New Mexico (Common) Course Numbering System (NMCCNS)

Introduction

The Post-Secondary Education Articulation Act requires the New Mexico Higher Education Department to consult with faculty to establish a common course numbering system for lower division academic courses offered at public higher education institutions in the state. When the NMCCNS was being established, the steering committee decided to include both common and unique courses. The decision to include unique courses decision was made to prevent the assignment of the same 4-letter prefix and 4-digit number to courses that are offered at only a single institution.

The goal of the New Mexico (Common) Course Numbering System is to improve the articulation and transfer of courses between New Mexico's Higher Education Institutions. To this end, when students transfer between two New Mexico public or participating tribal institutions, a course taken at the sending institution transfers as the course carrying the same NMCCNS designation at the receiving institution (exceptions listed below).

For an institution to offer a common course, the institution must adopt the approved 4 letter/ 4 number designator, course description, and **all** of the listed Student Learning Outcomes. *There is currently an exception to this rule for Mathematics that will be phased out in the future.*

The New Mexico Lower Division Course Catalog

The New Mexico Lower Division Course Catalog is the official list of course descriptions and Student Learning Outcomes for all lower division courses that are approved to be part of the New Mexico Course Numbering System. The course catalog lists courses by their approved 4-letter discipline prefix and 4-digit number. For information regarding the New Mexico Course Numbering System, please visit the New Mexico Higher Education Department's website https://hed.state.nm.us/resources-for-schools/public_schools/nm-course-numbering-system or contact the agency's public schools liaison division at articulation.transf@state.nm.us.

How the Catalog is Structured

All courses listed in the catalog correspond to courses that are part of the New Mexico (Common) Course Numbering System. Each entry begins with the approved 4-letter discipline prefix and 4-digit number followed by the approved course title. Beneath the title is the approved course description. Institutions must use this description; however, institutions may add to them. Under the course description is a list of the approved Student Learning Outcomes. In order to offer a common course, **all** of the listed Student Learning Outcomes must be adopted; institutions may add Student Learning Outcomes to the list (up to 20% of the total).

Credit hours, prerequisites and co-requisites are not listed. Each institution will decide the appropriate credit hours, prerequisites, and co-requisites for the courses it offers.

Course Transfer

Almost all common courses that are part of the New Mexico Course Numbering System will transfer from the sending institution as the course carrying the same NMCCNS designation at the receiving institution. Exceptions are listed below.

Course	Number
Externship	1989/2989
Practicum	1990/2990
Directed Research	1991/2991
Directed Study	1992/2992
Workshop	1993/2993
Portfolio	1994/2994
Cooperative Education	1995/2995

Topics	1996/2996
Independent Study	1997/2997
Internship or field experience (Institution may choose to use internship or field experience in the title)	1998/2998
Capstone	1999/2999

Courses with the above titles and numbers may be offered by any discipline that is part of the numbering system (Example BIOL 1996. Topics in Biology). These courses are subject to the transfer policies of the receiving institution. If a student is planning to transfer, please encourage him/her to speak with an advisor prior to taking one of these courses.

Post – Baccalaureate Education courses

Post – Baccalaureate Education courses will use the following prefixes and number ranges. These courses are not guaranteed to transfer; they will be subject to the receiving institution’s transfer policies.

EDUC 2850-2899

SPED 2850-2899

ECED 2850-2899

Addition, Deletion, and Reclassification of Courses

Institutions’ may request the addition, deletion, or reclassification of courses that are part of the New Mexico Course Numbering System by completing the “Change Form” on the NMHED Apply site: <https://hed.state.nm.us/about/divisions/public/academic-affairs-service-application>. Additions, deletions, and reclassifications are handled by NMHED staff on a monthly basis. Change forms received by the 15th of each month will be processed by the 30th of the same month. Change forms received after the 15th will be processed the following month.

Changing Course Descriptions and Student Learning Outcomes

Institutions’ may request changes to the course descriptions and Student Learning Outcomes that are in the course catalog by completing the “Change Form” on the NMHED Apply site: <https://hed.state.nm.us/about/divisions/public/academic-affairs-service-application>. Changes to unique courses will be processed by NMHED staff on a monthly basis. Changes to common courses will be referred to the New Mexico Curriculum and Articulation Committee (NMCAC), which meets (at least) quarterly. In most cases, the NMCAC will be asked to send proposed changes to the appropriate faculty at their institution. In some cases, the NMCAC will convene a subcommittee of discipline specific faculty to review the proposal.

Accounting (ACCT)

ACCT 1110. Business Application in Accounting

Course Description

Provides an essential foundation of the complete accounting cycle for a small business enterprise and a practical understanding of business financial statements. Includes an overview of the preliminary analysis of financial statements including the balance sheet, the income statement, and the statement of cash flows.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to.

1. Identify and define financial and accounting terminology.
2. Define and characterize account types such as: asset, liability, owners' equity, revenue, and expense accounts.
3. Define debits and credits and understand their role in double-entry accounting using T-accounts as a tool.
4. Record transactions in the basic and expanded accounting equation.
5. Set up and determine appropriate accounts for companies chart of accounts.
6. Demonstrate transactional analysis and use of key accounts according to the rules of debit and on credit.
7. Journalize transactions: provide analysis and record business transactions into a general journal, and special journals.
8. Demonstrate posting process.
9. Complete the adjusted trial balance worksheet and prepare the income statement and balance sheet sections of the worksheet.
10. Explain adjusting and closing entries, journalize adjusting entries.
11. Define, identify, and demonstrate the impact of adjusting entries on financial statements.
12. Complete the accounting cycle including trial balance, worksheet, adjustments, and closing entries for a small business.
13. Demonstrate use of journalizing and posting using special journals and subsidiary ledgers.
14. Identify the form and function of the schedule of accounts receivable and accounts payable.
15. Record and post cash receipts and payments transactions.
16. Reconcile the bank statement and complete subsequent journal entries.
17. Explain the articulation between financial statements using financial statement analysis.
18. Identify common performance measures from the financial statements.
19. Compare financial statement information of a small business to industry standards.

ACCT 1115. Accounting Principles I

Course Description

This is an introductory course in the theory and practice of accounting that covers the purpose of accounting, the accounting process, and the various types of ownership structure. Also covered are types of business, career opportunities in accounting, analyzing financial transactions, adjusting entries, accounting worksheets, financial statements, and the closing process. Computerized exercise problems are used to assist student understanding and proficiency. This course is only offered for fall enrollment.

Student Learning Outcomes

Not Available

ACCT 1120. Accounting Principles II

Course Description

This course is a continuation of theory and practice of accounting study began in ACCT 1115. Specialized accounting procedures for a service business and its environment, entrepreneurship, and small businesses are emphasized. Topics

covered include the modified cash basis and combination journal, accounting for cash, payroll accounting, employee earnings and deductions, payroll accounting, employer taxes, and reports.

Student Learning Outcomes

Not Available

ACCT 1125. Supplemental Instruction to Financial Accounting

Course Description

Collaborative workshop for students to provide additional problem solving necessary for students to master Financial Accounting.

Student Learning Outcomes

Not Available

ACCT 1135. Accounting Applications

Course Description

Applies the complete accounting process and practical problems to expand skills in the performance of accounting functions.

Student Learning Outcomes

Students should be able to:

1. Complete a manual accounting system using journals (general and special), ledgers (general and subsidiary), and worksheets as appropriate.
2. Interpret and record business transactions (e.g. corporate, partnership, sole proprietorship), analyze accounts and prepare appropriate entries for accrual basis accounting.
3. Prepare bank reconciliations and resulting entries using a variety of source documents.
4. Prepare adjusting and closing entries and completed year-end financial statements.
5. Prepare Statement of Cash Flows using the indirect method.
6. Illustrate the differences between cash and accrual basis accounting and prepare financial statements when converting from cash to accrual basis of accounting.

ACCT 1150. QuickBooks

Course Description

An introductory course to QuickBooks Pro accounting software, including setting up a new company and chart of accounts; recording transactions for service and merchandising businesses with customers, vendors and employees; bank reconciliations; payroll; end-of-period procedures; financial reporting; managing lists; and running reports and forms and customizing them.

Student Learning Outcomes

Students should be able to:

1. Understand differences and similarities between a manual accounting system and QuickBooks Online.
2. Identify and execute the four levels of operation within QuickBooks: New Company Setup, Lists, Activities, and Reports.
3. Record sales/collections, purchase/payments, inventory, adjusting entries.
4. Set up payroll, record payroll transactions, print paychecks, and view various payroll related reports.
5. Produce a variety of reports and financial statements.
6. Analyze reports to identify and correct errors.

ACCT 1180. Quantitative Methods in Business

Course Description

This course helps the student develop problem solving skills using mathematical equations to solve business problems and to enhance business performance and operations. Topics covered in this course include: the time value of money, interest calculations, trade and cash discounts, and concepts related to minimizing operational costs while increasing productivity.

Student Learning Outcomes

Students should be able to:

1. Understand bank services to include electronic banking, checking accounts, and check registers.
2. Understand payroll, Wages and Salaries, Social Security, Medicare, Other Taxes, and Income Tax Withholding.
3. Understand the mathematics of Buying and Selling.
4. Explain the concept of Simple Interest.
5. Demonstrate knowledge computing Compound Interest, Interest-Bearing Bank Accounts, Inflation and Present Value and Future Value.
6. Understand Annuities, Stocks, Bonds, Business and Consumer Loans, and early Payoff of Loans.
7. Explain Taxes, Insurance, and Depreciation.
8. Analyze Financial Statements and Ratios.

ACCT 1210. Income Taxation

Course Description

Federal income taxation of individuals, sole proprietorships, partnerships, corporations, trusts, and estates with particular reference to CLU, life insurance and annuities.

Student Learning Outcomes

Students should be able to:

1. Demonstrate their familiarity with the Federal Individual Income Tax System.
2. Demonstrate their familiarity with the Federal Income Tax System for sole proprietorships, partnerships, corporations, trusts, and estates.
3. Explain and demonstrate gross income, deductions and losses and how they relate to Federal Individual Income tax returns.
4. Demonstrate their ability to calculate basic gains and losses on property transactions.

ACCT 1220. Volunteer Tax Training

Course Description

Introduces basic tax return preparation issues and the software to complete and electronically file basic tax returns for low-income and elderly taxpayers. Students will not be able to take the Volunteer Tax Preparation Internship if they do not meet the current IRS guideline that requires all volunteers to be either US citizens or authorized aliens. An "unauthorized alien" is defined by the IRS as a person not legally admitted into the United States for either permanent residence or employment.

Student Learning Outcomes

Students should be able to:

1. Explain basic personal income tax filing status requirements.
2. Use appropriate tax software to prepare simple income tax returns for individuals.
3. Answer basic tax questions.

ACCT 1230. Volunteer Tax Updates

Course Description

To ensure returning volunteers are updated on any new changes to the current tax code and are refreshed on the tax software necessary to prepare individual tax returns for low-income and elderly taxpayers. Students must pass the certification examination to receive credit for the course.

Student Learning Outcomes

Students should be able to:

1. Pass IRS Certification exams.
2. Prepare simple income tax returns for individuals.
3. Use appropriate tax software.
4. Answer basic tax questions.
5. Solve practical tax problems

ACCT 1410. Personal Tax Preparation

Course Description

Introduces basic federal and state tax codes for preparing individual income tax returns. Emphasis on use of tax software. Students will be required to pass a certification exam and assist in preparing individual tax returns for low income and elderly taxpayers.

Student Learning Outcomes

Students should be able to:

1. Explain basic personal income tax filing status requirements.
2. Use appropriate tax software to prepare simple income tax returns for individuals.
3. Answer basic tax questions.
4. Demonstrate personal and professional interview skills in an environment that demands confidentiality issues at all levels.

ACCT 1993. Workshop in Accounting

Course Description

Varies

Student Learning Outcomes

Varies

ACCT 1996. Topics in Accounting

Course Description

Special topics are offered occasionally and the selection is different every semester. Special Topic courses do not repeat material presented by regular semester courses. The purpose of special topics is to provide students with new, one-time, and developing information in accounting.

Student Learning Outcomes

Varies depending upon topic.

ACCT 1998. Volunteer Tax Preparation Internship

Course Description

Students apply current tax code to prepare individual tax returns for low-income and elderly taxpayers. Volunteers must meet VITA volunteer eligibility requirements as defined by the IRS, which includes the passing of a certification examination. The IRS also requires all volunteers to be either US citizens or authorized aliens. An "unauthorized alien" is defined by the IRS as a person not legally admitted into the United States for either permanent residence or employment.

Student Learning Outcomes

Students should be able to:

1. Demonstrate personal and professional interview skills in an environment that demands confidentiality issues at all levels.
2. Use tax software to prepare and electronically file simple income tax returns for eligible taxpayers.

ACCT 2088. Accounting Specialty

This course allows students to apply computer information technology elective credit towards an Accounting program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

ACCT 2110. Principles of Accounting I (Financial)

Course Description

An introduction to financial accounting concepts emphasizing the analysis of business transactions in accordance with generally accepted accounting principles (GAAP), the effect of these transactions on the financial statements, financial analysis, and the interrelationships of the financial statements.

Student Learning Outcomes

Students should be able to: *Required:*

1. Analyze business transactions, their effects on the financial statements and the interrelationships of the financial statements involving the following:
 - a. Cash transactions
 - b. Receivables and Net Realizable Value
 - c. Operational Assets and Depreciation
 - d. Inventory
 - e. Current Liabilities
 - f. Long-term Liabilities
2. Define, identify and demonstrate the impact of adjusting entries on financial statements.
3. Explain and demonstrate the differences between cash and accrual basis accounting.
4. Define and identify generally accepted accounting principles.

Required to be included in either Principles of Accounting I (Financial) or Principles of Accounting II (Managerial)

1. Analyze equity ownership transactions and their effect on the financial statements.
2. Identify the cash flow statement activities and explain the purpose of the cash flow statement.
3. Perform ratio analysis to evaluate financial statements.

ACCT 2110x. Principles of Accounting IA (Financial)

Course Description

An introduction to financial accounting concepts emphasizing the analysis of business transactions in accordance with generally accepted accounting principles (GAAP), the effect of these transactions on the financial statements, financial analysis, and the interrelationships of the financial statements. Principles of Accounting 1A plus 1B are equivalent to Principles of Accounting I on the Matrix (1/2).

Student Learning Outcomes

Students should be able to:

1. Analyze business transactions, their effects on the financial statements and the interrelationships of the financial statements involving the following:
 - a. Cash transactions
 - b. Receivables
 - c. Payables
2. Define, identify and demonstrate the impact of adjusting entries on financial statements.
3. Explain and demonstrate the differences between cash and accrual basis accounting
4. Explain, define and apply generally accepted accounting principles.

ACCT 2110y. Principles of Accounting IB (Financial)

Course Description

A continuation of Principles of Accounting IA emphasizing accounting principles and procedures for receivables, inventory, notes and interest, depreciation, equity transactions, cash flow and financial statement analysis. Principles of Accounting 1A plus 1B are equivalent to Principles of Accounting I on the Matrix.

Student Learning Outcomes

Students should be able to:

1. Analyze business transactions, their effects on the financial statements and the interrelationships of the financial statements involving the following:
 - a. Receivables and Net Realizable Value
 - b. Operational Assets and Depreciation
 - c. Inventory
 - d. Current Liabilities
 - e. Long-term Liabilities
2. Define and identify generally accepted accounting principles.
3. Analyze equity ownership transactions and their effect on the financial statements.
4. Identify the cash flow statement activities and explain the purpose of the cash flow statement.
5. Perform ratio analysis to evaluate financial statements.

ACCT 2115. Survey of Accounting

Course Description

Designed to provide a basic understanding of accounting procedures for small businesses. Provides a foundation of the accounting cycle for a small business enterprise and a practical understanding of business financial statements.

Student Learning Outcomes

Students should be able to:

1. Explain basic accounting concepts and terminology.
2. Perform the basic steps in the accounting cycle for a small business.
3. Prepare bank reconciliations.
4. Prepare payroll journals and calculate withholding deductions.

ACCT 2120. Principles of Accounting II (Managerial)

Course Description

An introduction to the use of accounting information in the management decision making processes of planning, implementing, and controlling business activities. In addition, the course will discuss the accumulation and classification of costs as well as demonstrate the difference between costing systems.

Student Learning Outcomes

Students should be able to: *Required:*

1. Identify the differences between financial and managerial accounting.
2. Illustrate the accumulation of costs in cost accounting systems.
3. Describe the basic elements of the budgeting process, its objectives and budget preparation.
4. Define and classify cost behavior.
5. Perform cost-volume-profit analysis for decision making.
6. Perform differential (incremental) analysis for business decision making.
7. Explain the cause of the variance and its effect on the income statement.
8. Explain and demonstrate the difference between traditional costing and activity-based costing.

Required to be included in either Principles of Accounting I (Financial) or Principles of Accounting II (Managerial)

1. Analyze equity ownership transactions and their effect on the financial statements.
2. Identify the cash flow statement activities and explain the purpose of the cash flow statement.
3. Perform ratio analysis to evaluate financial statements.

ACCT 2125. Introduction to Intermediate Accounting I

Course Description

Introduction to intermediate accounting concepts, principles and practices, stressing financial reporting theory, applied financial accounting problems and contemporary financial accounting issues. Focuses on the determination of income and financial position of the corporate form of organization.

Student Learning Outcomes

Students should be able to:

1. Identify GAAP necessary to record specific economic transactions related to realization principle (revenue recognition), matching principle (expense recognition) and the balance sheet asset categories.
2. Analyze how economic transactions reported under GAAP impact financial statements.
3. Select the appropriate GAAP to record these economic transactions.
4. Prepare required entries, financial statements and disclosures for these transactions.
5. Critically examine accounting practices for recognition and reporting and their impact on the accounting environment.

ACCT 2130. Introduction to Intermediate Accounting II

Course Description

Completes the accounting theory framework started in Introduction to Intermediate Accounting I with the concepts and principles underlying liabilities, stockholder equity and the effects on the income statement and statement of retained earnings.

Student Learning Outcomes

Students should be able to:

1. Identify GAAP necessary to record specific economic transactions related to realization principle (revenue recognition), matching principle (expense recognition), and related transactions involving liabilities, stockholder equity and other financial statement components.
2. Apply financial accounting theory, professional standards and judgement to real world business transactions.
3. Prepare required entries, financial statements and disclosures for these transactions.
4. Critically examine accounting practices for recognition and reporting and their impact on the accounting environment.

ACCT 2135. Intermediate Accounting II

Course Description

An in-depth continuation of the study of the generally accepted accounting principles (GAAP) utilized to prepare financial statements for external users. This course deals primarily with financial accounting and reporting information related to enterprise liabilities and owner's equity.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Identify, analyze and record current liabilities and long-term liabilities of an enterprise.
2. Identify, analyze and record the lease contracts of an enterprise.
3. Identify, analyze and record the deferred tax assets and liabilities of an enterprise.
4. Analyze firm performance using financial accounting information with respect to current and long-term assets, and current and long-term liabilities.
5. Identify, analyze and record the shareholders equity of an enterprise
6. Identify, analyze and record accounting changes and correct accounting errors
7. Identify, analyze and record the derivative transactions of an enterprise

8. Apply financial accounting theory, professional standards and judgement to real world business transactions and record these transactions
9. Prepare a temporal and within industry comparative analysis of an enterprises' performance using financial statements.
10. Prepare an advanced level statement of cash flows

ACCT 2140. Advanced Accounting I

Course Description

A continuation of Accounting Principles II (ACG-111), this course focuses on specialized accounting procedures for merchandising business and partnerships, accounts receivable, notes and interest, merchandise inventory, and long-term assets.

Student Learning Outcomes

Students should be able to:

1. Apply the accounting methods in accounts receivables.
2. Account for Notes and Interests in accounts payable.
3. Account and apply the accounting concepts for Long-Term Assets.
4. Learn the accounting procedures for Partnerships.
5. The purpose of accounting and the accounting concepts; to apply accounting knowledge and skills for the business world.
6. Analyze transactions and obtain the concept of the accounting equation.
7. Analyze and use the double-entry framework of T accounts.
8. Analyze and use the double-entry framework of T accounts.
9. Analyze and use the double-entry framework of T accounts.
10. Adjusting entries and closing process.
11. Accounting for cash and payroll accounting.

ACCT 2150. Advanced Accounting II

Course Description

This course is a continuation of Advanced Accounting I (ACG-204) and covers accounting for corporations and manufacturing businesses, organization and capital stock, earnings and distribution bonds, the statement of cash flow, the indirect method, analysis of financial statements, departmental accounting, the job order cost system, and the worksheet and financial statement.

Student Learning Outcomes

Students should be able to:

1. The student will learn the characteristics, formation and the organization of a corporation; describe stockholder's equity, and types of capital stock, compute dividends on preferred and common stock; account for capital stock transactions; and prepare the stockholder's equity section of a corporation balance sheet. By demonstrating the ability to prepare general journal entries for corporation transactions such as organization costs, stock issuance, dividend allocations, stock subscriptions, prepare stockholder's equity section in a balance sheet
2. The student will learn to account for corporate income taxes, use the retained earring account, account for dividends and stock splits, and prepare the statement of retained earnings. By demonstrating preparing journal entries for corporate income tax, closing income summary and dividends to retained earnings, journal entries for declarations to common and preferred stock cash dividends, stock splits, and prepared the retained earnings statement.
3. The student will learn to describe the types of bonds issued at face value, premium, discount and bond redemption and bond sinking funds. By demonstrating journal entries, adjustments, year-end adjustments, interests, reversing entries, redemption at maturity, and deposits.

4. The student will learn the purpose and explain the Statement of Cash Flows, describe the direct and indirect methods of reporting cash, describe the effects of changes in current assets, liabilities, prepare the Statement of Cash Flows, and interpret the statement of cash flows. By demonstrating the identifying the activities of operating, investing, and financing; making adjustments for net income, computer change in cash equivalents, prepare the statement of cash flows.

ACCT 2155. Managerial Accounting

Course Description

This is an introductory course that stresses accounting concepts and procedures related to generating and using accounting information for planning, control, and decision-making of business operations. Student will learn alternative methods of preparing managerial accounting information and examining how these methods are used by different companies to maximize economic profit.

Student Learning Outcomes

Not Available

ACCT 2160. Governmental Accounting

Course Description

The theory and practice of accounting for government and other non-profit organizations. Topics include fund accounting, financial reporting and accounting for non-profit entities.

Student Learning Outcomes

Students should be able to:

1. Explain the accounting theory used in fund accounting.
2. Define and apply the basic accounting practices used in each of the funds recommended by NCGA for state and local governments.
3. Describe the basic accounting and reporting requirements of non-profit entities.

ACCT 2170. Payroll Accounting

Course Description

Covers payroll accounting procedures and controls, tax and employment laws, and tax reports that form the core of payroll responsibilities.

Student Learning Outcomes

Students should be able to:

1. Identify payroll terminology and concepts, required payroll records, and various laws and regulations affecting payroll operations
2. Calculate gross wages and deductions
3. Record, journalize and post payroll transactions in accordance with GAAP using the appropriate accounting records (e.g. payroll registers, employee earnings records, journals, and ledgers)
4. Prepare and accurately complete payroll tax reports for timely filing

ACCT 2210. Spreadsheet Accounting

Course Description

This course is a hands-on spreadsheet accounting course designed to help students apply previous knowledge and processes of financial and managerial accounting to a computerized environment using popular spreadsheet software. It will include microcomputer accounting applications, integrating spreadsheets, word processing, graphics, and database.

Student Learning Outcomes

Not Available

ACCT 2212. MS Excel for Accounting

Course Description

This course is a hands-on spreadsheet accounting course designed to help students apply previous knowledge and processes of financial and managerial accounting to a computerized environment using MS Excel spreadsheet software.

Student Learning Outcomes

1. Discover the basics and applicable uses of MS Excel in providing accounting information to both internal and external decision makers.
2. Explore how formulas can be utilized to make computations.
3. Link different spreadsheets together and learn the significance of absolute and relative cell references.
4. Design and set up a spreadsheet that will calculate and recalculate complicated calculations with enhanced accuracy.
5. Perform calculations that will allow changing only parts of the spreadsheet for what if analysis purposes.
6. Practice formatting data in a spreadsheet as to how it looks on the screen along with how it looks when printed.
7. Participate in activities that involve learning how to utilize template files to complete various financial and managerial accounting projects.
8. Create spreadsheet templates from scratch (called model building) and then test the model for various financial and managerial accounting applications.

ACCT 2220. Computerized Accounting

Course Description

This course requires prior knowledge from Survey of Accounting or Principles of Accounting I (Financial). It employs integrated accounting software for payroll, inventory control, accounts payable, accounts receivable and general ledger functions. Course reviews the accounting cycle.

Student Learning Outcomes

Students should be able to:

1. Set up a computerized accounting system and chart of accounts for a business enterprise.
2. Record sales/collections, purchase/payments, inventory, payroll, and adjusting entries using accounting software.
3. Identify the manual transactions underlying the computerized accounting systems.
4. Produce a variety of reports and financial statements using accounting software.
5. Analyze reports to identify and correct errors.

ACCT 2230. Cost Accounting

Course Description

This course covers an analysis of cost data for goods and services for planning, controlling, and decision-making. Study of cost accounting emphasizes the concept of different costs for different purposes. The focus of study will be on cost accounting strategy and decision-making process. It includes cost concepts and behavior, cost-volume-profit (break-even) analysis, Relevant costs for decision making, cost estimation, job costing, activity-based costing, cost allocation, budgeting and variance analysis.

Student Learning Outcomes

Not Available

ACCT 2240. Cost Management Accounting

Course Description

Expands the student's ability to use job order and process costing systems as well as the student's ability to apply and analyze accounting information for decision making in planning and controlling business activities. This includes the collecting of cost information, cost estimation and allocation, standard costs, budgeting and cost-volume-profit relationships.

Student Learning Outcomes

Students should be able to:

1. Analyze and Interpret accounting data to assist in management decision making.
2. Account for raw materials, work-in-process, finished goods and cost of goods sold using job order and process costing; including just-in-time inventory management and activity-based costing concepts.
3. Prepare statements for cost of goods manufactured, cost of goods sold and income.
4. Describe cost classifications, behaviors and apply the (CVP) Cost-Volume-Profit analysis concepts of contribution margin, and relevant costs to decision-making and profit planning.
5. Compute break-even points and determine target volumes needed to earn target profits and calculate the contribution margin ratios and the margins of safety and operating leverage.
6. Apply the budgeting process to the creation of budgets through the use of standard costs.
7. Explain the meaning of variances, perform variance analysis and prepare journal entries to record and dispose of variances.
8. Use differential cost analysis and capital budgeting techniques to make decisions.

ACCT 2250. Introduction to Fund Accounting

Course Description

A study of basic fund accounting and financial reporting principles and procedures necessary to implement budgetary controls for governmental units and other not-for-profit organizations.

Student Learning Outcomes

Students should be able to:

1. Distinguish between private sector accounting and governmental accounting to include the environment, accounting system and organizational goals
2. Describe fund accounting including budgetary, appropriation, and encumbrance accounting entries and concepts
3. Record fund entries (budgetary, appropriation, encumbrance) for the following:
 - a. Governmental Funds
 - b. General Funds
 - c. Special Revenue Funds
 - d. Capital Projects Funds
 - e. Debt Service Funds
 - f. Proprietary Funds
 - g. Fiduciary Funds
4. Identify the differences and similarities in reporting for governmental and not-for-profit organizations.

ACCT 2260. Managerial Accounting Applications

Course Description

A practical examination of accounting simulations that will provide opportunities to think critically about managerial accounting issues and to consider the ethics inherent in accounting decisions.

Student Learning Outcomes

Students should be able to:

1. Prepare and trace source documents.
2. Record transactions in job cost records.
3. Reconcile inventory and overhead control accounts.
4. Prepare financial statements.
5. Address “what if” managerial questions about variable costing, alternative overhead driers, budgeting for operations, variance, capital expenditures and internal controls.
6. Demonstrate an understanding of cost behavior.

7. Use Excel® to calculate compute elements of job-order costing, process costing, activity-based costing.
8. Determine joint versus by-products and allocate joint costs.
9. Use the direct allocation and sequential methods for service costs allocation.
10. Collect data for a transfer pricing decision.
11. Perform variance analysis.
12. Make tactical decisions for pricing special orders.
13. Discuss ethical issues in managerial accounting.

ACCT 2270. Budgeting

Course Description

Introduction to an integrative and practical view of concepts, methods, and techniques to develop a budget. Focuses on the budgeting process, its challenges, common issues, and approaches to mitigate problems and improve the learning curve of budget planning.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Develop a budget with a broad view of corporate functions.
2. Integrate strategic guidelines into discussions of the budgeting process.
3. Structure budget planning and development in a logical sequence.
4. Coordinate the project of budget planning for different areas of a business.
5. Apply financial concepts to support the budget planning process.
6. Explain budget monitoring to support performance management.
7. Evaluate performance by managing the results and the budget.

ACCT 2310. Government and Not-for-Profit

Course Description

A study of basic fund accounting and financial reporting principles and procedures necessary to implement budgetary controls for governmental units and other not-for-profit organizations. Recent GASB and FASB pronouncements are also addressed.

Student Learning Outcomes

1. Obtain an overview of financial reporting for non-business entities.
2. Distinguish between private and public sector organizations.
3. Identify the sources of authoritative accounting standard for various public and private sector organizations
4. Define the 11 fund types used by state and local governments.
5. Obtain an overview of the contents of the governmental financial report.
6. Define the governmental reporting entity.
7. Illustrate the basic financial statements for a state and local government.
8. Identify and describe the basic accounts used by governmental funds.
9. Identify the recognition criteria for revenues and expenditures under the modified accrual basis.
10. Apply fund balance classifications for governmental funds.
11. Prepare journal entries for the expenditures cycle using both budgetary and activity accounts.
12. Apply the modified accrual basis of accounting in the recording of a typical transaction of a General or special revenue fund, capital projects, debt service, and permanent funds.
13. Prepare the closing entries and classify fund balances.
14. Prepare the fund-basis financial statements for a General or special revenue fund.
15. Prepare the fund-basis financial statement for governmental funds.
16. Classify and identify appropriate fund reporting for trust agreements.

17. Apply the accrual basis of accounting in the recording of typical transactions of internal service and enterprise funds, agency, private-purpose trust, investment trust, pension (and other employee benefit) trust funds.
18. Prepare the fund-basis financial statements for proprietary funds.
19. Identify when an activity is required to be reported as an enterprise fund.
20. Contract statements of cash flow prepared under ASB guidelines with those prepared under FASB guidelines.
21. Identify the fiduciary funds and describe when each of them is appropriate.
22. Prepare the fund-basis financial statements for fiduciary funds.

ACCT 2311. Oil, Gas and Energy Accounting

Course Description:

An overview of accounting for the energy sector including an introduction to oil and gas accounting. Topics include accounting for exploration, development, production, depletion, amortization, joint operations, asset impairment, and retirement obligation.

Student Learning Outcomes:

Upon successful completion of the course, the student will:

1. Define terminology related to the energy industry.
2. Demonstrate accounting for exploration, acquisition, and developmental costs.
3. Calculate depreciation, depletion, and amortization.
4. Evaluate revenues from production activities.
5. Explain basic tax laws applicable to oil and gas accounting.

ACCT 2320. Introduction to Tax I (Individual)

Course Description

Studies the current federal tax laws, providing a working knowledge of preparing taxes for individuals and sole proprietorships. Federal tax law topics include gross income, exclusions, deductions, credits, accounting periods and methods, and property transactions.

Student Learning Outcomes

Students should be able to:

1. Explain the objectives of the Federal Income Tax System and relate them to individuals working in the U.S. economy.
2. Distinguish between taxable income versus tax exempt income and allowable deductions versus non-allowable deductions.
3. Identify tax planning strategies for maximizing deductions and minimizing the disallowance of deductions.
4. Recognize and determine deductions and losses for individual's businesses.
5. Apply the components of the Federal income tax formula to determine individual tax liability.
6. Identify tax problems that can be solved by further research, or that require expert tax counsel.

ACCT 2350. Introduction to Tax II (Corporate)

Course Description

Introduction to the tax law currently implemented by the Internal Revenue Service on business entities including C Corporations, S Corporations, Partnerships and fiduciaries.

Student Learning Outcomes

Students should be able to:

1. Demonstrate knowledge of the components of federal taxation for various entities.
2. Prepare income tax returns for C-Corporations, S-Corporations, partnerships, estates, gifts and trusts and show the underlying calculations.
3. Identify when income and deductions are recognized, excluded or deferred.

4. Explain the interrelationships and differences between financial accounting and tax accounting.
5. Identify tax problems that can be solved by further research, or that require expert tax counsel.
6. Apply analytical reasoning tools to assess how taxes affect economic decisions for business entities.
7. Explain tax-related professional and ethical obligations.

ACCT 2410. Personal Tax Preparation

Course Description

Introduces basic federal and state tax codes for preparing individual income tax returns. Emphasis on use of tax software. Students will be required to pass a certification exam and assist in preparing individual tax returns for low income and elderly taxpayers.

Student Learning Outcomes

Students should be able to:

1. Explain basic personal income tax filing status requirements.
2. Use appropriate tax software to prepare simple income tax returns for individuals.
3. Answer basic tax questions.
4. Demonstrate personal and professional interview skills in an environment that demands confidentiality issues at all levels.

ACCT 2420. Volunteer Income Tax Internship

Course Description

Apply the skills and expertise learned in ACCT-2410 by assisting eligible taxpayers in satisfying their tax responsibilities through the VITA/TCE program by providing free tax return preparation using software.

Student Learning Outcomes

Students should be able to:

1. Acquire an enhanced appreciation and understanding (via applicable experience) for the existence of the Volunteer Income Tax Assistance (VITA) Program and the benefits it provides to eligible taxpayers.
2. Apply prior knowledge regarding the requirements for utilization of various tax forms.
3. Apply prior understanding of the basic tax law regarding filing status, personal and dependency exemptions reportable income, allowable deductions and available tax credits through actual tax preparation procedures.
4. Continue to develop and practice utmost personal and professional interview skills in an environment that demands confidentiality issues at all levels.
5. Prepare simple individual tax returns for the low-income public to be provided free of charge using the appropriate step and procedures.
6. Utilize understanding of tax software in the preparation and filing of basic tax returns.

ACCT 2430. Federal Income Tax for Business

Course Description

Introduction to the tax law currently implemented by the Internal Revenue Service on business entities including C Corporations, S Corporations, and Partnerships. Gift and Estate Tax is also covered.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Demonstrate knowledge of the components of federal taxation for various entities.
2. Identify when income and deductions are recognized.
3. Describe when income and deductions are excluded or deferred.
4. Explain the interrelationships and differences between financial accounting and tax accounting.
5. Apply analytical reasoning tools to assess how taxes affect economic decisions for business entities.
6. Demonstrate the ability to conduct tax research.

7. Understand tax-related professional and ethical obligations.
8. Explain basic tax policy considerations underlying common tax regimes.

ACCT 2510. Enrolled Agent Exam Review Course

Course Description

Reviews concepts learned in study of accounting, individual and business income tax and ethical decision making as they relate to passing the IRS Special Enrollment Exam. Representation, practices and procedures as defined by Circular 230 are also covered.

Student Learning Outcomes

Students should be able to:

1. Demonstrate knowledge of the requirements for becoming an Enrolled Agent and be prepared to successfully pass the SEE.
2. Demonstrate knowledge of the application of tax theory and income tax laws as they relate to Individual Taxation, Sole Proprietorships and Partnerships, Corporations, Fiduciaries, Trust, Estate and Gift Tax.
3. Demonstrate knowledge of the application of tax theory and income tax laws as they relate to Charities & Not-For-Profits, Government Entities, Retirement Plans, Ethics and Professional Responsibilities.

ACCT 2520. Introduction to Auditing

Course Description

Surveys auditing concepts and processes used by management and assurance professionals that include audit standards, reports, professional ethics, legal liability, evidence accumulation, audit planning, internal controls, transaction cycles, other engagements and operational auditing.

Student Learning Outcomes

Students should be able to:

1. Describe the attest function.
2. Identify the professional and regulatory standards that impact the auditing profession.
3. Use audit planning techniques to assess risks, calculate materiality and prepare audit programs.
4. Evaluate factual situations to identify internal control deficiencies, significant deficiencies, and material weaknesses.
5. Identify types of evidence and practice documenting the results of performing audit tests.
6. Use various audit sampling to determine whether sufficient evidence has been obtained.
7. Identify audit procedures performed in the completion of an audit.
8. Select the appropriate audit report for various factual situations.
9. Demonstrate knowledge of other attestation and assurance services performed by CPAs as well as other types of services, which independent auditors may or may not perform.

ACCT 2540. Internal Control and Auditing

Course Description

Not Available

Student Learning Outcomes

Not Available

ACCT 2551. Corporate Financial Reporting I

Course Description

This course is the first of three courses that provide an in-depth study of the topics covered in Financial Accounting including theory and problems. The course begins with a review of the financial accounting environment, the conceptual framework and the accounting process. The course also provides a comprehensive study of financial statements, time value of money, and revenue recognition. Finally, current assets are studied in detail.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Explore the environment of financial reporting and the many factors and challenges affecting it.
2. Discuss the basic concepts underlying the conceptual framework.
3. Explain and illustrate the features of an accounting information systems and display and understanding of basic accounting terminology.
4. Examine the many different types of revenues, expenses, gains, and losses that affect the income statement and related information.
5. Examine the many different types of assets, liabilities, and stockholders' equity items that affect the balance sheet and the statement of cash flows.
6. Study the tools and techniques that will help one measure the present value of future cash inflows and outflows.
7. Recognize the difficulties associated with estimating the collectability and valuation of accounts receivable.
8. Understand the basic issues related to accounting and reporting for the cost of inventory.
9. Consider some of the valuation and estimation concepts that are used to develop relevant inventory information.

ACCT 2552. Corporate Financial Reporting II

Course Description

This course is the second of three courses that provide an in-depth study of the topics covered in Financial Accounting including theory and problems. The course begins with a comprehensive study of long-term assets, current liabilities, and long-term liabilities. The study of accounting for income taxes and pensions and other post retirement benefits are also included.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Discuss the proper accounting for measurement and reporting issues related to property, plant, and equipment and intangible assets acquisition.
2. Discuss the proper accounting and the accounting methods used to record the retirement or disposal of property, plant, and equipment and intangible assets.
3. Calculate depreciation expense for property, plant, and equipment.
4. Calculate amortization expense for intangible assets.
5. Consider impairment of long-term assets, the treatment of expenditures incurred subsequent to acquisition, and asset disposal.
6. Identify, analyze, and record current liabilities and long-term liabilities of an enterprise.
7. Identify, analyze, and record the lease contracts of an enterprise.
8. Identify, analyze, and record the deferred tax assets and liabilities of an enterprise.
9. Describe the key characteristics of a debt and equity investment and demonstrate how to account for a purchase, change in fair market value, and for revenue received from investments.
10. Demonstrate how to account for the disposition of debt and equity investments.
11. Understand the nature and characteristics of employer pension plans, including the details of defined benefit plans and postretirement benefit plans.
12. Analyze firm performance using financial accounting information with respect to current and long-term assets, and current, and long-term liabilities.

ACCT 2553. Corporate Financial Reporting III

Course Description

This is the third of three courses which covers concepts, principles, and practices for financial accounting. Topics include shareholder's equity, share-based compensation and earnings per share, accounting changes and error corrections, the statement of cash flows, and derivatives. Comprehensive cases in GAAP and IFRS will be covered as well.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Prepare a temporal and within industry comparative analysis of an enterprises' performance using financial statements.
2. Compute basic earnings per share, considering the sale and repurchase of stock during the period as well as the effects of stock splits and stock dividends.
3. Use the treasury stock method to compute diluted earnings per share when a firm has outstanding stock options, warrants, and rights.
4. Determine the order in which multiple potentially dilutive securities should be considered in computing diluted earnings per share.
5. Understand the business and accounting concepts connected with derivatives and hedging activities.
6. Recognize the difference between a change in accounting estimate and a change in accounting principle and know how a change in accounting estimate is reflected in the accounting statements.
7. Recognize the various types of errors that can occur in the accounting process, understand when errors counterbalance, and be able to correct errors when necessary.
8. Prepare an advanced level statement of cash flows.

ACCT 2993. Workshop in Accounting

Course Description

Topic varies

Student Learning Outcomes

Student Learning Outcomes be developed depending upon nature of workshop.

ACCT 2995. Accounting Cooperative Education

Course Description

Provides students the opportunity to work a minimum of 135 hours in a new job experience in accounting or training-related supervised work. Student trainees are not paid for their work but are supervised jointly by CNM and the company.

Student Learning Outcomes

Students should be able to:

1. Demonstrate professionalism by
 - a. arriving promptly for work
 - b. being appropriately groomed
 - c. working collaboratively with co-workers and supervisors
 - d. meet all requirements of cooperating firm and academic institution
2. Create, in cooperation with the supervisor, a list of job expectations (which will include some of the following):
 - a. prepare journal entries
 - b. use special journals (i.e. A/R, A/P, etc.)
 - c. prepare bank reconciliations
 - d. prepare payroll
 - e. uses appropriate software to perform accounting functionsprepare reports, letters, etc., using Word, Excel®, accounting software or other software as designated by employer

ACCT 2996. Topics in Accounting

Course Description

Special topics are offered occasionally and the selection is different every semester. Special Topic courses do not repeat material presented by regular semester courses. The purpose of special topics is to provide students with new, one-time, and developing information in accounting.

Student Learning Outcomes

Student Learning Outcomes will vary depending upon topic.

ACCT 2997. Independent Study in Accounting

Course Description

Requires the student and instructor to define a specific problem in the area of the student's interest and directly related to accounting. Student develops and executes a solution applying analytical techniques and critical thinking to the problem. An oral presentation may be required.

Student Learning Outcomes

Students should be able to:

Student Learning Outcomes to be developed collaboratively between student and instructor.

ACCT 2998. Accounting Internship

Course Description

Varies

Student Learning Outcomes

Varies

ACCT 2999. Accounting Capstone:

Course Description

Focuses on assessment of Student Learning Outcomes for the program of study.

Student Learning Outcomes

Students should be able to:

Adobe (ADOB)

ADOB 1111. Adobe Construction Basics

Course Description

History and overview of adobe construction techniques. Topics include monumental structures and settlements throughout the world and adobe practices that meet modern building codes. Students will examine construction and design techniques from foundation to roof. Students will make adobe bricks, build walls and construct other building components.

Student Learning Outcomes

1. State locations and historical periods where adobe is found in four locations in the world
2. Name codes in New Mexico and the United States that affect adobe construction
3. Name and describe four styles of architecture found in New Mexico
4. Make multiple adobe bricks

ADOB 1112. Adobe Wall Construction

Course Description

An introduction to exterior and interior adobe wall construction techniques. Students will learn the requirements for wall thickness, height and foundation construction based on the New Mexico Earthen Building Code. Topics include the installation of windows and doors and lintels over openings, the construction of bond beams at the top of walls, methods for the attachment of roof structural members and design and construction of buttresses and arches.

Student Learning Outcomes

1. State the requirements of the New Mexico Earthen Building Code for foundation construction
2. Build an adobe wall with corners and intersections
3. Describe a method for the installation of doors and windows in adobe walls
4. Place a lintel on a wall to create a window opening

ADOB 1113. Passive Solar Adobe Design**Course Description**

The integration of passive solar heating systems into the design of adobe homes. Topics include direct gain systems, Trombe Wall (indirect gain) systems and greenhouses/sunspaces. Students will learn the advantages and disadvantages of each system in order to choose among them for use in different parts of a house or commercial structure. Students will calculate the proper sizing of systems as well as auxiliary back-up systems.

Student Learning Outcomes

1. Name and describe the three passive solar heating techniques
2. State reasons for the choice of a particular system for a particular location
3. Calculate the size of glazing required to heat a living room in the Santa Fe climate
4. Describe and contrast the merits of radiant floor heating versus a wood stove for back-up heating

ADOB 1114. Floor Design and Construction**Course Description**

Traditional and modern Southwest floors and floor coverings. Topics include mud, brick, stone, concrete, tile, wood and sheet-goods flooring materials and applications. Students will design and build floor mock-ups. Suspended floors over crawl spaces or basements are covered as well as the sizing of joists and deck materials. Radiant floor heating systems are also discussed.

Student Learning Outcomes

1. Describe and contrast ground contact floors versus suspended floors
2. Describe and carry out a mud or concrete floor pour
3. Describe and build a brick on sand floor
4. Select appropriate details for a given floor: insulation, final surface, radiant heating and sizing charts

ADOB 1115. Finish Practices**Course Description**

Traditional and modern finishes used in the building of the exteriors and interiors of buildings of the Southwest. Topics include treatments of exposed adobe bricks; mud plaster by hand and trowel; plasters made with stabilized mud, lime, gypsum, cement and elastomerics. Wall insulation, vapor barriers, moisture protection, and the lath systems will be examined. The treatment of vigas, posts, corbels, exposed lintels and wood trim are also covered.

Student Learning Outcomes

1. Describe, mix and apply mud and gypsum plaster
2. Describe wall, ceiling and floor paints and stains.
3. Describe, select, mix and apply stain or preservatives on wood
4. Scribe and paint la zaneña
5. Demonstrate understanding of the use of appropriate insulations systems

ADOB 1116. Roof Design and Construction

Course Description

Traditional Southwest designs of pitched and flat roofs on adobe buildings. Topics cover roofing materials, structure, and plans, including vigas, beams, joists rafters, trusses. Ceiling materials, including latillas, rough boards, tongue-and-groove, are discussed along with details such as insulation, deck sheathing, canales and parapets. Two actual or mock-up roofs will be built.

Student Learning Outcomes

1. List and contrast the good and bad features of flat and pitched roofs
2. Describe structural members of traditional roofs and determine their size and spacing for a given span
3. Describe three types of pitched roofs and determine the size of rafters for a given span
4. Discuss choices in roofing materials and insulation for flat and pitched roofs

ADOB 1118. Preservation Practices

Course Description

The techniques of preservation, conservation, stabilization, restoration, remodeling, modernization and repurposing of adobe buildings. Consideration is also given to constructing additions to existing buildings. Topics include surveying and assessing existing buildings and the development of preservation plans. The US Secretary of the Interior's Standards for Historic Preservation are discussed along with the New Mexico Code for Historical Earthen Buildings. Safety around old buildings is emphasized.

Student Learning Outcomes

1. Define, discuss and contrast the different approaches in the taxonomy of preservation
2. Identify the important parts of a building that need to be included in a comprehensive assessment
3. Propose several remedies for a problem and choose and defend the best remedy
4. Prepare a preservation plan for a small existing building or virtual building presented by the instructor

ADOB 1122. Rammed Earth Construction

Course Description

An introduction to rammed earth construction techniques from around the world. This course examines various rammed earth construction methods including the use of small and large forms and manual and engine power. Topics also include the design of rammed earth walls that accommodate windows, doors, electrical, plumbing and heating ventilation and air conditioning (HVAC) systems.

Student Learning Outcomes

1. Describe and contrast hand rammed systems with power rammed systems
2. Describe door and window inclusion in walls
3. Describe insertion of electrical, plumbing and heating systems
4. Select appropriate details for a given house
5. Compare rammed earth techniques from around the world

ADOB 1123. Compressed Earth Block Construction

Course Description

An introduction to compressed earth block (CEB) and stabilized compressed earth block (SCEB) construction techniques from around the world. This course examines various compressed earth block manufacturing methods, including the use of small and large forming chambers and manual and engine power as well as block stabilization techniques. Topics also include the design of compressed earth block walls that accommodate windows, door and utilities.

Student Learning Outcomes

1. Identify the requirements of the New Mexico Earthen Building Code for CEB construction
2. Produce CEBs/SCEBs for use in wall construction
3. Build a CEB wall with corners and intersections
4. Describe a method for the installation of doors and windows in CEB walls
5. Place a lintel on a CEB wall to create a window opening

ADOB 1190. Adobe Building Practicum

Course Description

Applied adobe experience. Practicum activities may take place on campus, on the worksite of an adobe building project, on a adobe preservation site or working with an adobe related non-profit or government entity.

Student Learning Outcomes

1. Discuss and demonstrate the special safety considerations
2. Assess the components adobe project
3. Address cost considerations of an adobe projects

Agricultural Communication (ACOM)

ACOM 1110. Introduction to Agricultural Communication

Course Description

Students will learn about the history and theories of agricultural communications, be introduced to the degree program, explore careers in the field, and examine the role of media in agricultural communications.

Student Learning Outcomes

1. Identify classes needed in the degree program and relevant clubs.
2. Recall important times in the history of agricultural communication and journalism.
3. Comprehend the communication process and identify its components.
4. Identify effective and efficient media for agricultural communication.
5. Analyze the various roles and uses of media in agriculture communication.
6. Apply theories of communication and journalism to class assignments.

ACOM 1120. Introduction to Graphic Design in Agricultural

Course Description

This course focuses on introducing students to creating and critiquing visual communication materials in agricultural communications by developing understanding of visual communications, graphic design, and branding principles.

Student Learning Outcomes

1. Understand and demonstrate the correct use of formats, modes, and resolutions when creating or using graphics for various mediums and audiences.
2. Critique and evaluate graphic and photographic design elements in agricultural communications pieces.
3. Demonstrate a working knowledge of software and their uses for implementing principles of graphic design and branding.

ACOM 1130. Effective Leadership and Communication in Agriculture

Course Description

Theory and practice in leadership and communication for professionals who must work effectively in leadership and supervisory roles with people in agricultural business, industry, government agencies, and education. Course focuses on contemporary leadership theories. Oral communication skills in informative and persuasive speaking, parliamentary procedure, and for small groups are developed.

