literary arts and architecture in experiencing and expressing the social and doctrinal dimensions of several indigenous and major world religions.

Student Learning Outcomes

The objective is to gain a broad understanding of the symbolic and expressive dimensions of religion and the relationship between religion and the arts. Students will:

1. Identify the basic beliefs and practices of each religion.
2. Describe each religion's relative position on the iconoclasm–iconophilia spectrum.
3. Describe the use of symbolism to convey religious concepts and meanings.
4. Analyze representative literary, performance, visual art, and/or architectural works as expressions of religious beliefs and doctrines.
5. Demonstrate critical reflection and understanding of course material and concepts.

RELG 1550. Religion, Health & Medicine**Course Description**

Religion, Health, and Medicine introduces students to how people's religious beliefs and practices influence their perspectives on health and their approaches to medical care and treatment.

Student Learning Outcomes

1. Describe one's worldview and how it influences one's own perspective on health and approach to medicine.
2. Explain the basic beliefs and practices of the religions we study and how they influence people's perspectives on health and their approaches to medicine.
3. Identify particular questions and problems that may result when people holding different worldviews meet to discuss and/or treat health and medicine issues.
4. Develop comprehension and analytical reading, writing, and evaluation skills through class assignments.

RELG 1996. Topics in Religion**Course Description**

A course exploring a topic not covered by the standard curriculum but of interest to faculty and students in a particular semester.

Student Learning Outcomes

Varies

RELG 2110. Eastern Religions**Course Description**

Provides an academic overview of major religious traditions of Asia (mainly India, China, and Japan), which may include Hinduism, Buddhism, Sikhism, Jainism, Confucianism, Daoism, Shinto, and/or Shamanism as well as popular, tribal, or new religions. Students will be assigned both primary and secondary texts.

Student Learning Outcomes

1. Students will demonstrate knowledge of the origins, history, development, and characteristics of each religion.
2. Students will be able to identify and explain the beliefs and practices of each religion.
3. Analyze various primary religious texts.

RELG 2115. World Religions**Course Description**

In this course, the student will study the history and teachings of the world's major religions, e.g., Buddhism, Muslimism, Hinduism, and Shintoism.

Student Learning Outcomes

Students will:

1. Recognize the roots and foundations of each of the major religions and its founders.
2. Illustrate the history and development in relation to their respective cultures.
3. Examine their historical sequence in the development of religious traditions and practices.
4. Locate the global distribution of each religion from their foundation to the present.
5. Describe the relationship of thought and worship in the varied cultures.
6. Value the uniqueness of the different cultural religious expression through art, music, and literature.
7. Demonstrate to Western Christian thinking the uniqueness of Eastern belief, thought and religious living.
8. Measure the impact and influence of education, morality, and values of each religion globally.

RELG 2120. Western Religions**Course Description**

This is a survey course that will cover major religious traditions of the West, including the three Abrahamic religions (Judaism, Christianity, and Islam) and other religious systems. The course will focus on how each tradition has developed historically and how it exists in the world today.

Student Learning Outcomes

1. Students will demonstrate knowledge of the histories, belief systems, practices, etc. of major Western religions, and of how these traditions have influenced different societies.
2. Students will demonstrate critical skills in interpretation, discussion, and in composing creative, analytical and/or objective responses to material.

RELG 2130. History of Christianity

Course Description

This course examines Christianity from its origins to the present. The course will focus on church doctrine, people, movements, and problems that have characterized Christianity over two millennia.

Student Learning Outcomes

1. Students will demonstrate historical knowledge of the people, movements, and problems that comprise Christianity, and an understanding for the diversity of Christian expression over time.
2. Students will demonstrate critical skills in interpretation, discussion, and in composing creative, analytical and/or objective responses to material.

RELG 2135. Ancient Religions

Course Description

Examines the religions of the ancient Middle East, Egypt, Greco-Roman, Germanic and Celtic worlds. Provides students with an understanding of the origins of modern religions and spirituality.

Student Learning Outcomes

1. Identify major religious movements of the ancient world.
2. Contrast and compare the various ancient religions.
3. Describe the pantheons of the religions of the ancient world.
4. Define major terms in ancient religion, such as animism.
5. Analyze primary texts from ancient sources on religion.

RELG 2140. The Book of Acts

Course Description

An examination of the work of Peter and other early Christian leaders; missionary journeys of Paul; and the spread of early Christianity as recounted in the Book of Acts.

Student Learning Outcomes

1. Students will demonstrate knowledge of this stage in the development of the spread of the early Christian faith.
2. Students will demonstrate critical skills in interpretation, discussion, and in composing creative, analytical and/or objective responses to material.

RELG 2210. Biblical Perspectives on Relationships

Course Description

This course provides a fundamental knowledge of the biblical perspective on relationships by thoroughly covering the topics of marriage, family, and singleness from a Christian worldview. Current issues and movements are analyzed and discussed openly and honestly through the lens of the Scriptures. Moreover, the textbook intertwines the theological and the practical aspects of these ideals for the students' personal applications.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Identify and explain topics and issues of importance concerning various relationships from a biblical perspective.
2. Develop and defend a proper thesis statement about an approved book for a critique.
3. Compose journal entries of personal thoughts concerning corresponding reading assignments.
4. Prove retention of class material through weekly quizzes and the midterm and final exams.

RELG 2220. Women of the Bible

Course Description

This course is designed to introduce the modern-day reader to the women Bible characters. The Bible is literally filled with strong women whose lives and voices have much in common with modern day woman. The gamut of the Biblical record runs from the revered Virgin Mary to the beguiled Jezebel. Even though some of the women noted in the Bible remain unnamed, their lives can still be examined in the context of their exploits, accomplishments and commitments.

These women have complex and multifaceted personalities and, in that light, their message is relevant to all generations. These women struggled with real problems and obstacles. Surprisingly, these issues are in essence the same struggles that women face today. Many chose poorly and their lives reflected that but others made good choices and as a result, their lives are viewed through those lines. But whether these women made poor choices or good choices, the study of these women's lives in Biblical times are relevant for today. So, in this course, we will examine those women who might be ancient in history, but relevant to our study today.

Student Learning Outcomes

1. To acquaint ourselves with both well-known and not so well-known Bible characters who are women.
2. To establish a time-line to see how these women Bible characters fit into the framework of the Bible.
3. To study the history and customs surrounding the Bible women characters and how that history and culture affected them in their time.
4. To interpret and discuss the situations of Bible times and how they played out in women's lives.
5. To reflect on women's lives in Biblical times to relate to modern day times and all trials that humans face.
6. To examine each woman's life to evaluate consequences, achievements and situations resulting from her actions.

RELG 2230 Men of the Bible

Course Description

This course is designed to introduce the modern-day reader to the many men of the Bible who helped shaped the Bible message. In studying these men, students will have an opportunity to look into their lives. It will be illuminating and inspiring to see their stories played out in the Bible. Many of the men are strong men, many are good men and some are evil men. In that light, the student can see the aspects of both good and evil as nothing is withheld from the Biblical record and all flaws and good character traits are there for all readers to see. The gamut of men in the Biblical record runs from patriarchs such as Abraham and Jacob to Judas Iscariot and Pontius Pilate. No matter their character, their lives can still be examined in the context of their exploits, accomplishments and commitments.

These men all have complex and multifaceted personalities and as a result, their message is relevant to all generations. These men struggled with real problems and obstacles. These issues are in essence the same struggles that all humankind face today. Many chose poorly and their lives reflected those poor choices but others made good choices and as a result, their lives are viewed through the results of those choices. But whether poor choices or good choices, the study of these men's lives in Biblical times is relevant for today.

Student Learning Outcomes

1. The student will become acquainted with both well-known and not so well-known men of the Bible who helped to shape the world in which they lived during Biblical times.
2. The student will establish a timeline to see how these Bible characters fit into the framework of the Bible.
3. The student will become familiar with the history surrounding the characters and how that history and culture touched them in their time.

4. The student will reflect on the culture of the times in which the men lived to ascertain how that culture influenced the times of their lives.
5. The student will interpret, reflect, and discuss the situations of Bible times and how those times played out in men's lives.
7. The student will become familiar with each man in his own particular situation to see how that man fit into the revelation of the Biblical account.
8. The student will compare experiences of men through the Biblical record to times of today to detect similarities and differences.
9. The student will reflect on the hardships, setbacks, life experiences, personal choice and encounters that made the men in the Bible notable.
10. The student will recognize Bible ordinary men with life's baggage and situations that are common to even people today.

RELG 2510. Principles of Textual Interpretation

Course Description

A study of the principles of interpretation and the application of these principles to selected portions of Scripture.

Student Learning Outcomes

1. You will understand the need and importance of disciplined biblical interpretation.
2. You will know the impact that particular genres of the Bible have on successful interpretation.
3. You will learn the principles of inductive Bible study and the value of textual observations.
4. You will be able to prepare a thorough and responsible inductive Bible study on any assigned biblical text.
5. You will learn that the best biblical interpretation is pursued with a spirit of humility.

RELG 2520. Jesus and the School of Healing

Course Description

The introductory course takes a holistic approach to the biblical concept of healing. Topics include introduction to selected Old Testament passages with major emphasis in New Testament passages, containing the aspects of healing concepts. These passages are introductory exposure of the student to a broad understanding of the role of the Christian churches healing ministry in the twenty-first century. This will include introduction to the historical concepts, theological concepts, sacramental concepts, current models of holistic medicine concepts, and an introduction to authors with writings of relevance. Exposure to current works regarding death and dying; stress management, and related holistic theories.

Student Learning Outcomes

1. The student will be able to use the critical thinking process and to formulate a personal approach to the integration of biblical healing and the 21st century as demonstrated by writing an academic document containing a personal statement of faith, scored by faculty and receiving a score of 70% or better.
2. The student will be able to demonstrate competence in understanding of material presented by scoring a 70% or better on faculty evaluated quizzes or oral presentations.
3. The students will be able demonstrate proficiency in verbal articulation as based upon participation in classroom discussion and interaction with peers and the instructor by scoring a 70% or better on faculty evaluation.

RELG 2525. Beliefs and Believers

Course Description

In this course, the student develops an understanding of what they believe and why they believe it. The student will gain some initial exposure to the religious systems of major world religions: Hinduism, Buddhism, Taoism, Confucianism, Judaism, Christianity, and Islam – as well as systems of belief which are outside the scope of what are deemed to be mainstream religious institutions, such as new age religions, Neopaganism, and “civil” religion.

Student Learning Outcomes

Successful completion of the course implies the student will be able to:

1. Identify major religions and worldviews as measured by scoring 70% accuracy on a faculty prepared examination.
2. Describe major religions and worldviews according to the following dimensions – mythic, experiential, doctrinal, ritualistic, ethical and social as measured by scoring 70% on a faculty prepared examination.

RELG 2993. Workshop in Religion

Course Description

Varies

Student Learning Outcomes

Varies

RELG 2996. Topics in Religion

Course Description

Specific subjects and credits announced in the Schedule of Classes.

Student Learning Outcomes

Varies

Renewable Energy (RNBL)

RNBL 1010. Introduction to Renewable Energy

Course Description

This course is an introduction to renewable energy as compared to non-renewable energy. A close study of locally available renewable energy will allow a hands-on approach to solar, hydro, bio mass, and wind energy. Proper siting, feasibility, payback, and calculations, such as, load, storage and production will be introduced. Passive as well as active systems and dwellings will be studied.

Student Learning Outcomes

1. The student will be able to describe the difference between renewable energy sources and non-renewable energy sources
2. The student will be able to determine the proper use of both energy types considering current technology.
3. The student will be able to demonstrate knowledge of the different types of renewable energy and its conversion to mechanical and or electrical energy.
4. The student will be able to identify and utilize standard renewable energy terminology and concepts.
5. The student will be able to calculate the electrical load of an average American home.
6. The student will be able to complete a basic renewable energy feasibility study.

RNBL 1060. Electrical Theory for Renewable Energy

Course Description

This course introduces electrical safety, the basic principles of Direct Current (DC) and Alternating Current (AC) theory. Electrical energy applications in basic, capacitive, and inductive circuits will be covered in lecture and laboratory study, as will applications of basic renewable energy electrical components and systems.

Student Learning Outcomes

1. The student will be able to identify basic electrical components.
2. The student will be able to identify and explain characteristics of both AC and DC electricity.
3. The student will be able to demonstrate knowledge of Ohm's Law.
4. The student will be able to utilize a multimeter to test and troubleshoot basic circuits.
5. The student will be able to identify and calculate the basic series, parallel and series parallel circuits.

The student will be able to demonstrate knowledge of the electronics used in renewable energy devices, arrays and various installations.

RNBL 1150. Field Safety and Experience

Course Description

Wind turbine safety principles and practices are provided to ensure that persons working on wind power plants are safeguarded from the hazards associated with the work environment and the electro-mechanical systems therein. Students will obtain field experience involving tower safety and rescue, and will be familiarized with applicable OSHA standards.

Student Learning Outcomes

Student will score 100 % in the areas of “Lock Out/Tag Out” procedures and protocols and personal fall protection and rescue equipment and 80% or higher on a faculty prepared exam or project in all other areas.

1. The student will be able to identify the general concepts of health and safety and apply government regulations.
2. The student will be able to demonstrate the principles of electrical safety and protection.
3. The student will be able to identify the components of safety meetings.
4. The student will be able to perform “Lock Out/Tag Out” procedures and protocols.
5. The student will be able to demonstrate knowledge of the environmental, ethical, and legal obligations found within the wind industry.
6. The student will be able to inspect and wear personal fall protection and rescue equipment.

RNBL 1160. Introduction to Motors and Generators

Course Description

The electric motor and generator are critically important devices for generating mechanical and electrical power in nearly all heavy industries, including wind energy. In this course, students will be introduced to the various types of motors and generators commonly found within commercial wind turbines and study their configurations, functions, and operational characteristics.

Student Learning Outcomes

1. The student will be able to demonstrate knowledge of AC and DC motors and their applications.
2. The student will be able to describe the function of a generator.
3. The student will be able to describe the difference between synchronous and asynchronous.
4. The student will be able to identify three phase and single-phase wiring diagrams.
5. The student will be able to successfully identify major components of a motor and generator of both AC and DC types.
6. The student will be able to successfully identify different windings used in motors.
7. The student will be able to explain the use of capacitors to start and run a motor.
8. The student will be able to explain the application of a variable frequency drive.
9. The student will be able to explain the function of a doubly fed induction generator.

RNBL 1210. Wind Turbine Mechanical Systems

Course Description

This course is designed to familiarize students with the mechanical systems found within industrial wind turbines. These include turbine yaw drive systems, pitch drive systems, primary drive gearboxes, and smaller mechanical systems.

Student Learning Outcomes

1. The student will be able to demonstrate fundamentals of mechanical drive systems and their implementation.
2. The student will be able to explain the basics of mechanical power transmission.
3. The student will be able to explain the relationships between gears, bearings and lubrication.
4. The student will be able to identify gaskets and seals applicable to renewable energy mechanical systems.
5. The student will be able to identify specific applications of renewable energy mechanical systems.

6. The student will describe and demonstrate safety rules and practices relating to mechanical power systems, including rules of dress, and lock-out/tag-out.
7. The student will describe and demonstrate calculations and measurements used to determine the mechanical efficiency of a motor.

RNBL 1394. Communication Technology for the Technician

Course Description

This course will take the student through a history of communication cable connection and how and why they were used in the renewable energy arena along with their advantages and disadvantages. Communication devices will be discussed and used. Email, text and voice will be the modes used to send and receive assignments. Digital photography will be incorporated to archive, report, and receive detailed instruction. During this course a smart phone becomes the main tool. Examples of uses on the job site, up tower or on the array will be presented. Students will be competent at basic calling, texting, conference calling, sending digital images and special features of smart technology.

Student Learning Outcomes

Students will demonstrate critical thinking skills, conceptual constructs, and specialized vocabulary with a score of 70% or better while addressing the following learning outcomes:

1. The student will be able to identify data transfer cables and connectors commonly used in the Renewable energy industry.
2. The student will be able to explain the use of each cable and connector.
3. The student will be able to send and receive or, upload and download, job assignments via text, voice, email, or video conference.
4. The student will be able to report problems to team members and supervisors utilizing electronic means.
5. The student will be able to take digital images and videos that are informative, well-lit and the best composition possible given the situation.
6. The student will be able to interpret and follow instructions sent electronically.

RNBL 1400. Wind Turbine Climbing and Safety I

Course Description

This course will introduce the student to the environment of a wind turbine. The student will obtain skills of proper identification, inspection, donning, and maintenance of personal protection equipment (PPE) and fall protection equipment. An initial climb test will be administered before tower work proceeds.

Student Learning Outcomes

1. The student will be able to identify basic personal protective equipment (PPE).
2. The student will be able to inspect all PPE required for a safe tower climbing.
3. The student will be able to demonstrate proper donning and wear of PPE.
4. The student will be able to demonstrate proper maintenance and care of PPE.
5. The student will be able to successfully pass a pre-tower climb test before attempting to climb the wind turbine tower.
6. The student will be able to successfully climb the wind turbine tower while demonstrating safe practices and proper use of all safety equipment to include PPE.
7. The student will be able to identify faulty protective equipment.

RNBL 1410. Wind Turbine Climbing and Safety II

Course Description

This course will establish hazard awareness to the student in the environment of a wind turbine. The student will obtain skills of proper identification, inspection, reporting, and correcting the hazards. Climb time in this course will emphasize rigging, hoisting, and nacelle top equipment and proper tie off points.

Student Learning Outcomes

1. The student will be able to demonstrate knowledge of hazards in the environment of a wind turbine.
2. The student will be able to identify hazards and be able to take corrective or evasive action.
3. The student will be able to describe high voltage procedures and equipment used.
4. The student will be able to identify high voltage and low voltage cabinets.
5. The student will be able to successfully identify major components of the wind turbine and tower.
6. The student will be able to successfully ascend and descend the tower using all safety procedures and equipment.

RNBL 1993. Renewable Energy Workshop

Course Description

Renewable Energy Workshop consists of lecture, tours and hands-on labs that introduces the theory and application of residential, community and commercial renewable energy being produced or utilized in New Mexico and the surrounding areas. This week long course may end with a project.

Student Learning Outcomes

1. The student will be able to identify five renewable energies
2. The student will be able to explain how renewable energy is captured and converted
3. The student will be able to present arguments for and against use of renewable energy for a particular site.
4. The student will be able to identify water features on the Rio Grande and compare the fluid dynamics to airflow and electrical current
5. The student will be able to assemble a renewable energy device and test its function
6. The student will be able to set goals for future action on a personal, professional, or a policy level.

RNBL 2040. Introduction to Hydraulics

Course Description

This course will introduce the basic elements and applications of hydraulic power. Additional emphasis will be given to circuits, pressure, flow and control of hydraulic systems.

Student Learning Outcomes

1. The student will identify basic hydraulic equipment.
2. The student will identify the basics of hydraulic circuits, controls, systems and characteristics.
3. The student will identify the components, schematics and principles of hydraulics.
4. The student will explain the difference between atmospheric and gauge pressure.
5. The student will demonstrate how power is calculated.
6. The student will explain Pascal's Law.
7. The student will calculate the horsepower output of a hydraulic motor.
8. The student will describe and demonstrate knowledge of principles of hydraulic pressure and flow: pressure vs. cylinder force, hydraulic leverage, fluid friction, absolute vs. gage force.
9. The student will describe and demonstrate knowledge of hydraulic speed control: relief valves, check valves, flow control valves, meter-in and meter-out circuits, flow control circuit design, flow rate vs. cylinder speed.
10. The student will describe and demonstrate knowledge of pressure control circuits: sequence valves, sequence valve applications, pressure reducing valve, and applications.

RNBL 2170. Wind Turbine Siting, Erection, Generation and Distribution

Course Description

This course will instruct the student in proper wind farm siting that takes into consideration wind and weather data, ecological, anthropological and social concerns. Construction and commissioning are also covered as it relates to wind farm specifics. History of power distribution and transfer in the United States will be studied. Grid operation including renewable energy will be discussed.

Student Learning Outcomes

1. The student will be able to properly identify and use siting factors.
2. The student will be able to identify and demonstrate proper use of a MET tower.
3. The student will be able to demonstrate knowledge of proper development practices.
4. The student will be able to demonstrate basic commissioning techniques.
5. The student will be able to conduct a wind farm siting analysis.
6. The student will be able to follow all safety procedures for the climb.
7. The student will be able to identify the steps of wind turbine construction.
8. The student will be able to evaluate grid tie situations.

RNBL 2180. Wind Turbine Electronics

Course Description

This course explores the technologies and methodologies employed by heavy industry to remotely monitor and control power facilities. The study of commercial wind turbine monitoring and control systems will be strongly emphasized, as will the use of such systems to aid in the troubleshooting and maintenance of wind turbines. This course is designed to familiarize students with the principles of digital technology, and the composition of systems that employ it. Emphasis will be given to advanced industrial computerized control and automation systems.

Student Learning Outcomes

1. The student will be able to identify the technologies and concepts of Programmable Logic Controllers (PLC's).
2. The student will be able to identify various data transmission and communications protocols.
3. The student will be able to identify the technologies and concepts behind Supervisory Control and Data Acquisition (SCADA) systems.
4. The student will identify various types of input/output devices, and describe their function.
5. The student will describe the purpose for and methodology of data storage and archiving.
6. The student will demonstrate the usage of data history and trending to accomplish a given task.
7. The student will identify various embedded systems and independent control modules commonly found within WTG's.

RNBL 2190. Operation, Maintenance and Repair

Course Description

This valuable course is designed to introduce students to the general maintenance practices and procedures employed within the wind energy industry. The study of wind turbine mechanical system and subsystem fundamentals will be included. Hands on practice of installation, operation, maintenance, troubleshooting, and repair of wind turbine electro-mechanical systems is included in this course; as well as real-world troubleshooting scenarios that may be encountered in the wind energy workplace.

Student Learning Outcomes

1. The student will be able to properly identify, maintain and troubleshoot bearings used in wind turbines.
2. The student will be able to identify gasket materials and their uses.
3. The student will be able to demonstrate knowledge of lubrication purposes and identify grease and oils used in wind turbines.
4. The student will be able to list the properties of lubrication oils and grease.
5. The student will be able to use the basics of a wind farm SCADA system.
6. The student will be able to use SCADA to help diagnose turbine problems.

7. The student will be able to identify communications components used in the wind industry.
8. The student will be able to identify and correct electrical problems found on the wind turbine to include contactors and relays.

RNBL 2400. Tower Climb and Safety III

Course Description

This course will instruct the student in proper procedure of entering the hub of a wind turbine. Proper lock out/tag out procedures will be followed. The student will learn to identify components inside the hub. This course will emphasize safe techniques of hub entry and egress.

Student Learning Outcomes

1. The student will be able to identify hub components.
2. The student will be able to demonstrate proper lock out/tag out of the rotor lock.
3. The student will be able to demonstrate proper entry and exit of the wind turbine hub.
4. The student will be able to inspect and wear proper PPE for the climb.
5. The student will be able to follow all safety procedures for the climb.
6. The student will be able to rig and hoist special equipment needed for the climb.

RNBL 2410. Tower Climb and Safety IV

Course Description

This course will instruct the student in proper stopping and starting procedures of the wind turbine. The students will be able to identify and perform proper housekeeping. Proper maintenance and troubleshooting techniques will be introduced. During the climb all previous knowledge of climb safety will be evaluated.

Student Learning Outcomes

1. The student will be able to properly start and stop the wind turbine.
2. The student will be able to identify and demonstrate proper housekeeping.
3. The student will be able to demonstrate proper maintenance procedures.
4. The student will be able to demonstrate basic troubleshooting techniques.
5. The student will be able to inspect and wear proper PPE for the climb.
6. The student will be able to follow all safety procedures for the climb.
7. The student will be able to rig and hoist special equipment needed for the climb.

Respiratory Therapy (RESP)

RESP 1110. RT Orientation and Patient Assessment

Course Description

This course introduces the scope of practice, education, licensure, organizations and brief history of the profession of respiratory care. It also presents the basic techniques of patient interview, medical record review, physical assessment, basic ECG, Laboratory and chest x-ray assessment of the patient with cardiopulmonary disorder. Minimum grade required: C

Student Learning Outcomes

1. Analyze assessment data to prioritize patient care and provide patient education for the prevention and treatment of pulmonary disease or disorders.

RESP 1113. Introduction to Respiratory Therapy

Course Description

An overview of respiratory care, its evolution as a profession and its current relation to the modern health care system. Includes medical terminology, basic concepts of microbiology and chemistry, health communication, general patient care principles, as well as ethical and legal implications of health care. Principles of infection control employed in the hospital?

respiratory care department. Includes discussion of organisms responsible for contamination in respiratory care and techniques for preventing contamination. Also, it will cover the principles and techniques of basic cardiac life support, prudent living, risk factors, and action for survival. Students will also acquire skills in airway and breathing management using adjuncts, use of an automatic defibrillator, an initial management of life threatening situations. Upon completion, students are eligible for Basic Life Support Certification by the American Heart Association.

Student Learning Outcomes

1. Understand the Respiratory Care Profession:
 - a. Describe the evolution and current role of respiratory care within the modern health care system.
 - b. Identify key historical developments and the professional standards of respiratory therapy.
2. Utilize Medical Terminology:
 - a. Demonstrate proficiency in medical terminology relevant to respiratory care and communicate effectively using appropriate terminology.
3. Apply Basic Concepts of Microbiology and Chemistry:
 - a. Explain fundamental microbiological and chemical principles related to respiratory care.
 - b. Recognize common microorganisms involved in respiratory infections and their impact on patient care.
4. Implement Effective Health Communication:
 - a. Employ effective communication techniques in patient interactions and interdisciplinary team settings.
 - b. Address patient concerns and provide clear, compassionate information regarding respiratory care.
5. Perform Basic Cardiac Life Support:
 - a. Master the principles and techniques of Basic Cardiac Life Support (BCLS), including the use of an automatic defibrillator.
 - b. Execute appropriate actions in response to life-threatening situations to ensure patient survival.
 - c. Demonstrate the skills and knowledge necessary to achieve Basic Life Support Certification by the American Heart Association.
 - d. Understand Ethical and Legal Implications:
 - e. Analyze and apply ethical and legal principles in the practice of respiratory care, ensuring adherence to professional standards and regulations.
 - f. Describe the evolution and current role of respiratory care within the modern health care system.
 - g. Identify key historical developments and the professional standards of respiratory therapy

RESP 1118. Diagnostic and Therapeutic Techniques

Course Description

This course introduces basic cardiopulmonary diagnostic testing, specifically arterial blood gas (ABG) analysis and pulmonary function testing (PFT). It also covers the various therapeutic modalities used in respiratory care for humidity and aerosol therapy, lung expansion therapy, bronchial hygiene, chest physiotherapy and airway clearance.

Student Learning Outcomes

1. Describe the importance of pulmonary function testing and its different diagnostic measurements.
2. Demonstrate the pulmonary function testing (PFT) procedure, and interpret PFT results.
3. Describe the importance of arterial blood gas analysis (ABG) and its different diagnostic measurements.
4. Demonstrate the ABG procedure, and interpret ABG results.
5. Discuss the clinical applications of humidity therapy.
6. Calculate values for the different terms in humidity.
7. Explain the principles of operation of the different types of humidifiers.
8. Describe the principles of aerosol therapy.

9. Describe and demonstrate the principles, clinical applications and troubleshooting of nebulizers.
10. Explain how lung expansion therapy works.
11. Describe bronchial hygiene therapy.
12. Demonstrate airway clearance techniques.

RESP 1120. Cardiopulmonary Pathophysiology I

Course Description

Introduces the student to assessment and management of selected respiratory disorders. Topics include anatomic changes, pathophysiology, etiology, differential diagnosis, clinical manifestations, and management.

Student Learning Outcomes

1. Apply basic data collection, content organization, and assessment skills in disease processes; and display the ability to develop a treatment plan for cardiopulmonary disease processes.
2. Distinguish and apply the skills needed to assess and treat a patient on the “General Care Units”; as well as diagnostic Laboratoryoratories relating to specific disease processes through case study analysis.
3. Analyze and interpret basic pulmonary Function diagnostic information to assess and report cardiopulmonary patient conditions.
4. Analyze and interpret basic acid/base diagnostic information to assess and report cardiopulmonary patient conditions.
5. Utilize proper format and technical data to report appropriate patient information.

RESP 1122. Therapeutic Modalities

Course Description

Covers respiratory care therapeutic modalities in all patient populations, including medical gas administration, oxygen therapy, humidity and aerosol therapy, bronchial hygiene, airway management, lung expansion therapy and the applicable physics and mathematics. This course introduces students to respiratory care professional organizations and to professional and ethical issues in health care, sustainable living through study of the “invisible structures” behind environmental sustainability, and the environmental impact of the medical industry.

Student Learning Outcomes

1. Demonstrate knowledge and appropriate application of patient safety and infection control standards.
2. Demonstrate knowledge/awareness of sustainable perspectives as they relate to the health care industry and the practice of respiratory care.
3. Demonstrate understanding of theory, goals, indications, contraindications, hazards, administration, assessment and documentation of oxygen therapy modalities and medical gas administration.
4. Demonstrate understanding of theory, goals, indications, contraindications, hazards, administration, assessment and documentation of lung expansion therapy modalities.
5. Demonstrate understanding of theory, goals, indications, contraindications, hazards, administration, assessment and documentation of bronchial hygiene therapy modalities.
6. Demonstrate understanding of theory, goals, indications, contraindications, hazards, assessment and documentation of airway management adjuncts.
7. Demonstrate appropriate education for patients and families for each modality.
8. Participate effectively in the interdisciplinary patient care team.

RESP 1124. Special Procedures in Respiratory Care

Course Description

This course discusses chest tube and drainage systems, hemodynamic monitoring, sleep studies, bronchoscopy, Holter monitoring, exercise testing, and metabolic studies.

Student Learning Outcomes

Student Learning Outcomes

1. Describe chest tubes and chest drainage systems.
2. Discuss hemodynamic monitoring
3. Identify the requirements for bronchoscopy.
4. Describe Holter monitoring.
5. Describe the common sleep disorders and polysomnography
6. Identify the requirements for exercise testing
7. Describe nutritional assessment and indirect calorimetry.

RESP 1125. Cardiopulmonary Pharmacology I

Course Description

Introduction to cardiopulmonary pharmacology as used in respiratory care. Topics include review of central and peripheral nervous systems, pharmacology terminology, dosage calculations, bronchodilating agents, mucous-controlling agents, corticosteroids and aerosol administration.

Student Learning Outcomes

1. Demonstrate knowledge and appropriate application of patient safety and infection control standards.
2. Participate effectively in the interdisciplinary patient care team.
3. Demonstrate appropriate patient/family education.
4. Identify and define applicable pharmacology terminology.
5. Demonstrate competence in drug calculations required of the respiratory care professionals.
6. Identify bronchodilating agents, their administration, indications, dosages, contraindications, hazards and side-effects.
7. Identify selected mucous-controlling agents, their administration, indications, dosages, contraindications, hazards and side effects.
8. Identify selected corticosteroids, their administration, indications, dosages, contraindications, hazards and side effects.
9. Identify selected other agents of pulmonary value, their administration, indications, dosages, contraindications, hazards and side effects.

RESP 1128. Basic Assessment and Monitoring

Course Description

Study of patient assessment, diagnostic procedures, and testing techniques. Includes the detection and monitoring of adult, neonatal and pediatric cardiorespiratory disorders including advanced cardiac life support (ACLS). Also includes participation in a service-learning project. Upon completion, students are eligible for the Advanced Cardiac Life Support (ACLS) certification by the American Heart Association.

Student Learning Outcomes

1. Conduct Comprehensive Patient Assessment:
 - a. Perform thorough patient assessments for adult, neonatal, and pediatric populations, including the evaluation of cardiorespiratory status.
 - b. Utilize clinical skills to gather relevant patient history, conduct physical examinations, and identify signs and symptoms of cardiorespiratory disorders.
2. Utilize Diagnostic Procedures and Testing Techniques:

- a. Apply diagnostic procedures and testing techniques to evaluate cardiorespiratory function, including the use of diagnostic tools such as electrocardiograms (ECGs), pulse oximetry, and arterial blood gases (ABGs).
 - b. Interpret test results accurately to support clinical decision-making and patient management.
3. Monitor Cardiorespiratory Disorders:
 - a. Detect and monitor cardiorespiratory disorders through continuous and intermittent assessment methods.
 - b. Implement appropriate monitoring strategies for patients with various cardiorespiratory conditions, including acute and chronic disorders.
4. Apply Advanced Cardiac Life Support (ACLS) Protocols:
 - a. Demonstrate proficiency in Advanced Cardiac Life Support (ACLS) techniques and protocols, including the management of cardiac arrest and arrhythmias.
 - b. Perform ACLS procedures according to the latest guidelines and standards set by the American Heart Association.
 - c. Meet the requirements for Advanced Cardiac Life Support (ACLS) certification by demonstrating the necessary skills and knowledge through practical and written examinations.
5. Participate in Service-Learning Project:
 - a. Engage in a service-learning project that integrates course concepts with community service or clinical practice.
 - b. Reflect on and articulate the impact of the service-learning experience on personal and professional development in respiratory care.
 - c. Apply Knowledge to Clinical Scenarios:
 - d. Integrate theoretical knowledge and practical skills in clinical scenarios to address complex patient cases involving cardiorespiratory assessment and monitoring.

RESP 1128L. Basic Assessment and Monitoring Laboratory

Course Description

Basic Assessment and Monitoring Laboratory. One credit hour. Application of concepts taught in Basic Assessment and Monitoring RCP.

Student Learning Outcomes

1. Apply Patient Assessment Techniques:
 - a. Demonstrate the ability to perform comprehensive assessments for adult, neonatal, and pediatric patients, including physical exams and the use of assessment tools.
 - b. Apply techniques for detecting and evaluating cardiorespiratory disorders in a Laboratory setting.
2. Perform Diagnostic Procedures:
 - a. Execute diagnostic procedures and testing techniques, such as ECGs, pulse oximetry, and arterial blood gas (ABG) analysis, with proficiency.
 - b. Interpret diagnostic test results accurately to guide clinical decision-making and patient management.
 - c. Monitor Cardiorespiratory Disorders:
 - d. Practice the monitoring of cardiorespiratory disorders using appropriate equipment and methods.
 - e. Demonstrate the ability to continuously and intermittently monitor patients, identifying and responding to changes in their condition.
3. Implement Advanced Cardiac Life Support (ACLS) Skills:
 - a. Apply Advanced Cardiac Life Support (ACLS) protocols in simulated scenarios, demonstrating the ability to manage cardiac arrest and other critical situations effectively.
 - b. Perform ACLS procedures according to the latest American Heart Association guidelines.

- c. Demonstrate the skills and competencies required for ACLS certification through practical exercises and simulations.
 - d. Ensure readiness for certification exams by practicing and mastering key ACLS procedures and protocols.
4. Integrate Theoretical Knowledge into Practice:
- a. Translate concepts learned in RCP 108 into practical Laboratory exercises, effectively applying theoretical knowledge to real-world scenarios.
 - b. Demonstrate critical thinking and problem-solving skills during Laboratory activities and simulations.
 - c. Participate in Hands-On Practice:
 - d. Engage in hands-on practice of assessment and monitoring techniques, including the use of Laboratory equipment and simulation tools.
 - e. Develop and refine practical skills necessary for accurate patient assessment and effective monitoring.

RESP 1130. Respiratory Care Anatomy and Physiology

Course Description

Study of the cardiopulmonary system and associated structures. Includes nervous system control of ventilation, renal system, and the principles involved in ventilation and gas transport. Also, includes the effects of aging, exercise, and altitude on the cardiopulmonary system.

Student Learning Outcomes

1. Understand Cardiopulmonary Anatomy and Physiology:
Describe the structure and function of the cardiopulmonary system, including the heart, lungs, and associated vascular structures.
2. Analyze Nervous System Control of Ventilation:
Explain the role of the nervous system in regulating ventilation, including the mechanisms of respiratory control and feedback systems.
3. Explain Renal System Interactions:
Discuss the interaction between the renal system and the cardiopulmonary system, including the regulation of fluid and electrolyte balance and its impact on respiratory function.
4. Apply Principles of Ventilation and Gas Transport:
Demonstrate an understanding of the principles of ventilation and gas transport, including the mechanics of breathing, gas exchange, and transport in the blood.
5. Assess the Effects of Aging on the Cardiopulmonary System: Identify and describe how the aging process affects cardiopulmonary function and structure, including changes in respiratory and cardiovascular efficiency.
6. Evaluate the Impact of Exercise on Cardiopulmonary Function:
Analyze the physiological responses of the cardiopulmonary system to exercise, including adaptations and the impact on ventilation and cardiovascular performance.

RESP 1140. Respiratory Therapy Pharmacology

Course Description

Principles of pharmacology, drug dose calculations, and drug receptor theory as it relates to patients with cardiopulmonary disease. Includes specific emphasis on drugs used by respiratory care practitioners as well as discussion of other drugs used in the treatment of patients under their care.

Student Learning Outcomes

1. Have an introductory level of knowledge of the basic general principles of pharmacology that relate to all medications, drug actions, routes of administration etc.

2. Accurately calculate typical drug-dose calculations.
3. Demonstrate an in-depth knowledge of the mode of action, desired clinical effect and common and serious adverse effects of the medications commonly used in respiratory care.
4. Relate pharmacologic therapy to common pulmonary pathologies.
5. Effectively evaluate and educate patients regarding self-management of asthma and smoking cessation techniques.
6. Understand the underlying neurophysiology involved with each class of drugs studied in this course.

RESP 1150. Respiratory Therapy I

Course Description

Introduces respiratory therapy as a health sciences profession. Topics include cardiopulmonary assessment, medical gas administration, aerosol therapy, oxygen therapy, microbiology, infection control, equipment maintenance, incentive breathing exercises and chest physiotherapy.

Student Learning Outcomes

1. Accurately perform a complete cardiopulmonary assessment of any non-critically ill patient.
2. Apply knowledge of the basic anatomy and physiology of the cardiopulmonary system, especially as it relates to the transportation of oxygen in the human body.
3. Correctly set up equipment and assess effectiveness of bland aerosol equipment.
4. Relate how microbiology impacts respiratory therapy to include using the correct technique for the isolation of patients and utilizing standard precautions in the clinical setting.
5. Evaluate the procedures for cleaning and sterilization of respiratory therapy equipment.
6. Apply basic respiratory treatment to include chest physiotherapy, airway maintenance, and basic medication administration.

RESP 1150L. Respiratory Therapy I Laboratory

Course Description

Students practice cardiopulmonary assessment, medical gas administration, aerosol therapy, oxygen therapy, microbiology, infection control, equipment maintenance, incentive breathing exercises and chest physiotherapy using state of the art equipment in the learning Laboratory under simulated patient situations.

Student Learning Outcomes

1. Accurately perform a complete cardiopulmonary assessment of any non-critically ill patient.
2. Apply knowledge of the basic anatomy and physiology of the cardiopulmonary system, especially as it relates to the transportation of oxygen in the human body.
3. Correctly set up equipment and assess effectiveness of bland aerosol equipment.
4. Relate how microbiology impacts respiratory therapy to include using the correct technique for the isolation of patients and utilizing standard precautions in the clinical setting.
5. Evaluate the procedures for cleaning and sterilization of respiratory therapy equipment.
6. Apply basic respiratory treatment to include chest physiotherapy, airway maintenance, and basic medication administration.

RESP 1160. Physics of Respiratory Therapy

Course Description

This course introduces the basic concepts in the physics and the applications of gas laws in respiratory therapy. It discusses the physical characteristics of medical gasses, production, regulation, storage and distribution, and the therapeutic and diagnostic uses of oxygen.

Student Learning Outcomes

1. Conceptualize the basic physical principles inherent in respiratory therapy.
2. Develop the mathematical tools necessary for solving physics problems presented in this class.
3. Estimate answers to math/physics problems before solving them.
4. Determine the correct formula and then successfully apply it to solve math/physics problems.
5. Recall and correctly use terminology and symbols commonly used in scientific arenas.
6. Relate the history of physics and the history of respiratory therapy science to problems included in this course.

RESP 1162. Cardiopulmonary Diagnostics**Course Description**

Builds on the basic assessment and interpretation skills acquired in RESP 1130 and includes pulmonary function testing, acid-base balance, arterial blood gases (ABGs), ECGs, chest radiography (CXR), cardiac diagnostics bronchoscopy assisting and an introduction to intravenous (IV) therapy.

Student Learning Outcomes

1. Demonstrate knowledge and appropriate application of patient safety and infection control standards.
2. Participate effectively in the interdisciplinary patient care team.
3. Perform a complete patient assessment, including chart review, interview and physical exam.
4. Make recommendations based on patient assessment.
5. Demonstrate competence in ABG sampling, obtaining an ECG, performing spirometry and pulmonary mechanics and starting and managing IV therapy.
6. Interpret ABG, ECG, CXR and applicable Laboratory results and make recommendations.
7. Demonstrate bronchoscopy assisting.
8. Utilize AIDET (Acknowledge, Introduce, Duration, Explanation, Thank you) and appropriate patient education techniques.

RESP 1166. Cardiopulmonary Pharmacology II**Course Description**

Continuation of RESP 1125 Cardiopulmonary Pharmacology with an emphasis on advanced cardiac life support (ACLS) and critical care agents. Topics include advanced cardiac life support agents, cardiovascular agents, critical care agents and a review of dosage calculations.

Student Learning Outcomes

1. Demonstrate knowledge and appropriate application of patient safety and infection control standards.
2. Participate effectively in the interdisciplinary patient care team.
3. Demonstrate appropriate patient/family education.
4. Identify and define applicable pharmacology terminology.
5. Demonstrate competence in drug calculations required of the respiratory care professionals.
6. Identify ACLS agents, their administration, indications, dosages, contraindications, hazards and side effects.
7. Identify other selected pulmonary agents, their administration, indications, dosages, contraindications, hazards and side effects.
8. Identify selected critical care and cardiovascular agents and their indications and contraindications.

RESP 1170C. Ventilator Management Lecture & Laboratory**Course Description**

Introduces mechanical ventilation background, theory and physiologic effects. This course prepares the student to initiate and manage advanced airways and mechanical ventilation in the patient care setting and includes discussion of disorder-specific ventilation strategies and technical operation of specific ventilators.

Student Learning Outcomes

1. Demonstrate knowledge and appropriate application of patient safety, infection control standards and equipment processing.
2. Participate effectively in the interdisciplinary patient care team.
3. Demonstrate appropriate communication with patients and families.
4. Demonstrate intubation and extubation procedures at the novice level of skill.
5. Describe and demonstrate initiation, assessment, monitoring and optimization of mechanical ventilation.
6. Recognize different ventilation modes/strategies.
7. Describe troubleshooting and complications of mechanical ventilation.
8. Describe disorder-specific ventilation strategies.
9. Identify important technical operational differences among ventilators.

RESP 1170. Ventilator Management

Course Description

Study of critical care principles and procedures in the adult patient. Includes advanced airway management, mechanical ventilation principles, care of the mechanically ventilated patient, and alternatives to conventional ventilation.

Student Learning Outcomes

1. Master Advanced Airway Management:
 - a. Demonstrate proficiency in advanced airway management techniques, including endotracheal intubation, placement of supraglottic airway devices, and the use of bronchoscopy.
 - b. Identify and manage complications associated with advanced airway interventions.
2. Understand Mechanical Ventilation Principles:
 - a. Explain the principles and modes of mechanical ventilation, including volume control, pressure control, and other advanced modes.
 - b. Describe the physiological effects of mechanical ventilation on the respiratory and cardiovascular systems.
3. Manage the Mechanically Ventilated Patient:
 - a. Develop and implement effective care plans for patients receiving mechanical ventilation, including monitoring, troubleshooting, and adjusting ventilator settings.
 - b. Assess and address common issues and complications associated with mechanical ventilation, such as ventilator-associated pneumonia and barotrauma.
4. Apply Alternatives to Conventional Ventilation:
 - a. Describe and utilize alternative ventilation strategies, such as non-invasive ventilation (NIV) and high-frequency oscillatory ventilation (HFOV).
 - b. Evaluate the indications, benefits, and limitations of alternative ventilation methods in critical care settings.
5. Integrate Critical Care Principles into Practice:
 - a. Apply critical care principles to real-world scenarios, including the assessment, diagnosis, and management of critically ill patients.
 - b. Utilize evidence-based practices and clinical guidelines to inform decision-making in critical care settings.
6. Demonstrate Proficiency in Critical Care Procedures:
 - a. Perform critical care procedures with competence, including the use of advanced airway devices and mechanical ventilators.

- b. Simulate and practice critical care scenarios to reinforce procedural skills and clinical judgment.
- 7. Collaborate Effectively in Critical Care Teams:
 - a. Exhibit teamwork and communication skills essential for effective collaboration in a critical care environment.
 - b. Engage with interdisciplinary teams to provide comprehensive care for critically ill patients.
- 8. Prepare for Advanced Clinical Practice:
 - a. Integrate knowledge and skills from RCP 110 into clinical practice, preparing for complex patient care scenarios in critical care settings.
 - b. Ensure readiness for real-world application of advanced critical care therapeutics and techniques.

RESP 1170L. Ventilator Management Laboratory

Course Description

Application of Ventilator Management RESP 1170

Student Learning Outcomes

1. Demonstrate proper use of Respiratory Therapy Equipment.
 - a. Identify and correctly operate various respiratory care equipment used in critical care settings, including ventilators, oxygen delivery systems, and monitoring devices.
2. Apply Ventilation Techniques in Critical Care Scenarios.
 - a. Implement appropriate mechanical ventilation techniques in simulated critical care situations, adjusting parameters based on patient needs and conditions.
3. Perform Airway Management Procedures.
 - a. Demonstrate effective airway management techniques, including intubation, suctioning, and the use of airway adjuncts, in a Laboratory setting.
4. Administer and Monitor Respiratory Therapies.
 - a. Safely administer therapeutic gases, aerosol treatments, and other respiratory interventions while monitoring patient response and adjusting as needed.
5. Evaluate Patient Data to Modify Respiratory Care Plans.
 - a. Analyze patient data, including arterial blood gases (ABGs), ventilator settings, and vital signs, to make informed decisions about modifying respiratory care treatment plans.
6. Practice Infection Control Procedures in Critical Care.
 - a. Follow and apply infection control practices specific to respiratory therapy in critical care settings, including the proper handling of equipment and disposables.
7. Demonstrate Emergency Response Skills.
 - a. Respond effectively to respiratory and cardiac emergencies in a critical care environment, performing advanced life-saving techniques such as rapid sequence intubation and resuscitation.
8. Collaborate with Healthcare Team in Critical Care Simulation.
 - a. Work collaboratively with healthcare professionals in simulated critical care scenarios to provide comprehensive respiratory care, communicating clearly and efficiently.
9. Apply Ethical and Legal Principles in Critical Care Practice.
 - a. Recognize and apply ethical and legal considerations related to respiratory care in critical care environments, ensuring patient safety and professional integrity.
10. Demonstrate Proficiency in Documentation.
 - a. Accurately document all respiratory care interventions and patient responses in a critical care simulation setting, following standard healthcare protocols.

RESP 1250 Respiratory Therapy II

Course Description

Advanced respiratory care techniques. Emphasis on airway management, aerosol treatment, chest physiotherapy, pharmacology, posture pressure breathing, and pulmonary rehabilitation.

Student Learning Outcomes

1. Demonstrate a comprehensive understanding of the anatomy and physiology of the arterial system.
2. Apply and explain the basic principles of pharmacology therapy as it relates to the cardiopulmonary system.
3. Analyze and differentiate the basic pulmonary physiology associated with restrictive and obstructive disease processes. Analyze test results to identify abnormal findings.
4. Interpret and apply advanced airway management techniques including endotracheal intubation, tracheostomy, laryngeal mask airway, and supraglottic airway.
5. Describe and interpret radiographic images to assess respiratory and cardiopulmonary conditions.
6. Identify the anatomy, physiology and the electrical conduction of the heart.
7. Differentiate between invasive and non-invasive mechanical ventilation techniques, explaining their indications and contraindications.
8. Demonstrate knowledge of emergency life support related to respiratory therapy.

RESP 1250L. Respiratory Therapy II Laboratory

Course Description

Students practice airway management, pulmonary function testing, arterial puncture and blood gas analysis and administering home care therapy procedures using state of the art equipment in the learning Laboratory under simulated patient situations.

Student Learning Outcomes

1. Demonstrate the correct setup, operation, and maintenance of various respiratory therapy equipment; to include oxygen delivery systems, medication delivery devices CPAP/BiPAP machines and ventilators.
2. Complete respiratory assessments including vital signs: arterial blood gas ECG, pulmonary function test and ECG interpretations.
3. Properly assess and ensure airway patency.
4. Respond and react to airway emergencies and initiate proper treatment as indicated.

RESP 1294L. Basic Clinical Prep Laboratory I

Course Description

Provides first-year respiratory therapy students a basic overview of what to expect in the general care units within clinical rotations. Prepares students for basic tasks within the clinical setting.

Student Learning Outcomes

1. Perform aseptic techniques.
2. Comprehend and apply proper hand hygiene and proper placement of personal protective equipment.
3. Identify basic respiratory equipment.
4. Understand the indications, contraindications, and complications of basic respiratory equipment.
5. Perform various basic respiratory therapies.
6. Understand the indications, contraindications, and complications of various basic respiratory therapies.