Student Learning Outcomes

1. Understanding Leadership.
 - a. Definitions of Leadership
 - b. Agricultural Education, FFA, Leadership
 - c. Leadership Categories
 - d. Democratic, Authorization, and Situational Leadership
 - e. Personality and Leadership Relations
 - f. Developing Leaders
 - g. Personal Leadership Development
 - h. Ability, Experience, and the Opportunity to Lead
 - i. Leadership in the Workplace
 - j. Human Relations, Technical, and Conceptual Skills
2. Communication Skills.
 - a. Communication and Leadership
 - b. The Purpose of Communication
 - c. Forms of Communication
 - d. Communication Barriers and Styles
 - e. Verbal and Nonverbal Communication
 - f. Feedback
 - g. Self-Communication and Interpersonal Communication
3. Leading Individuals and Groups.
 - a. Group Dynamics and Team Building
 - b. Democratic Group Leadership
 - c. Importance of Groups
 - d. Types of Groups
 - e. Organizing Groups
 - f. Group Dynamics, Development, and Discussion
4. Conducting Successful Meetings.
 - a. Skills Developed by Bring an Officer
 - b. Basic Meeting Functions
 - c. Characteristics of a Good Meetings
 - d. Planning and Preparing for Meetings
 - e. The Meeting Room
 - f. Committees
 - g. Informative and Motivational Meetings
 - h. Group Member Involvement
 - i. Officer and Member Responsibilities
 - j. Developing a Program of Activities

ACOM 2120. Photography in Agriculture

Course Description

This is a field-based course focused on how to students use the camera as a tool to make the rules of photography and design work for the student's style, creativity, and goals pertaining to application of photography in agricultural communications. Students develop and disseminate a photography portfolio through a variety of communications channels.

Student Learning Outcomes

1. Utilize a DSLR or mirrorless camera to analyze scenarios to effectively curate a body of work that compliments agricultural communications practice

2. Demonstrate working knowledge of camera equipment and photography principles to create visual stories
3. Evaluate and critique imagery for use of photography skills and principles

ACOM 2998 Early Field-Based Experience in Agricultural Communications

Course Description

This course is designed to help you understand people and how to communicate with people. The key to all journalism or communications-related courses is to understand the audience well enough to know how to speak like them, to them, and to your stakeholders. The most successful communicators exhibit greatness in themselves and in their peers.

Communicators cannot do their job if they do not show up with their best attitude and work ethic. Don't let your audience down, and we will make sure you are equipped to do so.

1. Explain the role of communications in the agricultural or science industries.
2. Develop a communication campaign for an agriculturally related client.
3. Identify key principles of communication channels including newswriting, radio production, and communication plans.
4. Create effective internship application materials to meet needs in the industry.
5. Design a job portfolio that includes examples of communications experience.

Africana Studies (AFST)

AFST 1110. Introduction to Africana Studies

Course Description

An interdisciplinary course that introduce students to the histories, cultures, and experiences of global people of African descent.

Student Learning Outcomes

1. Students will carry out critical analysis and engagement with complex, interdependent global systems and legacies (natural, physical, social, cultural, economic, and political) and their implications for people's lives and the earth's sustainability.
2. Students will explore issues/objects/works through collection and analysis of evidence that result in informed conclusions/judgments, understanding and analysis of critical literacy and ethics pertaining to the dynamics of diversity, equity, inclusion and social change.
3. Students will examine habits of mind characterized by the comprehensive exploration of issues, ideas, artifacts and events related to diversity, equity and inclusion before accepting or formulating an opinion or conclusion.
4. Students will demonstrate the capacity to combine or synthesize existing ideas, images, or expertise in original ways.
5. Students will prepare, purposeful presentations designed to increase knowledge, foster understanding, or promote change in listener's values, beliefs, or behaviors pertaining to the dynamics of diversity, equity, inclusion and social change.
6. Students will develop and express ideas in writing and learning in many genres and styles using different writing technologies, mixing texts, data and images that relate to the dynamics of diversity, equity, inclusion and social change.
7. Students will show the ability to reason and solve quantitative problems from a wide array of authentic contexts and everyday life situation.
8. Students will demonstrate the ability to know a need for information or visual literacy and understanding of the dynamics of historic and contemporary inequality and how they shape individual and community power, biases, structural arrangements and social justice bias.
9. Students will enact behaviors and efforts and interact with others on the team to enhance the quality and quantity of contributions made to team discussions.
10. Students will design, evaluate and implement strategies to answer open-ended questions in multiple ways.

11. Students will work to make a difference in the civic life of communities and develop the combination of knowledge, skills and values and motivation to make a difference.
12. Students will develop their cognitive, affective and behavioral skills and characteristics to support effective and appropriate interaction in a variety of cultures.
13. Students will develop their ethical self-identity as they practice ethical decision making skills while learning how to describe and analyze positions on ethical issues.
14. Students will engage in self-reflection regarding one's own history and position in contemporary U.S. society as well as in a global context.
15. Student learners will connect perspectives and integrate relevant experience and academic knowledge from multiple disciplines.

AFST 1120. Race in the Digital Age

Course Description

The digital realm is comprised of storied sites such as commerce, employment, education, therapy, community, political expression, crime, and ideas. Technology has transformed the who, what, where, and why of how we define community and identity in the digital age. However, who you are and where you are still matters, despite the benefits of anonymity in cyberspace. This course will investigate the relevance of race, gender, class, identity, and the "cultural capital" that one can spend in our Digital Age economy. To this end, we will start with critical race scholar, Prof. Derrick Bell's 1990 sci-fi influenced work, which prophesied a 21st century "post-racial" American: entwining over two centuries of racial designations on an ever-evolving economic marketplace. This course will approach our present "post-racial" moment as an exceptional period for developing new models for identity formation.

Student Learning Outcomes

After completion of this course, students will:

1. Engage in problem-based learning that will allow students to shape their own directions of inquiry and learn about existing analyses of gender, race, and cultural realities within the complexities of science and technology.
2. Make an informed argument about competing scientific, technological, economic, political, and/or social priorities within a socio-cultural historical framework through reflections on entrepreneurial experiential community-based experiences.
 - a. Students will apply various perspectives and processes to discover, describe and understand human behavior in complex and diverse ethnic and gendered societies by participating in Global Entrepreneurship Week, Pitch Competitions, and entrepreneurial experiences throughout Albuquerque. By doing this, students will learn how to uncover new opportunities that others miss and reframe identity-based entrepreneurial markets in new ways.
3. Applying analytical, creative, and intuitive thinking styles, present research on the problems, opportunities for business advantage related to the societal strengths and limitations of technology, business, media, and the nuances of the gaming culture related to socio-cultural realities and lead a discussion about it with peers.
4. Develop critical thinking skills that help students develop the wide range of cognitive skills and intellectual dispositions they need to effectively identify, analyze, and evaluate arguments; to formulate and present convincing reasons in support of conclusions; and to make reasonable, intelligent decisions about how their research connects the past to the present.
 - a. Using interdisciplinary approaches to solving intellectual programs, be prepared to articulate arguments relating to power and control, especially the ways technologies are implicated in both the perpetuation and potential transformation of structured relations of inequality (class conflict, patriarchy, racism, colonialism) related to cultural and technology studies.
5. Attain facility in critical thinking and writing, especially through the intertwined lenses of race, gender, class, sexuality and identity, by writing critical reflection papers.

6. Using innovation, divergent thinking, and risk taking, students will enhance their knowledge of social and cultural institutions in the digital economy and the values of their society and other societies and cultures in the world by analyzing video games, creating remix videos, attending entrepreneurial events throughout the city.
7. Students will articulate their roles as citizens in a global context and express awareness and appreciation for diverse value systems in a global knowledge-based market economy through their final projects.

AFST 1996. Topics in Africana Studies

Course Description

Varies

Student Learning Outcomes

Varies

AFST 2110. African American History

Course Description

This course surveys the long and turbulent journey of African Americans, the rich culture they have cultivated, and their persistent struggle for freedom from the perspective, interests, aspirations, possibilities and envisioned destinies of African descended peoples. From African antiquity to the 21st century, students will study: 1) The African background; 2) The Holocaust of Enslavement; 3) Black Resistance and Abolition; 4) Reconstruction; 5) The Jim Crow Era; 6) Civil Rights and Black Power, and 7) The Post-Industrial/Post Civil Rights Era.

Student Learning Outcomes

1. Demonstrate a full ability to analyze and interpret how enslavement and oppression shape the racial, gendered, social, economic, and political realities of African descended people in the U.S.
2. Recognize and respond to ethical challenges/social justice issues that affect African American people.
3. Acquire a critical understanding of the human condition.

AFST 2140. Black Women in the African Diaspora

Course Description

This survey course reviews the contributions of Black women to the Black Diasporic story.

Student Learning Outcomes

1. Students will gain theoretical knowledge of the field of Black feminist thought.
2. Students will explore the relationship between Black feminist theory and the larger more general body of work on feminism.
3. Students will study the historical, political and social experiences of Black women in the Americas.
4. Students will understand the intersecting relationship between race, gender, class and sexuality.
5. Students will critically analyze the representations of Black women in popular culture.
6. Students will engage in critical thinking and critical dialogues and discussions.

Agricultural, Consumer, & Environmental Science (ACES)

ACES 1110. Agricultural Leadership Development

Course Description

This course will introduce the student to skill sets necessary to engage in the process of leadership through an applied project. A broad spectrum of principles and applications associated with the College of Agricultural, Consumer and Environmental Sciences will be employed. The development of a specific project through a collaborative process will be required. Students will be engaged in hands-on, real-time experiences applicable to agriculture.

Student Learning Outcomes

**This course is being submitted to be deleted from CCNS because it is inactive.*

ACES 1120. Freshman Orientation

Course Description

Orientation to University life, including the understanding and utilization of resources that promote University success. Designed to promote success in achieving a career objective and perseverance for degree completion. Promotes a recognition of changes required in moving from high school to the University. Eight weeks in length, required for all freshmen in the College of Agricultural, Consumer and Environmental Science.

Student Learning Outcomes

1. Orient students to NMSU and to the College of Agricultural, Consumer and Environmental Sciences.
2. Develop an understanding of the personal skill set needed for academic success.
3. Develop awareness of the academic and personal resources available to NMSU students.
4. Help students create a peer network that will support their academic and personal success.
5. Strengthen skills in oral and written communications.

ACES 1130. Agricultural Industry Certifications

Course Description

Provides academic course credit for the successful completion of agricultural industry certifications. The successful completion of one approved agricultural industry certification yields three hours of course credit. The completion of two agricultural industry certifications can yield a maximum course credit of six hours. Any third-party costs associated with completing the agricultural industry certification(s) will be the responsibility of the student.

Student Learning Outcomes

1. Demonstrate a comprehensive understanding of the key concepts, tools, and techniques specific to the agricultural certification, including both theoretical knowledge and practical applications relevant to the industry.
2. Achieve proficiency in technical skills related to modern agricultural practices within their chosen certification area, such as precision agriculture, sustainable farming techniques, and the use of advanced agricultural machinery and technology.
3. Develop and apply problem-solving and critical-thinking skills to address real-world challenges in the agricultural sector, utilizing data-driven approaches and industry best practices.
4. Demonstrate an understanding of professional and ethical standards within the agricultural industry, including sustainable practices, environmental stewardship, and adherence to safety and regulatory requirements.

ACES 1210. Financial Fitness for College Students

Course Description

An introduction to personal financial practices in post high school and/or college lives. Emphasis is placed on budgeting, savings, investment, college debt, student loans, credit cards, scams and consumer protection.

Student Learning Outcomes

1. Discuss the importance of personal financial management during college years.
2. Discuss the essentials of following:
 - a. paying yourself first and budgeting,
 - b. differentiating between needs and wants,
 - c. the significance of building and having good credit,
 - d. managing debt,
 - e. understanding and minimizing student loan debt,
 - f. investing,
 - g. life success principles, e.g., goal setting, time management, stress management.

3. Choose online financial tools to help them succeed financially.

ACES 1220. Academic Excel®lence

Course Description

Academic curriculum of Excel®lence that includes the development of collaborative learning and student success environment, learning diverse learning styles and multiple intelligences, and developing multi-contextual academic communication styles.

Student Learning Outcomes

1. Demonstrate an understanding of the relationship between time management and academic success.
2. Express a familiarity with college culture.
3. Communicate a comprehension of study skills and test taking strategies.
4. Apply material learned to other aspects to enhance academic Excel®lence.
5. Develop an academic and career life plan that will highlight goals, taking into account life circumstance.
6. Become competent in appropriate professional/academic communication.

Agricultural Economics/ECON (AEEC)

AEEC 1110. Introduction to Agricultural Economics and Business

Course Description

Orientation to agricultural economics and business through the discovery process for the consumer in the food, fiber and natural resource sectors of the global economy. The course will discuss the application of micro- and macro-economic principles as they relate to agricultural economics and business.

Student Learning Outcomes

1. Gain a broad understanding of the role of the consumer in the marketplace for agricultural commodities, producers, agencies and the global market structure.
2. Apply introductory economic principles to applied global situations.
3. Employ economic concepts in the application of production level decision making.
4. Employ economic principles to the basic and global agricultural community.
5. Understand relationships that exist between producers and consumers.

AEEC 1120. Careers in Food and Agribusiness

Course Description

This course provides an orientation to careers in agricultural economics and agricultural business. Students will learn about the agricultural supply chain in New Mexico, the United States, and the world.

Student Learning Outcomes

1. Become more familiar with career opportunities in agricultural economics and agricultural business.
2. Understand skills and characteristics desired by potential employers of Agricultural Economics and Agricultural Business students.
3. Develop greater appreciation of current policy and management issues in agriculture.
4. Become more familiar with faculty and staff in the Department of Agricultural Economics and Agricultural Economics and resources available to students within the Department.
5. Refine written and verbal communication skills.

AEEC 2110. Principles of Food and Agribusiness Management

Course Description

This course introduces business management theory and application of theory related to businesses within the food and fiber supply chain. Topics include management and financial principles, market planning, and organization theory.

Student Learning Outcomes

1. Demonstrate, refine and expand written and oral communication skills.
2. Develop an understanding of basic financial statements, their use and analysis.
3. Understand the roles management and management styles play in modern agribusiness.
4. Learn about the history of agribusiness domestically and internationally.
5. Integrate the role of technology into modern agribusiness management.

AEEC 2120. Introduction to Food and Agribusiness Accounting

Course Description

This course outlines the purpose and methods of keeping and analyzing farm and ranch records. Course topics include financial statements, efficiency measures, analysis of the business, and tax computations.

Student Learning Outcomes

1. Understand the terminology and principles used in modern farm and ranch financial management statements.
2. Evaluate capital investments, analyze farm business performance, and develop tools for financial planning and analysis.
3. Evaluate farm and ranch cash flows.

AEEC 2130. Survey of Food and Agricultural Issues

Course Description

Same as FTSE 2130.

Survey of food and agricultural issues, including: geography of food production and consumption; human-agricultural-natural resource relations; agriculture in the United States and abroad; modern agribusiness; food safety; food, agriculture, and natural resources policy; ethical questions; role and impact of technology.

Student Learning Outcomes

1. Understand of global agriculture including production techniques used in various geographical regions, consumption trends, and political and social constraints.
2. Synthesis information about agricultural issues and make informed arguments.
3. Articulate discuss modern issues in agriculture.
4. Write coherent arguments relative to personal beliefs regarding agricultural issues.

AEEC 2140. Technology and Communication for Business Management

Course Description

This course helps students improve their skills related to data analysis, information management, and communication. Drawing examples from a variety of management, business, technological and research situations, students discover the versatility and functionality of modern computer software. The course emphasizes a 'hands-on' approach.

Student Learning Outcomes

1. Demonstrate an understanding of the terminology used to describe common techniques and concepts in business information systems.
2. Demonstrate mastery of spreadsheet design and use.

AEEC 2996. Topics in Agricultural Economics

Course Description

Specific subjects and credits to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

Agriculture and Extension Education (AXED)

AXED 1110. Introduction to Agricultural, Extension, and Technology Education

Course Description

Orientation to programs, philosophies, competencies and leadership skills needed by professionals in agricultural and technology education, extension education, agricultural communications, and related career opportunities in industry, governmental agencies, and international organizations.

Student Learning Outcomes

1. Orient student to the AXED Department and their role as students.
2. Explore career opportunities (and the related skill sets needed for success) in public schools, career and technical institutions, the cooperative extension service, community, and international development, agricultural communications, agricultural industry associations and public service (e.g., NMDA and USDA).
3. Develop an understanding of the self-leadership skills needed to be effective in a variety of professional and personal environments.
4. Familiarize students with the aspects included within a total program in agricultural or technology education.
5. Strengthen skills in oral and written communications.

AXED 1120. Introduction to Agricultural Communication

Course Description

Students will learn about the history and theories of agricultural communications, be introduced to the degree program, explore careers in the field, and examine the role of media in agricultural communications

Student Learning Outcomes

1. Identify classes needed in the degree program and relevant clubs.
2. Recall important times in history of agricultural communication and journalism.
3. Comprehend the communication process and identify its components.
4. Identify effective and efficient media for agricultural communication.
5. Analyze the various roles and uses of media in agriculture communication.
6. Apply theories of communication and journalism to class assignments.

AXED 1130. Techniques in Agricultural Mechanization

Course Description

Development of competencies in agricultural mechanics including safety, tool identification, operation and maintenance of hand and power tools, cold metal, drafting, and plumbing procedures. Designed for any major wishing to improve mechanical skills needed in agriculturally related occupations in education and industry.

Student Learning Outcomes

1. To understand basic drafting language used in orthographic and isometric drawings.
2. To develop an understanding of the proper use and safety of basic hand and power tools.
3. To develop skills needed to operate basic hand and power tools correctly.
4. To develop an understanding of surveying methods and building layout for construction.
5. To develop an adequate level of competence in workshop techniques.
6. To prepare students to properly teach and demonstrate these techniques to others who may use them as a means of earning a living.

AXED 2110. Metal Fabrication

Course Description

Instruction and skill development in process and procedures of metal fusion, including gas and electric welding techniques, safety, and oxyacetylene cutting and welding. Designed to improve mechanical skills needed in agriculturally related occupations in education and industry.

Student Learning Outcomes

1. To develop students' understanding and appreciation for metal fabrication, design and teaching.

2. To develop in the student an adequate level of competence in shop work techniques, so that the student may be able to properly teach and demonstrate multiple metal fabrication techniques to others who may use them as a mean of earning a living.
3. To develop the student's fundamental techniques in shielded metal arc welding, oxy-acetylene welding and cutting operations, metal inert gas welding (MIG), and gas tungsten-arc welding as needed in repair and construction of agricultural equipment.
4. Student will understand appropriate shop management techniques and have an appreciation for mechanized agriculture.
5. To assist the student in developing an understanding and comprehension of the fundamental principles that apply to the area of basic shop work included in this course, such as proper selection of electrodes, oxy-acetylene filler rods, welding processes best suited for given welding conditions, the proper tool for the job, etc.
6. To develop in the student comprehension of safety practices that apply to the areas of basic shop work, tools, and equipment required in the course.

AXED 2120. Effective Leadership and Communication in Agriculture

Course Description

Theory and practice in leadership and communication for professionals who must work effectively in leadership and supervisory roles with people in agricultural business, industry, government agencies, and education. Course focuses on contemporary leadership theories. Oral communication skills in informative and persuasive speaking, parliamentary procedure, and for small groups are developed.

Student Learning Outcomes

1. Understanding Leadership.
 - a. Definitions of Leadership
 - b. Agricultural Education, FFA , Leadership
 - c. Leadership Categories
 - d. Democratic, Authorization, and Situational Leadership
 - e. Personality and Leadership Relations
 - f. Developing Leaders
 - g. Personal Leadership Development
 - h. Ability, Experience, and the Opportunity to Lead
 - i. Leadership in the Workplace
 - j. Human Relations, Technical, and Conceptual Skills
2. Communication Skills.
 - a. Communication and Leadership
 - b. The Purpose of Communication
 - c. Forms of Communication
 - d. Communication Barriers and Styles
 - e. Verbal and Nonverbal Communication
 - f. Feedback
 - g. Self-Communication and Interpersonal Communication
3. Leading Individuals and Groups.
 - a. Group Dynamics and Team Building
 - b. Democratic Group Leadership
 - c. Importance of Groups
 - d. Types of Groups
 - e. Organizing Groups
 - f. Group Dynamics, Development, and Discussion

4. Conducting Successful Meetings.
 - a. Skills Developed by Bring an Officer
 - b. Basic Meeting Functions
 - c. Characteristics of a Good Meetings
 - d. Planning and Preparing for Meetings
 - e. The Meeting Room
 - f. Committees
 - g. Informative and Motivational Meetings
 - h. Group Member Involvement
 - i. Officer and Member Responsibilities
 - j. Developing a Program of Activities

AXED 2130. Early Field-Based Experience

Course Description

Firsthand view of the roles of professional educators through field experiences with Cooperative Extension or other government agencies. Includes 4 weeks of classroom instruction and 30 hours of observation in a work setting.

Student Learning Outcomes

As part of this class, you will be able to:

1. Identify successful characteristics, tips and strategies that an agricultural education professional may use as part of their program.
2. Identify key components of an agricultural education program.
3. Actively observe a local agricultural education program.
4. Identify ways that your agency program networks and interacts with clientele and community.

AXED 2140. Early Field-Based Experience in Agricultural and Technology Education

Course Description

First-hand view of the roles of professional educators through field experiences in a secondary agricultural or technology education setting. Includes 4 weeks of classroom instruction and 30 hours of observations in a classroom setting. Consent of Instructor required.

Student Learning Outcomes

1. Explain student outcomes related to agricultural education.
2. Examine the role of agriculture teachers to accomplish the purpose of agricultural education.
3. Explain the relationship between motivation and learning.
4. Describe how teachers facilitate learning in an agriculture classroom.
5. Reproduce the three-circle model of agriculture education.
6. Provide an example of instruction in each of the three circles and instruction that happens in more than one circle.
7. Deliver instruction in a classroom or laboratory setting.
8. Deliver instruction related to FFA.
9. Deliver instruction related to SAEP.

AXED 2996. Topics

Course Description

Specific subjects and credits to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

Agronomy (AGRO)

AGRO 1110C. Introduction to Plant Science

Course Description

This is an introductory course for understanding plant science. Basic biological, chemical, and physical principles of various plants are covered. The focus of this course is on plants/crops used in agriculture production of food and fiber as well as pasture and range plants. Plant taxonomy and soil properties will also be discussed.

Student Learning Outcomes

1. Describe the basic structure of plants including growth and function.
2. Define photosynthesis, respiration, and translocation.
3. Utilize plant taxonomy techniques to identify various plants.
4. Classify soils based on their chemical and physical properties.
5. Explain how different soil properties affect plant growth and sustainability.

AGRO 2160. Plant Propagation

Course Description

Same as HORT 2160.

Practical methods of propagating horticultural plants by seed, cuttings, layering, grafting, division and tissue culture. Examination of relevant physiological processes involved with successful plant propagation techniques

Student Learning Outcomes

1. Practical methods of propagating plants by seed, cuttings, layering, grafting, division, and tissue culture through experiential, "hands-on" laboratories.
2. Relevant physiological principles involved in propagating horticultural plants through lecture discussions and readings.

AGRO 2996. Topics in Agronomy

Course Description

Specific subjects and credits to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

Air Force Aerospace Studies (AFAS)

AFAS 1120. Aerospace Studies I

Course Description

Survey course designed to introduce students to the U.S. Air Force and U.S. Space Force and provides an overview of the basic characteristics, missions, and organization of the Air Force and Space Force.

Student Learning Outcomes

1. Assess the role of self-mastery as a critical component of Department of the Air Force (DAF) professionalism and its importance for effective followership and leadership.
2. Illustrate the relationship between teamwork, problem-solving, and the DAF culture of innovation by engaging in collaborative discussions and activities.

AFAS 1121. Aerospace Studies II

Course Description

Survey course designed to introduce students to the U.S. Air Force and U.S. Space Force and provides an overview of the basic characteristics, missions, and organization of the Air Force and Space Force.

Student Learning Outcomes

1. Integrate the historical contributions of the Department of the Air Force (DAF) to national security with contemporary leadership challenges in aerospace operations.

AFAS 1192L. Leadership Laboratory I

Course Description

Dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air and Space Force second lieutenants and complement the AFROTC academic program.

1. Demonstrate leadership skills in dynamic, team-based environments through problem-solving exercises, group drills, and simulated field operations to prepare for second lieutenant roles.

AFAS 1292L. Leadership Laboratory II

Course Description

Dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air and Space Force second lieutenants and complement the AFROTC academic program.

Student Learning Outcome

1. Execute advanced leadership strategies during simulations, demonstrating adaptability and effective problem-solving in high-stress environments.

AFAS 2192L. Leadership Laboratory III

Course Description

Dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air and Space Force second lieutenants and complement the AFROTC academic program.

Student Learning Outcomes

1. Engage in experiential leadership and management exercises that develop competencies needed for command roles in the Air and Space Force.

AFAS 2229. Field Training Fitness Prep

Course Description

Prepares cadets for leadership through various methods of military fitness training. Course instills Air Force physical fitness standards and provides training in all aspects of health, including physical fitness, nutritional awareness, stress management, and other aspects of health. Requires lab activities in the fitness center.

Student Learning Outcomes

None Available

AFAS 2250. Aerospace Studies III

Course Description

Provides a fundamental understanding of both leadership and team building. The lessons and course flow are designed to prepare cadets for field training and leadership positions in the detachment.

Student Learning Outcomes

1. Analyze leadership and team-building principles and apply them in scenarios designed to prepare cadets for field training and leadership roles within the detachment.
2. Apply conflict management techniques and team-building activities to effectively manage diverse team dynamics in operational settings.

AFAS 2251. Aerospace Studies IV

Course Description

Provides a fundamental understanding of both leadership and team building. The lessons and course flow are designed to prepare cadets for field training and leadership positions in the detachment.

Student Learning Objectives

1. Evaluate team building and leadership strategies, identifying strengths and areas for improvement in real-world scenarios to prepare for field training leadership roles.
2. Lead conflict management and team-building activities that reflect operational challenges in the field, ensuring effective team performance under pressure.

AFAS 2292L. Leadership Laboratory IV

Course Description

Dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air and Space Force second lieutenants and complement the AFROTC academic program.

Student Learning Outcome

1. Engage in experiential leadership and management exercises that develop competencies needed for command roles in the Air and Space Force.

Artificial Intelligence Machine Learning (AIML)

AIML 1150. Artificial Intelligence and Society

Course Description

This course provides a broad, interdisciplinary, and non-technical introduction to the fundamental concepts of Artificial Intelligence (AI), its historical development, its transformative impact on various aspects of society, as well as how AI systems perceive, reason, learn, and interact with humans. Students will learn to use artificial intelligence responsibly, understanding both its potential and the ethical considerations surrounding its use. The course emphasizes communication, critical thinking, creativity, digital literacy, and responsible engagement with AI in a global context.

Student Learning Outcomes

1. Demonstrate an understanding of what AI is in general.
2. Analyze and evaluate the impact of AI on individuals and society with particular regard for ethical use of AI, including environmental impacts.
3. Recognize how AI systems are designed by humans to process information, identify patterns, and serve societal needs and wants.
4. Understand how AI's training data, prompts, and personalization can contribute to biased outputs.
5. Understand the differences between AI outputs and human thinking and reasoning.
6. Employ effective and creative processes when using generative AI.
7. Engage in reasoned civil discourse regarding AI and appropriate and ethical uses of AI.

AIML 1310. Introduction to Artificial Intelligence

Course Description

Cover basic concepts and applications of artificial intelligence (AI), including AI project cycles. Focus on issues surrounding AI including ethics, bias, culture, regulations, and professional expectations.

Student Learning Outcomes

1. Identify and describe emerging technologies in AI and future impacts.
2. Summarize basic function and structure of AI systems.
3. Describe issues relating to ethics, bias, design, training, and social impact of AI systems.
4. Identify and describe the stages and significance of the AI project cycle.
5. Create AI models, utilizing training and testing with datasets.

AIML 1320. Fundamentals of Artificial Intelligence

Course Description

Compares and applies machine learning solutions for computer vision, natural language processing, and data analytics.

Student Learning Outcomes

1. Apply an AI solution given a test data set and desired outcome.
2. Evaluate AI data sets.
3. Explain AI training and evaluation processes.
4. Plan the construction of a new AI solution given a problem to solve.

AIML 2310. Deep Learning

Course Description

Deep learning mimics the human brain enabling systems to make predictions with incredible accuracy. Students in this course identify the main deep learning algorithms and applications.

Student Learning Outcomes

1. Identify deep learning algorithms.
2. Choose deep learning algorithms for specific applications.
3. Review and recommend applications that use deep learning.

AIML 2320. Natural Language Processing

Course Description

Natural language processing machines understand and respond to text or voice with text or speech of their own. Students in the course identify the main natural language processing algorithms and applications.

Student Learning Outcomes

1. Identify natural language processing algorithms.
2. Choose natural language algorithms for specific applications.
3. Review and recommend applications that use natural language processing.

AIML 2330. Generative and Agentic AI

Course Description

This course introduces students to the foundations and applications of generative and agentic artificial intelligence. Students explore how modern models create text, images, and code, and how AI agents plan, use tools, and interact autonomously with digital environments. Through hands-on exercises, students learn prompt engineering, model mechanics, agent architecture, and multi-agent collaboration. Ethical considerations, safety, and real-world applications are emphasized throughout. The course culminates in a capstone project where students design and build either a generative AI system or a functional AI agent.

Student Learning Outcomes

1. Explain foundational concepts of generative and agentic AI, including models, mechanisms, and real-world applications.
2. Apply prompt engineering techniques and advanced prompting strategies.
3. Analyze how generative models work internally (neural nets, transformers, embeddings, tokenization) and communicate this clearly.
4. Evaluate, design, and implement generative AI use cases across modalities (text, code, images, audio, video) responsibly.
5. Explain agentic AI principles (autonomy, memory, planning, tool use) and contrast with generative AI.
6. Design, build, and evaluate AI agents (including multi-agent systems) with modern frameworks.
7. Critically assess ethical, safety, and governance issues for generative and agentic AI.
8. Create and present a capstone project applying generative or agentic AI to real-world problems or creative work

American Heart Association (AHAC)

AHAC 1110. Basic Life Support for Health Care Providers

Course Description

This class covers life-saving methods for healthcare professionals that include adult, infant, and child resuscitation, prevention of disease transmission and the use of a bag-valve mask. Upon successful completion of this course, students will receive BLS-CPR certification through the American Heart Association

Student Learning Outcomes

1. Successfully demonstrate competency in all required skills
2. Successfully demonstrate competency in the three final skill scenarios.
3. Correctly answer at least 84% of the written examination.

AHAC 2110. Basic Life Support for Health Care Providers Instructor

American Sign Language (SIGN)

SIGN 1110. American Sign Language I

Course Description

American Sign Language I is an introductory level language course in the language of the American Deaf Culture. Content includes ASL vocabulary and conversational skills; linguistic features of ASL; and skills in narrative/storytelling. In-class activities, comprehension and expressive examinations, narrative and storytelling assignments in addition to semester projects are venues for students to demonstrate their learning. In addition, Deaf Culture and Deaf Community issues are addressed.

Student Learning Outcomes

1. Engage in basic conversations using ASL, such as introducing oneself, exchanging personnel information, and talking about one's surroundings.
2. Demonstrate the use of grammatical structures, including spatial referencing, use of classifiers, role shifting, ASL syntax, and non-manual signals (NMS).
3. Demonstrate clear sign production using an understanding of sign parameters: hand shapes, movement, location, palm orientation, and NMS in targeted lexicon.
4. Demonstrate the use of basic ASL vocabulary and expressions necessary for conversations about real-life situations.
5. Evaluate and provide feedback concerning peers' and one's own uses of ASL.
6. Develop culturally appropriate behaviors and conversation strategies within a variety of contexts for interacting with people who are Deaf.
7. Demonstrate effective use of comprehension and expressive ASL skills through narrative and/or storytelling activities.
8. Describe issues of the American Deaf community and Culture.

SIGN 1120. American Sign Language II

Course Description

American Sign Language II is a continuation course that builds on concepts and skills developed in American Sign Language I. Students gain further exposure to ASL structure and grammar, and Deaf Culture and the Deaf community. Emphasis is on increasing students' ability to comprehend other signers and express themselves with more elaboration when conversing or presenting in ASL.

Student Learning Outcomes

1. Further develop basic conversational skills in ASL, taking on more complicated topics.
2. Apply knowledge of ASL grammar, including classifiers, spatial referencing and agreement, role shifting, and non-manual markers.
3. Develop ASL vocabulary, fingerspelling, number, narrative and storytelling skills.
4. Evaluate and provide feedback concerning peers' and one's own uses of ASL.
5. Demonstrate effective use of comprehension and expressive ASL skills through conversation, discussion, narrative and/or storytelling activities.
6. Demonstrate knowledge and appreciation of the American Deaf community and ASL.
7. Through first-hand experience in the American Deaf community and ASL, relate and reflect on perspectives of the community.

SIGN 1130. Introduction to Deaf Studies

Course Description

Provides an overview of cultural issues and historical perspectives, education for deaf and hard-of-hearing children, laws pertaining to educational choices, and rights of the deaf. The course also addresses sociological influences contributing to life for deaf persons in America and explores the role of technology, organizations, and relevant legislation. Additional topics include etiologies, demographics and communication methods.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the significant developments in the history of deafness.
2. Discuss the contributions made by deaf and hearing towards a stronger Deaf Community.
3. Contrast the cultural perspective of deafness to the broader cultural view.
4. Describe multiple causes of deafness and their impact on communication, the family, and education.
5. Describe the history of current educational programs & trends in America.
6. Recognize role and contributions of significant organizations and legislation in empowering the Deaf Community.
7. Utilize the basic technologies that enhance communication access for deaf and hard of hearing persons.

SIGN 1135. Introduction to ASL Professional Interpreting.

Course Description

A foundation course that introduces the profession of sign language interpreting. This course discusses the role, function, responsibilities, and communication strategies of ASL interpreters, including the situational application of national standards and the Code of Professional Conduct. It will also include major topics including history, organizations, and ethics, interpreting settings, certification, career information and current trends in the field.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Outline the history of the profession of Sign Language interpreting.
2. Identify the current federal and NM state laws affecting interpreters.
3. Define the rights and responsibilities of both the hearing and deaf consumers of interpreting services.
4. Apply RID Code of Ethics to interpreting situations.
5. Define terminology relevant to the field of interpreting.

6. Identify professional career goals.

SIGN 1140. Basic American Sign Language Linguistics

Course Description

An introduction to grammar and linguistic systems of American Sign Language (ASL). The course will focus on proper usage of ASL within Deaf culture and will also expose students to phonology, morphology, lexicon, syntax, discourse, and language acquisition, aspects of using sign language, and how visual languages differ from and are similar to spoken language.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the history and linguistic origins of ASL, as well as other visual languages.
2. Identify key dialectal variations of language usage between ASL and English, such as accents and word order.
3. Describe and distinguish the differences between morphological (word forms) and syntactical (word order) components within ASL.
4. Demonstrate the ability to distinguish between semantics (word meaning) and contextual connotations of ASL and English and apply proper language in translation.
5. Apply proper grammar, usage, and syntax of ASL in a variety of settings.

SIGN 2110. American Sign Language III

Course Description

This is an intermediate level course in American Sign Language (ASL). Expected areas of intermediate skill and knowledge development include: language comprehension and production, conversational use, narratives, ASL language features and further knowledge of and interaction with Deaf culture and the Deaf community.

Student Learning Outcomes

Through in- and out-of-class activities, assignments and projects, the student will:

1. Demonstrate intermediate ASL vocabulary, conversation and narrative/storytelling skills.
2. Demonstrate fundamental ASL features including visual/spatial orientation, constructed dialogue and action, spatial referencing, classifiers, non-manual behaviors and syntax/word order.
3. Demonstrate appropriate use of cultural behaviors and conversational strategies.
4. Translate written and spoken English to ASL and vice versa.
5. Self-evaluate and provide feedback to peers concerning ASL usage.
6. Examine the culture of the American Deaf community through engaging in community activities and its language.

SIGN 2120. American Sign Language IV

Course Description

American Sign Language (ASL) IV is a continuation of the intermediate level ASL III course. Emphasis is on further development of students' comprehension and production skills through a more advanced study of ASL discourse, grammatical structures, and semantics. Creative use of expression, classifiers, body posture, and signing space will be practiced along with videotext viewing and video production. Topics in Deaf culture and interaction with the Deaf community will be integral to the course.

Student Learning Outcomes

1. Demonstrate advanced-intermediate level comprehension and production skills incorporating complex ASL grammatical features, including classifiers, non-manual signals, role shifting, and spatial organization.
2. Identify and understand ASL idioms/expressions and how they are used in ASL discourse.
3. Comprehend and discuss ASL texts on a variety of topics, signed by a variety of Deaf people.
4. Demonstrate narrative competence through signed presentations, both prepared and spontaneous.
5. Demonstrate an understanding of ASL-English equivalents through translation tasks.
6. Use self-evaluation and peer/instructor feedback to revise one's video ASL texts.

7. Develop cultural competence through exposure to and reflection on Deaf culture.

SIGN 2125. Introduction to Signed Language

Signed languages and signing systems frequently used by deaf people are discussed. Cross-linguistic and cross-cultural information on ASL will be discussed. Focus is on ASL, signed English and fingerspelling, and the most common manually coded signed systems. In addition to the acquisition of basic vocabulary and grammar, this course emphasizes the knowledge of the characteristics, values and cultural and linguistic diversity of the Deaf Culture.

Student Learning Outcomes

1. Students will effectively communicate at a basic level with Deaf/Hard of Hearing individuals representing a cross-section of the deaf community.
2. Students will demonstrate knowledge of the basic education and access issues faced by the American Deaf community.
3. Students will demonstrate knowledge of the differences between American Sign Language and manually coded English systems.
4. Students will identify basic linguistic principles and describe the history of the recognition of American Sign Language.
5. Students will describe the cultural diversity and dynamics of the Deaf Community.

SIGN 2130. Fingerspelling

Course Description

This course will assist the student in acquiring fluent fingerspelling through the use of intense receptive and expressive drills. Lexical borrowing and the semantic and morphological categories involved in restructuring English finger spelled citation forms will be studied. Recordings of a variety of fingerspelling styles will be presented to ensure that the students acquire a comprehensive background. Students will also be recorded to allow for self-analysis of their fingerspelling skills.

Student Learning Outcomes

1. Students will demonstrate predictive strategies for the comprehension of finger spelled words and advanced numerical systems based on linguistic, cultural, and contextual information.
2. Students will demonstrate fluency in comprehension and production of finger spelled words and numbers.
3. Students will demonstrate comprehension of finger spelled words and the numerical systems in ASL.
4. Students will describe current research on the perception and production of fingerspelling skills.

SIGN 2135. Fingerspelling and Numbers

Course Description

Provide students with a general knowledge of various techniques of hand fingerspelling and number signing skills. Concentration on receptive and expressive skills along with focus on methods, theory, and skill development including speed, dexterity, clarity, and loan signs. The course also includes advanced use of numbers, prefixes, suffixes, and polysyllabic words.

Student Learning Outcomes

1. Demonstrate fluency in comprehension and production of finger spelled words and numbers.
2. Demonstrate comprehension of finger spelled words and the numerical systems in ASL.
3. Demonstrate strategies for the comprehension and incorporating finger spelled words and advanced numerical systems based on linguistic, cultural, and contextual information.
4. Describe current research on the perception and production of fingerspelling skills.

SIGN 2140. American Sign Language Classifiers

Course Description

An advanced course in the American Sign Language (ASL) morphemic system known as classifiers. The course is for advanced signers or interpreters with extensive interpretation experience who wish to increase classifier competence. Instruction involves a systematic and sequential approach to teaching classifiers. Students learn how to create mental pictures of what needs to be signed during interpretation by developing the basic building blocks of successfully signed narratives with classifiers. The course enhances signers' existing vocabulary and grammar with classifiers to assist in their ability to conjure up mental representations of narratives effectively in three-dimensional images.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify examples of handle, entity, and trace classifiers in short videos of ASL discourse.
2. Demonstrate skill in using handle, entity, and trace classifiers by presenting short passages in ASL which incorporate one or more of these types of classifiers.
3. Recognize and describe the differences between the non-manual signals (NMS) used to show emotion and those used to provide linguistic information.
4. Produce one or more short stories in ASL that incorporate several examples of handle, entity, and trace classifiers and that also effectively use NMS and character role-shift.
5. Summarize a short story in either paraphrased ASL or written English that incorporates examples of handle, entity, and trace classifiers.

SIGN 2145. Advanced Fingerspelling, Numbers, and Classifiers

Course Description

Further studies in advanced fingerspelling, numbers, classifiers, and non-manual grammatical signals, including development of techniques with concentration on receptive and expressive skills. Additionally, the class focuses on the use of face, eyes, and head to convey grammatical information and continues work on methods, theory, and skill development with signs.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate knowledge of the techniques of fingerspelling, numbers, and classifiers while incorporating them into ASL (structure and grammar).
2. Demonstrate the use of fingerspelling, numbers, and classifiers with other signers.
3. Analyze and compare various techniques of fingerspelling, numbers, and classifiers.
4. Produce one or more short stories in ASL that incorporate several examples of all components of classifiers, fingerspelling, and numbers.

SIGN 2150. Lexical Semantics for Transliteration

Course Description

Articles, videotapes, and supplemental materials will be used to demonstrate Various codes for English; these codes may be contrasted with the natural language of ASL. Periodically, students will be videotaped to aid in the analysis of their transliteration production.

Student Learning Outcomes

1. To examine polysemy of the English lexicon that transliterators must be concerned with, ranging from semantic prototypes to word meanings that are essentially fluid.
2. To provide class participants with the opportunity to improve their ability to sign and speak simultaneously while using appropriate American Sign Language grammatical features.
3. To provide an overview of different signed systems that attempt to visually represent English. The employment of signs created to represent English tenses, suffixes, prefixes and syllables are briefly examined and discussed.
4. To explore metonymy and metaphor in American Sign Language and to determine how this mapping can assist with the interpretation of signed English transliteration.

SIGN 2210. American Sign Language I

Course Description

This course in American Sign Language is designed to develop the students' receptive, expressive and conversational skills. Students will also develop narrative skills in application of these receptive and expressive skills. ASL vocabulary and linguistic features are introduced, as well as fundamental concepts about the Deaf community and culture.

Student Learning Outcomes

1. Students will demonstrate emerging expressive skills through production of targeted signs, fingerspelling, numbers, and selected ASL grammatical structures through in-class activities, homework assignments, and narratives.
2. Students will demonstrate emerging receptive skills development through in-class activities, and a final exam.
3. Students will demonstrate knowledge about the Deaf community, ASL grammar, and Deaf culture from textbooks, lectures, and videos through in-class activities, workbook assignments, and written exams.

SIGN 2214. Introduction to Deaf Culture & the Deaf Community

Course Description

Provides a broad introduction to concepts related to the Deaf, Deaf culture and the languages of people withing Deaf communities in particular and Deaf society in general. The course examines current issues and languages in the Deaf community, including technology and diversity.

Student Learning Outcomes

1. Discuss the characteristics of North American Deaf/Hearing communities.
2. Recognize and define aspects of power and oppression including cultural appropriation, hearing privilege, audism, linguisticism and ableism.
3. Examine the labels and stereotypes of Deaf people in historical context (cultural vs. pathological perspectives on Deaf people).
4. Identify the Deaf community's historical events, person(s), and organizations that impact the Deaf community.
5. Explore the traditions of Deaf people – Deaf history, Deaf folklore, Deaf Art/De'VIA, ASL literature and Deaf literature.

SIGN 2220. American Sign Language Level II

Course Description

American Sign Language II is a continuation course that builds on concepts and skills developed in American Sign Language I. Students gain further exposure to ASL structure and grammar, and Deaf Culture and the Deaf community. Emphasis is on increasing students' ability to comprehend other signers and express themselves with more elaboration when conversing or presenting in ASL

Student Learning Outcomes

1. Further develop basic conversational skills in ASL, taking on more complicated topics.
2. Apply knowledge of ASL grammar, including classifiers, spatial referencing and agreement, role shifting, and non-manual markers.
3. Develop ASL vocabulary, fingerspelling, number, narrative and storytelling skills.
4. Evaluate and provide feedback concerning peers' and one's own uses of ASL.
5. Demonstrate effective use of comprehension and expressive ASL skills through conversation, discussion, narrative and/or storytelling activities.
6. Demonstrate knowledge and appreciation of the American Deaf community and ASL
7. Through first-hand experience in the American Deaf community and ASL, relate and reflect on perspectives of the community.

SIGN 2996. Topics in American Sign Language

American Studies (AMST)

AMST 1105. Introduction to American Studies

Course Description

This course is an interdisciplinary exploration of U.S. history, society, thought, and imagination with special focus on the Rio Grande Valley as a microcosm of the nation. This course will examine the social construction of identity and difference, the culture of everyday life, and local and global perspectives of the United States, historically, in our present moment, and with a look toward the future. This course will introduce students to prevalent theories and methods within the discipline including, but not limited to critical race, feminist, and post-colonial theory.

Student Learning Outcomes

At the conclusion of the course, you should be able to:

1. Demonstrate critical thinking in the evaluation and analysis of textual, visual, and aural sources.
2. Identify and apply significant terms, concepts, and methods in the interdisciplinary field of American Studies.
3. Describe and analyze patterns and the ongoing work of understanding and appreciating the diversity of the American experience.

AMST 1110. Introduction to Environmental & Social Justice

Course Description

An introduction to the socially and politically constructed values directing Americans' attitudes toward nature, science and technology and to the impacts of those attitudes on built and natural environments regionally, nationally and globally.

Student Learning Outcomes

At the conclusion of the course, you should be able:

1. To articulate how your beliefs, assumptions, and values related to science, technology and the environment are influenced by factors such as politics, economics, culture, biology, and history.
2. To identify, describe and explain how science, technology and the environment are influenced by social structures, institutions, and processes within the contexts of complex and diverse communities.
3. To demonstrate critical analytic skills, using appropriate examples, critical reasoning, and diverse evidence to support their positions and relate these understandings to the reciprocal interactions between self, society, and the environment.
4. To explain issues, concepts and key words such as climate change, nature/culture, race, gender, technological determinism, doubt, evolution, etc., by exploring their contemporary usages while situating them in diversity of experiences across a range of historical periods and cultural perspectives.
5. To relate contemporary issues, social processes and models of thought, to broader political, economic, cultural and historical contexts. Draw from these social and historical contexts to critically evaluate contemporary problems, issues and modes of expression related to science, technology and the environment.

AMST 1120. Introduction to Gender, Sexuality & US Empire

Course Description

While Gender Studies is truly a vast field of inquiry, there is great symmetry in the ways in which feminist scholars have been engaged with questions as to how disciplinary apparatuses and discourses shape and construct "gender." This course will begin with the process of peeking into this exciting scholarship, focusing on the "intersectional ties" of identity—that is, how gender has been produced in and through other categories of identity, such as race, class, sexuality, and nation. While there are numerous ways to structure such a course, this course will maneuver through the field of Gender Studies with an eye toward feminisms, race, and U.S. Empire through processes of incarceration, colonialism, and war). In this course, we will explore how the "intersectional ties" of identities have been constructed within a range of institutions, discourses, and processes, such as law, medicine, popular culture, nationalism, colonialism, and empire. Throughout, we will pay close attention to how discourses normalize certain types of identities, practices, and behaviors, and mark others as deviant or unnatural. And, of course, we will look for strategies to contest these productions. This will necessarily place us within key debates in feminist studies of power, agency, activism, and justice at the individual, community, national, and transnational levels, and allow us to end the course by interrogating the role of Gender Studies in regard to current U.S. occupation in the Middle East and Native America. This course will provide a strong foundation for you to pursue studies in feminist, queer, critical race, and postcolonial theories.

Student Learning Outcomes

1. To familiarize you with key concepts in feminist scholarship, such as social construction, identity, intersectionality, difference, power, agency, normativity.
2. To help you obtain a critical analysis as to how these concepts are deployed within different institutional and disciplinary discourses.
3. To provide a strong understanding of the histories and theories of the intersectionality of identities and to gain a critical analysis as to the relationships between sex, gender, sexuality, race, class, and nation.
4. To interrogate the norms of whiteness, heterosexuality, middle-class, and U.S. nation-state (particularly via reigning discourses of citizenship, rights, and democracy) from diverse points of postcolonial, racial, class, and LGB TQ writing and analysis.
5. To introduce you to the bodies of study that encompass "Gender Studies," such as women of color studies, transnational feminist studies, queer studies, LGB T studies, postcolonial and critical race theories.
6. To enrich your reading skills and teach you how to read thoughtfully and productively in ways that allow you to locate and engage with the authors' arguments, and how to reach your own conclusions based on a thorough understanding of the "text" (broadly understood).

AMST 1130. Introduction to Politics in Popular Culture

Course Description

This course considers a range of theoretical approaches to the study of popular culture, including cultural studies and feminist theory as well as key concepts and key debates in the study of popular culture. It explores the ways popular culture is implicated in the formation of social determinants such as ethnicity, race, gender, class, and sexuality and conversely, how these social determinants are implicated in the formation of popular culture. The course also considers the ways in which popular culture serves as a site of ongoing political struggle. The aim of the course is to provide students with a critical vocabulary to make sense of the broader significance and relevance of popular culture—why popular culture matters. To accomplish this, we will investigate a number of popular expressive forms including magazines, fandom, digital music, and hip hop.

Student Learning Outcomes

At the end of the course, students should be able to

1. Identify what are considered major approaches to the study of popular culture.
2. Identify key concepts and key debates in the study of popular culture.
3. Articulate how the study of popular culture cannot be divorced from politics and power relations.

AMST 1140. Introduction to Critical Race and Indigenous Studies

Course Description

This course offers an introduction to the field of American Studies through an interdisciplinary examination of race, class and ethnicity in the United States and in a global context. Using a schedule of keywords, we will engage a range of central themes and concerns. We will examine histories of injustice, and resistance to injustice. Readings and assignments encourage students to notice the privilege and oppression at the core of U.S. society. The class will challenge the widely accepted assumption that we as a nation have moved beyond race and racism. Through readings, films, online sources, and our assignments, this course aims to increase our knowledge of inequity in our society, and the impact of those inequities on various societies and individuals.

Student Learning Outcomes

As a result of this course, successful students will be able to:

1. Demonstrate knowledge of information sources on race, ethnicity and class.
2. Demonstrate your understanding of the issues of race, class and ethnicity in America.
3. Demonstrate your understanding and appreciation of regional diversity in the U.S.
4. Define racial and ethnic diversity globally and its consequences.
5. State a hypothesis on race, ethnicity and/or class and write a research paper on the topic of your choice.
6. Discuss cultural competency as a lifelong activity.

AMST 1150. Introduction to Southwest Studies

Course Description

This course introduces the complex histories, social issues, and cultural experiences of peoples of the southwestern United States. Course materials and discussions also demonstrate the possibilities of interdisciplinary study of regional American culture. It is multicultural in content and multidisciplinary in methodology. We will examine cross-cultural relationships among the peoples of the Southwest within the framework of their expressions and experiences in art, culture, religion; social and political economy.

Student Learning Outcomes

Upon the completion of this course will:

1. Be able to identify how historical social, economic, political, religious and ecological factors shape communities in the southwest borderlands region and those communities' relation to the United States, Mexico, and the world.
2. Comprehend how people including but not limited to indigenous and immigrant communities in the Southwest use culture, art, and politics to conceptualize, reinforce, and contest the social and ecological factors that shape them and their communities.
3. Be able to analyze and compare the historic and contemporary cultural expressions of the Southwest.
4. Be able apply knowledge of southwest studies through the conduct of interdisciplinary research method.

AMST 1160. Environment, Science, & Technology

Course Description

This course examines how theoretical concepts of environment, science, and technology are bound up with everyday practices and broader understandings of nature and society (i.e., bodies, natural resources, race, gender, and sexuality). This course is interdisciplinary in its approach.

Student Learning Outcomes

Students will be able to:

1. Describe the social construction of such concepts as "environment," "science," and "technology"
2. Identify cultural assumptions underlying notions of scientific progress, environment, green, sustainability Explain how concepts of gender, race, sexuality, disability and class form and are formed by environment, science and technology.
3. Outline the roles of environment, science and technology in the creation of political and economic policies.

AMST 1170. Introduction to Asian American Studies**Course Description**

This course explores the diverse histories and contemporary social, cultural, and political experiences of Asian Americans and Pacific Islanders in the United States. We will take an interdisciplinary approach as we examine the formation of “Asian American,” who is included and excluded from the category, how it functions as a diverse network of solidarity, as well as an imperfect racialization whose meaning shifts over time. The course introduces students to the key scholarly works, theories, and frameworks that inform the field of Asian American Studies and considers the political stakes of academic research on Asian American and Pacific Islander communities. We will focus on the intersecting categories of race and ethnicity, gender, sexuality, and class as well as major themes and threads including U.S. imperialism and colonialism, migration, labor, popular culture, citizenship, and racialization among others. The course provides the opportunity to examine the cultural and political formations of Asian American and Pacific Islander people and communities which encompass over 50 cultures and societies including but not limited to those of East, South, Southeast, Western Asia, North Africa, and the Pacific Islands.

Student Learning Outcomes

1. Discuss the history of Asian Americans in relation to the United States and empire.
2. Articulate the historical formation of Asian American studies and the key concepts, theories and debates that constitute the field.
3. Examine Asian American history and contemporary politics through a decolonial lens.
4. Critically analyze media through the lens of Asian American cultural theory.
5. Develop a research topic related to Asian American studies.

AMST 1996. Topics in American Studies**Course Description**

Varies

Student Learning Outcomes

Varies

AMST 2110. American Life and Thought**Course Description**

This course introduces students to cultural studies and the alternative interpretations of American history and culture. Particular attention will be paid to indigenous history, country music, tattoos, and American mobilization for war. Course materials and lectures will frequently utilize cultural traditions to explore key concepts and issues. Additionally, this course will require students to assume an analytical and critical perspective on academic interpretive models. We will read texts that exemplify critical Marxist, feminist, and reflexive anthropological approaches.

Student Learning Outcomes

At the end of this course students will be able to do the following:

1. Summarize the major economic, political, social and cultural forces influencing identity and experience in the United States.
2. Explain the multidisciplinary diversity and intellectual rigor that make up the field of American Studies.
3. Develop compelling and logical questions and arguments about American life and thought.
4. Interpret, understand, and engage a variety of texts within cultural, social and historic contexts.
5. Gather, analyze, and evaluate information from a variety of sources and media.
6. Compose texts in a variety of media formats.

Agriculture (AGRI)

AGRI 1110. Introduction to Agricultural Education**Course Description**

An introduction to teaching agriculture with emphasis on opportunities for graduates and expectations of the ENMU Teacher Education Program. Emphasis placed on history, pedagogy and youth program organization.

Student Learning Outcomes

1. Investigate the historical development of agriculture education and the FFA student leadership organization.
2. Discuss the importance of supervised agriculture experience within agricultural education.
3. Students are expected to be proficient in CDE knowledge and practice.
4. Develop the student's understanding of instructional methods and teaching methodology.
5. Students will participate in a practice field-based teaching of agriculture education.

AGRI 1120. Introduction to Dairy**Course Description**

This course is designed to provide a basic understanding of the dairy industry, milk composition, production, marketing, dairy cattle breeding, feeding, housing and dairy farm management.

Student Learning Outcomes

1. To develop an appreciation for the value of milk to humans and the scope and economic importance of the dairy industry.
2. To create a better understanding of the basic characteristics of the dairy cow and her environment.
3. To introduce the basic principles of dairy cattle management and the resources which are the foundation for improvement in the dairy industry.

AGRI 1210. Rural Buildings and Materials**Course Description**

This class will focus on introductory and advanced topics in building materials, fabrication and project development. This class will also integrate aspects of the teaching of agriculture mechanics and supervising project development in a secondary school setting. Many of the skills learned within this class can be applied to tasks in the home.

Student Learning Outcomes

1. Identify safety and maintenance procedures in an ag mechanics laboratory setting.
2. Identify and describe the use of tools and equipment in the ag mechanics laboratory.
3. Utilize tools and equipment to in the ag mechanics laboratory.
4. Apply knowledge of carpentry to construct small scale projects.

5. Apply knowledge of electrical principles to wire circuits.
6. Apply knowledge of plumbing skills in small scale projects.

AGRI 1220. Agricultural Power and Machinery

Course Description

Advanced studies in mechanization skills for agricultural operations. Agricultural engines and theory of combustion, fuel systems, governor systems, and electric principles will be discussed. Introduction to agricultural machinery will be addressed.

Student Learning Outcomes

Upon successful completion of this course, students should be able to:

1. Discuss the history of the internal combustion engine.
2. Explain engine classifications.
3. Identify engine parts and their functions.
4. Describe energy conversion principles and calculate horsepower.
5. Describe 4-stroke and 2-stroke engines cycle theory and operation.
6. Describe the differences between diesel and gasoline engines.
7. Explain engine compression and operation.
8. Describe the various fuel systems, governor systems, and electrical principles associated with engines.
9. Navigate agricultural machinery owner's manuals.

Animal Science (ANSC)

ANSC 1110. Animal Science Careers

Course Description

Introduction to scientific disciplines and career options in animal-agriculture career skill development, including resume preparation, networking, importance of internships, and leadership experiences in animal agriculture.

Student Learning Outcomes

1. Increasing the understanding of career opportunities in animal agriculture.
2. Gain a broad experience in the development of creative thinking about the career choices available in animal agriculture.
3. Apply the increased knowledge of career development in the career path and internship directions for each student.
4. Gain leadership experience that will be impactful for the student in their pursuit of a career in animal agriculture.

ANSC 1120. Introduction to Animal Science

Course Description

Survey of the livestock industry throughout the world. Basic management practices will be covered, including livestock selection, nutrition, reproduction, anatomy and marketing to the consumer. This course will also discuss animal behavior and welfare.

Student Learning Outcomes

1. Understand the role of farm animals in a global setting.
2. Describe the role of nutrition, breeding, behavior, welfare, and physiology of livestock in the world.
3. Explain the structure and organization of livestock industries.
4. Discuss concepts and terminology of the livestock industries as they relate to the global perspective.
5. Classify the overall management, care, marketing of animals, represented in the various livestock industries.

ANSC 1120L. Introduction to Animal Science Lab**Course Description**

Students will observe and participate in activities related to farm animal management and will include areas of livestock selection, nutrition, reproductive physiology, animal ID and animal health. This lab is required for animal science majors.

Student Learning Outcomes

1. To provide the students with an understanding of the principles, concepts and terminology of today's livestock industry.

ANSC 1120C. Introduction to Animal Science Lecture and Lab**Course Description**

This course is designed to provide an introduction to nutrients and their function in livestock animals. Basic feed identification, evaluation, and diet formulation will be discussed. The anatomy of the digestive tract of animals and their ability to utilize feedstuffs is presented. Classification, digestion, absorption, transport and metabolism of major nutrients required by animals are studied.

Student Learning Outcomes

Not Available

ANSC 1125. Equestrian Team Competition**Course Description**

Basic principles of equestrian team competition, including care and management of the riding horse, equitation equipment, and development of riding skills. Emphasis will be placed competition within the Intercollegiate Horse Show Association. Consent of Instructor required.

Student learning Outcomes:

1. Have a general knowledge of horses and basic horsemanship/equitation position.
2. Explain and demonstrate basic techniques of balance, control, and safety skills while being in contact and mounted on a horse.
3. Explain and demonstrate proper handling and safety around horses and the proper care of the stable and tack.
4. Be able to ride unassisted at the walk, jog, and lope in either English or Western tack.
5. Apply general knowledge of horsemanship and equitation to competitive equine events in a safe manner including equitation on the flat, equitation over fences, horsemanship, ranch riding and reining.

ANSC 1130. Western Equitation I**Course Description**

Basic principles of Western riding, including care and management of the riding horse, equitation equipment, and development of riding skills.

Student Learning Outcomes

Not Available

ANSC 1140. Introduction to Dairy Science

Course Description

Introduction to the basic aspects of dairy science and how to apply key concepts to the practical feeding and management of dairy cattle and production of dairy products. Students should also obtain an appreciation for the size and diversity of the dairy industry.

Student Learning Outcomes

1. Learn key concepts in dairy production and management.
2. Be familiar with terms used in production of milk and milk products.

ANSC 1160. Introductory Horse Science

Course Description

The light horse industry; breeds; introduction to feeding, breeding, marketing and management; handling and selecting horses for breeding and performance.

Student Learning Outcomes

1. Describe and identify breeds of horses, their characteristics and their uses.
2. Demonstrate knowledge of basic physiology of horses by recalling parts of the horse, including bones, muscle, tendons and ligaments. Also, by ageing horses via teeth, body condition scoring and taking vital signs.
3. Demonstrate safe and proper handling of horses.
4. Demonstrate comprehension of basic nutrition and feedstuffs by formulating/correcting diets in clinical and non-clinical situations.
5. Recall aspects of basic reproduction by calculating a stallion book and recalling appropriate procedures for breeding.
6. Create informative articles that seek to educate the lay horse person about a topic covered in class.

ANSC 1170. Introduction to Animal Metabolism

Course Description

Principles underlying the mechanisms of animal metabolism as they relate to production, maintenance, and health of animals.

Student Learning Outcomes

1. This course introduces the study of the physiology of life.
2. The first part of the course covers acids and bases and the chemical nature of organic compounds.
3. The second part of the course relates to the chemistry of biomolecules (nutrients) and summarizes the chemical reactions of life (metabolism).

ANSC 1180. Companion Animal Metabolism

Course Description

Examination of the historical, current, and potential future roles of companion animals in human society. Topics include animal domestication, breeds, exotic companion animals, the companion animal industry, and competitions and sports involving companion animals. Emphasis is on canine and feline species

Student Learning Outcomes

Upon successfully completing this course, students will be able to:

1. Discuss the theories regarding why, how, and when companion animals became domesticated.
2. Describe how selective breeding has optimized certain physiological and behavioral traits of companion animals in order to fulfill the needs of individual people and society.
3. Explain the concept of human-companion animal interaction (HAI) and the influence this bond has on human behavior, health, society, and government policy/laws.

4. Understand the breadth and economic impact of the rapidly expanding companion animal industry and the recent expenditure trends of pet owners.
5. Discuss the past and present uses of companion animals and theorize regarding the future uses of companion animals in society.
6. Be effective in searching for, and critically evaluating, scientific based resources.

ANSC 1500. Anatomy and Physiology for Protein Production

Course Description

This course provides an overview of anatomy and physiology in animals used for protein production in human and animal diets. The course is designed to provide the study of anatomy and physiological systems of cattle, sheep and swine.

Student Learning Outcomes

Upon completion of this course, students will:

1. Describe how physiology relates to anatomy.
2. Describe how physiology relates to various bodily functions.
3. Describe the different types of cells in the animal body.
4. Explain how cells make tissues.
5. Explain how various tissues make organs.
6. Describe the role of various organs within the body.
7. Describe the anatomy and physiology of the following animal body systems.
 - a. Skeletal System
 - b. Muscle Systems
 - c. Respiratory System
 - d. Cardiovascular System
 - e. Properties and Functions of Blood
 - f. Nervous System
 - g. Urinary System
 - h. Digestive System
 - i. Sensory Organs
 - j. Male and Female Reproductive Systems
 - k. Body Water

ANSC 1510. Equine Anatomy and Physiology

Course Description

This course presents to students a broad-based approach of horse anatomy and physiology with emphasis on the foot and lower leg. A comprehensive look at hoof and leg dissection is also covered in this course. The biomechanics of these structures are also presented.

Student Learning Outcomes

1. Identify the parts and regions of a horse.
2. Use terminology relating to anatomy and physiology.
3. Identify views of the horse.
4. Label the skeleton of a horse.
5. Name the bones, tendons, and ligaments found in the equine limb.
6. Illustrate the tendons and ligaments inside the foot.
7. Illustrate the tendons and ligaments of the leg.
8. Discuss the stay apparatus.
9. Illustrate the structures of a horse's foot on class projects and exams.

10. Identify various hoof conformations.
11. Identify various limb conformations.
12. Discuss the circulation of the horse's foot.
13. Illustrate the nerves found in the leg.

ANSC 1520. Health of Animal for Protein Production

Course Description

This course provides an overview of management concepts and techniques that sustain or improve the health and welfare of animals used in the production of animal protein.

Student Learning Outcomes

Upon completion of this course, students will:

1. Describe the normal range for heart rate, respiratory rate and temperature for cattle, sheep and swine.
2. Describe the variables contributing to a strong immune response.
3. Define clinical symptoms of nutritional imbalances.
4. Identify and describe common diseases of domestic animals.
5. Define stressors and mitigation strategies to minimize stress through management in animal protein production systems.
6. Design scenarios to improve the animal health and welfare of domestic animals.

ANSC 2110. Introduction to Equine Behavior & Training

Course Description

Basic principles, methods, and philosophies of handling, starting, and training the young Western performance horse, with emphasis on preparation for show and sale, evaluation of pedigree and conformation, and marketing through auction sales.

Student Learning Outcomes

1. Become proficient in the ability to train a young horse to prepare them for sale, and future training.
2. Realize the importance of pedigrees and conformation in determining the value of horses.
3. Become familiar with all aspects of organizing and conducting a horse auction.

ANSC 2120. Equine Management

Course Description

Introduction and application of the business skills necessary to effectively manage the equine operation. Students will learn how to use strategic thinking and sound business management practices to succeed in the demanding equine industry.

Student Learning Outcomes

1. Develop a working knowledge of the business principles needed to operate a successful entrepreneurial enterprise.
2. Increase the awareness of the need for business principles in the aggregate function of an equine operation.
3. Gain a greater perspective of accounting, economic and financial principles in an equine business operation.

ANSC 2130. Western Equitation II

Course Description

Intermediate principles of Western riding, including reading horse behavior, limbering-up exercises, and developing riding skills. Introduction to rollbacks, turnarounds and stops.

Student Learning Outcomes

1. Increasing the understanding of the student relative to equitation practices.
2. Increase the students' ability to apply principles of Western Equitation to applied settings across a broad spectrum of outlets.
3. Prepare the student to engage equine in a professional manner.

ANSC 2140. Introduction to Companion Animal Science

Course Description

Introduction to the care of common companion animal species. Species specific housing and nutrition are covered in the context of maximizing animal health and well-being and reducing disease

Student Learning Outcomes

Upon successfully completing this course, students will be able to:

1. Accurately use scientific terminology common to the companion animal discipline.
2. Compare and contrast the physiological similarities and differences between the various companion animal species studied in class.
3. Create dietary plans based on the nutritional needs of different companion animal species to optimize animal health and lifespan.
4. Identify symptoms of disease/injury at the early stages of illness in order to obtain Veterinary care and treatment as quickly as possible.
5. Design and construct species specific cages/vivarium to maximize animal well-being and health.
6. Educate others regarding providing the best possible care for a variety of companion animal species.

ANSC 2150. Management of Equine Operations

Course Description

Introduction and application of business skills necessary to effectively manage the equine operation. Students will learn how to use strategic thinking and sound business management practices to succeed in the demanding equine industry.

Student Learning Outcomes

1. Acquire a working knowledge of different sectors of the equine industry, including business practices, management and marketing skills.

ANSC 2160. Team Competition in Animal Science

Course Description

Training in team competition in the animal sciences. May be repeated for a maximum of 6 credits. May be repeated up to 6 credits. Consent of Instructor required.

Student Learning Outcomes

1. Evaluate market and breeding cattle, swine, sheep, horses, and goats using visual appraisal and performance records.
2. Refine the decision-making process through making logical, rational decisions based on information gathered.
3. Defend decisions and improve communication skills by presenting accurate, clear and concise oral and/or written reasons.

ANSC 2310. Introduction to Meat Science

Course Description

Fundamental aspects of the red meat industry. Lecture topics and laboratory exercises include the nutrient value of meat, meat preservation, meat safety, muscle structure and contraction, slaughter and processing of beef, lamb and pork, sausage manufacture, meat curing, meat cookery, and muscle and bone anatomy.

Student Learning Outcomes

1. Increasing the understanding of meat science applications across animal agriculture.
2. Increase the students' ability to apply principles of production to the industry perspective.
3. Apply the increased knowledge of meat science in a global situation.
4. Gain an understanding of the components involved in the development and processing of the red meat industry.

ANSC 2320. Principles of Animal Nutrition

Course Description

This course is designed to provide an introduction to nutrients and their function in livestock animals. Basic feed identification, evaluation, and diet formulation will be discussed. The anatomy of the digestive tract of animals and their ability to utilize feedstuffs is presented. Classification, digestion, absorption, transport and metabolism of major nutrients required by animals are studied.

Student Learning Outcomes

Successful completion of the course implies the student should be able to:

1. Identify conventional and non-conventional feedstuffs that are fed to livestock animals.
2. Describe various methods for feed processing and storage.
3. Assess the nutritional value of a ration or feed ingredients.
4. Interpret the NRC (Nutrient Requirement Council) guidelines for feeding livestock.
5. List the basic digestive anatomy for all classes of livestock.
6. Describe nutritional deficiencies and digestive disorders common to livestock animals.

ANSC 2330. Animal Production

Course Description

Production and utilization of beef cattle, sheep, and swine; emphasis on feeding, breeding, management problems and marketing; selection of animals for breeding and market.

Student Learning Outcomes

1. Increasing the understanding of meat animal production.
2. Increase the students' ability to apply principles of production to the industry perspective.
3. Apply the increased knowledge of meat animal production to global situations.
4. Gain a broader understanding of the importance of meat animals in the global food system.

ANSC 2340. Genetics in Animal Science

Course Description

Introduction to genetics and inheritance relative to livestock production. Introduction to procedures for collection and use of performance information in livestock improvement programs.

Student Learning Outcomes

1. Gain a broader understanding of the role genetic impacts in the livestock industry.
2. Employ an increased knowledge of impact of genetics in the food animal industry and the production and economic principles that apply.
3. Recognition of the global impacts of genetics in the food animal industry in a global setting.

ANSC 2350. Applied Animal Breeding

Course Description

This course presents the fundamental principles of reproduction, breeding systems and their application to domestic species. Reproductive anatomy and physiology will be covered. Proficiency in applied reproductive technologies including estrus/ovulation synchronization, artificial insemination, and pregnancy diagnosis will be developed.

Student Learning Outcomes

Upon completion of this course, students will:

1. Identify the primary parts of the female reproductive tract and their role in reproduction.
2. Describe the hormonal regulation of the female estrus cycle.
3. Describe timing and events associated with ovulation.
4. Implement estrus/ovulation synchronization protocols.

5. Understand the process and techniques of artificial insemination, embryo transfer, and pregnancy determination.

ANSC 2996. Topics in Animal Science

Course Description

Varies

Student Learning Outcomes

Varies

Anthropology (ANTH)

ANTH 1115. Introduction to Anthropology

Course Description

Anthropology is the systematic study of the humanity both past and present. The course introduces students to the four subfields of anthropology, which include archaeology, biological, linguistic and cultural anthropology. Students will learn about the concepts and methods that anthropologists use to study our species and gain a broader perspective on the human experience.

Student Learning Outcomes

1. Describe and summarize terms, approaches, and cultural and biological adaptations in the four subfields of anthropology.
2. Explain and analyze conceptual and ethical arguments in the four subfields of anthropology.
3. Effectively communicate content, perspectives, and ideas in four subfields of anthropology.
4. Critically evaluate sources, approaches, and arguments in the four subfields of anthropology.

ANTH 1120C. Introduction to Archaeology Lecture & Lab

Course Description

Archaeology is the study of the human past through the analysis of material remains humans have left behind. This course explores the basic theoretical and methodological underpinnings of the discipline, as well as the techniques that archaeologists employ to describe the empirical world, produce data, and interpret how people lived in the past. Examples of archaeological research from around the world will be used to increase students' understanding of concepts presented in lecture. Students will also apply the archeological principles in the laboratory portion of the course.

Student Learning Outcomes

1. Understand the history of archaeology, with an emphasis on processual archaeology.
2. Understand and apply fundamental theoretical and methodological concepts of the archaeology discipline.
3. Provide hands-on experience with archaeological data collection and analysis methods.
4. Develop skills that will enable students to serve as crew members for supervised archaeological field and laboratory work.
5. Provide students with the tools to describe the nature of archaeological remains.
6. Synthesize archaeological data to make informed and educated interpretations.
7. Effectively comprehend and communicate knowledge about archaeological ethics and contemporary heritage management efforts and organizations.

ANTH 1135. Introduction to Biological Anthropology

Course Description

This course provides a basic introduction to the broad field of biological anthropology. The research interests of biological anthropologists include the history and development of modern evolutionary biology, molecular and population genetics, modern primates, the primate and human fossil record, and modern human biological diversity.

Student Learning Outcomes

1. Summarize the basic principles of evolution and recognize how they apply to the human species.
2. Recognize the biological and behavioral continuity of humans with all life, and especially other modern primate species.
3. Identify ways in which the human species is biologically and behaviorally unique.
4. Summarize fossil evidence for human evolution.
5. Distinguish the major Paleolithic industries and outline the behavioral and cognitive changes indicated by the fossil and archeological evidence.
6. Critically evaluate popular accounts of human variation and human evolution.
7. Interpret modern human dilemmas (e.g., overpopulation, co-evolution of disease, and genetic engineering) from an evolutionary perspective.
8. Discuss in class and analyze in writing scholarly arguments concerning course concepts.

ANTH 1135L. Introduction to Biological Anthropology Lab

Course Description

This laboratory course expands on the topics covered in lecture course and uses scientific methods and principles to examine evidence for the process of evolution, the nature of heredity, human evolutionary history and family tree relationships, primate ecology and behavior, and modern human diversity. Hands-on experience with fossil and skeletal material will be an important part of the learning process.

Student Learning Outcomes

1. Demonstrate an understanding of the scientific method.
2. Employ principles of Mendelian genetics to determine genotype and phenotype probabilities, and calculate gene, genotype, and phenotype frequencies using the Hardy-Weinberg Equilibrium formula.
3. Demonstrate an understanding of cell structure and functions.
4. Use common lab and anthropometric equipment such as a compound microscope and calipers.
5. Discuss primate evolution and compare and contrast members of the Primate order in terms of structure, behavior, and phylogeny.
6. Classify hominid species based upon selected traits such as anatomical changes associated with bipedalism, changes in the size and structure of the brain, and the development of culture.
7. Locate and describe the major bones of the human skeleton and identify characteristics of human skeletons or skulls such as gender, age, and ancestry.
8. Discuss current research in genome analysis of various hominid populations.

ANTH 1135C. Introduction to Biological Anthropology Lecture and Lab

Course Description

This course provides a basic introduction to the broad field of biological anthropology. The research interests of biological anthropologists include history and development of modern evolutionary biology, molecular and population genetics, modern primates, the primate and human fossil record, and modern human biological diversity.

Student Learning Outcomes

Students will accomplish at least 3 of the Common Student Learning Outcomes set forth by San Juan College. The CSLOs covered in this class include Broad and Specialized Learning, Critical Thinking, and Effective Communication.

1. Broad and Specialized Thinking
 - a. Through course readings and lectures, students will acquire basic knowledge of the concepts and terminology in biological anthropology.
 - b. Students will gain an understanding of the biological development of both humans and nonhuman primates.
2. Critical Thinking
 - a. Through reflective thought, class projects, and class discussions, students will use the basic concepts of biological anthropology and apply them in different contexts.

- b. Many areas of anthropology provide no right and wrong answers, and students will learn to evaluate concepts and draw conclusions based on their own reasoning.
- 3. Effective Communication
 - a. Students will research a topic of their choosing for their final paper.
 - b. Students will explore different fields of biological anthropology and present their findings to the class using visual aids.
 - c. Students will also participate in class discussions that require use of class concepts and their own ideas.

Course Description for Lab

The laboratory portion of the course expands on the topics covered in the lecture course and uses scientific methods and principles to examine evidence for the process of evolution, the nature of heredity, human evolutionary history and family tree relationships, primate ecology, behavior, and modern human diversity. Hands-on experience with fossil and skeletal material will be an important part of the learning process.

Student Learning Outcomes

- 1. Broad and Specialized Learning
 - a. Through course readings and lectures, students will acquire basic knowledge of the concepts and terminology in biological anthropology.
 - b. Students will gain an understanding of the biological development of both humans and nonhuman primates.
- 2. Critical Thinking
 - a. Through reflective thought, class projects, and class discussions, students will use the basic concepts of biological anthropology and apply them in different contexts.
 - b. Many areas of anthropology provide no right and wrong answers, and students will learn to evaluate concepts and draw conclusions based on their own reasoning.
- 3. Effective Communication
 - a. Students will research a topic of their choosing for their final paper.
 - b. Students will explore different fields of biological anthropology and present their findings to the class using visual aids.
 - c. Students will also participate in class discussions that require use of class concepts and their own ideas.

ANTH 1136. Introduction to Historic Preservation

Course Description

Introduction to historic preservation, its history, goals, methods, legal basis, and economic importance. Explores public role in decision-making.

Student Learning Outcomes

Upon successful completion of this course students will:

- 1. Understand **WHY** historic preservation is important.
- 2. Be familiar with **WHAT** is important to preserve.
- 3. Know **WHO** among the general public, state, and federal governments is responsible for preserving the past.
- 4. Have gained experience in **HOW** we all preserve.

ANTH 1137. Human Ancestors

Course Description

Evolutionary history of the human species from its origin in the primate order, with primary emphasis on the evolution of humankind during the past three million years. Examination of the social lives of apes and consideration of similarities to and differences from them. Biological foundations of human behavior, emphasizing thought, movement, and interaction.

Student Learning Outcomes

1. Describe the evolution of the human species, from its origin in the primate order to the emergence of Homo sapiens, and to the present-day.
2. Describe the social lives of apes and identify similarities to and differences between apes and humans.
3. Explain the biological foundations of human behavior.

ANTH 1140. Introduction to Cultural Anthropology

Course Description

This is an introductory course that provides an overview of cultural anthropology as a subfield within the broader discipline of anthropology and as a research approach within the social sciences more generally. The course presents core concepts and methods of cultural anthropology that are used to understand the ways in which human beings organize and experience their lives through distinctive cultural practices. More specifically, this course explores social and cultural differences and similarities around the world through a variety of topics such as: language and communication, economics, ways of making a living, marriage and family, kinship and descent, race, ethnicity, political organization, supernatural beliefs, sex and gender, and globalization. This course ultimately aims to present a broad range of perspectives and practices of various cultural groups from across the globe.

Student Learning Outcomes

1. Introduce students to the basic concepts and research methods of cultural anthropology as one of the disciplines of social science, including fundamental concepts, such as culture and society, which form the pillars of the discipline (e.g., cultural relativism, cultural persistence and change, worldview and enculturation).
2. Comprehend the importance of studying cultural anthropology.
3. Demonstrate knowledge of the practice of anthropological research in the modern world that is increasingly multicultural, transnational and globally interconnected (e.g., globalization and modern world system).
4. Demonstrate an awareness of how students' own cultures shape their experiences and the way they see the world, as well as help them understand and interact with other cultures.
5. Understand how beliefs, values and assumptions are influenced by culture, biology, history, economic, and social structures.
6. Gain a sense of relationship with people possessing different experiences from their own.
7. Gain a deeper understanding and appreciation for cultural anthropology as a broad discipline through learning about its practices and differentiating cultural anthropology from other disciplines that study people.
8. Become more sensitive and engaged global citizens from culturally relative perspectives.

ANTH 1141. Cultures of the World

Course Description

Not Available

Student Learning Outcomes

Not Available

ANTH 1155. Introduction to Linguistic Anthropology

Course Description

This is an introductory course, which provides an overview of the discipline of Linguistic Anthropology. The course will discuss the implications of language within anthropology, as well as within the sciences and social sciences more generally. The course explores the core concepts and methods of linguistic anthropology, such as the basic structure of language, first and second language acquisition, bilingualism, and social and regional variations that are used to help students understand what it means to be human and the role of language in human societies.

Student Learning Outcomes

1. Understand the nature, properties, and functions of language and its relations to anthropology.

2. Explain the basic principles of the following areas of linguistic study: phonetics, phonology, morphology, grammar, syntax, and semantics.
3. Understand the basic issues of other areas of linguistic study including language acquisition, pragmatics, discourse analysis, and sociolinguistics.
4. Understand the diversity of languages and their fundamental similarities.
5. Use basic terminology and notational conventions associated with linguistic study.
6. Think analytically and creatively to explore ideas, make connections, draw conclusions and solve problems related to language and language learning.
7. Examine and critically evaluate common assumptions and attitudes about language and language use.
8. Apply concepts learned in this course to students' personal and professional lives.

ANTH 1160. World Archaeology

Course Description

Not Available

Student Learning Outcomes

Not Available

ANTH 1170. Human Life

Course Description

Biology and behavior of the human life course, including the evolution of the life history patterns specific to humans and the impact of population growth and of adaptation to local conditions in promoting human diversity.

Student Learning Outcomes

1. Basic overview and understanding of evolutionary theory.
2. Understanding of how evolution by natural selection may affect human behavior.
3. Understand the factors that led to the evolution of the human life course.
4. Understand what features of the human life course are unique among primates.
5. Appreciate how contemporary and historical variation in individual and social behaviors vary with each stage of the life course.

ANTH 1170L. Computer Laboratory in Human Evolutionary Ecology

Course Description

Introduces the computer as a tool in biological and social science research, provides first-hand experience in data collection, analysis and modeling behavior. No prior computer experience required.

Student Learning Outcomes

1. Understanding research study design as it applies to testing hypotheses in human evolutionary ecology.
2. Learn statistical techniques to test hypotheses.
3. Learn how to use MS Excel® and SPSS to perform a variety of tasks related to data entry, analysis, and graphic display of results.
4. Learn how to interpret study results.
5. Learn how to write research reports.

ANTH 1175. Evolution and Human Emergence

Course Description

Evolution over the last several million years has resulted in modern humans – Homo sapiens. Amazing things occurred during this lengthy process, resulting in us – big brained, handy, upright, and lightly hair-covered primates. In this class, we'll track the phenomenal course of human development, beginning with our distant hominid ancestor Aridipithecus (more than 4 million years ago), through the various species of Australopithecus, Homo habilis, Home erectus, Neanderthals, and finally

arriving at modern humans. During this class, we'll learn what makes humans unique as a species and how closely related we are to our primate cousins.

ANTH 1180. The Dawn of Humanity

Course Description

This is an introductory course in which students will be given a brief overview of the four branches of anthropology: socio-cultural anthropology, physical anthropology, archaeology, and linguistics. The focus of this class will be primarily in the archaeological and physical branches of anthropology, and we will examine key concepts important to the study of the past. While examining diverse cultures throughout this course, we will cover key anthropological concepts including: 1) Physical and cultural characteristics of the human being; 2) Human origins until the close of the last ice age; 3) Changing views of evolutionary theory and adaptation; 4) Evolution of disease and humans; 5) Evolution of technology and humans; 6) Comparative artistic and religious practices, and the role of religion in cultural change; 7) Understanding how modern archaeologists uncover information regarding our early ancestors and people in the past.

Student Learning Outcomes

1. For students to understand and be able to apply the concepts of deep time.
2. To promote a greater understanding of human evolution and humankind's early journey across the globe.
3. For students to gain experience doing an individual research project with a corresponding presentation.
4. To gain a deeper understanding and appreciation for anthropology as a broad discipline through learning about its practice.

ANTH 1190C. Survey of Forensic Science

Course Description

This course is an introduction to the field of forensic science. The goal of this course is to provide an overview of three of the specialized branches of forensic science offered at ENMU: forensic anthropology, forensic biology and forensic chemistry. Within these topics, students will be exposed to a range of different types of evidence, evidence collection methods, and evidence processing protocols.

The course will be composed of a lecture and laboratory section. You are expected to understand and apply the material covered in both the lectures and the reading assignments. Online quizzes on the readings will be available prior covering the material in class, in order to help you to gauge your knowledge and improve your retention before you come to class. The labs are a supplement to the lecture topics. They will provide hands-on experience in a variety of forensic methods.

Student Learning Outcomes

By the end of the course, students will have understood and applied the following concepts:

1. The range of forensic science specialties.
2. Crime scene reconstruction.
3. Types of evidence.
4. Analytical methods and Interpretation of test results.

ANTH 1210. Introduction to Archaeology

Course Description

Introduction to Archaeology provides students with an overview of archeological fundamentals and how these can be utilized to understand ancient societies. The course emphasizes the analysis of modern societies as a method of reconstructing the past. There is a detailed case study of the Maya site of Copan.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Scope of archeology:
 - a. Define anthropology and archaeology
 - b. Understand the development of anthropology and archaeology
2. Methodology of archaeology:
 - a. Gain an introduction to archaeological methods
 - b. Understand conceptual frameworks
 - c. Analyze human habitats
3. Fundamentals of societal reconstruction:
 - a. Examine domestic issues and society
 - b. Explore artisans and traders
 - c. Learn signs and symbols
 - d. Understand power, prestige and wealth
 - e. Become familiar with realms
 - f. Discuss religion and ideology
4. Archaeology of ancient civilizations:
 - a. Examine the rise of civilization in the Old World
 - b. Explore the rise of civilizations in the New World
5. Archaeological explanation:
 - a. Discuss the fall of civilizations
 - b. Understand explanation and archeology

ANTH 1211. Archaeology in Practice

Course Description

This class explores different ways of studying and interpreting the past through a survey of archaeology's historical, theoretical, and methodological development. If you are interested in archaeology as a career (or even just trying out an archaeological field school), this course is critical: it will provide you with the basic tools for conducting archaeological research and with an understanding of the background of the discipline. For this reason, this course is required for anthropology majors with an archaeology concentration.

Even if you know you don't want to be an archaeologist, though, this class may interest you. Have you ever wondered how archaeologists know what they know about the past? Are you skeptical about some archaeological claims? Have you ever read a statement about the past and thought, "is this really true?" This class will provide you with the skills, both conceptual and practical, to answer those questions.

Student Learning Outcomes

Students will:

1. Understand the basics of the science of archaeology, including goals, methods, theory, terminology, and ethics.
2. Identify and evaluate archaeological objects, data, and evidence in order to understand the human past.
3. Discuss impacts of archaeological research on the archaeological record and on contemporary people and cultures.
4. Understand current legal protections and restrictions involving archaeology.

ANTH 1211L. Archaeology in Practice Laboratory

Course Description

This course introduces students to a variety of archaeological field and laboratory methods.

Student Learning Outcomes

1. Apply basic measurement and descriptive techniques to evaluate archaeological data.
2. Apply field and laboratory skills to the collection and analysis of archaeological materials

ANTH 1215. Introduction to Physical Anthropology & Archaeology

Course Description

Introduction to physical anthropology and archaeology in the investigation of the possible origins, distribution, adaptation, and evolution of early humans, up to the rise of civilization in the Old and New Worlds. Beginning today we will embark upon a study of the principles of physical anthropology and archaeology, with a specific focus on our human origins. We will work our way from the earliest possible human ancestors through the development of modern humans and the practices that make us unique among the primates.

Student Learning Outcomes

Not Available

ANTH 1330. Navajo Culture

Course Description

Introduces the basic values of Diné society, past and present, including the clan system, the philosophy of duality, rites and passages, and the Navajo creation story.

Student Learning Outcomes

Upon completion of the course, the student will be able to:

1. Demonstrate knowledge of Diné cosmology and world order and their relationship to the Diné way of life.
 - a. Discuss the concept of male-female duality.
 - b. Describe how all creations within the earth and sky are recognized according to the duality principle.
 - c. Explain the holistic nature of Diné philosophy; that is, discuss how Nits1h1kees, Nahat'1, lin1, and Sihasin are processes found in all aspects of nature.
 - d. Trace the history and cultural development of the Diné using the chronological order of the narratives that developed into ceremonies.
2. Demonstrate knowledge of Diné history using linguistics, oral narratives, and Athapaskan migration theories based on evidence from physical anthropology and archaeology.
 - a. Describe the meanings behind traditional ceremonies and the role these ceremonies play in modern society.
 - b. Describe the changes that have occurred through time in Diné ceremonies as a result of contact with other cultures.
 - c. Describe cultural differences and similarities between Athapaskan groups: Northern, Pacific, and Southern.
 - d. Describe conflicts and changes which have taken place in Diné society as a result of contact with Plain, Puebloan, and European cultures.
3. Demonstrate analytical research skills in ethnography and folklore as they relate to Diné culture.
 - a. Conduct research on topic(s) relevant to objectives in the course
 - b. Submit academic quality research papers that are thoughtful and thorough in nature.
4. Develop an understanding of the need for protection and maintenance of natural resources, the environment, and traditional Diné sacred places.
 - a. Discuss the cultural meaning of Diné terms such as Mother Earth, Father Sky, Mountain Woman, Water Woman, Dawn Boy, and so on.
 - b. Explain how these terms are interconnected to human life, life processes, and the natural world.
 - c. Discuss what is meant by a sacred place.
 - d. Explain why sacred places should be reserved and protected.

5. Draw upon the values derived from Diné culture to function successfully as citizens of the Diné community and of the world at large.
 - a. Describe the Diné clan system and explain how it is used as a means of social control within Diné society.
 - b. Identify who they are and where they come from in terms of the Diné clan system.
 - c. Identify their relationship to others within the Diné community and the world at large.

ANTH 2120. Introduction to Archaeological Field Methods

Course Description

This course introduces students to field and laboratory methods and techniques in archeology. Students learn the standards of archeological field recording, excavation techniques and field-related laboratory skills. Fieldwork is required.

Student Learning Outcomes

1. Describe procedures that must be followed prior to excavation of an archaeological site.
2. Identify archaeological remains.
3. Define various excavation and recording techniques.
4. Describe various types of samples that are collected during excavation.
5. Draw plan and profile maps of archaeological features.
6. Explain laboratory procedures utilized for dealing with collected artifacts and samples.
7. Identify various archaeological dating techniques.
8. Survey and identify archaeological sites, as well as record and map archaeological sites discovered during survey.

ANTH 2130. Introduction to Forensic Anthropology

Course Description

This course will introduce you to the field of forensic anthropology, its main concepts, and their application in the broader medico legal system. This will include discussion of the structure of the medico legal system, the organizational hierarchy of death investigation, the role and ethical responsibilities of the forensic anthropologist, an introduction to the information that is provided by anthropological analysis and the methods used to obtain this information, the importance of the chain of evidence, the role of expert testimony, the importance of research, and the steps of designing effective research projects.

Student Learning Outcomes

1. Learn the fundamental principles underlying the discipline of forensic anthropology.

2. Review and enhance understanding of the human skeletal system to understand basic terminology of the field.
3. Gain factual knowledge about the role of forensic anthropologists in the medico legal system, as well as the many lines of evidence on which they draw in order to reach their conclusions.
4. Understand the skills and competencies relied upon by professionals in the field, as well as their responsibilities.
5. Understand and be able to apply the ethical responsibility of working with human skeletal remains.
6. Apply anthropological knowledge through supervised research on a topic relevant to forensic anthropology.
7. Gain an understanding of current and potential future directions in forensic anthropology, both within the United States and internationally.

ANTH 2140. Indigenous Peoples of North America

Course Description

This course is a general survey of the history and ethnology of indigenous groups in North America. The course is designed to give students a comprehensive view of major issues pertaining to the indigenous cultures of North America, such as family structure, social organization, subsistence and contemporary economies, environmental adaptation, Indian-White relations, religious practices, and contemporary issues.

Student Learning Outcomes

1. Demonstrate familiarity with common elements pertaining to the languages and social organization of indigenous peoples in North America.
2. Recognize fundamental differences and similarities among traditional indigenous cultures.
3. Describe social relations of indigenous peoples in relationship to other ethnic groups.
4. Identify and analyze important ways that European societies and cultures and indigenous societies and cultures interacted from the time of Columbus to the present.
5. Evaluate the impacts of Euromerican policies and programs on indigenous cultures.
6. Distinguish major social issues facing contemporary indigenous communities in North America.
7. Understand objectives and limitations of cross-cultural analysis in anthropology as they relate to the study of indigenous peoples in North America.
8. Demonstrate research and communication skills as they relate to the study of indigenous peoples in North America.

ANTH 2150. Indigenous Peoples of the American Southwest

Course Description

This course is a study of indigenous cultural groups of the American Southwest. Students will explore historical and contemporary cultural and social patterns of American Indian, Hispanic and Anglo-American groups.

Student Learning Outcomes

1. Describe socio-cultural developments, geographic environments, and characteristics of major cultural groups that currently inhabit the American Southwest.
2. Recognize underlying similarities as well as the wide range of variability of the cultural groups in the American Southwest.
3. Recognize the impacts and effects of Euromerican colonization on indigenous cultural groups in the American Southwest.
4. Describe the historical interactions and accommodations among indigenous cultural groups in the American Southwest.
5. Examine the processes of cultural change within major cultural groups in the American Southwest.
6. Identify and analyze some of the contemporary issues faced by major cultural groups in the American Southwest.

ANTH 2160. Prehistoric Peoples of the American Southwest

Course Description

This course will explore many aspects of prehistoric peoples in the American Southwest. Beginning with the populating of the Southwest, this course will discuss interactions between these populations and their environment, as well as technological advances, subsistence practices, social structures, and settlement patterns. The course will also explore the processes of change and how prehistoric populations compare with modern ones.

Student Learning Outcomes

1. Identify major prehistoric populations of the American Southwest.
2. Describe the roles of anthropology and its sub-fields, especially archeology, in studying prehistoric populations of the American Southwest.
3. Explain the importance of geography, environment, technological advances, subsistence practices, social structures, and settlement patterns on cultural developments among prehistoric southwestern populations.
4. Analyze and evaluate theoretical explanations for cultural developments among prehistoric Southwestern populations.
5. Compare and contrast similarities and differences between prehistoric Southwestern populations.
6. Apply and communicate course concepts pertaining to prehistoric populations of the American Southwest through modes such as archeological projects/experiments, discussions, and writing assignments.
7. Develop a nuanced understanding of the prehistoric American Southwest and how they interacted.
8. Gain an understanding of the diversity of human behavior in the past and learn about commonalities, which unite humans across time and space.

ANTH 2165. Music in Culture

Course Description

Not Available

Student Learning Outcomes

Not Available

ANTH 2170. Human Evolutionary Biology

Course Description

A study of the basic principles of evolution applied to the human species. This class explores the principles of heredity and organic evolution, the principles and methods of biological anthropology, the evolutionary context and fossil record of primate and human emergence, the characteristics and behavior of non-human primates, and the origins and significance of modern human biological variation.

Student Learning Outcomes

1. Summarize the principles of modern evolutionary theory, including genetic mechanisms and population genetics.
2. Interpret elementary statistical analyses of intra-specific and inter-specific variation.
3. Outline the taxonomic position of modern humans.
4. Identify and describe the non-human primates most closely related to humans.
5. Differentiate characteristics of important anthropoid, hominoid and hominid fossil groups.
6. Critically evaluate new discoveries in biological anthropology in the light of the methods and principles of biological anthropology.

ANTH 2170L. Human Evolutionary Biology Lab

Course Description

A practical experience in the study and analysis of ancient and modern humans in comparison with other primates. Principles of human genetics, primate identification and taxonomic analysis, anthropometry, human osteology and introductory anthropological forensics are examined in a laboratory setting.

Student Learning Outcomes

1. Summarize the principles of modern evolutionary theory, including genetic mechanisms and population genetics.

2. Interpret elementary statistical analyses of intra-specific and inter-specific variation.
3. Outline the taxonomic position of modern humans.
4. Identify and describe the non-human primates most closely related to humans.
5. Differentiate characteristics of important anthropoid, hominoid and hominid fossil groups.
6. Critically evaluate new discoveries in biological anthropology in the light of the methods and principles of biological anthropology.

ANTH 2175. World Archaeology

Course Description

Archaeology is the systematic study of the human past through material remains. This course introduces students to the physical remains of past societies and compares and contrasts archaeological development in different regions. Students will explore the dynamics of the human past and its influences on contemporary society.

Student Learning Outcomes

1. Identify and describe terms, approaches, and material evidence in archaeology.
2. Compare and contrast archaeological development in different regions.
3. Explain and analyze conceptual and ethical arguments in archaeology.
4. Critically evaluate sources, approaches, and arguments in archaeology.
5. Effectively communicate content, perspectives, and ideas in archaeology.

ANTH 2190C. Forensic Anthropology

Course Description

This course is designed to introduce students to the forensic investigation of death. Emphasis will be on current methods and techniques and include the role of the anthropologist as an integral member of the investigation process.

Student Learning Outcomes

1. Students will gain factual knowledge about the role of forensic anthropologists in the medico legal system as well as the many lines of evidence on which they draw in order to reach their conclusions.
2. Students will learn the fundamental principles underlying the discipline of forensic anthropology.
3. While this is not a training course, students will understand the skills and competencies relied upon by professionals in the field, as well as their responsibilities.

ANTH 2210. Introduction to Archaeology

Course Description

Introduces students to the basic concepts, methods, and theories of archaeology with particular emphasis on the nature of archaeological evidence and its interpretation.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Distinguish archaeological remains from natural manifestations.
2. Prepare a survey map (field sketch).
3. Prepare excavation maps: site map, feature map, and profile map.
4. Understand the site grid and elevation system.
5. Set up excavation unit within a site grid.
6. Classify different types of artifacts.

ANTH 2222. Ancient Mesoamerica

Course Description

Traces Mesoamerican archaeology from the earliest inhabitants through the Aztec period. Emphasizes cultural processes and dynamics of cultural evolution.

Student Learning Outcomes

1. Discuss and understand the history of archaeology in the Mesoamerican region.
2. Explain the specific archaeological techniques used and preservation issues in data recovery of the various regions.
3. Describe the culture history and archaeological evidence of the varied Mesoamerican cultural developments.
4. Explain the development of stratified society and describe the various roles that are integral to that stratification.
5. Demonstrate understanding of the concept of religion and the Mesoamerican worldview.
6. Discuss the development of writing and historical records.
7. Define and explain the economic systems and means of production in the various regions.
8. Cite several examples of the above-mentioned objectives using real archaeological data.
9. Present an overview of Mesoamerican archaeology.

ANTH 2265. Anthropology of Drugs**Course Description**

This survey course explores the nature and use of mind-altering drugs from a cross-cultural perspective. Topics covered in this class include the varieties and effects of mind-altering drugs around the world, socio-cultural contexts and functions of drugs such as religious, medicinal, and recreational usages, varieties of social control of drugs, and the political economy of world trade in both licit and illicit drugs.

Student Learning Outcomes

After taking this course, students will be able to

1. Identify the primary mind-altering drugs used around the world and understand their physical and psychological effects.
2. Understand the socio-cultural contexts and functions of how these drugs are used, how different societies deal with both licit and illicit drug use, and how world trade in these substances affects political and economic systems around the globe.

ANTH 2290. Anthropology Practicum**Course Description**

Provides opportunities for students in anthropology practice by working with professionals conducting theoretical, laboratory, and/or field research in cultural, linguistic, physical/biological anthropology and archaeology.

Student Learning Outcomes

Not Available

ANTH 2310. Anthropology of Food**Course Description**

An exploration of the complex interrelationships among people, culture, society, and their food. Students will examine the connection between food and cultural practices from many perspectives, including historical, societal, anthropological, culinary, and scientific.

Student Learning Outcomes

1. Explain the importance of food rituals from different world cultures.
2. Describe the origins of important cultural feast days and fiestas.
3. Outline the dynamics of spice trade, its history, and effects on world commerce, both culturally and economically.
4. Explain the importance of key foods to distinct/discrete cultures.
5. Describe cultural practices in food preparation, including the culture history of why or how such practices emerged.
6. Outline the cultural reasons behind certain food aversions in some societies.
7. Explain key differences in food preferences around the world as affected by such factors as environment, economics, status and religion, among other things.

ANTH 2335. Anthropology of Religion

Course Description

Provides a cross-cultural inquiry into the spiritual and religious belief systems of diverse peoples from around the world and investigates the practices and symbols through which these beliefs are expressed and enacted. Emphasis is on non-Western cultures.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Understand the basic vocabulary used by anthropologists to describe and discuss the belief systems of various cultures.
2. Understand and appreciate the range of variation within belief systems of peoples around the world, particularly those of non-Western cultures.
3. Apply anthropology's holistic approach to cross-cultural research on belief systems of various cultures.
4. Recognize how the field of anthropology has changed over time and how these changes have affected the way that religion has been studied cross-culturally since its inception as a formal discipline.

ANTH 2340. Cultural Ecology

Course Description

Examines the relationship of humans to their environments using archaeology and ethnographic data from around the world. Particular focus on the social and technological adaptations of human groups to desert environments.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

Students will accomplish at least 3 of the Common Student Learning Outcomes set forth by San Juan College. The CSLOs covered in this class include Broad and Specialized Learning, Critical Thinking, and Effective Communication.