RESP 1310. Clinical Experiences I

Course Description

Provides supervised clinical experiences in area hospitals and health care facilities.

Student Learning Outcomes

1. Accurately assess the status of real and fictitious patients in the general care unit of a hospital. Make recommendations for changes based on the assessment of the patient's total needs.
2. Demonstrate the skill level needed to successfully complete clinical simulation scenarios related to adult patients who require a basic level of care.
3. Develop and/or accurately complete problem-based case studies of patients in the general care unit of a hospital.

RESP 1312. Clinical Experiences II

Course Description

Continuation of RESP 1310 which provides supervised clinical experiences in area hospitals and health care facilities.

Student Learning Outcomes

1. Demonstrate the skill level needed to successfully complete clinical simulation scenarios related to adult patients who require an intermediate level of care.
2. Develop and/or accurately complete problem-based case studies of patients on the general and intermediate-care units.
3. Accurately assess the status of real and fictitious patients on the intermediate-care population.
4. Make recommendations for therapy changes based on the assessment of the patient's total needs.

RESP 1320L. Clinical Procedures I

Course Description

Clinical application of all prerequisite and corequisite respiratory care coursework. Includes hospital and departmental organization; professionalism; medical record utilization; oxygen administration and analysis; and respiratory physiology principles applied to patient care.

Student Learning Outcomes

1. Apply Clinical Knowledge and Skills:
Demonstrate the ability to apply knowledge and skills from prerequisite and corequisite coursework to real-world respiratory care scenarios.
Exhibit proficiency in clinical techniques and procedures related to respiratory care.
2. Understand Hospital and Departmental Organization:
Explain the organizational structure and workflow of the hospital and respiratory care department.
Identify roles and responsibilities of various healthcare professionals and how they interact within the respiratory care setting.
3. Demonstrate Professionalism:
Display professionalism in clinical settings, including adherence to ethical standards, effective communication, and respectful interaction with patients and healthcare team members.
4. Utilize Medical Records Effectively:
Accurately utilize medical records and documentation systems to gather patient information, track progress, and support clinical decision-making.
Maintain accurate and confidential patient records in compliance with healthcare regulations.
5. Administer and Analyze Oxygen Therapy:

Perform oxygen administration and analysis techniques, including the use of appropriate equipment and methods for assessing oxygen levels.

Evaluate patient responses to oxygen therapy and adjust treatment plans as necessary.

6. Apply Respiratory Physiology Principles to Patient Care:

Integrate principles of respiratory physiology into patient care practices, including assessment, diagnosis, and treatment planning.

Demonstrate an understanding of how physiological concepts impact respiratory function and patient outcomes.

7. Achieve Clinical Competency:

Meet the competency-based requirements for clinical procedures as outlined by the course, including successful demonstration of required skills and adherence to clinical guidelines.

RESP 1322L. Clinical Procedures II

Course Description

Continuation of RESP 1320L. Includes clinical application of all prerequisite respiratory care coursework. Also includes basic respiratory care therapeutics, basic assessment, monitoring, and clinical application of cardiopulmonary medications.

Student Learning Outcomes

1. Apply Basic Respiratory Care Therapeutics in Clinical Settings.
 - a. Demonstrate the clinical application of basic respiratory care therapies, including oxygen therapy, aerosol treatments, and airway clearance techniques.
2. Perform Respiratory Assessments in Real-World Clinical Environments.
 - a. Conduct comprehensive patient assessments, including respiratory rate, breath sounds, and oxygenation levels, in a clinical setting.
3. Monitor and Evaluate Cardiopulmonary Function.
 - a. Utilize appropriate monitoring techniques (e.g., pulse oximetry, capnography, and electrocardiograms) to assess and evaluate patients' cardiopulmonary function.
4. Administer and Manage Cardiopulmonary Medications.
 - a. Safely administer prescribed cardiopulmonary medications, such as bronchodilators and mucolytics, and monitor patients for therapeutic effectiveness and adverse reactions.
5. Apply Clinical Knowledge in Diverse Healthcare Settings.
 - a. Demonstrate adaptability in applying respiratory care skills in various clinical environments, including hospitals and other healthcare facilities, with potential travel for clinical experiences.
6. Demonstrate Competency in Clinical Respiratory Care.
 - a. Meet clinical competency standards by successfully performing all required respiratory care procedures under supervision in real patient care settings.
7. Collaborate with Healthcare Teams in Clinical Practice.
 - a. Work effectively as part of an interdisciplinary healthcare team, contributing to the delivery of respiratory care and patient management in clinical settings.
8. Document Patient Care and Interventions
 - a. Accurately record patient assessments, interventions, and responses to therapy in clinical documentation, adhering to professional standards.
9. Integrate Ethical and Legal Considerations in Clinical Practice
 - a. Apply ethical principles and follow legal guidelines in providing respiratory care, ensuring patient rights, confidentiality, and safety.
10. Demonstrate Professionalism in Clinical Environments.

- a. Exhibit professional behavior, including effective communication, punctuality, and responsibility, while participating in clinical rotations and interacting with patients and healthcare staff.

RESP 1330. Respiratory Therapy II Clinical

Course Description

Supervised practice and application in a hospital setting.

Student Learning Outcomes

1. Maintain Patient confidentiality/privacy as defined by HIPAA.
2. Use critical thinking, problem solving and ethical decision-making in the assessment, diagnosis, planning, evaluation, and implementation of respiratory procedures.
3. Recognize emergency situations and respond appropriately.
4. Compose a patient assessment & Compose a patient SOAP/Patient Assessment document.
5. Demonstrate and perform cardiopulmonary diagnostic procedures.
6. Demonstrate how to set up and maintain a mechanical ventilator.
7. Demonstrate appropriate patient/physician interactions in the clinical setting.

RESP 1340L. Respiratory Care Clinical I

Course Description

Introduction to respiratory care in the patient care setting. Clinical experiences include patient assessment, interview and physical exam, chart review, documentation, basic respiratory equipment and procedures, airway management, and applicable therapist driven protocols.

Student Learning Outcomes

1. Use AIDET protocol (Acknowledge, Introduce, Duration, Explanation, Thank you) in the acute care setting.
2. Demonstrate knowledge and application of principles of patient safety, infection control, and participation in the healthcare team at the advanced beginner level of competency.
3. Perform a cardiopulmonary patient assessment at the novice level of skill.
4. Interpret cardiopulmonary assessments and make treatment recommendations at the novice level of skill.
5. Perform basic respiratory therapy therapeutics at the advanced beginner level of skill.
6. Process respiratory equipment with appropriate attention to safety and infection control.
7. Use applicable therapist-driven protocols effectively.

RESP 1342L. Respiratory Care Clinical II

Course Description

Builds on experience and skills acquired in Respiratory Care Clinical I. Experiences include cardiopulmonary diagnostics: arterial blood gases (ABGs), ECGs, intravenous therapy (IVs) and radiography (X-ray) and bronchoscopy.

Student Learning Outcomes

1. Use AIDET protocol (Acknowledge, Introduce, Duration, Explanation, Thank you) in the acute care setting.
2. Demonstrate knowledge and application of principles of patient safety, infection control, and participation in the healthcare team at the advanced beginner level of competency.
3. Perform a cardiopulmonary patient assessment at the novice level of skill.
4. Interpret cardiopulmonary assessments and make treatment recommendations at the novice level of skill.
5. Perform basic respiratory therapy therapeutics at the advanced beginner level of skill.
6. Process respiratory equipment with appropriate attention to safety and infection control.
7. Use applicable therapist-driven protocols effectively.

RESP 1350. Clinical Practicum I

Course Description

This course provides clinical experience in basic therapeutic modalities in the clinical setting. This includes patient assessment, non-invasive monitoring, pulmonary function testing, blood gas analysis, EKG, chest x-ray, medical gas therapy, aerosol therapy, humidity therapy, IPPB, chest physiotherapy, and airway care.

Student Learning Outcomes

1. Analyze assessment data to prioritize patient care and provide patient education for the prevention and treatment of pulmonary disease and disorders.
 - a. Select, review, obtain and interpret data.
 - b. Initiate, conduct, and modify prescribed therapeutic procedures based on patient outcomes.
2. Provide culturally sensitive care to patients across their lifespan.
3. Integrate clinical research and evidence-based practice for informed decision-making in the provision of quality patient care.
4. Employ leadership concepts to foster communication and collaboration within the interdisciplinary health care team.
 - a. Demonstrate ethical behavior, safety practices, effective communication skills, interpersonal and teamwork skills in a clinical environment.
5. Demonstrate the safe use of technology and information management systems.
 - a. Select, assemble and check equipment for proper function, operation, and cleanliness.
 - b. Demonstrate proficiency and competency in the delivery of respiratory care procedures.

RESP 1520. Cardiopulmonary Pathophysiology II

Course Description

Presents pathophysiology and management of patients with pulmonary diseases, often from the perspective of a physician. Includes causes, signs and symptoms, pathophysiology, diagnosis, treatments, and prognosis for patients with diseases involving the cardio-pulmonary systems.

Student Learning Outcomes

1. Develop a treatment plan for specific disease processes.
2. Execute the skills to assess and treat patient's specific disease processes through case study analysis.
3. Analyze case studies and articles relating to various disease processes.

RESP 1592L. Scenario Procedures Laboratory I

Course Description

Provides first-year respiratory therapy students additional learning over general respiratory care and practice of basic respiratory therapy skills in the campus laboratory.

Student Learning Outcomes

1. Complete therapeutic procedures such as aerosol and humidity therapy, chest physiotherapy, invasive and non-invasive ventilation application.
2. Respond to respiratory emergencies. Execute airway procedures as indicated, such as bag-valve mask ventilation, airway suction, and cardiopulmonary resuscitation.
3. Participate in simulated clinical scenarios to practice and refine all respiratory therapy skills in a controlled environment.

RESP 1992. Respiratory Therapy Directed Study**Course Description**

Varies

Student Learning Outcomes

Varies

RESP 1996. Topics in Respiratory Therapy**Course Description**

Varies

Student Learning Outcomes

Varies

RESP 2110. Respiratory Therapy Cardiopulmonary**Course Description**

This course delves into the study of commonly encountered respiratory disorders in adult patients. It encompasses an in-depth examination of the etiology, pathology, pathogenesis, clinical manifestations, and treatment of a variety of common adult pulmonary diseases.

Student Learning Outcomes

1. Identify and describe common adult respiratory disorders, explaining their etiology, pathology, and clinical manifestations. They will be able to formulate appropriate treatment plans for patients with pulmonary diseases, evaluating diagnostic data and applying evidence-based practices.
2. Recognize preventative strategies for respiratory diseases and demonstrate an understanding of COPD, asthma, and pulmonary infections.
3. Apply patient safety and infection control principles while demonstrating effective communication and interprofessional collaboration.

RESP 2120 Respiratory Therapy III**Course Description**

Presents basic concepts of adult care medicine including adult intensive care and pathophysiology of diseases, introduction to concepts of positive pressure ventilation and advanced airway care. Introduction to positive pressure mechanical ventilation equipment and procedures related to basic critical care medicine for adults using state of the art equipment and computer simulations in the learning Laboratory.

Student Learning Outcomes

1. Classify foundational concepts and core knowledge of mechanical ventilation.
2. Monitor mechanical ventilation and assessment of patients receiving mechanical ventilation and in the intensive care units.
3. Evaluate when and how to discontinue a patient from ventilation and long-term ventilation.
4. Successfully initiate ventilation.

RESP 2120L. Respiratory Therapy III Laboratory**Course Description**

Introduction to positive pressure mechanical ventilation equipment and procedures related to basic critical care medicine for adults using state of the art equipment and computer simulations in the learning Laboratory.

Student Learning Outcomes

1. Apply didactic skills to hands-on, scenario based learning.
2. Compare and contrast the components and settings of mechanical ventilation, IPPB, BiPAP, airway care parameters, components, and settings.
3. Analyze blood gases and advanced pharmacology.
4. Practice airway care and extubation techniques.
5. Explain ACLS protocols and their relevance in emergency situations and interpret hemodynamic monitoring data to assess patient status and guide treatment decisions.

RESP 2125. Neonatal and Pediatric Cardiopulmonary Disorders

Course Description

Presents pathophysiology and management of patients with pulmonary diseases from the perspective of a physician including causes, signs and symptoms, pathophysiology, diagnosis, treatments and prognosis for patients with these problems. Specific topics include infant and pediatric cardiac and respiratory disorders, cystic fibrosis, congestive heart failure, neuromuscular disease, traumatic injuries, burns, respiratory failure and adult/acute respiratory distress syndrome.

Student Learning Outcomes

1. Identify Common Respiratory Disorders Across All Age Groups.
Describe frequently encountered respiratory disorders in newborns, and pediatric patients, including their classifications and characteristics.
2. Explain the Etiology of Cardiopulmonary Diseases in Various Populations.
Understand and explain the causes (etiology) of cardiopulmonary diseases across neonatal, and pediatric populations.
3. Analyze the Pathology and Pathogenesis of Cardiopulmonary Disorders.
Examine the pathology (structural changes) and pathogenesis (disease development) associated with selected cardiopulmonary diseases in, newborns, and children.
4. Recognize Clinical Manifestations of Cardiopulmonary Diseases.
Identify and interpret the clinical signs and symptoms of common cardiopulmonary diseases in neonatal, and pediatric patients.
5. Develop Treatment Plans for Cardiopulmonary Disorders Across Age Groups.
Formulate comprehensive treatment strategies for patients of all ages, incorporating both pharmacological and non-pharmacological interventions based on the specific cardiopulmonary disorder.
6. Evaluate Diagnostic Data for Neonatal and Pediatric Patients.
Assess and interpret diagnostic data such as imaging, Laboratory results, and clinical findings to guide the diagnosis and management of cardiopulmonary diseases across various populations.
7. Discuss the Impact of Cardiopulmonary Disorders on Different Age Groups.
Evaluate how cardiopulmonary diseases affect the health and quality of life of neonatal and pediatric patients.
8. Apply Evidence-Based Practices in the Treatment of Cardiopulmonary Disorders.
Integrate current evidence-based practices into the treatment and management of cardiopulmonary diseases in newborns and children.
9. Understand Preventative Measures for Cardiopulmonary Disorders.
Recognize and recommend strategies to prevent or reduce the risk of developing cardiopulmonary diseases in neonatal, and pediatric populations.
10. Participate in Service-Learning Projects.
Engage in a service-learning project to apply classroom knowledge to real-world settings, contributing to community health and gaining practical experience.

RESP 2130C. Respiratory Care Seminar-Critical Care Lecture and Laboratory

Course Description

Prepares students for clinical experiences in respiratory care as it is practiced in non-hospital settings. The course includes research, sleep medicine, pulmonary rehabilitation, hyperbaric medicine, respiratory home care, transplantation and disaster management.

Student Learning Outcomes

1. Demonstrate knowledge and appropriate application of patient safety and infection control standards.
2. Participate effectively in the interdisciplinary patient care team.
3. Communicate with patients and families appropriately.
4. Demonstrate appropriate interpretation of therapist-driven protocols.
5. Recognize the indications, contraindications and complications of critical care. Explain the clinical indicators used to monitor patients in the intensive care unit (ICU)
6. Demonstrate appropriate ventilator assessment and management.
7. Describe management of shock, sepsis, ALI/ARDS, CHF, and trauma patients.
8. Identify the equipment, procedure, and practical application of chest tubes.
9. Discuss interpretation of Laboratory data, hemodynamic data, fluid and electrolyte data, nutritional data and ECGs in the critical care setting.

RESP 2130. Respiratory Care Seminar-Critical Care

Course Description

Study of the assessment of the critical respiratory patient. Includes advanced diagnostic studies and testing techniques employed in the detection and monitoring of adult, neonatal, and pediatric cardiorespiratory disorders. Upon completion, students are eligible for the Pediatric Advanced Life Support (PALS) certification by the American Heart Association. Also includes participation in a service-learning project.

Student Learning Outcomes

1. Perform Advanced Respiratory Assessments.
 - a. Conduct thorough respiratory assessments for critical adult patients, evaluating airway, breathing, and circulation.
2. Interpret Advanced Diagnostic Tests.
 - a. Analyze results from advanced diagnostic studies, such as arterial blood gases (ABGs), chest radiographs, and pulmonary function tests, to assess cardiorespiratory disorders.
3. Monitor and Evaluate Critical Respiratory Patients.
 - a. Utilize advanced monitoring techniques to continuously assess the respiratory status of patients with cardiorespiratory conditions, adjusting care plans based on findings.
4. Assess and Manage Neonatal and Pediatric Respiratory Disorders.
 - a. Apply specialized assessment and monitoring techniques for neonatal and pediatric populations, focusing on age-specific respiratory conditions and interventions.
5. Recognize and Respond to Cardiorespiratory Emergencies.
 - a. Identify signs of respiratory and cardiac distress in critical patients and initiate appropriate emergency interventions, including airway management and resuscitation.
6. Apply Pediatric Advanced Life Support (PALSa.) Techniques.
 - a. Demonstrate the skills required for Pediatric Advanced Life Support (PALS), including the recognition and management of respiratory and cardiac emergencies in children.

- b. Complete the necessary training and assessments to qualify for Pediatric Advanced Life Support (PALS) certification by the American Heart Association.
- 7. Integrate Ethical and Legal Considerations in Patient Care.
 - a. Apply ethical and legal principles when assessing and monitoring critical respiratory patients, ensuring patient rights, informed consent, and professional accountability.
- 8. Participate in Service-Learning Projects.
 - a. Engage in a service-learning project, applying respiratory care knowledge in a community setting and reflecting on the impact of healthcare services on diverse populations.
- 9. Collaborate with Interdisciplinary Healthcare Teams.
 - a. Work effectively with interdisciplinary healthcare teams in both clinical and simulated environments to assess, monitor, and manage patients with critical respiratory conditions.

RESP 2130L. Respiratory Care Seminar-Critical Care Laboratory

Course Description

Application of Advanced Assessment and Monitoring.

Student Learning Outcomes

- 1. Demonstrate Advanced Respiratory Assessment Techniques.
Perform comprehensive respiratory assessments on adult patients using advanced tools and methods in a Laboratory setting.
- 2. Apply Advanced Diagnostic Procedures.
Utilize and interpret results from advanced diagnostic tools, such as arterial blood gas (ABG) analyzers, spirometry, and chest radiography, to assess respiratory function.
- 3. Monitor Critical Respiratory Patients.
Operate advanced monitoring equipment (e.g., pulse oximetry, capnography, and hemodynamic monitors) to track the respiratory status of patients in real-time simulations.
- 4. Manage Cardiorespiratory Emergencies.
Apply advanced assessment skills in simulated emergency scenarios, recognizing and managing respiratory and cardiac emergencies promptly.
- 5. Use Pediatric Advanced Life Support (PALS) Techniques.
Practice Pediatric Advanced Life Support (PALS) interventions, including airway management and resuscitation, in pediatric emergency simulations.
- 6. Analyze Clinical Data to Inform Treatment Decisions.
Interpret clinical data from advanced monitoring systems and diagnostics to make evidence-based decisions about modifying patient care plans.
- 7. Document Respiratory Assessments and Monitoring Results.
Accurately record respiratory assessment findings and monitoring data in simulated clinical documentation, following standard healthcare protocols.
- 8. Collaborate with Interdisciplinary Teams in Simulated Environments.
Work effectively with a simulated healthcare team to assess, monitor, and manage patients with critical respiratory conditions in Laboratory-based scenarios.

RESP 2150C. Neonatal and Pediatric Respiratory Lecture/Laboratory

Course Description

This course introduces assessment skills, resuscitative procedures and appropriate therapies needed to treat the pediatric patient. This course also includes a study of neonatal anatomy and physiology, Labor and delivery, high risk infants, resuscitation, ventilator management, and common neonatal pathologies and modalities for their treatment.

Student Learning Outcomes

1. Demonstrate knowledge and appropriate application of patient safety and infection control standards.
2. Demonstrate appropriate participation in the interdisciplinary patient care team.
3. Describe appropriate education of patients and families.
4. Demonstrate neonatal and pediatric assessment, diagnostics, basic therapeutics, and stabilization.
5. Demonstrate pediatric and neonatal resuscitation protocols.
6. Demonstrate initiation, management, and discontinuation of neonatal and pediatric ventilation.
7. Identify important technical operational differences among ventilators.

RESP 2150. Neonatal and Pediatric Respiratory Theory

Course Description

Presents cardiopulmonary assessment and diagnosis in advanced neonatal and pediatric critical care including correlation of cardiopulmonary anatomy, physiology and pathophysiology with evaluation of cardiopulmonary function. Presents concepts of rehabilitative practice for patients with chronic cardiopulmonary diseases. Introduces strategies for successful completion of national board exams. Presents mechanical ventilation procedures related to critical care medicine for children and infants using state of the art equipment and computer simulation in the learning laboratory.

Student Learning Outcomes

1. Accurately identify and perform a complete cardiopulmonary assessment of a critically ill pediatric patient.
2. Identify and perform a complete cardiopulmonary assessment of a critically ill neonatal patient.
3. Summarize review-content and complete mock CRT and RRT examinations.
4. Compare and contrast the components of pediatric and neonatal ventilators.
5. Correctly perform and assess effectiveness of respiratory therapy on neonatal/pediatric patients.

RESP 2150L. Neonatal and Pediatric Respiratory Laboratory

Course Description

Presents mechanical ventilation procedures related to critical care medicine for children and infants using state of the art equipment and computer simulation in the learning Laboratory. Students will focus on cardiopulmonary assessment and diagnosis with correlation of cardiopulmonary anatomy, physiology and pathophysiology and evaluation of cardiopulmonary function.

Student Learning Outcomes

1. Accurately identify and perform a complete cardiopulmonary assessment of a critically ill pediatric patient.
2. Identify and perform a complete cardiopulmonary assessment of a critically ill neonatal patient.
3. Summarize review-content and complete mock CRT and RRT examinations.
4. Compare and contrast the components of pediatric and neonatal ventilators.
5. Correctly perform and assess effectiveness of respiratory therapy on neonatal/pediatric patients.

RESP 2180. Cardiopulmonary Pathophysiology III

Course Description

Presents pathophysiology and management of patients with pulmonary diseases from the perspective of a physician including causes, signs and symptoms, pathophysiology, diagnosis, treatments and prognosis for patients with these

problems: chest trauma, ACLS, pneumothorax, pulmonary vascular disease, Cor Pulmonale, sepsis syndrome, EKG interpretation. Management of patients on mechanical ventilation regardless of diagnosis is also covered.

Student Learning Outcomes

1. Apply the principles of data collection, organization, and assessment skills to the successful development of a treatment plan for specific disease processes.
2. Distinguish and apply the skills to assess and treat a patient in the ICU relating to specific disease processes through case study analysis.
3. Demonstrate the ability to examine and identify the chest x-ray of a patient in the ICU.
4. Analyze, integrate and solve ventilator management case studies relating to various cardiopulmonary disease processes.
5. Discuss, interpret and analyze cardiopulmonary pathophysiology.

RESP 2192L. Scenario Procedures Laboratory II

Course Description

Provides second-year Respiratory Therapy students the opportunity for additional learning and practice of respiratory therapy skills in the campus Laboratory.

Student Learning Outcomes

1. Understand the components of a ventilator, BiPAP, IPPB, chest tubes, bronchoscopy, and arterial blood gases.
2. Apply learned Laboratory skills to advanced adult patient population scenarios.
3. Provides time with respiratory equipment and high fidelity manikins to learn advanced respiratory therapy.

RESP 2194L. Advanced Clinical Prep Laboratory I

Course Description

This course is designed to help students with the transition of basic respiratory skills to advanced respiratory skills. The course will teach students an introduction to how to effectively care for critically ill patients in the intensive care units prior to attending their clinical rotations.

Student Learning Outcomes

1. Describe and demonstrate how to turn on various ventilators.
2. Assess and adjust settings and parameters on various ventilators.
3. Examine the intensive care unit and the monitors in the intensive care unit.
4. Demonstrate how to setup circuits on various ventilators.
5. Modify ventilatory support based on arterial and venous blood gases.

RESP 2210. Respiratory Professional Development

Course Description

Prepares students for national respiratory care credentialing exams and the job placement process. Topics include interviewing, resume-building, and board exam strategies.

Student Learning Outcomes

1. Create a resume and cover letter.
2. Demonstrate professionalism in a mock interview.
3. Pass a NBRC Therapist Multiple Choice Self-Assessment Exam.
4. Pass a NBRC Clinical Simulation Exam Self-Assessment Exam.

RESP 2220. Respiratory Seminar I

Course Description

This course introduces the student on the preparation for the certification and written registry examinations by utilizing the guidelines of the National Board for Respiratory Care (NBRC).

Student Learning Outcomes

1. Discuss stress reduction strategies that can be used during a test.
2. Discuss helpful hints for the night before the exam.
3. Take a self-assessment Certified Respiratory Therapist (CRT) exam, and identify weaknesses.
4. Review the appropriate text and subjects to strengthen weaknesses.
5. Successfully pass a CRT-level practice exam.
6. Take a self-assessment written Registered Respiratory Therapist (RRT) exam and identify weaknesses.
7. Review the appropriate text and subjects to strengthen weaknesses.
8. Successfully pass an RRT-level practice exam.

RESP 2230. Respiratory Therapy V**Course Description**

Emphasis on special modalities.

Student Learning Outcomes

1. Demonstrate and perform cardiopulmonary diagnostic procedures.
2. Determine appropriate interventions in a critical medical situation.
3. Demonstrate how to setup and maintain a mechanical ventilator.
4. Formulate appropriate cardiopulmonary treatment plans.

RESP 2230L. Respiratory Therapy V Laboratory**Course Description**

Advanced practice and procedures of respiratory care.

Student Learning Outcomes

1. Demonstrate and perform cardiopulmonary diagnostic procedures.
2. Formulate appropriate cardiopulmonary treatment plans.
3. Determine appropriate interventions in a critical medical situation.
4. Demonstrate how to setup and maintain a mechanical ventilator.

RESP 2232. Pulmonary Rehabilitation and Home Care**Course Description**

This course presents the principles and applications of pulmonary rehabilitation, respiratory home care, and healthcare reimbursement. Included is sub-acute care geriatrics.

Student Learning Outcomes

1. Describe the goals, and rationale for Respiratory Home care and pulmonary Rehabilitation.
2. Explain the role of the respiratory therapist in the home care and pulmonary rehabilitation settings.
3. Identify guidelines for reimbursement for respiratory procedures outside the hospital setting.
4. Compare the equipment used for out of hospital care (ventilators, oxygen, and treatments).

RESP 2236. Ethics, Management and Wellness Promotion**Course Description**

This course discusses the ethical and professional practice of respiratory care, principles of management, concepts and strategies of teaching. Included are ethics, leadership and management, adult learning, health and wellness promotion.

Student Learning Outcomes

1. Discuss the concepts and practices of ethics as it relates to healthcare setting.
2. Discuss the principles of management as applied to respiratory care.

RESP 2238. Clinical Simulation III

This course is a review of selected adult, pediatric and neonatal scenarios used in the clinical simulation examination of the National Board for Respiratory Care (NBRC).

Student Learning Outcomes

1. Prepare for TMC exam by taking simulated examinations on adult, neonatal and pediatric cases.
2. Successfully complete simulations on various respiratory disorders.

RESP 2242. Pediatric Advanced Life Support (PALS)

Course Description

Etiology, diagnosis, clinical manifestations, and management of cardiopulmonary disorders related to respiratory care.

Student Learning Outcomes

1. Accurately identify and perform a complete cardiopulmonary assessment of a critically ill pediatric patient.
2. Summarize review-content and complete mock CRT and RRT examinations.
3. Compare and contrast the components of pediatric and neonatal ventilators.
4. Correctly perform and assess effectiveness of respiratory therapy on neonatal/pediatric patients.

RESP 2243. Respiratory Therapy Neonatal Resuscitation

Course Description

Advanced practice of the neonatal resuscitation and certification. Students must be admitted into program to enroll in this course.

Student Learning Outcomes

1. Use critical thinking, problem solving and ethical decision-making in the assessment, diagnosis, planning, evaluation, and implementation of respiratory procedures.
2. Recognize emergency situations and respond appropriately.
3. Compose a patient assessment & Compose a patient SOAP/Patient Assessment document.
4. Demonstrate and perform cardiopulmonary diagnostic procedures.

RESP 2250. Clinical Review of CP Science

Course Description

This is an optional course suited for review for the national board certifications. It provides an in-depth review of clinical concepts in cardiopulmonary physiology, including the neuromuscular, renal, immune and endocrine systems. It involves case studies and clinical applications of various therapeutic modalities in cardiopulmonary care.

Student Learning Outcomes

1. Overview of anatomy, disease process and treatment modalities in review for the NBRC national board exam.
2. Overview of management of equipment used in respiratory care including QA and troubleshooting techniques.
3. Review of information for National board exam in Respiratory care.

RESP 2251. TMC Respiratory Board Exam Review Course

Course Description

Preparation and review for credentialing for the NBRC TMC exam for graduates of a CoARC-accredited Respiratory Therapy program.

Student Learning Outcomes

1. Demonstrate Mastery of Core Respiratory Therapy Concepts.
Review and demonstrate understanding of the core respiratory therapy concepts and practices required for the NBRC TMC exam, including patient assessment, therapeutic interventions, and respiratory care techniques.
2. Apply Critical Thinking and Problem-Solving Skills.
Practice applying critical thinking and problem-solving skills to clinical scenarios and case-based questions similar to those found on the NBRC TMC exam.
3. Understand NBRC TMC Exam Structure and Content.
Describe the structure, format, and content areas of the NBRC TMC exam, including the distribution of topics and the types of questions typically encountered.
4. Identify and Address Knowledge Gaps.
Conduct self-assessment to identify areas of weakness in respiratory care knowledge and take steps to address these gaps through targeted study and review.
5. Interpret and Analyze Diagnostic Data.
Demonstrate the ability to analyze and interpret diagnostic data such as arterial blood gases, pulmonary function tests, and imaging studies in preparation for the exam.
6. Practice Time Management for Exam Success.
Develop effective time management strategies for answering questions efficiently and accurately within the time constraints of the NBRC TMC exam.
7. Utilize Test-Taking Strategies.
Apply test-taking strategies to maximize performance on multiple-choice questions, including eliminating incorrect answers and making educated guesses when necessary.
8. Develop a Personalized Study Plan.
Create a personalized study plan that outlines a timeline, resources, and study techniques to prepare effectively for the NBRC TMC exam.

RESP 2252. CSE Respiratory Board Exam Review Course

Course Description

Preparation and review for credentialing for the NBRC CSE exams for graduates of a CoARC-accredited Respiratory Therapy program.

Student Learning Outcomes

1. Demonstrate Comprehensive Knowledge of Respiratory Therapy Principles:
Recall and apply fundamental concepts and principles of respiratory therapy, including but not limited to respiratory physiology, pathophysiology, pharmacology, and mechanical ventilation.
2. Apply Critical Thinking Skills to Clinical Scenarios:
Develop the ability to analyze and solve complex clinical case studies and scenarios similar to those encountered in the NBRC CSE exams, demonstrating critical thinking and problem-solving skills in the context of respiratory therapy.
3. Utilize Effective Test-Taking Strategies:
Learn and implement effective test-taking strategies, including time management, question analysis, and answer selection techniques, to improve performance on the NBRC CSE exams.
4. Demonstrate Proficiency in Core Respiratory Therapy Competencies:

Demonstrate proficiency in key competencies required for the NBRC CSE exams, such as patient assessment, diagnostic testing, therapeutic interventions, and emergency management.

5. **Integrate Knowledge from CoARC-Accredited Programs:**

Integrate and synthesize knowledge and skills acquired from their CoARC-accredited respiratory therapy programs, ensuring that their preparation aligns with the standards and expectations of the NBRC CSE exams.

6. **Conduct Self-Assessments and Identify Areas for Improvement:**

Engage in self-assessment activities to evaluate their readiness for the NBRC CSE exams, identify areas of strength and weakness, and create a targeted study plan to address any gaps in knowledge or skills.

7. **Demonstrate Effective Communication in a Clinical Context:**

Students will practice and refine their communication skills, including patient interactions and professional documentation, to ensure they meet the standards expected by the NBRC CSE and in real-world clinical settings.

8. **Foster Professional Development and Lifelong Learning:**

Students will develop a commitment to ongoing professional development and lifelong learning by exploring additional resources, staying current with advancements in respiratory therapy, and preparing for future credentialing and certification requirements.

RESP 2310. Clinical Experiences III

Course Description

Introduces skills for basic respiratory care in adult care settings with emphasis on problem solving and decision-making skills, patient evaluation skills and the evaluation of therapeutic care plans and initiating life support systems.

Student Learning Outcomes

1. Demonstrate an understanding of mechanical ventilation and critical care principles as evidenced by competency in the clinical setting.
2. Accurately assess the status of patients on mechanical ventilation or in the critical care setting to include: hemodynamic status, ABGs, and special procedures such as chest tubes, nutrition and Bronchoscopy.
3. Identify and recommend changes to a patients cardiopulmonary plan of care.
4. Develop plan of care for the critically ill adult patient.
5. Apply advanced respiratory care modalities for the critically ill patient.
6. Summarize the role of other health care professionals in the care of the critically ill patient.
7. Assemble equipment necessary for endotracheal intubation in the clinical setting.
8. Develop accurate, insightful, problem-based case studies of patients on mechanical ventilation.

RESP 2312. Clinical Experiences IV

Course Description

Introduces skills for advanced respiratory care in adult critical care clinical settings with emphasis on problem-solving and decision-making skills. Experiences include cardiopulmonary function monitoring and maintaining life support systems.

Student Learning Outcomes

1. Apply mechanical ventilation and critical care principles as they relate to pediatric and neonatal population.
2. Accurately assess the status of neonatal and pediatric patients on mechanical ventilation or in the critical care setting to include: hemodynamic status, ABGs, and special procedures such as chest tubes, nutrition and bronchoscopy.

RESP 2320L. Clinical Procedures III

Course Description

Includes clinical application of all prerequisite respiratory care coursework with an emphasis on adult critical care, assessment, and monitoring. Also includes cooperative and problem-based learning, and students will interact with, and present case studies to, the program's medical director.

Student Learning Outcomes

1. Apply Advanced Respiratory Care in Adult Critical Care Settings.
Demonstrate the clinical application of advanced respiratory care techniques, including mechanical ventilation and other therapies, in adult critical care environments.
2. Perform Comprehensive Patient Assessments in Critical Care.
Conduct thorough assessments of critically ill adult patients, including evaluating respiratory status, hemodynamics, and overall patient condition.
3. Monitor and Evaluate Critically Ill Patients.
Utilize advanced monitoring techniques and equipment, such as arterial blood gas analysis and capnography, to assess and adjust patient care in real-time.
4. Develop and Modify Respiratory Care Plans.
Create and adjust individualized respiratory care plans for critically ill adults based on patient assessments, monitoring data, and evolving clinical conditions.
5. Implement Problem-Based Learning in Clinical Scenarios.
Apply problem-based learning approaches to address complex respiratory care challenges in clinical settings, utilizing critical thinking and clinical reasoning skills.
6. Collaborate with Healthcare Teams in Critical Care Settings.
Work effectively with interdisciplinary healthcare teams, including nurses, physicians, and other respiratory therapists, to manage care for critically ill patients.
7. Integrate Feedback from Medical Professionals.
Incorporate feedback from the program's medical director and other clinical mentors to refine clinical skills and improve patient care strategies.
8. Demonstrate Professionalism in Clinical Environments.
Exhibit professional behavior, including effective communication, ethical practice, and accountability, in all clinical interactions and patient care activities.
9. Meet Competency Standards in Adult Critical Care.
Achieve competency in all required respiratory care procedures related to adult critical care, assessment, and monitoring, as evaluated by clinical supervisors.
10. Adhere to Infection Control and Safety Protocols.
Follow strict infection control measures and safety protocols when delivering care to critically ill patients in high-risk clinical environments.
11. Apply Ethical and Legal Considerations in Critical Care Practice.
Ensure patient safety and rights by applying ethical and legal principles while providing critical care to adult patients.

RESP 2322L. Advanced Procedures Clinical

Course Description

Includes clinical application of all prerequisite respiratory care coursework with an emphasis on adult critical care; neonatal/pediatric basic and critical care therapeutics; assessment and monitoring; pulmonary rehabilitation; and specialized environments for the delivery of respiratory care. In-depth clinical application of all prerequisite respiratory care coursework with an emphasis in specialty areas.

Student Learning Outcomes

1. **Demonstrate Advanced Clinical Competency:**
Apply advanced respiratory care techniques and procedures effectively in clinical settings, including adult critical care, neonatal/pediatric care, and specialized environments, demonstrating competency in all prerequisite respiratory care coursework.
2. **Execute Specialized Respiratory Care Procedures:**
Proficiently perform advanced procedures and therapies specific to critical care, neonatal/pediatric care, and pulmonary rehabilitation, including but not limited to mechanical ventilation, advanced airway management, and monitoring of complex patient conditions.
3. **Conduct Comprehensive Patient Assessments:**
Conduct thorough assessments of patients across various clinical settings, including adult critical care and neonatal/pediatric environments, utilizing advanced diagnostic and monitoring tools to evaluate respiratory status and response to therapy.
4. **Apply Evidence-Based Practices:**
Integrate evidence-based practices and current clinical guidelines into their respiratory care procedures, ensuring that their interventions are grounded in the latest research and best practices for specialized patient populations.
5. **Demonstrate Proficiency in Specialized Environments:**
Demonstrate proficiency in delivering respiratory care in specialized environments such as pulmonary rehabilitation centers and other unique clinical settings, adapting their techniques and approaches to meet the specific needs of these environments.
6. **Effectively Manage Complex Cases:**
Manage complex and critical respiratory cases with a focus on problem-solving and decision-making, demonstrating the ability to handle acute and challenging situations with clinical expertise and confidence.
7. **Utilize Advanced Monitoring Techniques:**
Use advanced monitoring techniques and technologies to track and assess patient progress, adjust therapeutic interventions, and make informed clinical decisions based on real-time data.
10. **Enhance Professional Skills through Clinical Experience:**
Enhance their professional skills, including communication, teamwork, and ethical decision-making, through hands-on clinical experience and interaction with multidisciplinary teams in various clinical settings.
11. **Demonstrate Adaptability and Problem-Solving Skills:**
Exhibit adaptability and problem-solving skills by responding effectively to unexpected clinical challenges, including those encountered during out-of-town travel or in specialized clinical environments.
12. **Reflect on Clinical Practice and Personal Development:**
Engage in reflective practice to evaluate their clinical experiences, identify areas for improvement, and set personal and professional development goals based on their clinical performance and feedback.

RESP 2330. Respiratory Therapy IV Clinical

Course Description

Emphasis on mechanical ventilators.

Student Learning Outcomes

1. Maintain Patient confidentiality/privacy as defined by HIPAA.
2. Use critical thinking, problem solving and ethical decision-making in the assessment, diagnosis, planning, evaluation, and implementation of respiratory procedures.
3. Recognize emergency situations and respond appropriately.
4. Compose a patient assessment & Compose a patient SOAP/Patient Assessment document.

5. Demonstrate and perform cardiopulmonary diagnostic procedures.
6. Demonstrate how to set up and maintain a mechanical ventilator.
7. Demonstrate appropriate patient/physician interactions in the clinical setting.

RESP 2332. Respiratory Therapy V Clinical

Course Description

Emphasis on special modalities.

Student Learning Outcomes

1. Demonstrate and perform cardiopulmonary diagnostics procedures during mechanical ventilation.
2. Demonstrate appropriate patient/physician interactions needed in the clinical setting.
3. Demonstrate how to set up, maintain, and wean a patient from a mechanical ventilator.
4. Compose a patient assessment on a patient receiving mechanical ventilation.
5. Formulate appropriate cardiopulmonary treatment plans for mechanical ventilation.
6. Determine appropriate interventions in a critical medical situation.
7. Document ventilator parameters, alarm settings, and patient assessment.

RESP 2334. Respiratory Therapy VI Clinical

Course Description

Advanced Clinical experience on special modalities.

Student Learning Outcomes

1. Maintain Patient confidentiality/privacy as defined by HIPAA.
2. Use critical thinking, problem solving and ethical decision-making in the assessment, diagnosis, planning, evaluation, and implementation of respiratory procedures.
3. Recognize emergency situations and respond appropriately.
4. Compose a patient assessment & Compose a patient SOAP/Patient Assessment document.
5. Demonstrate and perform cardiopulmonary diagnostic procedures.
6. Demonstrate how to set up and maintain a mechanical ventilator.
7. Demonstrate appropriate patient/physician interactions in the clinical setting.

RESP 2340L. Respiratory Care Clinical III

Course Description

Builds on experience and skills acquired in Respiratory Care Clinicals I and II. Students are introduced to initiation and management of non-invasive mechanical ventilation and emergency and critical care procedures.

Student Learning Outcomes

1. Use AIDET protocol (Acknowledge, Introduce, Duration, Explanation, Thank you) in the acute care setting.
2. Demonstrate knowledge and application of principles of patient safety, infection control, and participation in the healthcare team at the advanced beginner level of competency.
3. Perform a cardiopulmonary patient assessment at the advanced beginner level of skill.
4. Interpret cardiopulmonary assessments and make treatment recommendations at the novice level of skill.
5. Perform basic respiratory therapy therapeutics at the advanced beginner level of skill.
6. Perform ventilation related skills at the novice level of skill.
7. Demonstrate progressive independence in the practice of respiratory care.
8. Process respiratory equipment with appropriate attention to safety and infection control.
9. Use applicable therapist- driven protocols effectively.

RESP 2342L. Respiratory Care Clinical IV

Course Description

Prepares the student for practice in the entry-level health care environment. This clinical experience focuses on adult, pediatric and neonatal critical respiratory care in the acute care setting. Advanced cardiopulmonary assessment, plan of care, and shift management in all settings are included.

Student Learning Outcomes

1. Use AIDET protocol (Acknowledge, Introduce, Duration, Explanation, Thank you) in all settings.
2. Demonstrate knowledge and application of principles of patient safety, infection control and participation in the healthcare team.
3. Perform cardiopulmonary patient assessment at the competent level of skill.
4. Discuss the indications, methods, and goals of pulmonary rehabilitation.
5. Discuss the pathophysiology and treatment of sleep disorders
6. Educate patients and families in smoking cessation.
7. Show good shift management skills in the critical care setting.
8. Demonstrate patient assessment, treatment, and documentation at the competent level of skill.
9. Identify and interpret appropriate patient monitoring in the critical care setting.
10. Demonstrate ventilator management at the competent level of skill.
11. Identify the indications, contraindications, and complications of critical care.
12. Demonstrate progressive independence in the practice of respiratory care in all patient populations.
13. Describe indications, assessment, therapeutic modalities, patient education and documentation for respiratory care in alternate settings.
14. Process respiratory care equipment with appropriate attention to safety and infection control.
15. Use critical care therapist-driven protocols effectively.

RESP 2350. Practicum II

Course Description

This course is structured to provide the student the clinical experience in applying respiratory care modalities in an intensive or critical care and emergency settings. Included are modalities for airway care, ventilator management, and monitoring of adult patients.

Student Learning Outcomes

1. Select, review and interpret data in patients chart.
2. Select, assemble, and check equipment for proper function, operation and cleanliness.
3. Initiate, conduct, and modify prescribed therapeutic procedures based out patient outcomes for adult ventilator patients.
4. Demonstrate competency in the delivery of respiratory care procedures including Intubation, extubation, and mechanical ventilator management.

RESP 2352. Clinical Practicum III

Course Description

This course is designed to provide clinical experience in general diagnostic therapeutic and critical care modalities for adult, neonatal and pediatric patients in the clinical setting. Included are patient transport, mechanical ventilation, airway management, emergency care, and monitoring of neonatal and pediatric patients.

Student Learning Outcomes

1. Demonstrate ethical behavior, safety practices, effective communication skills, interpersonal and teamwork skills in a clinical environment.
2. Select, review, obtain and interpret data.
3. Select, assemble and check equipment for proper function, operation, and cleanliness.
4. Initiate, conduct, and modify prescribed therapeutic procedures based on patient outcomes.
5. Demonstrate proficiency and competency in the delivery of respiratory care procedures.

RESP 2492. Scenario Procedures Lab III

Cours Description

Scenario Procedures Laboratory III

Course Description

Provides second-year respiratory therapy students with the opportunity for additional learning over pediatric and neonatal intensive care. Provides practice of advanced respiratory therapy skills in the pediatric and neonatal patient population within the campus laboratory.

Student Learning Outcomes

1. Apply learned lab skills to advanced patient population scenarios.
2. Practice pediatric and neonatal respiratory therapy techniques using pediatric respiratory equipment and high-fidelity manikins.
3. Identify pediatric and neonatal respiratory equipment in a simulation lab.
4. Evaluate the uses of pediatric and neonatal respiratory equipment in a simulation setting.

RESP 2996. Topics in Respiratory Therapy

Course Description

Varies

Student Learning Outcomes

Varies

Russian (RUSS)

Russ 1110. Russian I

Course Description

This is an entry level Russian course for students with no previous exposure to the language. The purpose of this beginning course is to develop listening, speaking, reading and writing skills to communicate at a basic level. After the completion of the course, students will be able to perform in specific situations at the Novice-Mid level on the American Council on the Teaching of Foreign Languages proficiency scale.

Student Learning Outcomes

1. Students will gain basic understanding of the Russian language through intensive practice in reading, writing, speaking and listening.
2. Students will achieve basic communication goals in different communicative situations.
3. Students will develop intercultural awareness through understanding of Russian social and cultural norms, values, and attitudes.
4. Students will identify salient features of Russian culture in its historical and contemporary contexts.

Russ 1120. Russian II

Course Description

This is an entry-level continuation course for students that have completed Elementary Russian I. The course will use a communicative approach to cover the fundamentals of basic vocabulary, grammar, conversation and culture. After the completion of the course, students will be able to perform in specific situations at the Novice-High level on the American Council on the Teaching of Foreign Languages proficiency scale.

Student Learning Outcomes

1. Students will gain further understanding of the Russian language through intensive practice in reading, writing, speaking and listening.
2. Students will achieve more diverse communication goals in different communicative situations
3. Students will increase their intercultural awareness through understanding of Russian social and cultural norms, values, and attitudes.
4. Students will recognize features of Russian culture in its historical and contemporary contexts.

RUSS 2110. Russian III

Course Description

This course is for students who have completed Elementary Russian I and II. It is designed to further the understanding of the Russian language and culture and continues the development of the four language skills (listening, reading, writing, and speaking). After the completion of the course, students will be able to perform in specific situations at the Intermediate-Low level on the American Council on the Teaching of Foreign Languages proficiency scale.

Student Learning Outcomes

1. Students will increase their understanding of the Russian language through intensive practice in reading, writing, speaking and listening.
2. Students will achieve more complex communication goals in different communicative situations.
3. Students will strengthen their intercultural awareness through understanding of Russian social and cultural norms, values, and attitudes.
4. Students will interpret various features of Russian culture in its historical and contemporary contexts.

RUSS 2120. Russian IV

Course Description

In this course, students continue to expand and refine their proficiency skills in listening, reading, writing, and speaking Russian. It is designed for students who have completed Intermediate Russian I. After the completion of the course, students will be able to perform in specific situations at the Intermediate-Mid level on the American Council on the Teaching of Foreign Languages proficiency scale.

Student Learning Outcomes

1. Students will refine their Russian language skills in reading, writing, speaking and listening.
2. Students will achieve more complex communication goals in specialized contexts.
3. Students will apply their intercultural knowledge to various contexts.
4. Students will analyze more complex Russian cultural phenomena in their historical and contemporary contexts.

Social Science (SOSC)

SOSC 1110. Introduction to Science and Technology Studies**Course Description**

The aim of this course is to challenge commonly accepted beliefs regarding technoscience, including the presumption that the “best” technology always wins and the notion that science is never political. Through an examination of historical and contemporary examples, students will explore the cultural, organizational, economic, and political drivers and consequences of scientific R&D and technological change.

Student Learning Outcomes

This course explores the social, cultural, and political roots and effects of technoscience. Course assignments, moreover, will help students hone their analytical, writing, and oral presentation skills. By the end of the course, students should be able to:

1. Recognize and articulate how social factors have shaped historical cases of science and technology.
2. Critically describe the political implications and dominant guiding logics of contemporary regimes of scientific R&D and technological innovation.
3. Enumerate and characterize the possibilities for more democratic and precautionary technoscience.
4. Summarize and assess an academic level text in Science and Technology Studies.

SOSC 1110L. Introduction to Science and Technology Studies Lab**Course Description**

This is a pilot lab course linked with the HIST189-01 social science course as part of the Living Learning Community program through the Office for Student Learning. This semester will focus on completing a group project investigating technology relevant to our community. We will look at the relationship between technology and contemporary society by looking at how non-technical factors, such as politics, culture, and economics, drive changes in technology.

Student Learning Outcomes

1. Understand the connection between the evolution of modern science and technology and contemporary social issues/problems, relevant to our community.