1. Broad and Specialized Learning
 - a. Through course readings and lectures, students will acquire basic knowledge of the concepts in cultural ecology.
 - b. Students will gain an understanding of human diversity as well as what we all have in common.
 - c. Students will gain an understanding of the relationship between humans and their environment.
2. Critical Thinking
 - a. Through reflective thought, class projects, and class discussions, students will use the basic concepts apply them in different contexts.
 - b. Many areas of anthropology provide no right and wrong answers, and students will learn to evaluate concepts and draw conclusions based on their own reasoning.
3. Effective Communication
 - a. Students will research a topic of their choosing for their final paper.
 - b. Students will also participate in class discussions that require use of class concepts and their own ideas.

ANTH 2345. Peoples of Latin America

Course Description

Explores the various cultures and peoples of Latin America, concentrating on one region or culture at any given time. Offered as an interdisciplinary field-based intensive study experience.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to... Students will accomplish at least 3 of the Common Student Learning Outcomes set forth by San Juan College. The CSLOs covered in this class include Broad and Specialized Learning, Critical Thinking, and Effective Communication.

1. Broad and Specialized Learning

- a. Through course readings and lectures, students will acquire basic knowledge of the various cultures and peoples of Latin America.
 - b. Students will gain an understanding of human diversity as well as what we all have in common.
- 2. Critical Thinking
 - a. Through reflective thought, class projects, and class discussions, students will use the basic concepts apply them in different contexts.
 - b. Many areas of anthropology provide no right and wrong answers, and students will learn to evaluate concepts and draw conclusions based on their own reasoning.
- 3. Effective Communication
 - a. Students will research a topic of their choosing for their final paper.
 - b. Students will also participate in class discussions that require use of class concepts and their own ideas.

ANTH 2360. Cultures of the Southwest

Course Description

A study of the contemporary cultural and ethnic groups of the Southwest. Students explore the cultural and social patterns of American Indian, Hispanic and Anglo-American groups and their historical /relationships.

Student Learning Outcomes

- 1. Identify and describe, in writing, the contemporary cultures of the Southwest United States.
- 2. Discuss why and how those cultures have persevered in the face of political, social and demographic changes.
- 3. Describe, in writing, the characteristics of each culture.
- 4. Examine the processes of cultural change which each culture is undergoing.
- 5. Differentiate these cultures from one another.
- 6. Describe, in writing, the historical interactions and accommodations among these cultures.
- 7. Identify some contemporary problems confronting the indigenous cultures of the Southwest.

Applied Liberal Arts and Sciences (ALAS)

ALAS 1810. Applied Liberal Arts & Sciences – Humanities

Course Description

Interdisciplinary examination of the origins of the planet, life on earth, and humanity up to the Renaissance. Students will engage in all five essential skills as they explore the big ideas and milestones of our human past: Communication, Quantitative Reasoning, Critical Thinking, Personal and Social Responsibility, and Information Literacy.

Student Learning Outcomes

Students will practice, apply, and improve the 5 essential skills assessed in this course, demonstrating basic competency as follows:

Communication:

Consistently demonstrates the ability to

1. Explain content thoroughly
2. Use a logical structure to convey content
3. Follow standard English conventions, though there may be grammar/punctuation errors.

Critical Thinking:

1. Consistently demonstrates critical thinking skills by showing understanding of course content, asking thoughtful questions, and engaging with the course material.

Quantitative Reasoning:

1. Consistently demonstrates the ability to interpret basic data and apply it within another context.

Information Literacy:

1. Consistently demonstrates ability to conduct and evaluate basic research, understand and explain the research material, and apply that research within another context.

Personal and Social Responsibility:

1. Consistently meets course requirements for attendance, meeting deadlines, and being a respectful and active class participant.

ALAS 1820. Applied Liberal Arts – Social and Behavioral Sciences

Course Description

This course explores social responsibility and civic engagement as some of the most dynamic and formidable subjects facing our contemporary world. We largely accomplish this by examining the behavioral, economic, political, and societal contexts in which social issues and civic engagement and social responsibility manifest. We will grapple with grand questions like: What does it mean to be human?; What does it mean to be an individual living in society?; and How do we work towards better possibilities for all?

To promote personal and social responsibility and a deeper understanding of the topics under scrutiny in this course; we will explore issues contextually, using quantitative and qualitative case studies. Because social responsibility and civic engagement is really the capacity to organize with others, we will work together to develop ideas in action prescriptions that address issues and aim to benefit the whole society. The interdisciplinary, inquiry-based, and collaborative approach that constitutes the foundation of the Social & Behavioral Science ALAS course will challenge you to think imaginatively about complex problems, relate better to your peers by appreciating diverse points of view, and teach you how to be better engaged citizens.

Student Learning Outcomes

Upon completion of this course, you will be able to:

1. describe social and behavioral scientific bases and approaches for investigating and analyzing facts and truth about behavioral, institutional, and societal contexts – what is Truth?
2. creatively examine inequality, and personal and social responsibility from multiple disciplinary perspectives – what is Justice?
3. critically examine what it means to be human through the lens of personal and social identities including: social class, gender, race and ethnicity, political, and sexual identity – what is it to be Human?
4. devise civic engagement strategies that work toward developing better possibilities to improve societal conditions for the common good – what is the Good Life?
5. effectively collaborate and communicate with peers in both small and large group contexts to apply solutions to complex societal issues.
6. exhibit effective oral and written communication skills related to the four BIG QUESTIONS in the context of social & behavioral sciences.

ALAS 1825. Career Exploration and Financial Independence

Course Description

The course combines Financial Literacy with Entrepreneurship to offer career exploration and financial knowledge to students from all disciplines. The course is designed with two areas in mind, financial literacy, and entrepreneurship as a way of making a living. Financial literacy allows the student to be financially well informed when choosing careers, jobs, loans, housing, etc. In the modern world, Entrepreneurship offers an avenue to progress as far as entrepreneur skills and creativity can take them. Students in this class will gain basic hands-on, real-time experience on how to evaluate financial scenarios (personal and professional), and also will be faced with the challenge of evaluating if they want to start their own business.

Many young professionals can benefit from exploring career options, including the idea of owning and operating their own business. Innovative individuals naturally see opportunities. Entrepreneurs have been creating new generations of profitable businesses, while also providing solutions to some of the most difficult societal challenges. These social experiments (later businesses) help in understanding alternative solutions creating sustainable global scale industries and pave the way to the next generation of human living standards (i.e. the world wide web). The course will be interactive, using team exercises, and real-life examples. Emphasis will be given to collaborating and organizing creative ways to maximize innovation, self-achievement, and financially sound decisions.

Student Learning Outcomes

At the end of the class, the students should be able to:

1. Prepare a personal financial statement.
2. Analyze personal debt and develop a debt elimination plan.
3. Analyze and make purchase decisions for home and auto.
4. Analyze risk management needs in the areas of home, health, auto, life, and disability.
5. Analyze and develop a personal investment plan.
6. Analyze and develop a tax plan.
7. Develop a family educational plan.
8. Analyze retirement needs and develop a retirement plan.
9. Identify fundamental drivers creating opportunities for entrepreneurs and new ventures in the sustainable innovation arena.
10. Identify the constituent elements of the entrepreneurial process and Identify the necessary steps to start a business.
11. Adapt business responses to emerging opportunities. (Using real life cases and practice).
12. Analyze the value of collaborations for innovation.

13. Create an elevator pitch for the business plan.

ALAS 1830. Applied Liberal Arts and Sciences – STEM

Course Description

This course provides the knowledge and framework that will allow students to develop the quantitative skills necessary to be an active participant in shaping the future of our community and world. It contains an exploration from the perspectives of STEM disciplines to the questions: What is it to be human? What is a good life? What is truth? What is justice? Topics include surveys of biology, chemistry, computer science, environmental science and ecology, and mathematics to equip students with the knowledge to grasp today's important problems of pollution, population growth, conservation, climate change, impacts of artificial intelligence, global health and sustainability from the viewpoint of STEM disciplines.

Student Learning Outcomes

1. Explain the roles of STEM in society.
2. Explain the value of the scientific method, observation and experimentation as a means for understanding the natural world.
3. Understand basic biology and have a basic knowledge of origins of life, diversity of plants and animals, ecology of populations and communities, ecosystems and environmental concerns.
4. Understand the mechanisms of evolution by means of natural selection explaining the diversity of life.
5. Explain how the knowledge of human health and physiology has affected history, engagement in health practices and development of therapies for disease.
6. Understand basic chemistry and explain basic chemical terms, principles and concepts.
7. Describe the basic structure of an atom and molecules.
8. Understand forms of energy and energy conservation.
9. Using the Periodic Table of elements, distinguish between metals, non-metals and metalloids.
10. Distinguish between logical and non-logical axioms and formal systems in mathematics.
11. Define truth of a mathematical axiom.
12. Demonstrate knowledge of basic arithmetic, conversions, scientific notation, percent, ratios and proportions and draw informal comparative inferences about measurements.
13. Use SI system of units to solve quantitative calculations in science.
14. Understand graphical representations of data including pie charts, bar graphs, histograms and pictograms.
15. Define algorithm and give examples of algorithms in STEM.
16. Understand current state and future potential states of artificial intelligence.
17. Demonstrate awareness of potential impacts of artificial intelligence on human intelligence and the job market.
18. Demonstrate awareness in deep learning frameworks available today in computer science such as Python and Java.
19. Define sustainable development and describe its importance to natural resources in a global context.
20. Understand the basic causes of ecological concerns: population growth, global warming, ozone depletion, organic chemicals, pollution.
21. Demonstrate a basic knowledge of how the universe works, the basic structure of earth, and how it functions as a planet in our solar system.
22. Demonstrate a basic knowledge of how the Gila National Forest (located within the student community) functions, its endangered and threatened species, its use as an important source of ecological services to the community.
23. Quantify and demonstrate understanding of the impact of individuals and society on habitat and climate.
24. Make an informed argument about competing scientific, technological, economic, political and social priorities.
25. Communicate effectively about scientific ideas and topics; critically assess information from all sides of a scientific issue; choose a side and defend the choice.

ALAS 1835. Applied Liberal Arts and Sciences – Creativity

Course Description

Creativity is an essential skill for success in the 21st Century. This course will tap into and nurture the creativity that is innate in all of us. Students will explore the creative thinking process and idea generation methods that can be applied to any career path, or for personal life enrichment.

Student Learning Outcomes

1. Students will critically examine aspects of creativity:
 - a. Cultural and personal; in the arts, sciences, and business
 - b. How to apply creativity
 - c. Critical examination of the formal elements of creativity
2. Examination of creativity in light of ALAS's Four questions:
 - a. What is Truth - Is there a universal truth in art and music? In science? In business?
 - b. What is Justice as found in literature and art, also in issues of censorship and social justice revolution
 - c. What does it mean to be Human - how creativity drives human evolution, and creative collaboration
 - d. What is the Good Life - Identifying a personal passion and purpose in life
3. Students will engage in a team project that will challenge the student's creativity, critical thinking collaboration, communication and innovation skills.

ALAS 1840. Ethnic Studies

Course Description

This course explores the diversity of experiences and relations among racial and ethnic groups. The course engages with some of the most pressing and challenging racial and ethnic issues facing the United States and the globe. The content includes critical assessment of the economic, political, societal, and historical contexts in which race and ethnicity have been constituted and reproduced. Because race and ethnicity do not exist in isolation, the course materials raise questions and discussions about how intersections with class, gender, and sexuality have produced enduring—but continually evolving—patterns of privilege and inequality, marginalization and dominance, and oppression and empowerment. You will grapple with questions explored in all ALAS coursework, including: What does it mean to be human? What is the “good life”? What is truth? What is justice? You will also grapple with questions such as: What is the racial social hierarchy? How did/does it come to be? Who benefits from status quo power relations? How can human relations be more equitable and just? What does freedom for everyone look like? How is it achieved? The course embraces an interdisciplinary, inquiry-based approach. By developing and leveraging information literacy and social responsibility, it compels students to think imaginatively about complex problems, to appreciate diverse viewpoints, and to consider active engagement toward a freer, more just, and more equitable world.

Student Learning Outcomes

1. Learn the complexity of race and ethnic relations in the U.S. and globally.
2. Understand the most pressing challenges in regard to race and ethnic relations.
3. Analyze the historical, political, societal, literary, and economic contexts in which race and ethnic relations have been created.
4. Apprehend how intersecting identities such as gender and sexuality influence lived experiences of inequality, oppression, and marginalization.
5. Recognize the importance of equity, freedom, and justice as guiding principles in activism and social movement(s).
6. Practice interdisciplinarity, collaboration, and sustained inquiry in the pursuit of knowledge and truth.

Arabic (ARBC)

ARBC 1110. Arabic I

Course Description

Introduction to Arabic for students with no prior exposure. Following this class, students will be able to perform in specific situations at the Novice level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale. All five modes of communication are addressed (interpersonal, presentational speaking, presentational writing, interpretive reading, and interpretive listening). Modern Standard Arabic (MSA) and an Arabic dialect are taught using an integrated approach. Students will also develop their understanding of Arabic speaking cultures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to do all of the following as described by these NCSSFL-ACTFL CAN-DO statements:

Interpersonal Communication

1. Greet and leave people in a polite way.
2. Introduce myself and others.
3. Answer a variety of simple questions.
4. Make some simple statements in a conversation.
5. Ask some simple questions.
6. Communicate basic information about myself and people I know.
7. Communicate some basic information about my everyday life.
8. Exchange some personal information.
9. Exchange information using texts, graphs, or pictures.
10. Interact with others in everyday situations.

Presentational Speaking

1. Present information about myself and others using words and phrases.
2. Express my likes and dislikes using words, phrases, and memorized expressions.
3. Present information about familiar items in my immediate environment.
4. Talk about my daily activities using words, phrases, and memorized expressions.
5. Present simple information about something I learned using words, phrases, and memorized expressions.
6. Present basic information about a familiar person, place, or thing using phrases and simple sentences.
7. Present information about others using phrases and simple sentences.

Presentational Writing

1. Fill out a simple form with some basic personal information.
2. Write about myself using learned phrases and memorized expressions.
3. List my daily activities and write lists that help me in my day-to-day life.

Interpretive Listening

1. Understand a few courtesy phrases.
2. Recognize and sometimes understand basic information in words and phrases that I have memorized.
3. Recognize and sometimes understand words and phrases that I have learned for specific purposes.
4. Sometimes understand simple questions or statements on familiar topics.

Interpretive Reading

1. Recognize words, phrases, and characters with the help of visuals.
2. Recognize words, phrases, and characters when I associate them with things I already know.
3. Usually understand short simple messages on familiar topics.
4. Sometimes understand short, simple descriptions with the help of pictures or graphs.
5. Sometimes understand the main idea of published materials.

ARBC 1110L. Arabic I**Course Description**

Not Available

Student Learning Outcomes

Not Available

ARBC 1120. Arabic II**Course Description**

Continuation of Arabic I, ARBC 1110. Following this class, students will be able to perform in specific situations at the Novice High to Intermediate Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale. All five modes of communication are addressed (interpersonal, presentational speaking, presentational writing, interpretive reading, and interpretive listening). Modern Standard Arabic (MSA) and an Arabic dialect are taught using an integrated approach. Students will continue to develop their understanding of Arabic-speaking cultures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to do all of the following as described by these NCCSFL-ACTFL CAN-DO statements:

Interpersonal Communication

1. Exchange some personal information.
2. Exchange information using texts, graphs, or pictures.
3. Ask for and give simple directions.
4. Interact with others in everyday situations.
5. Have a simple conversation on a number of everyday topics.

Presentational speaking

1. Express my likes and dislikes using words, phrases, and memorized expressions.
2. Present information about familiar items in my immediate environment.
3. Talk about my daily activities using words, phrases, and memorized expressions.
4. Present information about my life using phrases and simple sentences.
5. Tell about a familiar experience or event using phrases and simple sentences.
6. Talk about people, activities, events, and experiences.

Presentational writing

1. Write notes about something I have learned using lists, phrases, and memorized expressions.
2. Write information about my daily life in a letter, blog, discussion board, or email message.
3. Write short notes using phrases and simple sentences.
4. Write about a familiar experience or event using practiced material.

Interpretive listening

1. Sometimes understand simple questions or statements on familiar topics.
2. Understand simple information when presented with pictures and graphs.
3. Sometimes understand the main topic of conversations that I overhear.
4. Understand the basic purpose of a message.
5. Understand messages related to my basic needs.
6. Understand questions and simple statements on everyday topics when I am part of the conversation.

Interpretive reading

1. Understand simple everyday notices in public places on topics that are familiar to me.
2. Understand messages in which the writer tells or asks me about topics of personal interest.
3. Identify some simple information needed on forms.

ARBC 1130. Arabic I Intensive**Course Description**

Following this class, students will be able to perform in specific situations at the Novice High to Intermediate Low level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale. All five modes of communication are addressed (interpersonal, presentational speaking, presentational writing, interpretive reading, and interpretive listening). Modern Standard Arabic (MSA) and an Arabic dialect are taught using an integrated approach. Students will continue to develop their understanding of Arabic-speaking cultures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to do all of the following as described by these NCSSFLACTFL CAN-DO statements:

Interpersonal Communication

1. Greet and leave people in a polite way.
2. Introduce myself and others.
3. Answer a variety of simple questions.
4. Make some simple statements in a conversation.
5. Ask some simple questions.
6. Communicate basic information about myself and people I know.
7. Communicate some basic information about my everyday life.
8. Exchange some personal information.
9. Exchange information using texts, graphs, or pictures.
10. Ask for and give simple directions.
11. Interact with others in everyday situations.
12. Have a simple conversation on a number of everyday topics.

Presentational speaking

1. Present information about myself and others using words and phrases.
2. Express my likes and dislikes using words, phrases, and memorized expressions.
3. Present information about familiar items in my immediate environment.
4. Talk about my daily activities using words, phrases, and memorized expressions.
5. Present simple information about something I learned using words, phrases, and memorized expressions.
6. Present information about my life using phrases and simple sentences.
7. Tell about a familiar experience or event using phrases and simple sentences.
8. Present basic information about a familiar person, place, or thing using phrases and simple sentences.
9. Present information about others using phrases and simple sentences.
10. Talk about people, activities, events, and experiences.

Presentational writing

1. Fill out a simple form with some basic personal information.
2. Write about myself using learned phrases and memorized expressions.
3. List my daily activities and write lists that help me in my day-to-day life.
4. Write notes about something I have learned using lists, phrases, and memorized expressions.
5. Write information about my daily life in a letter, blog, discussion board, or email message.
6. Write short notes using phrases and simple sentences.
7. Write about a familiar experience or event using practiced material.

Interpretive listening

1. Understand a few courtesy phrases.
2. Recognize and sometimes understand basic information in words and phrases that I have memorized.
3. Recognize and sometimes understand words and phrases that I have learned for specific purposes.
4. Sometimes understand simple questions or statements on familiar topics.
5. Understand simple information when presented with pictures and graphs.
6. Sometimes understand the main topic of conversations that I overhear.
7. Understand the basic purpose of a message.
8. Understand messages related to my basic needs.
9. Understand questions and simple statements on everyday topics when I am part of the conversation.

Interpretive reading

1. Recognize words, phrases, and characters with the help of visuals.
2. Recognize words, phrases, and characters when I associate them with things I already know.
3. Usually understand short simple messages on familiar topics.
4. Sometimes understand short, simple descriptions with the help of pictures or graphs.
5. Sometimes understand the main idea of published materials.
6. Understand simple everyday notices in public places on topics that are familiar to me.
7. Understand messages in which the writer tells or asks me about topics of personal interest.
8. Identify some simple information needed on forms.

ARBC 2110. Arabic III

Course Description

Continuation of Arabic II ARBC 1120. Following this class, students will be able to perform in specific situations at the Novice High to Intermediate Mid-level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale. All five modes of communication are addressed (interpersonal, presentational speaking, presentational writing, interpretive reading, and interpretive listening). Modern Standard Arabic (MSA) and an Arabic dialect are taught using an integrated approach. Students will continue to develop their understanding of Arabic-speaking cultures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to do all of the following as described by these NCSSFL-ACTFL CAN-DO statements:

Interpersonal Communication

1. Make plans with others.
2. Use the language to meet my basic needs in familiar situations.
3. Start, maintain, and end a conversation on a variety of familiar topics.
4. Talk about my daily activities and personal preferences.
5. Use my language to handle tasks related to my personal needs.
6. Exchange information about subjects of special interest to me.
7. Exchange information related to areas of mutual interest.

Presentational speaking

1. Give basic instructions on how to make or do something using phrases and simple sentences.
2. Present basic information about things I have learned using phrases and simple sentences.

3. Talk about people, activities, events, and experiences.
4. Express my needs and wants.
5. Present information on plans, instructions, and directions.
6. Present songs, short skits, or dramatic readings.
7. Express my preferences on topics of interest.
8. Make a presentation about my personal and social experiences.
9. Make a presentation on something I have learned or researched.
10. Make a presentation about common interests and issues and state my viewpoint.
11. Make a presentation on events, activities, and topics of particular interest.

Presentational writing

1. Write basic information about things I have learned.
2. Ask for information in writing.
3. Write about people, activities, events, and experiences.
4. Prepare materials for a presentation.
5. Write about topics of interest.
6. Write basic instructions on how to make or do something.
7. Write questions to obtain information.
8. Write messages and announcements.
9. Write short reports about something I have learned or researched.

Interpretive listening

1. Understand basic information in ads, announcements, and other simple recordings.
2. Understand the main idea of what I listen to for personal enjoyment.
3. Understand messages related to my everyday life.
4. Easily understand straightforward information or interactions.
5. Understand a few details in ads, announcements, and other simple recordings.

Interpretive reading

1. Identify some information from news media.
2. Understand simple personal questions.
3. Understand basic information in ads, announcements, and other simple texts.
4. Understand the main idea of what I read for personal enjoyment.
5. Read simple written exchanges between other people.

ARBC 2120. Arabic IV

Course Description

Continuation of ARBC 2120 Arabic III. Following this class, students will be able to perform in specific situations at the Intermediate level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale. All five modes of communication are addressed (interpersonal, presentational speaking, presentational writing, interpretive reading, and interpretive listening). Modern Standard Arabic (MSA) and an Arabic dialect are taught using an integrated approach. Students will continue to develop their understanding of Arabic-speaking cultures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to do all of the following as described by these NCSSFL-ACTFL CAN-DO statements:

Interpersonal Communication

1. Ask and answer questions on factual information that is familiar to me.
2. Use my language to do a task that requires multiple steps.

Presentational speaking

1. Present songs, short skits, or dramatic readings.

2. Express my preferences on topics of interest.
3. Make a presentation on something I have learned or researched.
4. Make a presentation about common interests and issues and state my viewpoint.
5. Present information on academic and work topics.

Presentational writing

1. Write about topics of interest.
2. Write short reports about something I have learned or researched.

Interpretive listening

1. Understand the main idea of what I listen to for personal enjoyment.
2. Easily understand straightforward information or interactions.
3. Understand a few details in ads, announcements, and other simple recordings.

Interpretive reading

1. Identify some information from news media.
2. Understand the main idea of what I read for personal enjoyment.
3. Understand accounts of personal events or experiences.
4. Sometimes follow short, written instructions when supported by visuals.
5. Understand the main idea of and a few supporting facts about famous people and historic events.

ARBC 2130. Arabic II intensive

Course Description

Continuation of ARBC 1130 Arabic I intensive. Following this class, students will be able to perform in specific situations at the intermediate level on the American Council on the Teaching of Foreign Languages (ACTFL) proficiency scale. All five modes of communication are addressed (interpersonal, presentational speaking, presentational writing, interpretive reading, and interpretive listening). Modern Standard Arabic (MSA) and an Arabic dialect are taught using an integrated approach. Students will continue to develop their understanding of Arabic-speaking cultures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to do all of the following as described by these NCSSFL-ACTFL can-do statements:

Interpersonal communication

1. Make plans with others.
2. Ask and answer questions on factual information that is familiar to me.
3. Use the language to meet my basic needs in familiar situations.
4. Start, maintain, and end a conversation on a variety of familiar topics.
5. Talk about my daily activities and personal preferences.
6. Use my language to handle tasks related to my personal needs.
7. Exchange information about subjects of special interest to me.
8. Exchange information related to areas of mutual interest.
9. Use my language to do a task that requires multiple steps.

Presentational speaking

1. Give basic instructions on how to make or do something using phrases and simple sentences.
2. Present basic information about things I have learned using phrases and simple sentences.
3. Talk about people, activities, events, and experiences.
4. Express my needs and wants.
5. Present information on plans, instructions, and directions.
6. Present songs, short skits, or dramatic readings.
7. Express my preferences on topics of interest.
8. Make a presentation about my personal and social experiences.

9. Make a presentation on something I have learned or researched.
10. Make a presentation about common interests and issues and state my viewpoint.
11. Present information on academic and work topics.
12. Make a presentation on events, activities, and topics of particular interest.

Presentational writing

1. Write basic information about things I have learned.
2. Ask for information in writing.
3. Write about people, activities, events, and experiences.
4. Prepare materials for a presentation.
5. Write about topics of interest.
6. Write basic instructions on how to make or do something.
7. Write questions to obtain information.
8. Write messages and announcements.
9. Write short reports about something I have learned or researched.

Interpretive listening

1. Understand basic information in ads, announcements, and other simple recordings.
2. Understand the main idea of what I listen to for personal enjoyment.
3. Understand messages related to my everyday life.
4. Easily understand straightforward information or interactions.
5. Understand a few details in ads, announcements, and other simple recordings.

Interpretive reading

1. Identify some information from news media.
2. Understand simple personal questions.
3. Understand basic information in ads, announcements, and other simple texts.
4. Understand the main idea of what I read for personal enjoyment.
5. Read simple written exchanges between other people.
6. Understand accounts of personal events or experiences.
7. Sometimes follow short, written instructions when supported by visuals.
8. Understand the main idea of and a few supporting facts about famous people and historic events.

ARBC 2140. Intensive Intermediate Arabic I

Course Description

Intensive Arabic language course that develops students' Arabic skills to the ACTFL Intermediate Mid-level and expands their cultural knowledge of the Arab world.

Student Learning Outcomes

By the end of Intensive Intermediate Arabic I, you will,

1. Be able to develop Arabic skills to the ACTFL Intermediate-mid level in presentational speaking, listening, reading and writing.
2. Be able to develop Arabic skills to the ACTFL Intermediate-high level in interpersonal communication.
3. Be able to discuss cultural questions and issues involving the Arab world.

ARBC 2150. Intensive Intermediate Arabic II

Courses Description

Intensive Arabic language course that develops students' Arabic skills to the ACTFL Intermediate High level and expands their cultural knowledge of the Arab world.

Student Learning Outcomes

The goal of this class is to develop your Arabic skills to the ACTFL Intermediate High level in interpersonal communication, presentational speaking, listening, reading, and writing, and to expand your cultural knowledge of the Arab world.

Architecture (ARCH)

ARCH 1105. Orientation and Mentoring in Architecture-Construction Engineering (ACE)

Course Description

This course is intended for high school dual credit students and college/university students wishing to explore careers in Architecture, Construction, and Engineering (ACE), which includes the specific fields of Architectural, Civil, Mechanical, Structural, Interior, Landscape, Sustainability, and Environmental. Students receive one-on-one mentoring, attend field trips, and engage in hands-on activities.

Student Learning Outcomes

Not Available

ARCH 1110. Architectural Drawing

Course Description

This course is designed as an introduction to architectural drawing and design for students without prior experience in the fine arts. Students are guided through a series of spatial and analytical exercises that focus attention on not only how architects draw, but also the reasoning and processes embedded within the technique. Students are provided exposure to a wide range of interconnected architectural concepts and to manual and digital drawing, as well as modeling techniques for architectural and interior design. Students will learn how to represent composition, form, and space by orthographic drawing, parallel and perspective views, and freehand sketching. Three-dimensional model building techniques will also be introduced.

Student Learning Outcomes

1. Gain understanding of basic methods of architectural drawing.
2. Explore and gain understanding of concepts of spatial design and its representation through exercises that stress analytical ability and an awareness of rational design process.
3. Gain an understanding of the design process with practice and various exercises.
4. Gain exposure to architectural delineation.
5. Demonstrate an understanding of specific skills and concepts related to architectural drawing.
6. Create and modify architectural models through various phases of a project.
7. Demonstrate a knowledge of graphic standards according to industry conventions.
8. Identify the various phases of work with regard to the architectural and interior design professions.
9. Develop analytical and critical thinking skills.

ARCH 1112. Global Issues and Sustainability

Course Description

Introduction to global environmental issues (historic, present, and future), and the impact on tomorrow's design and construction professions. Issues will include, but shall not be limited to global warming, energy consumption, population, natural resource consumption, air and water quality, waste management, facilities operation management, politics, and facilities design & construction. The impact on the design and construction industry, including 'Green Building' and 'LEED Accreditation and Certification/Criteria' will also be addressed.

Student Learning Outcomes

1. Discover global environmental history to better understand sustainable topics and change your behavior in the future.
2. Expand your knowledge on environment, natural resource consumption, human intervention, politics, and design and construction industry to support your education and future careers.

3. Learn how the US Green Building Council LEED (Leadership in Energy and Environmental Design) certification and Accredited Professional training expands your knowledge on green building design criteria; will help you determine whether you want to take the LEED exam.
4. Examine the many sides of climate change and its effects on the globe as well as our individual microclimate and personal lives to learn how to adapt to the current changes
5. Learn how to effectively research, report, present, and debate environmental topics to help you in your education and future careers.

ARCH 1114. Introduction to Architectural Design

Course Description

This course provides students who possess a basic background in architecture and architectural drawing with an introduction to architectural design. Students are guided through a series of spatial and analytical exercises that focus attention on two dimensional, three dimensional, and four-dimensional design. This course will build on direct linkages to ARCH 1120 and ARCH 1110 to further students' exposure to interconnected architectural concepts of process, organizational strategies, and analysis of material methodology while utilizing abstract and practiced graphical architectural conventions.

Student Learning Outcomes

1. Develop critical thinking strategies through a series of connected exercises in order to explain, demonstrate, categorize, compare, contrast and assess information/evidence.
2. Explore concepts of design through spatial design and apply these concepts through a series of progressive representational exercises that stress analytical ability and an awareness of rational design process.
3. Gain skills in the application of graphical communication in a range of media.
4. Enhance abilities in selecting specific information and applying that information to problem solve issues/concerns required to complete a task, while considering other implications.
5. Develop skill sin writing and speaking effectively and use representational media appropriate for both within the profession and with the public.
6. Gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
7. Utilize basic formal, organizational and environmental principles and the capacity of each to inform two- and three-dimensional design.
8. Apply fundamentals of both natural and formal ordering systems and the capacity of each to inform two- and three-dimensional design.
9. Demonstrate basic principles of structural systems and their ability to withstand gravitational, seismic, and lateral forces, as well as the selection and application of the appropriate structural system.

ARCH 1115. Introduction to Architectural Graphics

Course Description

Introduction to manual and digital drawing as well as modeling techniques for architectural and interior design. Students will learn how to represent composition, form and space by orthographic drawing, paraline and perspective views, and freehand sketching. Three-dimensional model building techniques will also be introduced.

Student Learning Outcomes

1. Demonstrate an understanding of orthographic projection, multi-view drawings, plan, section, and elevation.
2. Demonstrate a knowledge of graphic standards such as line types, line weights, hatch/poche, symbols, dimensioning, annotation, key noting, cross-referencing, according to industry conventions.
3. Draw from observation and perform conceptual sketching and diagramming.

ARCH 1120. Introduction to Architecture

Course Description

This course provides students the tools and vocabulary to analyze, interpret and discuss the built environment from the social, historical, perceptual and technical determinants. Students are introduced to elements, principles, and theories of architecture through their social, historical, and technical determinants. The course seeks to lay a foundation in architectural studies, including introducing students to fundamental vocabulary and concepts.

Student Learning Outcomes

1. Identify and describe significant architects and iconic buildings.
2. Discuss social, cultural, and aesthetic contributions of specific architects and projects.
3. Explain architectural concepts via written and graphic communication.
4. Recall basic processes and vocabulary of architectural professional practice.
5. Understand our built environment and the language of design and architecture.
6. Understand how buildings are constructed and explain the process of development.
7. Describe and discuss design elements, principles, and theories.
8. Understand the relationships among owner, surveyors, designers, architects, engineers, and contractors.
9. Research design texts and analyze buildings, landscapes, interiors, sustainability, and products to increase knowledge of important elements of architecture and design.
10. Identify the various styles, periods, and movements and their social, historical, and technical impacts on architecture.

ARCH 1121. Computers in Architecture

Course Description

Explore various software and photography techniques widely used in the architectural field. In addition to using industry standard CAD program as primary 2-d drafting tool, focus is to produce digital architectural models and renderings, presentation boards, and animations. Digital images will be produced and enhanced through basic techniques in photography and integration of various software. Both individual and group work will be required.

Student Learning Outcomes

1. Demonstrate the use of the computer and plotters/printers
2. Define and understand different terminologies
3. Demonstrate the understanding of different files using windows operating system
4. Understanding the appropriate use of the software in order to produce necessary drafting outcomes
5. Use proper plotting and printing procedures in order to increase efficiency and minimize paper waste
6. Demonstrating the use of different line types as they relate to drafting

ARCH 1122. Architectural Design Studio I

Course Description

Enhancement of general graphic communication skills and introduction to fundamental design including exploration, development and defense of design concepts; structural order; 2-D and 3-D processes in manual and digital architectural graphic expression; model building; general communication and presentation techniques; and development of course portfolio. Course is Studio/critique-based with a considerable amount of work/hours required. This course is designed to be taken during student's last year in the Pre-Architecture program.

Student Learning Outcomes

1. Write and speak effectively and use representational media appropriate for both within the profession and with the general public.
2. Raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards
3. Gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.

4. Effectively use basic formal, organizational and environmental principles and the capacity of each to inform two- and three-dimensional design.
5. Apply the fundamentals of both natural and formal ordering systems and the capacity of each to inform two- and three-dimensional design.
6. Examine and comprehend the fundamental principles present in relevant precedents and to make informed choices about the incorporation of such principles into architecture and urban design projects.
7. Prepare a comprehensive program for an architectural project that includes an assessment of client and user needs; an inventory of spaces and their requirements; an analysis of site conditions (including existing buildings); a review of the relevant building codes and standards, including relevant sustainability requirements, and an assessment of their implications for the project; and a definition of site selection and design assessment criteria.
8. Respond to site characteristics, including its context and developmental patterning, the fabric, soil, topography, ecology, climate, and building orientation, in the development of a project design.
9. Design sites, facilities, and systems that are responsive to relevant codes and regulations and include the principles of life-safety and accessibility standards.
10. Demonstrate the basic principles of structural systems and their ability to withstand gravitational, seismic, and lateral forces, as well as the selection and application of the appropriate structural system.
11. Understand the basic principles involved in the appropriate selection and application of building envelope systems relative to fundamental performance, aesthetics, moisture transfer, durability, and energy and material resources.

ARCH 1125. Design Fundamentals

Course Description

Introduces fundamental principles and processes of two-, three-, and four-dimensional design. Design aesthetics, perception, technique, composition, evaluation of materials and methods, practicing design methodologies, exploring design principles and theories, and graphic authorship are explored through various types of assignments.

Student Learning Outcomes

1. Demonstrate design solutions using the elements and principles of design and planning process to satisfy aesthetic and sustainable design criteria.
2. Furnish spaces by picture/sample of furniture, flooring, fabric, and finish samples.
3. Demonstrate the ability to use subtractive color theories and how color relates to space.
4. Demonstrate the ability to create basic lighting solutions.
5. Demonstrate the ability to perform space planning principles.

ARCH 1130. Building Materials and Methods

Course Description

An examination of common building systems and subsystems. Topics include structural materials, thermal and moisture protection, roofing, glazing, finish systems, and equipment systems that are in common use within the industry.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Draw a complete wall section that clearly conveys how a wall system is to be built.
2. Identify and define various types of structural systems.
3. Identify basic types of mechanical and electrical systems.
4. Implement sustainable materials and methods in technical drawings.
5. Use technical vocabulary to describe various building systems, subsystems, and components.

ARCH 1133. Physics and Math for Design

Course Description

Physics and Math for Design is a lecture/demonstration course for students who need scientific and mathematical concepts for their future design work. The course aims at a largely descriptive and qualitative introduction of selected (based on the needs and objectives of the future career in the field of design) topics of math and physics. No previous knowledge of physics is assumed: practicing the introduced topics (solving/discussing/analyzing problems) is scheduled based on (already) known elementary math and on the introduced concepts of math and physics. Emphasis is given to conceptual understanding of chosen topics related to future professional work areas with numerical application where it is important and useful. Topics as follows: Elements of Statistics, Elements of Geometry (in one- (x) , two- (x, y) , and three- $(x, y, z \rightarrow u, v, \text{normal, dimensions})$, Elements of Trigonometry, Vectors, Statics, Kinematics and Dynamics (including Loads), Energy, Elements of Thermodynamics, Waves and Acoustics plus selected topics of geology/astronomy like Earthquakes or the Greenhouse Effect, are covered in the one semester introductory course. The International Units System and the fundamental rules related to the mathematical and physical formulas and units will be introduced at the beginning of the semester.

Student Learning Outcomes

The overall objective is that the students are introduced to scientific and mathematical concepts. By the end of the course, the student will be able to:

1. Freely handle mathematical and scientific formulas and units.
2. Perform the measurements, collect data, analyze data and results, graph the results, and discuss the errors of measurements and of the results.
3. Successfully apply geometry in all (1-3) dimensions.
4. Apply useful and helpful trigonometric functions to their future work area.
5. Understand the difference between scalar and vector quantities and to operate them.
6. Describe the concepts of Kinematics: differentiate between speed, velocity and acceleration, differentiate between linear and non-linear motion.
7. Understand the foundation of Statics and Dynamics (Newton's Laws of Motion): mass of the object and inertia concepts, identify common forces such as elastic, friction, normal (support), tension forces and recognize the condition for mechanical equilibrium.
8. State and apply Newton's Laws of Motion to simple problems involving forces and study the effect of forces on motion.
9. Analyze Dynamics of linear and non-linear motion.
10. Understand and apply the Universal Law of Gravity (ULG) to problems solving, use proportional reasoning for ULG to discuss the problems.
11. Describe and differentiate the concepts of mass and weight, center of mass and center of gravity.
12. Graphically illustrate applied forces and conclude the results based on them (free-body diagram: static load, dynamic load).
13. Summarize the concept of elasticity (stress and strain) and deformations in the structures.
14. Define conservation laws in relation to momentum (linear and angular) and energy.
15. Explain the mechanical and thermal properties of solids, liquids, gases and plasma on the basis of the atomic nature of matter.
16. Understand temperature as a measure of the level of kinetic energy (of the atoms or molecules) of a system and use the different temperature scales in practice (conversion formulas).
17. Identify heat as a form of energy and describe thermal expansion and phase change.
18. Summarize Thermodynamics applied to the architectonic structures.
19. Describe periodic motion and the propagation of mechanical waves.
20. Explain acoustics parameters and the properties of sound and apply them in design of architectonic structures.

21. Analyze geological/astronomical phenomena (Earthquakes, the Greenhouse Effect) in Designing and Architecture.

ARCH 1135. Technical Documentation with Auto CAD I

Course Description

An introduction to basic computer-aided drafting concepts using AutoCAD. Students will learn drafting techniques that are in common use within industry. Emphasis is placed on drawing setup, creating and modifying geometry, storing and retrieving files, placing, rotating, and scaling objects, adding text and dimensions, using layers, creating blocks, and interpreting and constructing plans, elevation, and section views.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Execute commands that are used in the creation of a drawing file.
2. Create geometry that represents building objects.
3. Execute modified commands to manipulate user-generated geometry.
4. Create and manage multiple annotation objects within a drawing file.
5. Create, modify, and export blocks in a drawing file.
6. Create and analyze plan, elevation, and section views.

ARCH 1140. Building Information Modeling with Revit I

Course Description

Introduction to Revit, Building Information Modeling (BIM), fundamental concepts. Students learn how to place, manipulate, and create intelligent building components that are fully parametric. In Revit, students create and manage various views, manage and place annotative objects to create construction documents, and use nonnative files to create 3-D site information. This course will also demonstrate how BIM is becoming an industry standard due to its ability to connect architects/ interior designers, consultants, and contractors to create beautiful, functional, and sustainable buildings.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Place, modify, and create building components in multiple views within a project.
2. Create and manage elevations, sections, and other views at various scales within a project.
3. Modify, manage, and place annotative objects in a project.
4. Import and manipulate non-native site files into a 3-D model.
5. Create and manage construction documents.

ARCH 1145. Building Information Modeling with ArchiCAD I

Course Description

Introduction to ArchiCAD, Building Information Modeling (BIM), fundamental concepts. Students learn how to place, manipulate, and create intelligent building components that are fully parametric. In ArchiCAD, students create and manage various views, manage and place annotative objects, create construction documents, and use non-native files to create 3-D site information. This course explores how BIM is becoming an industry standard due to its ability to connect architects, interior designers, consultants, and contractors to create beautiful, functional, and sustainable buildings.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Place, modify, and create building components in multiple views within a project.
2. Create and manage elevations, sections, and other views at various scales within a project.
3. Modify, manage, and place annotative objects in a project.
4. Import and manipulate non-native site files into a 3-D model.
5. Create and manage construction documents.

ARCH 1150. Interior Design I

Course Description

An introduction to the basic principles of interior design: materials, lighting, color theory, space planning, and sustainable design. Students will integrate these basic principles into project-based assignments.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate design solutions using the elements and principles of design and planning process to satisfy aesthetic and sustainable design criteria
2. Furnish spaces by picture/sample of furniture, flooring, fabric, and finish samples
3. Demonstrate the ability to use subtractive color theories and how color relates to space
4. Demonstrate the ability to create basic lighting solutions
5. Demonstrate the ability to perform space planning principles

ARCH 1155. Sustainable Design Studio

Course Description

Introduction to sustainable design concepts. Lectures and assignments will present the framework for creative analysis, including systems thinking and synergistic integration of the three pillars of sustainability, environments, equity, and economy, and their relationship to building systems.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand how the environment, equity, and the economy impact sustainability.
2. Perform and present sustainable design research.
3. Assess, analyze comparatively, and choose between multiple sustainable design and construction options.
4. Understand the key components of the integrated design process.

ARCH 1160. Building Information Modeling with Revit II

Course Description

Focuses on the more advanced operations of Revit, Building Information Modeling (BIM). Topics include how to place, manipulate, and create intelligent building components that are fully parametric, create and manage various 2-D and 3-D views, create and manage building component content, create construction documents, and create site and terrain models.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Place, modify, and create advanced building components.
2. Place cameras to create views and movies within a project.
3. Create and manage project content.
4. Create and manipulate 3-D site models.
5. Create and manage construction documents.
6. Import and manipulate non-native file formats within a project.

ARCH 1165. Building Information Modeling with ArchiCAD II

Course Description

Focuses on the more advanced operations of ArchiCAD, a type of Building Information Modeling (BIM). Topics include how to place, manipulate, and create intelligent building components that are fully parametric, create and manage various 2-D and 3-D views, create and manage building component content, create construction documents, and create site and terrain models.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Place, modify, and create advanced building components.
2. Place cameras to create views and movies within a project.
3. Create and manage project content.
4. Create and manipulate 3-D site models.
5. Create and manage construction documents.

ARCH 1170. Technical Documentation with AutoCAD II

Course Description

Expands on the introduction to computer-aided drafting concepts using AutoCAD. Emphasis is placed on content management, creating blocks, and managing external references, annotation objects, and CAD standards. Students work with non-native imported objects, advanced modify commands, and expanding on the creation and analysis of plan, elevation, and section views.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Create and manage blocks and external blocks.
2. Explain the procedure of using external references.
3. Manage multiple annotation objects in a drawing file.
4. Implement CAD standards.
5. Scale, trace, and manage non-native imported objects.
6. Create and manage multiple layouts in a drawing file.
7. Execute advanced modify commands on user-generated geometry.
8. Manage and analyze plan, elevation, and section views.

ARCH 1175. Interior Design II

Course Description

An expansion on the principles of interior design: materials, lighting, color theory, space planning, and sustainable design. Students deepen their understanding of these principles and apply them to project based assignments, working in a collaborative environment.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate design solutions using the elements and principles of design and the planning process to satisfy aesthetic and sustainable design criteria.
2. Furnish a variety of spaces by picture/sample of furniture, accessories, flooring, fabric, and finish samples.
3. Use color of light and surfaces in relation to spatial design.
4. Create advanced lighting solutions.

ARCH 1180. Sketching Workshop

Course Description

An introduction to sketching strategies and techniques using various media through instructor demonstration, experimentation, and coaching. Students first meet in the studio and then meet on location to practice sketching and review and assess together while enjoying the sights and sounds of Santa Fe. Students plan and prepare for a group gallery show /exhibit as the last meeting.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Create graphics of multi-discipline teamwork project production.
2. Describe building technology, construction, systems, sub-systems, and components.
3. Demonstrate professional communication, problem solving, record keeping, planning, and assessment of projects.

ARCH 1210. Introduction to Environmental Planning

Course Description

Development of the major issues, concepts and methods emerging from the relationship of social systems and the natural environment.

Student Learning Outcomes

By the end of this course you should:

1. Have an understanding of some of the environmental problems/issues facing the world today, from the local to the global.
2. Be able ask not only the “what” questions, but the “how,” “where,” “when” and “why” questions through written work, class discussion, and oral presentation. That is, you should be able to express reasoned opinions and engage in critical debate that is necessary to being an environmental citizen in the 21st century.
3. Be able to explain (or at least further explore in a critical manner) the social dimensions and interdisciplinary challenges associated with pressing environmental issues; and
4. Understand the ethical dimensions of human-environment decision making.

ARCH 1215. Introduction to Environmental Problems

Course Description

Examination of the fundamental concepts and issues related to the natural environment that planners face. Focus on land use and open space planning, planning and use of resources, interactions of urban residents and the physical environment, and the role of government in formulating appropriate policies and strategies.

Student Learning Outcomes

At the conclusion of this course, students should be able to:

1. Identify underlying factors that shape environmental planning and policy.
2. Identify the major governmental planning-related issues associated with specific environmental topics such as: environmental justice, air quality, water quality and wastewater management, climate change, disaster planning, energy planning, the built and natural environment, conservation development, low impact and green development.
3. Describe, analyze and evaluate policies and programs used by planners to address environmental challenges and promote sustainable development.

ARCH 1220. Architecture World History I

Course Description

A survey of the development of world architecture from the ancient era to the advent of the enlightenment in Europe. Major emphasis is on the visual, intellectual, cultural and technological aspects of the ancient and indigenous cultures of the classical and pre-modern world.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify major architectural monuments from prehistory to the Renaissance (1400's) in the Western world.
2. Demonstrate an understanding of major monuments, styles of architecture and building traditions of non-Western cultures.
3. Recognize the relationship of movements and styles in Western architecture to their counterparts in painting and sculpture from the various historical periods.
4. Describe the basic principles of urban design.
5. Express an appreciation of architectural achievements and the ways in which the elements of art (line, form, color, texture, light, etc.) combine to produce objects of beauty in the built environment.
6. Describe basic engineering concerns and achievements in architecture.

ARCH 1310. Introduction to Architecture, Engineering & Construction

Course Description

Introduction to and exploration of careers in the fields of architecture, engineering, and construction. Specific fields to include: architecture, civil engineering, mechanical engineering, structural engineering, engineering technology, residential construction, commercial construction, geographical information systems (GIS), surveying, sustainable design, and green building

Student Learning Outcomes

1. Prepare accurate written technical documents, Produce drawing documents that are technically sound.
2. Develop and practice productive work skills.
3. Upgrade technical knowledge and skills to keep pace with real-world changes ARCT 100 Course Competencies.
4. Describe different career options in architecture, engineering, and construction.
5. Define the roles of different design professionals and support staff.
6. Explain related educational and professional licensing requirements.
7. Articulate employer expectations, Explore related courses and programs of study at community colleges and universities.
8. Develop good workplace skills and professional, productive work habits.

ARCH 2110. Architectural Design Studio II

Course Description

Provides an intermediate design studio format focused on the development of student-lead projects coupled with critical evaluation of graphic skills and architectural intent.

Student Learning Outcomes

1. Explore and develop an understanding of concepts in architectural aesthetics.
2. Develop understanding of design methods such as diagramming, brainstorming, and graphic authorship.
3. Apply fundamental design methodology to solve design problems, including diagramming, modeling, prototyping, illustrating, and presenting.
4. Develop critical thinking strategies using a series of connected exercises in order to explain, demonstrate, categorize, compare, contrast and assess information and evidence.
5. Explore concepts of design thinking through spatial design and apply these concepts through a series of progressive representational exercises that stress analytical ability and an awareness of rational design process.
6. Gain skills in the application of graphical communication in a range of media.
7. Apply fundamental design elements, principles, and theories to create visual solutions.
8. Research and incorporate design precedents into design projects

ARCH 2111. Architectural Delineation I

Course Description

Introduction to visual literacy, architectural graphic communication, & basic analytical skills. Architectural concepts primarily explored through the application of technical drawing, descriptive geometry, & material manipulation, primarily black & white media. Use of digital tools and media as applicable.

Student Learning Outcomes

1. Develop and utilize visual observation skills.
2. Translate visual observations into graphical information.
3. Develop and utilize critical thinking in the development of projects.
4. Develop effective line drawing techniques.
5. Produce graphical representations using various shading techniques.
6. Communicate design concepts and ideas clearly.

ARCH 2112. Architectural Visualization I

Course Description

Introduction to the history, theory, and emerging practices of architectural drawing. Students will learn technical workflows for 3-D digital modeling, 2-D digital drawing, and fabrication. This course will cover strategies for prescribing drawing conventions and modes of representation, including measured drawings, diagrams, orthographic views, perspectives, image-making, and rendering.

Student Learning Outcomes (required):

Through project exercises, students will demonstrate a working understanding of the following objectives and skills.

1. Architectural drawing conventions, such as line weights, line styles, composition, scale, notations, and orientation.
2. Graphic and compositional strategies for drawing and perspective making.
3. Conventional and unconventional approaches to modeling and drawing and the appropriate context for both.
4. Productive use and workflow of 2-D and 3-D digital software to construct architectural drawings and images.
5. Situate questions of representation within the historical and contemporary discourse on architectural environments.