2. Investigate the current implementation of science and technology, with a focus on the interconnection between technology, culture, and community.
3. Enhance your ability to evaluate information and communicate your ideas through logical evidence-based argument.
4. Develop critical thinking skills and resource knowledge that will facilitate academic success and professional development.

SOSC 1220. Full STEAM Ahead: Part II

Course Description

This course examines the development of contemporary technologies, including the personal computer, nuclear energy, jet engines, chemical plants, genetic engineering, and the automobile, in order to uncover the social, political, and ethical facets of science and engineering. By learning how historical events, pervasive ideas, business and regulatory cultures, economics, and other social stuff both drive and constrain technological development, students will acquire thinking skills necessary for being not only thoughtful technical professionals but also responsible citizens.

Student Learning Outcomes

This course explores the social, cultural, and political roots and effects of technoscience. Course assignments, moreover, will help students hone their analytical, writing, and oral presentation skills. By the end of the course, students should be able to:

1. Recognize and articulate how social factors have shaped historical cases of technology,
2. Describe how a process of Intelligent Trial and Error can lessen the risks of emerging technologies and enable technological change,
3. Enumerate and characterize the possibilities for more democratic, precautionary, or otherwise more desirable technoscience, and
4. Summarize and assess an academic level text.

SOSC 1220L. Full STEAM Ahead: Part II, Lab

Course Description

This lab accompanies the Full STEAM Ahead class and gives students the opportunity to explore class concepts by analyzing technological solutions to a contemporary public problem in a hands-on, collaborative environment. Students will not only diagnose the issues facing a current scientific and technical undertaking but also propose how it could be redesigned to better account for the cultural and political complexities of social reality. By the end of the semester, groups of students will produce and present a research poster on their chosen topics by analyzing technological solutions to a contemporary public problem in a hands-on, collaborative environment. Students will not only diagnose the issues facing a current scientific and technical undertaking but also propose how it could be redesigned to better account for the cultural and political complexities of social reality. By the end of the semester, groups of students will produce and present a research poster on their chosen topics.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Explain the connection between the evolution of modern science and technology and contemporary social issues/problems, relevant to a particular community,
2. Investigate the current implementation of science and technology, with a focus on the interconnection between technology, culture, and community,
3. Evaluate information and communicate their ideas through logical evidence-based argument, and
4. Develop critical thinking skills and resource knowledge that will facilitate academic success and professional development.

SOSC 1320. Creation of the Universe: Fact/Fiction/Myth

Course Description

How did we get here? Where did we come from? How were the earth, moon and sun created? From ancient tribes to modern civilization, the human race has tried to answer these questions. This course examines the myths and scientific theories of the origin of the universe. The course first covers ancient myths, progresses to modern religion and culminates with our current understanding of the Big Bang and related scientific theories. Other myths, such as the great flood, which common to many cultures, are examined. The course focuses on how science and culture interact by examining how our concept of creation has evolved.

Student Learning Outcomes

By the end of the semester, students who satisfactorily complete the course should be able to:

1. Describe the progression of man's concept of the origin of the universe from the ancient Greeks to modern times.
2. Explain how the relationship between science and society has evolved
3. Articulate how science can be used to support social decisions

SOSC 2010. American Culture and Leisure Ethics

Course Description

This course takes a look at how sociability and socio-economic status changed over the course of American history. Beginning with colonial America and continuing until the 21st century, we will look at how major political, religious, technological and economic trends, (such as the institution of slavery, prohibition, industrialization, world wars, xenophobia, and economic depressions) influenced social life and leisure habits of Americans. Predominant themes will include spectator as well as participatory sports, vices such as drinking, gambling, prostitution. The role dating, celebrations, food, freak shows, amusement parks, as well as the evolution of vacations, resorts, dancing, movies and music have played in the life of Americans.

Student Learning Outcomes

1. By the end of this course students will have read and or watched primary and secondary texts and sources in every relevant era to better understand its zeitgeist and apply analytical skills to determine the changes to and varying cultural and social phenomena that occurred in response to social, recreational and leisure habits of Americans. Students will actively participate in individual and group activities that are era appropriate. They are expected to be able to communicate and purposefully apply this knowledge in an effort to experience the same limits, roles, values and mindsets that shaped the behaviors of generations of Americans before them.

SOSC 2110. Understanding Technoscientific Controversy

Course Description

This science and technology studies course challenges students to think more carefully and critically about technoscientific environmental problems and controversies, such as climate change, vaccine hesitancy, genetic engineering, pharmaceutical drugs, and nuclear energy. Students will examine the cognitive, cultural, economic, ethical, political, and communicative roots of disagreement, learning to recognize that these issues are not solved by presenting a "balanced view" of both sides or by simply informing "ignorant" opponents. Students will apply these thinking skills in order to develop more productive and empathic solutions to tenacious and highly polarized public conflicts.

Student Learning Outcomes

1. Discern and describe how subjective judgements influence scientific decisions about what to study, how to study it, and how to deal with uncertainty.
2. Recognize and articulate past experiences, trust, and moral commitments influence whether people embrace, or reject, particular scientific facts or technologies.
3. Uncover how values are laundered through ostensibly scientific rhetoric about public issues.
4. Explore more productive and democratic pathways for reconciling disagreements about enduring.

SOSC 2120. Unintended Consequences, Industrial Accidents, and Other Anthropogenic Disasters

Course Description

A science and technology studies examination of how different cognitive, organizational, political, and technical factors influence people's ability to cope with the complexities and uncertainties of tech-nonscientific endeavors. Through a survey of unanticipated consequences, organizational failures, and other human-produced disasters, students will explore how humanity might proceed more thoughtfully, carefully, and fairly with respect to innovation and sociotechnical change.

This course explores the decisions, thinking processes, technical structures, and forms of organization that lead to technoscientific mistakes. Course assignments will help students hone their analytical, writing, and oral presentation skills.

Student Learning Outcomes

By the end of the course, students should be able to:

1. Characterize the unintended consequences occurring in historical cases and the risks entailed by emerging innovations.
2. Describe risky technologies as constituted by the coupling of sociotechnical systems.
3. Evaluate historical and contemporary instances of technoscience in terms of how well "intelligent trial and error" was pursued.
4. Propose mechanisms for lessening the risks posed by emerging technologies and lowering the barriers to more responsible innovation.

SOSC 2123. Civilizational Collapse and Its Prevention

Course Description

The goal of this course is to critically examine the resilience and frailties of human civilization. How have previous societies failed or succeeded to organize themselves within socio-ecological limits? What positive lessons can be drawn from earlier human settlements regarding the political, cultural, economic, and technological factors generative of social instability? In addition to researching potential answers to these questions, students will explore and evaluate contemporary perspectives and proposals regarding how to make human societies more socially, politically, and ecologically resilient.

Student Learning Outcomes:

Course assignments will help students hone their analytical, thinking, and oral presentation skills. By the end of the course, students should be able to:

1. Problematize common understandings of "progress" and theories of collapse.
2. Recognize and describe different cause and effect relationships contributing to civilizational collapse.
3. Contrast divergent solutions to civilizational problems, which may include degrowth, ecomodernism, polycentric governance, rewilding, etc.
4. Present a cohesive oral argument regarding a specific civilizational threat and what might be done about it or a specific author's claims regarding it.

Social Work (SOWK)

SOWK 1110. Ethics for Social Work and Human Services

Course Description

This course introduces students new to social work or human services to ethical standards and practices. The course includes ethics concepts including confidentiality, client rights, duty to warn, communication ethics, and applied ethics. The National Association of Social Workers Code of Ethics serves as the foundation of the course.

Student Learning Outcomes

Upon completion of this course, participants will be able to

1. Identify an ethical decision making process.
2. Explain an ethical decision making process.

3. Apply an ethical decision making process to a social work practice situation.

SOWK 2110. Introduction to Human Services and Social Work

Course Description

This course is for students who are interested in social welfare issues and/or are considering entering a social service profession. The course presents an overview of social problems, issues and trends, and the network of social agencies developed to address these concerns. The course examines the influence of personal and professional values and ethics on the helping relationship. The concept of social welfare will be discussed from a social work perspective (with an emphasis on social justice), and students will gain a basic understanding of social work in U.S. society, social work career opportunities, and contemporary issues facing social workers. Approaches relevant to work with individuals, families, groups and communities are presented, with special emphasis on Hispanic and Indigenous populations of New Mexico and the Southwest.

Student Learning Outcomes

1. Explain the interactions of social institutions, cultural factors, dimensions of identity, and environment with the human development and behavior of individuals.
2. Demonstrate knowledge of the social work profession's focus on addressing contemporary social issues in the United States.
3. Describe the mission and services provided by social service agencies at the regional, national, and global levels.
4. Demonstrate a basic understanding of the social work profession, its history, career opportunities, and contemporary issues facing social workers in the United States today.
5. Recognize how students' knowledge, skills, and attitudes impact their competence as helping professionals.

SOWK 2111. Women's Issues in Social Work

Course Description

Examines gender-specific social problems and their identification and resolution through the use of social agencies and community resources. Community Colleges only. No longer offered at NMSU, NMSU-A, NMSU-D or NMSU-G effective June 16, 2023.

Student Learning Outcomes

1. Understand the commonalities among all women, identifying commonalities and differences among oppressed and dominant groups, recognize multiple oppressions, and respect diversity while conducting social work practice through readings, class discussions, and/or written assignments.
2. Identify the various needs of women as individuals, family members and community members through readings, class discussions, and/or written assignments.
3. Demonstrate skills in working effectively with diverse issues involving women with an emphasis on building strengths, interdependence, self-direction, shared power, and cooperation through experiential exercises, written assignments, companion book, and instructor presentations.
4. Demonstrate skills in addressing issues that affect women such as parental issues, relationship problems, physical abuse, sexual abuse, crime, substance abuse, eating disorders, housing concerns, psychological issues and physical abilities written reports.
5. Understand the importance of and demonstrating skills in caring and empathetic connection in the change process through written assignments, experiential activities in the companion book.
6. Understanding the Importance of the Professionals Self-Care through experiential activities and journaling in the companion book.

SOWK 2112. Ethics in Addictions Work

Course Description

Course covers ethical practice as it relates to work in substance abuse. The course presents an overview of ethical standards of the social work profession as they relate to this population. The course examines personal and professional values in relation to client needs and cultural influences. Students are taught the concepts of working with clients with substance abuse, to include support systems and community dynamics.

Student Learning Outcomes

1. To understand and demonstrate the understanding of personal and client strengths and limitations, client welfare, cultural diversity and the professional relationship dynamic.
2. An introduction to the proper way of using written and spoken clinical material and demonstrate the proper use of the NASW code of ethics through case scenarios and ethical dilemmas.
3. To demonstrate the understanding for the need to continue learning, use of professional supervision, ethical responsibilities and to practice within one's own competence. Students will demonstrate their knowledge of self-care and burnout prevention.
4. Students will demonstrate and apply Substance abuse professional ethics and the NASW Code of ethics and take into consideration workplace standards, professional rapport, and societal obligations.

SOWK 2131. Trauma and Addictions

Course Description

This course explores the experience of trauma and nature of addiction. This course introduces the concepts of mind-body connection, adverse childhood experiences, and theory of trauma, comorbidity, client support structures, and client-practitioner relationships as they relate to substance abuse.

Student Learning Outcomes

1. Students will be able to identify how a crisis state is formed and the factors that influence substance abuse. They will be able to describe how to help a person increase functioning, identify danger and opportunity, the difference between stress and crisis and characteristics of effective coping.
2. Identify and explain models of crisis intervention and ways to help clients change their thinking.
3. Students will understand and recognize various forms of crisis what they are and interventions professionals use.

SOWK 2140. Social Justice and Community Engagement

Course Description

This course examines bias, privilege, and oppression, as well as the various types of social inequities and their differential impact on various types of communities. Difference related to race, ethnicity, age and ability, gender identity, sexual orientation, socioeconomic status, immigration status, and geographic location and access to services, will be explored. Further, students will engage in an exploration of the etiology, nature, scope, and effects of societal inequities and oppressive social structures. Drawing upon socio-historical-political approach, the course will encourage students to examine the roots of social justice and explore concrete community engagement initiatives to engage in social justice and related action and advocacy at the micro, mezzo, and macro levels.

Student Learning Outcomes

1. Define Social Justice and demonstrate an understanding of the history and scope of social justice initiatives in the United States.
2. Define and demonstrate an understanding of bias, privilege and systemic oppression.
3. Demonstrate an understanding of how the design and implementation of social systems has a disparate effect on diverse communities.
4. Demonstrate an understanding of how community engagement and advocacy at the micro, mezzo, and macro level, can effect change in societal equity and support for marginalized communities.

Sociology (SOCI)

SOCI 1110. Introduction to Sociology

Course Description

This course will introduce students to the basic concepts and theories of sociology, as well as to the methods utilized in sociological research. The course will address how sociological concepts and theories can be utilized to analyze and interpret our social world, and how profoundly our society and the groups to which students belong influence them. Students will be given the opportunity to challenge their “taken for granted” or “common sense” understandings about society, social institutions, and social issues. Special attention will also be paid to the intimate connections between their personal lives and the larger structural features of social life. In addition, the implications of social inequalities, such as race/ethnicity, gender, and social class will be central to the course’s examination of social life in the United States.

Student Learning Outcomes

1. Define sociological perspectives and the contributions that sociological knowledge can bring to the social sciences.
2. Understand the sociological imagination and explain the relationships between social structures, social forces and individuals.
3. Demonstrate the ability to apply the perspectives of symbolic interactionist theory, conflict theory, and structural-functional theory to qualitative and/or quantitative data.
4. Understand and explain intersectionality and the connections between race, class, gender, disability, sexual identity and other forms of structural inequality.

SOCI 1215. Career/Life Planning

Course Description

This course enables students to evaluate potential careers and to make educational plans in light of their interests, values, abilities, experiences and goals. Students have access through the Career Development Center to information on specific career choices, occupational requirements and market outlooks.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Articulate values, personality characteristics, interests and skills in relation to the career decision-making process
2. Write a plan for job hunting or career planning.
 - a. Utilize occupational and educational resources.
3. Write a resume and cover letter.
 - b. Gather information on potential employers.
 - c. Recognize the educational requirement of different careers.
4. Recognize the values and lifestyle preferences impact on career choices
5. Prepare for job interviewing
6. Write a career plan

SOCI 1310. Sociology of Substance Abuse

Course Description

This course explores the phenomenon of drug use and abuse in our culture. It will include, but it is not limited to, the history of drug use, the drugs used, legislation concerning drug possession and use, dependence/addiction to and withdrawal from drugs, and the business of drugs—both legal and illegal.

We will concentrate on the sociological aspects of drugs, and we will examine the psychological features as well. Moreover, we will examine the history of drugs, the current state of education as it applies to drugs, prevention efforts, and the role of treatment programs, the latter of which will include both theory and its practical applications in the field. Lastly, we will explore the following list of drugs: stimulants, sedatives/hypnotics, alcohol, nicotine, caffeine, over-the-counter drugs, prescription drugs, narcotics, hallucinogens, cannabis, and inhalants.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Develop an overview of various drugs and their use
2. Understand the media's influence on drugs and its control
3. Demonstrate an understanding of how drug use impacts families, the workplace, and society
4. Explore the historical, social, cultural, & psychological influences associated with drug use & its control
5. Practice critical thinking skills through thoughtful completion of reading assignments & written discourse

SOCI 1345. Cultural Diversity

Course Description:

This course examines, from a theoretical and experiential social work perspective, the personal behaviors and institutional factors that have led to oppression of ethnic minorities and various cultural groups. Attention is given to discriminatory practices as related to sex, age, religion, disablement, sexual orientation, and culture. The course explores the strategies that the various groups have employed to deal with discrimination. Implications to the individual, society, and the profession are explored.

Student Learning Outcomes:

1. Students will compare and contrast sociological concepts as they relate to various cultures as evidenced by scoring 70% or better on a faculty prepared examination.
2. Students will apply sociological theories to real-life situations as related to sex, age, religion, disablement, sexual orientation, and ethnic cultures as evidenced by scoring 70% or better on a faculty prepared examination.
3. Students will demonstrate critical thinking skills through discussion, reaction papers, social research, and application field projects scoring a minimum of 70% on each assignment.

SOCI 1350. Rural America

Course Description

Change and diversity are the terms most descriptive of rural America today. This course addresses four themes, which characterize the social and economic contexts within which rural communities must address their problems. Each section examines rural communities from a different perspective, enabling students to explore the complexity and diversity among communities. Collectively the four sections examine the process of community development and transition--exploring the ways in which history, culture, and policies limit change as well as the extent to which local community resources can mobilize to support efforts at community change.

Student Learning Outcomes

On an instructor created exam, eighty percent of the students will be able to:

1. Students of rural communities will:
 - a. Describe the ways in which a given rural area may be different over time in terms of economic base and population characteristics.
 - b. Describe the current economic transition taking place in rural America.
 - c. Recognize how history, environment, culture, economy, and political institutions interact to determine a community's well-being.
 - d. Identify how past decisions made by individuals, communities, states, and the federal government have affected rural areas and the problems they face.
2. Students of community and the economy will:
 - a. Understand the concept of capital and identify some of the forms it takes in their own community.
 - b. Explain how the transition to a global economy has affected different parts of the rural economy, such as farming and rural manufacturing, during the past decade.
 - c. Describe the consequences of increased consumption on rural communities, both in terms of economic base and waste disposal.
3. Students of the mediating change: community infrastructure will:

- a. Describe the character of rural governments.
 - b. Define and give some examples of economic infrastructure.
 - c. Define social infrastructure, and name and give an example of each of its three dimensions.
4. Students of community power and grassroots change will:
 - a. Define the principal theories of community power.
 - b. Recognize the different responses to special needs shown in the video program and be able to distinguish both their common features and uniqueness.
 - c. Identify the process to generate community change.

SOCI 1996. Topics in Sociology

Course Description

A course exploring a topic not covered by the standard curriculum but of interest to faculty and students in a particular semester.

Student Learning Outcomes

Varies

SOCI 2110. Major Orientation

Course Description

This course is designed to prepare students for success in the sociology major. Topics include citation styles, career/graduate school preparation, writing and research ethics.

Student Learning Outcomes

The skills concentrated on will include the following:

1. Demonstrate grammatically correct and factually accurate, professional writing that reflects sociological perspectives.
2. Conduct effective presentations about sociological research.
3. Use appropriate sociological writing style and format.
4. Utilize primary and secondary sources of research appropriately.
5. Develop ethical and legal standards for research and interaction as defined in the American Sociological Association Code of Ethics.

SOCI 2120. Introduction to Criminal Justice Systems

Course Description

This course provides an introduction to social issues that are currently affecting the criminal justice system in the United States. The course will cover the history of the US criminal justice system and how our system compares with other countries. We will address how the U.S. criminal justice system attempts to create and preserve a balance between sustaining order, maintaining individual rights, and promoting justice. Important themes also include, but are not limited to discussions of how crime and delinquency are measured, key correlates of crime, sociological approaches to researching crime, sociological theories of crime, the quality of crime data in the U.S. and how it is used to make public policy decisions, and the causes and consequences of mass incarceration in the United States.

Student Learning Outcomes

1. Identify the current practices and functions of the criminal justice system.
2. Understand and communicate how crime data is collected and measured and how this data informs the claims of policy makers and public policy outcomes.
3. Demonstrate the ability to compare and contrast the institutional practices and stratification of the U.S. criminal justice system with other criminal justice systems in the developed regions of the world.
4. Communicate an understanding of sociological theories of the U.S. criminal justice system through academic research, in-class discussions, written assignments, and other methods.
5. Describe the functions of the social institutions connected to crime, e.g., polity, media, education, family.

SOCI 2130. Introduction to Criminology

Course Description

Students will learn to understand and apply criminological theories that are produced within the field of sociology. These theories focus on how social structures, social contexts and particular kinds of social relationships influence the social activity of crime at both the micro and macro levels. Students will understand and analyze a variety of topics also pertinent to the study of crime, such as divergent definitions of crime, various correlates of criminal activities, criminal trends, and other key topics within the field of criminology.

Student Learning Outcomes

1. Understand and communicate the historical development of criminology as a field of inquiry through academic research, in-class discussions, written assignments, and other methods as necessary.
2. Evaluate and identify the assumptions, limitations and appropriate applications of theories of criminology through academic research, in-class discussions, written assignments, and other methods as necessary
3. Assess the validity and reliability of empirical research used to test the theories of crime examined through academic research, in-class discussions, written assignments, and other methods as necessary.
4. Communicate an understanding of criminological theories and how these theories can be used to explain the occurrence of crime at both micro and macro levels through academic research, in-class discussions, written assignments, and other methods as necessary.

SOCI 2140. Juvenile Delinquency

Course Description

This course is an introduction to sociological theories that explain juvenile delinquency in the United States. The course will explore the history of the juvenile justice in the U.S. and the causes and solutions of juvenile delinquency. The course will also cover how the U.S. juvenile justice system works and how it is different from the adult criminal justice systems in the US. The course will examine policing of juvenile delinquents, juvenile rehabilitation, probation services, and approaches to address limitations of the current U.S. juvenile justice system.

Student Learning Outcomes

1. Understand and define important events in the history of the juvenile justice system in the United States.
2. Explain the social theories of juvenile delinquency and how these theories explain both the causes of delinquency and possible solutions to delinquency.
3. Describe the relationships between the institutions of the U.S. juvenile justice system and how this system is different from the adult criminal justice systems in the U.S.
4. Identify the strengths and weaknesses of the current U.S. juvenile justice system in preventing delinquency and examine ways to facilitate changes to make it more effective.

SOCI 2210. Sociology of Deviance

Course Description

This course is designed to provide an overview of the study of deviance and social control from multiple sociological perspectives. The instructor will present how sociologists research deviance and social control and the ethical issues involved in studying human subjects involved in these activities. The course also examines central sociological theories for understanding the causes of deviant behavior.

Student Learning Outcomes

1. Identify and explain sociological theories of deviance and conformity through academic research, in-class discussions, written assignments, and other methods as necessary
2. Describe and identify the influences of gender, race, ethnicity, sexual orientation, class, nation, and other factors in defining social deviance and social control.
3. Describe how various sociological theories explain deviance and conformity.
4. Identify important ethics and methods issues that arise in the study of deviance and conformity.

SOCI 2220. Sociology of Gender

Course Description

This course is an introduction to the sociology of gender and gendered inequalities. While analyzing how masculinity, femininity and other gender forms are socially constructed, we will also analyze how gender intersects with other forms of social stratification such as race, socio-economic status, disability and sexual orientation. Our analysis of gender will focus on gender socialization, gender identities, and how gender forms are deeply rooted and reproduced in social institutions, interactions and relationships.

Student Learning Outcomes

1. Describe how gendered social relationships influence experiences, life chances, and perceptions.
2. Explain how gendered inequalities intersect with other forms of social stratification including race/ethnicity, social class, sexuality, etc.
3. Communicate how the institutional structures of gendered social relations have changed over time both in the United States and globally.
4. Describe sociological theories and perspectives of gender and how they pertain to experiences of gendered social relationships.

SOCI 2225. Introduction to Women's Studies

Course Description

This course is designed to help students identify, understand and defuse gender stereotypes and barriers. A control goal is to empower women to take charge of their own lives. Topics include: sexuality, socialization, self-esteem, leadership, motherhood and transcending victimization models of feminism and femininity.

Student Learning Outcomes

1. Students will be able to recognize and demonstrate with 70% accuracy or better on a faculty prepared examination the effect that gender stereotypes, barriers and other social systems (e.g. race and class) have on women's lives.
2. Students will be able to recognize and demonstrate with 70% accuracy or better on a faculty prepared examination empowering social actions.

SOCI 2226. Empowering Women

Course Description

This course is designed to help students identify, understand and defuse gender stereotypes and barriers. A control goal is to empower women to take charge of their own lives. Topics include sexuality, socialization, self-esteem, leadership, motherhood and transcending victimization models of feminism and femininity.

Student Learning Outcomes

1. Students will be able to recognize and demonstrate with 70% accuracy or better on a faculty prepared examination the effect that gender stereotypes, barriers and other social systems (e.g. race and class) have on women's lives.
2. Students will be able to recognize and demonstrate with 70% accuracy or better on a faculty prepared examination empowering social actions.

SOCI 2230. Sociology of Sexuality

Course Description

This course explores all aspects of human sexuality from a sociological perspective. Topics include, but are not limited to, sex work, intimate relationships, sexual response, political movements, power, and the social construction of sexuality. The course also considers how various social statuses such as ethnicity, gender, and social class intersect with sexuality.

Student Learning Outcomes

1. Identify the central research questions, theories, and methodologies used in the study of human sexuality.

2. Identify and describe biological, cultural, social, and psychological sexual behaviors and responses across the lifespan.
3. Identify and describe trends and changes that influence sexual attitudes and values in the U.S. and globally.
4. Describe how sexuality is influenced by contextual factors, such as race/ethnicity, gender, socioeconomic status, disability, and nationality.

SOCI 2235 LGBTQ Issues and Identities

Course Description

Examines the various ways lesbian, gay, bisexual, transgender, and queer experiences and identities are shaped by social and structural forces in contemporary US society.

Student Learning Outcomes:

1. Identify key concepts & issues in the interdisciplinary fields of LGBTQ and queer studies
2. Sociologically analyze the various social, economic, and political structures & processes which influence those issues
3. Articulate how sexual orientation, sexuality, and sex/gender are socially constructed
4. Discuss how identities are influenced by social institutions and macro-level forces
5. Analyze intersections between inequality based on orientation and/or gender and other systems of stratification, i.e., race/ethnicity, social class, age, and nationality.
6. Evaluate possible solutions for making social institutions more inclusive and equitable.

SOCI 2240. Sociology of Intimate Relationships and Family

Course Description

This course provides an overview of contemporary intimate relationships and families from sociological perspectives. We will examine intimate relationships and families as social constructions whose meanings have changed over time and from place to place. This course will aid students in developing a greater understanding of intimate relationships and families as institutions in contemporary U.S. society. Intersections of race, class, gender, sexual orientation, nationality, and other factors within these institutions will be addressed.

Student Learning Outcomes

1. Explain the sociological approaches to researching intimate relationships and families.
2. Describe important sociological research findings concerning intimate relationships and families.
3. Explain how intimate and familial relationships are affected by multiple intersecting inequalities and ongoing events in other social institutions.

SOCI 2250. Sociology of Race and Ethnicity

Course Description

This class will examine race and ethnicity as social constructs, including the history of race and ethnic relations in the United States and how and why these constructs continue to play such important roles in the lives of U.S. peoples today. This course will also explore how other types of social stratification, such as class, gender, nationality, and sexual orientation, intersect with race and ethnicity.

Student Learning Outcomes

1. Describe sociological methods used in researching race and ethnicity.
2. Explain sociological theories that are used to analyze race and ethnicity.
3. Evaluate how immigration, colonization, and social policies have affected racial and ethnic groups.
4. Describe how capitalism and other forms of social stratification, such as class, gender, nationality, disability, and sexual orientation, intersect with race and ethnicity.

SOCI 2255. Race, Class, and Gender

Course Description

An examination of the social bases of inequality and theories that explain the creation of systems and ideologies of subordination. Readings and topics explore the consequences of discrimination against others based on such factors as race, gender, sexual orientation, ethnicity, or appearance.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Explain the historical and ideological bases of prejudice and discrimination
2. Recognize the social behaviors and cognitive process that signal prejudice and discrimination against others
3. based on factors such as race, ethnicity, gender, sexual orientation, and age
4. Analyze the adaptive techniques that groups use to counter prejudice and discrimination
5. Propose individual and group behavioral modifications to alleviate tensions arising from prejudice and discrimination.

SOCI 2260. Sociology of Aging

Course Description

This is an introductory gerontology course for students interested in behavioral, social, or family studies. The course is designed to understand the separate processes of biological, psychological, and social aging and how these aging processes interact with each other and with our environment.

Student Learning Outcomes

Successful completion of the course implies the student will be able to:

1. Understand the foundational basis of the aging process and old age as a state of life as measured by 90% accuracy on a written examination.
2. Understand the impact of aging on society as measured by 90% accuracy on a written examination.

SOCI 2261. Issues in Death and Dying

Course Description

Major personal and social issues related to the process of dying in our culture.

Student Learning Outcomes

After completing this course, the student will:

1. Understand the diversity of the death experience and the various options available in coping with death and bereavement as shown by the student's participation in class discussions and field trips.
2. Better understand death and dying as social phenomena as shown by the student's reaction papers.
3. Have taken an in-depth look at her or his own death with a researched paper. Comprehension will be shown by the student's grade on the paper.

SOCI 2310. Contemporary Social Problems

Course Description

This course studies the nature, scope, and effects of social problems and their solutions. The course will concentrate on sociological perspectives, theories, and key concepts when investigating problems, such as inequality, poverty, racism, alienation, family life, sexuality, gender, urbanization, work, aging, crime, war and terrorism, environmental degradation, and mass media. This course is designed to build students' sociological understanding of how sociological approaches attempt to clarify various issues confronting contemporary life, as well as how sociologists view solutions to these problems.

Student Learning Outcomes

1. Identify and explain major social problems in the United States, and how social problems become constructed as problems.
2. Describe and analyze policy related solutions associated with social problems from various perspectives.
3. Critically examine social problems through the use of sociological theories, methods, and empirical techniques.

4. Identify connections, both national and global, between social problems and social inequalities (e.g., social class, race/ethnicity, and gender/sexuality).

SOCI 2315. The Dynamics of Prejudice

Course Description

This course is designed to help students understand how attitudes and beliefs of individuals shape intergroup relations and their impacts on the daily lives of individuals as well as the effects that these beliefs have on the larger social structure of American society. We will examine how profoundly our society and the groups to which we belong, influence us and our beliefs and ultimately how these beliefs shape prejudice in our society. In this course, students are encouraged to challenge ideologies that are considered "common sense" or that are taken for granted and this in turn will allow them to critically engage issues in society such as racism, classism, sexism, and will leave with an understanding on how privilege affects our views on disability, LGBTQ issues, religion and immigration. Rather than investigating these themes in the abstract, students will identify and unpack how these larger structural issues play integral roles in their everyday lives, interactions, and existence. Ultimately, this course aims to address the social inequalities that exists in our society as a result of prejudice and will challenge students to identify and engage in strategies to work towards changing these aspects of society.

Student Learning Outcomes

At the end of the semester, students will be able to:

1. Identify the sources of attitudes and beliefs of individuals pertaining to various social groups.
2. Understand the meaning of privilege as well as be able to identify and address the different intersections of privileges that are inherent to them on an individual level.
3. Apply theories covered in the course to understand contemporary trends in majority minority relations.
4. Identify the multiple forms of marginalization and oppression that exist in society.
5. Understand the structural nature of these inequalities in U.S. society.
6. Apply course theories in a critical manner to a social theme of their choice.
7. Change at least one habit to reduce prejudice on an individual level.

SOCI 2320. Contemporary Social Issues in Native American Societies

Course Description

This course will examine current issues, conditions, and contexts affecting Native Americans in the U.S. Students will examine the growth of urban indigenous groups and their adjustments to urbanization, as well as the social, economic, and political achievements of the Southwestern Indians. Students will explore current topics connected with life patterns and issues facing Native Americans, such as health, education, poverty, and traditional lifestyles in transition.

Student Learning Outcomes

1. Deepen understanding of contemporary topics in Native American studies pertaining to health, education, poverty, traditional lifestyles in transition, and other areas, such as tribal sovereignty, political activism, and current century policies along with their effects.
2. Recognize how cultural differences in worldviews constructed as Native and non-Native are influencing changes in contemporary Native society.
3. Analyze the concepts presented through coursework to examine how structures and changes in Native society connect to the lives of both Native and non-Native peoples.
4. Communicate understanding of one's own views and the views of others regarding contemporary Native American issues through class discussions, written assignments, and other methods as necessary.
5. Understand the use of Nation building lenses and indigenous research practices in examining contemporary Native American issues.

SOCI 2325. Introduction to Native American Studies

Course Description

This course examines the wide scope of Native American Studies across multiple disciplines and as a standalone academic field. The course explores various concentration areas: Art, Media, Literature, Education, Native Language, Sociocultural Studies, Sovereignty, Leadership, Self-Determination, and Global Indigenous Justice.

Student Learning Outcomes

1. Students will develop a general understanding of the various concentration areas in Native American Studies throughout the United States.
2. Students will identify the contributions of various academic disciplines to Native American Studies.
3. Students will understand the intricacies and intersections of Indigenous scholarship in Native American Studies.
4. Students will articulate the importance of Native American Studies as a stand-alone discipline in academia.
5. Students will be able to connect community issues in both Native and Non-Native America to concepts taught in Native American Studies.

SOCI 2330. Society and Personality

Course Description

From a sociological vantage point, this course will introduce students to the discipline of social psychology, which is the scientific study of how people think about, influence, and relate to one another. Special attention will be given to the applications of social psychological insights. The course will explore the many ways our social environment influences our behavior.

Student Learning Outcomes

The student will be able to:

1. Examine the theories, research and applications of social psychology.
2. Recognize the consequences of social influences on individuals and their understanding of the world.
3. Examine the concept of self as a social agent.
4. Recognize how social psychologists use theory, research and applied methods to help solve social problems.
5. Analyze the processes of group interaction and the effects on human relations, small group dynamics and organizational structure.
6. Relate social psychological principles to everyday happenings.

SOCI 2340. Global Issues

Course Description

Many of the problems we face on a daily basis are global in scope and global in origin. The world is now more interconnected than ever. The things that happen in China or in Saudi Arabia affect us in the United States, just as the things that we do here affect the people in Russia or Egypt. This course offers a sociological perspective on this phenomenon of globalization and explores its origins in the culture of capitalism. To this end, we will examine topics such as consumption, labor, migration and immigration, economic inequality, the natural environment, and health. We will also consider various ways in which these problems can, or cannot, be solved for us and for future generations.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Discuss the global expansion of capitalism and its effects on different countries.
2. Recognize interactions among people, governments and corporations around the world.
3. Evaluate the increasing interconnectedness of global culture, politics and economics.
4. Recognize and analyze global dimensions of social issues, problems and networks.
5. Make connections between individuals' lives and global forces.
6. Analyze US issues within a global context.

SOCI 2345. Cultural Diversity

Course Description

The course will aid students in developing the ability to understand, respect, and value diversity and encourage the use of their sociological imaginations to gain a deeper understanding of how culture shapes our social world. Theory and application will be addressed through discussion, readings, and activities.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Demonstrate diversity consciousness.
2. Identify the various elements of culture.
3. Develop strategies appropriate for problem-solving in a culturally diverse environment.

SOCI 2410. Introduction to Research Methods

Course Description

This course is a survey of qualitative and quantitative approaches to sociological research. The course provides an overview of the research process, focusing on research design, hypothesis formulation, measurement, and data collection. In this course, students will develop the ability to critically analyze social research, as well as design and execute their own research projects. At the conclusion of this course, students should also have more confidence critically analyzing, writing about, and otherwise discussing research findings they encounter, while also becoming better equipped to comprehend complex social structures and concerns.

Student Learning Outcomes

1. Explain the advantages and disadvantages of qualitative and quantitative approaches to sociological research.
2. Describe the social research process, including research design, hypothesis formulation, measurement, data collection, and analysis.
3. Evaluate and critique published research articles on the basis of methodological strengths and weaknesses.

SOCI 2415. Grant Writing

Course Description

This course brings order and simplicity to the grantsmanship process. It is designed for beginning grant writers concerned with securing funds for non-profit organizations. The class is skills oriented. Students learn to research government funding sources, match project ideas with grantor needs, approach grantors and submit winning proposals. Graded as "Pass/Fail".

Student Learning Outcomes

Not Available

SOCI 2610. Sociology of Health Care Access

Course Description

This course explores factors affecting access to health care in the United States, including socioeconomic, racial, geographic, and legislative issues.

Student Learning Outcomes

Upon completing the course, students will be able to discuss the impact on access to health care of:

1. Socioeconomic factors.
2. Access to insurance.
3. Racial factors.
4. Geographic factors.
5. Current State and Federal legislation.

SOCI 2611. Sociology of Health Care Innovation and Development

Course Description

This course explores the role of united states-based health care research and development on the health care system, including in the United States and globally. Consideration will be given the costs and pricing structures of research,

development, and testing of pharmaceuticals, medical equipment, and best practices, both in the domestic and global markets. The course will also consider the impact of patient laws, efforts to make emerging medication available to critically ill patients, and strategies to facilitate access for patients who lack resources.

Student Learning Outcomes

Upon completion of the course, students will be able to discuss:

1. The role of the United States pharmaceutical industry in the global health care system.
2. The relationships between pharmaceutical industry and health care providers, including the potential for benefits and risks to patients.
3. The impact of media coverage on prescribing patterns
4. The concept and impact of orphan drugs.

SOCI 2612. Sociology of Health Care in Global Context

Course Description

This course places health care in a global context, including ways in which United States resources contribute to global health issues, advantages and disadvantages, including issues of cost and efficacy, of the United States health care system as compared to those utilized in other nations, especially industrialized nations.

Student Learning Outcomes

Upon completion of the course, students will be able to discuss:

1. Contributions that the United States make in the global health care context, including financial, technological, and expertise.
2. How the United States health care delivery compares in cost and efficacy to those of other nations, especially industrialized nations.

SOCI 2993. Workshop in Sociology

Course Description

Varies

Student Learning Outcomes

Varies

SOCI 2996. Topics in Sociology

Course Description

A course exploring a topic not covered by the standard curriculum but of interest to faculty and students in a particular semester.

Student Learning Outcomes

Varies

SOCI 2999. Sociology and Criminology Capstone

Course Description

The Capstone class revolves around a central theme of public sociology and criminology. As you put your sociological/criminological perspectives into action, you will have opportunities to reflect on your previous training at CNM and how to best achieve your future education and career goals. You will participate in public sociology/criminology through a community engagement project. The project will allow you to practice and express the sociological perspective you've developed in past semesters. It will also be an opportunity for you to translate academic skills into professional terms that will be useful for whatever realm you enter next. To that end, you will also explore various jobs that sociologists and criminologists pursue, learn about professional networks that may further occupational goals, and prepare materials to use in applying for careers and/or academic programs.

Student Learning Outcomes

The student will be able to:

1. List career fields that employ sociology majors.

2. Develop a completed resume that could be provided to a prospective employer or academic program.
3. Prepare for an interview with a prospective employer or academic program.
4. List their own career goals and how lifelong education fits with those goals.

Soil (SOIL)

SOIL 1110. Fundamentals of Soils

Course Description

Focuses on the management and fertility of soils. Conditions affecting plant growth, nutrition and production will be discussed along with the production and properties of fertilizer material.

Student Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the importance of soils.
2. Give basic account of soil chemical and physical properties.
3. Discuss applied aspects of soils, specifically plant and soil relationships.
4. Convey soil science terminology.

SOIL 1120C. Introduction to Soil Regeneration Lecture and Laboratory

Course Description

This course introduces principles and practices of soil regeneration and remediation for degraded or contaminated lands. Topics include soil structure and fertility, organic matter management, erosion control, bioremediation, phytoremediation, and sustainable land reclamation. Students gain practical experience in laboratory and field techniques to assess soil health, implement restoration strategies, and evaluate treatment effectiveness.

Student Learning Outcomes

1. Describe the physical, chemical, and biological properties of soils.
2. Assess soil health and fertility using laboratory and field tests.
3. Apply bioremediation and phytoremediation methods for contaminated soils.
4. Design soil restoration plans for degraded or mined lands.
5. Evaluate the effectiveness of soil regeneration strategies using measurable indicators.
6. Integrated soil regeneration principles into environmental management projects.

SOIL 2110. Introduction to Soil Science

Course Description

An overview of fundamental concepts in soil science and soils as a natural resource. Students will be introduced to the physical, chemical, and biological properties as it relates to soil management in environmental science, conservation, and agronomy.

Student Learning Outcomes

At the end of this course, students will be able to:

1. Understand and use the technical terminology associated with the use and management of soils.
2. Understand the classification of soils and the processes leading to their formation.
3. Identify key physical, chemical, and biological properties of soils.
4. Explain the impact of land use and management decisions as it relates to soil degradation and environmental problems.

SOIL 2110L. Introduction to Soil Science Laboratory

Course Description

Morphological, chemical, physical and biological properties of soil in the laboratory and field.

Student Learning Outcomes

1. Learn techniques for sampling and characterizing soils in the region.
2. Understand how soils are formed and the processes that occur within the soil profile.
3. Gain fundamental knowledge of soil physical, chemical, and biological properties and how each can influence the overall function of a particular soil.
4. Develop critical thinking and analytical skills within laboratory and field settings.
5. Encourage collaboration, inclusiveness and critical thinking.

SOIL 2996. Topics in Soil

Course Description

Specific subjects and credits to be announced in the Schedule of Classes. Maximum of 4 credits per semester. No more than 9 credits toward a degree. May be repeated up to 9 credits. Consent of Instructor required.

Student Learning Outcomes

Varies

Spanish (SPAN)

SPAN 1010. Introduction to Spanish

Course Description

Introduction to Spanish is a course for beginners who wish to become familiar with the sound system and conjugation of Spanish verbs. Basic vocabulary will be presented. This course is recommended as a prerequisite for students who have never had Spanish before and wish to enter the regular Spanish program.

Student Learning Outcomes

1. By the end of the semester, the student should be able to use simple greetings and expressions of courtesy in Spanish. (Spoken at a normal pace.)
2. Students should be able to ask and answer questions about ordering food in a restaurant, greet a friend, use vocabulary in the classroom, speak to and about families, use vocabulary as it relates to hotels, and speak about typical activities related to traveling in a foreign country.
3. Students should be able to recognize numbers from 0 – 1000.
4. Students should be able to conjugate simple verbs used in the Spanish language.

SPAN 1110. Spanish I

Course Description

Designed for students with little exposure to Spanish, this course develops basic listening, speaking, reading, and writing skills and basic intercultural competence in interpretive, interpersonal and presentational modes of communication at the Novice Level of proficiency based on ACTFL guidelines. During this course, students perform better and stronger in the Novice-Mid level while some abilities emerge in the Novice High range. This is an introductory course aimed at helping the student to communicate in Spanish in everyday familiar situations via recognition and production of practiced or memorized words, phrases, and simple sentences.

Student Learning Outcomes

1. Students can communicate on very familiar topics using a variety of words and phrases that they have practiced and memorized.
2. Students can present information about myself and some other very familiar topics using a variety of words, phrases, and memorized expressions.
3. Students can write short messages and notes on familiar topics related to everyday life.
4. Students can often understand words, phrases, and simple sentences related to everyday life.
5. Students can recognize pieces of information and some- times understand the main topic of what is being said.
6. Students can understand familiar words, phrases, and sentences within short and simple texts related to everyday life.

7. Students can sometimes understand the main idea of what they have read.

SPAN 1120. Spanish II

Course Description

Designed for students with some degree of exposure to Spanish in high school and/or at home, this course continues to develop basic listening, speaking, reading, and writing skills and basic intercultural competence in interpretive, interpersonal and presentational modes of communication based at the Novice High Level of proficiency based on ACTFL guidelines, although a few abilities may emerge in the Intermediate Low Level. Students in this course communicate in Spanish in familiar topics using a variety of words, phrases, simple sentences and questions that have been highly practiced and memorized.

Student Learning Outcomes

1. Students can participate in conversations on a number of familiar topics using simple sentences.
2. Students can handle short social interactions in everyday situations by asking and answering simple questions.
3. Students can present basic information on familiar topics using language they have practiced using phrases and simple sentences.
4. Students can write briefly about most familiar topics and present information using a series of simple sentences.
5. Students can understand the main idea in short, simple messages and presentations on familiar topics.
6. Students can understand the main idea of simple conversations that they overhear.
7. Students can understand the main idea of short and simple texts when the topic is familiar.

SPAN 1125. Conversational Spanish I

Course Description

This third-semester Spanish course emphasizes oral communication, idiomatic usage and the development of vocabulary, with a review of basic syntax.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Be able, by learning dialogues, to converse freely in the present and past with pronunciation that closely resembles that of a native speaker.
2. Be more aware of Hispanic culture and civilization.
3. To introduce the student to Spanish language literature in Hispanic America.

SPAN 1125L. Conversational Spanish Laboratory I

Course Description

Independent development of listening skills and supplemental instruction through computer work. Study of culture and instruction in how to deal with travel situations in a foreign country.

Student Learning Outcomes

1. Use listening strategies to understand Spanish spoken in the context of real world situations.
2. Understand the content of authentic text not based on familiar material.
3. Use the Internet to explore topics in which more practice is needed.

SPAN 1126L. Spanish Laboratory

Course Description

A self-paced language lab designed to accelerate, reinforce, and support all levels of Spanish. The course provides an opportunity to practice and strengthen listening, speaking, reading, and writing skills using software, audio and video tapes, and other technologies

Student Learning Outcomes

Demonstrate progress in the following areas:

1. Pronunciation.
2. Vocabulary.
3. Grammatical structure.
4. Reading and listening comprehension skills.
5. Writing and speaking skills.
6. History and culture of the Spanish speaking world.

SPAN 1127. Intensive Spanish

Course Description

An intensive two-week course designed to prepare the beginning or intermediate-level student for travel and study in a Spanish-speaking country. The course addresses basic survival Spanish and cultural literacy for a successful trip.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use survival Spanish for travel and the instructional classroom.
2. Use the present tense.
3. Identify important differences between United States culture and Spanish-speaking culture.
4. Demonstrate knowledge of cities to be visited and where he or she will study and tour.

SPAN 1210. Spanish for Heritage Learners I

Course Description

This is a beginning-level Spanish course designed for students who have a cultural connection to the Spanish language. Some students have had very little exposure to the language and enter the class to develop beginning-level skills. Other students may have grown up hearing the heritage language in the community and may understand some Spanish and speak at a basic level as a result. The objective is to draw upon the connection to the heritage language as a source of motivation and engagement for our learning communities. At the same time, we build upon the language base that students may already have as a result of their heritage learner experience in order to develop new proficiencies in Spanish and reactivate the Spanish that students have learned previously. By the end of this course, students will be able to describe their home, campus surroundings and common activities including cultural traditions. At the same time, students gain cultural competency and develop a critical understanding of their linguistic and cultural background.

Student Learning Outcomes

1. Interpersonal Communication: Students can engage in exchanges in culturally appropriate ways using understandable pronunciation on familiar topics using contextualized words, phrases, common idiomatic expressions, and simple sentences.
2. Written expression: Students can write an essay/poem/story/creative sketch/lyric in the target language that describes a past/present/future (fictional) event to the reader.
3. Interpretive listening: Students can understand familiar questions and statements from simple sentences in conversations.
4. Interpretive reading: Students can identify the topic and some isolated facts from simple sentences in informational and fictional texts.
5. Critical cultural awareness: Students can recognize and explain some of the issues facing bilingual communities in accordance with the instructor expertise and articulation with subsequent courses.

SPAN 1220. Spanish for Heritage Learners II

Course Description

Spanish as a Heritage Language II is a second semester class designed for students who have developed some basic Spanish proficiency from previous classes and/or from community experiences. This course provides students with the opportunity to develop their proficiency in the four language skills (speaking, listening, reading, and writing). Class activities are designed

to strengthen oral communication skills (speaking and listening) through a variety of group activities. By the end of the course students will be able to understand and produce narrations of past events in oral and written Spanish. In order to foster a desire to revitalize and maintain the Spanish language in the US context we attempt to raise students' critical awareness of what it means to be part of a specific speech community.

Student Learning Outcomes

1. Interpersonal Communication: Students can engage in basic but authentic conversations through providing and obtaining information, expressing likes and dislikes, describing their daily lives, and narrating simple events in the past.
2. Written expression: Students can write an essay/poem/story/creative sketch/lyric in the target language, and that describes a past (fictional) event to the reader.
3. Interpretive listening: can identify the main idea in short conversations.
4. Interpretive reading: Students can identify the topic and related information from simple sentences in short informational and fictional texts.
5. Critical cultural awareness: Students can recognize and explain some of the issues facing bilingual communities in accordance with the instructor expertise and articulation with previous and subsequent courses.

SPAN 1224. Beginning Conversational Spanish I

Course Description

For non-native speakers of Spanish, simple conversation, designed primarily to give students extra practice in the oral use of the language.

Student Learning Outcomes

This course is designed to have students:

1. Learn basic vocabulary in Spanish in order to facilitate listening and speaking comprehension.
2. Learn some of the basic verbs, their meanings, their structure and use in the present tense and its various functions: present, historic present, present progressive, and the paraphrastic future.
3. Learn the basic grammatical components of the Spanish language.
4. Learn to speak at a basic level so that a sympathetic native speaker may understand.
5. Learn to listen and comprehend the discourse of a native speaker who works to communicate with a non-native speaker of the Spanish language
6. Learn to read and write Spanish at a basic level

SPAN 1310. Elementary Spanish I for Hotel, Restaurant and Tourism Managers

Course Description

Beginning Spanish for HRTM majors only. Will count towards HRTM degree language requirement. Does not count towards language requirement for other majors.

Student Learning Outcomes

Not Available

SPAN 1410. Spanish for Health Care Professionals

Course Description

This course is designed to develop the student's ability to understand, speak, read and write the Spanish language within a health profession framework because linguistic and cultural knowledge are essential for communication with patients.

Student Learning Outcomes

At the end of this course students will:

1. Demonstrate acquisition of basic communicative skills in the area of listening, speaking, reading, and writing.
2. Comprehend and participate in short conversations in Spanish.
3. Have a working vocabulary which enables to recognize and exchange some information in Spanish.

4. Be able to apply some basic grammar rules in Spanish.

SPAN 1420. Spanish for Health Care Professionals II

Course Description

Designed for students with some prior exposure to Spanish SPAN 1410 or SPAN 1110), this course continues to develop listening, speaking, reading, and writing skills, as well as intercultural competence in healthcare contexts. Instruction targets the novice-high level (ACTFL), with some emerging abilities in the intermediate-low range.

Students expand their ability to communicate in Spanish in common healthcare scenarios, including describing symptoms in more detail, giving simple instructions, discussing medical histories, and interacting with patients and colleagues. Greater emphasis is placed on comprehension, interaction, and culturally appropriate communication in healthcare settings.

Student Learning Outcomes

1. Participate in simple conversations related to healthcare settings using phrases and simple sentences (e.g., patient interviews, basic consultations).
2. Handle short interactions in clinical or service-oriented contexts by asking and answering simple questions.
3. Present basic information about health conditions, treatments, and patient needs using practiced language.
4. Write brief texts related to healthcare topics (e.g., patient notes, instructions, summaries) using a series of simple sentences.
5. Understand the main idea in short, simple-spoken messages and presentations related to healthcare contexts.
6. Understand the main idea of simple conversations between healthcare providers and patients.
7. Understand the main idea of short, simple healthcare-related texts when the topic is familiar (e.g., discharge instructions, informational brochures).

SPAN 1421. Spanish for Medical Personnel I

Course Description

An introductory course in Spanish medical vocabulary and terminology. The course focuses on situations commonly encountered by healthcare professionals, such as routine physical exams, basic laboratory tests, patient interviews, the delivery of a baby, and giving instructions regarding medication and follow-up procedures that patients should understand. Key vocabulary, grammatical structures and proper pronunciation are introduced in the context of a practical medical situation.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use basic conversational and medical/health specific vocabulary and phrases.
2. Demonstrate the ability to discuss typical medical forms with Spanish-speaking patients or clients.
3. Integrate basic medical vocabulary in the work setting in order to be able to ask or answer simple questions of a medical nature.
4. Recognize significant cultural characteristics of their Spanish-speaking clientele/patients.
5. Employ Spanish competencies comfortably in the work setting with clients and colleagues.

SPAN 1422. Spanish for Medical Personnel II

Course Description

An advanced beginning level Spanish course aimed at improving the student's medical vocabulary and terminology. The course will further delve into situations commonly encountered by health care professionals as well as discuss the cultural sensitivity issues that exist in Hispanic/Latino societies.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Develop and improve Spanish writing skills in formal and literary styles.
2. Improve the knowledge and use of formal Spanish.
3. Develop and improve the student's knowledge of formal spoken Spanish.
4. Develop and improve grammar structures used in formal Spanish.
5. Extend the use of vocabulary used in formal, oral, and written Spanish.

SPAN 1425. Survival Spanish for the Educational Professional

Course Description

An introductory course in Spanish that introduces the education professional to the sound system/pronunciation, basic vocabulary, idiomatic expression/ and cultural issues of the language. A major goal of the course is the development of effective conversational skills for the educational setting although basic grammar, reading and writing are also addressed.

Student Learning Outcomes

At the conclusion of this course, the student should:

1. Demonstrate basic conversational Spanish with a corresponding vocabulary.
2. Use good pronunciation.
3. Recognize mood, tense, and parts of speech.
4. Perceive grammatical usage impractical conversational situations.

SPAN 1511. Spanish for Human Services

Course Description

An introductory Spanish course for professionals in the human services. The course focuses on pertinent vocabulary for situations commonly encountered by professionals in areas such as social work, counseling, case management, Social Security, Medicare, health services, food stamps, child support, vocational rehabilitation, senior citizen issues and other areas. Basic Spanish pronunciation and grammar are introduced in the context of practical social-services situations.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Augment basic vocabulary pertinent to professional roles (Vocabulary Journal).
2. Display increased confidence about pronunciation of Spanish and Spanish sentence structure (Role Play Interview).
3. Identify cultural norms working with Hispanic individuals and families (interview of Hispanic Professional).
4. Translate and explain agency forms and documents (Translation of Agency Form).
5. Display listening comprehension of typical dialogues which take place in a variety of human services agencies (Final Exam).

SPAN 1810. Spanish Abroad I

Course Description

This is a Level I intensive Spanish course. Students will study for a two-week period at a foreign language institute. The course includes approx. 40 hours of study in Spanish grammar, sentence structure and vocabulary development with additional hours of conversational tutoring. Excursions to selected historical and anthropological sites will be arranged through the Institute.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use basic conversational vocabulary
2. Demonstrate good pronunciation
3. Formulate simple questions and requests
4. Express familiarity with significant places in the foreign country

SPAN 1996. Topics in Spanish**Course Description**

A course exploring a topic not covered by the standard curriculum but of interest to faculty and students in a particular semester.

Student Learning Outcomes

Varies

SPAN 2088. Spanish Specialty

This course allows students to apply computer information technology elective credit towards a Native American Studies program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

SPAN 2110. Spanish III**Course Description**

This course is based on the integration of learning outcomes across Interpersonal, Interpretive, and Presentational Modes of Communication at the Intermediate Low Level of proficiency based on ACTFL guidelines. Students accomplish real-world communicative tasks in culturally appropriate ways as they gain familiarity with the target culture(s). This is an intermediate course aimed at helping the student to communicate in Spanish on familiar topics about self, others and everyday life at the same time that they recognize and handle short social interactions in interactions in everyday situations by asking and answering a variety of questions.

Student Learning Outcomes

1. Students can participate in conversations on familiar topics using sentences and series of sentences.
2. Students can handle short social interactions in everyday situations by asking and answering a variety of questions.
3. Students can usually say what they want to say about themselves and their everyday life.
4. Students can make presentations on a wide variety of familiar topics using connected sentences
5. Students can write on a wide variety of familiar topics using connected sentences.
6. Students can understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
7. Students can understand the main idea in conversations that they overhear.
8. Students can understand the main idea of texts related to everyday life and personal interests or studies.

SPAN 2120. Spanish IV**Course Description**

This course is based on the integration of learning outcomes across Interpersonal, Interpretive, and Presentational Modes of Communication at the Intermediate High Level of proficiency based on ACTFL guidelines. Students accomplish real-world communicative tasks in culturally appropriate ways as they gain familiarity with the target culture(s). This is an intermediate course aimed at helping the student to communicate in Spanish on familiar topics about self, others and everyday life at the same time that they recognize and handle short social interactions in interactions in everyday situations by asking and answering a variety of questions.

Student Learning Outcomes

1. Students can participate with ease and confidence in conversations on familiar topics.
2. Students can usually talk about events and experiences in various time frames.
3. Students can usually describe people, places, and things.
4. Students can handle social interactions in everyday situations, sometimes even when there is an unexpected complication.
5. Students can make presentations in a generally organized way on school, work, and community topics, and on topics they have researched.

6. Students can make presentations on some events and experiences in various time frames.
7. Students can write on topics related to school, work, and community in a generally organized way.
8. Students can write some simple paragraphs about events and experiences in various time frames.
9. Students can easily understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
10. Students can usually understand a few details of what they overhear in conversations, even when something unexpected is expressed.
11. Students can sometimes follow what they hear about events and experiences in various time frames.
12. Students can easily understand the main idea of texts related to everyday life, personal interests, and studies.
13. Students can sometimes follow stories and descriptions about events and experiences in various time frames.

SPAN 2121. Spanish Grammar and Composition

Course Description

This course is designed to help students with advanced knowledge of Spanish understand and practice the formal structures of the Spanish language. In this course, students will read, study, analyze, and produce different literary styles that will help them expand their knowledge of the Hispanic culture and native Spanish speakers.

Student Learning Outcomes

1. Develop and improve Spanish writing skills in formal and literary style.
2. Improve the knowledge and use of formal Spanish.
3. Develop and improve the student's knowledge of formal spoken Spanish.
4. Develop and improve grammar structures used in formal Spanish.
5. Extend the use of vocabulary used in formal, oral and written Spanish.

SPAN 2123. Conversational Spanish

Course Description

This intermediate-level class helps students develop their conversational capacities in Spanish. The emphasis is primarily on speaking and listening, although the course will also include significant reading and writing components. Classroom activities and course assignments will develop students' capacity to use Spanish in real-life scenarios relating to everyday interactions with friends, family members, acquaintances, and strangers. It will also review vocabulary and grammar from both elementary and intermediate Spanish courses. At the end of this course, students will be able to carry out a broad range of simple conversations and will feel more comfortable listening to and understanding spoken Spanish.

Student Learning Outcomes:

1. Complete a variety of communicative tasks in straightforward social situations relating to everyday conversations between friends, acquaintances, and family members.
2. Engage in conversation in real-life scenarios and contexts, carrying out relatively predictable exchanges related to buying or ordering food; asking for directions and using public transportation; receiving a haircut; obtaining first-aid supplies or medical help; and other tasks related to everyday life in Spanish-speaking communities.
3. Ask and respond to a variety of questions about the past, present, and future to obtain simple information and express personal meaning.
4. Identify basic differences between the Spanish spoken in different parts of Latin America and Spain, including differences in accent, vocabulary, and grammar.

SPAN 2125. Conversational Spanish II

Course Description

A conversational Spanish course designed for the "intermediate" level student. The course provides intensive conversation practice and a review of selected grammar. It emphasizes vocabulary expansion and enhancement.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use the indicative, the subjunctive and imperative moods accurately.
2. Converse freely with competencies which resemble that of a native speaker.
3. Identify, discuss and write about "issues" presented in reading selections.

SPAN 2125L. Conversational Spanish Lab II

Course Description

A continuation of Spanish Lab I. Independent development of listening skills and supplemental instruction.

Student Learning Outcomes

1. Use listening strategies to further develop understand Spanish relating to global issues and culture.
2. Understand and pronounce words, phrases, and simple sentences related to everyday life.
3. Recognize pieces of information from native speakers online and understand the main topic of what is being said.

SPAN 2130. Introduction to Public Speaking in Spanish

Course Description:

This course aims to help undergraduate students feel more comfortable become more effective “public speakers” and more critical “public receivers” of information in Spanish. The primary focus of the course is the practice of techniques to lessen speaker anxiety and to enhance speaker presentations in public settings with multiple audiences in mind. This course has been designed for undergraduates who speak Spanish as a daily basis with their own families and/or other personal networks in addition/outside educational settings.

Student Learning Outcomes:

1. Identify and describe unique characteristics of informative and persuasive speeches in Spanish following rhetoric principles. OE
2. Design informative and persuasive speeches in Spanish (and/or translanguaging Spanish English) for a specific purpose and audience.
3. Structure informative and persuasive speeches in Spanish using visual and audio artifacts.
4. Engage with diverse audiences and adapt content and style of speech accordingly.
5. Articulate a thesis and a purpose in speeches by means of presenting information and developing persuasion and synthesize information in a logical and organized structure.
6. Explain and analyze conceptual and ethical arguments in public speaking.

SPAN 2204. Spanish Language in Film

Course Description

Explores themes relevant to Spanish-speaking societies through the viewing and analysis of critically acclaimed films and documentaries. Such themes include cultural and/or religious conflict, rural vs. urban and migration issues, changing gender and social roles, marginalized peoples, and globalization.

Student Learning Outcomes

1. Students will be able to articulate the code of ethics for the profession.
2. Students will be able to identify the human rights and social justice goals for language interpretation.

SPAN 2210. Spanish for Heritage Learners III

Course Description

Intermediate Spanish for Heritage Speakers I is a third semester course designed for students who have been raised in a Spanish-speaking environment and speak, or understand, some Spanish as a result of hearing it in the home, and in the community by family, friends, and neighbors. Students in this course will continue to develop their ability to narrate events

in the past and will be able to describe hypothetical situations. Students will also develop their ability to express wishes, desires, and necessities. This course will help the student build confidence in their Spanish abilities and expand the language use in the areas of writing, reading, oral production and listening comprehension. To foster a desire to revitalize and maintain the Spanish language we attempt to raise students' critical awareness of wider issues facing Spanish speakers in the US context.

Student Learning Outcomes

1. Interpersonal Communication: Students can exchange information on a wide variety of familiar topics in which the students use appropriate vocabulary to describe their daily lives and narrate events in the past with some degree of ease and confidence.
2. Written expression: Students can write an essay/poem/story/creative sketch/lyric in the target language, and that effectively conveys a series of past (fictional) events to the reader that may include recent and distant past.
3. Interpretive listening: Students can identify the main idea and key information in short straightforward conversations.
4. Interpretive reading: Students can understand the main idea and key information in short straightforward informational and fictional texts.
5. Critical cultural awareness: Students can recognize and explain some of the issues facing bilingual communities in accordance with the instructor expertise and articulation with previous and subsequent courses.

SPAN 2220. Spanish for Heritage Learners IV

Course Description

Intermediate Spanish for Heritage Speakers II is a fourth-semester course designed for students who have been raised in a Spanish-speaking environment and speak, or understand, Spanish as a result of having heard it in the home and in the community. It is also for students with a cultural connection to heritage language speech communities or who have achieved proficiency from study in previous courses. This course will help the student build confidence in their Spanish abilities and expand the language use in the areas of writing, reading, oral production and listening comprehension. In addition to scaffolding skills that students already have, in this class they will expand their ability to describe abstract and hypothetical situations. Students will write essays, reaction papers, and creative pieces. Students will also examine formal and informal contexts of language use in speaking and writing. By studying the cultural and historical background shared by students as part of the program, students will develop an increased critical awareness of Spanish language speech communities.

Student Learning Outcomes

1. Interpersonal Communication: Students can exchange information on a wide variety of familiar topics in which the students use appropriate vocabulary to describe their daily lives, narrate events in the past, describe future events, and present a simple hypothetical situation with some degree of ease and confidence.
2. Written expression: Students can produce writing in the target language that state their viewpoint about familiar topics and give some reasons to support it, using sentences and series of connected sentences.
3. Interpretive listening: Students can usually understand the main idea and flow of events expressed in various time frames in conversations and discussions.
4. Interpretive reading: Students can usually follow the main message in various time frames in straightforward, and sometimes descriptive, paragraph-length informational and fictional texts.
5. Critical cultural awareness: Students can recognize and explain some of the issues facing bilingual communities in accordance with the instructor expertise and articulation with previous and subsequent courses.

SPAN 2224. Beginning Conversational Spanish II

Course Description

Beginning Conversational Spanish will concentrate on the acquisition of Spanish. In this course students will display a greater understanding of basic elements of the Spanish language. Class will consist of reading, practicing and writing to increase student's proficiency.

Student Learning Outcomes

Not Available

SPAN 2277. The Art and Skill of Translation

Course Description

Introduces the art and profession of translation with a focus on practical translation problems in Spanish. Studies texts from the area of journalism, law, business and literature for translation from Spanish to English and from English to Spanish. This course introduces the art of translation and an overall view of this field. Students will sharpen their insight on linguistic issues, vocabulary and grammatical structures of Spanish and English, and they will develop analytical thinking into the nature of translation. This course will examine basic techniques in translation and will develop student's competence in solving translation problems through practical examples. Throughout the course students will translate numerous texts from Spanish to English and English to Spanish from the fields of: journalism, business, law, computer science and medicine

Student Learning Outcomes

At the end of this course, students will be able to:

1. Produce translations of Spanish-language texts with increased proficiency at an intermediate level.
2. Identify and apply theoretical and practical tools to perform Spanish-English translation at an intermediate level.
3. Distinguish significant kinds of translation problems and develop strategies to solve them.
4. Demonstrate mastery of grammatical structures and lexicon through participation, quizzes and projects and exams.
 - a. Students will identify basic syntactic elements (nouns, verbs, adjectives, prepositions etc.), grammatical markers (tenses, modes, and voice etc.) and their use in the target language.
 - b. Students will identify cognates, false cognates, idioms and specialized vocabulary.
5. Demonstrate awareness of linguistic (stylistic, social and geographical) variation
6. Discuss the act of translation in an informed manner.

SPAN 2280. Introduction to Hispanic Literature

Course Description

Presents selected readings from literature written in Spanish by Spanish and Spanish-American authors. **Student Learning Outcomes**

Upon completion of the course, students will be able to:

1. Recognize and identify some of the masterpieces of Hispanic letters and their authors.
2. Use the techniques of literary analysis Identify the different currents and cultural movements in which the texts appear
3. Defend literary works as multifaceted texts that, besides being linguistic texts, can be read as cultural, historical, social, philosophical texts.
4. Demonstrate that they can speak and write eloquently about literature.

SPAN 2375. Accelerated Beginning Spanish

Course Description

Combines SPAN 1110 and SPAN 1120 in one term. Recommended for language enthusiasts or those who have had exposure to Spanish either in the home or from previous study. This course is a college-level accelerated introduction to Spanish that promotes language learning in a cultural context. It covers the material of two semesters in one. It is recommended for language enthusiasts or those who have had exposure to Spanish either in the home or from previous studies. This course will develop students' communicative language with clear and comprehensive grammatical coverage by the presentation of functional language, role-play, small group and personalized activities. Students will engage in cross-cultural comparisons in

reading, writing, listening and interview activities. Students will make connections among discipline areas with document readings, internet research and interview activities.

Student Learning Outcomes

1. Students can participate in conversations on a number of familiar topics using simple sentences.
2. Students can handle short social interactions in everyday situations by asking and answering simple questions.
3. Students can present basic information on familiar topics using language they have practiced using phrases and simple sentences.
4. Students can write briefly about most familiar topics and present information using a series of simple sentences.
5. Students can understand the main idea in short, simple messages and presentations on familiar topics.
6. Students can understand the main idea of simple conversations that they overhear.
7. Students can understand the main idea of short and simple texts when the topic is familiar.
8. Students can demonstrate connections between beliefs, behaviors and cultural artifacts of the Spanish-speaking world and make informed cross-cultural comparisons to develop their sense of personal and social responsibility.

SPAN 2376. Accelerated Intermediate Spanish

Course Description

Recommended for language enthusiasts or those who have had exposure to Spanish either in the home or from previous study. Designed to meet the need for an accelerated course in Intermediate Spanish, this course covers the material of Spanish 2201 and 2202 in one term. It is recommended for language enthusiasts or those who have had exposure to Spanish either in the home or from previous studies. This course will develop students' communicative language with clear and comprehensive grammatical coverage by the presentation of functional language, role-play, small group and personalized activities. Students will engage in cross-cultural comparisons in reading, writing, listening and interview activities. Students will make connections among discipline areas with document readings, internet research and interview activities.

Student Learning Outcomes

At the end of this course, students will be able to:

1. Students can participate with ease and confidence in conversations on familiar topics.
2. Students can usually talk about events and experiences in various time frames.
3. Students can usually describe people, places, and things.
4. Students can handle social interactions in everyday situations, sometimes even when there is an unexpected complication.
5. Students can make presentations in a generally organized way on school, work, and community topics, and on topics they have researched.
6. Students can make presentations on some events and experiences in various time frames.
7. Students can write on topics related to school, work, and community in a generally organized way.
8. Students can write some simple paragraphs about events and experiences in various time frames.
9. Students can easily understand the main idea in messages and presentations on a variety of topics related to everyday life and personal interests and studies.
10. Students can usually understand a few details of what they overhear in conversations, even when something unexpected is expressed.
11. Students can demonstrate connections between beliefs, behaviors and cultural artifacts of the Spanish-speaking world and make informed cross-cultural comparisons to develop their sense of personal and social responsibility.

SPAN 2420. Introduction to Medical Spanish

Course Description

This class has been designed, upon special request, specifically for those entering or already practicing in the medical field. The purpose of the class is to have each student become compliant with the Spanish language federal requirement to function better at the bedside with Spanish-speaking patients with little or no English abilities.

Student Learning Outcomes

At the end of this course, students will be able to:

1. Understand the spoken Spanish equivalent of phrases and useful words.
2. Speak basic phrases and words in Spanish for specific tasks in a medical setting.
3. Read Spanish phrases and vocabulary in context and comprehend their meaning.
4. Have a comprehension of the Latino cultural traditions or customs regarding illnesses of the body, mind and spirit (curanderismo) that some patients may have as a belief system.

SPAN 2421. Intermediate Spanish for Medical Personnel**Course Description**

An intermediate level Spanish course introducing the principles of interpreting in medical settings. The course will focus on cultural sensitivity issues that exist in Hispanic/Latino societies and the linguistic variations encountered in our area. Emphasis will be placed on interpreting from English to Spanish and from Spanish to English in the medical setting.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Engage in interpretations in Spanish and English focused on discussing patient symptoms, questions, and/or concerns.
2. Recognize and be sensitive to cultural differences that may exist between U.S. and Hispanic/Latino societies.
3. Demonstrate knowledge of "real world" language used in discussing minor and serious illnesses as well as outpatient care and follow-ups.

SPAN 2510. Introduction to Hispanic Literature**Course Description**

An introduction to the novels, poetry, short fiction and drama of Spain and Hispanic America. The emphasis is on interpretation with appropriate references to literary history. Lectures, discussion and compositions are in Spanish.

Student Learning Outcomes

At the conclusion of this course, the student will have considered the following questions:

1. What were the linguistic origins of a national "Spanish" literature?
2. What is the Black Legend and what role has it played in defining a Spanish history and literature?
3. What impact did the New World writing/literature have on Spanish literary developments or literary history?
4. How do we select and give meaningful placement to the most important writers, movements, ideas, and works, which have contributed to Hispanic literature?

SPAN 2511. Spanish Through Children's Literature**Course Description**

A course for teachers and other students interested in teaching Spanish through children's literature from the Hispanic world including the Southwest. Hispanic history, folklore, and mythology provide much of the material that will be covered.

Student Learning Outcomes

1. To develop aural, oral, reading and writing skills in Spanish.
2. To teach Spanish through Hispanic culture.
3. To integrate oral and written Hispanic literature as sources of storytelling classroom material.

SPAN 2512. Chicano Literature and Expression

Course Description

A course taught in Spanish to present the Chicano experience through literature, journalism, chronicles, film and drama.

Student Learning Outcomes

At the conclusion of this course, the student should:

1. Demonstrate knowledge of the historical events and forces which influenced the writing of the literature treated.
2. Assess and compare the works selected for study in this course.
3. Incorporate Spanish language competencies.
4. Identify and analyze significant elements in Chicano culture (origins and development).

SPAN 2513. Latin American Feminist Expression**Course Description**

Through literature, art, film, and journalism students explore the emerging issues and women's perspectives on their place in Latin American culture. The course surveys the works of historic and contemporary artists, writers and filmmakers of Hispanic America.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify the major themes of women writers, journalists, artists and filmmakers of Latin America.
2. Evaluate, discuss and critique the historical context of their works.
3. Prepare written and oral summaries in Spanish of the readings and artistic traditions studied.

SPAN 2514. Southwest Culture through Film**Course Description**

This course explores the Hispanic culture of the Southwest as depicted in documentary and popular entertainment films. A discussion of each film is held after viewing.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Interpret SW Hispano culture as presented in film.
2. Know the unique cultural traits of Hispano culture in the SW:
3. Identify the important films that portray Hispano culture.

SPAN 2515. Contemporary Latino Film**Course Description**

This course explores the Latina/Hispanic culture of Spain, Latin America, and the United States as depicted in documentary and popular entertainment films. A discussion of each film is held prior to and after viewing.

Student Learning Outcomes

1. Interpret contemporary Latino/Hispanic culture as presented in film.
2. Know the cultural traits of Hispanics/Latinos worldwide.
3. Identify the important films, filmmakers, and actors that portray contemporary culture of country/region represented.

SPAN 2520. Short Readings in Hispanic Literature: Immersion**Course Description**

This course seeks to familiarize students with the literature, culture and history of Spain. Focus on short stories and/or book segments of prominent Spanish writers allows students to learn the basic elements of the various genres of literature, literary interpretation techniques, and important topics in Hispanic culture.

Student Learning Outcomes

1. Read carefully and discuss stories.

2. Analyze in writing the works reach in the course.
3. Have fundamental knowledge of some of the most prominent authors in Spain.
4. Demonstrate his or her knowledge of history, customs, values, are, language, social iteration, literature, and other cultural aspects of Spain.

SPAN 2521. Short Readings in Hispanic Culture: Immersion

Course Description

This course seeks to familiarize students with the literature, culture and history of Spain. Focus on short stories and/or book segments of prominent Spanish writers all students to learn the basic elements of the various genres of literature, literary interpenetration techniques and important topics of Hispanic literature.

Student Learning Outcomes

1. Explore Spanish Literature and other topics that are fundamental to the identity of those in the Spanish-speaking world.

Spanish Language Interpreter (SPLI)

SPLI 1101. Fundamentals of Interpreting

Course Description

This introductory course to the program addresses fundamental philosophical, theoretical, and technical knowledge and skills necessary for the provision of professional cross-cultural linguistic services in the healthcare and legal sectors. The course covers the different aspects of interpreting in the legal and medical fields, including the role of the medical and court interpreter, ethical issues and best practices, research skills and job opportunities. The fundamentals of simultaneous, consecutive and sight interpretation will be introduced with an emphasis on legal and medical vocabulary and grammar.

Student Learning Outcomes

1. Students will acquire a working knowledge of the theoretical and practical framework of translation and interpretation in various contexts.
2. Students will demonstrate increasing fluency in Spanish and English medical and legal terminology.

SPLI 1102. Language Structure and Technologies in Interpretation and Translation

Course Description

This course examines how language works, the nature and structure of language, and aspects of linguistics relevant to the development of competence in the fields of Interpretation and Translation, especially grammatical competence, in English and Spanish. This course covers English and Spanish legal, medical and business translation. It focuses on building upon conceptual knowledge in these specialized contexts as well as language and translation competence in these settings, with the additional intent of guiding students in building their vocabulary in both languages. It introduces students to professional standards of translation practice using authentic materials and contextually meaningful situations. Students will be introduced to the use of the technological equipment that facilitates the work of the interpreter. Includes computers for transcription/translation, information distribution techniques, file transfer technologies, using the World Wide Web in translation and interpretation, and applied projects.

Student Learning Outcomes

1. Students will demonstrate proper use of receivers and transmitters, as well as any other relevant technologies used in interpretation.
2. Students will read source texts and perform beginning sight translation.
3. Students will create a field-specific vocabulary glossary, utilizing research techniques.

SPLI 1103. Introduction to Medical Interpretation

Course Description

Interpreting in a medical context. Includes interpreting in a medical setting, pronunciation of Spanish and English names and medical terms, Spanish and English medical terminology, bicultural medical communication, and regional dialects.

Student Learning Outcomes

1. Students will demonstrate knowledge of and increasing ease with medical vocabulary in both languages.
2. Students will identify key components of the code of ethics for medical interpretation.
3. Students will recognize primary characteristics of professional venues, including personnel and procedures.

SPLI 1104. Introduction to Legal Interpretation

Course Description

Includes interpreting in a legal setting, knowledge of legal procedure and ancillary issues related to legal terminology in Spanish and English, bicultural legal communication, and regional differences.

Student Learning Outcomes

1. Students will demonstrate knowledge of and increasing ease with legal vocabulary in both languages.
2. Students will identify key components of the code of ethics for legal interpretation.
3. Students will recognize primary characteristics of professional venues, including personnel and procedures.

SPLI 1105. Ethics and Advocacy in the Profession

Course Description

This course provides an overview of human rights and social-justice goals for the provision of equal access and the role that language policies, translation and interpreting services for limited and non-English speaking populations play in attaining those goals. Additionally, this class emphasizes the standards of ethics and best practices in medical, court and community interpreting and translation. This class will also examine how interpreters can practice self-care when providing service to people experiencing trauma.

Student Learning Outcomes

1. Students will be able to articulate the code of ethics for the profession.
2. Students will be able to identify the human rights and social justice goals for language interpretation.

SPLI 1106. Beginning Simultaneous Interpretation

Course Description

This course begins the in-depth study of simultaneous interpretation (continued in Advanced Simultaneous Interpretation). Its focus is to build upon conceptual knowledge in the legal, medical, and business contexts as well as language and interpreting competence. Students are introduced to professional, nationally accepted standards of practice and performance using authentic materials and contextually meaningful situations.

Student Learning Outcomes

1. Student will begin to render messages into target language simultaneously with increasing accuracy and consistency.
2. Students will demonstrate knowledge of acquired notetaking, listening, and rendering skills.

SPLI 1107. Beginning Consecutive Interpretation

Course Description

This course begins the in-depth study of the theory and practice of consecutive interpretation and sight translation (continued in Advanced Consecutive Interpretation). It reviews legal and medical concepts and covers policy and law relevant to interpreter practice, theory, skill development, and special issues in legal, medical, and business settings using authentic materials and contextually meaningful situations.

Student Learning Outcomes

1. Student will begin to render messages into target language consecutively with increasing accuracy and consistency.
2. Students will demonstrate knowledge of acquired notetaking, listening, and rendering skills.

SPLI 2190. Community Practicum

Course Description

Community practicum is essential to skill building and preparation for certification exams. Students may carry out practicum in last term or over two terms for one-credit hour each.

Student Learning Outcomes

1. Students will apply the knowledge and skills necessary for medical and/or legal interpretation in the field.

SPLI 2206. Advanced Simultaneous Interpretation

Course Description

This course continues the in-depth study (begun in Beginning Simultaneous Interpretation) of simultaneous interpretation. Its focus is building conceptual knowledge in the legal, medical, and business settings as well as advancing language and interpreting proficiency. Students will review professional standards of practice and performance using authentic materials and contextually meaningful situations. Focus is on intensive skill development.

Student Learning Outcomes

1. Student will demonstrate increasing ability to render messages into target language simultaneously with advanced accuracy and consistency.
2. Students will demonstrate advanced knowledge of acquired notetaking, listening, and rendering skills.
3. Students will apply code of ethics consistently in practice.

SPLI 2207. Advanced Consecutive Interpretation

Course Description

This course continues the in-depth study of the theory and practice of consecutive interpretation and sight translation. It focuses on a review of complex legal and medical concepts; policy and law relevant to interpreter practice; theory; skill development; and special issues in interpretation in the legal, medical, and business settings. Focus is on intensive skill development.

Student Learning Outcomes

1. Student will demonstrate increasing ability to render messages into target language consecutively with advanced accuracy and consistency.

2. Students will demonstrate advanced knowledge of acquired notetaking, listening, and rendering skills.
3. Students will apply code of ethics consistently in practice.

Special Education (SPED)

SPED 2110. Introduction to Students with Exceptionalities

Course Description

This course is an introduction to special education with information regarding characteristics of individuals with exceptionalities, special education terminology, evidence-based instructional strategies, diversity of students with exceptional needs, relationships between personal and cultural perspectives, and legal policies pertaining to exceptional students' rights.

Student Learning Outcomes

1. Demonstrate familiarity with categories of exceptionalities and related accommodations and instructional methods appropriate for various exceptionalities.
2. Identify major laws, regulations, and responsibilities of schools related to special education.
3. Explain the components of Individualized Educational Plans (IEPs) and related roles of teachers, school specialists, students, and their families.
4. Identify the roles and resources of family, school, and community to serve exceptional students.
5. Participate in field experiences that include observations and interaction with special education students and school programs.
6. State the definition of each disability category covered by Individuals with Disabilities Education Act (IDEA).
7. Create lesson plans that demonstrate an understanding of differentiated instruction.

SPED 2120. Introduction to Special Education

Course Description

For paraprofessional students who will be working with a teacher in a Special Education classroom. This class will provide an overview of characteristics of children with special needs, legal issues, framework of effective instruction and a variety of practical teaching and learning strategies that are relevant to the tasks and academic demands required in inclusive classrooms.

Student Learning Outcomes

Not Available

SPED 2130. Culture, Learning and Academic Achievement in a Diverse Society

Course Description

Development of culturally responsive learning strategies, skills and utilization of support services, to enhance academic achievement.

Student Learning Outcomes

Not Available

SPED 2210. Education of the Exceptional Person

Course Description

This course is an introduction to special education with information regarding characteristics of individuals. A survey of the characteristics and educational needs of exceptional children. Includes definition, etiology, characteristics and various educational alternatives for each of the exceptionalities. Students will explore:

- the historical and legal basis for special education services for students with disabilities.
- the exceptionality categories included in the federal Individuals with Disabilities Act (IDEA 2004) and NM State laws.

- the basic responsibilities of educators and school systems to students with exceptional needs including documentation and IEP participation.
- the importance of, and strategies for, collaboration with families, students, and other professionals
- research-based strategies for differentiating instruction and planning for students with exceptional needs.

Student Learning Outcomes

1. Define and describe the roles and responsibilities of special educators regarding the six principles of IDEA & related law (e.g., FERPA, NCLB).
2. Become familiar with Universal Design for Learning (UDL) and its application in planning for academic success.
3. Explain special education procedural safeguards in parent-friendly language and answer relevant questions in an approachable way.
4. Model professional ethics and advocacy in a variety of presented scenarios.
5. Identify ways to collaborate with educational staff and families for academic success of students regardless of perceived abilities.
6. Construct a resource guide that: describes the exceptionality categories included in IDEA and NM State Law; provides information on how eligibility is determined for each category; describes general characteristics of each category and applicable teaching considerations; and provides high quality free or low-cost evidence-based teaching resources applicable to each category.

SPED 2220. Exploring Disability, Diversity, and Practice Across Learning Environments

Course Description

Field experience and seminar in special education settings. Need to check past applications vs. UNM description

Student Learning Outcomes

1. Develop an understanding of how special education services are implemented in the field.
2. Understand that students with disabilities are entitled to be full participants in education and other life activities along with their nondisabled peers.
3. Become familiar with and incorporate “people first” language into any discussions or writings about people with disabilities.
4. Recognize that the educational environment in which services are provided can have a lasting and significant impact on the lives of students with disabilities.
5. Identify the role and responsibility of teachers to meet the needs of students in the least restrictive environment (LRE).

SPED 2258. Classroom Behavior and Management for SPED

Course Description

This course is designed to prepare both future special education teachers with knowledge and skills to effectively manage and promote prosocial skills of students who present challenging behaviors. The course is structured around several theoretical underpinnings: (1) behavior is purposeful and fulfills a function; (2) behavior and environment affect each other reciprocally, (3) behavior can be predicted and managed based on principles of applied behavior analysis; and (4) self-management can be promoted through an understanding of various theories of human behavior including social learning, cognitive, and ecological theories.

STUDENT LEARNING OUTCOMES Upon successful completion of the course, the student will be able to...

1. Know the basic tenants for effectively managing children’s behavior. 3
2. Identify impediments to managing children's behavior. 3
3. Describe different theoretical models for understanding human behavior. 3
4. Identify basic principles of behavior modification. 3
5. Analyze methods for conducting a functional assessment of challenging behavior. 3
6. Describe methods for counting and graphing behavior. 3

7. Describe techniques for increasing appropriate behavior. 3
8. Explain non-aversive techniques for reducing inappropriate behavior. 3
9. Explain techniques for teaching children self-management. 3, 8
10. Study preventative approaches as an antecedent for behavior problems. 3

SPED 2996. Topics in Special Education

Course Description

Offered under various subtitles that indicate the subject matter to be covered

Student Learning Outcomes

Varies

Speech & Hearing Science (SPHS)

SPHS 2110. Introduction to Communication Disorders

Course Description

This introductory course provides an overview of common speech, language, and hearing disorders in children and adults including etiologies, characteristics, prevention, identification, assessment and intervention. The course provides an overview of the field of speech-language pathology and audiology.

Student Learning Outcomes

1. Describe normal human communication anatomy and processes as they relate to speech and language production.
2. Describe the nature of speech, language, and hearing disorders and differences.
3. Describe the principles of prevention, assessment and intervention of communication disorders.
4. List requirements for licensure, certification, and other relevant professional credentials.
5. Exhibit basic knowledge of contemporary professional issues in speech-language pathology.
6. List possible psychosocial implications of various communication disorders.
7. Identify cultural, educational, legal, and ethical issues related to communication disorders.
8. Describe the scope of practice of speech-language pathologists and audiologists.

Sports Medicine (SPMD)

SPMD 1110. Introduction to Athletic Training

Course Description

Introduction to the principles of athletic training.

Student Learning Outcomes

1. Understand the historical development of athletic training and sports medicine.
2. Understand the knowledge and experiences needed to become a Certified Athletic Trainer.
3. Understand the specific responsibilities and duties of an athletic trainer.
4. Understand the diverse jobs settings within the profession of athletic training.
5. Understand the relationship between the athletic trainer and the sports medicine team.
6. Understand some of the general and specific injuries and medical conditions that occur in athletics, their causes, signs and symptoms, treatments, rehabilitation, and prevention.
7. Understand some of the contemporary issues and problems facing the athletic training profession.

SPMD 1120. Medical Terminology

Course Description

Study of the structure of medical language with emphasis on sports medicine-related terminology. To include analysis and interpretation of medical documentation.

Student Learning Outcomes

1. Master the fundamentals of word analysis, including the separation of terms into word roots or combining forms, common prefixes, and suffixes.
2. Differentiate types of medical terms and the relationships among terms.
3. Develop a proficiency in the use of physiological and anatomical terms as reflected in medical documents.
4. Master the terms, words, phrases, and symbols that describe the human body in its various states of health and disease, including essential anatomical terms.

SPMD 1190. Clinical Practicum I

Course Description

Introduction to the clinical aspects of the athletic training education program. Must maintain at least 3.0 GPA.

Student Learning Outcomes

1. The Athletic Training Program application procedures.
2. The ability to perform selected taping and wrapping techniques.
3. Knowledge of HIPAA guidelines, pre-participation physical examinations, environmental illnesses, the history of Athletic Training and its governing bodies, Evidence Based Practice and its implications in the field of athletic training, evaluation procedures for the injured athlete, NMSU AT program and its affiliated clinical sites.
4. Proper documentation for the athletic training environment including SOAP notes.

SPMD 1195. Clinical Practicum II

Course Description

Athletic training related content and psycho-motor skills are introduced, enhanced, and assessed in the classroom and clinical rotations. Emphasis is on competencies and proficiencies previously instructed in didactic courses while providing increased depth of understanding and clinical practice. Must maintain a 3.0 GPA.

Student Learning Outcomes

1. Demonstrate knowledge and skill in emergency situation prevention, recognition, and management.
2. Demonstrate proficiency in basic skills of musculoskeletal injury recognition and management.
3. Demonstrate competency in basic pre-participation exam skills, including but not limited to taking vital signs.
4. Demonstrate competency in wound care and first aid.

SPMD 1310. Introduction to Kinesiology

Course Description

An introduction to the field of Kinesiology which will explore areas such as exercise physiology, sport and exercise psychology, motor behavior, biomechanics, strength and conditioning, exercise prescription, as well as professional and graduate programs, and allied health and applied careers opportunities.

Student Learning Outcomes

1. Students will investigate various career paths in exercise science.
2. Students will search academic materials to better understand current research.
3. Students will compare and contrast the various disciplines within kinesiology.
4. Students will explore the public health benefits of exercise.
5. Students will document the historical impact of exercise science as a field.

SPMD 1350. Social Foundations of Physical Activity

Course Description

Historical and cultural foundations and vocational, scientific, and educational data on careers in health education, physical education, and recreation.

Student Learning Outcomes

1. Improve students' knowledge of foundations of physical education. (Research) (Standard 4 j, k, l, m, o, p)

2. Improve students' abilities to analyze current physical activity issues based on historical, philosophical, sociological, and psychological perspectives. (Research) (Standard 4 l, m, e, g)
3. Improve students' knowledge of and ability to critically analyze how gender, race, social class, sexual orientation, and ability issues affect physical education and performance programs. (Research, Diversity) (Standard 4j, k, l, m, o; Standard 2 d, g, j, f, k)
4. Improve students' knowledge of forces influencing the development of physical education programs. In particular, attitudes, values, and beliefs about gender, race, social class, sexual orientation, and ability, etc. (Diversity, Practitioners, Reflection, Pedagogy) (Standard 1 a, b, h, l; Standard 4 j, k, l, m, o; Standard 2 a, d, g, j, f, k)
5. Improve students' knowledge of strategies for becoming an advocate in the school and/or community to promote a variety of physical activity opportunities. (Practitioners) (Standard 2 m, n; Standard 3 n, o, p, q, r; Standard 10 d, j, p)
6. Improve students' knowledge of current educational issues and trends. In particular, socio-cultural issues that affect educational, fitness, and sports settings. (Diversity, Research) (Standard 4 j, k, l, m, o, p Standard 9 a, c, e, f m, n)
7. Improve students' knowledge of how students' learning is influenced by individual experiences, talents, and prior learning, including language and family/community values and conditions. (Diversity, Research) (Standard 1 b, h, l; Standard 2 d, g, j, k, m, n, o; Standard 3 l)
8. Improve students' knowledge of the impact of international changes on the content of physical education, fitness, and sports programs. (Research) (Standard 4 j, k, l, m, o, p)
9. Improve students' ability to critically analyze how gender, race, sexuality and social class issues affect how we view the body, and how these views can affect students' health and participation in physical education, fitness, and sports programs. (Diversity, Reflection) (Standard 2 d, g, j, f, k, m, o)
10. improve students' ability to become critically aware of how their feelings, beliefs, and values in relation to gender, race, social class, sexual orientation, and ability issues will affect their abilities to work as professionals in the fields of physical education, sport, or fitness. (Diversity, Reflection) (Standard 2-D, g, j, f, k, m, o Standard 9 e, d, g, l, m)
11. Improve students' knowledge of and ability to critically analyze cultural stereotypes of diverse populations of people. (Diversity) (Standard 2 d, g, j, f, k, m, o)
12. Improve students' knowledge of how cultural stereotypes influence the development of physical education, fitness and sport programs. (Research, Diversity) (Standard 2 d, g, j, f, k, m, o; Standard 4 j, k, m, o, p, q Standard 8 p)
13. Improve students' knowledge of how groups influence individuals, and how individuals influence groups in a democratic society. (Diversity) (Standard 2 d, g, j, f, k, m, o; Standard 4 m, p;)
14. Improve students' abilities to communicate in ways that demonstrate sensitivity to all learners. (Diversity, Effectiveness) (Standard 1 d, h, l; Standard 2 d, g, j, f, k, m, o)
15. Students will demonstrate through writing the ability to apply the issues discussed in class to their specific fields in ways that benefit society. (Evaluation) (Standard 9 e, g, l, m)
16. Students will improve their ability to take the content from readings and present it in thought provoking ways to their classmates. (Research, Evaluation, Reflection) (Standard 9 e, g, l, m; Standard 10 a, d, h, n)
17. Writing proficiency is required for a passing grade in this course. (Standard 4 l)
18. Improve students' abilities to use computers and other technologies to communicate, network, and/or foster inquiry. (Standard 10 g)
19. Consult professional literature, colleagues, and other resources to develop as a professional. (Standard 10 e, f, h, l, n, r)

SPMD 2130. Emergency Response in Sports Medicine

Course Description

Designed to provide knowledge and experience in emergency care procedures, blood borne pathogens, and first aid. Students will receive certification in CPR/AED for the Professional Rescuer and in First Aid, upon successful completion of course.

Student Learning Outcomes

1. Identify the individuals involved in the Emergency Response Team.
2. Construct the components of an effective emergency Action Plan.
3. Assess the scene and patient during an emergency situation.
4. Demonstrate proper universal precautions and wound care.
5. Demonstrate effective Cardiopulmonary Resuscitation, & AED use.
6. Demonstrate effective Rescue Breathing & Airway Management techniques.
7. Demonstrate effective splinting techniques.
8. Demonstrate understanding of the techniques utilized in cervical stabilization.
9. Identify components of acute care for general medical and orthopedic emergencies.

SPMD 2210. Anatomy & Physiology I

Course Description

Detailed study of the structure and function of the human musculoskeletal, cardiovascular, respiratory, and peripheral nervous systems. Designed specifically for students interested in allied health professions.

Student Learning Outcomes:

The student will gain an understanding (awareness) through hands on learning (practitioner) covering the following:

1. The student will learn and identify bones, connective tissue, joints and muscular structures of the human body.
2. The student will study joints and associated structures of the body.
3. The student will learn about skeletal muscle, origins, insertions, and actions.
4. The student will learn about the fundamentals of the nervous system and associated structures.
5. The student will learn about smooth and cardiac muscle and their association actions.
6. The student will learn the structures associated with the cardiovascular system (heart and blood vessels).
7. The student will learn the location of all visceral organs.
8. Evaluation of knowledge is determined through practical identification of anatomical structures via written open ended exams.

SPMD 2210L. Anatomy & Physiology Laboratory

Course Description

Students will engage in activities designed to enhance appreciation of the anatomical structures related to the content areas for SPMD 2210.

Student Learning Outcomes

The student will gain an understanding (awareness) through hands on learning (practitioner) covering the following:

1. The student will learn and identify bones, connective tissue, joints and muscular structures of the human body.
2. The student will study joints and associated structures of the body.
3. The student will learn about skeletal muscle, origins, insertions, and actions.
4. The student will learn about the fundamentals of the nervous system and associated structures.
5. The student will learn about smooth and cardiac muscle and their association actions.
6. The student will learn the structures associated with the cardiovascular system (heart and blood vessels).
7. The student will learn the location of all visceral organs.
8. Evaluation of knowledge is determined through practical identification of anatomical structures via written open ended exams.

SPMD 2225. Anatomy and Physiology II

Course Description

This course is the second of two that serve as an introduction to human anatomy and physiology for any student interested in allied health and/or kinesiology. The course entails describing, explaining, and analyzing structure and function from the submicroscopic to the organismal level with emphasis on specific cellular, tissue, and organ structure and physiology, and

organ system structure and function; specifically the endocrine, urinary, digestive, integumentary, renal, central nervous, and reproductive systems. Additionally, an analysis of these concepts is included: fluid and electrolyte balance, pregnancy, growth and development from zygote to newborn, and heredity.

Student Learning Outcomes

1. Identify and describe the major anatomical features of the endocrine, lymphatic, digestive, integumentary, renal, urinary, and reproductive systems.
2. Analyze the physiological roles of the endocrine, lymphatic, digestive, urinary, central nervous, immune, and reproductive systems in maintaining homeostasis in the human body.
3. Explain how fluid and electrolyte balance is maintained in the human body.
4. Compare and contrast the anatomy and physiology of male and female reproductive systems.
5. Describe pregnancy from conception to parturition including human growth and development from zygote to newborn.
6. Explain heredity and genetic control.

SPMD 2225L. Anatomy and Physiology II Laboratory

Course Description

This is the second in a series of two laboratory courses designed to introduce laboratory practices and techniques for human anatomy and physiology, from the basic cell structure through the organ system level; specifically the endocrine, digestive, lymphatic, respiratory, urinary, and reproductive systems.

Student Learning Outcomes

1. Apply the scientific method correctly.
2. Collect, analyze, and interpret scientific data.
3. Use laboratory equipment correctly and safely.
4. Identify the anatomical components of human tissues, organs, and organ systems using models, diagrams, illustrations, or cadaver specimens.
5. Describe the functional characteristics of human tissues, organs, and organ systems using models, diagrams, illustrations, or cadaver specimens.
6. Analyze the physiological processes of the endocrine, lymphatic, respiratory, digestive, urinary, and reproductive systems.
7. Analyze the physiological processes of fluid and electrolyte balance and acid base balance in the human body.
8. Analyze heredity and genetic control.

SPMD 2250. Fitness for Health and Sport

Course Description

A study of the fitness needs for health enhancement and sport participation.

Student Learning Outcomes

1. Recognize the importance of incorporating positive fitness/wellness habits within one's lifestyle in terms of enhancing longevity, disease prevention, and overall quality of life.
2. Examine various physiological benefits and adaptations to such factors as muscular strength, muscular endurance, cardiovascular fitness, flexibility, and body composition when certain stimuli are applied to each. Assessment of these characteristics will be witnessed primarily in practical experiences within the course's laboratory settings.
3. Identify current trends and/or health patterns within society in regards to scientific findings, declination in health habits, and increases in health ailments.
4. Compare various nutritional concepts, specifically proper dietary habits and their impact on weight management aspects.

5. Describe the role physical activity and sport specific training play on competitive athletic performance.

SPMD 2310. Career Preparation

Course Description

From concept to implementation: Career exploration, setting up degree plans, finding graduate programs, developing professional resumes, writing letters of application, seeking letters of recommendation, and interview preparation

Student Learning Outcomes

The student will explore, learn, implement and apply:

1. Career opportunities within human movement and allied health fields.
2. Chose both a primary and secondary career of their interest.
3. Search for appropriate graduate schools to match their career choices.
4. Create a plan by aligning their undergraduate curriculum with their career choices.
5. Explore additional education (dual majors, minors, and certifications specific to their chosen field).
6. Study and create a professional resume.
7. Create a curriculum vita as a historical reference for future job prospects.
8. Write a professional letter of application for jobs and school applications.
9. Learn how to seek "outstanding" letters of recommendation.
10. Study appropriate interview protocol.
11. Interviews (one on one, panel and group).

Sterile Processing Tech (STPT)

STPT 1100. Basics of Sterile Processing

Course Description

Course provides instruction on Sterile Processing Technician roles and responsibilities, anatomy & physiology, microbiology, infection control, decontamination, medical terminology, sterilization, sterile storage, preparation packaging & instrumentation, and inventory control.