ARCH 2113. Sustainable Design in Architecture

Course Description

This course provides students with hands-on opportunity to increase their awareness in and respond to the issues of responsible environmentally friendly building design by engaging in an integrated design process combining 'Traditional Design Process' with 'Sustainable Environmental Design' strategies. Students will expand their awareness of global environmental impacts due to design and construction, and gain knowledge in the industry's leading design 'tool' LEED (Leadership in Energy and Environmental Design) green building design rating system. LEED strategies will be utilized in the design of individual projects apply LEED in practical, individual design development, and develop an integrated building model utilizing the concept of BIM (Building Information Modeling). Such project development will require learning a basic design process and specific sequence including conceptual design, schematic design, design development and BIM (utilizing a BIM software such as REVIT, or AutoCAD Architecture).

Student Learning Outcomes

1. Understand Global Issues that impact sustainability of resources and quality of/equity in life.
2. Understand the impact of buildings on the environment.
3. Identify the basic principles of 'green' design and construction.
4. Identify and Interpret basic principles of the LEED green building rating system.
5. Engage in research of green technologies and design practices.
6. Understand the essential steps of the design process.
7. Develop a basic building design which qualifies for at least LEED Certified rating.
8. Utilize a BIM integrated software package to develop a virtual Building Information Models.
9. Develop presentation posters and slideshow of design work.
10. Conduct project presentations, and critique work of peers in a clear, concise manner.

ARCH 2114. Construction Documents

Course Description

Basic use of CAD and Building Information Modeling (BIM) to produce residential, commercial, and industrial architectural working drawings, including floor plans, sections, foundation plans and details, exterior and interior elevations, framing plans, and site plans. Use and application of building and zoning codes, typical construction methods and materials, and accessibility requirements. Basic 3-D modeling, AIA layering standards, sheet layout, and construction document coordination.

Student Learning Outcomes

1. Create full 3-D architectural project models, both via tutorials, and independently.
2. Set models up as working drawings.

3. Have a working knowledge of the tools that the majority of users will use to work with Revit Architecture.
4. Project File management skills.

ARCH 2115. Architecture Design Studio II

Course Description

Advanced graphic communication, design and 3-D physical model representation. Focus on site analysis, programing and fundamental design issues of context, environment, program development and space planning, 2-D and 3-D design and presentation techniques. The Course is 'Studio/critique-based' with considerable number of outside work/hours required.

Student Learning Outcomes

1. Write and speak effectively and use representational media appropriate for both within the profession and with the general public.
2. Raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards.
3. Gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
4. Effectively use basic formal, organizational and environmental principles and the capacity of each to inform two- and three-dimensional design.
5. Apply the fundamentals of both natural and formal ordering systems and the capacity of each to inform two- and three-dimensional design.
6. Examine and comprehend the fundamental principles present in relevant precedents and to make informed choices about the incorporation of such principles into architecture and urban design projects.
7. Prepare a comprehensive program for an architectural project that includes an assessment of client and user needs; an inventory of spaces and their requirements; an analysis of site conditions (including existing buildings); a review of the relevant building codes and standards, including relevant sustainability requirements, and an assessment of their implications for the project; and a definition of site selection and design assessment criteria.
8. Respond to site characteristics, including its context and developmental patterning, the fabric, soil, topography, ecology, climate, and building orientation, in the development of a project design.
9. Design sites, facilities, and systems that are responsive to relevant codes and regulations and include the principles of life-safety and accessibility standards.
10. Demonstrate the basic principles of structural systems and their ability to withstand gravitational, seismic, and lateral forces, as well as the selection and application of the appropriate structural system.
11. Understand the basic principles involved in the appropriate selection and application of building envelope systems relative to fundamental performance, aesthetics, moisture transfer, durability, and energy and material resources.

ARCH 2116. Architectural Delineation

Course Description

Continuation of ARCH 2111 with an emphasis in color media.

Student Learning Outcomes

1. Develop and utilize visual observation skills.
2. Translate visual observations into graphical information.
3. Develop and utilize critical thinking in the development of projects.
4. Develop effective line drawing techniques.
5. Produce graphical representations using various shading techniques.
6. Communicate design concepts and ideas clearly.

ARCH 2117. Architectural Visualization II

Course Description

Students will advance on technical skills and workflows obtained in Architectural Visualization I to observe, document, transform and create multi-scalar ideas into irresistible visual expressions. This course will cover architectural drawing conventions of plan, section, elevation, axonometric projection, perspective construction, diagramming, mapping and imaging to effectively communicate design ideas through visual means.

Student Learning Outcomes Through project exercises, students will demonstrate a working understanding of the following objectives and skills.

1. Identify architectural conventions in orthographic projections.
2. Emphasize Architectural properties through the strategic use of drawing conventions.
3. Graphic and compositional strategies for drawing and perspective making.
4. Develop a process that transitions 2-dimensional drawings into 3-dimensional visual graphic forms.
5. Conventional and unconventional approaches to modeling and drawing and the appropriate context for both.

ARCH 2120. World Architecture I

Course Description

Lecture survey of the architectural and urban traditions of world cultures from prehistory to the Enlightenment.

Student Learning Outcomes

1. A.1 Professional Communication Skills: Ability to write and speak effectively and use representational media appropriate for both within the profession and with the general public.
2. A.3 Investigative Skills: Ability to gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
3. A.7 History and Global Culture: Understanding of the parallel and divergent histories of architecture and the cultural norms of a variety of indigenous, vernacular, local, and regional settings in terms of their political, social, ecological, and technological factors.
4. A.8 Cultural Diversity and Social Equity: Understanding of the diverse needs, values, behavioral norms, physical abilities, and social and spatial patterns that characterize different cultures and individuals and the responsibility of the architect to ensure equity of access to sites, buildings, and structures.

ARCH 2122. LEED Accreditation Exam Prep

Course Description

This course is intended for anyone in the construction or architectural design fields who is interested in learning more about green building and the LEED (Leadership in Energy and Environmental Design) strategies and are also interested in learning about how to become LEED accredited. Overview of the LEED rating systems utilized in the design and operation of buildings, the various LEED building certifications, and accreditation requirements for professionals. Highlights include interpretation of the LEED Reference Guides, accepted strategies for meeting LEED certification, sample practice exams, integrated project delivery methods, and a practical approach to problem solving through the use of design problems.

Student Learning Outcomes

1. The student completing this course should gain knowledge and skills for each of the topics covered in the Course Outline.
2. Successful completion of this course should give each student a working knowledge of various LEED Rating Systems, and LEED GA Study Guides.
3. Students will develop critical thinking strategies to enable them to develop preliminary design and plan checking for code compliance.
4. Students should develop acceptable and productive work habits.

ARCH 2124. Professional Development and Leadership

Course Description

As members and/or officers of student professional organizations, architecture students gain experience through undertaking leadership roles, participating in team building, and becoming involved in service to the community. Students can also gain actual work experience involving skills related to their field of study.

Student Learning Outcomes

1. Leadership skills.
2. Presentation techniques and public speaking.
3. Organizational and teambuilding skills.
4. Architecture-related skills.
5. Community organizations and service.

ARCH 2125. World Architecture II

Course Description

A survey of modern architectural and urban traditions from 1700 to present.

Student Learning Outcomes

1. Identify key characteristics of the built environment from different time periods (post-1700) and explain the events that influenced them.
2. Describe how architectural ideas, materials, and labor circulate globally.
3. Understand how one's own life compares/contrasts with those of others around the globe at different time periods.
4. Identify how architects and architecture participate within broader social, cultural, and economic systems.
5. Differentiate between claims backed by research and those not backed by research.
6. Conduct original architectural research using historical methods.

ARCH 2135. Commercial Environmental Design

Course Description

Introduction to commercial space design. This course will include space planning, color selections, textile and furniture selection, lighting requirements, building materials and methods, and building codes for a commercial design project.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate knowledge of planning a commercial space.
2. Demonstrate knowledge of selecting furniture to meet the client's needs.
3. Demonstrate knowledge of selecting lighting to meet the client's needs.
4. Demonstrate knowledge of commercial building codes and materials and methods in a commercial space.

ARCH 2140. Professional Practices and Portfolio Assessment

Course Description

An opportunity to plan and deliver presentations on design projects to the class and a design jury. Students assemble a portfolio of selected work and learn interviewing strategies through lecture and mock interviews with industry professionals. Professionalism within a design studio is examined and practiced through lectures and group assignments.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Assemble a portfolio for future employment or higher education.
2. Create and deliver a presentation on a design project.
3. Demonstrate how to perform during an interview.
4. Demonstrate professionalism in a design studio.

ARCH 2151. Design Thinking

Course Description

This course introduces an approach to design as critical engagement. This course develops a critical engagement with architectural and design production, through the mechanisms of diagramming and writing. The goal of the course is to foster an approach to writing as learning and drawing as design.

Student Learning Outcomes

1. Read, write, speak and listen effectively.
2. Raise clear and precise questions, use abstract ideas to interpret information, consider diverse points of view, reach well-reasoned conclusions, and test alternative outcomes against relevant criteria and standards.
3. Use appropriate representational media, such as traditional graphic and digital technology skills, to convey essential formal elements at various stages of the design process.
4. Understand the designer's responsibility to work in the public interest, to respect historic resources, and to improve the quality of life for local and global neighbors.

ARCH 2155. Architectural Design Studio III

Course Description

Lecture survey of the architectural and urban traditions of world cultures from prehistory to the Enlightenment.

Student Learning Outcomes

1. A.1 Professional Communication Skills: Ability to write and speak effectively and use representational media appropriate for both within the profession and with the general public.
2. A.3 Investigative Skills: Ability to gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
3. A.7 History and Global Culture: Understanding of the parallel and divergent histories of architecture and the cultural norms of a variety of indigenous, vernacular, local, and regional settings in terms of their political, social, ecological, and technological factors.
4. A.8 Cultural Diversity and Social Equity: Understanding of the diverse needs, values, behavioral norms, physical abilities, and social and spatial patterns that characterize different cultures and individuals and the responsibility of the architect to ensure equity of access to sites, buildings, and structures.

ARCH 2220. Architectural World History II

Course Description

A survey of the development of world architecture from the enlightenment in Europe to the present.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify major architectural monuments from 1400 to the present in the Western world.
2. Recognize the relationship of movements and styles in Western architecture to their counterparts in design, painting, and sculpture from the various historical periods.
3. Describe the basic principles of urban design.
4. Express an appreciation of architectural achievements and the ways in which the elements of art (line, form, color, texture, light, etc.) combine to produce objects of beauty in the built environment.
5. Analyze basic engineering concerns and achievements in architecture.

ARCH 2223. World Architecture I: History of the Built Environment from Pre-history to 1400 C.E.

Course Description

Not Available

Student Learning Outcomes

Not Available

ARCH 2224. World Architecture II: History of the Built Environment from 1400 CE to Present

Course Description

Survey of the architectural and urban traditions of the modern world from the Enlightenment to the present.

Student Learning Outcomes

1. A.1 Professional Communication Skills: Ability to write and speak effectively and use representational media appropriate for both within the profession and with the general public.
2. A.3 Investigative Skills: Ability to gather, assess, record, and comparatively evaluate relevant information and performance in order to support conclusions related to a specific project or assignment.
3. A.7 History and Global Culture: Understanding of the parallel and divergent histories of architecture and the cultural norms of a variety of indigenous, vernacular, local, and regional settings in terms of their political, social, ecological, and technological factors.
4. A.8 Cultural Diversity and Social Equity: Understanding of the diverse needs, values, behavioral norms, physical abilities, and social and spatial patterns that characterize different cultures and individuals and the responsibility of the architect to ensure equity of access to sites, buildings, and structures.

ARCH 2315. Architectural Design I

Course Description

This course introduces fundamental principles and processes of architectural design. Students will explore topics such as design aesthetics, perception, technique, composition, evaluation of materials and methods, design methodologies, design principles and theories, and graphic authorship. Students will be exposed to interconnected architectural concepts of process, organizational strategies, and analysis of material methodology, while critically utilizing abstract and practiced graphical architectural conventions.

Student Learning Outcomes:

1. Explore and develop an understanding of concepts in architectural aesthetics.
2. Develop understanding of design methods such as diagramming, brainstorming, and graphic authorship.
3. Apply fundamental design methodology to solve design problems, including diagramming, modeling, prototyping, illustrating, and presenting.
4. Develop critical thinking strategies using a series of connected exercises in order to explain, demonstrate, categorize, compare, contrast and assess information and evidence.
5. Explore concepts of design thinking through spatial design and apply these concepts through a series of progressive representational exercises that stress analytical ability and an awareness of rational design process.
6. Gain skills in the application of graphical communication in a range of media.
7. Apply fundamental design elements, principles, and theories to create visual solutions.
8. Research and incorporate design precedents into design projects.

ARCH 2325. Architectural Design II

Course Description

Studio introduces principles of urban design and planning through an exploration of a series of multi-scaled architectural projects that examine public goals and constraints, urban infrastructure and fabric, sustainability, historical and socio-cultural issues.

Student Learning Outcomes (required):

1. To establish and develop understanding and use of foundational architectural systems including form, geometry, and space.
2. To develop methods of precedent analysis and expand methods for looking at, measuring, and evaluating space and architecture.
3. To develop strategies for designing and building in relation to the environment.

4. To introduce technologies of description and develop skills and comfort with new technologies.
5. To develop craft as a productive process of architectural translation.

ARCH 2333. Sustainability I

Course Description

Lectures present the framework for creative analysis, including systems thinking and synergistic integration of the three pillars of sustainability, environments, equity, and economy, and their relationship to building systems.

Student Learning Outcomes (required):

1. Students will learn through critical thinking and reviewing each other's assignments in classroom discussions be able to offer appropriate and alternate solutions.
2. Students will be able to document their findings through research and case.
3. Precedents will be used to assess students' research and integration skills.
4. Students will be aware of USGBC's LEED principles.
5. Students will be able to define architectural sustainability.

ARCH 2994. Portfolio

Course Description

Varies

Student Learning Outcomes

Varies.

ARCH 2995. Cooperative Experience

Course Description

Supervised cooperative work program. Student employed in approved occupation; supervised and evaluated by employer and instructor.

Student Learning Outcomes

Varies

ARCH 2996. Topics in Architecture

Course Description

Topics subtitled in the Schedule of Classes.

Student Learning Outcomes

Varies

Arts and Science (ARSC)

ARSC 1198. Freshmen Seminar Topics

Course Description

Variable content in an academic discipline. Through study of topic, develops academic skills including scholarship, research, comprehension, analysis, synthesis, evaluation, application, critical thinking, and communication of ideas. Most sections require coregistration in a specified "linked" course.

Student Learning Outcomes

Ex: "Student Success in A&S". (This topics course is specifically designed for second semester freshmen that earn below a 2.0 gpa in their first semester at UNM)

1. **Learning Strategies and Metacognitive Knowledge:** Through this class you will gain a better understanding of your strengths as a student and the different ways learning occurs. You will be able to adapt learning strategies and create tools for your learning across new contexts, subjects, and tasks.
2. **Self-Management, Growth, and Goal Setting:** By the end of the course, you will be able to create a learning plan, create action steps, and evaluate/assess how effective your learning plan is. You will leave with a better understanding and tools for managing your time, regulating your learning, and making adjustments along the way.
3. **Hidden Curriculum:** Through this class, you will learn how the formal curriculum differs from the hidden curriculum. We will explore the norms, values, and processes that make up the hidden curriculum.

Art Education (ARTE)

ARTE 2110. Arts & Crafts for the Elementary Teacher

Course Description

Application of techniques, methods, and materials of arts and crafts in the teaching of subject matter by the elementary class-room teacher. Additional art supplies will be required.

Student Learning Outcomes

Not Available

ARTE 2214. Art in Elementary and Special Classrooms

Course Description

This course is designed to introduce elementary education majors to the teaching of visual art. Students will study art, art history; childhood art developmental stages and will write a research paper on an artist and prepare an art lesson plan inspired by that artist. Students will create art projects using various materials and methods and learn about the integration of the arts into other core subjects.

Student Learning Outcomes

1. Understand the importance of art in education.
2. Recognize and implement the elements of art and the principles of design in their own artwork.
3. Understand the artistic cognitive, affective, motor, and sensorial development of children.
4. Prepare and present an integrated art lesson.
5. Understand the scope of art history and utilize examples in lesson plan.
6. Learn effective teaching techniques in handling art materials, classroom management, and classroom procedures.
7. Develop personal creative growth teaching art by reflecting on the readings in their journals.
8. Learn how to relate the visual arts to music, drama, dance, language arts, math, social studies, and science.

Art History (ARTH)

ARTH 1110. Art Appreciation

Course Description

This course introduces and explores visual arts, providing an awareness of the significance of the arts at personal, societal and historical levels including both fine and applied arts.

Student Learning Outcomes

1. Trace the development of diverse art and architecture styles.
2. Compare and contrast the major art and architectural styles.
3. Use art terms and explain basic art concepts.
4. Analyze the visual elements and design principles in masterworks of art.
5. Describe masterpieces objectively, with emphasis on contemporary works.
6. Gain general knowledge of the history of artistic production.

7. Understand how both art and the study of art relates to other disciplines, such as philosophy, history, archeology, theater, and music.
8. Distinguish the elements and principles of design and explain how they are being used in a given piece of art.

ARTH 1115. Orientation in Art

Course Description

A multicultural examination of the principles and philosophies of the visual arts and the ideas expressed through them.

Student Learning Outcomes

The student who successfully completes this class will be able to:

1. Identify elements of art & principles of design.
2. Articulate the relationship of art to the human experience.
3. Write and discuss critically using the vocabulary of art.
4. Interpret art within cultural, social, personal, and historical contexts.
5. Critically analyze an original work of art.

ARTH 1116. History of Design

Course Description

This course introduces significant developments in the history of design as situated within its sociopolitical, cultural, and economic contexts. Design types ranging from furniture, interiors, products, and commercial to graphic design will be examined. The evolution of design will be traced in regards to materials, technology, social taste, and the effects of the shifting patterns of production and consumption. This course will also consider how issues of gender, race, and class influence design.

Student Learning Outcomes

Students will be able to:

1. Demonstrate a chronological understanding of various design types.
2. Recognize and correctly identify major works of design from various cultures.
3. Develop a vocabulary necessary to discussing works of design within the discipline of art history.
4. Discuss (written/oral) a given work of design in terms of its form, contextual history, function, and iconographic meaning.
5. Compare and contrast works of design from a range of periods and cultures using the various modes of art criticism.

ARTH 1120. Introduction to Art

Course Description

In this class, students will be introduced to the nature, vocabulary, media and history of the visual arts, illustrated by examples drawn from many cultures, both Western and non-Western and across many centuries. We will begin with a general overview of the subject, including basic concepts and themes that shed light on the continuity of the artistic enterprise across the span of human experience. We will study the visual elements from which art is made, including how artists use these elements and how the artists' use of visual elements affects our experience of looking at art. We will examine both two-dimensional and three-dimensional media including drawing, painting, printmaking, camera and computer arts, graphic design, sculpture, installation, crafts and architecture. Selected works will be examined in context, including the history of the time and place in which they were created, as well as their function, patronage, and the character and intent of individual artists.

Student Learning Outcomes

1. Students will learn the terminology that we use to talk about art.
2. Students will learn about the elements from which art is made including line, shape, mass, color, light, texture and pattern, space, time and motion.

3. Students will learn about the principles of design including unity and variety, balance, emphasis and subordination, scale and proportion, rhythm.
4. Students will become proficient in understanding and identifying a wide variety of techniques and materials that artists use to make art
5. Students will become proficient at seeing and analyzing individual works of art, evaluating criteria such as the artist's intention, the formal visual elements and media used.
6. Students will learn to look at and think about art in new ways.
7. Students will develop an understanding of the cultures and individuals that produced various artworks and art traditions.
8. Students will acquire a basic understanding of a wide variety of artistic traditions including when and where they developed, and the basic style characteristics that identify those traditions.
9. Students will develop a familiarity with controversies surrounding restoration, censorship, public art, and the removal and display of artworks from tombs.
10. Students will improve their study, research, reading and writing skills.
11. Students will view artworks with increased confidence and a broader understanding of what they see.

ARTH 1122. Survey of Native American Art

Course Description

Provides an overview of Native American art from earliest cultures to contemporary. Emphasizes tribal perspectives on aesthetics, resources, and innovations.

Student Learning Outcomes

1. Prepare a correct indigenous art history of a North American region.
2. Discuss and identify influences upon the development of artistic expression, including natural environment, eco and social systems, and contemporary life.
3. Use terminology related to indigenous people, their art and history.
4. Connect creative processes and developments in indigenous art expression in the American Southwest to creative processes and developments in other parts of the world.
5. Document research for semester project.
6. Strengthen speaking skills through class presentations.

ARTH 1125. Innovation in Modern Art and Science

Course Description

Not Available

Student Learning Outcomes

In this course, students will learn to:

1. Analyze and critically interpret texts, data, or other sources of information.
2. State a primary purpose in a written or oral statement appropriate for target audience.
3. Order and order supporting points logically and convincingly, individually or collaboratively for the target audience.
4. Identify, describe, explain, or express human behaviors and actions in the context of any of the following: literature and/or other art forms, history, culture, philosophy, technology, politics, geography, economics, sciences, social structures.
5. Compare art forms, modes of thought, modes of expression or processes across a range of historical periods and/or structures or disciplines (such as political, geographical, scientific, technological, economic, social, cultural, religious and intellectual).
6. Identify and critically evaluate ethical dilemmas or arguments.
7. Conduct research or design technology correctly, ethically, and responsibly.

ARTH 1130. Art Foundations

Course Description

Introduces hands-on art experience to include techniques of drawing pencil and charcoal to basic principles of using color.

Student Learning Outcomes

After successfully completing this course the student should be able to:

1. Describe, analyze, and demonstrate techniques of drawing, including figure studies and still-life drawings.
2. Define and demonstrate the basic principles of working with color.

ARTH 1140. The History of Graffiti: From Glyph to Graff

Course Description

A survey of the origins and growth of cultural markings in the forms of imagery and language. Topics will include: the origins of the term graffiti, a survey of graffiti as cultural markings from earliest art to contemporary expressions, the reasons make such markings, and the social context in which graffiti is created. Students will photograph examples of rock art and contemporary graffiti in their communities.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define the term "graffiti."
2. Contextualize works of earliest examples of cultural markings and contemporary graffiti.
3. Describe the intrinsic qualities of individual works.
4. Identify/analyze the social impact and significance of graffiti.
5. Compare and contrast works from different locales, cultures, and periods of history.
6. Add to the scholarship of graffiti by documenting examples in their communities.

ARTH 1141. Art of the Comics

Course Description

With the combination of words and imagery, comics have developed a language of fine art and visual culture within context of visual art. We will study the evolution of this three to four panel comic to trade paper backs and graphic novels, and place the development of the comics in its social context. Distinctive focuses of the course will be the expansion of comic strips in late nineteenth to twenty-first century America; the birth of the comic book in the 1930s with the concept of the superhero, and the rise of underground (or indy) and alternative graphic culture. We will also investigate the semantics of word and image as well as many post-modern theories which attempt to unravel the imagery in the graphic novels from the 1930s to the present.

Student Learning Outcomes

1. To comprehend the evolution and history of comics and graphic novels.
2. To obtain extensive knowledge of the creation of comics from the written story to the colorist.
3. To delve deeply into the artist's works selected above allowing for breathe and depth of art from this period.
4. To acquire an understanding of correlation of word and image along with the historical context surrounding each work.
5. To strengthen abilities of writing about art with greater understanding of aesthetic questioning with a critical lens as well as a methodology of comparing and contrasting works of art.
6. To become familiar with traditional and digital forms of resources available to them.
7. To discuss current research in the field of comics and graphic novels.
8. Ability to recognize the significance in the developments of art history in regard to sequential art.
9. Identify artwork from major and minor writers and artists of sequential art.
10. Further develop a critical lens in viewing, discussing, and writing about art history

ARTH 2110. History of Art I

Course Description

This survey course explores the art and architecture of ancient pre-historic cultures through the end of the fourteenth century. While focused primarily on the art of the Western civilizations, this course will also provide insights into the works of other major cultures in order to provide alternate views of art and history. Emphasis will be placed on the relationship of artworks to political, social, spiritual, intellectual, and cultural movements that affect and are affected by their creation and development.

Student Learning Outcomes

1. Identify major artworks from a variety of regions and time periods.
2. Investigate the methods of producing various works of art.
3. Articulate an understanding and appreciation for the political, social, spiritual, intellectual, and cultural contexts of art forms.
4. Comprehend and apply terms, methodologies and concepts common to studies of art history, developing a language to further understanding of art.
5. Compare works across a range of historical styles and periods.

ARTH 2120. History of Art II

Course Description

This survey course will explore the architecture, sculpture, ceramics, paintings, drawings, and glass objects from the 14th century to the modern era. While focused primarily on the art of the Western civilizations, this course will also provide insights into the works of other major cultures in order to provide alternate views of art and history. Emphasis will be placed on the relationship of artworks to political, social, spiritual, intellectual, and cultural movements that affect and are affected by their creation and development.

Student Learning Outcomes

1. Identify major artworks from a variety of regions and time periods.
2. Investigate the methods of producing various works of art.
3. Articulate an understanding and appreciation for the political, social, spiritual, intellectual, and cultural contexts of art forms.
4. Comprehend and apply terms, methodologies and concepts common to studies of art history, developing a language to further understanding of art.
5. Compare works across a range of historical styles and periods.

ARTH 2130. Modern Art

Course Description

This course is an overview of European and American art and architecture during the Modern era. Students will analyze the various movements in art as they relate to the historical settings in which the works were created. Emphasis will be placed on the relationship of artworks to political, social, spiritual, intellectual and cultural movements as they affected and were affected by their creation and development.

Student Learning Outcomes

1. Recognize and identify works of art, including painting, sculpture, and architecture created in Europe and America during the Modern and Contemporary periods.
2. Comprehend and apply terms, methodologies and concepts common to studies of art created during the Modern and Contemporary periods.
3. Compare and contrast stylistic aspects of works created in different time periods of the Modern era and/or locations in terms of their form, contextual history, function, and iconographic meaning.
4. Describe and discuss orally and in writing the political, social, spiritual, intellectual and cultural movements that shaped artistic thinking and creation during the Modern period.

5. Describe the various techniques employed in the creation of art and architecture during the Modern and Contemporary periods.
6. Comprehend the particular emphasis on personality and innovation inherent within the Modern period in relationship to institutions and movements.
7. Describe the impacts of Modern and Contemporary art on works created in subsequent time periods to the present.
8. Recognize and appreciate art in new ways from a range of periods and cultures using various modes of art criticism.

ARTH 2136. Writing in Art

Course Description

This class looks at the variety of writings associated with art history and studio art practice. It explores the discipline of art history itself, and introduces students to the specific ways in which art historians study art. Within a workshop setting, students will practice approaches to research, understanding art and writing about art. Students will also be introduced to professional writing practices, including digital formats, relating to studio art.

Student Learning Outcomes

1. Develop visual literacy in looking at art.
2. Analyze a complex art historical argument.
3. Apply art specific vocabulary to critically based writings and discussions of art
4. Develop writing skills to articulate the relationship of art to the human experience.

ARTH 2140. Art of the American Southwest

Course Description

This course examines the major cultures and artistic traditions of the southwest and their historical bases from prehistoric times to the present.

Student Learning Outcomes

Students will:

1. Recognize and identify the major Southwestern artistic traditions from prehistoric times to the present.
2. Recognize the cultural context of these traditions.
3. Distinguish the formal characteristics of a particular tradition.
4. Identify cross-cultural influences and correlations in the arts of the southwest.
5. Develop a vocabulary necessary to discuss (oral and/or written) a given work of art from a variety of different media.

ARTH 2145. Contemporary Art

Course Description

This course is a survey of the movements in European and American painting, sculpture, and architecture from the second half of the 20th century to contemporary times. The course will begin with an explanation of changes in European and American culture as a direct result of global conflict and the effects of these changes on movements in art. The main focus of the course however will be the postmodern era and its new genres, such as performance art, installation art, and the impact of multiculturalism, the feminist movement, and new technologies on the visual arts and culture.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize and identify major works of painting, sculpture, and architecture from the mid 20th century to the present.
2. Be able to discuss the dematerialization of the art object in 20th century and contemporary times.
3. Define the philosophical, social, and cultural underpinnings of the postmodern era.
4. Evaluate the influence of technology on the evolution of contemporary art.

ARTH 2150. Censorship and the Visual Arts

Course Description

Seminar course exploring historical and contemporary examples of censorship in the visual arts. Conflicts around artistic expression and the responses of institutions and the state are examined, including social pressures on the visual arts stemming from racial, cultural, sexual, and religious sources.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Cite examples of artistic repression by the state or institutions.
2. Explain the role of censorship of the visual arts.
3. Explain the sources of conflict between the state and artistic expression.
4. Analyze the restraints placed on the visual arts from religious, cultural and social sources.
5. Analyze complex issues of censorship from multiple points of view.

ARTH 2165. Study Abroad: Images & Insights

Course Description

A study abroad class in which students visit ancient sites in Greece. The influence of the classical Greek archetypes and their mythic patterns on human experience and behavior will be studied. The powerful inner forces of the archetypes personified by Greek gods, goddesses, and heroes will be explored.

The Archaic, Classical, and Hellenistic images of the gods, goddesses, heroes, and mythological stories as they are represented on architecture and in sculpture and painting will be examined from an art historical perspective. Art from the Byzantine period including Christian archetypal imagery in the form of icon painting will be introduced in both an historical and contemporary context.

Students will be responsible for additional costs for this course which will include airfare, travel costs while abroad, hotel, food, and miscellaneous expenditures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify the concepts of archetypal psychology and symbolism found in mythology and ancient Greek art history.
2. Apply the concepts of archetypal psychology as they are relevant to one's personal experience and consciousness.
3. Demonstrate the ability to be a culturally competent and responsible traveler with an expanded world view.
4. Articulate some of the major stylistic trends and concepts behind artworks from ancient Greece.
5. Develop a basic knowledge and appreciation for Byzantine iconography as it relates to archetypal ideals in an historical and contemporary context.

ARTH 2200. History of Women Artists: Renaissance to 21st Century

Course Description

This course examines the creative achievements of women artists within the art-historical continuum with focus on the changing role of women in the evolution of art.

Student Learning Outcomes

Students will be able to:

1. Recognize and describe, orally and in writing, the changing roles of women in the evolution of art as makers, patrons, collectors, and critics of art and how these changing roles effect self-expression.
2. Identify and describe, orally and in writing, individual women artist's achievements within the art-historical continuum.
3. Appraise, orally and in writing, the significance of women artist's work and the impact that this work has, and will have, on the future of visual art.
4. Examine the social and cultural dynamics affecting the perceptions of women's art and the role of feminism in art and art criticism.

ARTH 2201. History of Women Artists

Course Description

This course examines the creative achievements of women artists within the art-historical continuum with focus on the changing role of women in the evolution of art.

Student Learning Outcomes

1. Recognize and describe, orally and in writing, the changing roles of women in the evolution of art as makers, patrons, collectors, and critics of art and how these changing roles effect self-expression.
2. Identify and describe, orally and in writing, individual women artist's achievements within the art-historical continuum.
3. Appraise, orally and in writing, the significance of women artist's work and the impact that this work has, and will have, on the future of visual art.
4. Examine the social and cultural dynamics affecting the perceptions of women's art and the role of feminism in art and art criticism.

ARTH 2210. Art History

Course Description

Survey of art of the western hemisphere from prehistory to the 21st century. May incorporate an interdisciplinary approach.

Student Learning Outcomes

Students will:

1. Analyze and critically interpret significant primary texts and/or works of art (this includes fine art, literature, music, theatre, and film).
2. Compare art forms, modes of thought and expression, and processes across a range of historical periods and/or structures (such as political, geographic, economic, social, cultural, religious, intellectual).
3. Recognize and articulate the diversity of human experience across a range of historical periods and/or cultural perspectives.
4. Draw on historical and/or cultural perspectives to evaluate any or all of the following: contemporary problems/issues, contemporary modes of expression, and contemporary thought.

ARTH 2220. History of 19th Century Photography

Course Description

This course centers on the study of the aesthetic evolution of photography. Topics and readings cover the predictions of photography beginning in the late Renaissance, which culminated with the 1839 invention of photography, up to the end of the 19th century. Periodic field trips to special collections and libraries offer an opportunity for firsthand viewing of early photographs.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and describe, orally and in writing, 19th century practitioners and their aesthetic concerns.
2. Describe, orally and in writing, how photography has been used to address social, political and aesthetic needs.
3. Describe and discuss, orally and in writing, major trends in photography.

ARTH 2230. History of 20th Century Photography

Course Description

This course emphasizes modern photography within and outside mainstream art movements, from the late 19th century to the present. Lectures focus on modernism, site-specific works, multi-material approaches and new digital technologies. Field trips to local archives and collections supplement course work.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize and describe, orally and in writing, the various inventive traditions that established photography as a modern art form in the 20th century.
2. Distinguish the visual and technological innovators that created the foundation for the history of photography.
3. Relate photographic innovators to other visual arts traditions within modern art history.
4. Research resulting in either a written paper or a portfolio of photographs "in the manner of" a 20th century photographer.
5. Read one additional book concerning 20th century photography and write one page about it.

ARTH 2245. History of Photography

Course Description

This course is designed to provide students with a fundamental working knowledge of the major trends in the aesthetic, conceptual, and technical aspects of photography from its beginnings in the 1830s to the recent practices of photographers and artists working with photographic technologies. Together we will investigate photography's role as an artistic medium as a central focus, as well as its broader role in our visual, political, and social culture. Textbook readings, online lectures, discussions boards, exams, and other activities will assist students in gaining a critical understanding of photography.

Student Learning Outcomes

1. To identify significant people and events in the development of photography.
2. To develop visual literacy: To begin building a vocabulary for analyzing photography in terms of form and style.
3. Recognize the various uses that have been considered appropriate for photography.
4. Evaluate the photographs of individuals who have set new trends in the art of photography.
5. Analyze and compare the work of significant photographic practitioners.
6. Describe the relationship between photography and other contemporary events that have shaped the nation and the world.
7. To enjoy the art of photography!

ARTH 2310. Art History Careers

Course Description

Students will utilize art historical perspectives and fundamental skills derived from prior art historical course work to make connections on how art is critical to shaping worldview. Students will engage in various career oriented and pre-research activities to prepare them to achieve their future transfer or employment goals. Students will deliberate on what they intend to do with their degree with focus on how they plan to use their Art history coursework.

Student Learning Outcomes

1. Propose a research project focusing on a particular artist, period, or theoretical problem in the field of Art History.
2. Recognize different forms of art theory and criticism in art historical writing.
3. Utilize proper research citation methods.
4. Effectively employ visual vocabulary.
5. Develop a professional writing sample in the field of Art History.
6. Present the writing sample in a formal scholarly setting and contemporary thought.

Art Studio (ARTS)

ARTS 1110. Arts and Design Survey

Course Description

An introduction to disciplines within Arts and Design encompassing two-dimensional, and three-dimensional studies. Projects will be based on a common conceptual theme for the semester. Students will gain a fundamental understanding of issues of aesthetics, innovation, critical interpretation and collaboration central to arts and design studies. Discussions and assigned readings will provide a critical overview of historical and cross-cultural examples.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an aesthetic understanding of design disciplines through the completion of a project in 2-D and 3-D studies.
2. Successfully participate in Arts and Design critique and describe their conceptual process.
3. Articulate an understanding of aesthetics in a variety of art forms and modes of expression within historical and cross-cultural perspectives.
4. Successfully participate in presentation and exhibition of work.
5. Articulate a critical interpretation of and comparison of significant works of art, across a range of historic periods.
6. Discuss potential career path in arts and design.

ARTS 1111. Introduction to Studio Art

Course Description

Introduction to Studio Arts is a hands on studio course, for non - art majors. Students will cover the techniques, materials, and terminology in both 2-Dimensional and 3-Dimensional image and form making. Major studio concepts are covered in Drawing, Design, Painting, Printmaking, Ceramics, Photography and Sculpture. Emphasis is placed in "Hands on" problem solving and includes historic overview where applicable.

Student Learning Outcomes

Students will be able to:

1. Utilize the visual elements and principles of design in the making of various works of art.
2. Utilize appropriate use of art terminology in the classroom.
3. Recognize historical modes of art making.
4. Produce art projects in Drawing, Design, Painting, Printmaking, Craft, Photography, Ceramics, and Sculpture.

ARTS 1112. Introduction to Interior Design

Course Description

An introduction to basic interior design, to include color coordination, furniture arrangement, unusual window treatments, choice of fabric and floor coverings, and accessories. This course will help participants in understanding the overall concept of design and will help students develop skills associated with design projects.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Create and design a room with furniture, including colors and products.
2. Use realistic proportion and balance in furniture layouts and drawings.
3. Understand the concept and procedure of putting together color boards and designing rooms.

ARTS 1115. Explore Arts & Design

Course Description

Hands-on introduction to many aspects of art careers and disciplines including two and three- dimensional compositional fundamentals, and entrepreneurship. Students will gain a fundamental understanding of issues of aesthetics, innovation, critical interpretation, and collaboration which form the basis of arts and design studies. Central to the class will be a collaborative exhibition featuring students and programs from northern New Mexico in one or more of the many SFCC exhibition spaces.

Student Learning Outcomes

1. Demonstrate a basic aesthetic understanding of design disciplines through the completion of a project in 2-D and 3-D studies
2. Demonstrate an understanding of the basic aspects of a juried visual art exhibition.
3. Successfully participate in arts and design critique and describe their own conceptual process.
4. Demonstrate the ability to think critically and to work collaboratively in the development of a project.
5. Demonstrate basic principles related to installation and design of an exhibition
6. Demonstrate an understanding of the entrepreneurial skills related to the project.

ARTS 1120. Introduction to Art

Course Description

In this class, students will be introduced to the nature, vocabulary, media and history of the visual arts, illustrated by examples drawn from many cultures, both Western and non-Western and across many centuries. We will begin with a general overview of the subject, including basic concepts and themes that shed light on the continuity of the artistic enterprise across the span of human experience. We will study the visual elements from which art is made, including how artists use these elements and how the artists' use of visual elements affects our experience of looking at art. We will examine both two-dimensional and three-dimensional media including drawing, painting, printmaking, camera and computer arts, graphic design, sculpture, installation, crafts and architecture. Selected works will be examined in context, including the history of the time and place in which they were created, as well as their function, patronage, and the character and intent of individual artists.

Student Learning Outcomes

1. Students will learn the terminology that we use to talk about art.
2. Students will learn about the elements from which art is made including line, shape, mass, color, light, texture and pattern, space, time and motion.
3. Students will learn about the principles of design including unity and variety, balance, emphasis and subordination, scale and proportion, rhythm.
4. Students will become proficient in understanding and identifying a wide variety of techniques and materials that artists use to make art.
5. Students will become proficient at seeing and analyzing individual works of art, evaluating criteria such as the artist's intention, the formal visual elements and media used.
6. Students will learn to look at and think about art in new ways.
7. Students will develop an understanding of the cultures and individuals that produced various artworks and art traditions.
8. Students will acquire a basic understanding of a wide variety of artistic traditions including when and where they developed, and the basic style characteristics that identify those traditions.
9. Students will develop a familiarity with controversies surrounding restoration, censorship, public art, and the removal and display of artworks from tombs.
10. Students will improve their study, research, reading and writing skills.
11. Students will view artworks with increased confidence and a broader understanding of what they see.

ARTS 1121. Studio Core I: Concept Development-Process and Play

Course Description

The Foundations course will focus on a deceptively simple question. "What is Contemporary Art, and how can we make it?" Through the exploration of basic visual design concepts, collaborative learning, and interdisciplinary studio production, this course will help us to discover what it means to be an artist in the 21st century.

Student Learning Outcomes

1. Cultivate creative thinking by developing and enhancing the ability to think creatively and generate original ideas through the embracing of divergent thinking and exploration of the artistic process.

2. Apply creative problem-solving to address artistic challenges and demonstrate the capacity to find innovative solutions.
3. Demonstrate ability to integrate multidisciplinary strategies to enhance creative expression.
4. Use creative thinking to explore and express emotional experiences and cultural perspectives.
5. Engage in reflective practices to analyze and understand one's own creative process and critically assess its effectiveness.

ARTS 1122. Studio Core II: Formal Structure Tools and Techniques

Course Description

Introduce students to formal design concepts as well as to various technical skills and tools in order to explore and develop innovative forms of artistic expression.

Student Learning Outcomes

1. Analyze and interpret visual elements within artworks, recognizing the application of formal design concepts.
2. Demonstrate an understanding of how formal design concepts contribute to effective visual communication and apply an understanding of how aesthetics enhances the overall impact and quality of artistic creation.
3. Explore and apply technical skills across a range of artistic mediums, including traditional and digital formats.

ARTS 1123L. Book Arts

Course Description

The study and exploration of a variety of book structures, including pamphlets, accordion and multiple-signature books. Japanese side-sewn, paper decoration, and altered books are also introduced. Development of technical skill, craftsmanship and knowledge of book history are emphasized.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Make a variety of book structures.
2. Integrate a book's content with an appropriate structure.
3. Recognize and appreciate a well-made book.
4. Analyze an artist's book with critical knowledge of technique, craftsmanship and history.

ARTS 1124L. Pleasures of Papermaking

Course Description

This course emphasizes traditional European and Asian styles of making paper by hand. Cotton, abaca, kozo, flax and locally found plant fibers will be investigated. Pulp coloring methods, watermarks, embedding, collage, paper casting to three dimensional sculptural uses of paper are introduced.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Gain a working knowledge of papermaking equipment.
2. Design and develop original three-dimensional paper pieces.
3. Explore the techniques of paper-sheet production.
4. Integrate process and content.

ARTS 1141. Color and Culture

Course Description

Color usage and meaning in different cultural, social and historic contexts. Use color effectively as an extraordinary visual and sensual stimulus, while gaining a fundamental understanding of color and culture. This course will focus on the potential of color to effect mood, product sales, and home environments, within diverse cultural contexts.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe, compare and contrast color models from diverse historical and cultural perspectives.
2. Describe, compare and contrast different uses and understanding of color from diverse social, religious and historic contexts.
3. Describe, compare and contrast the psychological effects of color in diverse cultural contexts.
4. Describe, compare and contrast the uses of color in the marketplace, within diverse cultural contexts.

ARTS 1142L. Creative Expression

Course Description

This course provides students with an opportunity to explore and discover their creativity through various techniques and media such as writing, sculpture, collage and printmaking. The course is designed for beginners as well as for experienced artists and writers.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify stages in the creative process.
2. Work in a variety of expressive mediums.
3. Identify internal and external factors that block creativity.
4. Demonstrate ability to work alone and in teams and groups.
5. Utilize strategies to overcome creative blocks.

ARTS 1143. Introduction to Arts and Ecology

Course Description

This course is an introduction to the history and practice of the interdisciplinary field of art and ecology. Students will investigate artistic practice, political ecology, environmental justice, and the interrelationships between cultural and ecological systems.

Through readings, discussion, lectures, and projects, we will explore how art can respond to—and make meaning within—the context of climate crises, mass extinction, colonialism, extractivism, and beyond. In order to expand the space of possibilities for thinking/feeling/making, this course aims to identify and to challenge distinctions between art and science, theory and practice, knowledge and affect.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Gain an introduction to the history and practice of the interdisciplinary field of art & ecology.
2. Critically discuss and analyze issues surrounding art and ecology through reading discussions, lectures, and course presentations.
3. Develop skills of embodied research to investigate ecological relationships of the self, community, interspecies kin, the built environment, and landscape.
4. Develop skills for translating research into artistic forms.

ARTS 1145. Visual Concepts

Course Description

Visual Concepts is an introduction to the philosophies of art, visual thinking, and principles of visual organization. Designed to give students a broad view of aesthetic traditions, ideologies, and techniques basic to the creation and evaluation of art. Principles and concepts are taught in a common lecture and applied in parallel small studio sections.

Student Learning Outcomes

Upon completion of the course, the student will be able to:

1. Develop understanding of history, major styles and contemporary issues in art.
2. Introduce students to the language of visual perception and aesthetic evaluation.

3. Introduce students to the fundamental processes of visual perception and artistic expression.
4. Develop students' confidence in using various art materials for artistic expression.
5. Develop students' ability to verbalize ideas and processes in art making.
6. Develop student's ability to communicate through writing about art and art experiences.

ARTS 1150. Visual Communication Design

Course Description

Lecture and studio-based art course focused on print design with Adobe® InDesign®. The program enables students to create print and packaging materials while they learn the technical aspects of the software. This course is geared for certification in Adobe® InDesign®.

Student Learning Outcomes

Students will be able to use Adobe® InDesign's® available tools to design professional and print-ready letterhead, posters, newsletters and booklets.

ARTS 1152L. Intaglio I

Course Description

Fundamental techniques for using the unique qualities of intaglio processes to create single prints and editions that express aesthetic concerns. Students will work primarily in black and white. This course will focus on technical and aesthetic considerations of development of intaglio plates, intaglio printing and an introduction to the history of intaglio as a fine art discipline.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Create an aesthetically resolved, content-based image using acid etching and/or engraving and/or dry point.
2. Use an etching press to create a sharp and well inked black and white print.
3. Create an image using aquatint.
4. Create an edition of consistent inking, registration and clarity using an Intaglio press.

ARTS 1153L. Relief Printmaking

Course Description

In this course the student will learn about the origins and development of relief printmaking, including linocut, woodcut. The student will produce a portfolio of original prints and make a presentation on the historical and contemporary approaches to this art.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Produce a high-quality print using linocut as a print vehicle.
2. Produce a high-quality print using wood block as a print vehicle.
3. Discuss the origins and development of relief printmaking.
4. Produce a high-quality print using one of the contemporary methods.

ARTS 1160L. Letterpress

Course Description

Introduction to printmaking: Basics of typesetting and printing on a cylinder press and platen press with metal type, wood type, relief and contemporary printmaking methods. Students will work on independent and collaborative projects and learn press lockup, ink mixing, multiple-color registration, editions, and the basics of press mechanics using good studio practice.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate competent use of cylinder and platen letterpress equipment and manual typesetting.

2. Problem solve letterpress printing projects.
3. Explain the use and practice of printing varied surfaces applicable to letterpress.
4. Produce quality prints using letterpress methods and equipment.
5. Understand history and the value of letterpress in contemporary design, art and craft.

ARTS 1165L. Monotype Printmaking

Course Description

This class explores the addition and subtraction methods of monotype printmaking to produce exciting images. Monotype is an old method that has received new attention in today's society. Students explore its relationship to other contemporary forms of art and develop a personal direction in their work.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Incorporate the following techniques in their work: layering; building textured surfaces, additive and subtractive methods; the use of stencils, masking, stamping, collage and mixed media using oil-based ink. Student will utilize the differing properties of various printmaking papers and alternative printing surfaces.
2. Articulate their goals and working approach; assess the strengths and limitations of their work and the work of others.
3. Complete a final project or series that shows a personal direction and demonstrates the exploration, thinking and planning that informs their work.

ARTS 1170. Site and Environmental Art

Course Description

This course introduces students to the history of earthworks created throughout the world by numerous cultures. It includes the role of environmental art in contemporary art and its applications to environmental issues. Studio projects include the construction of site-specific sculpture.

Student Learning Outcomes

1. Create meaningful work of art in the genre of environmental art.
2. Work collectively on large-scale projects.
3. Plan a large-scale project.
4. Develop a critical ability to decode the many layers of meaning in environmental works of art.
5. Develop a relationship with various materials and how they create meaning in works of art.

ARTS 1210. Color Theory I

Course Description

The study of subtractive and additive modes of color mixing, and the psychological effects and popular understanding of color usage and it's meaning in different cultural, social and historical contexts in relation to fine art and commercial contexts.

Student Learning Outcomes

1. Apply the subtractive color wheel and color harmonies effectively in art and design.
2. Demonstrate the ability to mix and match hue and value.
3. Demonstrate an understanding of additive and subtractive color models.
4. Analyze the use of color historically and in diverse cultural contexts.
5. Distinguish the emotional and psychological meanings of color.

ARTS 1211. Color Theory II

Course Description

Study and application of the objective principles of color and its psychological, emotional, and symbolic effects.

Student Learning Outcomes

1. Through the study of color theory and projects completed, the students will develop an intuitive use of color.
2. Be familiar with other color systems.
3. Learn about color harmonies, form, spatial effect, composition, impression and expression.
4. Understand the creative process as it involves a willingness to explore and go beyond first attempts and to take an idea all the way.
5. Awareness of universal communication through the visual arts and the role of artists and art in the development of humankind.

ARTS 1212. Color Theory**Course Description**

Various color theories as they relate to compositional organization. Required for art education majors.

Student Learning Outcomes

1. Explain and utilize the principles of two-dimensional design and color.
2. Demonstrate the principles of design and color using various media to create effective 2-D designs.
3. Use the principles of design and color to communicate complex issues in a simple and understandable manor.

ARTS 1220. Art Practices I**Course Description**

This course introduces the exploration of processes, ideas, and diverse media of visual arts. It addresses the thematic concepts that are central to the nature of art making today, with emphasis given to issues of LIGHT, FRAME, and MARK while developing an understanding of the elements and principles of design.

Student Learning Outcomes

1. Produce create works that explore, interpret, and/or question LIGHT, FRAME, and MARK in relation to the creative arts
2. Apply and organize the elements of 2-D, 3-D, and 4-D form.
3. Incorporate various materials, processes, and spatial concepts into the creation of objects.
4. Integrate research into content-based reasoning during the development of creative works.
5. Produce creative works using time-based mediums such as performance, experimental film and video, sound art, and/or installations.
6. Critically analyze personal, contemporary, and historical works of art as well as the artwork created by peers for both aesthetic and conceptual quality.
7. Revise personal creative works in response to constructive critique by instructors and/or students.

ARTS 1230. Art Practices II**Course Description**

This course introduces the exploration of processes, ideas, and diverse media of visual arts. It addresses the thematic concepts that are central to the nature of art making today, with emphasis given to issues of MOTIVE and CHANGE while developing concepts, techniques, and processes involved in working in the third dimension.

Student Learning Outcomes

1. Produce creative works that explore, interpret, and/or question issues of ethics, audience, identity, sustainability, invention, time, and change in relation to creative arts.
2. Employ materials that reinforce their conceptual goals in each project.
3. Integrate research into content-based reasoning during the development of creative works, taking into consideration global and multi-cultural influences in contemporary art practices.
4. Identify, analyze, and apply the artistic qualities of 3-D design.

5. Critically analyze personal, contemporary, and historical works of art, as well as the artwork created by peers for both aesthetic and conceptual quality.
6. Revise personal creative works in response to constructive critique by instructors and/or students.
7. Promote personal and group welfare by using safe work procedures and maintaining a safe working environment.

ARTS 1240. Design I

Course Description

This course introduces the fundamentals of two-dimensional design as it applies to fine art and commercial contexts. Emphasis will be on basic color theory, elements of dynamic composition, vocabulary of visual arts and design, and development of visual conceptual skills. Students will use a variety of materials and techniques.

Student Learning Outcomes

1. Produce art works that apply and organize the elements of two-dimensional form (line, shape, value, texture, color and space).
2. Produce artworks that apply the principles of two-dimensional design (harmony, variety, repetition, balance, rhythm, proportion, dominance, movement, and economy).
3. Demonstrate effective use of materials and techniques with consideration for craftsmanship and presentation.
4. Use visual art vocabulary in the development and critique of work.
5. Explore concepts and ideas: from conceptual, realistic/referential to non-representational.

ARTS 1250. Design II

Course Description

This course introduces the basic formal (aesthetic), spatial, and physical aspects of 3-D form as they can be applied to sculptural and functional design. Techniques that explore structure, mass, volume, scale, surface, form, and function are covered, along with various media, which may include paper, wood, clay, and/or metal.

Student Learning Outcomes

1. Apply the artistic qualities of the elements of art and principles of design to three-dimensional form.
2. Create 3-dimensional form using varied sculptural methods, construction techniques and media.
3. Produce 3 D design projects safely with proper use of equipment and materials.
4. Apply realistic, referential, and abstract concepts and ideas to projects.
5. Demonstrate knowledge of 3-D related art vocabulary, origin and trends in sculpture, and 3-D design fundamentals.

ARTS 1270. Navajo Rug Weaving I

Course Description

Introduction to the processes and techniques of Navajo weaving, including preparation of the wool, setting up the loom and warp, weaving techniques, and design elements. Basic origin stories and the history of Navajo rug weaving will also be covered.

Student Learning Outcomes

Upon completion of the course, the student will be able to:

1. Understand the oral tradition and the history of Navajo weaving. Identify the significance of the upright loom and weaving tools, and identify traditional, regional, and non-regional Navajo rug styles.
 - a. Understand the oral history of Navajo weaving.
 - b. Know the historical background of Navajo rugs.
 - c. Identify the different names and types of Navajo rugs.
2. Gain a basic understanding of Navajo weaving by preparing the wool, dying wool, and setting up the loom and the warp.
 - a. Learn vocabulary words used with weaving and naming tools.
 - b. Prepare, gather, process, and spin the wool.

- c. Dye wool.
- d. Prepare the loom and warp.
- e. Spin the side-string and spacing string.
- 3. Learn the basic weaving techniques and designs.
 - a. The weaving process:
 - i. Warping and twining
 - ii. Mounting the bound warp on the dowel
 - iii. Mounting the warp on the loom
 - iv. Making the heddles and shed rod
 - v. Holding the batten and comb
 - vi. Weaving the first rows
 - vii. Using the heddle and shed rod
 - viii. Adding new wool (string)
 - ix. Repairing a broken warp
 - x. Learning hooked joint, square, and diamond shapes
 - b. Create a basic rug design using the three (3) basic designs.
 - c. Learn the “Finishing Technique” of traditional Navajo Rug Weaving.

ARTS 1272. Introduction to Fibers

Course Description

Introduction to fiber/fabric materials, processes and approaches including dyeing, sewing, basket-making, embroidery, netting, weaving, and hand construction.

Student Learning Outcomes

- 1. Manipulate fibers via coiling and plating basketry, yarn netting, basic machine and hand- sewing, small-scale tapestry weaving.
- 2. Demonstrate basics of fiber-reactive dyeing (including safety precautions).
- 3. Synthesize these craft techniques into personalized conceptual projects.

ARTS 1275. Art Garment

Course Description

Introduction to textile properties, dyeing, hand, and machine sewing. Introduction to conceptual fashion and artists who employ clothing as sculpture. Students design and construct 2 sculptures that relate to a body. Sculptures are finished objects or are utilized in performance art.

Student Learning Outcomes

- 1. Manipulate textiles to create garments.
- 2. Demonstrate hand and machine sewing techniques.
- 3. Demonstrate the basics of fiber-reactive dyeing.
- 4. Synthesize sewing, sculpting, dyeing techniques into personalized conceptual projects.

ARTS 1278. Indigo and Solar Dyeing

Course Description

Introduction to indigo dyeing and solar dyeing. Students learn how to make, maintain and dye using an indigo bath. Students harvest and dye with local materials and learn sustainable low-water solar dyeing methods.

Student Learning Outcomes

- 1. Demonstrate ability to prepare indigo dye bath and successfully dye silk and cotton.
- 2. Demonstrate ability to collect local plants.
- 3. Demonstrate ability to prepare solar dye bath with local natural materials and successfully dye silk and cotton.

ARTS 1280. Santeros: Craft and Tradition

Course Description

New Mexican santeros are part of a 400-year-old artistic and religious tradition. In this course, students learn the history, symbolism, and woodcarving and painting techniques associated with diverse styles of ancient and contemporary santero artisans. Students learn to carve bultos and to paint retablos.

Student Learning Outcomes

1. Identify the symbols commonly associated with specific saints.
2. Recognize the historical schools of the santero traditions in New Mexico.
3. Demonstrate carving techniques, including relief and three-dimensional applications.
4. Identify appropriate woods to be used for different applications.
5. Apply appropriate surface finishes to bultos and retablos.

ARTS 1281. Santeros II

Course Description

Builds on acquired skills, experience, and knowledge of the history, symbolism, woodcarving, and painting techniques of the New Mexican folk art of creating santos. Students will concentrate on carving techniques for rendering aesthetically pleasing heads, hands and feet and the process of applying natural pigments to created works.

Student Learning Outcomes

1. Carve aesthetically pleasing heads, hands, and feet in the Santos tradition.
2. Apply advanced processes in using natural pigments on wood carvings.
3. Describe the relationship of their created work with the New Mexican tradition and folk art of creating santos.

ARTS 1282L. Introduction to New Mexico Tinwork

Course Description

Students learn traditional tin working, part of the traditional Hispanic folk art of Northern New Mexico, using fundamental tools, processes and materials. Students fabricate such items as frames, candleholders and objects of utilitarian and artistic purposes. Regional issues and techniques are explored.

Student Learning Outcomes

1. Acquire a general knowledge of basic forms, materials and processes.
2. Learn to use traditional tools in tin working.
3. Develop skills in folding and use of tin stamping and punching.
4. gain knowledge of cultural and historical applications and techniques.

ARTS 1310. Introduction to Ceramics

Course Description

This course introduces the technical processes and conceptual concerns of working with ceramic material. Various methods of forming functional and expressive works out of clay are explored. Methods used include hand building and throwing, basic clay bodies, slip and glaze, and atmospheric firing.

Student Learning Outcomes

1. Explain the transformation of the ceramic material from raw clay form to glazed ceramic object.
2. Demonstrate proficiency of technical ceramic skills.
3. Explain larger concepts and design principles.
4. Apply basic 3-D design principles in the formation of a work of art, as they apply to the ceramic media.
5. Create ceramic works of art based on conceptual prompts.
6. Critically evaluate a variety of artwork.

7. Gain an understanding of the history of ceramic art from a multicultural perspective.

ARTS 1311L. Ceramic Color on Form

Course Description

The process of formulating and applying color on ceramic forms. Engobers, sintered engobes, underglazes, slips, stains, terra sigillatas, and glazes will be explored. Pattern, monochrome, polychrome, abstract application, and other approaches to ceramic painting on a three-dimensional form will also be introduced.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Formulate a slip, in engobe, stains, terra sigillata, and a simple glaze.
2. Demonstrate an understanding of the different surface approaches to color on form.
3. Successfully transform the visual look of a three-dimensional form using applied surface design concepts.
4. Demonstrate an understanding of historical approaches to color on form and how they relate to the student's own colored sculptural works.

ARTS 1312L. Micaceous Pottery I

Course Description

Micaceous Clay is a unique type of clay found in Northern New Mexico. It has been used for centuries by Jicarilla Apache, Pueblo and Hispanic potters to produce cooking vessels. This course presents the history of its traditional use as well as traditional and nontraditional techniques for working with this clay. Students produce a variety of open bowls, closed bowls and lidded forms using hand-building techniques, electric kilns and open-pit firing processes.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize the unique properties of micaceous clay.
2. Clean and prepare a suitable micaceous clay body for hand-building or execute works with commercially produced micaceous clay.
3. Demonstrate a variety of hand-building techniques.
4. Execute the steps in preparing an open pit fire, and successfully fire a variety of micaceous vessel forms and/or using contemporary firing techniques which include electric kilns before the pit firing process.

ARTS 1313L. Pueblo Pottery

Course Description

Offers the student an experience in Elements of the Earth/Pin Kwi yo, the traditional techniques of Pueblo Pottery. The student will learn the traditional approach to respectfully gathering and processing clay along with ancient methods of forming Pueblo Pottery vessels. Surface decoration, including designing, carving, incising, and painting with natural pigments is an integral course element. Ancient firing methods will be used.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize clay in its natural environment and be able to gather and process clay.
2. Hand build, coil, form and shape pots.
3. Design, carve, incise, and paint their pottery with natural pigments.
4. Sand, water wash, slip, and stone polish their pottery.
5. Perform oxidation and reduction firing using natural fuel.
6. Explain the importance of leaving the clay site in a respectful manner.
7. Contrast contemporary ceramics methodology with Pueblo ceramics methodology.

ARTS 1314L. Indigenous Pottery

Course Description

Study of Indigenous Pottery in the American Southwest. This course presents an archaeological anthropology study of traditional pottery making from New Mexico, Arizona and Mexico. The study and making of Indigenous pottery includes those of the Anasazi, Sinagua, Patayan and Hohokam Indigenous cultures. Using a road map, students are assigned to an area of pottery making that originates from a specific archaeological site. This research is used to create site/specific pottery. Hands on pottery making methods include coil building and old-style surface polishing of functional forms and small sculptures. The contrast between ceremonial as opposed to decorative pottery is discussed.

Student Learning Outcomes

1. Recognize the unique properties of hand harvested clay as it relates to indigenous cultures of the Southwest.
2. Identify pottery forms and building techniques with site/specific southwest indigenous cultures.
3. Prepare a suitable clay body for hand-building pottery using traditional indigenous pottery making techniques.
4. Create functional forms and small sculptures that interface aesthetically with a particular indigenous pottery culture such as Anasazi, Sinagua, Patayan and or Hohokam.
5. Execute the steps in preparing an open pit fire, and successfully fire a variety of vessel forms and/or using contemporary firing techniques which include electric kilns before the pit firing process.
6. Demonstrate traditional approaches to respectfully gather and process clay at the site.

ARTS 1315L. Ceramics: Wheel Throwing

Course Description

An introduction to the fundamental principles of throwing clay forms on a potter's wheel. The course emphasizes functional as well as sculptural aesthetics associated with the potter's wheel.

Student Learning Outcomes

1. Identify and operate equipment associated with the ceramic wheel throwing.
2. Design and create forms using the potter's wheel.
3. Articulate vocabulary and practices specific to ceramic throwing.

ARTS 1320. Ceramics I

Course Description

An introduction to the medium of clay incorporating hand building and wheel throwing to introduce the student to both the sculptural and utilitarian uses of clay. The student will also be introduced to a variety of glazing and firing techniques.

Student Learning Outcomes

1. Demonstrate through critical discourse or writing an introductory knowledge of the history of ceramics, and ceramic language and terminology.
2. Demonstrate through mechanical application an introductory knowledge of the properties of clays, glazes, and a variety firing techniques.
3. Produce a body of work that exemplifies good ceramic design through the effective use of form, surface, and color.
4. Through the production a body of work demonstrate competency in hand building and throwing on the wheel.

ARTS 1330. Clay Handbuilding I

Course Description

An introduction to the aesthetic qualities of ceramics and the material properties of clay via the learning of traditional hand building techniques and a variety of methods of applying finish and color.

Student Learning Outcomes

1. Create clay forms using a variety of traditional hand-building techniques.
2. Demonstrate the ability to apply glazes and other colorants to clay forms.
3. Describe the process of firing a ceramic kiln.
4. Use the vocabulary of ceramic art in the critical evaluation of ceramics.

ARTS 1340. Functional Ceramics I

Course Description

In this course the student is introduced to a variety of techniques used to create hand built and wheel thrown functional ceramics. Specific topics include pinch, slab, and coil hand building, basic wheel throwing, surface finishing, and firing.

Student Learning Outcomes

1. Demonstrate through the creation of a body of work a basic knowledge of ceramic hand forming techniques, the potter's wheel, simple surface finishes, and basic firing techniques.
2. Demonstrate through the proper use of facilities, materials, and personal protective equipment knowledge of safety measures and the safe practices used in the ceramic studio.
3. Demonstrate through writing or other forms of presentation familiarity with the history and terminology of pottery (functional ceramics).
4. Demonstrate through the critical examination of their own and others ceramics a sound judgment of craftsmanship, creativity, and elements of design; while showing respect for the dignity of the individual artist.

ARTS 1410. Introduction to Photography

Course Description

This course introduces the making of photographic images from a broad viewpoint to consider both as an art practice and as a cultural practice. The course covers technical information on camera use and functionality, composition and visual design, digital workflow and editing, professional functions of manipulating and enhancing images, and printing correctly and effectively. The historical aspects of photography are also covered.

Student Learning Outcomes

1. Gain fluency with basic camera function as well as a working knowledge of other photographic equipment and software to produce technically competent photographs.
2. Have a familiarity with current image-editing software to enhance images as well as developing a digital workflow for the management of digital images.
3. Be able to develop creative solutions to visual photographic problems.
4. Gain awareness of contemporary issues in contemporary art photographic practice that can be applied to the one's own individual practice.
5. Develop the ability to critically analyze and discuss photographic images.
6. Print and produce a final project that demonstrates synthesis of ideas presented in the course readings, critiques, and individual research.
7. Demonstrate photographic terminology, and the many ways photographs function in society, both currently and historically.

ARTS 1411. Basic Digital Printing Skills

Course Description

For students with existing familiarity in the digital print environment who seek training on updated hardware and software. Specific coverage of the continuous and sometimes drastic changes in evolving printing technology. Current industry standard software and hardware components are used in a state-of-the-art lab facility. It is recommended that students take a photography class concurrently with this course to maintain continuing access to the digital darkroom.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Competently operate various printer models including loading of sheet and roll paper.
2. Troubleshoot basic printer and print driver problems.
3. Print in the digital darkroom independently of instructor.
4. Soft-proof images to predict intended outcome.

5. Understand the necessity of a calibrated print environment.
6. Describe the differences between manufacturer-provided and custom paper profiles.

ARTS 1412. Alternative Photographic Processes I

Course Description

This is an introductory course in Alternative Photographic Processes, aka Non-silver Photography, or Historic Processes. Areas covered include the production of Digital Negatives and processes such as cyanotype, Van Dyke prints, and platinum/palladium printing. Assignments are designed to familiarize students with basic technical skills, genres and personalities associated with photography.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate competencies in producing digital negatives with predictable exposure characteristics.
2. Demonstrate proficiency in non-silver photographic processes.
3. Develop a working knowledge of non-traditional photographic techniques.
4. Demonstrate an emerging understanding of aesthetic, compositional, conceptual, and communicative tools in photography.
5. Create a final portfolio.

ARTS 1413. Photography and Studio Lighting I

Course Description

An introductory course in the purposeful and creative use of light and shadow in photography. Both natural and artificial light sources are used to illuminate arranged subjects, primarily still-lives, small environments and portraits, lighted in a variety of ways to render desired effects and outcomes.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Produce photographic images that show a high degree of aesthetic and compositional awareness.
2. Produce images that are innovative and original in approach.
3. Demonstrate the technical skills necessary, to render an intended outcome.
4. Demonstrate an emerging understanding of aesthetic, compositional, conceptual, and communicative tools in photography.
5. Create a final portfolio.

ARTS 1414. Camera Use and the Art of Seeing

Course Description

Focuses on the use of the digital SLR camera and the principles of composition and the art of seeing. Students are required to shoot digital files for their assignments. Students' work is critiqued on the basis of the online presentations or PowerPoint presentations; no printing is part of this course. Designed for the beginning photographers, this course prepares students for subsequent photo courses and review the principles of camera use and composition. Not a darkroom/lab course.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define the relationship of shutter speeds, f-stops and ISO.
2. Recognize the concepts of depth-of-field and reciprocity failure.
3. Define various focal lens lengths.
4. Identify the properties of film and the characteristics of various film types and the characteristics of different digital file types and resolutions.
5. Demonstrate an evolved "art of seeing" through deliberate use of texture, pattern, shadow, viewpoint, etc.

ARTS 1415. Photographing Artwork

Course Description

This course provides practical skills to artists who need to generate examples of their creative output for documentary and commercial purposes. Students learn to photographically capture images for web, portfolio, gallery and professional presentations. Students learn to stage, light, and photograph artwork such as paintings, drawings, ceramics, jewelry, furniture and photographs to create professional presentations for galleries, museums, collectors, and college applications. Digital cameras are utilized in this course. Students will learn color management and various methods of outputting print and digital files for portfolio, web and marketing activities.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Create hi-quality photographic examples of artwork for portfolio and artistic presentation.
2. Organize photographic presentation with documents for portfolio packet.
3. Exhibit fluency with the criteria for professionally photographing materials for gallery environment and portfolio presentation.
4. Exhibit competency with the necessary skills and requirements for professional presentations.

ARTS 1510. Introduction to Electronic Arts

Course Description

This course will be an introduction to the computer as a medium and fine art tool. The course will explore the history, theory, and contemporary art issues associated with electronic art practice, as well as introduce students to the basic tools and associated technologies. This studio course will introduce simple electronics, software and ideas for working with sound, video, and the internet to create artwork.

Student Learning Outcomes

1. Demonstrate knowledge of simple electronics and circuit building through the construction of simple sensor based circuits.
2. Integrate a knowledge of digital audio recording and analog circuit building with historical concepts from sound art practice to create a simple sound art piece.
3. Create a short video art piece informed by historical and theoretical examples.
4. Develop a project that uses simple web programming (HTML, CSS, and JavaScript) to integrate digital imaging, sound, and video to express conceptual approaches informed by historical examples.

ARTS 1515. Digital Photography

Course Description

The student will learn the techniques and aesthetics of digital imaging using an editing software program. Students will gain an understanding of digital cameras and basic photo enhancement methods. There will be a discussion of output devices for the finished image. Creating artistic visual images within the camera will be emphasized. Students must supply their own digital camera.

Student Learning Outcomes

1. A working knowledge of digital camera operation.
2. A basic understanding of digital imaging.
3. An understanding of input and output sources in digital photography.
4. A basic understanding of image editing.
5. An understanding of photographic design and lighting.
6. An understanding of photographic history.
7. An understanding and ability to use the language of digital imagery.
8. Confidence in visual and written assessment skills.
9. Awareness of visual metaphors in personal artwork and culture.

ARTS 1520. Digital Media I

Course Description

This course introduces two of Adobe®'s major software applications, Illustrator and Photoshop®, which are essential in creating artwork, designing promotional materials, websites and more. Part of the course deals with creating a variety of documents using the major tools of each program and gaining an understanding of the contemporary graphic industry and basic elements and principles of design.

Student Learning Outcomes

1. Demonstrate appropriate skills in configuring and navigating computer systems software applications as appropriate to digital image making needs including organization of files using keywords and running batch processes.
2. Exhibit an understanding of a layer-based bitmap editing program, through photo retouching, precise use of selection tools, and color adjustment techniques.
3. Create imagery using a vector-based illustration program which demonstrates an understanding of vector-based drawing tools.
4. Integrate the use of bitmap and vector images using bitmap and vector-based image making applications to demonstrate a basic understanding of composition, color, and appropriate image size and resolution.

ARTS 1530. Digital Media II

Course Description

This course introduces one of the major software applications in Adobe® Creative Cloud, InDesign, with emphasis on obtaining a working knowledge of this software to create publications and documents of all kinds, promotional materials, press releases, newsletters, website, and more.

Student Learning Outcomes

1. Demonstrate an understanding of the software.
2. Gain knowledge in the main features of the software and how to apply them for different styles of documents.
3. Demonstrate an understanding of what constitutes a press-ready document.

ARTS 1531. Lighting for Digital Photography

Course Description

Students learn how to use lighting techniques and equipment for digital photography. This course offers students an opportunity to use studio lighting equipment to photograph portraits, still life objects, flat and 3-D artwork, and objects and products for web marketing: which will enable them to use this knowledge in the workplace or for personal portfolio use. Students will be shown how photographers use lighting equipment and techniques in the commercial photography field. Students will also be able to assess their own lighting equipment needs and be able to make informed decisions when purchasing lighting equipment.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use digital cameras with lighting equipment.
2. Have a working knowledge of the qualities, kinds, and types of light.
3. Make correctly lit photographs for commercial and personal use.
4. Photograph products for web marketing.
5. Knowledgeably purchase and build different types of lighting system.

ARTS 1540. Digital Tools for the Artist

Course Description

This course provides students with the digital skills needed for artists in the modern world. Students will be introduced to relevant software programs, projects, theory, ideas and discussions that will help prepare students to enter a contemporary, digital culture.

Student Learning Outcomes

1. Students will learn modern software programs relevant to the modern artist.
2. Students will understand the ideas involved in contemporary technologies and platforms.
3. Students will develop language to help discuss, utilize and understand the newest digital tools in the art field.

ARTS 1541. Introduction to Digital Fabrication for the Arts**Course Description**

This course is a hands-on exploration in the art and process of digital fabrication. The course will assist students in nurturing the ability to efficiently translate ideas and concepts into digitally produced physical objects. Students will be given the opportunity to create objects utilizing industrial laser and waterjet cutters, 3-D printers and a Computer Numerical Control (CNC) mill.

Student Learning Outcomes

1. Learn to use basic prototyping and manufacturing techniques in the production of art objects.
2. Become adept at developing concepts which follow through from the screen to physical form.
3. Develop a hands-on understanding of the multiple functions and processes of a fabrication lab.
4. Learn to measure, print and cut with precision as well as produce error free objects.
5. Apply research and methodologies from other content areas to the making of art works.

ARTS 1542. Digital Art to 3-D CNC Machining**Course Description**

This course teaches the general concepts of using CNC machines in the studio arts. Through lecture and lab assignments, the student will learn basic skills necessary to convert two-dimensional digital pictures into three-dimensional Computer Aided Design data for surface machining. Toolpaths will be generated and parts will be machined using CNC Machine Tools. Terminology used in the field of CAD/CAM will be emphasized.

Student Learning Outcomes

1. Students will be able to convert artwork into digital format.
2. Students will learn the basic navigation and user interface of CAD (Computer Aided Design) systems.
3. Students will be able to program basic toolpaths for CNC machining.
4. Upon completion of this course, students will be able to create clean vector data for machining and relief art object.

ARTS 1543. Digital and Analog Drawing Bridging Tradition and Technology**Course Description**

An introduction to the historical foundations and contemporary potential of drawing that combines digital and traditional approaches. students will develop their ability to create and manipulate images by hand and with the aid of a computer, and learn to compare, translate, and integrate visuals made by old and new technologies. Students will gain a better understanding of digital tools, their expressive capacities, and their application within the context of drawing.

Student Learning Outcomes

1. Demonstrate proficiency in traditional drawing fundamentals (including line, value, perspective, and proportion) as well as the formal principles of composition.

2. Develop a working knowledge of traditional drawing materials and supports; digital drawing and 3d-modeling software and competency in hardware (including scanners, printers, vinyl/laser cutters, monitors, and projectors).
3. Apply observational drawing skills to digital drawing while demonstrating an understanding of digital drawing's unique materiality.
4. Demonstrate critical thinking and problem-solving skills through the analysis and critique of traditional and digital drawings.
5. Understand historical foundations of drawing and articulate how this intersects with contemporary technologies and approaches.

ARTS 1610. Drawing I

Course Description

This course introduces the basic principles, materials, and skills of observational drawing. Emphasis is placed on rendering a 3-D subject on a 2-D surface with visual accuracy. Other topics include historical and contemporary references as well as an investigation of linear perspective, line, value, shape, space & composition.

Student Learning Outcomes

1. Produce drawings that demonstrate techniques and mechanics of observational drawing.
2. Demonstrate competency in the following practices: measuring and sighting, gesture, contour line, negative space, shape, value, space, volume, plane and texture.
3. Create drawings primarily from observation with black and white traditional drawing media.
4. Demonstrate effective verbal or written response to one's own art and the art of others.

ARTS 1611. Industrial Drawing

Course Description

This course material is designed to give an overview of drawing in perspective and applying it to industrial drawing. Student skill level is not a factor in determining whether a student understands the material. Students will be taught concepts that can be used effectively in developing drawings that can be used in assembly, communication and instruction. The development of an idea, comparing the relationship of concepts and revising with the finished product in mind all create a series of tools in developing the designer's mind. Correct use of concepts in the final project will be emphasized. The course has been designed so that all instruction, assignments, both in and out of the classroom develop better foresight when it comes to product design and development.

Student Learning Outcomes

To teach students basic concepts and techniques to enable them to understand, demonstrate and develop an exploded view which shows some process through words and drawing.

ARTS 1616. Drawing Comics & Sequential Art

Course Description

This studio/history/concept course will explore the role which sequential art and comics play in society and our personal lives. In an increasingly visual culture how does the language of comics help to communicate visual ideas more accurately? This class is designed for the student who wishes to investigate self-expression and storytelling using the narrative form of sequential art. Students will question why we feel the need to tell stories and how our world view is reflected in autobiography. Using the hands-on experience of creating their own comic stories, students learn how to communicate their visual ideas more clearly and accurately. Each class will include a discussion of the concepts of comics using examples and recommended sources of research and inspiration. Topics will include the language of comics, page design, visual thinking strategies, dreaming, memory, wordless comics, writing outlines and wordsmithing. Week by week we will extensively cover an aspect of how and why comics work while students simultaneously create their own sequential art.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Demonstrate knowledge of basic character animation layout and design.
2. Utilize the terms native to sequential art.
3. Utilize drawing from life as the basis of sequential art.
4. Comprehend the foundations of underlying shapes, personality, attitude, color, style, and integration with a story.
5. Critically analyze the story elements in sequential art.
6. Apply creatively the principles of design and story for sequential art.

ARTS 1620. Life Drawing I

Course Description

This course introduces the study of the human form as a primary vehicle for addressing formal and conceptual issues in drawing, using a variety of media to master proportion, structure, and visual expression of the figure.

Student Learning Outcomes

1. Apply the proportional canons to draw a human figure in space.
2. Produce drawings that utilize a variety of traditional anatomical rendering concepts, including accurate skeletal and muscular structures of the human form using a variety of drawing media.
3. Employ the figure to visually express ideas or narrative.
4. Use life drawing vocabulary to critique work created by oneself and classmates.

ARTS 1630. Painting I

Course Description

This course introduces the tradition of painting as a medium for artistic expression. Students will investigate materials, tools, techniques, history and concepts of painting. Emphasis is placed on developing descriptive and perceptual skills, color theory, and composition.

Student Learning Outcomes

1. Produce paintings that demonstrate the tradition of methods, techniques, materials, and tools of oil painting.
2. Construct a variety of support structures and grounds on which paintings are created
3. Examine the historical origins and practices of painting from the personal, social and cultural perspective.
4. Identify and apply environmentally safe painting practices, care of tools, equipment, and facilities, as well as disposal of mediums, solvents and paints.
5. Apply basic color theory to representational and non-representational painting.

ARTS 1631L. Painting Media Ancient and Contemporary

Course Description

Students work with bulk powdered pigments and other materials called for in ancient and contemporary recipes to make a variety of painting media. Four to five different media are covered each semester. In addition, students will make their own "grounds" and "supports". A solid understanding of the materials related to painting, health and safety issues, and basic techniques related to each media will be covered in this course.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Solid understanding of the materials used to make a variety of types of paints, grounds, and supports.
2. Gain the ability to problem solve compatibility questions related to the materials used within a painting.
3. Understand through experience, the basic craft issues related to a variety of paint media.
4. Broaden their understanding of what is possible in painting through experience of a variety of paint media and mixed media techniques.

ARTS 1632L. Drawing Space

Course Description

A drawing course focusing on ways to create the illusion of deep and shallow space within a two-dimensional format. Students will work with applied linear perspective, including three-point and creative dynamic perspective, atmospheric perspective, and the use of color to manipulate space. Art historic and culturally specific approaches to visual space will be explored.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Apply one-, two- and three-point linear perspective in drawings from observation and imagination.
2. Understand and apply spatial principles to expand or contract the ground plane in drawings.
3. Use linear perspective to create exaggerated expressive space.
4. Employ color and atmospheric perspective to manipulate space in drawings.
5. Recognize and discuss alternative approaches to rendering space.

ARTS 1633. Painting in Acrylics

Course Description

Students will learn the uses of acrylic paint, care and uses of brushes, what supplies are needed to paint with acrylic. Varnishing, and framing. Learn depth, shading and tones. Different Techniques and steps used to complete a painting. Learn the how to use a color wheel.

Student Learning Outcomes

1. Will form their own, and learn different techniques and styles used with acrylic paint.
2. Will create a color wheel, using primary colors. Use of a color wheel.
3. Will learn to notice their surroundings, look at color and shades, shadows in everyday life.
4. Will learn how art can help the mind and, help relax, let loose of creativity.
5. Will use depth, shadows and shades of color to complete a painting.
6. Will learn to use their own ideas and technique to put onto canvas.

ARTS 1634. Painting with Oils

Course Description

A relaxing approach to the introduction of art, the purpose of this course is to provide simple background for your oil painting experiences in the future and in the meantime serve as an outlet to relax. My objective is to provide a stimulating, relaxing environment where student work is geared toward experimentation with the medium of Oil paint. In this class, you will choose one or more references approved by the instructor, and from that create a work of art. You may create up to 3 paintings in this class, but please pace yourself-no good work of art is done in 3 weeks!

Student Learning Outcomes

Students will learn what makes a successful painting and will be able to confidently begin a work of art and complete on a timely basis. Also, there will be an emphasis on color mixtures-there is no right-from-the-tube green or brown colors. Students will also learn technique and about the various materials/equipment provided by Tech.

ARTS 1640. Watercolor I

Course Description

This course introduces watercolor painting materials and techniques with an emphasis on capturing light, shadow, color and spatial manipulation to describe form. Covers both traditional and contemporary approaches to watercolor painting.

Student Learning Outcomes

1. Compose and paint a series of paintings, demonstrating an understanding of color, composition, space, and fundamental watercolor technique.
2. Distinguish pigments, mix color, identify and prepare varieties of papers for watercolor use.

3. Demonstrate the application of wet in wet, wet on dry, dry brush, back wash, transparent and opaque painting methods.
4. Apply the proper use and maintenance of tools and materials of watercolor painting.

ARTS 1710. Introduction to Printmaking

Course Description

This course provides direct experience of exploring basic printmaking processes, including relief, intaglio, and monoprint processes, as well as the investigation of materials/media, tools, techniques, history, and concepts of printmaking. Emphasis is given to solving problems through thematic development while producing a portfolio of prints.

Student Learning Outcomes

1. Properly operate a printing press and safely handle materials and equipment.
2. Demonstrate an adequate ability to utilize basic historical printmaking techniques that are widely relevant to contemporary, artistic expressions.
3. Utilize formal elements of art and design (line, shape, value, texture, space, and color), to create prints that are formally sophisticated.
4. Create imagery that contains conceptual depth, which can be interpreted by viewers with regard to social, cultural, political, geographical, and/or psychological experiences and relevance.

ARTS 1711. Computer-Based Illustration

Course Description

Introduction to the principles of computerized drawing and design. Using the basic concepts, drawing tools, and vocabulary of Adobe® Illustrator.

Student Learning Outcomes

1. Demonstrate drawing with the pen tool.
2. Demonstrate the use of blending color and creating shapes.
3. Create spot colors and effectively use them in a page layout.
4. Demonstrate formatting and creating typography.
5. Demonstrate the use of layers, effects, graphic styles, symbols, and brushes.
6. Demonstrate competency in creating digital graphics using of Adobe® Illustrator software.

ARTS 1712. Digital Graphics

Course Description

Importing and exporting images and text into various desktop publishing formats. Exploring imaging, drawing, and page layout applications. Introduction to typography.

Student Learning Outcomes

1. Demonstrate competency in the use of InDesign software.
2. Create appropriate visual solutions based on target marketing information.
3. Demonstrate competency in the design and production of advertising and promotional materials.
4. Present ideas and concepts effectively and competently.
5. Visually demonstrate design solutions to be used in a portfolio.

ARTS 1713. Web Page Design

Course Description

Introduction to the creation of well-designed and organized Web sites. Emphasis on building creative but functional user-friendly sites. Introduction to HTML, Flash, Java Script, and Web-authoring software.

Student Learning Outcomes

1. Outline the structure and functionality of a typical website.

2. Demonstrate design and layout skills.
3. Demonstrate competency in the use of Dreamweaver software.
4. Demonstrate competency in the use of photo editing software.
5. Demonstrate skills learned for website functionality.
6. Create an Internet compatible website.

ARTS 1715. Introduction to Graphic Design

Course Description

This course is an introduction to the fundamental concepts of graphic design. Projects will balance the learning of theory, communication, and creativity. It also serves as an introduction to industry-standard digital tools. Through discussion, assignments, and critiques, students will develop the foundational skills needed to communicate via visual language.

Student Learning Outcomes

This course encourages exploration and experimentation into the foundations of graphic design. Upon completion, students will have practical and conceptual knowledge of design principles and will have begun to develop a visual vocabulary demonstrating an understanding of how it is employed in visual form making and communication. Historical, contemporary, and future topics will be discussed providing context for current practices. Students will also gain experience with analog- and computer-based tools used for design creation. By exploring content through presentations, discussions, demonstrations, research, studio work, and critiques, students will achieve the following:

1. The ability to identify foundational principles and elements of graphic design.
2. Build and apply a new visual vocabulary to various compositional assignments.
3. Gain an understanding of typographic form and best practices.
4. Understand how form, images, typography, and stylistic approaches affect the viewer.
5. Be able to apply the core concepts of visual communication to convey content.
6. Gain a working knowledge of the analogue and digital processes of design.
7. Discover and use various resources needed to keep pace with technological growth.
8. Submit and present artwork in a manner suitable for critique.
9. Discuss, defend, and constructively criticize their assignments and those of their peers.

ARTS 1716. Typography and Layout Design

Course Description

Understanding the relationship between text, image, and composition is essential to good design. This course explores design principles and the use of typography, imagery, and graphics in the design of various layouts, from page to poster. It also serves as an introduction to industry-standard digital design tools.

Student Learning Outcomes

In this course, students will develop their compositional layout skills through effective use of the principles and elements of graphic design. This includes developing an understanding of how type is used in practical application and as a means of expression. Through a variety of exercises and projects, they will explore how type, compositional form, images, and graphics unite to create work that is visually compelling. This course also provides an introduction and continued study of the digital tools used in graphic design. By exploring content through presentations, discussions, demonstrations, research, studio work, critiques, and historical context, students will achieve the following:

1. An appreciation for the many ways in which typography and layout are used in graphic design.
2. Be able to successfully unify various design elements in creating compositional forms.
3. Gain an understanding of the many ways in which typography is used in graphic design.
4. The ability to apply principles and elements of design in creating well-composed layouts.
5. Continued experience with the digital tools used in graphic design.

6. Submit and present artwork in a manner suitable for critique.
7. Discuss, defend, and constructively criticize their assignments and those of their peers.

ARTS 1717. Image Making: Graphics and Illustration

Course Description

Image-based graphics and illustrations are as informative as they are expressive. In this course, students will develop and produce imagery that ranges from instructional to artistic while investigating various creative techniques and processes. It also serves as an introduction to industry standard digital graphics tools.

Student Learning Outcomes

This course encourages exploration and experimentation of the foundational principles that guide illustrative and graphic-based image making. Upon completion students will have developed an appreciation for the ways in which these two graphic approaches inform viewers as well as elicit emotional responses. The desire of students to express personal, artistic narratives through visual means will also be explored. In addition, they will learn to differentiate and properly apply vector- and raster-based graphic formats as well as an understating of what makes these two formats unique. This course also provides an introduction and continued study of the digital tools used in graphic creation. By exploring content through presentations, discussions, demonstrations, research, studio work, and critiques, students will achieve the following:

1. A foundation in concepts and techniques used in multiple forms of image making.
2. Methods of illustrating that provides informative content.
3. Approaches to graphic-based imagery that speak to viewers beyond the literal.
4. Exploration of personal expression through graphics and art making.
5. Gain experience with the digital tools and formats used for image making.
6. Submit and present artwork in a manner suitable for critique.
7. Discuss, defend, and constructively criticize their assignments and those of their peers.

ARTS 1720. Stained Glass and Mosaics

Course Description

The purpose of these classes is to help students to develop new skills that assist them to decrease stress through art and at the same time, they will learn to develop their creativity and create skills that can be used outside the classroom. The students can take Stained glass or a Mosaic class. In both classes they will learn by practice sessions and step-by-step instructions the art to work with glass. Also because of the nature of this class; students will receive individualized attention if needed. At the end of the semester the students will be equipped with new skills to work with glass and they will be able to work by their own and supplement their income by doing something that they will love to do. One of the main objectives of these classes is to provide a stimulating, relaxing and pleasant environment where the students would have the opportunity to be in touch with their artistic way.

Student Learning Outcomes

Not Available

ARTS 1750. Papermaking I

Course Description

This course covers the historical styles of making paper by hand, including investigating cotton, abaca, and other exotic indigenous fibers. The course introduces pulp-coloring methods, embedding, embossing, and three-dimensional sculptural uses of paper, as well as students' construction of a mold and deckle, and other basic tools of papermaking.

Student Learning Outcomes

1. Apply a working knowledge of papermaking equipment, its terminology, history, and global cultural contributions.
2. Practice techniques of paper-sheet production.
3. Create works using a mold and deckle method of paper casting.

4. Develop safety and operation skills of papermaking equipment, hand drills with paper pulping extensions, and blender .
5. Explore the historical uses and methods of handmade paper.

ARTS 1810. Jewelry and Small Metal Construction I

Course Description

This course introduces the basic techniques, materials, and tools traditionally used in the creation of jewelry and/or small-scale sculptural objects.

Student Learning Outcomes

1. Apply basic jewelry fabrication techniques (such as: piercing, cold connections, soldering, metal forming, casting and stone setting) to complete projects.
2. Create design sketches of the objects prior to fabrication.
3. Demonstrate knowledge of materials and safe practices for making jewelry, as well as small functional and non-traditional objects.
4. Analyze projects through critiques, oral presentations, and discussions.

ARTS 1811L. Silversmithing I

Course Description

This course is designed for students to gain mastery in fabricating high end silver products. This course will enable students to gain the skills in layout and design, high temp soldering, manufacturing dies to form various silver pieces, placing and soldering of borders. Lab will consist of design and completion of a ranger buckle set.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. High Temperature solder.
2. Fabricate dies to fabricate high end ranger buckle set.
3. Successfully clean and polish silver project.
4. Design and overlay border (berry bead, twisted wire, etc.).

ARTS 1812L. Wax Carving for Jewelry

Course Description

This course is designed to introduce students to the basic techniques, materials and tools used in the wax carving and modeling of jewelry and small-scale sculptural objects. Students develop the tools and techniques necessary to interpret their designs into workable modes. Projects challenge students not only in terms of learning new techniques, but also through specific ideas, themes, or concepts involved in making jewelry and art.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand and plan the steps necessary to interpret designs into a workable mode.
2. Demonstrate an understanding of the different types of waxes and their applications.
3. Demonstrate the proper use of tools and finishing processes in preparation for casting.

ARTS 1813. Jewelry Drawing and Rendering

Course Description

Leads students through color based drafting materials and advances rendering processes specific to metal and gems. This course helps student clarify their jewelry and metal designs as well as strategize developing their drawings into 3-dimensional works of art through demonstrations and practice of graphic layouts, multiple views, value study and color rendering of metal, gems and pearls. Students also learn how to professionally present their design to potential clients and to future employees.

Student Learning Outcomes

1. Draw multiple view layouts.
2. Draw value study of objects and metal.
3. Render different metals in color with multi-media.
4. Render colored gems, diamonds and pearls.
5. Create a color rendering including form and value for a "client".
6. Professionally present work.

ARTS 1814L. Beginning Stone Setting**Course Description**

Designed to take students through the process of engineering settings for faceted stones. Emphasis is on contemporary setting styles and techniques including graver dressing/sharpening and using the complement of setting furs for a variety of setting styles and building bezels. Students practice settings to develop ""muscle memory"" and skill to prepare them for creating a completed piece of jewelry. Techniques to be explored include, but are not limited to flush setting, bezel setting for round gems, making unique bezels with or without gallery work, prong setting and channel setting.

Student Learning Outcomes

1. Create samples of the following setting techniques: prong setting, flush setting, bezel setting for round faceted gems.
2. Evaluate the appropriate setting style for a specific design.
3. Complete a work using one or more of the setting techniques learned.

ARTS 1820. Introduction to Enameling**Course Description**

This course introduces the art of enameling on metal, including powdered enamels, watercolor and liquid (porcelain) enamels. Focus will be on using these materials with the application of drawing and painting techniques, working with textured metal and controlled firing textures. Other topics include basic metalsmithing techniques to integrate enamels into jewelry by use of bezels, prongs, and cold-connections.

Student Learning Outcomes

1. Demonstrate an understanding of the nature and history of enamels including the differences between various enamel types, choice of the correct enamels and the use of alternative enamel types such as watercolor and porcelain enamels.
2. Demonstrate an understanding of how to choose and prepare metals for enameling.
3. Design and create a collection of enamels using the techniques of sifting, stencils, graffito, basse taille, and add variation by the use of controlled firing techniques and enamel additions such as metal foils and underglaze pigments.
4. Create a finished work incorporating enamels into studio jewelry using bezels, prongs, or cold connections .
5. Safely and competently use the studio equipment and processes taught.

ARTS 1830. Shop Foundation**Course Description**

This course introduces the proper use of shop facilities with an emphasis on the safety procedures required for their proper use. The course will provide the student with a foundation of technical skills for use in the production of their work in subsequent classes.

Student Learning Outcomes

1. The student shall demonstrate through a series of exercises and prescribed projects the safe and proper use of the tools and machinery in production studios.

2. The student shall demonstrate through a series of exercises and prescribed projects a working knowledge of the hazards associated with the use of materials commonly employed in the production of 2-D and 3-D art, and the proper precautions used to mitigate their negative effects.
3. The student shall demonstrate a working knowledge of the proper use of personal safety equipment by the proper use of such equipment in the execution of their exercises and projects in the class.

ARTS 1840. Sculpture I

Course Description

This course introduces the student to a variety of medium and techniques used in the production of sculpture; along with the historic, conceptual, and esthetic foundations of the sculptural process.

Student Learning Outcomes

1. Create a series of pieces that demonstrate a working knowledge of a variety of materials and techniques used in the creation of sculpture.
2. Demonstrate the ability to experience and analyze a sculpture, and how to communicate those analyses in a comprehensible manner.
3. Produce objects and analysis that demonstrate a cursory knowledge of historic, and contemporary art practices.
4. Through the creation of a body of work begin to define one's own personal vocabulary in the visual language.

ARTS 1850. Metal Sculpture I

Course Description

In this course students create metal sculpture using a variety cutting and welding techniques; the primary metal used is steel. Through learning the use of the equipment required to produce their work, students will become familiar with the correct processes, nomenclature, and safety precautions used in creating welded sculpture. The student will be introduced to the history and cultural framing of fabricated metal sculpture.

Student Learning Outcomes

1. Demonstrate through the creation of a sculpture of their own design, the ability to cut and weld metal.
2. Demonstrate through discussion or text a basic understanding of the history and nature of sculpture as both object, and interactive experience defined by cultures.
3. Demonstrate through the installation of their work the variety of options in the presentation of work, and the installations effect upon the work itself.
4. Describe the safe and effective use of the welding equipment used in the class.

ARTS 1854. Artistic Blacksmithing

Course Description

This course focuses on the fundamental techniques of forging and metalsmithing. It will cover the basics of forging, fabrication and finishing, as well as an introduction to decorative processes, ergonomic and functional problems, and the construction of mechanisms. The class is structured with an emphasis on technique and will include demonstrations each class.

Student Learning Outcomes

1. To explore blacksmith design.
2. To apply blacksmith methods.
3. To learn the use of a variety of forging tools.
4. To understand the use of forging processes.
5. Develop the vocabulary necessary to objectively critique metalwork.

ARTS 1855. Forging for the Sculptor

Course Description

An introduction to the use of traditional forging tools and techniques in the creation of decorative and expressive ironwork

Student Learning Outcomes

1. Use a forge to heat metal to its proper heat to be worked in a variety of manners.
2. Form, forge-weld, fold and Damascus steel and iron.
3. Compose a work of art, functional or pure sculpture, with the use of the skills acquired in the course.

ARTS 1860. Beginning Spur Making

Course Description

This course is designed for introductory level spur making including the overlay of silver. This course will enable students to gain the skills necessary in fabricating the band, shank, hangers and rowels required in making a pair of spurs. Students will also acquire an understanding of the theory and practice of metal cutting, shaping, welding, and finishing of one pair of spurs. Lab will consist of design and completion of a pair of spurs.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Safely operate all shop equipment and tools.
2. Design and layout the various components of a spur-band, shank, hangers, and rowels.
3. Successfully construct a pair of spurs from the above components.
4. Design and overlay silver.

ARTS 1861. Spurmaking I

Course Description

This course presents the principles and techniques of fabricating spurs. Students gain skills in welding, hard and soft soldering, riveting, and overlay. Students also acquire skills necessary in designing spurs along with understanding form and function.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Operate shop equipment such as cutting torch, metal shears, cutoff saw, mig welder, gas welder, and stick welder.
2. Design and layout spur patterns.
3. Cut, bend, and form shanks, bands, and hangers.
4. Weld, solder, and rivet spur parts together.

ARTS 1862. Basic Casting Techniques

Course Description

Basic Casting Techniques is an introduction to fundamental foundry practices. Students will model several small sculpture and reliefs. At least one project may be chosen to be poured in bronze. Elementary wax chasing, spruing, and metal chasing will be experienced through practical application. Elementary design will be considered.

Student Learning Outcomes

1. Personal responsibilities: AFFECTIVE: Students will develop behavioral skills which help the student acquire a positive attitude toward self, other students, faculty, facilities and equipment, housekeeping in the work areas, and the ability to carry out directions, meet deadlines, meet attendance requirements, etc. with a score of 60% or better using the following concept:
 - a. Each student will maintain class attendance.
 - b. Each student will observe safe studio and shop practices.
 - c. Each student will demonstrate the ability to follow task instructions.
 - d. Each student will demonstrate the ability to self-initiate tasks.
 - e. Each student will demonstrate the ability to complete tasks.
 - f. Each student will demonstrate the ability to focus on group objectives.

- g. Each student will demonstrate the ability to focus on personal objectives.
 - h. Each student will demonstrate the ability to comply with due dates.
 - i. Each student will demonstrate the ability to contribute to the studio working environment.
 - j. Each student will demonstrate the ability to tolerate diverse views.
 - k. Each student will participate in group critiques.
 - l. Each student will demonstrate the ability to dialogue effectively.
 - m. Each student will demonstrate the ability to offer and receive constructive criticism.
 - n. Each student will demonstrate that the discipline focus of class objective can be used as creative stimulus.
2. Theory of casting: COGNITIVE: Students will demonstrate critical thinking skills, conceptual constructs, and specialized vocabulary with a score of 60% or better on a body of work which includes the following:
- a. Each student will be able to demonstrate the principles of relative shop technology and safety.
 - b. Each student will be able to design effective technical strategies.
 - c. Each student will be able to design shape and scale optimum formats to accommodate individualized expressive concerns.
 - d. Each student will develop a sense of form through casting sculptural studies molded into wax and clay.
 - e. Each student will be able to employ appropriate technical processes for casting bronze and aluminum as a basis for further research and exploration of form.
 - f. Each student will explore determinative relationships between media, technical processes and sculptural products.
 - g. Each student will be able to offer an oral critique of finished products.
 - h. Each student will be able to participate in group critiques
3. Casting: PSYCHOMOTOR: Students will develop manipulative, work-oriented skills, and demonstration of specific process skills with a score of 60% or better on a body of work which includes the following:
- a. Each student will be able to effectively assemble material.
 - b. Each student be able to control form so that a finished presentation is accomplished, including architectural weight/support sufficiency.
 - c. Each student will use his/her hands and tactile responsiveness as a perceptive sense in creating sculptural form.
 - d. Each student will be able to install works of sculpture for ideal contextual viewing.
 - e. Each student will be able to orally critique works of sculpture.

ARTS 1863. Silversmithing for the Artist

Course Description

This laboratory-oriented course is designed for either farriers or artistic blacksmiths who have a desire to enhance their forging skills. Students are allowed to select and practice the forging or blacksmithing skill of their own choosing.

Student Learning Outcomes

- 1. Successful course completion implies that a student should be able to do the following with at least 70% accuracy:
- 2. Farriers may choose from any of the following:
- 3. Forge various toe and heel modifications on machine made shoes.
- 4. Forge clips.
- 5. Forge handmade open heeled shoes.
- 6. Forge therapeutic shoes
- 7. Forge various competition shoes.
- 8. Blacksmiths may choose from any of the following:
- 9. Forge various ornamental pieces from the Blacksmith's Journal.

ARTS 1864. Artistic Silversmithing

Course Description

This course is designed for introductory level engraving on precious and non-precious metals. This course consists of understanding the theory and practice of hand and power assist engraving on spurs and jewelry.

Student Learning Outcomes

Learning activities may include lectures, instructional handouts, videos, class participation, demonstrations, and examinations.

Successful completion of the course implies the student should be able to:

1. Demonstrate safe use of shop equipment and shop tools.
2. Shape and sharpen gravers to correct dimensions.
3. Demonstrate the ability to engrave in the Texas style and beginning bright-cut style.