Student Learning Outcomes

1. Explain the basic structures and functions of the body systems.
2. Interpret and apply medical terminology and anatomical terms as the relate to equipment.
3. Recognize and apply basic principles of infection control/microbiology.
4. Cite the importance of quality control. List the agencies involved with the development of standards and their application to sterile processing.

STPT 1100L. Sterile Processing Laboratory

Course Description

Provides opportunity to practice skills and competencies developed in the classroom. Includes processing, maintaining, and dispensing instruments, supplies, and equipment in an operating room or central supply department.

Student Learning Outcomes

1. Demonstrate the use of sterilization process monitors, including temperature and frequency of appropriate chemical indicators and bacterial spore tests for all sterilizers.
2. List the processes and steps of decontamination.
3. List the assembly and packaging systems and discuss their advantages and disadvantages.
4. List the processes and steps of sterilization.
5. Cite the importance of quality control.
6. List the means of preventing safety hazards.

7. List the agencies involved with the development of standards and their application to sterile processing.
8. Identify and classify basic surgical instrumentation.

Structural Integration (Massage) (SHIN)

SHIN 2200. Structural Integration Principles I

Course Description

This foundational course introduces the key concepts that will be taught throughout the program, namely, the five principles of structural integration: holism, adaptability, support, resonance and integration.

Student Learning Outcomes

1. Apply their knowledge of a specific SI principle, adaptability, to themselves.
2. Apply basic principles of structural integration in embodiment exercises and summarize their experience verbally in group.
3. Assess the interdependent principles of structural integration with a practice client (fellow student) and write down specific modalities of treatment.

SHIN 2201. Structural Integration Principles II

Course Description

The introduction of the five principles of structural integration: holism, adaptability, support, resonance and integration, and how to apply them to the first three sessions with a client, from macro to micro applications.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, adaptability, by applying it directly to another student while observed by the instructor.
2. Apply assessment of adaptability with a practice client and be observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2202. Structural Integration Principles III

Course Description

This course will focus on introducing the principles of structural integration holism, adaptability, support, resonance and integration vital for sessions four through six, at both the micro and macro level.

Student Learning Outcomes

1. Apply their knowledge of a specific SI principle, support, to themselves in movement and write a summary of experience to be reviewed by the instructor.
2. Apply basic principles of structural integration in embodiment exercises and summarize their experience verbally in group.
3. Assess the interdependent principles of structural integration with a practice client (fellow student) and write down specific modalities of treatment.

SHIN 2203. Structural Integration Principles IV

Course Description

This course will focus on introducing the principles of structural integration pertinent to sessions seven through ten, laying the groundwork for the next three courses.

Student Learning Outcomes

1. Apply their knowledge of support and adaptability, principles of structural integration, to a practice client and write a summary of treatment to be reviewed by the instructor.
2. Describe how support and adaptability are implemented in a session verbally in group.
3. Assess the interdependent principles of structural integration with a practice client (fellow student) and write down specific modalities of treatment.

SHIN 2204. Structural Integration Principles V

Course Description

This course will focus on session ten in the lineage of the 10 series by Dr. Ida Rolf. Students will apply the principles of structural integration--holism, adaptability, support, resonance and integration.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, holism and resonance, by applying it directly to another student while observed by the instructor.
2. Apply assessment of holism and resonance with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2210. Integration and Practice Session I

Course Description

This course will cover assessment of a client/model, anatomy specific to session one, and the application of the overarching theme of adaptability from the lineage of the 10 series by Dr. Ida Rolf.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, adaptability, by applying it directly to another student and observed by the instructor.
2. Apply assessment of adaptability with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2220. Integration and Practice Session II

Course Description

This course will focus on session two in the lineage of the 10 series by Dr. Ida Rolf, covering the assessment of a client/model, anatomy and the application of the overarching theme of support.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, support, by applying it directly to another student while observed by the instructor.
2. Apply assessment of support with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2230. Integration and Practice Session III

Course Description

This course will focus on session three in the lineage of the 10 series by Dr. Ida Rolf, covering the assessment of a client/model, anatomy and the application of the overarching theme of resonance.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, resonance, by applying it directly to another student while observed by the instructor.
2. Apply assessment of resonance with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2240. Integration and Practice Session IV

Course Description

This course will focus on session four in the lineage of the 10 series by Dr. Ida Rolf, covering the assessment of a client/model, specific anatomy and the application of the overarching theme of support.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, support, by applying it directly to another student while observed by the instructor.
2. Apply assessment of support with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2250. Integration and Practice Session V

Course Description

This course will focus on session five in the lineage of the 10 series by Dr. Ida Rolf, covering the assessment of a client/model, specific anatomy and the application of the overarching theme of support and adaptability.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, support and adaptability, by applying it directly to another student while observed by the instructor.
2. Apply assessment of support and adaptability with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2260. Integration and Practice Session VI

Course Description

This course will focus on session six in the lineage of the 10 series by Dr. Ida Rolf, and apply the principles of structural integration: holism, adaptability, support, resonance and integration, from a macro to micro application.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, support and resonance, by applying it directly to another student while observed by the instructor.
2. Apply assessment of support and resonance with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2270. Integration and Practice Session VII

Course Description

This course will focus on session seven in the lineage of the 10 series by Dr. Ida Rolf. Students will learn how to apply the principles of structural integration: holism, adaptability, support, resonance and integration.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, support and adaptability, by applying it directly to another student while observed by the instructor.
2. Apply assessment of support and adaptability with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2280. Integration and Practice Session VIII

Course Description

This course will focus on session eight in the lineage of the 10 series by Dr. Ida Rolf. Students will learn how to apply the principles of structural integration: holism, adaptability, support, resonance and integration.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific SI principle, adaptability, by applying it directly to another student and observed by the instructor.
2. Apply assessment of adaptability with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2290. Integration and Practice Session IX

Course Description

This course will focus on session nine in the lineage of the 10 series by Dr. Ida Rolf. Students will learn how to apply the principles of structural integration: holism, adaptability, support, resonance and integration.

Student Learning Outcomes

1. Demonstrate their knowledge of a specific principle, adaptability, of structural integration by applying it directly to another student and observed by the instructor.
2. Apply assessment of adaptability with a practice client and observed by faculty.
3. Assess the interdependent principles of structural integration with a practice client and write down specific modalities of treatment to be reviewed by faculty.

SHIN 2300. Structural Integration Advanced Training I

Course Description

This course continues to develop concepts in structural integration with a principals-based approach to seeing holism, adaptability, support, resonance and integration. This course will teach how to palpate and treat neurovascular relationships and tissues in the client's body. The neurovascular approach will be integrated with the domes of lift and diaphragms of the body—feet, pelvic, respiratory, thoracic inlet and tentorium. Students will learn through didactic lecture, experiential movement and dyad partnering.

Student Learning Outcomes:

1. Students will apply their knowledge of a specific neurovascular SI technique in treatment within the dyads.
2. Students will apply the treatment to the five diaphragms.
3. Students will assess the interdependent principles of structural integration with a practice client (fellow student) and write down specific modalities of treatment.

SHIN 2310. Structural Integration Advanced Training II

Course Description

This course continues to develop concepts in structural integration with a principals-based approach to seeing holism, adaptability, support, resonance and integration. This course will focus on embodiment and movement paradigms in advance series work in structural integration. Specifically developing advanced forms of movement that support breath, gait patterning, tracking and how one embodies the concepts of structural integration to support clients. Students will learn through didactic lecture, experiential movement, and dyad partnering.

Student Learning Outcomes:

1. Students will apply their knowledge of a specific movement SI technique in treatment within the dyads.
2. Students will apply the embodiment exploration to themselves.
3. Students will assess the interdependent principles of structural integration with a practice client (fellow student) and write down specific modalities of treatment.

SHIN 2996. Structural Integration Topics

Course Description

Varies

Student Learning Outcomes

Varies

Supply Chain Management (SCMT)

SCMT 1110. Fundamentals in Supply Chain Management.

Course Description

This course provides an overview of the basic theoretical concepts and principles of supply chain management. Students will learn the role of supply chain management in business operations, as well as the components of supply chain management at all levels of business; large and small. The course will also cover the importance of technology in managing the supply chain, and strategies for managing supply chain risks and disruptions as well as the concept of globalization in regard to supply chain management.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Understand the role of supply chain management in business operations. [Traits 1 & 3]
2. Recognize the terminology used in supply chain management. [Traits 1, 2, 3, & 4]
3. Understand different supply chain models. [Traits 1, 3, & 4]
4. Obtain an understanding of the key components of supply chain management, including procurement, transportation, inventory management, sustainability, and distribution. [Traits 1, 2, & 3]
5. Obtain an understanding of the impact of technology on supply chain management. [Traits 1, 3, & 4]
6. Understand the term, globalization, its relationship to supply chain management. [Traits 2, & 4]

Surgical First Assistant (SUFA)

SUFA 2230. Surgical Anatomy

Course Description

Course prepares student for the advanced detail of surgical anatomy, physiology. Includes a review of the common function and structures of the human body including the surface anatomy. Other topics include relevant medical terminology, pathophysiology, etiology, disease, chemistry, microbiology, physics, and the technological sciences and congenital anomalies commonly encountered during surgical related interventions. In addition, pathology classification, cellular injury, types of necrosis, inflammation, types of injury, nutritional and metabolic pathologies, immunological disorders, neoplastic disorders, circulatory pathologies, hemodynamic management, and pain management will be included.

Student Learning Outcomes

1. Demonstrate detailed knowledge of human anatomy, emphasizing structures and systems pertinent to surgical practice, including but not limited to the cardiovascular, musculoskeletal, nervous, and gastrointestinal systems.
2. Analyze anatomical variations and their potential impact on surgical procedures, patient outcomes, and complication management.
3. Integrate anatomical knowledge with clinical scenarios to inform surgical decision-making and enhance operative planning.
4. Utilize anatomical landmarks to accurately identify and navigate to target tissues or organs during simulated surgical procedures.
5. Apply anatomical principles to execute fundamental surgical techniques, such as incisions, dissections, and closures, with precision and safety.
6. Demonstrate the ability to maintain the integrity of vital structures while assisting in complex surgical interventions.
7. Assess and respond to anatomical challenges encountered during surgery, such as unexpected variations or pathological findings, by adapting surgical approaches accordingly.
8. Collaborate effectively with the surgical team to anticipate and address potential anatomical complications during procedures.
9. Engage in self-directed learning to stay abreast of advancements in surgical anatomy and related technologies.
10. Reflect on surgical experiences to identify areas for improvement and implement strategies to enhance anatomical knowledge and surgical skills.

SUFA 2232. Surgical Assisting Business Practice

Course Description

This course is designed to introduce students to the business practice of Surgical Assisting. Course examines ethics in business including business models, marketing, the use of liability coverage, maintaining medical records and case information. This course also addresses surgical case selection for the Surgical Assistant, Informed consent, CPT and ICD-10 codes, submission of medical claims and proper documentation, including the use of software and billing companies.

Student Learning Outcomes

1. Explain the reimbursement process for surgical assistants, including private insurance, Medicare, and Medicaid guidelines.
2. Accurately apply CPT, ICD-10, and HCPCS codes relevant to surgical assisting services.
3. Differentiate between in-network and out-of-network billing practices for surgical assistants.
4. Identify federal and state regulations governing surgical assisting billing, including Stark Law, Anti-Kickback Statute, and HIPAA.
5. Describe the role of compliance programs and audits in a surgical assisting business.
6. Discuss ethical considerations and legal responsibilities in documentation and claim submission.
7. Develop a business plan for an independent surgical assisting practice.
8. Compare different employment models, including independent contractor, employed surgical assistant, and locum tenens.
9. Evaluate surgical assisting contracts, including fee schedules, non-compete clauses, and liability considerations.
10. Outline the revenue cycle for a surgical assistant, from patient encounter to reimbursement.
11. Analyze financial reports and key performance indicators to assess practice profitability.
12. Implement strategies for claim denials, appeals, and collections.
13. Develop strategies for networking and establishing relationships with surgeons and healthcare facilities.
14. Utilize digital marketing and branding techniques to promote a surgical assisting business.

15. Discuss continuing education and certification requirements for professional growth.

SUFA 2233. The Art of Teamwork in Surgery

Course Description

This course will introduce student to the principles of Human Factors science as applied to the system of care, teaching them about the skills needed to function effectively and safely in teams in a modern surgical environment. The course will cover the background psychology of interpersonal interactions and the evidence from other industries on the barriers to safe and effective team communication and cooperation. Students will develop their teamwork and communication skills, explore the principles of hierarchy and power distance, personal styles and coping strategies, situational awareness, secure communications loops, use of checklists and standard operating procedures, how to deal with team dysfunction, leadership, follower-ship, effective briefing and debriefing, models of risk and error in health care, and the principles of risk minimization in systems involving humans.

Student Learning Outcomes

1. Effective Communication in the OR – Demonstrate clear and concise verbal and nonverbal communication strategies to enhance collaboration among surgical team members.
2. Interdisciplinary Collaboration – Analyze the roles and responsibilities of surgical team members, including surgeons, first assists, nurses, anesthesiologists, and technicians, to foster a cohesive working environment.
3. Conflict Resolution and Professionalism – Apply conflict resolution techniques to address challenges in the surgical setting while maintaining professionalism and patient-centered care.
4. Decision-Making and Critical Thinking – Utilize critical thinking skills to anticipate the needs of the surgical team and respond effectively to intraoperative situations.
5. Situational Awareness and Adaptability – Demonstrate situational awareness by recognizing potential complications or inefficiencies and adjusting teamwork dynamics accordingly.
6. Leadership and Followership in Surgery – Explore the balance between leadership and followership in surgical teamwork and how each role contributes to patient safety and surgical success.
7. Cultural Competency and Diversity in the OR – Recognize the impact of cultural, generational, and professional diversity on surgical team dynamics and implement inclusive communication practices.
8. Error Prevention and Patient Safety – Apply teamwork principles to reduce surgical errors, enhance procedural efficiency, and contribute to a culture of safety.
9. Application of Human Relations Theories – Integrate principles from Effective Human Relations to enhance interpersonal effectiveness and strengthen teamwork in the surgical environment.
10. Compliance with Ethical and Legal Standards – Adhere to ethical, legal, and institutional policies that guide teamwork and collaboration in surgery.

SUFA 2234. Principles of Surgical Assisting

Course Description

Course provides an in-depth study of the Surgical First Assistant role including history, professional, legal, moral, and ethical responsibilities. Review of healthcare facility information, documentation, and risk management. Topics include instrument usage, trocar/incisions, tissue handling, dissection, exposure, hemostasis, retraction, suturing, wound healing, tissue replacement materials, irrigation, specimen care, catheter/drain placement, surgical hazard management, IV fluid/auto-transfusion techniques, medication administration, and wound management. Patient care skills include interview/history techniques, physical assessment, diagnostic exams, planning, patient education, patient monitoring, and perioperative patient care skills. Application of principles includes: the technological sciences, infection control, sterile technique,

disinfection and sterilization and problem solving regarding the prevention and treatment of potential complications or emergencies.

Student Learning Outcomes

1. Apply principles of sterile technique and infection control to maintain a safe surgical environment.
2. Differentiate between the roles and responsibilities of the surgical assistant, surgeon, scrub tech, and circulator in various surgical procedures.
3. Utilize proper techniques for tissue retraction, manipulation, and exposure to optimize surgical field visibility and minimize trauma.
4. Assist in achieving and maintaining hemostasis using appropriate methods, including suturing, electrocautery, and hemostatic agents.
5. Perform basic and advanced suturing, knot tying, and stapling techniques in accordance with procedural requirements.
6. Assist in wound closure, including selection of appropriate suture materials and techniques for optimal healing.
7. Integrate anatomical and physiological knowledge to anticipate surgical needs and improve patient outcomes.
8. Identify and use surgical instruments, retractors, and devices correctly to facilitate efficient surgical procedures.
9. Collaborate with the surgical team to enhance efficiency, patient safety, and procedural success.
10. Recognize and respond to surgical complications, instrument malfunctions, or unexpected intraoperative events.
11. Assist in proper patient positioning to prevent complications and ensure optimal surgical exposure.
12. Adhere to professional, ethical, and legal guidelines governing the role of a surgical assistant.

SUFA 2235L. Surgical Simulation Laboratory

Course Description

Course introduces student to instrumentation usage and identification, completion of core mock surgical procedures to facilitate the student's ability to anticipate the steps of the procedure and permits the evaluation of the student's performance regarding the critical elements of the surgical First Assistant responsibilities.

Student Learning Outcomes

1. Apply principles of surgical asepsis, including gowning, gloving, and sterile field maintenance, to simulate real-world surgical scenarios.
2. Identify, handle, and use surgical instruments and devices appropriately in a simulated operative environment.
3. Practice and refine suturing, knot-tying, and tissue approximation techniques commonly used in various surgical procedures.
4. Correlate anatomical structures with surgical procedures to enhance decision-making and precision in simulated operations.
5. Utilize closed-loop communication, anticipate the surgeon's needs, and function effectively within a surgical team.
6. Recognize and respond to potential surgical complications, such as bleeding control and tissue handling challenges, within a simulation setting.
7. Demonstrate standardized surgical procedures, safety guidelines, and best practices.
8. Develop and refine motor skills essential for surgical assistance, including laparoscopic and open surgical techniques.
9. Assess personal and peer performance using self-reflection, feedback, and simulation-based metrics for continuous improvement.
10. Demonstrate professionalism, accountability, and ethical decision-making in all aspects of the simulated surgical environment.

SUFA 2244. Pharmacology and Anesthesia

Course Description

This course is designed to introduce students to most commonly used pharmacological agents utilized for surgical patients in each phase of the perioperative experience and those utilized in the treatment of complications and emergencies. Emphasis is placed on preoperative medications, anesthetics and medications utilized within the sterile field stressing identification, preparation, measurements, management within the sterile field, handling/transfer, and usage. Other topics include pain management, airway and respiratory management, IV fluid and electrolyte replacement therapy, and a comparison of the types of anesthesia, physiological effects, complications and treatment.

Student Learning Outcomes

1. Explain the principles of pharmacokinetics and pharmacodynamics as they relate to surgical and anesthetic agents.
2. Identify the mechanisms of action, indications, contraindications, and potential side effects of commonly used perioperative medications.
3. Compare and contrast the pharmacological profiles of general, regional, and local anesthetic agents.
4. Describe the physiological effects of anesthetic agents on major organ systems.
5. Recognize signs of anesthesia-related complications and appropriate intervention strategies.
6. Evaluate different classes of analgesics, including opioids, NSAIDs, and adjunctive pain management strategies.
7. Discuss multimodal analgesia and its role in enhanced recovery after surgery (ERAS) protocols.
8. Assess patient-specific factors influencing pain management choices.
9. Identify commonly used reversal agents for anesthesia-related complications, including opioid and neuromuscular blockade reversal.
10. Describe pharmacologic interventions for managing perioperative emergencies such as malignant hyperthermia and anaphylaxis.
11. Apply principles of medication safety, including proper Labeling, handling, and administration of perioperative drugs.
12. Explain the role of the surgical first assist in medication management and collaboration with anesthesia providers.
13. Demonstrate adherence to regulatory guidelines and institutional protocols for perioperative pharmacology.

SUFA 2245. Surgical Procedures I

Course Description

Course is designed to prepare students for surgical procedures including the review of surgical anatomy, physiology, pathophysiology, relevant equipment, supplies, and techniques regarding general surgery, endoscopic surgery, gynecological and obstetrical surgery, genitourinary surgery, and otorhinolaryngological surgery (ear, nose and throat), diagnostic procedures and relevant equipment, supplies, and techniques.

Student Learning Outcomes

1. Describe the phases of surgery, including preoperative, intraoperative, and postoperative considerations.
2. Explain the principles of aseptic technique and infection control in the surgical setting.
3. Identify the roles and responsibilities of the surgical first assistant in various procedures.
4. Correlate surgical procedures with relevant anatomical structures and physiological functions.
5. Discuss common pathological conditions that require surgical intervention.
6. Demonstrate knowledge of wound healing, tissue handling, and hemostasis.
7. Identify and describe the use of basic surgical instruments, sutures, and stapling devices.
8. Explain the principles of electrosurgery, laser surgery, and minimally invasive surgical techniques.
9. Demonstrate proper handling and passing of surgical instruments.

10. Outline the key procedural steps for common general surgical procedures, such as appendectomy, cholecystectomy, and hernia repair.
11. Explain the indications, contraindications, and potential complications of these procedures.
12. Assist in positioning, prepping, and draping the patient for various surgical procedures.
13. Identify risk factors for surgical complications and strategies to prevent them.
14. Apply patient safety measures, including correct site verification and adherence to surgical checklists.
15. Discuss the principles of anesthesia management and its impact on surgical procedures.
16. Demonstrate effective communication and teamwork skills within the surgical team.
17. Recognize the importance of collaboration with surgeons, anesthesiologists, nurses, and other healthcare professionals.
18. Apply ethical and legal considerations in surgical patient care.

SUFA 2246. Surgical Procedures II

Course Description

Course is designed to prepare students for specialty surgical procedures including the review of surgical anatomy, physiology, pathophysiology, relevant equipment, supplies, and techniques regarding ophthalmic surgery, orthopedic surgery plastic and reconstructive surgery, maxillary/mandibular surgery, oral surgery, neurosurgery, cardio thoracic surgery, peripheral vascular surgery, trauma and surgery for all ages.

Student Learning Outcomes

1. Describe the procedural steps, indications, contraindications, and potential complications for complex general surgical procedures.
2. Demonstrate an understanding of open versus laparoscopic techniques for procedures such as bowel resections, gastrectomy, and splenectomy.
3. Explain the key steps and considerations for cardiovascular and thoracic procedures, including coronary artery bypass grafting (CABG), valve repair/replacement, and lung resections.
4. Identify surgical interventions for vascular conditions, including aneurysm repair, carotid endarterectomy, and arterial bypass procedures.
5. Describe the indications, procedural steps, and postoperative considerations for common orthopedic procedures, including joint arthroplasty, fracture fixation, and spinal surgeries.
6. Discuss neurosurgical procedures, including craniotomy, spinal decompression, and shunt placement, with emphasis on neurological monitoring and patient positioning.
7. Outline surgical procedures related to the female reproductive system, including hysterectomy, oophorectomy, and cesarean section.
8. Discuss minimally invasive gynecologic techniques, such as laparoscopic myomectomy and hysteroscopy.
9. Explain key procedures related to the urinary system, including nephrectomy, prostatectomy, and cystectomy.
10. Identify indications and techniques for minimally invasive approaches, including transurethral resection of the prostate (TURP) and robotic-assisted urologic surgeries.
11. Describe surgical procedures for the ear, nose, and throat, including tonsillectomy, laryngectomy, and sinus surgery.
12. Explain ophthalmic procedures such as cataract extraction and retinal detachment repair.
13. Identify key steps in maxillofacial surgeries, including mandibular fracture repair and orthognathic procedures.
14. Discuss the principles of reconstructive surgery, including flap procedures, skin grafting, and breast reconstruction.
15. Explain cosmetic surgical techniques, including abdominoplasty, liposuction, and rhinoplasty.
16. Recognize patient-specific considerations, such as comorbidities and anatomical variations, that impact surgical planning and execution.

17. Demonstrate knowledge of intraoperative complications and strategies for prevention and management across various surgical specialties.

SUFA 2250. Surgical First Assistant Clinicals

Course Description

This is a combined clinical course designed to prepare students for preoperative, intra-operative, and postoperative surgical procedure experiences. Preconference and case preparation prepares students to gain experiences in the role of the scrub, assistant circulator, and second assistant. Performance evaluation includes surgical techniques, sterile technique, medication administration, prevention of wrong site surgery, prevention of foreign body retention, safe work practices, work attitudes, professional ethics, legal requirements, reporting, documentation, and efficiency in the work arena. Students gain hands-on experience in the application of surgical techniques under the supervision of their preceptor and surgeon for the case. The current edition of the Core Curriculum determines depth of coverage, role performance, and case completion requirements for graduation for Surgical Technologists as published by the Association of Surgical Technologists.

Student Learning Outcomes

1. Demonstrate proficiency in reviewing and interpreting patient surgical records, including patient history, test results, and diagnostic imaging.
2. Coordinate with the surgical team to confirm the functionality and placement of all necessary equipment and supplies.
3. Accurately communicate the surgeon's preferences regarding suture requirements, specialty tools, and patient positioning to the surgical team.
4. Assist in preoperative patient care tasks, including catheterization, skin preparation, and positioning, tailored to the surgeon's requirements.
5. Confirm the availability and correct placement of all diagnostic materials, including X-rays and MRIs, within the operating room.
6. Assist with patient draping and provide intraoperative updates on the surgeon's preferences.
7. Execute specific technical skills such as local anesthesia injection, incision dissection, or placement of trocars as part of the procedure entry.
8. Apply knowledge of anatomical and pathological variations to respond appropriately to surgical events, enhancing patient safety.
9. Facilitate operative site visibility by performing tasks such as retraction, knot tying, suctioning, and managing hemostasis tools and agents effectively.
10. Participate in postoperative tasks, including dressing application, splinting, immobilization, and patient transfer to recovery areas.
11. Ensure wound care readiness by assisting with the insertion of drains or wound closure as required by the procedure.

Surgical Technology (SURG)

SURG 1110 Introduction to Surgical Technology I

Course Description

Includes scope of practice, technologist role, medical ethics and medical terminology, basic principles of aseptic technique and anatomy and physiology applied to surgical procedures.

Student Learning Outcomes

1. Verbalize the role of each team member in the surgical environment.
2. Define the meaning of surgical consciousness.

3. Describe the design of the operating room related to function.
4. Apply the principles of microbiology to sterilization, disinfection, sterility, and infection control.
5. Apply the scientific principles of aseptic technique.
6. Describe the scope of practice of the surgical technologist in the operating room.
7. Describe the use of accessory supplies and their pertinence to specific procedures.
8. Define the mechanisms of wound healing and classification of surgical procedure.
9. Correlate the principles of pharmacology in Labeling and using medication during surgical procedures.
10. Demonstrate knowledge of medical terminology.
11. Discuss the reasons for patient fear and anxiety in the adult and pediatric patient.
12. Identify the basic components of a computer system.
13. Demonstrate the operation of a computer utilizing word-processing, Internet browser, and e-mail software.
14. Define electricity and identify components of an electrosurgical system.
15. Demonstrate comprehension and application of appropriate principles of physics as related to tasks performed by the surgical technologist.
16. Recognize the purpose of minimally invasive surgery.
17. List the four basic types of surgical robots.
18. Follow directions as it applies in the classroom.
19. Demonstrate knowledge of medical terminology.
20. Discuss the reasons for patient fear and anxiety in the adult and pediatric patient.
21. Identify the basic components of a computer system.
22. Demonstrate the operation of a computer utilizing word-processing, Internet browser, and e-mail software.
23. Define electricity and identify components of an electrosurgical system.
24. Demonstrate comprehension and application of appropriate principles of physics as related to tasks performed by the surgical technologist.
25. Recognize the purpose of minimally invasive surgery.
26. List the four basic types of surgical robots.
27. Follow directions as it applies in the classroom.

SURG 1110L. Introduction to Surgical Technology I Laboratory

Course Description

Provides opportunity to practice clinical skills and competencies developed in the classroom. Includes surgical technique, setting up the sterile field, scrubbing, gowning and gloving and standards of practice. Infection prevention and control will be covered plus care of the surgical patient.

Student Learning Outcomes

1. Verbalize of the role of each team member in the surgical environment.
2. Define the meaning of surgical consciousness.
3. Apply the principles of microbiology to sterilization, disinfection, sterility, and infection control.
4. Apply the scientific principles of aseptic technique.
5. Describe the scope of practice of the surgical technologist in the operating room.
6. Describe the use of accessory supplies and their pertinence to specific procedures.
7. Demonstrate knowledge of medical terminology.
8. Demonstrate the properly technique of donning OR attire and PPEs.
9. Demonstrate techniques of opening and preparing supplies and instruments needed for any operative procedure with the maintenance of sterile technique at all times.

10. Demonstrate the proper techniques for the surgical hand scrub, gowning and gloving, and assisting of team members.
11. Demonstrate the proper technique for preparing supplies and instruments on the sterile field.
12. Demonstrate and explain in detail the procedure for counting instruments, sponges, needles, and other items on the sterile field.
13. Demonstrate the initial steps for starting a procedure.
14. Demonstrate intra-operative handling of sterile equipment and supplies.
15. Follow directions as it applies in Laboratory.

SURG 1110C. Introduction to Surgical Technology Lecture and Laboratory I

Course Description

Students will learn tasks and responsibilities of the surgical technologist. They will learn the practice of sterile technique. They will learn surgical scrub, gown and glove, patient positioning, draping and surgical prep on patients. They will know the practice of standard precautions in the O.R. When they are finished with this class they will know how to set-up cases, open sterile supplies, perform counts, and pass instruments. They will do some practice. This introductory course provides students with a broad overview of the responsibilities of a surgical technologist and the operating room environment. Emphasis is placed on developing fundamental skills necessary for success in the Surgical Technology Program.

Students will learn the basics of sterile technique, including surgical scrubbing, gowning, gloving, patient positioning, draping, and surgical site preparation. They will also gain an understanding of standard precautions in the operating room and develop foundational skills in setting up surgical cases, opening sterile supplies, performing counts, and passing instruments.

Hands-on Laboratory activities and a practicum component will reinforce classroom instruction, allowing students to apply their skills in a structured learning environment. This course is designed to prepare students for next level of the Surgical Technology Program and provide them with the essential knowledge and skills required for further training. Practicum to compliment this course. Acceptance into the Surgical Technology Program.

Student Learning Outcomes

1. Define the Role of a Surgical Technologist: Define the basic responsibilities and duties of a surgical technologist in the operating room environment.
2. Verbalize Sterile Technique Procedures: Verbalize the essential steps of surgical scrubbing, gowning, and gloving, highlighting their importance in maintaining a sterile environment.
3. Apply Basic Patient Positioning and Draping Techniques: Apply basic patient positioning and draping techniques, following guidelines to ensure comfort and safety in the operating room.
4. Describe Surgical Site Preparation: Describe the steps for preparing the surgical site, emphasizing sterile procedures to reduce the risk of infection.
5. Demonstrate Standard Precautions: Demonstrate a basic understanding of standard precautions and infection control practices to maintain a sterile operating room environment.
6. Identify Surgical Case Set-Up Steps: Identify the basic steps involved in setting up a surgical case, including organizing sterile instruments and supplies.
7. Demonstrate Basic Surgical Counts: Demonstrate the basic procedure for performing surgical counts, including instruments, sponges, and needles, under supervision.
8. Pass Instruments in a Controlled Setting: Pass instruments to the instructor/surgeon in a basic, controlled manner, practicing proper technique during Laboratory exercises.
9. Participate in Hands-On Laboratory Activities: Participate in hands-on Laboratory exercises to practice fundamental skills such as sterile technique and surgical setup in a structured

environment.

10. Describe the Pathway to Advanced Surgical Technology Training: Describe the skills and knowledge necessary to advance to the next level of the Surgical Technology Program.

SURG 1111. Introduction to Surgical Technology

Course Description

This course is designed to give the student a broad overview of the responsibilities of the Surgical Technologist and the operating room environment. This will prepare the student for entrance into the Surgical Technology program.

Student Learning Outcomes

1. Discuss the history of the operating room and the team who work in this environment.
2. Apply medical terminology as related to the operating room.
3. Apply the principles of microbiology to achieve infection control in the healthcare environment.
4. Explain the difference between medical and surgical asepsis.
5. Discuss the reason for specific operating room design and the surgical equipment found in the the operating room.
6. Identify safety concerns for both the patient and the staff in the operating room.
7. Explain the importance of treating every patient with dignity and compassion.
8. Discuss various procedures performed in the operating room.
9. Identify emergencies that can occur in the operating room and the different roles in such emergencies.
10. Describe tasks performed in the instrument room.

SURG 1150. Surgical Procedures I

Course Description

This course is an introduction to surgical procedures and its related pathologies. Emphasis on surgical procedures related to general, obstetrics/gynecology, genitourinary, otorhinolaryngology and orthopedic surgical specialties incorporating instruments and equipment. It is designed to prepare students to function actively in the surgical environment with entry-level knowledge of surgical procedures. This course expands the foundation principles and combines the study of common surgical procedures to include anatomy, physiology and pathophysiology. Specific patient care concepts, medications, instrumentation, equipment, supplies and complications related to selected surgical procedures will be discussed.

Student Learning Outcomes

1. Identify the physical, interpersonal, legal and ethical aspects of the perioperative environment.
2. Distinguish between varied job roles and duties of surgical personnel and their responsibilities
3. Identify, evaluate, and perform patient care concepts.

SURG 1155. Pharmacology for Surgical Technology

Course Description

This is an orientation to surgical pharmacology and anesthesia and is designed to prepare the student to enter the surgical environment with knowledge necessary to categorize the classification of drugs, calculate drug dosages and identify the therapeutic use, routes of administration, indications, contraindications and adverse effects of pharmacologic agents used in the perioperative setting. This course is the foundation for the acquisition of program specific competencies as identified by the AST Core Curriculum.

Student Learning Outcomes

1. Discuss basic concepts of surgical pharmacology and anesthesia.
2. Analyze principles of anesthesia administration and explain the necessity of each component of anesthesia preparation of the surgical patient.

3. Compare and contrast methods, agents and techniques of anesthesia administration and preparation.
4. Correlate anesthesia monitoring devices with patient homeostasis.
5. Explain anesthesia complications and interventions.
6. Calculate medication conversions and dosages.
7. Apply general terminology to medication use.
8. Prepare and manage medications and solutions.
9. Identify medications in the care of the surgical patient.

SURG 1160. Surgical Procedures II

Course Description

This is an introduction to surgical procedures and related pathologies. Emphasis on surgical procedures related to thoracic, peripheral vascular, plastic/reconstructive, ophthalmology, cardiac and neurological surgical specialties incorporating instruments. The course is designed to prepare the student to continue to function actively in the surgical environment with entry-level knowledge of more complex surgical procedures. This course expands the basic foundation principles and combines the study of complex surgical procedures to include anatomy, physiology, and pathophysiology. Specific patient care concepts, medications, instrumentation, equipment, supplies, and complications related to specific surgical procedures will be discussed. Realities of clinical practice and concepts of death and dying will also be discussed

Student Learning Outcomes

1. Demonstrate principles and practices of aseptic/sterile techniques.
2. Relate pathophysiology to the noted surgical interventions.
3. Analyze the relationship between cell pathology and disease.
4. Examine hemodynamic disorders, inflammation and infection.
5. Compare and contrast the various surgical pathologies of each of the following body systems.

SURG 1210. Surgical Technology II

Course Description

This second-level course builds upon foundational surgical technology concepts by introducing students to specialized instrumentation, surgical procedures, with more advanced clinical skills. Students will explore the use of electrocautery and laser technology, the care and handling of endoscopic instruments, and the selection of appropriate instruments for various surgical procedures. Instruction will also cover commonly used Laboratory and radiologic tests essential to the surgical setting.

Emphasis will be placed on surgical instrumentation and procedural considerations for abdominal and laparoscopic surgeries, urology, and setups for ear, nose, throat, and eye procedures. Additionally, students will gain an introduction to surgical specialties, including general surgery, obstetrics and gynecology, ophthalmic surgery, otorhinolaryngologic surgery, oral and maxillofacial surgery, and plastic and reconstructive surgery. Relevant anatomy, procedural history, and special patient considerations will be discussed for each specialty.

Student Learning Outcomes

1. Verbalize the principles of electrocautery and laser technology, including their indications, safety precautions, and applications in surgical procedures.
2. Define the functions, classifications, and proper handling techniques of endoscopic instruments used in minimally invasive procedures.
3. Describe the selection and use of surgical instruments specific to abdominal, Minimally invasive, as well as ear, nose, throat, and eye procedures. + General, GYN, oral maxillofacial.
4. Recognize commonly used Laboratory and radiologic tests in the surgical setting, explaining their significance in perioperative decision-making.

5. Describe proper setup and handling of surgical instrumentation for general surgery, obstetrics and gynecology, ophthalmic, otorhinolaryngologic, oral and maxillofacial, and plastic and reconstructive procedures.
6. Verbalize the procedural steps and considerations for various surgical specialties, including relevant anatomy and historical advancements in surgical techniques.
7. Define patient safety protocols and special considerations when preparing for surgeries involving different patient populations and surgical specialties.
8. Describe the role of the surgical technologist in assisting with advanced procedures, emphasizing aseptic technique and teamwork within the surgical team.
9. Recognize and differentiate between various types of sutures, stapling devices, and hemostatic agents used in surgical procedures.
10. Identify surgical instruments, passing techniques, and sterile field management in a simulated clinical setting.

SURG 1210L. Surgical Technology II Laboratory

Course Description

Emphasis will be placed on surgical instrumentation and procedural considerations for abdominal and laparoscopic surgeries, urology, and setups for ear, nose, throat, and eye procedures. Additionally, students will gain an introduction to surgical specialties, including general surgery, obstetrics and gynecology, ophthalmic surgery, otorhinolaryngologic surgery, oral and maxillofacial surgery, and plastic and reconstructive surgery. Relevant anatomy, procedural history, and special patient considerations will be discussed for each specialty.

Through hands-on Laboratory sessions and experiences, students will continue developing their clinical competencies by practicing surgical techniques, instrument handling, and procedural setups. This course provides the opportunity to apply theoretical knowledge in a simulated clinical environment, preparing students for advanced coursework and clinical rotations.

Student Learning Outcomes

1. Verbalize the principles of electrocautery and laser technology, including their indications, safety precautions, and applications in surgical procedures.
2. Define the functions, classifications, and proper handling techniques of endoscopic instruments used in minimally invasive procedures.
3. Describe the selection and use of surgical instruments specific to abdominal, Minimally invasive, as well as ear, nose, throat, and eye procedures. + General, GYN, oral maxillofacial.
4. Recognize commonly used Laboratory and radiologic tests in the surgical setting, explaining their significance in perioperative decision-making.
5. Demonstrate proper setup and handling of surgical instrumentation for general surgery, obstetrics and gynecology, ophthalmic, otorhinolaryngologic, oral and maxillofacial, and plastic and reconstructive procedures.
6. Verbalize the procedural steps and considerations for various surgical specialties, including relevant anatomy and historical advancements in surgical techniques.
7. Define patient safety protocols and special considerations when preparing for surgeries involving different patient populations and surgical specialties.
8. Describe the role of the surgical technologist in assisting with advanced procedures, emphasizing aseptic technique and teamwork within the surgical team.
9. Recognize and differentiate between various types of sutures, stapling devices, and hemostatic agents used in surgical procedures.
10. Demonstrate competency in instrument identification, passing techniques, and sterile field management in a simulated clinical setting.

SURG 1310. Surgical Technology III

Course Description

This advanced-level course builds on previous surgical technology knowledge, focusing on specialized surgical procedures, instrumentation, and equipment used in plastic, orthopedic, peripheral vascular, genitourinary, cardiothoracic, and neurosurgical procedures. Students will learn the names, functions, and applications of surgical instruments used in these specialties, along with procedural considerations for each type of surgery.

The course also explores the history, relevant anatomy, and unique patient considerations associated with these advanced surgical procedures. Emphasis will be placed on understanding the complexities of orthopedic and peripheral vascular surgeries, as well as specialized techniques in genitourinary, cardiothoracic, and neurosurgical interventions.

Student Learning Outcomes

1. Verbalize the procedural steps, patient considerations, and historical advancements associated with plastic, orthopedic, peripheral vascular, genitourinary, cardiothoracic, and neurosurgical procedures.
2. Define the names, functions, and applications of specialized surgical instruments used in orthopedic, vascular, genitourinary, cardiothoracic, pediatrics and neurosurgical procedures.
3. Describe the anatomical structures relevant to advanced surgical specialties and their significance in surgical interventions.
4. Recognize the unique challenges and patient considerations involved in complex surgical procedures, including trauma, congenital abnormalities, and reconstructive surgeries.
5. Demonstrate proficiency in setting up instrument trays and sterile fields for plastic, orthopedic, pediatrics, peripheral vascular, genitourinary, cardiothoracic, and neurosurgical cases.
6. Verbalize the indications, contraindications, and procedural considerations for specialized surgical techniques, including microsurgery, grafting, and robotic-assisted procedures.
7. Define the key principles of hemostasis, wound closure, and implant selection in orthopedic and vascular surgeries.
8. Describe the functions and safety considerations of specialized surgical equipment, such as tourniquets, bone saws, endoscopic cameras, and cardiopulmonary bypass machines.
9. Recognize potential complications in complex surgical procedures and discuss strategies to assist the surgical team in preventing and managing intraoperative challenges.
10. Demonstrate competency in assisting with advanced procedural techniques, including draping, instrument passing, and maintaining aseptic technique in high-risk surgical environments.

SURG 1310L. Surgical Technology III Laboratory

Course Description

The course explores the history, relevant anatomy, and unique patient considerations associated with these advanced surgical procedures. Emphasis will be placed on understanding the complexities of orthopedic and peripheral vascular surgeries, as well as specialized techniques in genitourinary, cardiothoracic, and neurosurgical interventions.

Through hands-on Laboratory sessions and practicum experiences, students will refine their surgical skills, including instrument handling, case setup, and procedural techniques. This course provides a strong foundation for transitioning into clinical rotations, ensuring students are well-prepared for advanced surgical environments.

Student Learning Outcomes

1. Verbalize the procedural steps, patient considerations, and historical advancements associated with plastic, orthopedic, peripheral vascular, genitourinary, cardiothoracic, and neurosurgical procedures.
2. Define the names, functions, and applications of specialized surgical instruments used in orthopedic, vascular, genitourinary, cardiothoracic, pediatrics and neurosurgical procedures.

3. Describe the anatomical structures relevant to advanced surgical specialties and their significance in surgical interventions.
4. Recognize the unique challenges and patient considerations involved in complex surgical procedures, including trauma, congenital abnormalities, and reconstructive surgeries.
5. Identify procedures for setting up instrument trays and sterile fields for plastic, orthopedic, pediatrics, peripheral vascular, genitourinary, cardiothoracic, and neurosurgical cases.
6. Verbalize the indications, contraindications, and procedural considerations for specialized surgical techniques, including microsurgery, grafting, and robotic-assisted procedures.
7. Define the key principles of hemostasis, wound closure, and implant selection in orthopedic and vascular surgeries.
8. Describe the functions and safety considerations of specialized surgical equipment, such as tourniquets, bone saws, endoscopic cameras, and cardiopulmonary bypass machines.
9. Recognize potential complications in complex surgical procedures and discuss strategies to assist the surgical team in preventing and managing intraoperative challenges.
10. Explain competent methods in assisting with advanced procedural techniques, including draping, instrument passing, and maintaining aseptic technique in high-risk surgical environments.

SURG 1410. Surgical Technology IV

Course Description

Students will continue to learn instrumentation & equipment used in Cardiac & Pulmonary Surgery. They will learn the difference in the physiology of the Pediatric patient. They will also be able to identify & select proper instrumentation and equipment for Neurological procedures They will do Laboratory and some practicum to compliment this course. This didactic course provides a continued in-depth study of advanced surgical procedures, instrumentation, and equipment used in cardiac, pulmonary, and neurological surgeries. Students will refine their ability to identify and select the appropriate instruments and technology necessary for these complex procedures. Emphasis will also be placed on the physiological differences in pediatric patients and the unique considerations required when performing surgery on this patient population. Students will develop a deeper understanding of specialized surgical techniques, patient care strategies, and operative protocols in high-risk surgical environments. Through hands-on Laboratory sessions and practicum experiences, students will continue honing their clinical skills, ensuring proficiency in advanced instrument handling, case preparation, and procedural execution. This course serves as the final didactic component of the program, integrating knowledge and skills in preparation for clinical rotations and professional practice in the surgical setting.

Student Learning Outcomes

1. Explain the procedural steps, patient considerations, and specialized techniques associated with cardiac, pulmonary, and neurological surgeries.
2. Identify and define the names, functions, and applications of instrumentation and equipment specific to cardiac, pulmonary, and neurological procedures.
3. Compare and contrast the physiological differences between pediatric and adult patients, emphasizing their implications for surgical intervention and patient management.
4. Discuss the specialized considerations for pediatric surgery, including anesthesia concerns, fluid management, and temperature regulation.
5. Explain the principles of selecting, handling, and preparing instrumentation and equipment used in cardiac, pulmonary, and neurosurgical procedures.
6. Describe the role of the surgical technologist in high-risk surgical environments, including maintaining sterility, assisting with specialized techniques, and responding to intraoperative complications.

7. Outline the principles of cardiopulmonary bypass, ventricular assist devices, and other life-sustaining technologies used in cardiac surgery.
8. Explain the indications, contraindications, and procedural considerations for common neurological surgeries such as craniotomies, spinal fusions, and neuroendoscopic procedures.
9. Recognize and discuss potential intraoperative complications unique to cardiac, pulmonary, and neurological surgeries, and explain the surgical technologist's role in assisting the surgical team in managing these situations.
10. Demonstrate comprehension of the foundational knowledge necessary for setting up, assisting, and maintaining sterility in complex surgical environments, providing the groundwork for success in lab practice and future clinical rotations.

SURG 1410L. Surgical Technology IV Laboratory

Course Description

Students will learn instrumentation & equipment used in Cardiac & Pulmonary Surgery. They will learn the difference in the physiology of the Pediatric patient. They will also be able to identify & select proper instrumentation and equipment for Neurological procedures. They will do Laboratory and some practicum to compliment this course.

This didactic course provides an in-depth study of advanced surgical procedures, instrumentation, and equipment used in cardiac, pulmonary, and neurological surgeries. Students will refine their ability to identify and select the appropriate instruments and technology necessary for these complex procedures.

Emphasis will also be placed on the physiological differences in pediatric patients and the unique considerations required when performing surgery on this patient population. Students will develop a deeper understanding of specialized surgical techniques, patient care strategies, and operative protocols in high-risk surgical environments.

Through hands-on Laboratory sessions and practicum experiences, students will continue honing their clinical skills, ensuring proficiency in advanced instrument handling, case preparation, and procedural execution. This course serves as the final didactic component of the program, integrating knowledge and skills in preparation for clinical rotations and professional practice in the surgical setting.

Student Learning Outcomes

1. Verbalize the procedural steps, patient considerations, and specialized techniques associated with cardiac, pulmonary, and neurological surgeries.
2. Define the names, functions, and applications of instrumentation and equipment specific to cardiac, pulmonary, and neurological procedures.
3. Describe the physiological differences between pediatric and adult patients, emphasizing the implications for surgical intervention and patient management.
4. Recognize the specialized considerations for pediatric surgery, including anesthesia concerns, fluid management, and temperature regulation.
5. Demonstrate the proper selection, handling, and setup of instrumentation and equipment used in cardiac, pulmonary, and neurosurgical procedures.
6. Verbalize the role of the surgical technologist in high-risk surgical environments, including maintaining sterility, assisting with specialized techniques, and responding to intraoperative complications.
7. Define the principles of cardiopulmonary bypass, ventricular assist devices, and other life-sustaining technologies used in cardiac surgery.
8. Describe the indications, contraindications, and procedural considerations for common neurological surgeries, such as craniotomies, spinal fusions, and neuroendoscopic procedures.
9. Recognize potential intraoperative complications unique to cardiac, pulmonary, and neurological surgeries, and discuss the surgical technologist's role in assisting the surgical team in managing these situations.

10. Demonstrate competency in setting up, assisting, and maintaining sterility in complex surgical environments, ensuring readiness for clinical rotations and professional practice.

SURG 2150. Surgical Technology Clinical I

Course Description

This first-level clinical course provides students with the opportunity to apply surgical theory and foundational skills in a hands-on clinical environment. Under the guidance of a preceptor, students will learn essential tasks such as scrubbing in, assisting with the second and possibly first scrub roles, and contributing to the setup and teardown of surgical procedures. The course emphasizes practical exposure to various aspects of surgical operations, enabling students to build confidence and competence in supporting surgical teams while adhering to best practices in patient safety and aseptic technique.

Student Learning Outcomes

1. Demonstrate proper aseptic technique, including scrubbing, gowning, and gloving, to maintain a sterile surgical environment.
2. Demonstrate the setup and breakdown of a sterile field, ensuring proper organization and adherence to surgical protocols.
3. Demonstrate basic skills in the second scrub role, including instrument handling, retraction, and assisting with intraoperative tasks.
4. Demonstrate the correct passing of instruments, sutures, and supplies to the surgeon in a timely and efficient manner.
5. Select key surgical instruments and their appropriate use in various procedures.
6. Identify proper patient positioning, draping, and skin preparation techniques under supervision.
7. Practice safety protocols, including counting procedures and the proper handling of sharps to prevent errors and contamination.
8. Recognize the roles and responsibilities of the surgical technologist within the surgical team and their impact on patient care.
9. Recall the steps involved in setting up, maintaining, and breaking down a sterile field.
10. Recall the principles of aseptic technique and infection control as they apply to the surgical environment.

SURG 2230. Professional Readiness

Course Description

This course transitions the student into professional readiness for employment, professional readiness for attaining certification and professional readiness for maintaining certification status.