Students will receive grades on completion of work as defined in the Course Outline and described by the following performance objectives.

1. Safety students will:
 - A. Demonstrate their ability to safely operate shop equipment and hand tools.
 - B. Demonstrate their ability to use the equipment.
 - C. Demonstrate proper setup and shut-off of equipment.
1. Design and Layout students will demonstrate:
 - A. Ability to create a pattern and transfer to engraving plate.
 - B. Layout a flower and a scroll.
2. Tool sharpening students will demonstrate:
 - A. The ability to learn the proper tool angles for different cuts and gravers.
 - B. The ability to sharpen your gravers.
3. Students will demonstrate the ability to learn basic cuts.
 - A. Straight cut.
 - B. Forehand cut.
 - C. Backhand cut.
4. Students will demonstrate the ability to learn border cuts
 - A. Riggle borders.
 - B. Cut borders
5. Students will begin to learn basic bright cut engraving.
 - A. Cutting flowers.
 - B. Cutting scrolls.

ARTS 1865.Artistic Silversmithing-Bit & Spur Making

Course Description

This course is designed for intermediate level spur making including the overlay and engraving of silver. This course consists of understanding the theory and practice metal cutting, shaping and welding in order to build one pair of spurs. Lab will consist of design and completion of a pair of spurs.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Safety students will:
 - a. Demonstrate their ability to safely operate shop equipment and hand tools.
 - b. Demonstrate their ability to use the equipment.
 - c. Demonstrate proper setup and shut-off of equipment.
2. Spur design and layout students will demonstrate:
 - a. The ability to design a balanced spur pattern taking into account the type of riding, size of the user and the dictates of good horsemanship.

- b. Ability to create a pattern and transfer to steel.
 - c. Create a silver pattern and transfer to silver.
- 3. Bit design and layout students will demonstrate:
 - a. The ability to design a balanced bit pattern taking into account the type of riding, type of horse and the dictates of good horsemanship.
 - b. Ability to create a pattern and transfer to steel.
 - c. Create a silver pattern and transfer to silver.
- 4. Spur component construction students will demonstrate:
 - a. The ability to cut out spur shanks with an acetylene torch.
 - b. The ability to cut and bend spur bands to fit the rider's heel.
 - c. The ability to cut out rowels.
 - d. The ability to cut and form spur button hangers.
- 5. Bit component construction students will demonstrate:
 - a. The ability to cut out cheek pieces with an acetylene torch.
 - b. The ability to cut and bend mouthpieces.
 - c. The ability to cut out silver mounts and attach to cheek piece.
- 6. Assembly students will demonstrate:
 - a. Welding shanks to band and mouthpieces to cheeks.
 - b. Soldering button hangers to bands.
 - c. Riveting rowels to shank
 - d. Cut and solder silver to spur body.

ARTS 1866. Silversmithing

Course Description

This course is designed for students to gain mastery in fabricating high end silver products. This course will enable students to gain the skills in layout and design, high temp soldering, manufacturing dies to form various silver pieces, placing and soldering of borders. Lab will consist of design and completion of a ranger buckle set.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

- 1. High Temperature solder.
- 2. Fabricate dies to fabricate high end ranger buckle set.
- 3. Successfully clean and polish silver project.
- 4. Design and overlay border (berry bead, twisted wire, etc.)

ARTS 1867. Bit Making

Course Description

This course is designed for entry level bit making. The following topics will be covered-leverage, purchase, leverage-purchase ratio, Mullen and mouthpiece design and placement. Students will also be introduced to tig welding techniques. By course end students will have made one Bayer's style leverage bit, one loose jaw leverage bit, and one snaffle bit.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

- 1. Understand leverage, purchase, and how their ratios impact the horse.
- 2. Communicate how mouthpiece design and placement impacts bit function.
- 3. Design and fabricate both loose jaw and fixed jaw leverage bits and one snaffle.

ARTS 1869. Signal Bit Design and Fabrication

Course Description

This course is designed for students in their final semester. In this course students will be required to make a California style spade bit. After successful course completion students will be able to fabricate j-boxes, braces, cricket roller, spoon mouthpiece, slobber bar, rein chains, purchase length and leverage. Students will also refine tig welding skills and acquire advanced fabricating skills.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Safely operate all shop equipment and tools.
2. Design a functional California style spade bit.
3. Successfully fabricate j-boxes, braces, cricket roller, spoon mouthpiece, slobber bar, rein chains, cheek piece with appropriate purchase length and leverage.

ARTS 1870. Engraving

Course Description

This course is designed for introductory level engraving on precious and non-precious metals. This course consists of understanding the theory and practice of hand and power assist engraving on spurs and jewelry. Students will learn the basic cuts involved in beginning bright cut engraving.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Demonstrate ability to lay wriggle borders and backbones.
2. Shape and sharpen gravers to correct dimensions.
3. Demonstrate the ability to engrave the following bright cut components-forehand cut, backhand cut, closure cut, s cut.

ARTS 1996. Topics

Course Description

Varies

Student Learning Outcomes

Varies

ARTS 2010. Portfolio Development

Course Description

This course presents the practicalities of building an art career with emphasis on developing a professional portfolio through visual aids, resumes, statements, and presentations. It covers professional practices of the studio artist including self-promotion, contracts, research tools for exhibition venues and other art related opportunities.

Student Learning Outcomes

1. Develop a portfolio package with visual aids, photographic documentation, resumes, bios and artist statements.
2. Analyze the qualifications, procedures and portfolio requirements necessary for professional art related opportunities.
3. Complete an oral presentation on a series of personal works.
4. Distinguish pathways for navigating the business side of being a professional artist.

ARTS 2110. Artist as Entrepreneur

Course Description

Introduction to the process of creating marketable artwork and the development of entrepreneurial activities for the studio artist. Students will work with their own work, both pre-existing as well as new work produced in class, and its application to a variety of products, using a range of art media. Very basic business concepts for the start-up and promotion of an art

entrepreneur activity and the sales of studio work are also discussed. Projects include display, exhibition, and related sales. Students may incur additional costs for some types of production.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Design and execute an original aesthetic vision.
2. Demonstrate competency in the art techniques and materials to create a marketable aesthetic project.
3. Demonstrate very basic business practices required of an entrepreneurial studio artist.
4. Demonstrate professional studio art presentation and portfolio.
5. Create methods of promotion, networking, and marketing of artwork with an emphasis on social media.

ARTS 2111L. Advanced Color and Design

Course Description

Perceptual and experimental in-depth study of color theory and compositional dynamics, and their application for artists and designers. Students explore the use of color and composition in both fine art and commercial design.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use and understand color wheel models and harmonies effectively in art and design.
2. Demonstrate color usage and dynamic composition in a variety of materials and media.
3. Analyze the use of color and composition historically and commercially through the study of fine art and commercial design.
4. Distinguish the emotional and psychological meanings of color and composition.

ARTS 2113. Business Practices for Artists and Designers

Course Description

Principles and procedures for establishing a profitable art or design business. Students are trained to create an actual or theoretical business, including business formations, product design and costing, insurance and ethical practices. The course teaches students to identify and research E commerce, trade and wholesale markets. All aspects of good and sustainable business practices will be covered.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Start a business in the state of New Mexico.
2. Establish and practice business ethics.

ARTS 2114. Arts and Design Seminar

Course Description

A study of issues related to a discipline within the arts and/or design. The theme of the course may vary each time the course is offered. Students are challenged with a range of viewpoints related to the theme of the course. Aspects of the arts and/or design that create a bridge to other disciplines such as science, psychology, or philosophy are also a focus of this course.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Explain how a discipline within the arts and/or design can be understood in relationship to the theme of the course.
2. Explain how the relationship between disciplines, within the context of the theme of the course, can provide a new understanding of an arts and/or design discipline.
3. Compare and contrast a range of viewpoints and their relationship to the theme of the course.
4. Analyze issues related to the course theme in more depth.

ARTS 2115L. Arts & Design Advanced Projects

Course Description

An in-depth forum to analyze aesthetic and conceptual issues relevant to each individual artist. Offered in sections per program area, the course provides a focused environment for students to work on advanced projects in their discipline. Emphasis is placed on the realization of each student's unique vision and completing project(s) in arts and design.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Develop and initiate a project.
2. Select and apply the appropriate techniques and materials to produce an artwork.
3. Articulate the conceptual significance of their project.
4. Be familiar with contemporary issues in their field of arts and design.
5. Demonstrate substantial progress in project completion.

ARTS 2116. Studio Practice

Course Description

Intensive group and individual critique and discussion of studio work. The emphasis of this course is the interaction with peers across disciplines. Students are expected to be engaged in a cohesive and directed body of work and to be actively working towards completion of a degree or certificate in Arts, Design and Media Arts. Satisfactory class participation is required in order to maintain access to a student studio.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate the ability to independently conceive and produce works for critique, to be presented for peer and faculty review.
2. Demonstrate the ability to discuss the work of other artists and designers.
3. Demonstrate the ability to produce work that represents a substantial and serious inquiry directly related to statement of intent.
4. Demonstrate an initial understanding of one's own work within contemporary and/ or historical tradition of art and design.
5. Demonstrate safe and sustainable studio practice.

ARTS 2117L. Book Arts: Text and Image

Course Description

The fundamentals of typesetting and letterpress printmaking. Students set lead type by hand and compose type and image using the press as a design tool. Investigating the subtleties of paper, ink and pulling an impression, students explore the juxtaposition of image and text by incorporating traditional printmaking techniques.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Set lead type by hand on a composing stick using various type faces and demonstrating an understanding of linear and word spacing.
2. Operate a letterpress, including locking up type properly with furniture, color-mixing ink and printing.
3. Demonstrate a fundamental understanding of the history of type, typography and printmaking.

ARTS 2118L. Alternative Printmaking

Course Description

This course covers alternative printmaking methods. Methods of emulsion transfer including chemical & litho. Polaroid transfers and Solar Plate etching are used in combination with the process of monotype. This creates a great opportunity to develop unique mixed media pieces.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate a working knowledge of Emulsion transfer.
2. Demonstrate a working knowledge of chemical transfer.
3. Demonstrate a working knowledge of Litho transfer.
4. Demonstrate a working knowledge of Solar Plate Etching.
5. Demonstrate a working knowledge of Polaroid transfer.

ARTS 2119. Archival Printing

Course Description

For artists and photographers wanting to produce archival, exhibition quality large-format, ink jet prints. Students will explore monitor calibration, media profiling, large format file creation and aesthetics of the large format print. Students acquire a practical knowledge of image management from input/creation to archival output, as well as producing their own fine art prints.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand system and monitor calibration.
2. Scan for high quality large format output.
3. Understand resolution and file sizes for large format output.
4. Evaluate the aesthetics of large format prints.
5. Create a master file.
6. Understand System profiles.

ARTS 2120. Graphic Design I

Course Description

Introduction to the basic principles of graphic design and typography. Includes examination of the use of space, balance, unity and visual hierarchy.

Student Learning Outcomes

1. Define the basic computer terminology used in graphic design.
2. Demonstrate basic knowledge of Graphic Design software.
3. Further their knowledge of scanners and the printing process.
4. Organize research procedures to solve graphic design problems.
5. Work with formal design principles in the approach to solutions.
6. Learn to create a concept to amplify content, while also developing sensitivity to typography, symbolism, language, and text.
7. Demonstrate the ability to prep re for client presentations.

ARTS 2125. Graphic Design II

Course Description

Continuation of the principles and theory of graphic design. Includes digital media and page layout.

Student Learning Outcomes

1. Define the advanced computer terminology used in graphic design.
2. Demonstrate advanced knowledge of Graphic Design software.
3. Further their knowledge of scanners and the printing process.
4. Organize advanced research procedures to solve graphic design problems.
5. Work with formal design principles in the approach to solutions.

6. Learn to create a concept to amplify content, while also developing sensitivity to typography, symbolism, language, and text.
7. Demonstrate advanced ability to prepare presentations for clients.

ARTS 2126. Identity Systems Design

Course Description

Successfully designed identity systems combine logos, typefaces, colors, imagery, and stylistic choices providing a unique voice for a product, business, or individual. In this course, students will design identity assets as they explore the creative and technical processes in developing a well-crafted identity system.

Student Learning Outcomes

In this course, students will explore a variety of design assets that are often associated with well-developed identity systems. By association, they will also recognize identity's contribution to the larger, comprehensive fields of brand creation and marketing. Throughout the semester students will research, develop and create various materials that appropriately represent a chosen product, business, or individual. Along with creative practice, students will be introduced to the processes of commercial production, as artwork should be both well designed and properly crafted. This course, along with others in the program will serve to continue their growth in technical proficiency. By exploring content through exercises, discussions, demonstrations, readings, research, assignments, and critiques, students will have achieved the following:

1. The ability to define how design is used to develop a visual identity.
2. Identify various products used in the building of an identity system.
3. Understand identity design's placement within comprehensive branding strategies.
4. Proper use of the principles and elements of design in a variety of compositional assignments.
5. Understand how typography, images, and stylistic approaches in design affect stakeholders.
6. Apply various analog and digital processes used in graphic design.
7. Submit and present artwork in a manner suitable for critique.
8. Discuss, defend, and constructively criticize their assignments and those of their peers.

ARTS 2127. Digital Interface Design

Course Description

Good interface design is visually compelling, intuitive, and efficient while prioritizing user expectations and experience. In this course, students will design and develop digital interface wireframes and interactive prototypes while gaining the foundational knowledge needed to research and strategize screen-based experiences.

In this course, students will work through the concept, iteration, wireframing, and prototyping stages used in the design and development of digital interfaces. They will research, develop, and apply graphic design, interactive, and usability processes, completing the semester with a fully realized, working digital product. Along with creative practice, students will be introduced to the fields of user interface/user experience design (UI/UX design), to which digital interface design is associated. This course, along with others in the program will serve to continue their growth in technical proficiency.

Student Learning Outcomes:

By exploring content through exercises, discussions, demonstrations, readings, research, assignments, and critiques, students will have achieved the following:

1. The ability to define interface design's place in the fields of graphic, UI/UX, and digital product design.
2. Successfully work through the stages of design development, from concept to working prototype.
3. Learn and utilize digital tools and services unique to the creation of digital interfaces.
4. Make creative choices appropriate to the brand, service, or product their interface represents.
5. Understand that aesthetics is only part of the process, which also includes user experience.
6. Apply various analog and digital tools used in graphic design.
7. Submit and present design work in a manner suitable for critique.

ARTS 2128. Graphic Design Studio

Course Description

Graphic Design Studio builds on the skills and principles of foundational web design. Students will integrate images, print, and design principles creating art in a digital space.

Student Learning Outcomes:

1. Students will learn how to apply advanced design skills to digital space.
2. Students will develop unique content for their artwork learning how to solve problems with creativity.
3. Students will be able to discuss and strategize practical solutions to graphic design problems through practice and study.
4. Students will realize real-world applications for graphic design skills and abilities.

ARTS 2129. Studio Work in Graphic Design II

Course Description

A faculty-guided independently navigated advanced graphic design course which allows for creative exploration and research into topics extending from prior studies and personal endeavors.

Student Learning Outcomes:

This is a student-led, faculty-guided course with an emphasis on mentored projects and research. Prior to the start of the term, a course schedule and assignment load will be determined and agreed upon by faculty and student. These factors will establish the course schedule for the semester. Course topics can vary widely from student to student based on their needs, interests, and academic focus.

ARTS 2131. Illustration Arts

Course Description

Integrates traditional drawing, non-traditional drawing, and electronic drawing techniques together to create a portfolio of illustrative designs. Emphasis will be placed on artistic concepts combined with text and skilled execution of scenarios that artfully communicate ideas and purpose.

Student Learning Outcomes

1. Combine language and fonts to drawings that communicate a purpose artistically.
2. Apply wet and dry drawing techniques, mono-print & photography to illustration and design projects.
3. Demonstrate color meaning and symbolism in illustration and design.
4. Examine the historical origins and practices of illustration and design from the personal, commercial, social and cultural perspective.

ARTS 2211. Portraiture

Course Description

The examination of the portrait in drawing and painting, emphasizing development of personal skills in depicting likeness and personality. Various artistic media are used to explore the anatomy of the human head and face and its power to express emotion. The role of the portrait throughout history is examined together with development of skills.

Student Learning Outcomes

Students will be able to:

1. Produce a portfolio of drawings and paintings of the head and it's features using proportional references from various positions
2. Identify the skeletal and muscular structure of the human head in drawings and through the construction of the écorché head
3. Draw the likenesses of people; specifically, classmates, models and themselves in both local and subjective color.

4. Recognize portraits from various historical periods.

ARTS

ARTS 2270. Navajo Rug Weaving II

Course Description

Continuation of ARTS 131 which will include further development of the processes and techniques of Navajo weaving, with a special emphasis on advanced weaving techniques and design.

Student Learning Outcomes

Upon completion of the course, the student will be able to:

1. Know the oral tradition and the history of Navajo weaving in depth. Identify the significance of the upright loom and weaving tools. Identify traditional, regional, and non-regional Navajo rug styles.
 - a. Understand the oral history of Navajo weaving.
 - b. Know the historical background of Navajo rugs.
 - c. Identify the different names and types of Navajo rugs.
2. Demonstrate Navajo weaving by preparing the wool, dying wool, and write a step by step process of setting up the loom, the warp, and weaving.
 - a. Learn vocabulary words used with weaving and naming tools.
 - b. Prepare, gather, process, and spin the wool.
 - c. Dye wool.
 - d. Prepare the loom and warp.
 - e. Spin the side-string and spacing string.
3. Learn additional weaving techniques and designs.
 - a. The weaving process:
 - i) Warping and twining
 - ii) Mounting the bound warp on the dowel
 - iii) Mounting the warp on the loom
 - iv) Making the heddles and shed rod
 - v) Holding the batten and comb
 - vi) Weaving the first rows
 - vii) Using the heddle and shed rod
 - viii) Adding new wool (string)
 - ix) Repairing a broken warp
 - x) Learning hooked joint, square, and diamond shapes
 - b. Create an intermediate rug design using the three (3) basic designs.
 - c. Learn the "Finishing Technique" of traditional Navajo Rug Weaving.
 - d. Produce a completed Navajo Rug.
 - e. Assist and mentor beginning students in setting up their looms.

ARTS 2275. Beginning Fibers

Course Description

This course presents a variety of fiber techniques, such as felting, inkle weaving, card weaving, knotting, using cords, yarns and other materials. Design application, historical development of fibers is also explored.

Student Learning Outcomes

Students should:

1. Demonstrate knowledge of fiber materials and simple weaving applications.
2. Create some fiber constructions, both hand manipulated and loom constructed.

3. Address problem solving regarding fibers construction and design techniques.
4. Utilize basic design concepts related to fiber application.
5. Address problem solving regarding fibers construction and design techniques.
6. Utilize basic design concepts related to fiber application.

ARTS 2301. Studio Studies in Graphic Design I

Course Description

This course is the first of three faculty-guided, independently navigated advanced graphic design courses which allow for creative exploration and research into topics extending from prior studies and personal endeavors. Students enrolled in this course are expected to have completed and passed the introduction and intermediate core program course requirements or may be enrolled by permission of the instructor.

Outcomes: As a student-led, faculty-guided course with an emphasis on mentored projects and research, a course schedule and assignment load will be determined and agreed upon by faculty and student prior to the start of the term. These factors will establish advanced creative projects to be completed throughout the semester. Student success will be based on their ability to interpret and apply previous core course learning and newly discovered creative concepts and technical skills. Continued development and progress are expected throughout the term.

Student Learning Outcomes

By exploring content through research, studio work, and critique, students will have achieved the following:

1. Demonstrate the ability to extend prior learning to advance projects.
2. Explore, discuss and develop advanced topics independently and with peer groups.
3. Manage time and resources required of an independent studies course.
4. Produce, submit, and present artwork in a manner suitable for critique.
5. Utilize basic design concepts related to fiber application.

ARTS 2302. Studio Studies in Graphic Design II

Course Description

This course is the second of three faculty-guided, independently navigated advanced graphic design courses which allow for creative exploration and research into topics extending from prior studies and personal endeavors. Students enrolled in this course are expected to have completed and passed Studio Studies in Graphic Design I or maybe enrolled by permission of the instructor.

This course is a continuation of Studio Studies in Graphic Design I. As a student-led, faculty-guided course with an emphasis on mentored projects, research, and critique, a course schedule and assignment load will be determined and agreed upon by faculty and student prior to the start of the term. These factors will establish advanced creative projects to be completed throughout the semester. Students are expected to extend previous independent studio studies by demonstrating growth through continued research, studio work, technical development, and response to critical feedback, while participating with peers in various projects.

Student Learning Outcomes

Continued development and progress is expected throughout the term while achieving the following:
peers

1. Continue to expand upon prior independence study learning.
2. Explore, discuss, and develop advanced topics independently and with peer groups.
3. Manage time and resources required of an independent studies course.
4. Produce, submit, and present artwork in a manner suitable for critique.
5. Discuss, defend, and constructively criticize their projects and those of their peers.

ARTS 2303. Studio Studies in Graphic Design III

Course Description

This course is the third of three faculty-guided, independently navigated advanced graphic design courses which allow for creative exploration and research into topics extending from prior studies and personal endeavor. Students enrolled in this course are expected to have completed and passed Studio Studies in Graphic Design I and II or may be enrolled by permission of the instructor.

Outcomes

This course is a continuation of Studio Studies in Graphic Design I and II. As a student-led, faculty-guided course with an emphasis on mentored projects, research, and critique, a course schedule and assignment load will be determined and agreed upon by faculty and student prior to the start of the term. These factors will establish advanced creative projects to be completed throughout the semester. Students will continue their previous independent studio studies through continued research, studio work, technical development, and response to critical feedback, while participating with peers in various projects. This course will focus on professional development through portfolio creation and exhibition in preparation for advanced degree studies and entry into commercial markets.

Student Learning Outcomes

Progress is expected throughout the term while achieving the following:

1. Continue to expand upon prior independence study learning.
2. Demonstrate creative and technical proficiency through the productions of advanced projects.
3. Prepare portfolio materials for various forms of presentation including final exhibition.
4. Manage time and resources required of an independent studies course.
5. Produce, submit, and present artwork in a manner suitable for critique.

ARTS 2310. Ceramics II

Course Description

This course continues the students' instruction in ceramics, with an emphasis given to the continuing development of form, surface, and firing processes, expanded critical awareness, and the development of a personal aesthetic.

Student Learning Outcomes

1. Demonstrate intermediate techniques in wheel throwing, hand building, glazing, and kiln firing.
2. Prove through class work an intermediate understanding of both the nomenclature and the use of a variety of ceramics equipment.
3. Be able to utilize principles of design, and aesthetic judgment to create and analyze a body of work consisting of both functional and sculptural ceramic objects.
4. Use a greater familiarity with historical and contemporary ceramic sources, ideas, and materials in the discussion and creation of a unique body of ceramic works.

ARTS 2311L. Extreme Pottery

Course Description

Learn to combine more advanced use of the potter's wheel and hand building methods to develop vessel and sculptural forms beyond what would be considered traditional and conventional. The course emphasizes the exploration of contemporary form and color with works in clay.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate intermediate level hand building and wheel throwing techniques.
2. Demonstrate the development of a more personal and contemporary aesthetic by exploring the more abstract and unconventional with the ceramic medium.
3. Demonstrate a deeper understanding of Contemporary Art expressions and apply these to one's work.

ARTS 2312L. Ceramics: Glaze Formulation

Course Description

Provides the ceramic artist with the skills needed to understand, develop and control the glazes used in the ceramic process. Materials, mixing, testing methods and basic formula comparisons will be covered.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Develop new applicable glaze, engobe, and slip bases suitable for a variety of clay bodies.
2. Research existing glaze formulas and adjust them to fit particular clay bodies.
3. Integrate an in depth understanding of glaze chemistry into the student's own body of work.
4. Test for consistency.

ARTS 2313L. Ceramics: Integrated Projects

Course Description

Skill development in preparation for application to an undergraduate university program or for commercial practice in the field of ceramics. Students are taught how to create a coherent body of work, stay consistent within an established concept, and develop the ability to speak and write articulately within the medium of ceramic art. Students are guided in identifying their special areas of skill and competency through the process of critical self-evaluation.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Prepare a consistent body of original work identifying a personal style and direction.
2. Present a body of work and written artist statement of their work.
3. Demonstrate a working knowledge of specific ceramic techniques used in the student's semester course work.

ARTS 2315L. Ceramic: Wheel Throwing II

Course Description

Intermediate level course that offers a study of current approaches to the potter's wheel as a tool for creating functional and sculptural forms. The foundation of this course is a series of sequential projects designed to increase a student's skill level on the wheel. Functional as well as sculptural concepts will be investigated. An introduction into clay bodies and glazes augments the disciplined throwing. This course is designed to advance the throwing abilities of students who already have a strong foundation in wheel throwing basics.

Student Learning Outcomes

Demonstrate an approach to making functional and nonfunctional ceramic objects using the potter's wheel.

1. Demonstrate through discussion, projects and use of a sketchbook, a growth in artistic and conceptual ability.
2. Demonstrate an increased ability to execute thrown functional ware on the wheel, and to begin to use the wheel as a tool for sculptural forms.
3. Demonstrate through discussion or presentation, the understanding of ceramic pottery and sculptural terms.

ARTS 2320. Clay Handbuilding II

Course Description

This course introduces the student to more advanced concepts and techniques used in the creation of ceramic sculpture and/or functional forms. This will be accomplished through the further study of a wide variety of hand building, finishing, and firing techniques, their historic and cultural foundation, and the critical assessment of the work produced in the class.

Student Learning Outcomes

1. Demonstrate through the production of a body of work the development of an approach to making ceramic sculpture and/or functional forms that arises out of a strong conceptual base.
2. Demonstrate an increased facility with planning, finishing, and firing resulting in increased technical and conceptual complexity in the student's work.
3. Demonstrate a more advanced understanding of terms and vocabulary used in ceramic sculpture and/or functional forms through discourse or text.

4. The student shall develop a body of work that through process and product demonstrates the student's particular abilities and artistic vision.

ARTS 2321. Appreciation of Clay

Course Description

Appreciation of Clay. Introduction to clay as an art medium: handbuilding, decorating techniques, glazing and firing processes. The course goes beyond techniques to include how clay has reflected creative ingenuity, function, history, culture, and spirituality.

Student Learning Outcomes

Upon completion of this course, students should be able to/ competent in:

1. Identify the basic physical qualities of clay.
2. Construct objects using traditional building methods including pinch, coil, and slab.
3. Understand the historical significance of hand building processes such as pinching, coiling, slab building.
4. Identify the meaning of terminology related particularly to the clay medium.
5. Demonstrate knowledge of the most common kinds of glazing procedures.
6. Develop an idea from concept to art form by using a systematic approach as recorded in a journal.
7. Identify the aesthetic strengths and weaknesses of a specific form.
8. Prepare a Power Point Presentation of an artist's work using specific terminology related to aesthetic concerns.
9. Demonstrate the use of craftsmanship and originality in the production of his/her work.
10. Demonstrate mastery of choice when matching a building method to the construction of a specific form.
11. Demonstrate the use of Internet search procedures as a source for comparing artist styles and techniques.
12. Demonstrate an ability to articulate the concepts and intent of a completed piece.

ARTS 2322. Clay Handbuilding II

Course Description

Intermediate level ceramic sculpture course offering further study into the various hand building techniques for executing clay sculpture on a medium to large scale. Class assignments are theme specific to emphasizing sequential development of a particular sculptural concept. Colorings include slips, engobes, terra sigillatas and glazes are offered as possibilities for surface treatment. Large scale work will be investigated as an addition to medium sized work. Firing ranges, clay bodies and how to fire a clay sculpture will be discussed.

Student Learning Outcomes

1. Demonstrate the development of an approach to making ceramic sculpture that arises out of a strong conceptual base.
2. Demonstrate an increased facility with colored slips, engobes, glazes, ceramic color palette and firing techniques related to one's work.
3. Demonstrate the development of a deeper skill level in executing clay sculpture that is challenging both technically and creatively.
4. Discuss the value of working sequentially and using a sketchbook.
5. Demonstrate through discussion the understanding of terms and vocabulary used in sculpture and ceramics.
6. Demonstrate the ability to self-evaluate one's technical and conceptual growth in ceramics and sculpture.

ARTS 2324. Pottery & Clay Arts III

Course Description

Continuation of pottery and clay techniques for the advanced student. Focus will be on production pottery and the development of personal style.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. The student will be able to apply the elements of design in a variety of situations.
2. The student will be able to apply the principles of design in a variety of situations.
3. The student will demonstrate ceramic skills using a variety of media, construction techniques, and finishing methods.
4. The student will be able to prepare art works for display.
5. The student will develop a general knowledge of ceramic vocabulary and use that vocabulary to describe works of art verbally and in writing.
6. The student will develop a general knowledge of ceramic materials, tools, and techniques.
7. The student will be able to demonstrate good work habits.
8. The student will develop an appreciation for the art of seeing; develop a personal vision.

ARTS 2325. Precious Metal Clay I

Course Description

Precious Metal Clay is an innovative material created by Mitsubishi Materials in Japan. Copper & Bronze Clay is manufactured in the United States by Rio Grande. These "clays" are finely ground metals mixed with an organic binder. You can use these products to make items that are solid metal when fired.

Student Learning Outcomes

Not Available

ARTS 2326. Precious Metal Clay II

Course Description

Precious Metal Clay is an innovative material created by Mitsubishi Materials in Japan. Copper & Bronze Clay is manufactured in the United States by Rio Grande. These "clays" are finely ground metals mixed with an organic binder. You can use these products to make items that are solid metal when fired.

Student Learning Outcomes

Not Available

ARTS 2327. Micaceous Pottery II

Course Description

You will learn micaceous clay pottery in the tradition of northern New Mexico through a continuation of the techniques learned in Micaceous Potter I. You will also experiment with advanced techniques of handbuilding and out-door firing.

Student Learning Outcomes

By the end of the course you will be able to:

1. Demonstrate familiarity with history and terminology for micaceous pottery making
2. Dig and process micaceous clay effectively
3. Construct complex micaceous pottery forms using the coil technique such as lidded utilitarian ware
4. Refine micaceous pottery using the scrape and sand techniques
5. Incise or applique designs to the micaceous pottery
6. Apply and burnish slip to an even gloss
7. Build a fire pit and participate in wood-firing the micaceous pottery using more advanced firing techniques
8. Express ideas coherently through oral and written communication
9. Critically exam others micaceous clay work making sound judgments on craftsmanship, creativity, and visual elements while respecting individual dignity.

ARTS 2328. Pottery Glaze Making & Studio Practices

Course Description

Instruction and experience in making and altering pottery glazes, in maintaining and firing a kiln, in recycling clay and in maintaining a pottery studio.

Student Learning Outcomes

By the end of this course the student will be able to:

1. Use basic studio practices that are needed to maintain a pottery studio.
2. Mix and alter glazes and engobe formulas.
3. Analyze glazes and engobes.
4. Load, unload and maintain a pottery kiln.
5. Critically examine clay and glaze experiments.
6. Understand basic glaze terminology.
7. Set up and maintain a pottery studio.

ARTS 2329. Pottery III

Course Description

A continuation of Ceramics II in which you will study advanced methods for hand-building and wheel throwing of pottery. You will have hands-on experience in kiln loading and glaze making.

Student Learning Outcomes

By the end of the course you will be able to:

1. Demonstrate familiarity with the history and terminology for pottery making.
2. Constructing a functional lidded jar.
3. Throw right-side up and up-side down lids on the potter's wheel.
4. Construct a functional teapot.
5. Apply slips and glazes using the graffito, inlay and trailing techniques.
6. Combine building methods to create functional forms.
7. Load bisque and glaze kilns and mix pottery glazes.
8. Research and express information coherently in oral and written communication.
9. Critically examine others clay work making sound judgments on craftsmanship, creativity and visual elements while respecting individual dignity.

ARTS 2330. Functional Ceramics II

Course Description

This course familiarizes the student with more advanced hand building, wheel throwing, surface finishing, and firing techniques.

Student Learning Outcomes

1. Create a body of work that demonstrates a working knowledge of a variety of more advanced techniques, including the use of slip or press molds, multi section thrown work, and creating a piece that combines more than one forming technique.
2. Create a body of work that demonstrates a more advanced knowledge of surface treatments including slips, graffito, inlay, and trailing techniques as well as a basic understanding of glaze formulation and firing.
3. Demonstrate through the proper use of facilities, materials, and personal protective equipment knowledge of safety measures and the safe practices used in the ceramic studio.
4. Demonstrate through writing or other forms of presentation a more in depth knowledge of the history and terminology of pottery (functional ceramics).
5. Demonstrate through the critical examination of their own and others ceramics a more refined judgment of craftsmanship, creativity, and elements of design; while showing respect for the dignity of the individual artist.

ARTS 2331. Clay Tilemaking

Course Description

An introduction to making tiles and glaze application. Also includes mosaic tiles.

Student Learning Outcomes

Students will acquire basic skills and knowledge in:

1. A basic working knowledge of ceramic tile making techniques.
2. A basic knowledge of mosaic tile techniques.
3. A basic knowledge of mold making techniques.
4. A basic knowledge of a variety of surface decoration and techniques.
5. Proficiency and knowledge of safety measures and practices in the ceramic studio.

ARTS 2335. Southwestern Pottery**Course Description**

Advanced techniques in hand built or wheel- thrown vessels and specialized glazing methods.

Student Learning Outcomes

The students will attain:

1. A working knowledge of ceramic hand forming techniques.
2. A working knowledge of the potter's wheel (using modern techniques).
3. A basic knowledge of a variety of surface decoration and techniques (using modern techniques).
4. A basic knowledge of glazes and how they are created (using modern techniques).
5. A basic knowledge of research and how to present an oral report.
6. Proficiency and knowledge of safety measures and practices in the ceramic studio.

ARTS 2340. Raku**Course Description**

This course introduces the principles of Raku firing, post firing, and alternative firing techniques and the process of making simple Raku glazes.

Student Learning Outcomes

1. Understand the properties of Raku clays, and glazes; and the effect of secondary reduction firing.
2. Compare traditional Raku to contemporary Raku.
3. Create work demonstrating proficiency in the handbuilding and, or throwing techniques used in Raku.
4. Understand the function, care, and safe usage of studio equipment used in the production of Raku.
5. Evaluate the aesthetic and, or functional value particular to Raku ceramics.

ARTS 2345L. Advanced Wheel Throwing**Course Description**

Advanced study of historical and contemporary approaches to the potter's wheel as a tool for creating functional vessels, non-functional vessels, and sculptural forms. The focus of the class is large-scale and altered throwing techniques, and the utilization of thrown parts in the construction of hand built forms as well as traditional production methods. Glaze, slip, and other surface applications are researched and incorporated in order to create a successful surface/form design. Discuss relevant aspects of historic and contemporary ceramic arts.

Student Learning Outcomes

1. Use production methods for creating functional pottery.
2. Design and execute a successful surface that relates to the form and the concept behind the form.
3. Create both functional and non-functional forms for production and/or ceramic sculpture using the potter's wheel.
4. Practice shop safety.

ARTS 2350. Glass Design

Course Description

This class is designed for students who have had a basic understating of glass. However, all students are welcomed.

Student Learning Outcomes

In this class you will learn the design process that goes into producing a viable glass panel. You will create a panel of your own design.

ARTS 2351. Glass Fusing/Slumping**Course Description**

This course is open to all students. You will be expected to have a working knowledge of glass COE's, mold making, fritography, workshop safety and glass terminology.

Student Learning Outcomes

Not Available

ARTS 2352. Glass Interpretation**Course Description**

This class is opened to all students. In this class students will be able to pick a great master, study his works of art and decide which piece they would like to interpret into glass. They may re-create the entire piece or a small section of the art piece.

Student Learning Outcomes

Students will learn a working knowledge of the master, the master's works and create a glass piece.

ARTS 2353. Glass Bead Making**Course Description**

This course is opened to students of all levels. You will be expected to master the torch and follow safety procedures. Students will master all beads and decorative techniques.

Student Learning Outcomes

Not Available

ARTS 2354. Stained Glass**Course Description**

Students of all levels will investigate the tools and techniques of creating copper-foil stained glass compositions. Workshop safety and set-up will be covered along with vocabulary and history. Pattern making, proper alignment of glass, differences in glass textures and a variety of soldering techniques will be taught. Depending on skill level, students may create simple sun catchers to 3-D sculptural creations. Students will come away with a working knowledge of the elements of design, value, color, and form of glass.

Student Learning Outcomes

1. Students will have a working knowledge of terminology and application of the glass process.
2. Students will learn the elements of design, value, color, and form of glass.
3. Students will learn the principles of glass compatibility, movement of glass, and the balance of glass.
4. Students will learn to use the elements of design and principles of compatibility to create a beautiful work of art.

ARTS 2355 Stained Glass**Course Description**

Instruction in the fundamental fabrication and design techniques for stained glass. Introduction to visual decision making skills, historical, and critical issues of the medium.

Student Learning Outcomes

1. Demonstrate an understanding of the theory, principles and procedures that comprise the art and science of designing at least four (40 stained glass techniques through both written and verbal assessments, as well as, actual completed examples of each technique.
2. Properly select and safely employ various glass studio tools, instruments, procedures, methods and techniques in the fabrication processes of stained glass.
3. Select and apply suitable problem-solving strategies in a practical studio environment.
4. Work cooperatively in a studio classroom.
5. Relate historical background and significant developments of glass in general and stained glass in particular.
6. Understand the chemical processes associated with various processes used in working with and manipulating glass.
7. Develop critical thinking and problem-solving strategies in various stained glass fabrication technics.
8. Be able to critically analyze, assess and appreciate the value of glass works of every kind.

ARTS 2410. Black & White Photography

Course Description

This course introduces the fundamental techniques of black and white photography, which includes camera functions and use, exposure techniques and film processing, traditional darkroom printing, and presentation of

Student Learning Outcomes

1. Demonstrate competent film development and photographic printing skills.
2. Demonstrate an emerging understanding of aesthetic, compositional, conceptual, and communicative tools in photography including lighting and dynamic composition techniques.
3. Be able to critically analyze and discuss photographic images using photographic terminology.
4. Demonstrate proper image adjustment and correction techniques and apply proper exposure techniques.

ARTS 2411. Underwater Photography

Course Description

Traditional genres of photography such as Still Life, Portraiture, and Fashion Photography will be re-evaluated and re-discovered in the context of the aquatic environment. A shallow warm water pool will be used during the scheduled class times. No diving skills or diving equipment are required. Enough time for practical instruction and underwater open lab will be allotted to shoot all the images necessary to fulfill the class objectives. Students should be comfortable in water for prolonged periods.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand and describe the technical skills necessary to photograph under water.
2. Demonstrate the ability to effectively expose and capture images under water.
3. Produce u/w images that are content orientated, communicative and innovative in approach and show a high degree of aesthetic and compositional awareness.
4. Demonstrate knowledge about personalities and events that have shaped u/w photography.
5. Create a final portfolio of u/w photography.

ARTS 2412. Digital Darkroom

Course Description

Focuses on using Adobe® Photoshop and Adobe® Lightroom applied to photographic imaging techniques and manipulation within the context of the digital darkroom. Topics include image correction and enhancement, advanced use of layer and compositing techniques as well as paths and selections.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Expand and creatively apply increased PHOTOSHOP® and LIGHTROOM skills.

2. Create content orientated, communicative and innovative in approach and show a high degree of aesthetic and compositional awareness.
3. Demonstrate a deeper understanding of aesthetic, compositional, conceptual, and communicative tools in photography.
4. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts
5. Create a portfolio to be used for self-marketing and for those seeking advanced in photography.

ARTS 2413. Black and White Film Photography II

Course Description

Expand on techniques and concepts learned in Photography I in this project-oriented course. Predictable image exposure, the Zone System, enhanced film developing techniques, traditional fiber-based printing techniques and presentation of work to professional portfolio standard. Assignments are designed to deepen understanding of photography in contemporary and historical contexts.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate competent use of SLR camera.
2. Demonstrate competent film development.
3. Demonstrate competent photographic printing skills.
4. Demonstrate a deeper understanding of aesthetic, compositional, conceptual, and communicative tools in photography.
5. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts.
6. Create a portfolio to be used for self-marketing and for those seeking advanced degrees in photography.

ARTS 2414. Fine Black and White Darkroom Printing

Course Description

Course work will further develop the skills of the fine art of silver gelatin printing. Emphasis will be on developing a personal sense of how negatives relate to the final prints, and how to work in the darkroom with different papers, developers, developer concentrations, temperatures and "green" toners. In addition to the technical information the course will introduce elements from the history of photography. Silver gelatin printing skills will be learned through lectures, demonstrations, assignments, critiques and hands-on darkroom time.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Create well-exposed negatives by understanding the relationships between light, film and chemistry.
2. Confidentially print on both RC and fiber-based papers.
3. Creatively print with split filtering techniques.
4. Experiment with a variety of developers, developer concentrations, filtration techniques and "green" toners.

ARTS 2415. Alternative Photographic Processes II

Course Description

Techniques and concepts learned in Alternative Photographic Processes I are expanded upon in this project-oriented course. Some previously covered processes like cyanotype or Van Dyke may be explored further and/or advanced processes such as historical carbon printing methods may be offered depending on the availability of specialized facilities and/or the faculty member's area of expertise. Classes are used for lectures, presentations, discussions, regular critiques and hands-on non-silver darkroom time. Assignments are designed to deepen understanding of photography in contemporary and historical contexts.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate increased competencies in producing digital negatives with predictable exposure characteristics.
2. Demonstrate increased proficiency in non-silver photographic processes.
3. Develop an increased working knowledge of non-traditional photographic techniques.
4. Demonstrate a deeper understanding of aesthetic, compositional, conceptual, and communicative tools in photography.
5. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts.
6. Create a portfolio to be used for self-marketing and for those seeking advanced degrees in photography.

ARTS 2416. Photography and Studio Lighting II

Course Description

Techniques and concepts from Photography and Studio Lighting I are expanded upon in this project-oriented course. Major projects are assigned. Both natural and artificial light sources are used to illuminate arranged subjects, primarily still-lives, small environments and portraits, lighted in a variety of ways to render desired effects and outcomes.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Produce photographic images that show a high degree of aesthetic and compositional awareness.
2. Produce images that are innovative and original in approach.
3. Demonstrate increased technical skills necessary, to render an intended outcome.
4. Demonstrate a deeper understanding of aesthetic, compositional, conceptual, and communicative tools in photography.
5. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts.
6. Create a portfolio to be used for self-marketing and for those seeking advanced degrees in photography.

ARTS 2417. Fashion Photography

Course Description

Students will work with fashion models in studio and exterior environments to learn the art of professional fashion photography. Innovative approaches to using light, wind, make up and close-ups are but a few examples of technical manipulations that will be covered. The subject will be further explored by studying and analyzing historic and contemporary trends in fashion photography and how they reflect broader social realities. From Richard Avedon to heroin chic and Irving Penn to Calvin Klein ads a fascinating world awaits with a richness that extends far beyond the assumed parameters of this subject.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Produce fashion images that show a high degree of aesthetic and compositional awareness.
2. Produce images that are innovative and original in approach.
3. Produce images that have a convincing standard of overall professional quality.
4. Demonstrate the ability to effectively collaborate with models to achieve a stated goal.
5. Demonstrate the technical skills necessary, to capture an intended outcome.
6. Demonstrate knowledge about personalities and events that have shaped fashion photography.

ARTS 2418. Landscape Photography

Course Description

An exploration of the broadest definitions of what the photographic landscape is, or can be. From a traditional definition as an aesthetic pictorial perspective, to environmental, ecological, social, referential, political, and its uses as a pro-active tool. Both, natural and urban landscapes can be explored.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate expanded understanding of technical knowhow.
2. Awareness of the origins of landscape photography.
3. Uses of innovative approaches to landscape photography.

ARTS 2419. Documentary Photography

Course Description

Students photograph a subject or narrative event with the end product being a layout and proposal for a published photo-essay. A variety of photographic skills including lighting are covered, as well as the ethical, legal and social considerations raised by this type of photography.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand the ethics and traditions of documentary photojournalism.
2. Photograph an event in real time as it is happening.
3. Develop understanding of sequencing photographic works.
4. Develop concepts of pacing and layout for the printed page.

ARTS 2420. Visualizing Ideas

Course Description

The course is dedicated to teaching how to visualize ideas within the photographic medium by combining theoretical content and aesthetic form to create a conceptually rich body of work. It explores advanced digital photography, including perfecting use of the camera and relevant digital software, and honing inkjet printing skills. We will explore new techniques and workflows and use them to respond to a variety of themes and concerns. We will look at a number of contemporary photographic practitioners and discuss a multitude of historical and contemporary approaches to the same ideas we will be probing.

Student Learning Outcomes

1. Perfect use of the camera, other photographic equipment, and software in order to produce technically successful photographs.
2. Apply issues of contemporary fine art photographic practice to your own work.
3. Critically analyze and discuss photographic images.

ARTS 2421. Photographic Surrealism

Course Description

An exploration of the rich and fascinating form of expression in the context of the photographic image. The ease with which images, photographic and otherwise, can be combined offers the serious explorer great opportunities to depict notions of reality and perception within this forum of self-expression. This vehicle is similarly adept at revealing the absurdities and contradictions that surround us every day. Students are challenged to produce well-considered, technically competent and visually engaging work. The student's work can be purely digital in nature, or a hybrid incorporating any other photographic processes and techniques he/she considers to be beneficial to aid the outcome of the end product. Students may work in black and white, color or a combination of both.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Develop an understanding of surrealism in the context of the photographic image and prevailing culture.
2. Increase visual literacy.
3. To gain deeper understanding of montage and compositing with photographs since the Victorian era.
4. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts.
5. Create a portfolio to be used for self-marketing and for those seeking advanced degrees in photography.

ARTS 2422. Extreme Photography

Course Description

A production course that encourages risk-taking strategies and radical approaches in the 'making of photographs. Work expressed in forms such as mixed media, installation, large scale prints, new approaches to collage, political, narrative, autobiographical, diaristic, constructed, directorial, sequential, use of text and others may be explored.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize risk-taking traditions in photography and other media.
2. Create work demonstrating unconventional and untraditional expressive strategies.
3. Identify an audience and propose methods for communicating with that audience.
4. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts.
5. Create a portfolio to be used for self-marketing and for those seeking advanced degrees in photography.

ARTS 2423. Visual Anthropology

Course Description

Northern New Mexico and other distinct communities have been the subject of many anthropological and photographic research projects. In this course students learn to document the distinctive character of Santa Fe and surrounding communities using anthropological and photographic methods.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Distinguish and identify anthropological characteristics of Northern New Mexico Hispanic, Anglo-American, Pueblo and/or any other communities or subcultures.
2. Learn to negotiate a place in the community that allows for recording and photographing.
3. Establish a collaborative relationship that allows for participation in community events.
4. Take photographs of those people, places and artifacts that help to define the unique cultural qualities of any community.
5. Understand the impact of an outside presence within a community and how the process of documenting said community impacts and changes it.

ARTS 2424. Photographing the Figure

Course Description

Photographic exploration of the human figure in various contexts. Aesthetic, historical and social issues are emphasized. Classes are used for lectures, presentations, discussions, regular critiques. Assignments are designed to deepen understanding of photography in contemporary and historical contexts.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Comprehend and analyze critical writings on the body.
2. Produce an on-going series of prints that will be presented for frequent critique sessions.
3. Learn how to use double-exposures flash and extended-time-exposures in a nocturnal setting.

ARTS 2425. Photographic Imaging for Fine Arts

Course Description

Focuses on creating imagery that is expressive, experimental and collaborative in an effort to explore the photographic medium as it intersects artistically with the traditions of drawing, painting and printmaking. Assignments are designed to deepen understanding of photography in contemporary and historical contexts.

Student Learning Outcomes

1. Produce imagery that is purely digital or hybrid-based or traditional.

2. Produce imagery through digital input, manipulation and output.
3. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts.
4. Create a portfolio to be used for self-marketing and for those seeking advanced degrees in photography.

ARTS 2426. Photography II

Course Description

This course is a continuation of Photography I in which students will study advanced black and white techniques covering exposure, development, various films, and the use of filters, with special emphasis on tonal control through the creative use of the zone system; increased emphasis on personal vision, aspects of design, composition, and perception.

Student Learning Outcomes

1. Be knowledgeable in the correct methods for processing film and making traditional prints.
2. Understand advanced composition and lighting techniques.
3. Provide an overview of the history and contemporary practitioners of the medium.
4. Research, discuss, and analyze advanced photographic ideas.

ARTS 2428. Photography III

Course Description

In this continuation of Photography II, which concentrates on advanced black and white printing, you will learn single filter printing, split filter printing, and high key printing. You will use fiber papers and various archival toning processes.

Student Learning Outcomes

1. Continued refinement and improvement of exposure, development, and printing skills.
2. Identify, describe and analyze photographers, styles and genres.
3. Understand the relationships between multiple images and sequencing of images.
4. Understand and articulate the meaning of the photographs you see and learn how meaning is visually communicated.
5. Knowledge of photographic critical theory and the history of photography.
6. Create a cohesive body of exhibition quality work and be able to explain the significance of subject, form, presentation and meaning of student's own work.

ARTS 2429. Special Photographic Projects

Course Description

Expands upon photographic techniques and concepts using a variable, project-oriented format. Sessions are used for discussion, critiques, and hands-on production time for the special topic being covered. Projects are designed to deepen understanding of photography in contemporary and historical contexts.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate a deeper understanding of aesthetic, compositional, conceptual, and communicative tools in photography
2. Exhibit deeper knowledge of this special topic in photography from contemporary and historical perspectives
3. Create and complete a major photographic project
4. Create a body of work centered on a special topic.

ARTS 2430. Photographic Portraiture

Course Description

This course covers the study of professional photography that involves people, including studio and environmental portraits. Topics include studio and exterior lighting techniques and selecting lighting equipment and supplies.

Student Learning Outcomes

1. Demonstrate successful operation of studio lighting equipment and accurately define lighting equipment terminology.
2. Illustrate the principles of photographic lighting.
3. Demonstrate and apply how to use and modify natural light effectively.
4. Demonstrate understanding of different approaches such as formal, informal, candid, vernacular and their cultural implications.
5. Distinguish historic and contemporary cultural notions informing different types of portraits.