Student Learning Outcomes

1. Apply the theory, concepts and skills involving specialized materials, tools, equipment, procedures as they relate to the occupation and the business/industry.
2. Apply the theory, concepts and skills involving regulations, laws, and interactions within and among political, economic, environmental, social and legal systems associated with the occupation and business/industry.
3. Demonstrate legal and ethical behavior, safety practices, interpersonal and teamwork skills.
4. Demonstrate appropriate use of written, verbal and non-verbal communication skills using terminology of the occupation and the business/industry.

SURG 2250. Surgical Technology Clinical II

Course Description

This second-level clinical course builds on foundational surgical skills, offering students increased responsibility and exposure in the clinical setting. Students will rotate through key departments, including Central Sterile, and will be involved in more complex tasks such as room setup, second scrubbing, and, depending on progress, first scrubbing. Additionally, students will have the opportunity to gain experience in specialty areas, such as Laboratory and delivery and gastroenterology. With continued guidance from a preceptor, students will apply surgical theory to practice, refining their techniques and preparing for advanced clinical roles in a variety of surgical settings.

Student Learning Outcomes

1. Demonstrate intermediate level skills in room setup, including organization of surgical instruments, equipment, and sterile supplies.
2. Demonstrate the ability to perform the second scrub role with increased independence, assisting with instrumentation, retraction, and suctioning.
3. Demonstrate proper aseptic technique in a variety of surgical settings, ensuring infection control and patient safety.
4. Demonstrate the correct procedures for processing, sterilizing, and handling surgical instruments while rotating through Central Sterile.
5. Identify instruments and equipment specific to specialty areas, including Laboratory and delivery and gastroenterology.
6. Identify proper protocols for handling surgical specimens, ensuring accurate Labeling and transport.
7. Recognize the responsibilities of the surgical technologist in first scrubbing, including anticipation of surgeon needs and intraoperative decision-making.
8. Recognize the workflow and interdisciplinary collaboration required in surgical specialty areas.
9. Recall key surgical procedures and their required instrumentation, reinforcing knowledge of surgical theory through hands-on experience.
10. Recall patient safety protocols and emergency procedures in the operating room, ensuring preparedness for advanced clinical roles.

SURG 2350. Surgical Technology Clinical III

Course Description

In this third-level clinical course, students will take on advanced responsibilities in the surgical setting, working closely with a preceptor to refine their skills. Students will perform a significant amount of first scrubbing, along with second scrubbing, gaining comprehensive hands-on experience in surgical procedures. This course emphasizes the application of advanced surgical techniques, allowing students to further develop their confidence and competence in the operating room while continuing to receive expert guidance and feedback. Students will also focus on enhancing their role in supporting the surgical team and ensuring smooth, efficient procedures.

Student Learning Outcomes

1. Demonstrate increased proficiency in the first scrub role, including anticipating surgeon needs and managing instrumentation efficiently, while working toward completing the required minimum of 120 cases.
2. Demonstrate advanced aseptic technique, ensuring strict adherence to sterile protocols throughout surgical procedures.
3. Demonstrate the ability to set up and maintain a sterile field independently, ensuring proper organization and readiness for surgical interventions.
4. Demonstrate effective communication and teamwork within the surgical team, contributing to procedural efficiency and patient safety.
5. Identify complex surgical instruments, equipment, and supplies required for a variety of advanced surgical procedures.

6. Identify potential intraoperative complications and appropriate responses to maintain a controlled and sterile environment.
7. Recognize the critical role of the surgical technologist in assisting with intraoperative decision-making and problem-solving.
8. Recognize the importance of efficiency and adaptability in the operating room, adjusting to changes in surgical procedures as needed.
9. Recall the procedural steps for a wide range of surgical specialties, reinforcing knowledge through hands-on first and second scrubbing experience while progressing toward the required 120 cases.
10. Recall patient positioning, draping techniques, and equipment requirements for different types of surgical interventions.

SURG 2450. Surgical Technology Clinical IV

Course Description

Student will independently 1st scrub majority of cases with a minimal number of 2nd scrub cases, with a preceptor observing. The student will have accumulated a minimum total of 120 cases from all clinical courses combined.

This final-level clinical course provides students with the opportunity to independently perform first scrubs on the majority of surgical cases, with minimal second scrubbing required. Under the observation of a preceptor, students will demonstrate proficiency in all aspects of surgical preparation, technique, and aseptic practice. By the end of the course, students will have completed a minimum of 120 cases across all clinical courses, showcasing their readiness to transition to professional practice. This course is designed to refine skills, enhance confidence, and ensure students are fully prepared for the demands of a career in surgery.

Student Learning Outcomes

1. Demonstrate proficiency in performing first scrubs for the majority of surgical cases, ensuring full preparation and aseptic technique, while minimizing second scrub roles.
2. Demonstrate advanced aseptic technique in all phases of surgical preparation, including scrubbing, gowning, gloving, and maintaining a sterile field.
3. Identify and select appropriate instruments, equipment, and supplies for a variety of surgical procedures, demonstrating expertise in case setup.
4. Recognize the critical importance of patient safety protocols and the role of the surgical technologist in maintaining a safe and sterile operating environment.
5. Recall the procedural steps for complex surgical specialties, ensuring accuracy and efficiency when performing first scrub roles.
6. Demonstrate the ability to anticipate the needs of the surgical team, including managing instrumentation, assisting with retraction, and handling specimens with precision.
7. Recognize the complexities of diverse surgical procedures and adapt to changes in the operating room, adjusting techniques as needed.
8. Demonstrate the ability to effectively communicate with the surgical team, ensuring smooth coordination and timely delivery of required instruments and supplies.
9. Recall the importance of ongoing observation and feedback from the preceptor, refining skills and adjusting techniques based on expert guidance.
10. Demonstrate completion of a minimum of 120 cases across all clinical courses, showcasing readiness for independent professional practice in the surgical environment.

SURG 2550. Advanced Review in Perioperative

Course Description

This course is designed to prepare students for success on the national certification examination for surgical technologists. Emphasis is placed on reviewing and reinforcing knowledge of perioperative care, including preoperative preparation, intraoperative procedures, and postoperative responsibilities. Additional focus is given to ancillary duties, equipment sterilization and maintenance, and foundational concepts in anatomy and physiology as they relate to surgical practice. Through structured review, practice questions, and test-taking strategies, students will strengthen their ability to recall, apply, and integrate essential concepts required for certification and professional practice.

Student Learning Outcomes

1. Review and apply principles of preoperative preparation including patient assessment, operating room setup, documentation, and equipment management.
2. Reinforce knowledge of intraoperative procedures by demonstrating understanding of aseptic technique, surgical instrumentation, suturing, hemostasis, and surgical team responsibilities.
3. Summarize postoperative care responsibilities including patient transfer, debriefing, equipment disposal, and room turnover.
4. Evaluate ancillary duties and professional responsibilities such as preference card revision, disaster protocols, cost containment, ethical and legal considerations, and cultural competence.
5. Apply principles of equipment sterilization and maintenance by reviewing processes for cleaning, testing, packaging, and troubleshooting surgical instruments and devices.
6. Integrate basic science knowledge of anatomy, physiology, and medical terminology across all surgical specialties to support accurate exam performance.
7. Demonstrate readiness for the national certification exam through practice tests, case-based review, and test-taking strategies that promote accuracy, speed, and confidence.

SURG 2996. Surgical Technology Topics

Course Description

Varies

Student Learning Outcomes

Varies

Swahili (SWAL)

SWAH 1110. Swahili I

Course Description

Foundation course for all beginning students interested in reading or speaking the language.

Student Learning Outcomes

The SLOs for Swahili 101 are consistent with the Intermediate Mid level of the NCSSFL-ACTFL Can-Do Benchmarks. Upon completion of this course, students will be able to develop:

1. Interpersonal Communication in Swahili: Communicate on familiar topics using a variety of words and phrases they have acquired through the course.
2. Presentational Speaking in Swahili: Present information about themselves, their environments, and other familiar topics using a variety of words, phrases, and expressions acquired in the course.
3. Presentational Writing in Swahili: Demonstrate novice-mid level writing in Swahili on familiar topics.
4. Interpretive Listening in Swahili: Recognize and respond to familiar words, phrases, and expressions when they hear them spoken, in song, and on other media.

SWAH 1120. Swahili II

Course Description

This course builds directly upon SWAH 1110 and is designed to bring the students beyond a novice-intermediate or intermediate level of competence.

Student Learning Outcomes

The SLOs for 1120 are consistent with the Intermediate Mid level of the NCSSFL-ACTFL Can-Do Benchmarks. Upon completion of this course, students will be able to:

1. Interpersonal communication: Communicate and exchange information about familiar topics using phrases and simple sentences, sometimes supported by memorized language. Hold short social exchanges in everyday situations by asking and answering simple questions.
2. Presentational speaking: Present basic information on familiar topics using language they have practiced using phrases and simple sentences.
3. Presentational writing: Write short messages and notes on familiar topics related to everyday life.
4. Interpretive listening: Understand words, phrases, and simple sentences related to everyday life. Recognize pieces of information and sometimes understand the main topic of what is being said.
5. Interpretive reading: Understand familiar words, phrases, and sentences within short and simple texts related to everyday life. Understand the main idea of what they have read.

Sustainability (SUST)

SUST 1110. Renewable Energy in Buildings

Course Description

This course is an introduction to Renewable/Sustainable Energy Systems and their appropriate use; well established technologies, such as Solar Hot Water and Space Heating, Photovoltaic Electrical Systems, Passive Solar Design, and Wind Energy Systems will be examined and observed if possible. The course will provide students with sufficient background for furthering their studies in specific Energy-System disciplines. Course materials will consist of books and online resources, and homework will include papers and projects. Classes will focus on discussion and, as a “hybrid” course, significant online research, work, and reading will be required.

Student Learning Outcomes

1. Understand terminology related to building energy use.
2. Understand the basic principles of sizing an RE energy system.
3. Understand the better known and established RE technologies and their appropriate use.
4. Learn about RE incentive programs.
5. Provide exposure to RE systems

SUST 1120. Power Generation, Transmission and Distribution

Course Description

Provides a firm technical foundation for students interested in design, operation, and management of electric power systems. The course covers the technical, economic, and environmental considerations of power generation, transmission, distribution, and consumption and introduces power engineering.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Analyze the existing structure of a power grid and make rudimentary power flow calculations.
2. Describe the function, operating parameters, and selection criteria for power system equipment.
3. Explain the concepts of reliability, security, and ancillary services as they relate to power generation, transmission, and distribution.
4. Determine the electrical, economic, and environmental considerations for generation, transmission, distribution, and consumption system choices.
5. Apply occupational and personal health and safety standards.

SUST 1130. Sustainable Energy Technologies

Course Description

Designed to provide students with a basic understanding of sustainability as an environmental and economic concept. The course will describe and analyze current and emerging sustainable energy technologies. Additionally, information about basic skill requirements required to begin working in renewable energy fields are provided.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand the history and terminology used in the field of Energy.
2. Identify and describe various energy systems.
3. Calculate energy costs, substitution analysis, resource valuation.
4. Demonstrate understanding of sustainability and energy economics.

SUST 1134. Introduction to Sustainability Studies

Course Description

This course provides a broad survey of various aspects of sustainability. Students will explore topics such as climate change, renewable energy, water, agriculture, green building, socially responsible business, micro lending, environmental justice, smart growth and alternative progress indicators. Students will examine both contemporary challenges to sustainable development and examples of successful sustainability initiatives on local, national, and global levels.

Student Learning Outcomes

1. Explain the concept of sustainability using the “3 E’s” -- environmental health, social equity, and economic vitality.
2. Describe examples of successful sustainability initiatives.
3. Identify current environmental, social, and economic issues.
4. Propose sustainable solutions to current problems by analyzing issues, recognizing multiple stakeholders, and evaluating likely outcomes.
5. Apply course concepts and promote sustainability in the community.
6. Understand and explain the importance of sustainable practices.
7. Demonstrate an understanding of the scientific aspects of sustainability practices and issues.

SUST 1144. Sustainability In Film

Course Description

This class examines pressing questions of climate change, inequality, racism, and sexism (among others) through the language of global film. We will analyze some of the most innovative pathways to sustainability and regeneration that are currently being practiced and implemented.

Student Learning Outcomes

1. Demonstrate understanding of how the language of film is utilized in cinematic storytelling in sustainability-oriented films.
2. Demonstrate in speech and writing, a complex understanding of the interconnection of social and environmental issues.
3. Demonstrate comprehension of narrative as power, both in wider society and within film.
4. Analyze innovative interventions for sustainability and environmental justice from a systems perspective.

SUST 2110. Climate Change & Sustainability

Course Description

At the nexus of science, society, and sustainability, this course is an in-depth exploration of the causes and consequences of modern global warming. Topics include stakeholder analysis, environmental justice, economics, politics, energy sources, adaptation and mitigation at local, national and global scales. In the past, humanity was transformed by the Agricultural, Industrial, and Technological Revolutions. We are currently undergoing an Energy Revolution with direct consequences on

the climate crisis. Will it be in time to stabilize the rapidly changing hydrological and ecological systems upon which Earth's biodiversity depends?

Student Learning Outcomes

1. Students understand how the chemical composition of Earth's atmosphere influences the amount of heat that it can hold.
2. Students understand what human activities are increasing the amount of greenhouse gases in the atmosphere.
3. Students learn how Earth's current systems and biodiversity are affected by increasing average atmospheric temperatures.
4. Students learn what local, state, and national actions are being taken to adapt to climate change and to decrease the amount of greenhouse gases in the atmosphere.

Technical Communication (TCOM)

TCOM 1110. Community Service

Course Description

Proposing and reporting in writing on a semester long community service activity with any nonprofit organization.

Student Learning Outcomes

Students will gain:

1. professionalism within the field of TC (e.g., skills in written communication, visual communication, technical writing, editing, critical thinking, and oral presentation).
2. the ability to conduct original research in TC and related fields intellectual breadth and depth in TC.
3. the ability to work collaboratively and understand the way TC projects are products of negotiated interaction.

TCOM 1120. Orientation to Technical Communication

Course Description

Guest speakers introduce students to the myriad activities and career paths of technical communicators.

Student Learning Outcomes

By the end of this course, you will be able to

1. Speak about the activities of technical communicators.
2. Speak about career paths open to technical communicators.
3. Dialogue with technical communicators working in the field.
4. Explain the difference between technical communication for technical communicators and for other professionals.
5. Explain your motivations for pursuing a career in technical communication.
6. Use basic features of three Adobe® programs.

TCOM 1130. Visual Communication and Graphic Design

Course Description

This course supports students' personal and professional development by exploring the principles and practices of visual communication and graphic design. Students learn best practices for creating human-centered, ethical, appealing, and effective visual communication—from presentations and data displays to signage, posters, and tutorials—for research, education, and industry. Working individually and in groups, students create various small graphic and communication design projects that aspire to make a difference. By the end of the semester course, students showcase their work in a professional online portfolio.

Student Learning Outcomes

By the end of this course, students should have developed or enhanced these Student Learning Outcomes:

1. Visual communication: Ability to tell compelling visual stories in multiple media for different rhetorical situations.
2. Graphic design: Ability to employ the design basics and the design process creatively to produce visual design projects.

3. Technical skills: Ability to use basic visual communication and graphic design tools. Ability to create and maintain a multimodal and multimedia learning website.
4. Metacognitive skills: Ability to plan and monitor their own learning, and to modify their approach based on evolving outcomes.
5. Research and organization: Ability to research audiences, content-sharing platforms, brands and social media strategies, and to integrate the results in their work. Ability to create and maintain social media profiles and projects.
6. Flexibility, responsibility, and creativity: Ability to build and sustain team dynamics and projects by being flexible and responsible.
7. Peer review: Ability to provide feedback based on active listening and careful analysis of peers' work.

TCOM 2110. Technical Editing

Course Description

Grammar review. Description of types and levels of editing. Responsibilities of editors. Use of editing and proof-reading symbols, usage guides, style guides and style sheets; Production aspect of editing. Practice online and hard copy of short manuscripts.

Student Learning Outcomes

By the end of the course, you should be able to:

1. Understand the difference between being a good editor and being a “language maven.”
2. Develop effective marking skills and use a variety of print and electronic commenting and editing options.
3. Use a style guide and understand the differences in stylistic and documentation standards across style guides.
4. Gain expertise in English grammar and style.
5. Edit a text for a range of grammatical, stylistic, and formatting concerns.
6. Understand the procedural and logistical issues involved in preparing copy for print.

TCOM 2120. Branding and Social Media

Course Description

This course helps students build their brand identity and apply the process to an organization of their choice. It also helps students harness the power of social media to build and consolidate both a personal brand and that of organizations. This class prepares students to make branding and social media an integral part of their day-to-day activities.

Student Learning Outcomes

By the end of this course, students should have developed or enhanced these Student Learning Outcomes:

1. Effective communication: Ability to develop a brand and use social media to effectively communicate with audiences.
2. Technical and digital competence: Ability to use tools and technologies to communicate with audiences; ability to create and maintain a multimodal and multimedia learning website.
3. Metacognitive skills: Ability to plan and monitor their own learning, and to modify their approach based on evolving outcomes.
4. Research and organization: Ability to research audiences, content-sharing platforms, brands and social media strategies, and to integrate the results in their work. Ability to create and maintain social media profiles and projects.
5. Flexibility, responsibility, and creativity: Ability to build and sustain team dynamics and projects by being flexible and responsible.
6. Peer review: Ability to provide feedback based on active listening and careful analysis of peers' work.

Theater (THEA)

THEA 1110. Introduction to Theatre

Course Description

This course introduces the study of theatre. Students will examine various components that comprise theatre, such as acting, directing, playwriting, dramaturgy, scenic and costume design, stagecraft, spectatorship, history, theory, and criticism.

Student Learning Outcomes

1. Define and discuss basic theater terms and concepts.
2. Discuss the fundamental elements of theatre, and the ways in which theatre differs from other art forms.
3. Analyze and critique the elements of a live theatrical production.
4. Identify and describe the roles of various theatre artists including actors, directors, playwrights, dramaturges, and designers.

THEA 1130. Introduction to Film**Course Description**

This course introduces the study of film. Students will examine the formal properties of film through four basic categories: history, genre, visual/composition design, and production processes.

Student Learning Outcomes

1. Define and describe basic film terms, forms, methods, and concepts.
2. Identify and analyze the significance of film historically, culturally, and worldly.
3. Analyze and evaluate the aesthetic, structural, and thematic aspects of film.
4. Analyze and critique films.

THEA 1210. Acting for Non-majors**Course Description**

This class gives non-majors experience in the depth and craft of the actor's art. Students will learn various terms, techniques, and practices of acting and will demonstrate their understanding in class. Through exercises and improvisations, partnered scenes, and group work, students will be better able to appreciate the work of others as they learn techniques of performing.

Student Learning Outcomes

1. Develop fundamental physical, vocal, analytical, and imaginative skills for acting for the stage.
2. Apply fundamental techniques of voice and movement for the stage.
3. Apply principles of play text analysis to understand story, character, and meaning.
4. Gain a better understanding of an actor's approach to goals, tactics, and obstacles.
5. Engage in character creation and development while preparing and performing monologues and scenes.
6. Learn a common vocabulary to help discuss the process of acting.
7. Employ collaborative methods of work with a partner and in groups.
8. Observe and evaluate acting skills of other actors.

THEA 1220. Beginning Acting**Course Description**

This course serves as an introduction to the theory and practice of acting. Students will learn various terms, techniques, and practices of acting and will demonstrate their understanding in class. Through exercises and improvisations, partnered scenes, and group work, students will be better able to appreciate the work of others as they learn techniques of performing.

Student Learning Outcomes

1. Develop fundamental physical, vocal, analytical, and imaginative skills for acting for the stage.
2. Apply fundamental techniques of voice and movement for the stage.
3. Apply principles of play text analysis to understand story, character, and meaning.

4. Gain a better understanding of an actor's approach to goals, tactics, and obstacles.
5. Engage in character creation and development while preparing and performing monologues and scenes.
6. Learn a common vocabulary to help discuss the process of acting.
7. Employ collaborative methods of work with a partner and in groups.
8. Observe and evaluate acting skills of other actors.

THEA 1221. Beginning Acting

Course Description

Basic understanding of self-expression through a variety of physical exercises, improvisation, and character study, culminating in scene or monologue work..

Student Learning Outcomes

1. Apply a common vocabulary that serves as a foundation in acting for the theatre major and minor.
2. Communicate effectively in front of an audience, applying learned concepts while exercising freedom and control of voice, body, and imagination.
3. Analyze the written character and live performance.
4. Provide objective feedback to your classmate's work as well as your own, that supports a greater understanding of our craft while building trust within the collaborative ensemble.

THEA 1222. Stage Movement

Course Description

Physical techniques for the actor to develop kinesthetic awareness and skills in characterization, archetypes, and stage combat. Restricted to: THTR majors.

Student Learning Outcomes

1. To provide fundamental training in a variety of movement techniques which can be applied to both theatrical performance and physical communication in everyday life.
2. Observation and critical skills will be advanced through class participation and outside assignments.
3. Class exercises are aimed at guiding participants to uncover their own creative expression, while working with efficient, healthy body alignment.

THEA 1223. The Art of Theatre

Course Description

This course introduces the variety and scope of theatre professions, the value and goals of the theatre major and an analysis of the art form from script to stage. Restricted to: Required for THTR majors.

Student Learning Outcomes

Not Available

THEA 1310. Introduction to Costuming

Course Description

This course introduces students to basic skills generally used in creating costumes for theatre. During the semester students will be introduced to the costume shop, equipment, supplies, and processes. They will learn the process of sewing a garment and running a stage production.

Student Learning Outcomes

1. Demonstrate basic hand and machine sewing skills.
2. Use basic costume craft tools and techniques.
3. Analyze fabric selection for the stage.
4. Draft and use patterns.
5. Take body measurements for patterning and construct a costume from those measurements.

6. Combine interpersonal communication skills with costume construction skills.
7. Analyze a script for costume design purposes.
8. Build a garment.

THEA 1310L. Costume Craft Laboratory

Course Description

Class members will assist in construction for productions in a studio environment.

Student Learning Outcomes

1. This laboratory class compliments THEA 1310. Introduction to Costuming.
2. It gives the student an opportunity to put into practice the skills learned in THEA 1310 as well as be introduced to and participate in the day-to-day operations of the Costume Shop.

THEA 1320. Intermediate Costume

Course Description

Provides students with more advanced training in cutting and sewing techniques, as well as knowledge of fabric. Trains student in building of complex clothing patterns.

Student Learning Outcomes

Upon completion of this course students will be able to:

1. Demonstrate intermediate hand and machine sewing skills.
2. Design, create renderings, and draft pattern for a costume.
3. Construct a new costume or apparel piece from new designs.
4. Construct a more complex apparel piece from a pattern.
5. Combine interpersonal communication skills with costume construction skills.
6. Alter and retrofit an existing garment.

THEA 1330. Advanced Costuming and Sewing

Course Description

Students who take this class will build upon previous sewing knowledge to construct advanced garments. They will learn techniques for building garments with alternative materials.

Student Learning Outcomes

Upon completion of this course students will be able to:

1. Utilize alternative fabrics such as leather, paper-clay, felt, worbla, plastics, decoupage, applique, and latex to build garments.
2. Demonstrate proper tailoring methods.
3. Design and build a corsetAlter and retrofit an existing garment.

THEA 1410. Everything Technical

Course Description

An introduction to the various aspects of play production including set construction and painting, lighting for theater, costumes, and sound for theater with practical application in the current semesters play production.

Student Learning Outcomes

1. Students will be able to analyze and identify significant theatrical texts.
2. Students will engage in an analysis and comparison of historical periods and how each period relates to theater.
3. Students will be able to recognize the diversity of human experience as it relates to theater across a range of historical and cultural periods.
4. Students will be able to relate cultural perspectives and modes of thinking and expression to contemporary thought regarding theater.

THEA 1415. Running Crew I**Course Description**

Students learn about backstage and front of house production positions and work on a technical aspect of a production in a rehearsal and performance environment.

Student Learning Outcomes

1. Students will learn one, or more, of the basic technical elements of theatrical crew work.

THEA 1990. Theatre Practicum**Course Description**

This course introduces student to the various principles of play production. Students will participate within the elements of on stage or backstage categories: acting, designing, front of house, and/or production staff. Theatre Practicum provides hands-on experience(s) for all elements of theatrical productions.

Student Learning Outcomes

1. Identify and analyze theatrical terms, forms, and practices.
2. Apply various concepts and skills as part of the production or acting staff.
3. Identify and demonstrate a variety of skills that will enhance the presentation of the theatrical event.
4. Explain the process from page to stage.

THEA 2110. Theatre History I**Course Description**

Theatre History I serves as an introduction to the literatures, histories, theories, and practices of world theatre, drama, and performance from antiquity to through the early modern period.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Demonstrate basic familiarity with global performance forms within their historical context.
2. Analyze and critically interpret significant primary texts related to theatre history from antiquity to the early modern period.
3. Identify key figures and define important terms related to theatre history between antiquity and the early modern period.
4. Understand and discuss major developments and movements in theatre history between antiquity and the early modern period.
5. Compare and contrast various performance theories and practices across a broad global context as pertaining to the history of theatre between antiquity and the early modern period.

THEA 2120. Theatre History II**Course Description**

Theatre History II serves as an introduction to the literatures, histories, theories, and practices of world theatre, drama, and performance from the early modern period to the present.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Demonstrate basic familiarity with global performance forms within their historical context.
2. Analyze and critically interpret significant primary texts related to theatre history from the early modern period to the present.
3. Identify key figures and define important terms related to theatre history between the early modern period to the present.

4. Understand and discuss major developments and movements in theatre history between the early modern period to the present.
5. Compare and contrast various performance theories and practices across a broad global context as pertaining to the history of theatre between the early modern period to the present.

THEA 2130. Race Ethnicity and the Drama of Diversity

Course Description

The course will examine sociological theory, with particular focus on race, ethnicity and the oppression and marginalization of people in the United States throughout history and today. This will be done through the exploration of dramatic literature and devised performance techniques.

Student Learning Outcomes

1. Analyze the forces, which create of oppression throughout history through today
2. Define the differences between race and ethnicity
3. Define the differences between racism, prejudice, stratification and discrimination.
4. Understand the vicious cycles of discrimination and how they play out in systems on both a micro and macro scale.
5. Learn the concepts of Image Theatre, and apply the techniques learned to the creation of a final performance project.
6. Read a variety of significant historical plays, which explore the above concepts.
7. Learn and site examples of how art and live performance have served throughout history as agents of social change.
8. Create an original “theatre of the oppressed” performance, which will reflect in depth learning of the above concepts.

THEA 2210. Acting for the Camera

Course Description

Acting for the Camera introduces students to techniques specific to performing for the camera. Students acquire acting skills that can be used on both the stage and screen. Students develop techniques through various exercises in front of a camera. Covers audition techniques, readings, shot size, eye-line, and industry vocabulary.

Student Learning Outcomes

1. Demonstrate acting techniques specific to performing for the camera.
2. Perform audition techniques for the camera.
3. Perform in front of the camera.
4. Critique on-screen performances.
5. Create and critique an acting resumé.
6. Understand the basic acting vocabulary that translates from stage to screen.
7. Adjust acting performances to fit the screen.

THEA 2220. Intermediate Acting

Course Description

Provides students with the opportunity to deepen physical, vocal, imaginative, and collaborative skills to which they were exposed in Beginning Acting. During the course of the semester, students will be introduced to techniques for working on script and character analysis, moment-to moment work, physical transformation, breath work, and truthful playing of the scene.

Student Learning Outcomes

1. Apply fundamental techniques of voice and movement for the stage.
2. Employ text analysis from an actor’s point of view.
3. Perform specific choices to create and perform goal-driven characters.
4. Demonstrate various physical and mental relaxation techniques.

5. Identify internal and external techniques to increase actor's emotional range.
6. Demonstrate sensory exercises and apply this technique to scene work.
7. Articulate and implement key terminology of modern acting techniques.
8. Begin to develop professionalism and development of a critical eye—practice with giving and receiving peer feedback, adherence to deadlines, memorization, flexibility and coachability.

THEA 2221. Intermediate Acting: Scene Study and Monologues

Course Description

Monologues and scene work, using character and script analysis.

Student Learning Outcomes

1. Students will gain further insight into the craft of acting and the techniques and skills required to present a successful stage performance.
2. Via the presentation of varied scenes and monologues, students will be exposed to a variety of theatrical literature.
3. Via research, students will gain knowledge of successful actors, acting techniques, and career advice.

THEA 2222. Intermediate Acting for Non-Majors

Course Description

A continuation of THEA 1210 with an emphasis on monologues, scenes and characterization.

Student Learning Outcomes

The successful student will:

1. Apply fundamental techniques of voice and movement for the stage.
2. Analyze a dramatic text and interpret a character and develop the skills necessary to score a script for character development.
3. Perform specific choices to create and perform goal-driven characters.
4. Demonstrate various physical and mental relaxation techniques.
5. Identify internal and external techniques to increase actor's emotional range.
6. Demonstrate sensory exercises and apply this technique to scene work.
7. Articulate and implement key terminology of modern acting techniques.
8. Develop and articulate a basic personal artistic process.
9. Demonstrate the ability to work cooperatively on a creative/interpretative project.
10. Begin to develop professionalism and development of a critical eye through practice giving and receiving peer feedback, adherence to deadlines, memorization, flexibility and coachability.

THEA 2225. Creative Dramatics

Course Description

Techniques for developing creativity and original dramatizations through improvisations and informal drama activities for all age groups. Emphasis on using creative drama as a development tool with children and youth in educational and recreational settings. This course will also explore methods of using drama as an interdisciplinary educational tool.

Student Learning Outcomes

Upon specific completion of the course, the student will be able to...

1. Release creative imagination
2. Explore and exercise creativity through theatre games, activities, and improvisation
3. Expand the range of vocal and physical communication skills
 - a. Perform vocal and physical warm up exercises
4. Use creative drama as an interdisciplinary educational approach
 - b. Respond in writing to each chapter in the text with an original project or game
 - c. Prepare lesson plans for each chapter in the text

5. Integrate the cultural community into activities for the classroom
 - d. Prepare and perform in a classroom production
 - e. Develop a portfolio of lesson plans and evidence of the final production
 - f. Attend a live production and write a review of it

THEA 2230. Ensemble Improvisation

Course Description

Introduces students to the structure and rules of short and long-form improvisation, allowing them to create original ensemble theatrical productions.

Student Learning Outcomes

1. Explore basics of improv comedy.
2. Describe standard improv terminology.
3. Investigate different forms of improv including short-form and long-form.
4. Develop a cohesive improv ensemble.
5. Perform for an audience.

THEA 2235. Introduction to Shakespeare

Course Description

As the name suggests, this course is intended as an introduction to the study of Shakespeare for both majors and non-majors. It will focus primarily on five of his plays which are most typically taught in Secondary and postsecondary education. Although one of Shakespeare's comedies will be included, particular emphasis will be placed upon four of his major tragedies. Students will study both traditional and contemporary adaptations of the plays. This course will approach Shakespeare as a combination of both literature and drama (performance), thus making the material relevant to students of both Theatre and English.

Student Learning Outcomes

Not Available

THEA 2240. Musical Theatre Performance

Course Description

Not Available

Student Learning Outcomes

1. Analyze and apply a step-by-step method for acting in musical theatre.
 - a. Apply the 'theory of safe space'
 - b. Demonstrate believability and truth using the concept of the 'Magic IF' and the Konstantin
2. Stanislavski acting school of thought
 - c. Demonstrate the concept of 'acting is believing' -the difference between acting and performing.
 - d. Apply the theory of 'playful work, disciplined play'
 - e. Sing/act a scene applying the aforementioned method
 - f. Give and receive feedback respectively and truthfully
3. Understand the musical and music analysis of score and libretto.
 - a. Listen and understand the concept that 'the music never lies'
 - b. Read composer's markings and analyze their relationship to emotional qualities and melodic shape
 - c. Learn the elements of musical key, modulations, accents and dynamics
 - d. Demonstrate musical "Voice" of a song and of a character
 - e. Sing/act a scene applying the aforementioned elements
4. Analyze the language of the lyric and libretto creating the elements of storytelling.
 - f. Analyze the story of a musical through lyric rhythm

- g. Analyze language usage of rhetoric, simile and metaphor, punctuation and period
- h. Create a breakdown of a musical using story events, French scenes, and musical moments
- i. Devise a plot outline through events seen and unseen, your characters events, back-story, thematic conflict, and location and time
- 5. Demonstrate the staging of songs through character analysis and the four basic structures of a journey.
 - j. Stage a song using the exposition of characters and character facts
 - k. Map out the journey of a song through character objectives
 - l. Map out the journey of a song through beat breakdowns and visible discovery
 - m. Sing/act a scene applying the four basic structures of a scene
- 6. Evaluate the style and overall preparation through the do's and don'ts of professional audition guidelines.
 - n. Demonstrate an external expression of the inner journey of an audition piece
 - o. Choose appropriate song choices for audition pieces that fit musical type and style
 - p. Present audition song portfolio with optional song length cuttings
 - q. Apply the anatomy of an audition
 - r. Perform a prepared piece with all appropriate audition materials

THEA 2245. Storytelling

Course Description

Storytelling is a course that will offer the student the competencies in effective public speaking.

Student Learning Outcomes

- 1. Students will analyze and evaluate oral and written communication in terms of situation, audience, purpose, aesthetics, and diverse points of view.
- 2. Students will express a primary purpose in a compelling statement and order supporting points logically and convincingly.
- 3. Students will use effective rhetorical strategies to persuade, inform, and engage.
- 4. Students will employ writing and/or speaking processes such as planning, collaboration, organizing, organizing, composing, revising, and editing to create presentations using correct diction, syntax, grammar, and mechanics.
- 5. Students will integrate research correctly and ethically from credible sources to support the primary purpose of a communication.
- 6. Students will engage in reasoned civic discourse while recognizing the distinctions among opinions, facts, and inferences.

THEA 2250. The Company Class

Course Description

The Company Class has been created to allow the student actor the opportunity to create a character by participating in a full theatrical production. This course will be designed for intense rehearsal culminating in several performances during the fall semester. Focus on character development, bodywork, and vocal work emphasizing accents will be explored this semester.

Student Learning Outcomes

Not Available

THEA 2255. Beginning Screenwriting

Course Description

Provides the critical ingredients of great dramatic writing that are then adapted to a dramatic form manageable for the emerging screenwriter: the narrative short film.

Student Learning Outcomes

At the end of this course, students will be able to:

1. Describe basic elements of dramatic structure
2. Perform screenwriting format and techniques
4. Analyze short contemporary films
5. Critique other's written works

THEA 2310. Stagecraft

Course Description

Student will explore basic skills for scenic designers and techniques of set construction for the stage, including building scenery, rigging, painting and properties.

Student Learning Outcomes

1. Demonstrate a range of technical skills, which will qualify them to assist in the basic technical production of a play.
2. Demonstrate and apply how to safely and competently use hand tools, power tools, electrical, and electronic stage equipment.
3. Analyze the technical aspects of a play in performance.
4. Read and construct scenery from ground plans, elevations, and drawings.
5. Analyze a script from the perspective of a designer, artistic, and/ or technical director.

THEA 2310L. Stagecraft Laboratory

Course Description

Class members will assist with construction for productions in a studio environment.

Student Learning Outcomes

Students will learn:

1. History of scenic design and the development of present day stage design.
2. How to create and interpret basic scenic ground plans, elevations, and detail drawings.
3. To construct basic scenic structures to include flats and platforms.
4. Various techniques of scenic painting and decorating.
5. The installations of theatre lighting instruments and sound equipment.

THEA 2315. Basic Stage Combat

Course Description

In this course, students will learn basic hand-to-hand and sword fighting techniques for the stage. They will explore the elements necessary for safe and believable fighting on stage: collaboration, communication, concentration, eye-hand coordination, physical control of speed and force, and sensitivity to balance and reflexes.

Student Learning Outcomes

1. Demonstrate basic hand-to-hand and sword fighting techniques:
 - a. Demonstrate parries 1-8 in armed fighting, as well as other armed techniques
 - b. Demonstrate various techniques in unarmed fighting including: shoulder rolls, jumps, falls, kicks, punches, slaps
 - c. Apply armed fighting techniques into a stage fight
 - d. Apply unarmed fighting techniques into a stage fight
 - e. Incorporate both armed and unarmed techniques into one stage fight
2. Incorporate techniques that ensure safe and believable fighting on stage:
 - a. Define the basic rules of stage fighting
 - b. Demonstrate the basic rules of stage fighting
 - c. Identify the importance of these rules for stage fighting
 - d. Use these rules to execute safe and believable fights on stage
 - e. Discern when these rules are being used, and when they are not

3. Choreograph and integrate fighting techniques into a believable stage fight:
 - a. Apply fighting techniques learned to choreograph a new fight with a partner
 - b. Execute the fight using safe and believable fighting techniques
4. Illustrate physical strength, control, balance, and coordination with his/her body when learning and executing fighting techniques:
 - a. Illustrate the three C's: Collaboration, Concentration, and Communication
 - b. Exercise sharp and focused eye-to-hand coordination
 - c. Exercise physical control of speed and force
 - d. Exercise sensitivity to balance and reflexes
 - e. Exercise alert thinking and physical stability
 - f. Identify your limits in these elements and work to improve them
 - g. Identify your partners' limits with these elements and work with them to improve them
5. Analyze and evaluate fighting techniques and choreography:
 - a. Apply principles learned in class to analyze your own and others' fighting techniques
 - b. Give feedback critically, constructively, clearly, and respectfully
 - c. Accept feedback graciously and with trust
6. Maintain creative concentration when working individually and with a partner:
 - a. Illustrate how we can use stage combat to present and communicate feelings and ideas
 - b. Illustrate how we can foster creative traits in ourselves by learning the techniques of stage combat
 - c. Illustrate how we can develop skills in creative problem sensing and solving with a partner

THEA 2320. Lighting for the Theatre

Course Description

This course is a comprehensive introduction to theatre lighting. Students will explore all areas of stage lighting, which include creating a light plot, hanging, circuiting, focusing, patching, and programming a lighting console.

Student Learning Outcomes

1. Demonstrate a range of technical lighting skills, which will qualify them to assist in the basic technical production of a play.
2. Identify types of light sources, components, and uses.
3. Demonstrate how to safely and competently use hand tools, lighting instruments, and lighting consoles.
4. Analyze the technical lighting aspects of a play for performance.
5. Demonstrate knowledge of the electrical equations necessary in stage lighting.
6. Demonstrate and apply knowledge to hang and focus using a light plot.
7. Analyze a script from the point of view of the lighting designer.

THEA 2325. Lighting Methods and Equipment

Course Description

Theory and practice of lighting for the stage. Crew assignment on departmental production required.

Student Learning Outcomes

1. By the end of this course students will understand the principles of theatrical lighting technology for the stage.
2. By the end of this course students will understand the principles of electricity for the stage.
3. By the end of this course students will understand the principles of CAD (computer aided drafting).

THEA 2330. Introduction to Theatre Makeup

Course Description

Learn basic techniques of theatre makeup. Students will explore applications for various stylizations including period, fantasy, and special effects. This may include practice in productions during the semester.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Demonstrate knowledge of makeup techniques and styles through practical application.
2. Demonstrate accepted techniques of stage makeup application.
3. Recognize and understand the fundamental roles of makeup design in the creation of characters.
4. Demonstrate and apply skills in relation to face shape, contours, color and different historical eras.
5. Analyze a script for makeup design purposes.

THEA 2335. Rendering for Stage, Screen, and New Media

Course Description

Introduction to basic drawing skills used in the presentation of theatrical designs for stage, film, and digital media. Emphasis is given to accurate representation of the human figure, perspective, and lighting using different mediums.

Student Learning Outcomes

1. Develop fundamental sketch and rendering techniques in both monochromatic and color using various art media from dry to wet media
2. Learn terms and theories of perspective drawing both one and two vanishing points
3. Explore mood (light and shadow) in various lighting situation

THEA 2340. Introduction to Design

Course Description

Introduction into our visual world via the language of designers, focusing on collaboration, creative thinking and presentation skills. The varied design professions in theatre and the performing arts will be explored.

Student Learning Outcomes

1. Apply design vocabulary and descriptions when speaking about design.
2. Identify design tools and make choices about where to use them.
3. Apply the foundation information in understanding how design tools work.
4. Apply correct terminology in assessing design and script analysis.
5. Read and understand some of the design documents commonly used in the industry.

THEA 2345. Voice for Actor I

Course Description

Basic vocal and physical skills with emphasis on relaxation, breath, and freeing the voice. Consideration of placement, articulation and support. Voice work is combined with movement to connect the expressive impulse to the entire body.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Demonstrate practical knowledge of advanced singing techniques.
2. Show competency in the precision of tunings, rhythms, melodic intervals, and harmonies.
3. Recognize the difference between timbers and resonators.
4. Sing collectively.
5. Unite body impulses with rhythmic qualities.
6. 1105
7. Develop physical actions related to a song score.

THEA 2350. Movement for the Stage

Course Description

An exploration of the art of acting primarily through the focus on body awareness, dynamic movement techniques, and physical characterization.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Demonstrate an understanding of anatomy and how their bodies work.
2. Show competence in their ability to build physical strength and flexibility.
3. Discuss the fundamentals of physical storytelling, choreography, and physical theatre.
4. Demonstrate a theoretical and practical understanding of the connection between language and the body.
5. Apply diverse tools and strategies to self-direct their physical work on the stage.

THEA 2415. Running Crew II

Course Description

Students learn about backstage and front of house production positions and work on a technical aspect of a product in a rehearsal and performance environment.

Student Learning Outcomes

1. To provide students with “hands on” experience participating in being a member of a running crew on a theatrical production.
2. Students will learn one, or more, of the basic technical elements of theatrical crew work.

THEA 2420. Voice & Movement

Course Description

Students are introduced to basic techniques, which aid in vocal and physical strength, variety, flexibility, and stamina, and gain understanding of harmful or limiting vocal and physical habits in stage acting.

Student Learning Outcomes

1. Explain and apply effective vocal and physical warm-ups to all rehearsals and performances.
2. Perform speech and articulation exercises to strengthen speaking voice.
3. Apply relaxation, breathing, resonance, projection, and language skills in performance.
4. Create and perform characters through clear movement and vocal choices.
5. Explain the harmful potential of physical habits that can hinder vocal and physical strength.

THEA 2421. Vocal Production for the Actor

Course Description

Exploration and development of the actor's vocal instrument, including relaxation, projection, diction and articulation. May be repeated up to 3 credits. Restricted to: THTR majors.

Student Learning Outcomes

1. Apply concepts of alignment, relaxation, breath support, resonance, projection, and articulation for your personal and professional benefit
2. Refine vocal 'problem solving' which will carry into your personal and professional life
3. Apply vocal concepts to a variety of text in order to understand and appreciate your voice and its capabilities, both intellectually and sensorially
4. Apply the vocal/speech tools consciously and behavior-ally, as an aid in the search for musicality of the voice in conjunction with truth and believability

THEA 2430. Principles of Stage Management

Course Description

Functions, duties, and responsibilities of the stage manager in rehearsal and performance. Students will experience the role of stage manager by working on a running crew.

Student Learning Outcomes

Upon specific completion of the course, the student will be able to...

1. Demonstrate an understanding of the duties and responsibilities of stage managers
 - a. Perform safety and fire extinguisher training
 - b. Organize a rehearsal schedule for an actual production
 - c. Demonstrate competency on concepts of stage management by taking an exam
 - d. Stage manage an actual production
 - e. Call cues for an actual production
2. Develop a working knowledge of Equity rules and guidelines
 - a. Read about and discuss Equity, LORT, and URTA
3. Prepare pre and post production worksheets
 - a. Write a production analysis
 - b. Compile an actor's information packet
 - c. Prepare rehearsal reports for an actual production
 - d. Prepare cue sheets for an actual production
4. Use technical theatre terminology
 - a. Demonstrate competency by taking an exam on terminology

THEA 2435. Directing

Course Description

Play analysis, visual composition, blocking, and interpretation for the beginning director. Work in current productions and Studio Scenes

Student Learning Outcomes

Upon specific completion of the course, the student will be able to...

1. Think and write analytically and critically about plays
 - a. Describe the cultural and economic background in which a play is written
 - b. Evaluate works by a playwright
 - c. Evaluate criticism of a playwright's work
 - d. Break a script into units
 - e. Interpret a playwright's meaning
2. Demonstrate research skills
 - a. Gather information on playwrights and critics
 - b. Research geographical regions where a play takes place
 - c. Investigate cultures and societies in which a play takes place
 - d. Research political and economic climates in which a play takes place
 - e. Research the people about whom a play is written
3. Describe visual and aural conceptualization of a play
 - a. Plot necessary costume and makeup designs for each character
 - b. Draw a floor plan for the set(s)
 - c. List necessary props
 - d. Determine sound and lighting requirements
4. Demonstrate organizational skills
 - a. Schedule deadlines and build timelines
 - b. List technical requirements called for in scripts
 - c. List staffing needs
 - d. Discuss budget requirements and adhere to a budget
5. Demonstrate interpersonal communication skills
 - a. Conduct auditions and cast a play
 - b. Carry out rehearsals

- c. Direct designers and actors
 - d. Cooperate with other directors, producer, stage manager, and technicians
- 6. Evaluate a production
 - a. Write a self-evaluation of the process and outcome of the production

THEA 2450. Playwriting

This course provides students with the critical, fundamental ingredients of dramatic writing for the stage. Students will write their own plays as well as learn how to offer constructive criticism for each other's work.

Student Learning Outcomes

1. Apply principles of play structure and playwriting techniques to original written works for the stage
2. Execute correct play manuscript format
3. Analyze contemporary published plays
4. Demonstrate a vocabulary of constructive criticism of the written works of self and classmates.

THEA 2990. Theatre Practicum

Course Description

This course introduces student to the various principles of play production. Students will participate within the elements of on stage or backstage categories: acting, designing, front of house, and/or production staff. Theatre Practicum provides hands-on experience(s) for all elements of theatrical productions.

Student Learning Outcomes

1. Identify and analyze theatrical terms, forms, and practices.
2. Apply various concepts and skills as part of the production or acting staff.
3. Identify and demonstrate a variety of skills that will enhance the presentation of the theatrical event.
4. Explain the process from page to stage.

THEA 2993. Theatre Workshop I

Course Description

Varies.

Student Learning Outcomes

Varies

THEA 2996. Topics in Theater

Course Description

Specific subjects to be announced in the Schedule of Classes. May be repeated for a maximum of 9 credits.

Student Learning Outcomes

Varies

THEA 2998. Theater Internship

Course Description

Varies

Student Learning Outcomes

Varies

THEA 2999. Theatre Capstone

Course Description

This course will prepare students for admission to a four-year college or career in the theatre. Students will assemble a resume and portfolio and execute a capstone project in one of the following areas: set, lighting, costume, sound

construction or design; stage management; or publicity. The capstone project can be completed with a professional, reputable theatre company or in an educational theatre setting. Capstone project must be approved by technical director and theatre director.

Student Learning Outcomes

1. Create a resume and portfolio (1 credit hour)
 - a. Write a resume including objective, educational and work experience, special skills, references, etc.
 - b. Compile a portfolio of designs, drafting, renderings, descriptions, photographs of completed projects and assignments, etc. of all work completed within the theatre program
 - c. Compile list of references and secure letters of recommendation participants
2. Demonstrate expertise in your area of concentration, e.g. acting, set, light, costume design or construction, stage management, backstage crew, publicity, etc. (3 credit hours)
 - a. Design or plan a theatre capstone project which can be carried out by working on a theatre production or for a theatre related business
 - b. Propose project to a professional or educational theatre company or a theatre related business
 - c. Secure confirmation of proposed project from the theatre company or theatre related business
 - d. Prepare all preparation materials for project
 - e. Set up work schedule, responsibilities, expectations, goals/objectives, etc. for the project with the theatre company or theatre related business
 - f. Execute the theatre capstone project
 - g. Write a descriptive and evaluative report assessing the experience and the work completed
 - h. Receive feedback from theatre company or theatre related business
3. Apply organizational, communication, and interpersonal skills
 - a. Schedule a timeline of execution and completion of theatre capstone project
 - b. Convey information in meeting with production crew and/or staff on the project
 - c. Direct production crew and/or staff on how to carry out the project
 - d. Troubleshoot complications and challenges with execution and completion of project
 - e. Work well with others on the execution and completion of project
4. Plan professional career goals
 - a. After completion of #1-3 above, write a list of goals for future career in the theatre
 - b. Set guidelines and a timeline on pursuing those goals for future career in the theatre

Traditional Arts (TRDA)

TRDA 1110. Traditional Arts & Ecology

Course Description

Not Available

Student Learning Outcomes

Not Available

Veterinary Technology (VETT)

VETT 1103. Preparation for Professional Success

Course Description

Open to students considering, or preparing to enter, a HWPS Professional Program. Students will explore professional aspects specific to their field of interest, considering various professional attitudes, ethics, and basic client or patient communications. Opportunities will be offered for students to make personal physical or mental adjustments in preparation to succeed in the HWPS Program. CR/NC; VT 1003 is taught almost entirely online. IT 1004 is recommended for any student interested in VT 1003 who is not familiar with the online environment.

Student Learning Outcomes

1. Engage with peers through on-line communication.
2. Investigate personal professional motivation.
3. Assess personal learning habits.
4. Explore instructor and student responsibilities.
5. List suggested steps in technical writing.
6. Examine role models.
7. Identify personal leadership qualities.
8. Create peer support systems.
9. Describe public speaking skills.
10. Investigate the need for professional enthusiasm.
11. Troubleshoot potential burn out and stress.
12. Explain professional appearance.
13. Describe professional behavior.
14. Describe patient and/or client communications.
15. Analyze personal health needs.
16. Explain wise financial principles.

VETT 1105. Veterinary Reception Basic Skills**Course Description**

Presents essential veterinary / animal care receptionist front office skills. Emphasizes customer service and professionalism, and introduces vocabulary applicable to veterinary, agricultural, and retail animal care fields.

Student Learning Outcomes

1. Manage the receptionist responsibilities in a veterinary services office.
2. Manage medical records and communicate instructions to pet owners.
3. Manage veterinary client invoicing, billing, and handling of finances.
4. Maintain veterinary office filing systems.
5. Exhibit professional communication skills and confidentiality while working with various individuals.
6. Exhibit veterinary professional appearance and behaviors.
7. Utilize proper vocabulary/terminology supporting the 9 species involved in animal care fields.

VETT 1108. Applied Mathematics for Veterinary Technicians**Course Description**

This course introduces conversions between metric and household systems and common abbreviations used in preparing medications. Presents applications in disciplines such as calculating medication dosages, percentage of weight loss, oral medications, intravenous fluid therapy, solutions and dilutions.

Student Learning Outcomes

1. Perform calculations involving fractions and decimals.
2. Demonstrate use of percentages.
3. Demonstrate use of scientific notation.
4. Solve ratios and proportions.
5. Solve calculations using dimensional analysis.
6. Convert between metric and household systems.
7. Calculate:

- a. oral medication dosages
 - b. parenteral medication dosage
 - c. concentrations of solutions
 - d. dilution problems
 - e. energy requirements
8. Discuss administration of intravenous fluids.
 9. Determine infusion rates.
 10. Explain anesthesia gas flow rates.
 11. Discuss statistics and quality control.

VETT 1110. Introduction to the Veterinary Profession

Course Description

Introduces veterinary medical team opportunities for the paraprofessional. Includes legal, ethical, and professional topics. Presents veterinary medical terminology including phylogenetic and taxonomic relationships of domestic, laboratory, and exotic animals.

Student Learning Outcomes

1. Medical Terminology as applied by the Veterinary Technician and in Medical Records
 - a. Identify prefix, suffix, and combining form word parts
 - b. Spell medical terms
 - c. Identify frequently used veterinary abbreviations
 - d. Identify anatomical positional terms
 - e. Identify taxonomic names
 - f. Define anatomical & physiological terms of various body systems
 - g. Define testing, diagnostic, pharmacologic, and disease terms
2. General Overview
 - a. Define technician, technologist, assistant, job duties, accredited training facilities
 - b. Explain careers and career paths
 - c. Describe various job settings
 - d. Compare economics and finances of veterinary businesses
 - e. Demonstrate professional attitudes
 - f. Describe professional expectations
 - g. Define professional organizations for veterinary technicians
 - h. Discuss safety issues consistent with CVTEA Policy on Safety and OSHA regulations
 - i. Explain general housekeeping principles
 - j. Describe sanitation and nosocomial protocols
 - k. Demonstrate understanding of zoonotic diseases
 - l. Describe ethical responsibilities
 - m. Compare animal welfare versus animal rights
 - n. Demonstrate understanding of organizations concerned with animals
3. Domestic and Exotic Animals
 - a. Demonstrate understanding of taxonomic terms
 - b. Differentiate between species and breeds
 - c. Describe breed specific behavioral characteristics, both normal and abnormal
4. Basic Medical Care Techniques

- a. Define and demonstrate understanding of applications of the term triage
- b. Demonstrate understanding of species-specific behavior to medical care
- c. Explain situations warranting euthanasia
- d. Explain neonatal care
- e. Explain basics of the immune system
- f. Outline gestation tables
- g. Outline basic pharmacologic principles

VETT 1111. Introduction to Animal Nursing Care

Course Description

Introduction to Animal Nursing Care is an entry-level course which provides discussion and introduction of concepts involved with safety, animal handling and restraint, animal behavior, basic nursing skills utilized by veterinary technicians, and to act as a foundation of knowledge for subsequent program courses.

Student Learning Outcomes

1. Identify potential personal, patient and workplace safety hazards.
2. Perform a basic physical examination on common domestic animal species.
3. Accurately record patient history, vital signs, and examination findings.
4. Demonstrate safe and effective restraint and handling techniques for common domestic animal species.
5. Recognize and interpret the behavior and body language of common domestic animal species.
6. Identify and describe basic treatment procedures and common medical conditions.
7. Apply proper animal husbandry and grooming care techniques for common domestic animal species.

VETT 1113.

Small Animal Diseases I

Course Description

Small Animal Disease and Medical Care 1 is an entry-level course designed to develop the basic knowledge of mammalian diseases and disease processes that may be encountered by a veterinary technician.

Student Learning Outcomes

1. Explain principles of patient and personal safety, disease transmission, and epidemiology in small animals.
2. Classify and differentiate microorganisms, including bacteria, viruses, fungi, and protozoa, based on their characteristics and pathogenicity.
3. Identify and analyze common infectious and zoonotic diseases affecting dogs and cats including their etiology, clinical signs, diagnosis, and treatment.
4. Evaluate the fundamentals of immunology and the role of vaccines in disease prevention and control.
5. Research and present findings on specialized topics related to small animal infectious diseases with a focus on Rabies prevention strategies, clinical progression, affected species, and occupational safety measures.

VETT 1114. Pharmacology and Medical Therapeutics I

Course Description

Pharmacy and Medical Therapeutics 1 is an entry-level course designed to teach the student the basic classification and properties of the common pharmaceuticals used in veterinary medicine.

Student Learning Outcomes

1. Describe routes and techniques available for drug administration.
2. Apply knowledge of veterinary pharmaceutical drug classes introduced in this course.

3. Recognize different types of needles and syringes and describe their common use.
4. Properly prepare and dispense veterinary prescriptions.
5. Perform basic pharmaceutical and dosage calculations.

VETT 1115. Vet Anesthesia and Surgical Assisting I

Course Description

Veterinary Anesthesia and Surgical Assisting 1 is an entry-level course designed to help develop a strong foundation in anesthetic skills, surgical assisting skills, and perioperative procedures.

Student Learning Outcomes

1. Recognize basic workplace safety protocols, including safety concerns in the operating room and during perianesthetic period.
2. Identify and understand the purpose and function of anesthetic and surgery-related equipment, and various perianesthetic drugs, including their uses, contraindications, and potential side effects.
3. Describe basic anesthetic monitoring principles, including manual and equipment-assisted techniques, and anesthesia stages across different species (dog, cat, horse, ruminant).
4. Define asepsis principles, the role of the surgical assistant, and basic surgical assisting techniques.
5. Differentiate between common surgical procedures and patient management strategies, including preoperative, intraoperative, and post-operative care.

VETT 1116. Introduction Veterinary Diagnostic Imaging

Course Description

Presentd veterinary radiography basics including safety measures, image production and storage, radiographic quality, patient positioning for imaging, and an introduction to advanced imaging techniques for common domestic animal species.

Student Learning Outcomes

1. Recall the historical significance in the development of radiology, identify the key components of radiographic technique charts, and list the procedures for proper maintenance of radiographic equipment.
2. Describe the role of correct Labeling and filing in maintaining accurate patient records and ensuring compliance with radiological standards.
3. Recall the key safety protocols for both patients and staff in veterinary radiology, including PPE (personal protective equipment) usage, exposure limits, and shielding techniques.
4. Identify the principles behind each specialty radiographic technique and how they differ from traditional radiography.
5. Explain the importance of proper animal positioning for accurate radiographs.
6. Define the principles that determine diagnostic image quality (e.g., contrast, resolution, exposure).

VETT 1117. Veterinary Clinical Pathology I

Course Descrtiption

This an entry-level course designed to develop the student's knowledge and skills in basic Laboratory and diagnostic procedures.

Student Learning Outcomes

1. List common workplace hazards in the veterinary setting, identify required personal protective equipment (PPE) for safety, and explain the safety rights and responsibilities of employees to ensure adherence to safety protocols and regulations.

2. Understand basic components involved in red blood cell (RBC) and white blood cell (WBC) count evaluations and perform calculations related to RBC indices.
3. Describe basic principles of parasitology, including identifying common internal and external parasites encountered in veterinary practice.
4. Understand basic principles of urinalysis, including identification of cells and other constituents found during a microscopic examination of a urine sample.
5. Describe and apply techniques for identifying common bacterial pathogens and cytological methods, including preparation, staining, and interpretation.

VETT 1118. Veterinary Medical Terminology

Course Description

This entry level course designed to provide the student with a foundation in the language of veterinary medicine, focusing on pre-fixes, suffixes, word roots and their combining forms.

Student Learning Outcomes

1. Define commonly used prefixes, suffixes, root words, and combining forms used within the veterinary medical terms.
2. Utilize knowledge of word parts to construct and interpret medical terms.
3. Identify and explain positional terms, directional terms, and body surface/planes terms.
4. Identify and describe the terminology of major structures/functions of the primary organs/body systems and associated procedures, diagnoses, and pathology.
5. Define and explain medical terms related to physical examinations of animals, common veterinary Laboratory procedures, and disease processes.

VETT 1119. Veterinary Business Procedures I

Course Description

Veterinary Business Procedures I is an entry-level course designed to introduce the student to veterinary medicine as a business and profession.

Student Learning Outcomes

1. List concepts in managing client interactions and records, observing legal boundaries, and respect for the veterinary-client-patient relationship.
2. Define qualities which show a commitment to high-quality patient care and identify the contributing factors to improve interpersonal skills and team dynamics.
3. Utilize practice management software and identify regulatory agency roles to effectively meet facility and patient needs.
4. Explore the most common canine and feline breeds and differentiate between breed characteristics.
5. Define credentialing and continuing education requirements for veterinary technicians, and demonstrate effective job search strategies, including resume building and interviewing skills

VETT 1130. Veterinary Nursing Care II

Course Description

An intermediate level course designed to instruct students in comprehensive and compassionate nursing care techniques, including bandages and casts, administration of medications, and sample collection. Emphasis will be placed on ensuring optimal animal health through effective restraint, nutrition, and understanding of body systems.

Student Learning Outcomes

1. Demonstrate ability to provide proper restraint and handling of patients; administer medications using various routes and techniques; Perform venipuncture; Place intravenous catheters.
2. Evaluate pet foods, describe feeding methods best used for specific conditions; compare nutritional support provided by nutrients. Assess patient body condition and communicate with clients regarding nutrition topics.
3. Gather patient history and perform physical exams; provide basic husbandry care.
4. Perform clinical procedures involving the digestive, cardiovascular, respiratory, and urinary systems.
5. Identify special considerations for and explain proper care of neonatal, geriatric, and infirm patients; identify pain in patients using pain assessments.
6. Identify select toxicants and assist in managing poison emergencies.

VETT 1132. Small Animal Disease and Medical Care II

Course Description

An intermediate level course which builds on foundational knowledge of Small Animal Disease and Medical Care 1. This course explores a selection of diseases in greater depth, emphasizing their anatomical and physiological basis. Students will develop a deeper understanding of disease mechanisms, progression, and clinical implications in small animal patients.

Student Learning Outcomes

1. Demonstrate proper restraint and handling techniques; apply muzzles and E-collars; provide basic husbandry care; demonstrate ophthalmic diagnostic tests and administer medications using various routes and techniques.
2. Explain the organization of the body at the cellular and tissue levels; identify mechanisms of disease; and apply proper sanitation practices.
3. Describe key oncology concepts; recognize and assess signs of pain in animals.
4. Identify anatomical structures, explain their functions, as well as describe select diseases, including diagnostic procedures and common medical treatments for disorders affecting the eye and ear, integumentary, musculoskeletal, and endocrine systems.
5. Research and develop reports on selected topics related to small animal diseases and medical care.

VETT 1133. Pharmacy and Medical Therapeutics II

Course Description

Pharmacy and Medical Therapeutics II is an intermediate course designed to instruct students in the cardiovascular, respiratory, and integumentary systems, the pharmaceuticals that affect those systems, and pharmacological calculations.

Student Learning Outcomes

1. Demonstrate knowledge of clinical use and actions of veterinary pharmaceuticals.
2. Apply knowledge of physiological processes of the cell, digestive system, cardiovascular system, respiratory system, and endocrine system.
3. Properly prepare and dispense veterinary prescriptions.
4. Perform measurement conversions and drug dosage calculations.

VETT 1134. Veterinary Anesthesia and Surgical Assisting II

Course Description

Veterinary Anesthesia and Surgical Assisting II is an intermediate course designed to instruct students in the preanesthetic evaluation of patients, the induction of anesthesia, and the monitoring of anesthetized and post-anesthetic patients.

Student Learning Outcomes

1. Identify and explain the function and maintenance of each part of the anesthesia machine and other ancillary anesthetic equipment.

2. Explain principles of aseptic techniques, including the proper preparation of surgical sites and personnel entering the operating room.
3. Identify and describe the use of various surgical instruments, and demonstrate proper OR setup, maintenance, and cleaning of equipment.
4. Demonstrate ability to select and safely utilize appropriate anesthetic-related medications and protocols; including use of proper administration and the ability to describe their indications, contraindications, and common side effects.
5. Manage patients under anesthesia using both hands-on monitoring and monitoring equipment, including identifying anesthetic stages and understanding normal vital signs according to species.

VETT 1135. Veterinary Diagnostic Imaging II

Course Description

Veterinary Diagnostic Imaging II is an intermediate course designed to instruct students in radiographic safety techniques, developing radiographs, the proper use of contrast media, specialized radiographic procedures, and an introduction to veterinary diagnostic ultrasound.

Student Learning Outcomes

1. Analyze and utilize radiographic technique charts, demonstrate proper care and maintenance of radiographic equipment, and apply radiology safety measures to minimize exposure,
2. Demonstrate proper positioning techniques for small animal patients during radiological procedures across various body regions.
3. Recognize, identify, and differentiate primary skeletal structures and soft tissue organs in images in common small animal species.

VETT 1136. Veterinary Clinical Pathology II

Course Description

Veterinary Clinical Pathology II is an intermediate course designed to instruct students in parasitology and advanced cytological and hematological procedures.

Student Learning Outcomes

1. Identify various blood cell types, analyze white blood cell (WBC) differentials, and interpret hematology results to assist in diagnosing blood-related disorders in veterinary patients.
2. Define and describe disorders of hemostasis; apply appropriate blood transfusion and cross-matching techniques to ensure safe and effective treatment of veterinary patients.
3. Perform sample collection and evaluation techniques for small animal and large animal parasites.
4. Identify the microscopic and macroscopic appearance of small animal and large animal parasites while being able to describe their zoonotic potential.

VETT 1137. Veterinary Business Procedures II

Course Description

Veterinary Business Procedures II is an advanced course designed to build on the knowledge and skills covered in Business Procedures I, with an emphasis on veterinary business operations.

Student Learning Outcomes

1. Performing basic filing and maintenance of medical records including patient records, radiographs, Laboratory reports, maintain appropriate controlled substance logs, and maintain daily client-based financial transactions.
2. Participating in hospital inventory control processes.

3. Recognizing roles of appropriate regulatory agencies and identify disposal protocols for hazardous materials in compliance with regulatory guidelines.
4. Acquiring and conveying information utilizing appropriate interpersonal and public relation skills.
5. Developing and providing client education in a clear and accurate manner at an appropriate level.
6. Applying crisis intervention/grief management skills utilizing an understanding of the human-animal bond.

VETT 1170. Animal Comparative Anatomy and Physiology

Course Description

Comparative anatomy and physiology of canine, bovine, equine, feline species including circulatory, respiratory, digestive, muscular/skeletal, nervous, endocrine, exocrine, urogenital systems. Also includes a brief anatomy and physiology of avian and reptile species. Requires hands on Laboratory experience including dissection.

Student Learning Outcomes

1. Organize the taxonomic relationships of 9 species of domestic animals.
2. Compare and contrast the structure of components of 11 body systems in 9 species of animals.
3. Compare and contrast the function of components of 11 body systems in 9 species of animals.
4. Describe the relationship between structure and function of components of each of 11 body systems.

VETT 1192L. Supplemental Laboratory

Course Description

Provides participation in supervised learning and review of basic, advanced and specialized practices, including topics in Anatomy and Physiology, Therapeutics, Clinical Pathology. Allows students to review in preparation for VT exit examinations.

Student Learning Outcomes

1. Compose a goal statement for the course.
2. Use Laboratory resources and other students and instructors to practice skills and competencies in past and current VT coursework.
3. Report on the accomplishment of the goal.

VETT 1210. Animal Comparative Anatomy and Physiology II

Course Description

Continues study of comparative anatomy and physiology of canine, bovine, equine, feline species including circulatory, respiratory, digestive, muscular/skeletal, nervous, endocrine, exocrine, urogenital systems. Requires hands-on Laboratory experience including dissection.

Student Learning Outcomes

1. Organize the taxonomic relationships of 9 species of domestic animals.
2. Compare and contrast the structure of components of 11 body systems in 9 species of animals.
3. Compare and contrast the function of components of 11 body systems in 9 species of animals.
4. Describe the relationship between structure and function of components of each of 11 body systems.

VETT 1272. Surgical Technology for Veterinary Technicians

Course Description

Introduces students to surgical procedures, instruments, suture materials, surgical supplies and surgical preps. Overview of anesthesia and emergencies, surgical emergencies and post-surgical care. Includes clinical experience as circulating technician. This course is primarily small animal in focus.

Student Learning Outcomes

1. Prepare surgical packs, gowns, and instruments.
2. Describe surgical procedures.
3. Recognize and organize suture materials.
4. Perform surgical preps.
5. Organize and prepare surgical supplies.
6. Recognize and describe response to surgical emergencies.
7. Perform suite circulating technician duties.
8. Describe postsurgical care.
9. Relate overview of anesthesia.
10. Apply concepts of microbiology to sterile fields.
11. Perform sterilization techniques.
12. Identify surgical instruments. perform surgical scrub.
13. Present all current small animal CVTEA surgical nursing required competencies.

VETT 1292L. Veterinary Office and Hospital Procedures Laboratory

Course Description

Introduces veterinary office procedures in a hands-on Laboratory experience. Various aspects of facility management will be presented using traditional and electronic media to prepare student to effectively contribute to the professional and efficient operation of a veterinary facility. Emphasis will be on veterinary computer software applications, veterinary online services, telephone skills and role-playing in client communication situations.

Student Learning Outcomes

1. Identify various facility management processes utilizing traditional and electronic media.
2. Identify appropriate veterinary medical terminology and abbreviations.
3. Demonstrate telephone etiquette, including excellent message writing
4. Define the veterinary - client - patient - relationship, and apply confidentiality of information
5. Classify and respond appropriately to various veterinary medical emergencies (role play)
6. Implement the "needs ladder"
7. Demonstrate appointment scheduling, admits, discharge and triage
8. Write a SOAP.
9. Write a proper prescription Laboratoryel.
10. Describe common veterinary office equipment and maintenance needs.
11. Utilize common veterinary management software programs, including client data entry.
12. Locate on-line resources supporting veterinary technology topics.
13. Describe various facility logs and records.
14. Describe the human animal bond and stages of grief (natural death, or by euthanasia).
15. Utilize veterinary on-line services (NAVTA, VSPN, AVMA)
16. Perform medical record filing (alphabetical and numerical).
17. Describe inventory control management.
18. Describe the role of regulatory agencies, such as OSHA.
19. Create a hazardous material protocol and recognize workplace safety issues.
20. Demonstrate ability to enter data, and make correct change for financial transactions
21. Explain personal and client stress.
22. Explain the professional veterinary team and demonstrate appropriate interactions.
23. Read and apply the HWPS and Veterinary Technology Program handbooks.

24. Comprehend and utilize the services of the CNM Learning Center (library / student support services).
25. Apply the StrengthsQuest inventory and Learning Styles assessment to personal professional performance.
26. Apply communication skills in a professional manner in all formats - written, oral, non-verbal, and electronic.
27. Apply applicable laws and the veterinary technology profession's ethical codes to provide high quality care to patients.

VETT 1293L. Radiology for Veterinary Technicians Laboratory

Course Description

Introduces exercises and demonstrations related to veterinary radiology. Includes field trips, exercises and demonstrations at veterinary clinics.

Student Learning Outcomes

1. Manage personal radiographic monitoring badge.
2. Maintain proper personal radiographic safety measures.
3. Observe recommended radiation safety measures.
4. Apply recommended radiation safety measures.
5. Appreciate historical development of radiography.
6. Manage risks to personnel & the animal during radiographic exposures.
7. Apply effective radiographic quality control measures.
8. Evaluate diagnostic quality of the radiograph.
9. Process exposed images.
10. Prepare the imaging site & equipment.
11. Create a radiographic technique chart.
12. Utilize a radiographic technique chart.
13. Place animals properly for radiographic studies.
14. Demonstrate a broad variety of anatomical radiographic positions.
15. Recognize faulty operation of radiographic equipment.
16. Store radiographic film properly & safely.
17. Utilize automatic & hand processors.
18. Utilize radiographic equipment properly to expose x-ray film.
19. File radiographic film correctly.
20. Laboratoryel radiographic film properly.
21. Complete radiographic logs, reports, files & records properly.
22. Demonstrate proper maintenance of radiographic equipment.
23. Demonstrate radiographic techniques utilized in screening canine hip dysplasia.
24. Demonstrate the steps for a GI series.
25. Demonstrate the steps for a pneumocystogram.
26. Utilize positive & negative radiographic contrast media properly.
27. Demonstrate large animal radiographic positioning.
28. Place exotic & Laboratory animals properly for radiographic studies.
29. Use ultrasonography equipment.
30. Use endoscopic equipment.

VETT 2110. Clinical Pathology for Veterinary Technicians I

Course Description

Provides a clinical laboratory setting for students to learn the diagnostic techniques in parasitology, urinalysis, microbiology and cytology including proper collection, preparation and evaluation of specimens.

Student Learning Outcomes

1. Handle laboratory equipment, specimens and cultures using Standard Precautions, employing PPE, and following laboratory safety rules.
2. Use the microscope properly to accurately view specimens at 100x power.
3. Clean and care for the microscope properly.
4. Complete microbiology skills, and specimen identification (bacteria, fungi, dermatophytes, and yeast).
5. Classify Gram negative and Gram positive organisms, focusing on organisms important to veterinary medicine.
6. Perform a Gram stain resulting in proper identification of the organism.
7. Perform a four quadrant streak isolation, including proper labeling.
8. Perform microbiology tests such as oxidase, catalase, CMT, MacFarland Standard and disc sensitivity, etc.
9. Identify hemolysis patterns.
10. Use a dichotomous key.
11. Perform parasitologic procedures for internal parasites:
 - a. fecal flotations.
 - b. fecal sedimentation.
 - c. direct smears.
 - d. scotch tape retrieval of specimens.
12. Perform parasitologic procedures for external parasites and identify mites, lice, ticks, fleas, flies.
13. Identify common adult parasites and ova including Nematodes, Trematodes, Cestodes and Protozoa.
14. Explain the life cycles of various endoparasites and exoparasites as they relate to pathologic conditions.
15. Perform coprologic tests.
16. Perform cytologic evaluation including collection, preparation and evaluation of specimens.
17. Perform urinalysis (determine physical properties, test chemical properties, examine and identify sediment).
18. Explain the relationship between urinary tract disease and urinalysis results.
19. Explain the relationship between infections and infestations.
20. Explain which plants are toxic to animals.
21. Perform necropsy procedures, including:
 - a. collection, identification and safe handling of rabies suspects
 - b. storage and shipping of samples according to laboratory protocols
 - c. prosection on non-preserved animal
 - d. disposal of dead animals
22. Present all current CVTEA laboratory procedures required competencies.

VETT 2115. Non-Infectious and Infectious Diseases for Veterinary Technicians

Course Description

Presents overview of common non- infectious and infectious diseases with a special emphasis on zoonotic diseases, isolation concerns, and federal regulations. OSHA requirements, occupational safety, the CVTEA policy on safety and necropsy techniques.

Student Learning Outcomes

1. Describe zoonotic disease and how it can be transmitted to humans; consider zoonotic potential of animal diseases and define epidemiologic terms.

2. Describe specific and non-specific immunity, define antigen and antibody and differentiate the types of immunoglobulins.
3. Identify causative agents, transmission and signs of bacterial zoonoses and describe protective measures professionals take to prevent transmission of bacterial zoonoses.
4. Identify causative agents, transmission, clinical signs and control of viral diseases and the protective measures taken to prevent transmission.
5. Describe basic tick biology and differentiation and identify causative agents, transmission, clinical signs and control of tick-borne bacterial zoonoses.
6. List and describe vaccines for common feline and canine diseases.
 - a. List the major types of vaccines
 - b. Discuss how vaccines work
 - c. Discuss correct handling and storage of vaccine
 - d. Describe possible vaccine reactions
7. Describe the causative agents, clinical signs and control of fungal zoonoses and identify the properties unique to fungi.
8. Describe prion disease, transmission, clinical signs as well as control and protective measures for professionals to prevent transmission.
9. Define necropsy and describe its purpose, safety precautions and procedures for different species and list the materials used for necropsy and tissue collection.
10. List and describe disinfectant categories and their advantages and disadvantages and recognize the relationship of diseases and OSHA requirements and the technicians role in controlling spread of disease.
11. Describe the agents or metabolic processes of common non-infectious diseases, how the diseases affect the body systems of domestic animals and the technician's role in the nursing care of these animals.

VETT 2190. Veterinary Technology Clinical I

Course Description

Applies theory to practice at veterinary clinics performing hands-on duties including radiology, kennel maintenance, animal handling and restraint, pre and post surgical preparation and operating room etiquette, etc.

Student Learning Outcomes

1. Complete 90 clinical placement hours.
2. Participate in required field trips.
3. Write reports on field trips.
4. Write term paper.
5. Write weekly clinical reflection reports.
6. Write StrengthQuests reflection report.
7. Complete required clinical placement evaluation forms.
8. Complete required clinical placement logs, attendance, radiology.
9. Complete clinical placement journal. participate in daily clinical activities at placement facility.
10. Discuss progress at a clinical review appointment with clinical coordinator.
11. Interact appropriately with staff.
12. Interact appropriately with clients.
13. Interact appropriately, proficiently and safely with patients.
14. Describe an involved case; follow care, include a reflection in a weekly report.
15. As the placement allows; opportunities are presented.

16. Demonstrate proficiency level in reception skills per rubric.
17. Demonstrate proficiency level in room assistant skills per rubric.
18. Demonstrate proficiency level in surgical pre-post operative care per rubric.
19. Demonstrate proficiency level in radiology or imaging skills per rubric.
20. Demonstrate proficiency level in laboratory skills per rubric.
21. Demonstrate proficiency level in therapeutics and care skills per rubric.

VETT 2210. Veterinary Nursing Care III

Course Description

An advanced level course designed to instruct students in the topics of dentistry, and nursing care of small animal patients afflicted by disorders of specific body systems.

Student Learning Outcomes

1. Identify structures of the oral cavity, head, and neck; describe and identify dental occlusions, neoplasia, oral diseases, proper use of dental instruments and equipment, perform dental exams and cleanings, and provide client education for dental home care for their pet.
2. Perform clinical procedures involving the eye, musculoskeletal, and integumentary systems.
3. Describe wounds, wound healing, and treatment of wounds.
4. Identify and describe different types of bandages, splints, casts, apply bandages, and provide bandage care.
5. Demonstrate ability to obtain patient histories and perform physical exams; Perform venipuncture; Perform urinary procedures; Clean and medicate ears; Administer fluid therapy and medications; Place IV catheters; Perform ophthalmic tests and therapy; Apply bandages; Perform dental prophylaxis.
6. Compare and contrast innate and adaptive immune responses while acknowledging the impact of stress on the patient.

VETT 2212. Small Animal Disease and Medical Care III

Course Description

Small Animal Diseases and Medical Care 3 is an advanced level course that builds on foundational knowledge of small animal diseases and conditions. This course explores a selection of diseases in greater depth, emphasizing their anatomical and physiological basis. Students will develop a deeper understanding of disease mechanisms, progression, and clinical implications in small animal patients

Student Learning Outcome

1. Obtain patient histories and perform physical examinations; perform venipuncture and urinary procedures; provide basic husbandry care; administer fluid therapy and medications; place intravenous (IV) catheters.
2. Identify anatomical structures, explain their functions, as well as describe select diseases, including diagnostic procedures and common medical treatments for disorders affecting the reproductive, cardiovascular, blood/immune, respiratory, nervous, urinary, and digestive systems.
3. Research and develop reports on selected topics related to small animal diseases and medical care utilizing the SJC library resources

VETT 2213. Pharmacology and Medical Therapeutics III

Course Description

Pharmacology and Medical Therapeutics III is an advanced course designed to instruct students in the musculoskeletal, nervous, endocrine, reproductive, digestive, urinary, special sense organs, and the pharmaceuticals that affect those systems.

Student Learning Outcomes

1. Demonstrate knowledge of clinical use and actions of veterinary pharmaceuticals.
2. List and identify actions of veterinary medications as related to various body systems.
3. Define actions and clinical uses of veterinary pharmaceuticals in response to pain and inflammation, antimicrobial drug therapy, antiparasitic medications, fluid therapy, immunology, and explore alternative therapeutic agents.
4. Properly prepare and dispense veterinary prescriptions.
5. Perform pharmaceutical calculations and properly calculate dosage problems.
6. Document usage of pharmaceuticals within the veterinary pharmacy and apply knowledge of inventory control procedures; including proper handling and tracking of controlled substances.

VETT 2214. Veterinary Anesthesia and Surgical Assistant III**Course Description**

This course is an advanced course designed to instruct students in advanced and interactive preanesthetic evaluations, induction of anesthesia, and the monitoring of anesthesia and post-anesthetic patients.

Student Learning Outcomes

1. Describe the anesthetic process from preanesthetic evaluation through induction, maintenance, and recovery for multiple species, including dogs, cats, horses, ruminants, and exotic animals.
2. Consider advanced anesthetic techniques, including local and regional blocks, and the management of patients on a ventilator.
3. Identify and respond appropriately to anesthetic complications or emergencies.
4. Demonstrate pain scoring evaluation techniques and describe the importance of pain management, including both pharmacologic and non-pharmacologic options.
5. List, describe, and demonstrate the duties of the sterile surgical assistant including proper surgical assisting principles, instrument handling, tissue maintenance, and suture handling.
6. Describe concepts of various surgical procedures and explain the role of the technician in patient care before, during, and after the procedure.

VETT 2215. Veterinary Diagnostic Imaging III**Course Description**

This course is an advanced course designed to instruct students in advanced safety techniques, the use of contrast media, advanced radiographic procedures, and advanced veterinary diagnostic ultrasound techniques.

Student Learning Outcomes

1. Identify the skeletal anatomy of canine, feline, equine, and avian species as it applies to diagnostic imaging.
2. Evaluate equine imaging safety principles; identifying patient positioning and diagnostic imaging techniques for anatomical areas such as the feet, knees, and fetlocks.
3. Differentiate between radiograph imaging techniques and positioning strategies used for avian and exotic species.
4. Apply and analyze proper positioning techniques for dental radiography in small animals.
5. Evaluate and analyze ultrasonography techniques in dogs, cats, and horses, and examine the use of endoscopy in small animals, horses, avian species, and exotics.
6. Apply digital radiography techniques, and evaluate special radiographic procedures, including contrast studies, CT, MRI, and cystograms.
7. Demonstrate proper positioning techniques for hip dysplasia analysis in canine patients.
8. Demonstrate and evaluate images through the completion of the Veterinary Diagnostic Imaging Capstone project.

VETT 2216. Veterinary Clinical Pathology III

Course Description

This course is an advanced course designed to instruct students in hematology, cytology, histopathology, blood chemistry, urinalysis, and diagnostic microbiology.

Student Learning Outcomes

1. Perform advanced hematological techniques to evaluate blood samples, including specialized staining, cell morphology assessment, and coagulation testing.
2. Interpret hematological and urinalysis results to assess animal health and detect pathological conditions.
3. Demonstrate proficiency in microbial culture techniques, pathogen identification, and antimicrobial susceptibility testing for veterinary diagnostics.
4. Analyze clinical chemistry profiles to assess organ function, metabolic status, and disease processes in veterinary patients.
5. Evaluate cytological and bone marrow samples to differentiate normal and abnormal cellular changes, assess hematopoietic function, and identify disease processes.

VETT 2219. Video Portfolio Veterinary Nursing I

Course Description

The Veterinary Nursing 1 Video Portfolio is an advanced level course designed to evaluate student performance of required hands-on clinical tasks for veterinary nursing skills. Students will be required to capture and submit videos on specific and required veterinary nursing tasks as part of the program final clinical practical exams. The completion of clinical skills videos is a requirement for all online veterinary technology students based on AVMA/CVTEA accreditation criteria.

Student Learning Outcomes

This course requires students demonstrate proficiency of the following required clinical tasks through a video assignment utilizing CVTEA and SJC VTDLP standards (as outlined in the course video instructions document) for the following tasks:

1. Remove a Large Dog from Cage.
2. Place Cat into a Cage or Carrier and Remove.
3. Administer an Enema.
4. Apply a Nylon Muzzle to a Dog.
5. Place an Elizabethan Collar on a Dog or Cat.
6. Use a Restraint Pole on a Large Dog.
7. TPR and Auscultation on a Dog.
8. TPR and Auscultation on a Cat.
9. Cephalic Venipuncture on a Dog.
10. Cephalic Venipuncture on a Cat
11. Jugular Venipuncture on a Dog.
12. Jugular Venipuncture on a Cat.
13. Lateral Saphenous Venipuncture on a Dog.
14. Medial or Lateral Saphenous Venipuncture on a Cat.
15. Administer Subcutaneous Fluids
16. Apply a Modified Robert Jones Bandage.
17. Express Canine Anal Sacs.
18. Cystocentesis on a Cat or a Female Dog.
19. Urinary Catheterization on a Male Dog.
20. Nail Trim on a Dog.

21. Nail Trim on a Cat.
22. Clean and Medicate Ears on a Dog.
23. Clean and Medicate Ears on a Cat.
24. Hand Pill a Dog.
25. Hand Pill a Cat.
26. Subcutaneous Injection on a Dog.
27. Subcutaneous Injection on a Cat.

VETT 2221. Video Portfolio Anesthesia and Surgical Assisting

Course Description

This course is an advanced level course designed to evaluate student performance of required hands-on clinical tasks for veterinary anesthesia and surgical assistance skills. Students will be required to capture and submit videos of specific and required veterinary surgical assistance and perianesthetic tasks as part of the program final clinical practical exams. The completion of clinical skills videos is a requirement for all online veterinary technology students based on AVMA/CVTEA accreditation criteria.

Student Learning Outcomes

This course requires students demonstrate proficiency of the following required clinical tasks through a video assignment utilizing CVTEA and SJC VTDLP standards (as outlined in the course video instructions document) for the following tasks:

1. Set up, maintain and operate an anesthetic machine and perform pressure check for leaks.
2. Remove sutures.
3. Preanesthetic patient preparation.
4. Perform rapid sequence induction and endotracheal intubation.
5. Utilize clinical signs and appropriate equipment to monitor patient status under inhalant anesthesia.
6. Prepare surgical site using aseptic techniques and position patient for common procedures.
7. Wrap a surgical gown.
8. Clean the operating room.
9. Perform surgical hand scrubbing.
10. Perform surgical gowning and closed gloving.
11. Clean surgical instruments.
12. Demonstrate proper operating room conduct and asepsis when working as a scrubbed in sterile assistant.
13. Assemble and wrap a major surgery pack.
14. Utilize an autoclave to sterilize instruments and supplies.
15. Participate in common canine and feline surgical procedures.

VETT 2222. Video Portfolio: Veterinary Clinical Pathology

Course Description

The Veterinary Clinical Pathology Video Portfolio is an advanced level course designed to evaluate student performance of required hands-on clinical tasks for clinical pathology essential skills. Students will be required to capture and submit videos of specific clinical pathology tasks as part of the program final clinical practical exams. The completion of clinical skills videos is a requirement for all online veterinary technology students based on AVMA/CVTEA accreditation criteria.

Student Learning Outcomes

1. Prepare serum and plasma.
2. Perform packed cell volume/total protein.
3. Prepare and stain blood film.

4. Perform leukocyte differential.
5. Perform culture for identification of dermatophytes.
6. Perform heartworm microfilaria test: direct smear method.
7. Perform heartworm antigen test.
8. Perform modified Knotts test for microfilaria detection.
9. Perform fibrinogen assay.
10. Perform CBC and blood chemistry (both in-house and external laboratory).
11. Perform serologic testing (ELISA).
12. Collect, prepare, and evaluate ear cytology.
13. Collect, prepare, and evaluate canine vaginal smears.
14. Perform a skin scrape.
15. Perform a fecal flotation with centrifugation.
16. Perform a fecal direct smear test.
17. Perform a fecal sedimentation test.
18. Perform bacterial culture and sensitivity.
19. Perform cross match (manual)
20. Perform a urinalysis.

VETT 2223. Video Portfolio: Veterinary Nursing II

Course Description

The Veterinary Nursing II Video Portfolio is an advanced level course designed to evaluate student performance of required hands-on clinical tasks for veterinary nursing essential skills. Students will be required to capture and submit videos of specific veterinary nursing tasks as part of the program final clinical practical exams. The completion of clinical skills videos is a requirement for all online veterinary technology students based on AVMA/CVTEA accreditation criteria.

Student Learning Outcomes

This course requires students demonstrate proficiency of the following required clinical tasks through a video assignment utilizing CVTEA and SJC VTDL standards (as outlined in the course video instructions document) for the following tasks

1. Properly restrain a dog for cephalic venipuncture.
2. Properly restrain a dog for saphenous venipuncture.
3. Properly restrain a dog or cat for jugular venipuncture.
4. Administer an intramuscular injection to a dog AND cat.
5. Administer an intravenous injection to a dog AND cat.
6. Placement of a cephalic intravenous catheter.
7. Placement of a saphenous intravenous catheter.
8. Perform a Schirmer tear test.
9. Perform a fluorescein stain test.
10. Perform tonometry testing.
11. Perform orogastric intubation.
12. Perform a complete dental prophylaxis/examination.

VETT 2230. Vet Anatomy and Physiology

Course Description

Veterinary Anatomy and Physiology provides a comprehensive understanding of comparative anatomy and physiological adaptations of domestic animals. The course emphasizes core anatomical and physiological principles while incorporating specific information on large animals and non-traditional species.

Student Learning Outcomes

1. Identify and describe the microscopic and gross anatomy of each body system studied using the appropriate terminology.
2. State the functions of each organ system of the body, explain the mechanisms by which each operates, and relate the functions to the anatomy and histology of each organ system.
3. Apply to clinical scenarios the concepts and knowledge of the general terminology, function, and physiology of the organ systems covered.
4. Explain the role of each body system in maintaining homeostasis.

VETT 2232. Large Animal Diseases and Medical Care

Course Description

Large Animal Diseases and Medical Care instructs students in sanitation and disease prevention techniques, correct use and administration and documentation of medications, and the pathophysiology of common diseases of large animals.

Student Learning Outcomes

1. Identify components and the role of the veterinarian and veterinary technician in livestock breeding operations and concepts involved in reproductive procedures.
2. Differentiate between breeds and uses of livestock including horses, cattle, sheep, goats, swine, and camelid species.
3. List and describe appropriate husbandry and nutrition for livestock including horses, cattle, sheep, goats, swine, and camelid species.
4. Compare and contrast common parasites affecting large animal species including life cycle, transmission, symptoms, and treatment.
5. Evaluate symptoms and clinical signs of major infectious and non-infectious diseases in cattle, sheep, goats, and pigs and be able to identify those which are zoonotic or reportable.
6. Identify techniques used to evaluate and determine signs associated with equine lameness and the techniques used for lameness exams.

VETT 2233. Large Animal Clinical Assisting

Course Description

Large Animal Clinical Assisting is designed to prepare the student for clinical care of large animals by building core competencies related to safe livestock handling, patient nursing care, preventative medicine, equine imaging, surgical nursing, and proper use of large animal instruments and equipment. Through both course instruction and practical lab experiences, students will gain a foundational knowledge and technical abilities required for completion of required large animal clinical skills.

Student Learning Outcomes

1. Describe the principles of safe livestock restraint and handling, including species-specific behavior and design and use of various pens and restraint equipment.
2. Identify and explain the steps of a physical examination and importance of a patient history for large animals and small ruminants.

3. Differentiate between various routes of medication administration in large animals and small ruminants and describe best practices for each.
4. Recognize the tools, terminology, equipment, and protocols used in large animal clinical procedures, and explain their relevance to patient care.
5. Discuss principles and applications of diagnostic imaging in equine medicine various positions, terminology and techniques.
6. Outline common hoof pathologies and describe and perform appropriate hoof care and bandaging techniques used in equine practice.
7. Describe preoperative and postoperative processes involved in equine surgery, including aseptic techniques and patient monitoring.

VETT 2235. Laboratory Animal/Sm Exotic Clinical Procedures

Course Description

Covers the common diseases of laboratory animals and small exotics and emphasizes proper sanitation and disease prevention techniques, appropriate medication administration procedures, animal nutrition, reproduction, and behavior.

Student Learning Outcomes

1. Identify the unique anatomic and physiologic characteristics of various laboratory and small exotic animals.
2. Identify the husbandry/nutritional requirements, normal behaviors, and breeding systems of laboratory animals in a clinical setting and discern these from inappropriate conditions.
3. Demonstrate safe handling and restraint of laboratory and small exotic animals in a clinical setting.
4. Utilize appropriate methods of medication administration and sample collection techniques for various laboratory animal/small exotic species in a clinical setting.
5. Identify and describe common diseases and disease pathophysiology processes of laboratory animals encountered in the practice of veterinary medicine.
6. Perform a necropsy procedure on a non-preserved animal and collect/store/ship samples according to laboratory protocols.

VETT 2236. Emergency and Critical Care Medicine

Course Description

This course is designed to provide students with emergency and critical care nursing skills necessary to identify and respond effectively to a variety of emergency situations. The course includes patient assessment, triage, stabilization techniques, cardiopulmonary resuscitation, and advanced emergency medicine and critical care techniques and assessments.

Student Learning Outcomes

1. Perform triage and stabilization techniques for emergency patients.
2. Administer intravenous fluid therapy and blood transfusions effectively.
3. Manage patients in shock, utilizing appropriate clinical interventions upon veterinarian's orders.
4. Administer cardiopulmonary resuscitation (CPR) following established protocols.
5. Identify and manage emergencies across various body systems.
6. Provide comprehensive nursing care for critical care patients.
7. Provide proper management for chest tubes and feeding tubes.
8. Describe various venous access techniques, including proper placement and maintenance.

VETT 2592L. Advanced Supplemental Laboratory for Veterinary Technology

Course Description

Provides second-year Veterinary Technology students with the opportunity for additional learning and practice of veterinary technology skills in the campus laboratory. Encourages preparation for the VTNE.

Student Learning Outcomes

1. Compose a goal statement for the course.
2. Use laboratory resources and other students and instructors to practice skills and competencies in past and current VT coursework.
3. Use available resources to properly prepare to pass the Veterinary Technician National Examination.
4. Report on the accomplishment of the goal.

VETT 2610. Clinical Pathology for Veterinary Technicians II

Course Description

Identifies RBC, WBC, PCV, TP, platelets and blood parasites. Students learn how to perform staining techniques, heartworm tests and coagulation tests, how to perform serum analysis and how to use diagnostic in house laboratory kits.

Student Learning Outcomes

1. Package, handle and store specimens for laboratory analysis properly.
2. Perform and determine appropriate methodologies and carry out analytical procedures necessary to provide accurate and precise diagnostic information.
3. Recognize accurate vs. erroneous results in order to provide maximum diagnostic benefit.
4. Communicate if a need exists for additional laboratory tests that will provide useful diagnostic information.
5. Perform a CBC, including evaluation of the various test results: including hemoglobin, packed cell volume, total protein, white cell count, buffy coat, red cell count (including morphology).
6. Prepare and evaluate a microscopic exam of blood film, including various stain techniques and evaluation of normal vs. abnormal cells.
7. Estimate platelet numbers.
8. Perform platelet count.
9. Calculate absolute values.
10. Correct white blood cell counts for nucleated cells.
11. Calculate hematologic indices.
12. Perform reticulocyte count.
13. Perform blood chemistry tests.
14. Collect properly and examine small animal urinary, vaginal and semen specimens.
15. Perform cytological examination of specimens.
16. Perform blood typing procedure.
17. Perform one of the following coagulation tests: Buccal mucosal bleeding time, Activated clotting time (ACT), Prothrombin time (PT), Partial thromboplastin time (PTT), Fibrinogen assay.
18. Properly prepare, handle and submit appropriate samples for diagnostic analysis in order to ensure maximum accuracy of results.
19. Determine proper maintenance and quality control procedures necessary to ensure accurate results.
20. Present all current CVTEA Laboratory procedures required competencies.

VETT 2651. Anesthesiology for Veterinary Technicians Lecture

Course Description

Studies anesthesia in large and small domestic animals, exotic and laboratory species. Includes pre-anesthetic evaluation, induction of anesthesia, patient monitoring and recovery, principles of fluid therapy related to anesthesia, dosage calculations, and identification, care, and maintenance of anesthetic machines.

Student Learning Outcomes

1. Calculate dosages of appropriate anesthetic-related drugs.
2. Explain how to safely and effectively administer appropriate anesthetic-related drugs by injection, mask, induction chamber or endotracheal tube.
3. Explain how to safely and effectively place endotracheal tubes in patients when appropriate.
4. Explain how to utilize clinical signs and appropriate equipment to monitor patient status in all stages of anesthetic procedures (e.g. esophageal stethoscope, doppler, pulse oximeter).
5. Explain how to effectively evaluate patients and implement and evaluate pain management protocols.
6. Explain how to recognize and respond appropriately to patients in compromised states.
7. Explain how to effectively perform appropriate resuscitation procedures as needed (e.g. calculate and administer appropriate anesthetic antagonist and emergency drugs as directed).
8. Complete controlled drug log.
9. Assess the patient's risk status and determine appropriate anesthetic and perianesthetic protocols to provide effective pain management and maximum anesthetic safety and effectiveness.
10. Explain how to choose and utilize appropriate techniques and equipment to accurately and effectively monitor the patient's ongoing status before, during and after anesthesia to provide for adequate anesthesia, analgesia and a safe recovery.
11. Explain how to maintain & operate anesthetic delivery & monitoring equipment:
12. Explain how to recognize and respond appropriately to equipment malfunction or inappropriate equipment setup, given the characteristics of the anesthetic instrument and equipment being used.
13. Explain how to select, evaluate and adjust equipment, given the requirements of the anesthetic protocol.

VETT 2674. Applied Therapeutics and Care for Veterinary Technicians I

Course Description

Presents skills such as venipuncture, medication administration, IV therapy, bandaging and splinting, catheterization techniques, recumbent patient care, blood transfusions, and nutritional care.

Student Learning Outcomes

1. Recognize husbandry, nutrition, and therapeutic techniques for small animals.
2. Describe emergency protocols, critical nursing care, parenteral and enteral medications, fluid therapy and catheter principles, ocular and aural care.
3. Demonstrate proper use of monitoring machines, and describe the P-QRST ECG wave.
4. Discuss urinary catheterization.
5. Demonstrate placement of intravenous catheters.
6. Demonstrate intravenous fluid therapy and calculate drip rates.
7. Describe body condition scoring and small animal nutrition principles, and the AAFCO.
8. Describe various methods of tube feeding.
9. Describe pet food labels, related especially to client care.
10. Calculate moisture content and dry matter percent for pet foods.
11. Calculate energy requirements, and describe life stage diets.
12. Discuss wound healing and bandage techniques.
13. Apply soft padded bandages and the Robert Jones Bandage.

14. Describe various passive physical therapy techniques.
15. Describe various alternative small animal therapeutic medicine techniques
16. Evaluate a patient as if for critical emergencies, including CPR.
17. Apply various therapeutic skills appropriate to the animal and for the case management presented.
18. Apply appropriate care for the patient in simulated medical situations, including critical thinking, client care concerns, and safety and care for the patient.

VETT 2690. Veterinary Technology Clinical II

Course Description

Applies theory to practice at clinics, performing hands-on duties that include: specimen collection, urinalysis, parasite evaluation, wound management, administration of medications, IV catheterization, veni-puncture and client education.

Student Learning Outcomes

1. Complete 156 clinical placement hours.
2. Participate in required field trips.
3. Write reports on field trips.
4. Write term paper.
5. Write weekly clinical reflection reports.
6. Write StrengthQuests reflection report.
7. Complete required clinical placement evaluation forms.
8. Complete required clinical placement logs; attendance, radiology.
9. Complete clinical placement journal.
10. Discuss progress at a clinical review appointment with clinical coordinator.
11. Participate in daily clinical activities at placement facility.
12. Interact appropriately with staff.
13. Interact appropriately with clients.
14. Interact appropriately, proficiently and safely with patients.
15. Demonstrate proficiency level in reception skills per rubric.
16. Demonstrate proficiency level in room assistant skills per rubric.
17. Demonstrate proficiency level in surgical pre-post operative care per rubric.
18. Demonstrate proficiency level in radiology or imaging skills per rubric.
19. Demonstrate proficiency level in laboratory skills per rubric.
20. Demonstrate proficiency level in therapeutics and care skills per rubric.
21. Describe an involved case; follow care, include reflection in a weekly report.

VETT 2692L. Anesthesiology for Veterinary Technicians Laboratory

Course Description

Introduces exercises and demonstrations related to veterinary anesthesiology. May include field trips, exercises and demonstrations and laboratories at veterinary clinics.

Student Learning Outcomes

1. Assess the patient's risk status and determine appropriate anesthetic and perianesthetic protocols to provide effective pain management and maximum anesthetic safety and effectiveness.
2. Choose and utilize appropriate techniques and equipment to accurately and effectively monitor the patient's ongoing status before, during and after anesthesia to provide for adequate anesthesia, analgesia and a safe recovery.

3. Accurately calculate dosages of appropriate anesthetic-related drugs.
4. Safely and effectively administer appropriate anesthetic-related drugs by injection, mask, induction chamber or endotracheal tube.
5. Safely and effectively place endotracheal tubes in patients when appropriate.
6. Utilize clinical signs and appropriate equipment to monitor patient status in all stages of anesthetic procedures (e.g. esophageal stethoscope, doppler, pulse oximeter).
7. Effectively evaluate patient and implement and evaluate pain management protocols.
8. Recognize and respond appropriately to patients in compromised states.
9. Effectively perform appropriate resuscitation procedures as needed (e.g. calculate and administer appropriate anesthetic antagonists and emergency drugs as directed).
10. Complete controlled drug log.
11. Recognize and respond appropriately to equipment malfunctions or inappropriate equipment setup, given the characteristics of the anesthetic instruments and equipment being used.
12. Select, evaluate and adjust equipment, given the requirements of the anesthetic protocol.
13. Maintain and operate anesthetic delivery and monitoring equipment:
 - a. pulse oximeter
 - b. esophageal stethoscope
 - c. electrocardiograph (e.g. recognize abnormal rhythms/audible sounds)
 - d. anesthetic machines, including rebreathing systems, non-rebreathing systems, induction chambers, and masks
 - e. endotracheal tubes
 - f. ambu bag
 - g. scavenging systems
 - h. oxygen sources
 - i. respiratory monitors
 - j. blood pressure monitoring devices
 - k. laryngoscopes
 - l. ventilator
 - m. defibrillator

VETT 2790. Applied Therapeutics II Avian, Laboratory, Exotic and Large Animals

Course Description

Presents recognition, restraint, behavior, and basic husbandry of avians, laboratory animals, exotics and reptiles, and equines and livestock. Includes appropriate sites and routes of medication administration for each species, physical examinations, diseases, nursing and surgical requirements, and specimen collection.

Student Learning Outcomes

1. Present material required to meet the current CVTEA Competencies for Laboratory Animal, Non-Human Primates, Avian and Exotics, and Large Animals.
2. Describe restraint of non-human primates.
3. Explain the complications of keeping wildlife as pets.
4. Per identified species:
 - a. Identify common breeds.
 - b. Describe husbandry needs and concerns.
 - c. Recognize normal and abnormal behavior patterns.

- d. List information needed for a thorough patient history.
- e. Describe therapeutic procedures.
- f. Describe common animal identification systems as appropriate.
- g. Describe anesthesia and recovery procedures.
- h. Describe key nutritional factors for optimum health and in disease conditions.
- i. Identify and describe clinical signs of common and zoonotic diseases.
- j. Safely perform restraint.
- k. Demonstrate how to obtain objective data as appropriate for a physical exam.
- l. Determine the sex and describe reproduction variables.
- m. Perform basic husbandry procedures.
- n. Perform oral dosing.
- o. Perform injections in the appropriate locations.
- p. Collect blood samples.
- q. Identify food types and nutritional requirements.
- r. Discuss and / or administer sedatives or anesthetics as appropriate.
- s. Discuss and / or perform necropsy and collect various samples.
- t. Perform skills required to meet the current CVTEA Competencies for Laboratory Animal, Non-Human Primates, Avian and Exotics, and Large Animals.

VETT 2803. Pharmacology for Veterinary Technicians

Course Description

Presents overview of veterinary pharmacology and therapeutics, drug categories and use of drugs, administration methods, pharmacokinetics, prescription labeling and dispensing procedures, calculations, controlled substances including record logs, inventory control and ethical issues relating to handling drugs.

Student Learning Outcomes

1. Follow all current CVTEA required Pharmacy and Pharmacology competencies.
2. Safely and effectively administer prescribed drugs to patients.
3. Prepare medications.
4. Label and package dispensed drugs correctly.
5. Read and follow veterinarians pharmacy orders.
6. Explain groups of drugs, their mechanisms, and clinically relevant side effects.
7. Describe the safe and effective manner in which vaccines must be administered.
8. Explain common side effects.
9. Perform appropriate calculations to 100% accuracy.
10. Use weights and measures correctly.
11. Describe how to administer drugs by common parenteral and enteral routes; be able to explain appropriate routes and methods and when used.
12. Explain how to monitor and record therapeutic responses.
13. Describe regulations governing maintenance of controlled substances log book.
14. Explain compliance with all federal regulatory guidelines for drug purchase, storage, administration, withdrawal, dispensing, disposal, and inventory control; e.g., biologics and therapeutic agents pesticides, and hazardous wastes.
15. Practice dispensing and explaining prescribed drugs to clients.
16. Given a drug order, properly prepare medications for dispensing, including performing accurate calculations.
17. Explain compliance with regulations governing prescription drugs versus over-the-counter.

VETT 2890. Veterinary Technology Clinical III

Course Description

Applies theory to practice at veterinary clinics performing duties that include handling, therapeutics and care of laboratory and exotic animals, surgical assisting and hematological exams.

Student Learning Outcomes

1. Perform the required 156 clinical hours of clinical activities at assigned facility.
2. Demonstrate professional attire and approach for an interview.
3. Write a cover letter and resume.
4. Write StrengthQuests reflection report.
5. Complete required clinical placement logs, forms, journal, and evaluations.
6. Review clinical progress at an appointment with clinical coordinator.
7. Collaborate with the healthcare team.
8. Communicate appropriately with clients.
9. Integrate an evidenced based approach in the safe delivery and evaluation of patient care.
10. Complete comprehensive program assessments.

VETT 2892. Dentistry for Veterinary Technicians

Course Description

Studies prophylactic technique, charting, identification of normal tooth structure, number of teeth in each domestic species, identification of common dental problems, dental radiography and client dental education.

Student Learning Outcomes

1. Identify tooth anatomy.
2. Chart canine and feline dentition.
3. Enumerate NMBVM dental Rules & Regulations
4. Conduct oral examination.
5. Recognize mandibular and maxillary fractures.
6. Recognize dental emergencies.
7. Identify disease and injury conditions.
8. Define dental diagnostic codes.
9. Identify dental instruments.
10. Maintain dental instruments.
11. Manipulate dental instruments.
12. Maintain dental unit equipment.
13. Employ preventative ergonomics.
14. Describe hazard-related information.
15. Manage dental anesthetic protocol.
16. Use PPE.
17. Perform manual dental prophylaxis.
18. Do dental scaling.
19. Perform machine dental prophylaxis.
20. Do dental polishing.
21. Categorize common large animal dental procedures.
22. Explain client dental education.
23. Explain client home care.

24. Appreciate dental exodontics.
25. Explain dental radiography.
26. Appreciate dental endodontics.
27. Describe orthodontic and restorative procedures.
28. Appreciate root canal therapy.
29. Describe clipping teeth for exotic animals.

VETT. 2996. Veterinary Technology Topics

Course Description

Varies

Student Learning Outcomes

Varies

Welding (WELD)

WELD 1010. Safety and Orientation

Course Description

Emphasis in the proper and safe use of machines and tools found in the welding industry. Students learn the health concerns and precautions used to minimize exposure during welding and cutting. Orientation prepares individuals for employment and the documentation relating to welding.

Student Learning Outcomes

1. Demonstrate safety practices and regulations while working in a welding environment and inspection of equipment and tools used in the welding field prior to use.
2. Understand the hazards found in the welding environment and the protective measures utilized to avoid injury or accidents resulting from misuse or damaged equipment.
3. Students will also be trained in the appropriate paperwork, the ability to follow verbal and written instructions needed to complete classroom and or work assignments.
4. Show the importance of being able to identify hazards and report them to an instructor or supervisor immediately.
5. Also students will learn what is expected by employers prior to employment, as well as what employers in the welding field expect after employment is obtained.

WELD 1015. NCCER Safety Core

Course Description

Required introduction to the National Center for Construction Education and Research for certification. Topics studied include basic math, communications, prints, methods, and ethics. Students demonstrate skills level through laboratory assignments. Orientation prepares individuals for employment and the documentation relating to welding.

Student Learning Outcomes

1. Explain safety culture and its importance in the construction craft.
2. Explain the role of OSHA job site safety.
3. Explain OSHA's General Duty Clause and 1926 CFR subpart.
4. Hazard recognition and risk assessment of job site.
5. Demonstrate the use and care of appropriate personal protective equipment (PPE).
6. Identify other construction hazards on the job site, including hazardous material exposure and environmental.
7. Prepare students for OSHA 10 Safety Certification.
8. Students will learn all phases of safety used in the welding.

9. Students will learn concepts related to applied math in welding.

WELD 1110. Introduction to Welding Fundamentals

Course Description

This course focuses on the fundamental techniques employed in the welding field. It is a laboratory approach to understanding and building skills in welding related areas including shop safety, hand and portable power tool usage, and welding.

Student Learning Outcomes

1. Demonstrate knowledge of basic welding processes.
2. Demonstrate shop safety including the proper use of welding hand and machine tools.
3. Practice and demonstrate SMAW with various electrodes in all positions.

WELD 1113. General Welding for the Hobbyist

Course Description

This course introduces welding safety, welding, thermal cutting, use of hand and power tools, and basic fabrication for the “do it yourself” or hobbyist. This course will include thermal cutting utilizing oxy-acetylene cutting and plasma arc cutting, welding using SMAW Shielded Metal Arc Welding (stick) and GMAW-Gas Metal Arc Welding (mig) processes, and basic joint configuration. Skill practice will be encouraged through the building of at least one comprehensive project. All projects must be approved by and will be under the guidance of the instructor.

Student Learning Outcomes

1. Safely operate hand and machine tools.
2. Perform basic welding on various materials and material thickness.
3. The student should be able to safely make adjustments to the different machines being utilized in the lab.
4. Students wishing to use and/or learn how to use their personally owned equipment will also be allowed to bring them to learn how they operate and make needed adjustments.
5. The student will also be able to perform minor repair and maintenance on the various equipment used in the welding industry.

WELD 1115. Agricultural Welding

Provides an introduction to the Ag welding industry. This course provides an in-depth study of welding hazards and common safety procedures. Ag-related weld joints and weld positions are studied. Students learn the proper names of the parts of a weld and are able to identify good welds and point out defects in bad welds.

Student Learning Outcomes

1. Study of welding hazards, radiation, burns, explosions within enclosed objects or vessels, and general shop safety.
2. Practice and demonstrate SMAW with E6010, E6013, E7018 electrodes in flat, horizontal, vertical.
3. Demonstrate GMAW short arc in all positions.
4. Practice and demonstrate FCAW in horizontal and vertical.

WELD 1116. Agricultural Welding Fabrication

Course Description

As a continuation of WELD 1115, students will use skills and knowledge gained in WELD 1115 to create agriculture-related projects.

Student Learning Outcomes

1. Use skills and knowledge to fabricate a “T” post driver.

2. Use skills and knowledge to fabricate a welding table.
3. Use skills and knowledge to fabricate a fire pit.

WELD 1117. Welding Math

Course Description

Provides instruction in computing math problems that are common in a variety of welding applications. Topics will include welding terminology, common fractions, decimal fractions, metric system, geometric shapes, angular measurements and economical layout.

Student Learning Outcomes

1. Calculate areas and volumes of various shapes including rectangles, trapezoids, parallelograms, triangles, cylinders, and complex containers.
2. Use formulas and equations to solve complex manufacturing and fabrication shop problems.
3. Calculate the material requirements for curved pieces.
4. Calculate economical layouts of various shaped objects.

WELD 1120. Print Reading for Welders

Course Description

Provides students with the knowledge to read and interpret prints and welding symbols and transfer this knowledge to the workplace with layout tools and measuring instruments.

Student Learning Outcomes

1. Identify, read and follow AWS welding symbols.
2. Demonstrate the ability to interpret orthographic and isometric drawings.
3. Demonstrate the ability to read/interpret pipe welding drawing and schematics.
4. Demonstrate proficiency in the mathematics utilized in welding and fabrication.

WELD 1123. Welding Technology CAD/CNC

Course Description

Presents computer-assisted drafting and computer numerical control as applied in welding technology on hardware typically found in the welding shop.

Student Learning Outcomes

1. Enter project information into word processing, database, or specialized machining software on a computer so that the data can be analyzed and quality improvements are made.
2. Operate a computer numerical controlled welding tool.

WELD 1125. Thermal Cutting

Course Description

Emphasis on safety and the fundamentals of thermal cutting processes. Students will cut various materials and thicknesses of metals in all positions.

Student Learning Outcomes

1. Identify safety requirements for thermal cutting.
2. Perform how to light, adjust, and shut down oxy-fuel equipment.
3. Perform plasma cutting techniques.
4. Identify correct amperage, gas pressure and flow rate.

WELD 1130. SMAW (Shielded Metal Arc Welding) I

Course Description

This course will cover introductory theory and practical applications of structural plate welding, welding safety, handheld torch cutting operations and equipment set up. The development of student skills using the Shielded Metal Arc Welding process in all positions will be stressed. The standards of this course are set by the American Welding Society and utilized in both classroom study and laboratory work.

Student Learning Outcomes

1. Perform welds on various joints in all positions.
2. Demonstrate proper shop safety
3. Demonstrate proficiency in identification of electrode classification and proper storage.
4. Identify SMAW power sources and their characteristics.
5. Maintain, use, and safely operate SMAW equipment.

WELD 1132. Intermediate SMAW

This course will cover commonly used joint configurations and practical applications of these joints using structural plate. Advancing the development of student's skills using Shielded Metal Arc Welding in all positions with E-6010, E-7018 and E-7024 electrodes will be stressed.

Student Learning Outcomes

1. Participate in the welding safety program.
2. Define basic terms associated with parts of a weld.
3. Identify basic structural joints.
4. Identify in addition to operate oxyacetylene cutting and track torch equipment.
5. Create and assemble t-joints as well as lap joints using mild steel plate.
6. Weld t-joints and lap joints in a variety of positions.

WELD 1140. GMAW-(Gas Metal Arc Welding) I

Course Description

Introduces Gas Metal Arc Welding (GMAW) short circuit welding safety, machine set up and shutdown procedures. Topics include personal protective equipment (PPE), GMAW uses, advantages and disadvantages, constant voltage (CV) power source, polarity, electrode types, shielding gasses, and weld discontinuities and defects identification and corrective practices. Lab exercises will include various joints in all positions.

Student Learning Outcomes

1. Demonstrate the ability to safely operate the Gas Metal Arc Welding equipment.
2. Demonstrate Gas Metal Arc Welding theory and application.
3. Demonstrate the ability to perform Gas Metal Arc Welding on various joints in all positions.
4. Demonstrate the ability to fabricate assigned projects while applying proper tolerance to finished projects.

WELD 1155. GTAW (Gas Tungsten Arc Welding) I

Course Description

A basic course designed to provide the student with the ability to setup, maintain and operate Gas Tungsten Arc Welding (GTAW) equipment safely. Develop skills to weld structural joints to bend tests standards utilizing various metals. Weld quality will be measured in accordance with American Welding Society standards.

Student Learning Outcomes

1. Demonstrate the ability set up GTAW equipment for use, inspect equipment prior to use, perform minor maintenance, and identify potential hazards.

2. Demonstrate the ability to perform GTAW on various base metals in all positions.
3. Demonstrate the understanding of basic metallurgical differences in various base and filler metals.
4. Demonstrate an understanding of welding currents and power sources.

WELD 1160. Oxyacetylene Welding

Course Description

This course will introduce the student to gas welding process. The student will learn to handle and use the acetylene gas form of welding.

Student Learning Outcomes

1. Demonstrate hands on work competencies and AWS standards through a variety of on-the-job work assignments.
2. Demonstrate and set up oxyfuel equipment, light and adjust torch, change cylinders.
3. Demonstrate cutting a straight line, square shapes, piercing, slot, bevels on carbon steel.
4. Demonstrate welding skills for making a T joint, lap joint and butt joint.
5. Learn plasma arc cutting.

WELD 1171. Layout and Fabrication

Course Description

This class is an introduction to general layout and fabrication techniques as related to structural welding. Emphasis will be on construction of small projects to tolerances using prints. A variety of welding processes will be used in all positions.

Student Learning Outcomes

1. Demonstrate the ability to fabricate projects.
2. Use shop drawing and/or prints to create projects and develop the bill of materials for the project.
3. Demonstrate ability to properly follow WPS (Welding Procedure Specification) during fabrication.

WELD 1172. Fabrication Fundamentals

Course Description

Hands-on course introduces students to the fundamental principles and techniques of automotive fabrication and welding. Emphasizing safety, precision, and craftsmanship, students will learn to measure, cut metal components, and perform a variety of welding processes commonly used in the automotive industry, including MIG (GMAW), TIG (GTAW), and stick (SMAW) welding.

The course covers metal shaping, frame and chassis modifications, custom exhaust fabrication, and bracket and mount construction. Students will also gain experience in using fabrication tools, including plasma cutters, angle grinders, drill presses, tube benders, and metal brakes.

Student Learning Outcomes

1. Demonstrate proper safety procedures when working with welding equipment, fabrication tools, and automotive components in lab environments.
2. Identify and apply appropriate welding techniques (MIG, TIG, and stick) for various automotive metals and fabrication tasks.
3. Measure, cut, shape, and join metal components using hand tools, power tools, and fabrication equipment such as plasma cutters, grinders, and benders.
4. Fabricate and weld structural and non-structural components, including brackets, frames, body panels, exhaust systems, and mounts to industry-standard quality.
5. Evaluate weld quality through visual inspection and basic testing methods, identifying defects and performing necessary corrections.

6. Apply math and measurement skills to ensure precision in fabrication layouts, cuts, and welding alignments.

WELD 1191. Welded Art**Course Description**

Students explore the possibilities of welded art.

Student Learning Outcomes

Demonstrate knowledge of the different forms of welded art.

WELD 1210. Flux Cored Arc Welding**Course Description**

Principles of flux cored arc welding (FCAW) terminology, safety procedures, and equipment set-up. Students will practice welding structural joints in all positions using the FCAW process.

Student Learning Outcomes

1. Demonstrate the set up of FCAW equipment.
2. Demonstrate safe operations of FCAW equipment.
3. Demonstrate minor repairs/maintenance of equipment.
4. Perform FCAW welds to minimum required specifications.

WELD 1220. Pipe Welding I**Course Description**

Stresses the theory and practical application of pipe welding in the 1-G and 2-G positions. This course will develop skills in the fit-up and technique of welding pipe, using electrodes and various Welding process.

Student Learning Outcomes

1. Demonstrate an understanding of 1-G and 2-G pipe welding using a variety of pipe sizes.
2. Demonstrate the ability to produce destructive test samples to AWS and/or API standards.
3. Demonstrate the ability to prepare, fit and tack pipe to specifications, getting pipe ready to weld.
4. Demonstrate knowledge of appropriate pipe fitting terminology and calculations.

WELD 1222. Pipe Welding 5G/6G Downhill**Course Description**

Stresses the theory and practical application of 5-G and 6-G pipe welding. This course will develop individual skills in the technique of downhill pipe welding, using E-6010 electrodes and the Shielded Metal Arc Welding process on a variety of pipe sizes.

Student Learning Outcomes

1. Perform the task of welding pipe joints in the 5-G and 6-G position using the SMAW process.
2. Weld pipe in the 5-G & 6-G position (downhill travel) using E-6010 electrodes on a variety of pipe sizes.
3. Weld then prepare test coupons that will withstand a root and face bend. Inspection will consist of both visual and destructive methods.

WELD 1229. Template Theory and Constructions**Course Description**

Stresses template development for the use of structural steel shapes in power plant construction and maintenance, oil equipment fabrication and industrial piping systems.

Student Learning Outcomes

1. Develop templet for pipe joints and connections.

2. Draw a two piece 90 degree, 3 piece, and 4 piece turn.
3. Draw a two piece 45 degree and 60degree turn.
4. Draw 2", 3", and 4" branch and header.
5. Draw branch and header templet - unequal diameters.
6. Draw eccentric branch and header templet.
7. Draw various lateral connections.
8. Draw a 60 degree true "Y".
9. Draw a blunt head on various sizes of pipe.
10. Draw an orange peel head on various size pipe.
11. Draw concentric and eccentric reducers.
12. Draw vent hoods - V-shaped and T-shaped.
13. Draw rolling offsets and welded combination offsets.

WELD 1260. Advanced GTAW and Fabrication

Course Description

Covers carbon and stainless steel gas tungsten arc welding (GTAW). Teamwork, problem solving and work ethics are stressed.

Student Learning Outcomes

1. Demonstrate the ability to safely operate GTAW Welding equipment.
2. Understand the welding theory and proper application of plate welding using GTAW welding equipment.
3. Demonstrate the ability to weld low carbon steel, using GTAW welding equipment.
4. Demonstrate the ability to properly fit up and prep plate to code standards.

WELD 1280. Pipe Fabrication & Layout I

Course Description

Overviews the fabrication of piping systems used in real life mechanical and facility applications. Students will build and test pipeline from blueprints using a variety of fittings and offsets.

Student Learning Outcomes

1. Read and understand pipe data sheets.
2. Know and understand different pipe valves.
3. Know and understand different pipe fittings.
4. Know and identify different pipe joints.
5. Understand the math formulas for pipe offsets.
6. Read and interpret piping blue prints.
7. Understand and practice the operations for welding pipe.

WELD 1282. Pipe Fabrication and Layout II

Course Description

A continuation of Pipe Fabrication and Layout I. Emphasis on student prepared advanced construction templates and joint configurations. Students will layout, construct and weld in a variety of pipe positions using numerous pipe sizes and materials.

Student Learning Outcomes

1. Construct and weld Branch and Headers in equal and un-equal diameters.
2. Construct and weld Eccentric Branch and Headers.

3. Construct and weld Lateral connections.
4. Construct and weld 60 degree True "Y".
5. Construct and weld a Blunt Head on various sizes of pipe.
6. Construct and weld a Orange Peel Head on various sizes of pipe.
7. Construct and weld Concentric and Eccentric reducers.
8. Construct and weld Vent Hood – "V" Shape and "T" Shape.
9. Construct and weld rolling and combination offsets on pipe.

WELD 1310. Metallurgy

Course Description

This course includes a study of ferrous and nonferrous metals from ore to the finished products. Emphasis is placed on metal alloys, heat-treating, hard surfacing, welding techniques, forging, foundry processes, and mechanical properties of metal including hardness, machinability, and ductility. Technical terms used in the various phases of metallurgy, from early history to present.

Student Learning Outcomes

1. Describe metals and alloys commonly used in industry.
2. Describe mechanical properties of metals including stresses and failures.
3. Describe the metalworking processes of casting, forming, and machining.
4. Describe the two basic processes, and state the four major purposes of heat treatment.

WELD 1370. Qualifications for GMAW

Course Description

Provides stimulated qualification procedures for gas metal arc welding (GMAW), in all positions.

Student Learning Outcomes

1. Demonstrate understanding of qualification procedures using the GMAW & FCAW processes.
2. Weld to AWS specifications, open root, V-groove on mild steel plate using the GMAW process in various positions.
3. Weld to AWS specifications, with backing, V-groove on mild steel plate using the FCAW process in various positions.

WELD 1580. Advanced Project and Fabrication Lab

Course Description

This course covers the use of shielded metal arc welding, gas metal arc welding, gas tungsten arc welding, oxyacetylene and plasma cutting. Students will utilize industrial fabrication and repair problems for assigned projects, possibly including real-world projects, on advanced fabrication equipment. Students will create blueprints for assigned projects. Course also includes training in welding safety and customer relations.

Student Learning Outcomes

1. Students will demonstrate ability to perform large scale layout using advanced baseline and centerline techniques.
2. Students will perform and demonstrate ability to perform basic jigging operations as needed.
3. Students will demonstrate ability in squaring components through 3-4-5 rule, cross measurements etc.
4. Students will demonstrate ability in reading and building components from blueprints required of the entry level welders.
5. Students will demonstrate ability to perform roll out calculations and procedures to achieve cylinder and/or required vessel sizes as needed.
6. Students will demonstrate ability and understanding of welding and repair procedures on hard to weld metals.

7. Students will demonstrate ability and understanding of corrective procedures necessary with material warpage on a wide range of fabricated components.

WELD 1993. Workshop in Welding

Course Description

Varies

Student Learning Outcomes

Varies

WELD 1996. Welding Topics

Course Description

Varies

Student Learning Outcomes

Varies

WELD 2130. SMAW (Shielded Metal Arc Welding) II

Course Description

Reviews and builds upon SMAW-1 skills. Students will learn joint design and AWS standards for welder qualification testing.

Student Learning Outcomes

1. Meet AWS acceptance criteria for weld quality and destructive tests (bend test).

WELD 2140. GMAW (Gas Metal Arc Welding) II

Course Description

Advanced course in the gas metal arc welding process (GMAW). Instruction includes trouble shooting, and the correct selection and application of consumables. Students practice GMAW of carbon and stainless steel on structural joints in all positions. Preparation of test samples will also be emphasized.

Student Learning Outcomes

1. Perform more demanding and difficult welds utilizing GMAW advanced processes.
2. Prepare test samples for examination and destructive testing according to AWS SENSE guidelines.

WELD 2150. Metal Fabrication II

Course Description

This course is designed to give students a knowledge of the fabrication process. This course will cover areas of customer interaction, print reading, sketching, job estimation, manufacturing of parts, assembly, welding, and finishing. Students will gain knowledge in the operation and safety practices of equipment used in fabrication, project tolerance, meeting deadlines as well as critical thinking skills.

Student Learning Outcomes

1. Understand safety as it relates to shop equipment used in fabrication.
2. Demonstrate math formulas used in fabrication.
3. Demonstrate Communication skills.
4. Properly and accurately filling out estimates and invoices.
5. Demonstrate the operation of a fabrication shop.

WELD 2155. GTAW (Gas Tungsten Arc Welding) II

Course Description

A continuation of GTAW I. This course is designed to provide the student with the ability to setup, maintain and operate Gas Tungsten Arc Welding (GTAW) equipment safely. Develop skills to weld structural joints to bend tests standards utilizing various metals. Weld quality will be measured in accordance with American Welding Society standards.

Student Learning Outcomes

1. Demonstrate the ability to perform increasingly complex welds.
2. Demonstrate the ability set up GTAW equipment for use, inspect equipment prior to use, perform minor maintenance, and identify potential hazards.
3. Demonstrate the ability to perform GTAW on various base metals in all positions.
4. Demonstrate the understanding of basic metallurgical differences in various base and filler metals.
5. Demonstrate an understanding of welding currents and power sources.

WELD 2210

GTAW Pipe Welding

Course Description

Students will learn to weld on carbon steel and stainless-steel pipe with gas tungsten arc welding process only, in various positions with emphasis on ASME standards.

Student Learning Outcomes

1. Learn to weld on carbon steel pipe in the 2G position using GTAW.
2. Learn to weld on carbon steel pipe in the 5G position using GTAW.
3. Learn to weld on carbon steel pipe in the 6G position using GTAW.
4. Learn to weld on stainless steel pipe in the 6G position using GTAW.

WELD 2220. Pipe Welding II

Course Description

Stresses the theory and practical application of 5-G and 6-G pipe welding. This course will develop skills in the technique of pipe welding, using various Welding processes.

Student Learning Outcomes

1. Demonstrate an understanding of 5-G and 6-G pipe welding using a variety of pipe sizes.
2. Demonstrate the ability to produce destructive test samples to AWS and/or API standards.
3. Demonstrate the ability to prepare, fit and tack pipe to specifications, getting pipe ready to weld.
4. Demonstrate knowledge of appropriate pipe fitting terminology and calculations.

WELD 2225. Pipe Welding Code

Course Description

Students will learn to weld carbon steel pipe according to the API and ASME code with emphasis on welder qualification in the 6G position. Students will practice layout, fit up and welding of API branch test.

Student Learning Outcomes

1. Demonstrate a weld test on 4-inch pipe in 6G position.
2. Demonstrate layout, fit up and welding of API branch test.
3. Learn knowledge and skills to pass a welder qualification test from ASME B31.3 on 2-inch pipe using SMAW process.
4. Learn knowledge and skills to pass a welder qualification test from ASME B31.3 on 4-inch pipe using GTAW process.

WELD 2290. Welder Qualifications

Course Description

Laboratory and classroom instruction on AWS and ASME Welder Performance Qualification Tests. All position plate and pipe techniques and tests for SMAW, GMAW, GTAW, FCAW, and SAW. Nondestructive and destructive examination methods, and basics of welding codes.

Student Learning Outcomes

1. Pass the AWS and ASME Welder Performance Qualification Tests in all processes and all positions.
2. Recognize the role of welding inspection and testing in industry.
3. Identify essential information for welding procedure and performance qualification.
4. Identify essential welding and inspection information from Welding Procedure Specifications (WPS's).
5. Identify essential welding and inspection information from AWS D1.1, Structural Welding. Code – Steel.
6. Identify essential welding and inspection information from ASME, Boiler and Pressure Vessel Code - Section IX.
7. Describe the basic principles of non-destructive testing methods.

WELD 2311. Aerospace Welding Theory and Fabrication

Course Description

This course is designed to provide the student with the ability to set up, maintain, and operate Gas Tungsten Arc Welding (GTAW) equipment safely and develop basic entry-level skills of plate welding. Weld quality will be measured in accordance with American Welding Society standards. Students will be eligible to earn an AWS D17.1 Educational Certification.

1. Demonstrate the ability to safely operate GTAW Welding equipment.
2. Explain welding theory and proper application of plate welding using GTAW welding equipment.
3. Demonstrate the ability to weld Aluminum, using GTAW welding equipment.
4. Demonstrate the ability to properly fit up and prep plate to code standards.

Women's Studies (GNDR)

GNDR 2040. Science and Gender

Course Description

This course introduces students to the complex interplay between science and gender, with special attention to intersections with sexuality, race, and ethnicity. We analyze the concepts of “sex” and “gender” by critically investigating the nature/nurture debates about sex differences. The course further prompts students to think more broadly about gender in science in discussions over bias, values, and scientific objectivity. Throughout the course, we also survey different critical approaches to biomedicine involving women’s health and LGBTQ medicine, e.g., breast cancer, HIV/AIDS, and reproductive health.

Student Learning Outcomes

By the end of class, students will be able to:

1. Construct and clearly communicate arguments about sex/gender/sexuality and science; and defend their judgments with charity and without logical fallacies;
2. Write and research essays about contemporary scientific debates over gender with analytic structure that engage with popular and scholarly conversations;
3. Recognize how human cultures and value judgments shape the process of science and the practice of medicine, including dichotomies (e.g., nature/culture, sex/gender), biases (e.g., heteronormativity, Eurocentrism), and standpoints (e.g., Black feminism, disability rights);
4. Evaluate critically scientific studies in terms of their assumptions about sex, gender, sexuality, etc., and their methodology; and analyze how to improve their theories, inferences, and objectivity.

GNDR 2110. Introduction to Women, Gender, and Sexuality Studies

Course Description

This course introduces students to key concepts, debates, and analytical tools informing Women's, Gender, and Sexuality Studies. As an interdisciplinary field of study, Women's, Gender, and Sexuality Studies employs academic perspectives from a range of disciplines and theoretical approaches. It also incorporates lived experience and social location into its object of analysis. Though content will vary according to the expertise and focus of the instructor, this course will develop tools through readings and assignments that critically analyze how gender and sexuality are shaped by different networks of power and social relations and demonstrate how the intersections of race, class, disability, national status, and other categories identity and difference are central to their understanding and deployment. In addition to feminist thought, areas of focus might include gender and sexuality in relation to social, cultural, political, creative, economic, or scientific discourses. This class is recommended for those with a general interest in the topic area as well as for those seeking a foundational course for further study.

Student Learning Outcomes

Taking the course, students will:

1. Understand foundational concepts, theories, and approaches to gender and sexuality in conjunction with contemporary social justice movements such as feminism.
2. Describe the range of social and political forces that shape and are shaped by gender, sexuality, race/ethnicity, and other intersecting categories of identity.
3. Demonstrate the ability to conduct intersectional analysis.
4. Develop and improve skills in reading, critical thinking, academic writing, and public speaking.

GNDR 2120. Representing Women across Cultures

Can be taken in place of Introduction to Women, Gender, and Sexuality Studies at NMSU

Course Description

This course explores fundamental concepts in the interdisciplinary field of Women's Studies and feminist theory, especially as they relate to aspects of identity beyond sex and gender. Students will critically examine concepts of power, privilege, and inequality in conjunction with intersections of gender with race, ethnicity, class, and sexuality. We will read and view texts that allow us to gain familiarity with the roles women occupy in diverse societies, and the social institutions that shape our perceptions of gender, race, and class.

Student Learning Outcomes

1. To think critically about contemporary discourses on gender, race, sexuality, and class.
2. To understand how forms of identity intersect with one another.
3. To explore the ways power and privilege operate in contemporary society.
4. To understand some of the ways social inequalities develop, function, and change.
5. To further students' interest in developing their own ideas and research in issues of women and gender, sexuality, race, class, and nation.

Woodworking (WOOD)

WOOD 1110. Introduction to the Fine Art of Woodworking**Course Description**

Introduces students to using wood as a medium for realizing design ideas. By designing and building a small table, students learn to choose a wood that complements the design, milling techniques, mortise and tenon joinery, edge gluing, surface preparation; and application of water-based finish. Students learn the safe use of the radial arm saw, jointer, planer, table saw, handsaw, drill press, horizontal boring machine, and router.

Student Learning Outcomes

1. Demonstrate an understanding of the characteristics of wood and sound design principles in building furniture
2. Design and build a table
3. Demonstrate safe and proper use of stationary power tools.
4. Perform milling operations, mortise and tenon joinery, and finishing procedures appropriate for a water-based finish.

WOOD 1120. Introduction to Hand Tools**Course Description**

Covers sharpening, maintenance, and use of basic hand tools including chisels, planes, spokeshaves, marking knives, handsaws, and scrapers. Various sharpening systems are discussed. Students build a wooden hand plane, sharpen personal tools, and practice hand tool use.

Student Learning Outcomes

1. Demonstrate sharpening techniques for handtools.
2. Demonstrate safe and correct use of handtools.
3. Design, construct, and use a wooden handplane.

WOOD 1150. Introduction to Joinery**Course Description**

Introduces traditional joinery techniques including edge, dowel, mortise and tenon variations, bridle, breadboards, and frame and panel work. Students layout, cut, and fit each of these joints.

Student Learning Outcomes

1. Identify the properties and correct use of various fine woodworking joints.
2. Layout, cut, and fit frame joinery.
3. Layout, cut, and fit variations on mortise and tenon joinery.
4. Demonstrate the purpose and construction of a frame and panel.

WOOD 1160. Dovetails**Course Description**

Introduces dovetail joinery for drawers and casework. Students learn to layout and cut dovetails with handsaw and chisels, the table saw, and a router jig. After practicing all three methods, students design and build a project utilizing dovetail joinery.

Student Learning Outcomes

1. Evaluate the strengths and weaknesses of different methods of cutting dovetails.
2. Demonstrate accurate layout, hand-cutting, and fitting of dovetails.
3. Cut a dovetailed corner on the table saw.
4. Cut a dovetailed corner with the router jig.

WOOD 1170. The Artful Box**Course Description**

Creating boxes with intriguing forms, tactility, and varied functionality. Students will design and build several wooden boxes that consider materials, form, transitions, and the potential content.

Student Learning Outcomes

1. Choose and sensitively use materials for box making.
2. Select joinery that is consistent with aesthetic choices.
3. Understand the internal and external ways that boxes divide space.
4. Design boxes for personal expression.

WOOD 1175. Artistic Veneering**Course Description**

Students will learn artistic applications for commercial veneers, including the use different types (If veneers while designing and building a project of their choice. Topics include diamond matching, inlays, difficult veneers, and use of the veneer press.

Student Learning Outcomes

1. Explain proper applications for commercial veneers.
2. Outline different types of veneer matching.
3. Develop a veneering project.
4. Apply correct veneering techniques while building chosen project.

WOOD 1180. Jigs and Fixtures**Course Description**

This course is an introduction to the design, fabrication, and use of woodworking jigs that are used to facilitate safe, accurate, and repeatable machining operations on stationary power tools. Students will study, discuss, and build jigs that are used with hand tools, workbenches, and the woods hop in general.

Student Learning Outcomes

1. Design, fabricate, and employ woodworking jigs.
2. Compare and contrast the applicability of common woodworking jigs.
3. Use problem-solving techniques for the design of jigs and fixtures.
4. Demonstrate appropriate use of jigs for safe and accurate woodworking operations.

WOOD 1185. CNC for Fine Woodworking**Course Description**

Utilizing computer-aided design (CAD), computer-aided machining (CAM), and computer numerical control (CNC) routers as they apply to fine woodworking. Students creating furniture, sculpture, or design related products learn the possibilities and limitations of this technology and how to incorporate this work into their practice. Students work on two customizable projects to produce on a CNC router. Proper safety, tooling selection, and machine practices are emphasized.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of the CNC production process as it applies to woodworking.

2. Design and produce a jig, fixture, or template for use in making a design.
3. Understand the concepts of proper tool selection and use for CNC.
4. Design and produce a finished piece with at least one CNC part.

WOOD 1190. Working Machinery Maintenance

Course Description

Students will learn about the setup, maintenance, and minor repair of stationary and portable power tools in the woodworking shop. In addition there will be discussion about shop layout and setup considerations.

Student Learning Outcomes

1. Define the setup criteria of stationary power tools.
2. Outline maintenance schedules for stationary and portable power tools.
3. Determine proper techniques for minor repairs of portable power tools.
4. Organize and plan shop layout of stationary power tools.

WOOD 1210. Characteristics of Wood

Course Description

Focuses on wood as a material. This course covers the visual aspects of different wood species as well as their working characteristics. Topics include the structure, graphics, moisture content, and choice of appropriate wood for a project.

Student Learning Outcomes

1. Identify common wood species and cuts.
2. Estimate wood movement.
3. Explain standard lumber terminology.
4. Choose the best woods for a project based on working properties.

WOOD 1250. Introduction to Finishing

Course Description

Introduces wood finishes including penetrating oil finishes and film finishes such as shellac, lacquer, varnish, and water-based finish. Surface preparation, stains, dyes, and hand and spray application methods are covered. Special attention will be given to the advantages of low-toxicity water-based finishes, and the health and environmental issues concerning solvent-based finishes.

Student Learning Outcomes

1. Demonstrate the steps in preparing a wood surface for a chosen finish.
2. Apply finish with a brush or rag.
3. Apply finish with and properly clean the spray gun.
4. Choose an appropriate finish and plan for a particular wood project.

WOOD 1310. Furniture Design

Course Description

Encourages the uninhibited accumulation of ideas in a sketchbook and the development of each student's individual design aesthetic. Basic requirements for furniture, orthographic drawing, principles of design, recent furniture history, and model making are covered.

Student Learning Outcomes

1. Demonstrate a personal aesthetic through sketches, exercises, and research.
2. Explain the relation of design to functional requirements for furniture.
3. Use design methods to approach common furniture making challenges.
4. Draw an orthographic projection of a piece of furniture.
5. Make a scale model of a design.

WOOD 1350L. Band sawn Veneers**Course Description**

An introduction to the use of band sawn veneers in furniture construction. Students execute a project of their own design that incorporates band sawn veneers.

Student Learning Outcomes

1. Demonstrate resawing on the bandsaw.
2. Demonstrate edge-joining veneers and applying edge bands.
3. Demonstrate use of vacuum veneer press.
4. Explain how to design furniture using band sawn veneers.

WOOD 1450. Bent Lamination**Course Description**

An introduction to the use of bent lamination in furniture construction. Students will build a project of their own design using the techniques.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Outline the use of bent wood in furniture design.
2. Demonstrate and explain the technique of bent lamination.
3. Explain the technique of steam bending.
4. Create a project incorporating the use of bent lamination or steam bending.

WOOD 1550. Build a Workbench**Course Description**

Covers fabrication of an instructor-designed workbench for each student that incorporates a laminated maple top, maple dog holes, bench dogs, end rails, and tool tray on a poplar trestle-style base. This versatile bench is designed for one or two metal vises with shop-made wooden vise pads. NOTE: Significant additional fee will be charged to cover materials and hardware. Vises may be ordered individually at the beginning of class.

Student Learning Outcomes

1. Design a workbench, including cut lists and procedure lists.
2. Explain the key components of workbench design.
3. Fabricate a workbench, including accessories.
4. Work efficiently as a member of a team.

WOOD 1610. Introduction to Wood Turning**Course Description**

Teaches the elementary concepts and methodologies of turning wood on the lathe using a hands-on approach. Students learn the art of woodturning through design and production of turned projects.

Student Learning Outcomes

1. Discuss wood choices appropriate for various turning projects.
2. Demonstrate tool use, safety, and sharpening for gouges, skewers, parting tools, and scrapers.
3. Demonstrate spindle and faceplate woodturning techniques.
4. Complete basic turning projects that primarily use the lathe.

WOOD 1620. Advanced Wood Turning**Course Description**

Builds on basic skills learned in WOOD 1610. Students explore dimensioned turnings from patterns, production of accurate multiples, and creative spindle and bowl techniques in the pursuit of a personal design aesthetic.

Student Learning Outcomes

1. Understand and use layout tools and techniques.
2. Understand and use different chucking techniques.
3. Design, layout, and produce multiple accurate turnings.
4. Create and translate a design concept to a finished piece.

WOOD 1625. Woodturning Studio

Course Description

Builds on previously learned skills to design and turn individually conceived projects. Students explore form and surface treatment as they develop a personal aesthetic.

Student Learning Outcomes

1. Experiment and refine object forms.
2. Experiment and refine use of surface design and finishes.
3. Understand and use a wide range of tools and techniques for woodturning.
4. Conceive, design, create and evaluate finished pieces.

WOOD 1660. Router Joinery

Course Description

An introduction to using the router to make mortise and tenon joints, dovetails, sliding dovetails, bent lamination joinery, and many other joints. Students will learn how to build the jigs and templates, which make the router an indispensable tool.

Student Learning Outcomes

1. Define applications for router joinery.
2. Outline how to build jigs and templates for repeatable results.
3. Demonstrate how to cut joints with the router.
4. Identify safety concerns of router use.

WOOD 1710. Introduction to Woodcarving

Course Description

Covers the selection of appropriate types of wood, project design, correct use and sharpening of carving tools, and basic carving methods. Relief, chip, and sculptural carving are introduced through exercises.

Student Learning Outcomes

1. Compare and contrast different carving techniques.
2. Demonstrate proficient relief, chip, and sculptural techniques.
3. Demonstrate an understanding of tool choice and maintenance.
4. Layout and carve a design in wood.

WOOD 1720. Advanced Woodcarving

Course Description

Builds on skills learned previously to create expressive wood carvings. Students work with considerable independence to design, fabricate, and carve elements for furniture or free-standing pieces.

Student Learning Outcomes

1. Identify wood species amenable to relief carving.
2. Sharpen wood carving chisels.
3. Convey expressive technique in relief carving.
4. Layout and cut a figurative relief carving.

WOOD 1810. Basic Woodworking Projects

Course Description

Introduces planning a woodworking project with consideration to design, type of wood, joinery, process, tool needs, and finish. Students design and build a project of their choice.

Student Learning Outcomes

1. Design a woodworking project, including cut lists and procedure lists.
2. Choose and execute appropriate joinery for the chosen project.
3. Demonstrate safe and effective use of machinery and hand tools.
4. Make significant progress on a project

WOOD 1820. Summer Projects

Course Description

Introduces planning a woodworking project with consideration to design, type of wood, joinery, process, tool needs, and finish. Students design and build (or continue) a project of their choice, utilizing their own lumber.

Student Learning Outcomes

1. Design a woodworking project, including cut lists and procedure lists.
2. Choose and execute appropriate joinery for the chosen project.
3. Demonstrate safe and effective use of machinery and hand tools.
4. Make significant progress on a project

WOOD 2110. Doors, Drawers, and Hardware for Furniture

Course Description

Surveys various cabinet designs and carcass construction methods, and introduces the designing, building, and installing of doors, drawers, and hardware. Students design and build a cabinet that incorporates a door, drawer, and hardware.

Student Learning Outcomes

1. Design and build using carcass construction.
2. Identify common door, drawer, and hardware used in fine furniture.
3. Design, build, and hang a door or lid.
4. Design, build, and install a drawer.
5. Utilize hardware appropriate to a fine wooden cabinet.

WOOD 2120. Material Study: Cast Metal and Wood

Course Description

Metalworking and casting from a designer's perspective, utilizing industrial processes. Students creating furniture, sculpture, or design-related products learn what is possible using this technique, the characteristics inherent in metal parts, and how to incorporate this work into their practice. Students design and build a project that integrates wood with a cast metal part that. They have designed and prototyped.

Student Learning Outcomes

1. Demonstrate an understanding of the properties and potential of a cast metal part in combination with wood.
2. Design and build a prototype of a metal component that can be produced with industrial processes.
3. Appropriately work and finish a cast metal component.
4. Build a piece that integrates wood with at least one cast metal part.

WOOD 2130. Classical Guitar Making

Course Description

Covers all aspects of building a classical guitar. Students begin with the tone woods and the work-board form and proceed to bend the sides, construct the rosette, brace the top, assemble the body, shape the neck, band the edge, fret the fingerboard, add the bridge and tuners, make final adjustments and finish.

Student Learning Outcomes

1. Identify appropriate woods used in classical guitar making.
2. Design and construct jigs and forms to build guitars.
3. Build a classical guitar.
4. Tune and apply finish to a classical guitar.

WOOD 2140. Advanced Furniture Making

Course Description

Covers construction of a capstone furniture project, similar to a journeyman's piece, based on design and technical skills learned over the course of the woodworking program. Students consult with the instructor to conceive, design, build, and present a major furniture work.

Student Learning Outcomes

1. Produce working drawings, cut lists, and select appropriate materials for a major project.
2. Design and build a capstone furniture piece.
3. Select and apply joinery and a finish appropriate to fine furniture.
4. Document and present a finished work of furniture.

WOOD 2150. Chairmaking

Course Description

Students will learn about the unique structural and aesthetic challenges presented in chair making. Topics include design criteria for chairs, compound angle joinery, floating-tenons, shaping techniques and a discussion of upholstery possibilities. Students will construct a chair of their own design, modifying size scale, and shaping details to fit their personal taste.

Student Learning Outcomes

1. Describe and discuss design criterion of chairmaking, i.e. aesthetic, structural, and comfort concerns.
2. Draw a modified design of the assigned project.
3. Describe and discuss correct application and structural concerns of compound-angle and floating tenon joinery.
5. Apply concepts in the construction of the chair, presented in class.
6. Discuss upholstery possibilities in chairmaking.

WOOD 2185. CNC Fine Woodworking Projects

Course Description

Continuing study of computer-aided design (CAD), computer-aided machining (CAM), and computer numerical control (CNC) routers as they apply to fine woodworking. Students will design and build a project that includes CNC-produced components in consultation with the instructor.

Student Learning Outcomes

1. CNC processes.
2. CNC production using CAD software.
3. Production of wood components on the CNC.
4. Tool selection, toolpaths, and speed control.

WOOD 2810. Advanced Woodworking Projects

Course Description

An advanced class for students with a good foundation in project planning, machine and hand-tool use, and traditional joinery skills. Students will design and build a project of their choice.

Student Learning Outcomes

1. Develop plans for a woodworking project.
2. Analyze necessary joinery for a woodworking project.
3. Estimate materials necessary for the chosen project.
4. Make substantial progress in completing the chosen project.

WOOD 2980. Furniture Studio**Course Description**

Varies

Student Learning Outcomes

Varies

Zuni (ZUNI)

Zuni 1110. Introduction to Zuni**Course Description**

This course is designed help individuals develop basic conversational skills in Shiwi listening and speaking.

Student Learning Outcomes

1. Students will communicate in Shiwi (Zuni) language at the ACTFL novice-high level, engaging in basic communication tasks through listening, speaking, class discussion and group activities.
2. Students will interact effectively with fluent Shiwi speakers.
3. Students will develop an appreciation of A:shiwi A:wan Haydoshna:we (Zuni Ancestral Knowledge): values, traditions, ancestral sites, and works of art of the A:Shiwi people.