ARTS 2431. Introduction to Graphic Design

Course Description

Introduction to the principles of visual communication and digital media, letterforms, typography and identity marks. Projects produced using conventional and digital tools.

Student Learning Outcomes

1. Demonstrate working knowledge of the graphic design software.
2. Identify and apply basic design concepts for the purpose of visual communication.
3. Conduct visual research and create presentations on design topics.
4. Solve graphic design problems through solving fundamental communication challenges by sketching, drawing, typographic composition, use of image and color.

ARTS 2433. Photography Portfolio

Course Description

To assist students in entering the world of professional photography, they will create your own portfolio with a strong emphasis on editing, content, printing, and presentation. Students will engage in discussions on how to market their work to enter graduate schools; includes publications, shows, and galleries.

Student Learning Outcomes

1. Enhance student knowledge of photography from an informed perspective, through the understanding of photographic history, the development of professional processes and skills and the building of an original and personally tailored photography portfolio.
2. Create a cohesive body of exhibition quality work and be able to explain the significance of subject, form, presentation and meaning of student's own work and mastery.

ARTS 2440. Photo Finishing & Presentation

Course Description

Use of visual language for personal expression. Freelance photography; care of original photos; preparation of portfolios, photographic markets, exhibitions and judging, galleries and copyrights. Students will prepare a photographic portfolio.

Student Learning Outcomes

1. Define your target market and create a complete "Personal Promotional Package".
2. Produce a professional Resume Cover Letter.
3. Produce a professional looking Business Card, Letterhead Mailing Labels.
4. Produce a single page Promotional Piece, (and possible follow-up material).
5. Produce a PDF Formatted Portfolio (Create in Photoshop® Export as PDF).
6. Produce a clean, professional looking traditional hard portfolio with 20-30 pieces.
7. Present the Entire Promotional Portfolio and promo materials in a "Job Interview".

ARTS 2445. Large Format Photography

Course Description

In this course the students will learn the mechanics of producing photographic film images using a large format 4x5 film camera. Everything from setup of the camera, focusing on subjects and determination of proper exposure will be explored. Loading and unloading and processing of sheet film will be demonstrated and practiced. Considerations for the printing of large format negatives will be explored.

Student Learning Outcomes

1. Mastery of the use of the 4x5 film camera.
2. Mastery of processing of large format sheet film.
3. Mastery of the printing of large format sheet film.

ARTS 2520. Digital Photography II

Course Description

Techniques and concepts learned in Digital Photography I are expanded upon in this project-oriented course. Predictable image capture, enhanced color management archival printing techniques and presentation of work to professional portfolio standard.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Expand and creatively apply the used of dSLR camera.
2. Expand and creatively apply file processing techniques and management techniques.
3. Expand and apply competent digital printing skills.
4. Demonstrate a deeper understanding of aesthetic, compositional, conceptual, and communicative tools in photography.
5. Demonstrate a deeper understanding of photography in contemporary, historical and psychological contexts.
6. Create a portfolio to be used for self-marketing and for those seeking advanced degrees in photography.

ARTS 2522. Digital Imaging Techniques

Course Description

This course is an introduction to the artistic possibilities of digital compositing and other lens based digital techniques. In this course you will learn to use Adobe®'s Photoshop® to generate digital images both for electronic output and for making prints. Over the course of the semester, we will be focusing on creating five projects expressing your personal artistic vision. The best projects will be the ones in which the technical issues of photography, particularly digital compositing, are used to further the artist's concept. In other words, make the projects your own, use the techniques to explore ideas and images you care about. Don't just fulfill the assignment. Most importantly have fun.

Student Learning Outcomes

1. Students will gain a deep understanding of Adobe®'s Photoshop® as a tool for making photographic and photographically based images.
2. Students will become familiar with contemporary photographic practice, especially as it relates to digital techniques.
3. Students generate significant bodies of personal creative work using digital techniques and write successful artist statements.

ARTS 2523. Video Art I

Course Description

This studio class is an in-depth introduction to video as an art form; the focus will include theory, history and practice of video art as an extension of visual art and as a time-based medium. Video Art's roots lie in consumer technology, TV, cultural, political and avant-garde film history. This time and light based medium, has a relatively short history and encompasses technological (and scientific) developments, cultural movements and has recently become a ubiquitous art practice. Set up as an online research laboratory, the class will help students to further develop their personal video work while experimenting with various styles and formats of video art. The equipment and demonstrations explored in the class

are within a context defined by the history, aesthetics, and theory of video art practice. The emphasis of this class is on the student finding their own personal voice, and incorporating an innovative approach to their video work. Students are also expected to achieve a level of technical competence and confidence needed to undertake more ambitious and sophisticated work. Current and significant contemporary video works and critical writings will be viewed, read and discussed in online forums. This class aims to challenge notions of what video art is, and can be. Students are expected to think outside the box and try new approaches to this time-based media. Students will learn to seek out new audiences and create unique methods of presenting video online.

Student Learning Outcomes

1. Demonstrate the ability to utilize video editing and post-production effects software to generate assigned video art projects.
2. Demonstrate the ability to produce visually engaging and conceptually strong video artwork.
3. Exhibit the ability to critically evaluate video art work by contemporary new media artists, their own work, and the work of their fellow classmates.
4. Demonstrate greater facility through activities focused on analysis and writing for art theory, criticism and history of video art and across disciplines.

ARTS 2550. Intermediate Digital Photography

Course Description

This course explores creativity and the making of personal images in the context of understanding visual culture and self-expression. Students will explore their interest in photography and learn to 'see' as a photographer. We will learn lighting both in the on-campus studio and on location. Student will become proficient in writing and talking about photographs and how this impacts their own work. The course covers other photographers and art theory. The course uses Photoshop® CC for editing and enhancing images. Included in class time is a lab.

Student Learning Outcomes

Upon successful completion of the course, the student will have:

1. A continuing knowledge of digital camera operation.
2. Use of lighting in the studio and on location.
3. An advanced understanding of digital imaging.
4. An understanding of input and output sources in digital photography.
5. A further understanding of editing with Photoshop® CC.
6. An understanding of photographic design and lighting.
7. Basic knowledge of ink jet printing.
8. An understanding of photographic history.
9. Confidence in visual and written assessment skills.

ARTS 2610. Drawing II

Course Description

This course introduces color and colored media as an element of composition while emphasizing descriptive and perceptual drawing skills and conceptual approaches to contemporary drawing.

Student Learning Outcomes

1. Create drawings in wet and dry color media.
2. Practice analyzing and visually translating observed subjects from realistic, referential, and/or objective form, to non-representational or abstract imagery in drawings.
3. Compose fully developed drawings that include a conceptual or historical basis.
4. Engage in effective written and oral critique in response to one's own art and the art of others.

ARTS 2611. Advanced Computer-Based Illustration

Course Description

Design custom graphics and create special effects with filtering, special effects on type, graphing, technical illustrations, and three-dimensional drawing using Adobe® Illustrator.

Student Learning Outcomes

1. Demonstrate competency in the use of Adobe® Illustrator software.
2. Create appropriate visual solutions based on target marketing information.
3. Demonstrate competency in the design and production of advertising and promotional materials.
4. Present ideas and concepts effectively and competently.
5. Visually demonstrate design solutions to be used in a portfolio.

ARTS 2612L. Illustration I

Course Description

An intermediate-level drawing course which introduces students to drawing as illustration, a visual translation of the written word. Students work largely from imagination as well as learn to research for visual sources. This course prepares students for work with digital illustration.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Translate the written word into a visual image or concept.
2. Demonstrate an understanding of the difference between institutional and editorial illustration.
3. Illustrate a written narrative.
4. Use a variety of drawing media, techniques and composition, appropriate to a clarity of visual information.
5. Understand basic professional practices for presentation and client relationships.

ARTS 2613L. Animal Life Drawing & Painting

Course Description

Drawing and painting students explore the structure, movement and form of a variety of animals. In addition, the artistic tradition of the animal as a part of two-dimensional art- as human metaphor, as a metaphor for nature, as a symbol of the fabulous and the surreal will be explored. The class will involve field trips as well as in- studio work. The course will involve on-site observational work as well as supplemental anatomical study. A small body of developed imagery based on these explorations will result.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate a competent understanding of the structural form and general visual nature of major groups of animals.
2. Apply gained ability to research fundamental aspects about animals in future imagery.
3. Demonstrate critical understanding of a range of symbolic aspects of animals, largely in relation to western art traditions.
4. Create a work of art incorporating sketches and study drawings.

ARTS 2614L. Drawing & Painting Advanced Projects

Course Description

Intermediate to advanced level drawing and/or painting studio course. The course is structured around a common theme or mode of inquiry or combination of media, relevant to contemporary painting and/or drawing. Art historical context is discussed. Individual expression and exploration of painting and/or drawing is encouraged and expected.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Select and apply appropriate materials and techniques in order to initiate and complete a project.

2. Articulate conceptual significance of the project.
3. Describe an art historical context for the work begun in this course.
4. Create a portfolio using a variety of techniques and materials explored in this course.

ARTS 2615. Drawing III

Course Description

Students will utilize all the knowledge and experience acquired in their previous art courses, in order to create a body of work that demonstrates expertise in drawing. They will further refine and develop drawing techniques and concepts, as well as understanding of basic human anatomy for the purpose of artistic expression. Linear perspective, compositional structure, figure/ground integration, spatial perception, and analytical skills will be emphasized extensively.

Student Learning Outcomes

1. Personal responsibilities: Affective: Students will develop behavioral skills which help the student acquire a positive attitude toward self, other students, faculty, facilities and equipment, housekeeping in the work areas, and the ability to carry out directions, meet deadlines, meet attendance requirements, etc. with a score of 60% or better using the following concepts
 - a. Each student will maintain class attendance.
 - b. Each student will demonstrate the ability to follow assignment instructions.
 - c. Each student will bring the proper drawing material in class to do class work.
 - d. Each student will perform outside drawing projects as assigned.
 - e. Each student will demonstrate the ability to comply with due dates.
 - f. Each student will demonstrate the ability to complete assignments.
 - g. Each student will demonstrate the ability to focus on group objectives.
 - h. Each student will demonstrate the ability to focus on personal objectives.
 - i. Each student will demonstrate the ability to contribute to the studio working environment.
 - j. Each student will demonstrate the ability to tolerate diverse views.
 - k. Each student will participate in group critiques.
 - l. Each student will demonstrate the ability to dialogue effectively.
 - m. Each student will demonstrate the ability to offer and receive constructive criticism.
 - n. Each student will demonstrate that the discipline focus of class objective can be used as creative stimulus.
2. Theory of drawing I: Cognitive: Students will demonstrate critical thinking skills, conceptual constructs, and specialized vocabulary with a score of 60% or better on a body of work which includes the following:
 - a. Each student will demonstrate well developed skill in at least one drawing media, with introduction to at least one other drawing media and/or technique, with possible emphasis on mixed media.
 - b. Each student will be able to select appropriate drawing techniques and visual vocabulary to execute original and flexible solutions to assigned think problems.
 - c. Each student will execute drawings with firm understanding of the principles of good design, such as unity, variety and balance.
 - d. Each student will master both perceptual and conceptual skills necessary to draw from still life set-ups and/or think problems.

ARTS 2616. Aspects of Drawing

Course Description

Continued work in drawing with emphasis on personal creative endeavor. Outside assignments required.

Student Learning Outcomes

In order to acquire knowledge of the inherent visual dynamics of drawing. Students will demonstrate the following:

1. Advanced skill level in the visual dynamics of line involved in the creation of drawing.
2. Advanced skill level in the visual dynamics of shape involved in the creation of drawing.

3. Advanced skill level in the visual dynamics of value involved in the creation of drawing.
4. Advanced skill level in the visual dynamics of color involved in the creation of drawing.
5. Advanced skill level in the visual dynamics in the combination of line, shape, value and color involved in the creation of drawing.

ARTS 2620. Life Drawing II

Course Description

This course introduces color and colored media as an element of composition while emphasizing descriptive and perceptual drawing skills and conceptual approaches to contemporary drawing.

Student Learning Outcomes

1. Create drawings in wet and dry color media.
2. Practice analyzing and visually translating observed subjects from realistic, referential, and/or objective form, to non-representational or abstract imagery in drawings.
3. Compose fully developed drawings that include a conceptual or historical basis.
4. Engage in effective written and oral critique in response to one's own art and the art of others.

ARTS 2621L. Drawing for Animation

Course Description

An intermediate level course in drawing for animation and cartooning. Students work with drawing as a progressive storytelling medium, with introduction to storyboarding for film as well as the graphic novel. Students are introduced to the work of cartoonists and animators, whose work has been historically influential in the field. This course provides students with the drawing skills needed for successful use of digital animation tools.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Construct and pace a narrative in visual terms.
2. Manipulate the viewing angle perspective
3. Describe a variety of approaches to storytelling, based on familiarity with the work of professionals in the field.
4. Use a variety of drawing media, techniques and composition to enhance visual impact.
5. Present their work in a professional manner.

ARTS 2625. Figure Drawing

Course Description

Not Available

Student Learning Outcomes

Not Available

ARTS 2630. Painting II

Course Description

This course focuses on the expressive and conceptual aspects of painting, building on the observational, compositional, technical, and critical skills gained previously. Students will investigate a variety of approaches to subject matter, materials, and creative processes through in-class projects, related out-of-class assignments, library research or museum/gallery attendance, written responses, and critiques.

Student Learning Outcomes

1. Produce paintings building on the skills and techniques learned in Painting I.
2. Solve unique format, support, ground, over and under texturing surface challenges.
3. Practice analyzing and translating observed subjects from realistic, referential, and/or objective form, to non-representational imagery.

4. Create paintings that explore personal content, stylization, symbolism, narrative, and/or iconography.

ARTS 2631L. Landscape Painting

Course Description

A contemporary approach to landscape painting in oil or acrylic. On-site and studio work will focus on both the natural world and landscapes in the imagination. Students are encouraged to pursue and develop their own personal direction with the landscape as a reference.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Organize and prepare painting equipment, media and materials for a successful day in the field.
2. Recognize and discuss the components of some major modern and contemporary landscape painters.
3. Use color and techniques of paint application as they apply to landscape painting.
4. Create personally meaningful imagery based on the landscape.

ARTS 2632L. Fine Art Collage

Course Description

This course will focus on the fine art collage/mixed media applications and will explore experimental processes, incorporating the adhering of papers and other materials to a support along with painting and drawing media. Art historical influences will be emphasized.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate well-designed and visually exciting images in the collage medium.
2. Work with a variety of materials and processes including papers, fabrics, found objects, etc. in combination with painting, drawing and other 2-D media.
3. Demonstrate an understanding of the elements and principles of design in the creation of collage works.

ARTS 2633L. Abstract Painting

Course Description

Students analyze and apply to their own work the various concepts, styles and techniques of contemporary abstract painting, including deconstruction of subject matter, collage, mixed media, textural layering, lyrical and hard edge abstract expressionism, and minimalism. Experimental color usage, paint application techniques, development of surface techniques and the use of varying surfaces along with art historical references will be covered. Students will complete a portfolio of abstract works.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Apply the elements and principles of design in the completion of a successful abstract painting.
2. Use of a variety of media, techniques and surfaces to express an aesthetic concept.
3. Describe key issues and characteristics of historical and contemporary abstract painting.

ARTS 2635. Painting III

Course Description

Continuation of ARTS 2630.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Color mixing and color relationships.
2. Create illusions of space and volume.

3. The student will strengthen his or her own personal artistic style.
4. Knowledge of the proper use and maintenance of painting tools.
4. Explore and learn the technique of a master painter of the past.
5. Awareness of nature, “eye hand response,” and an imaginative or personal use of the medium.
6. Awareness of the creative process, exploring unforeseen possibilities.
7. An ability to work independently.
8. Understanding of painting styles and arts vocabulary.

ARTS 2637. Painting IV

Course Description

Continuation of ARTS 2635.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Color mixing and color relationships.
2. Create illusions of space and volume
3. The student will strengthen his or her own personal artistic style.
4. Knowledge of the proper use and maintenance of painting tools
5. Knowledge of painting sizing, grounds, preparation and show presentation.
6. Explore and learn the technique of a master painter of the past.
7. Awareness of nature, “eye hand response,” and an imaginative or personal use of the medium.
8. Awareness of the creative process, exploring unforeseen possibilities
9. An ability to work independently.
10. Understanding of painting styles and arts vocabulary.

ARTS 2639. Advanced Painting

Course Description

A highly individualized instructional approach to the basic principles, materials, and skills of painting. Students may choose their own specific media. Subject matter may be decided by and large by each student. Weekly exercises will be used to reinforce basic principles in painting. Emphasis this semester will be placed on all aspects of color, seeing, mixing, describing and manipulating color.

Student Learning Outcomes

Upon completion of this course, the student should be able to:

1. Cultivate a desire to express oneself visually.
2. Be acquainted with the techniques of painting in chosen media.
3. Ensure quality and consistency as a practicing artis.
4. Motivate creativity through individuality.
5. Promote a sense of responsibility and accountability, and
6. Instill a positive attitude concerning one's individual ability and role in the visual arts.

ARTS 2640. Watercolor II

Course Description

This course introduces an expansion of watercolor techniques, with a greater emphasis on developing personal expression through conceptual and technical experimentation.

Student Learning Outcomes

1. Create works with complex watercolor techniques such as masking, washout, and mixed media.
2. Use watercolor painting as a means of personal expression, as shown through a series of theme related paintings.
3. Developed the use of space, form, texture, composition, value, positive and negative shapes in larger format.

4. Explore the use of transparent and opaque water media within the creative process.

ARTS 2710. Intermediate Printmaking

Course Description

This course provides direct experience in exploring advanced printmaking concepts, including screen printing, multiple block relief printing, plate lithography, and mixed media printmaking. Emphasis is given to developing a portfolio of prints focusing on individual expression, collaborative work, and digital imagery.

Student Learning Outcomes

1. Apply previously learned knowledge and concepts in a more advanced setting.
2. Develop new print processes and combine them with previous printmaking knowledge, with focus on intaglio and relief process.
3. Integrate research into the conceptual development of printmaking and create a diverse portfolio of curated prints.
4. Employ editioning and monotype print skills.
5. Practice printmaking safely with proper use of new equipment and materials.
6. Learn basic lithography including stone and/or plate preparation, drawing, etching, printing, and counter etching.

ARTS 2712. Illustration II

Course Description

Continuation of ARTS 2612L with a more focused exploration of specific types of typical illustration assignments. Based on a set of parameters, students create visual imagery for clients whose projects include institutional, editorial, advertising, and packaging.

Student Learning Outcomes

1. Demonstrate ability to create illustration for a magazine or book cover.
2. Demonstrate ability to create illustration for an institutional publication.
3. Demonstrate ability to create illustration for an editorial publication.
4. Demonstrate ability to create illustration for advertising or packaging.

ARTS 2720. Advanced Book Arts

Courses Description

Continues the investigation of book arts through a variety of structures and enclosures using differing binding styles. The origins of the book and its global history are discussed. The work of contemporary book artists and examples are also discussed.

Student Learning Outcomes

1. Bind a variety of book structures and enclosures.
2. Demonstrate knowledge of book forms and their origins.
3. Demonstrate ability to maintain craftsmanship in binding.
4. Demonstrate knowledge of the history of the craft of the book.

ARTS 2725. Advanced Papermaking

Course Description

Continues the investigation of two- and three-dimensional papermaking. Beating fiber, paper chemistry, sheet formation, pulp painting, and sculptural papermaking are covered. Papermaking history and contemporary applications are discussed.

Student Learning Outcomes

1. Beat fiber for multiple purposes.
2. Demonstrate knowledge of painting with colored fiber.
3. Demonstrate ability to use paper as a medium for sculpture.
4. Demonstrate knowledge of the science and history of the craft of papermaking.

ARTS 2810. Jewelry and Small Metal Construction II

Course Description

Fabrication skills are further developed and refined while additional advanced fabrication methods are introduced. Emphasis is placed on developing a deeper understanding of form and content as it relates to creating on an intimate scale.

Student Learning Outcomes

1. Demonstrate an understanding of innovative design.
2. Apply safe practices in the production of works that expand on and experiment with advanced fabrication techniques.
3. Create design sketches of the objects prior to fabrication.
4. Construct three-dimensional, small scaled, functional or nonfunctional objects, which incorporate mechanisms.
5. Analyze projects through critiques, oral presentations, and discussions.

ARTS 2811L. Advanced Stone Setting

Course Description

This course is designed to give students an intensive hands-on approach to stone setting, Demonstrations will be given in prong setting, cluster setting, thick bezel setting, pave, channel setting, and burnish setting. After each demonstration the student will practice the technique. Students will also be taught to create a finished piece of jewelry including prepolishing, stone setting, clean up, and final polishing, Tool making appropriate to the craft will be taught Safety precautions relative to the tools and equipment used will be stressed. By the end of the class students will have learned a number of new stone setting techniques and improved their ability with techniques they may have already known.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. To set faceted stones in a basket like setting with either four or six prongs.
2. Competently execute cluster setting which generally refers to the setting of multiple stones around a central larger stone.
3. Bezel set both cabochon and faceted stones using the hammer setting tool of the flexible shaft.
4. Lay out multiple stones' settings over a given area in tight proximity to each other.
5. Set various shaped stones in a single row.
6. Competently set faceted stones flush with the surface of a piece of jewelry.

ARTS 2812L. Silversmithing II

Course Description

This course is designed as a continuation of silversmithing I (JEWL 158L) in which students will improve their skills in the arts of sinking, repousse and forging. In addition, raising will be taught which is an advanced silversmithing technique employed for the formation of metal objects such as teapots, pitchers, vases and similar vessel forms.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Execute a variety of basic silversmithing techniques used to produce hollowware.
2. Identify specific tools and their uses.
3. Explain the various processes of metalwork past and present.

ARTS 2812. Jewelry Casting

This course introduces students to a wide range of non-ferrous casting techniques. Direct casting, cuttle-fish casting, vacuum casting and experimental casting will be covered. Students will learn to carve waxes and cast non-wax objects. Students will create sprue trees, invest waxes, schedule/program kiln burnouts and participate in pouring their castings.

Student Learning Outcomes

Students will be able to:

1. Practice direct casting, vacuum casting, and centrifugal casting.
2. Sprue and tree waxes, calculate charge and invest objects to cast.
3. Cast and burn out a variety of materials.
4. Remove castings from trees, remove sprues, and clean up castings.
5. Analyze projects through critiques, oral presentations, and discussions.

ARTS 2813L. Casting for Jewelry

Course Description

An introduction to the ancient art of casting and wax-model-making that focuses on the tools, equipment, materials and processes traditionally used in creating forms in silver. The course includes demonstrations on designing and creating wax models for the casting process and many techniques of vacuum and direct-casting methods. Emphasis is on casting and experimenting with design in wax and cast forms.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Acquire a general working knowledge and overview of basic tools, processes and materials relative to wax model making and casting.
2. Develop an awareness of wax-model making and casting and the various processes used in creating them.
3. Develop an awareness of safety in working with the equipment.
4. Gain a general knowledge of cultural, contemporary and historical uses of casting processes and materials.

ARTS 2814L. CAD for Jewelry Design

Course Description

Intensive computer-based approach to jewelry design. Students will learn to design textures, surfaces, forms, placement of stones, settings and a wide range of other jewelry techniques using computer-aided design (CAD). The processes of machining and producing a finished product will be discussed. Gemvision software will be used to introduce students to state of the art processes used by the jewelry industry worldwide. Students will create wax or plastic models that can be cast in silver or gold.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Design wearable jewelry using the computer.
2. Demonstrate proficiency and versatility in jewelry fabrication, wax casting, stone setting and silversmithing using CAD software.
3. Produce a series of designs as part of a portfolio using CAD software.

ARTS 2820. Jewelry and Small Metal Construction Portfolio

Course Description

Advanced study in bench jewelry and/or small metal construction techniques through the creation of a series of personal works.

Student Learning Outcomes

1. Create a series of either jewelry or small-scale sculptural objects that represent a consistent body of original work.
2. Create design sketches of the objects prior to fabrication.
3. Apply safe and professional bench jewelry fabrication, advanced stone setting and repair techniques to complete projects.
4. Explore professional practices of jewelry repair and design with emerging technologies.
5. Present a professional portfolio including a resume, artist's statement and photographs of the work.

ARTS 2812. Jewelry Casting

This course introduces students to a wide range of non-ferrous casting techniques. Direct casting, cuttle-fish casting, vacuum casting and experimental casting will be covered. Students will learn to carve waxes and cast non-wax objects. Students will create sprue trees, invest waxes, schedule/program kiln burnouts and participate in pouring their castings.

Student Learning Outcomes

Students will be able to:

1. Practice direct casting, vacuum casting, and centrifugal casting.
2. Sprue and tree waxes, calculate charge and invest objects to cast.
3. Cast and burn out a variety of materials.
4. Remove castings from trees, remove sprues, and clean up castings.
5. Analyze projects through critiques, oral presentations, and discussions.

ARTS 2821. Enameling II**Course Description**

This is a self-paced course in enameling. You will create larger & more complex items utilizing the techniques you learned in Beginning Enameling. You will learn more advanced techniques which were not covered in the beginning class.

Student Learning Outcomes

Not Available

ARTS 2823L. Advanced Enameling**Course Description**

Exploration of advanced enameling techniques. This course covers many areas and techniques in the enameling field including, but not limited to limoges, painted enamels, grisaille, champleve for multiple production, Cloisonné/Appliques and Plique-à-jour. Students may work on small to large scale work as jewelry or sculptural forms.

Student Learning Outcomes

1. Produce samples of no fewer than 4 of the 6 techniques demonstrated.
2. Apply 2 of the 4 techniques sampled to student's own work.
3. Create a finished piece of jewelry, sculpture, or a collection of multiple production jewelry.

ARTS 2830L. Jewelry/Metal Arts III**Course Description**

Not Available

Student Learning Outcomes

Not Available

ARTS 2835. Jewelry and Metal Arts Advanced Projects**Course Description**

Structured around a common theme or mode of inquiry relevant to the conceptual concerns and techniques particular to the making of jewelry. An in-depth forum is provided to analyze aesthetic and conceptual concerns. Emphasis is placed on the realization of each student's unique vision and completion of projects. Creativity and the development of a personal style of self-expression are encouraged.

Student Learning Outcomes

1. Develop and initiate a project.
2. Select and apply the appropriate techniques and materials to produce an artwork.

3. Articulate the conceptual significance of their project.
4. Be familiar with contemporary issues in their field of arts and design.
5. Demonstrate substantial progress in project completion.

ARTS 2839. Introduction to Sculpture

Course Description

Beginning sculpture students “explore space” while learning new processes and skills, including mold making, welding and woodworking.

Student Learning Outcomes

1. Be able to utilize a variety of traditional materials and sculpture processes, including: mold making, metal fabrication/wood fabrication, and the creative integration of mixed media.
2. Learn to differentiate between objects and installations, and be prepared to explore sculpture in upper division, topics based courses.

ARTS 2840. Sculpture II

Course Description

This course continues the exploration of form and concept in sculpture through the exploration of materials, techniques, and varied media. Students conceive and execute work that incorporate a variety of materials and types of presentation.

Student Learning Outcomes

1. Use a variety of processes, materials, tools, and equipment to create work that demonstrates an understanding of the fundamentals of time, form, and structure.
2. Explain the rationale behind decisions made during the production of work that explore sculpture’s visual language.
3. Demonstrate through object, action, or text; increased knowledge of the language and history of sculpture as it pertains to contemporary sculptural practices.
4. create works of art that demonstrate competence in the student’s chosen area of focus.

ARTS 2841. Appreciation of Sculpture

Course Description

Introduction to contemporary and traditional methods and aesthetics of sculpture: including culture, purpose, history, methods, and innovations from plaster to bronze casting.

Student Learning Outcomes

Not Available

ARTS 2842. Kinetic Art

Course Description

Intended for sculptors who wish to introduce motion into their work. The course is directed toward a final project of the student's design, which may be sculpture, installation, performance, costume, robotics, toys, etc. Issues covered include mechanism design and troubleshooting, hand-cranks, ratchets, solenoids, motors, drive systems, and basic construction techniques aimed at building safe and reliable kinetic art. An overview on the history of kinetic art is provided to inspire a richness of conceptual thinking.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of the Five Basic Machines and how they transfer movement and force.
2. Safely and competently use the shops to construct kinetic sculpture and mechanisms.
3. Complete a Kinetic Art idea in written proposal, drawing proposal/diagrams, and sculptural construction.

ARTS 2843L. Contemporary Bronze Sculpture

Course Description

An introduction to direct casting methods for the realization of a personal and expressive art. Students work with cast bronze, which has been used for thousands of years as an expressive medium. In addition to a lab fee, students must purchase wax, ceramic shell and bronze.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Fabricate patterns directly in wax and organic materials for direct casting and will be familiar with the basic gating techniques used in lost wax casting.
2. Demonstrate an understanding of the basic application of ceramic shell stuccoes and the preparation of ceramic shell molds for kiln firing.
3. Demonstrate an understanding of the pouring of bronze into ceramic shell molds, the divesting and
4. Degating of rough castings and the basic finishing and patination of bronze castings.
5. Describe the reasons why they may want to realize a particular work in bronze and how bronze and other cast metals have been and are now being used by other artists in the realization of their work.

ARTS 2844L. Stone Sculpture

Course Description

An overview of stone sculpture that investigates techniques of carving in limestone, alabaster and marble by hand and with pneumatic tools, both directly and from models.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Carve stone, alabaster, marble and limestone by hand-hammer & chisels and pneumatic hammers.
2. Understand subtractive sculpture.
3. Begin to master stone carving techniques.
4. Carve directly or from a model.

ARTS 2845L. Mixed Media Sculpture

Course Description

This course covers a variety of tools and techniques used in mixed-media sculpture. Assemblage as an aspect of the additive approach to sculpture is examined. Students focus on aesthetic, structural and conceptual principles involved in this approach. In addition to wood, materials may include metal, fibers, plastics, found objects, etc.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate sound construction using basic joinery and other techniques.
2. Have completed several finished sculptures using assemblage.
3. Demonstrates some understanding of aesthetic concepts and issues in class discussions and projects.
4. To exhibit some progress in the development of individual forms and concepts.
5. Demonstrate some knowledge of assemblage relative to the history of sculpture.

ARTS 2846L. Glass Sculpture

Course Description

An introduction to the basic kiln casting in the lost wax technique and other kiln working of glass including the processes of slumping and fusing. Students will be introduced to creating molds for use with glass and the entire lost wax process.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Model and cast waxes for investing in glass.
2. Develop programs for firing the kiln for the casting process.

3. Develop an understanding of the vocabulary of glass as an artistic medium.

ARTS 2847L. Metal Sculpture II

Course Description

An in-depth study of the metal processes introduced in Metal Sculpture I with greater emphasis on individual artistic expression. Tig welding is introduced in this class.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Articulate and discuss perception, conception, and symbolism in sculpture.
2. Create sculptural forms in a practical, functional, and aesthetic framework.
3. Understand the safe and effective use of metal fabrication equipment.

ARTS 2848L. Mold Making for Sculptors

Course Description

A course in basic mold making for sculpture. This course covers pattern preparation, mold construction, and casting in wax and plaster. Class projects are designed to help students become proficient in several mold making processes. This class may be of special interest to students who wish to do bronze and glass sculpture.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Make a plaster piece mold, and create a wax, plaster, and clay positive.
2. Make an alginate mold and cast a plaster positive.
3. Make a simple rubber mold and cast a wax or resin positive.

ARTS 2849L. Wood Sculpture

Course Description

An introduction to tools and techniques used in wood sculpture to develop sculptural forms and encourage personal exploration. Students investigate a diverse range of techniques, such as wood construction, wood lamination, fabrication, wood carving, wood finishing, glues, and tool sharpening and maintenance. Sculptural traditions, both historical and contemporary, are discussed.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of the tools and techniques used in wood sculpture.
2. Demonstrate an understanding of the various types of wood construction, wood qualities, wood carving, wood finishing, glues, and tool sharpening and maintenance.
3. Articulate and discuss perception, conception, and symbolism in sculpture.
4. Demonstrate competency in the execution of sculptural forms in wood.

ARTS 2850. Arts Foundry I

Course Description:

This course provides the student with an introduction to the use of the casting process in the creation of sculpture. Both sand mold and ceramic shell casting methods will be used.

Student Learning Outcomes

1. Create a cast sculpture that demonstrates a basic working knowledge of the processes involved in the creation of a pattern suitable for casting, the patterns investment, the pouring of the metal into the investment mold, the castings divestment, and its finishing.
2. Through the safe use of materials, and the facilities, and the proper use of personal protective equipment, the student shall demonstrate an adequate knowledge of safety procedures required for the use of the foundry studio.

3. Write or participate in symposia to demonstrate knowledge of the history, language, and cultural framing associated with the creation of sculpture using the casting method.
4. Participate in group critiques to demonstrate an initial awareness of craft, design, and personal content, as these elements are used in the creation of cast sculpture.

ARTS 2855. Sculpture III

Course Description

This course will focus on the development of the student's personal aesthetic while continuing to analyze the use of form and surface to create content. Developing a body of work and documentation for a portfolio.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. The student will be able to apply the elements of design in a variety of situations.
2. The student will be able to apply the principles of design in a variety of situations.
3. The student will demonstrate ceramic skills using a variety of media, construction techniques, and finishing methods.
4. The student will be able to prepare art works for display.
5. The student will develop a general knowledge of ceramic vocabulary and use that vocabulary to describe works of art verbally and in writing.
6. The student will develop a general knowledge of ceramic materials, tools, and techniques.
7. The student will be able to demonstrate good work habits.
8. The student will develop an appreciation for the art of seeing; develop a personal vision.

ARTS 2857L. Sculpture: Advanced Projects

Course Description

Structured around a common theme or mode of inquiry relevant to the conceptual concerns and techniques particular to the making of sculpture. An in-depth forum is provided to analyze aesthetic and conceptual concerns. Emphasis is placed on the realization of each student's unique vision and completion of projects. Creativity and the development of a personal style of self-expression are encouraged.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Select and apply appropriate materials and techniques in order to initiate and complete projects.
2. Articulate the conceptual significance of a project.
3. Articulate the relationship of proposed and produced project in terms of historical or contemporary understanding of the techniques and processes appropriate to the creation of sculptural form.
4. Completion of project(s) in the medium of sculpture.

ARTS 2861. Modeling Sculpture and Mold Making

Course Description

In this course students will create sculptures by modeling the form in plasticine clay. Visual expression of personal concept will be an important factor in each sculpture. Participation in formal and conceptual class critiques will be mandatory for each assignment. Students will create rubber molds from each sculpture, from which wax patterns may be cast in a future class.

Student Learning Outcomes

1. Personal responsibilities: AFFECTIVE: Students will develop behavioral skills which help the student acquire a positive attitude toward self, other students, faculty, facilities and equipment, housekeeping in the work areas, and the ability to carry out directions, meet deadlines, meet attendance requirements, etc., with a score of 60% or better using the following concepts

- a. Each student will maintain class attendance.
 - b. Each student will observe safe studio and shop practices.
 - c. Each student will demonstrate the ability to follow task instructions.
 - d. Each student will demonstrate the ability to self-initiate tasks.
 - e. Each student will demonstrate the ability to complete tasks.
 - f. Each student will demonstrate the ability to focus on group objectives.
 - g. Each student will demonstrate the ability to focus on personal objectives.
 - h. Each student will demonstrate the ability to comply with due dates.
 - i. Each student will demonstrate the ability to contribute to the studio working environment.
 - j. Each student will demonstrate the ability to tolerate diverse views.
 - k. Each student will participate in group critiques.
 - l. Each student will demonstrate the ability to dialogue effectively.
 - m. Each student will demonstrate the ability to offer and receive constructive criticism.
 - n. Each student will demonstrate that the discipline focus of class objective can be used as creative stimulus.
2. Theory of casting wax and metal: COGNITIVE: Students will demonstrate critical thinking skills, conceptual constructs, and specialized vocabulary with a score of 60% or better on a body of work which includes the following:
- a. Each student will be able to demonstrate the principles of relative shop technology and safety.
 - b. Each student will be able to design effective technical strategies.
 - c. Each student will be able to design; shape and scale optimum formats to accommodate individualized expressive concerns.
 - d. Each student will develop a more extensive sense of form through casting sculptural studies molded into wax and clay.
 - e. Each student will explore determinative relationships between media, technical processes and sculptural products.
 - f. Each student will be able to offer an oral critique of finished products.
 - g. Each student will be able to participate in group critiques.
3. Casting wax and metal: PSYCHOMOTOR: Students will develop manipulative, work-oriented skills, and demonstration of specific process skills with a score of 60% or better on a body of work which includes the following:
- a. Each student will be able to effectively assemble material.
 - b. Each student be able to control form so that a finished presentation is accomplished, including architectural weight/support sufficiency.
 - c. Each student will use his/her hands and tactile responsiveness as a perceptive sense in creating sculptural form.
 - d. The student will refine personal wax working and spruing skills. Each student will be able to orally critique works of sculpture.

ARTS 2862. Casting Wax and Bronze

Course Description

In this course students will cast wax patterns from molds created in a previous course (Modeling Sculpture and Mold making). Those wax patterns will continue through the entire bronze casting process, including finishing and patination of the sculpture. The student will personally perform each step in the process.

Student Learning Outcomes

1. Personal responsibilities: AFFECTIVE: Students will develop behavioral skills which help the student acquire a positive attitude toward self, other students, faculty, facilities and equipment, housekeeping in the work areas, and the ability to carry out directions, meet deadlines, meet attendance requirements, etc., with a score of 60% or better using the following concepts:

- a. Each student will maintain class attendance.
 - b. Each student will observe safe studio and shop practices,
 - c. Each student will demonstrate the ability to follow task instructions.
 - d. Each student will demonstrate the ability to self-initiate tasks.
 - e. Each student will demonstrate the ability to complete tasks.
 - f. Each student will demonstrate the ability to focus on group objectives.
 - g. Each student will demonstrate the ability to focus on personal objectives.
 - h. Each student will demonstrate the ability to comply with due dates.
 - i. Each student will demonstrate the ability to contribute to the studio working environment.
 - j. Each student will demonstrate the ability to tolerate diverse views.
 - k. Each student will participate in group critiques.
 - l. Each student will demonstrate the ability to dialogue effectively.
 - m. Each student will demonstrate the ability to offer and receive constructive criticism.
 - n. Each student will demonstrate that the discipline focus of class objective can be used as creative stimulus.
2. Theory of casting wax and metal: COGNITIVE: Students will demonstrate critical thinking skills, conceptual constructs, and specialized vocabulary with a score of 60% or better on a body of work which includes the following:
- a. Each student will be able to demonstrate the principles of relative shop technology and safety.
 - b. Each student will be able to design effective technical strategies.
 - c. Each student will be able to design; shape and scale optimum formats to accommodate individualized expressive concerns.
 - d. Each student will develop a more extensive sense of form through casting sculptural studies molded into wax and clay.
 - e. Each student will be able to employ appropriate technical processes for casting bronze and aluminum as a basis for further research and exploration of form.
 - f. Each student will explore determinative relationships between media, technical processes and sculptural products.
 - g. Each student will be able to offer an oral critique of finished products.
 - h. Each student will be able to participate in group critiques.
3. Casting wax and metal: PSYCHOMOTOR: Students will develop manipulative, work-oriented skills, and demonstration of specific process skills with a score of 60% or better on a body of work which includes the following:
- a. Each student will be able to effectively assemble material.
 - b. Each student be able to control form so that a finished presentation is accomplished, including architectural weight/support sufficiency.
 - c. Each student will use his/her hands and tactile responsiveness as a perceptive sense in creating sculptural form.
 - d. The student will refine personal wax working and spruing skills.
 - e. The student will refine metal chasing and finishing/patination skills.
 - f. Each student will be able to orally critique works of sculpture.

ARTS 2866. Artistic Silversmithing-Engraving

Course Description

This course is designed for introductory level engraving on precious and non-precious metals. This course consists of understanding the theory and practice of hand and power assist engraving on spurs and jewelry.

Student Learning Outcomes

Successful completion of the course implies the student, with 70% accuracy, will be able to:

1. Safety students will:

- a. Demonstrate their ability to safely operate shop equipment and hand tools.
 - b. Demonstrate their ability to use the equipment.
 - c. Demonstrate proper setup and shut-off of equipment.
- 2. Design and Layout students will demonstrate:
 - a. Ability to create a pattern and transfer to engraving plate.
 - b. Layout a flower and a scroll.
- 3. Tool sharpening students will demonstrate:
 - a. The ability to learn the proper tool angles for different cuts and gravers.
 - b. The ability to sharpen your gravers.
- 4. Students will demonstrate the ability to learn basic cuts.
 - a. Straight cut.
 - b. Forehand cut.
 - c. Backhand cut.
- 5. Students will demonstrate the ability to learn border cuts
 - a. Riggle borders.
 - b. Cut borders
- 6. Students will begin to learn basic bright cut engraving.
 - a. Cutting flowers.
 - b. Cutting scrolls.

ARTS 2870. Engraving II

Course Description

This course is designed for intermediate level engraving on precious and non-precious metals. This course consists of understanding the theory and practice of more advanced scroll designs and refining techniques learned in ART 1870. Students will learn how to draw and design interlocking scrolls, 2 & ½ scrolls, and the incorporation of positive and negative space to create pleasing design patterns.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

- 1. Demonstrate the ability to lie out and design advanced scroll designs.
- 2. Design engraving patterns that exhibit informal balance by incorporating self-originating 2 & ½ scrolls down to 1 & ½ scrolls.
- 3. Demonstrate the ability to properly incorporate positive and negative space to create pleasing design patterns.

ARTS 2871. Engraving III

Course Description

This course is designed for the more advanced level engraver. This course will require greater graver control than previous classes and will consist of creating a three-dimensional effect through the use of single point line placement. Students will master the techniques involved in creating high tones, mid tones, base tones and high lights to create different effects. Students will also learn the techniques involved in relief of backgrounds. Advanced scroll design from ART 2870 will be used but students will be taught how to properly design and engrave complex acanthus leaf structures within these scroll structures.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

- 1. Design and draw acanthus leaves with fold overs within scroll structures.
- 2. Master the tapered stroke and proper placement to create base tones, mid tones and high tones.
- 3. Background removal and treatment.

ARTS 2880. Advanced Project Design

Course Description

This course is designed for students in their final semester. After successful course completion students will be able to fabricate a project that requires use of a metal lathe and milling table. Students will also refine tig welding skills and other advanced fabricating techniques. Students will design and fabricate a California style spur.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Safely operate all shop equipment and tools.
2. Design a California style spur.
3. Successfully fabricate bands and shanks that require the use of a metal lathe and milling table.

ARTS 2885. Studio

Course Description

This course provides the student who is enrolled in another art course the opportunity for additional working time to complete projects required for those courses. No work originating outside of a current course may be worked on in the course. All safety practices and precautions relating to processes and procedures performed must be observed at all times.

Student Learning Outcomes

1. Personal responsibilities: AFFECTIVE: Students will develop behavioral skills which help the student acquire a positive attitude toward self, other students, faculty, facilities and equipment, housekeeping in the work areas, and the ability to carry out directions, meet deadlines, meet attendance requirements, etc. with a score of 60% or better using the following concepts
 - a. Each student will maintain class attendance.
 - b. Each student will observe safe studio and shop practices.
 - c. Each student will demonstrate the ability to follow task instructions.
 - d. Each student will demonstrate the ability to self-initiate tasks.
 - e. Each student will demonstrate the ability to complete tasks.
 - f. Each student will demonstrate the ability to focus on group objectives.
 - g. Each student will demonstrate the ability to focus on personal objectives.
 - h. Each student will demonstrate the ability to comply with due dates.
 - i. Each student will demonstrate the ability to contribute to the studio working environment.
 - j. Each student will demonstrate the ability to tolerate diverse views.
 - k. Each student will participate in group critiques.
 - l. Each student will demonstrate the ability to dialogue effectively.
 - m. Each student will demonstrate the ability to offer and receive constructive criticism.
 - n. Each student will demonstrate that the discipline focus of class objective can be used as creative stimulus.
2. Studio theory: COGNITIVE: Students will demonstrate critical thinking skills, conceptual constructs, and specialized vocabulary with a score of 60% or better on a body of work which includes the following:
 - a. Each student will be able to demonstrate the principles of relative shop technology and safety.
 - b. Each student will be able to design effective technical strategies.
 - c. Each student will be able to design; shape and scale optimum formats to accommodate individualized expressive concerns.
 - d. Each student will develop an understanding of presentation.
 - e. Each student will be able to employ appropriate technical processes.
 - f. Each student will explore determinative relationships between media, technical processes and finished products.
 - g. Each student will be able to orally critique finished products.
 - h. Each student will be able to participate in group critiques.

3. Studio practicum: PSYCHOMOTOR: Students will develop manipulative, work-oriented skills, and demonstration of specific process skills with a score of 60% or better on a body of work which includes the following:
 - a. Each student will be able to effectively assemble material for the class this studio is related to.
 - b. Each student is able to control form so that a finished presentation is accomplished.
 - c. Each student will use his/her hands and tactile responsiveness as a perceptive sense in creating the form.
 - d. Each student will be able to install works for ideal contextual viewing.
 - e. Each student will be able to orally critique works.

ARTS 2890. Armor Making

Course Description

This course is designed for the medieval enthusiast & members of the Society for Creative Anachronism to create functional armour to protect the body during combat. We will discuss the changes in armour as the weapons and style of warfare progressed. We will discuss the differences & similarities of armourers, blacksmiths, & feniers. You will complete the required projects in each of the following: chain-maille, leather, steel plate, & blacksmithing. You will learn how to create chain-maille from steel wire; select appropriate leather for a project; cut, tool, stitch, harden, & finish leather; create full size patterns; cut, cold-work, & rivet sheet steel; blacksmith steel into simple shapes; and proper use & care of tools. This is a physically demanding class; it requires a significant amount of upper body strength. All armour pieces are tested to determine if they will protect the wearer during combat.

Student Learning Outcomes

Not Available

ARTS 2891. Art for the Elementary Teacher

Course Description

Orientation into the methods, philosophy and media of art practiced in the elementary school.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. Appreciate and execute an art program as a relevant, sequential process of growth development as in all other content areas at the elementary level by:
 - a. Applying the four areas of Discipline Based M Education: Aesthetics, Studio M, Artists and Art History and Art Appreciation in the elementary art program.
 - b. Using proficiently and integrating the basic language of art, Elements and Principles, in all art experiences.
 - c. Elements: Line, Shape, Value, Color, Space (Mass, Form, Volume) and texture & pattern.
 - i. Principles: Balance and Symmetry, Variety, Repetition.
 - ii. (Rhythm/Movement) Emphasis, Dominance/Subordination and Contrast.
 - d. Understanding creativity and self-expression, knowing the difference between the two and using these concepts to guide development of a formalistic and qualitative elementary art program.
 - e. Understanding the links between the creative process and critical thinking and problem solving skills as examples of higher thought process.
2. Develop confidence, interest and appreciation for his/her own art expression by:
 - a. Participating in art critiques (presentations) in class.
 - b. Maintaining a cumulative portfolio of studio activities properly mounted to be used as classroom examples.
 - c. Exploring a variety of media in class and independently that pertains to personal expression for themselves and for use in the elementary classroom.
 - d. Setting up an exhibit of their work that exemplifies educational concepts learned during this course.
3. Understand and recognize sound educational practice and implement developmentally appropriate techniques and media for grades K-8 by:

- a. Experiencing a program that includes both 2-D (drawing, painting, printmaking, and collage, etc.) and 3-D (clay, construction/assemblage, and other additive and subtractive methods of three dimensional expression).
 - b. Examining appropriate and inappropriate classroom practices.
 - c. Learning sequential stages of artistic development of children as defined by authorities in the field.
- 4. Develop an understanding of the role of the adult/ teacher in facilitating meaningful art experiences by:
 - a. Learning to model and interact positively with students for successful making and studying the world of art.
 - b. Understanding the importance of communicating with parents, administrators and the community about appropriate process and relevancy of the arts in education.
 - c. Valuing the process of making art as more important than the final product.
 - d. Understanding that media and technique are secondary to the feelings and ideas expressed by student artists.
- 5. Obtain, organize, and implement art teaching resources, materials and equipment to insure continued growth for the classroom art program by:
 - a. Developing a bibliography (wish list) of handbooks of processes, motivation, artists and appreciation.
 - b. Learning about proper and economical materials and supplies and sources for obtaining them.
 - c. Experiencing practical classroom structure and organization that facilitates art expression in the regular classroom.

ARTS 2892. Sound Art I

Course Description

An exploration of sound as a medium and fine art tool. Course will explore history, theory and contemporary art issues associated with sound art, as well as develop student's skills in sound editing/ recording technology.

Astronomy (ASTR)

ASTR 1010. Introduction to Solar System Astronomy**Course Description**

Astronomy 1010 provides a historical introduction to the science of astronomy, with an emphasis on the nature and evolution of models of the solar system. We spend time on the fundamentals of modern astronomy, including motion, forces, gravity, and the nature of light. We focus on the dynamics and physical properties of solar system objects, including planets, moons, asteroids, and comets. Finally, our study culminates with an investigation of the origin of the solar system. Additional topics may include recent advances in astronomical research and findings from current solar system exploration by automated spacecraft.

Astronomy 1010 is a course designed for students having little or no background in astronomy or physics. The course focuses on interpretation of the nature of the solar system based on modern observational techniques and the properties of light and matter.

Student Learning Outcomes

By the end of the course, the student should be able to:

1. Explain the causes of the daily and seasonal motions of the various celestial objects.
2. Determine the phase of the Moon based upon the relative positions of the Sun, Earth and Moon.
3. List the basic tenets of the geocentric cosmological models.
4. List the basic tenets of the heliocentric model of Copernicus.
5. Apply Newton's laws of motion and Newton's law of gravitation.
6. Solve simple problems by employing Kepler's laws of planetary motion.
7. Compare and contrast the properties of the different types of electromagnetic radiation.
8. Analyze blackbody curves by using Wien's law and Stefan's law.
9. Use the principles of quantum mechanics to explain how atoms emit and absorb electromagnetic radiation (photons) interpret the spectra of celestial objects.
10. Describe the various functions of a telescope.
11. Explain the rationale for using different types of telescopes for observing various celestial objects and phenomena.

12. Classify the objects within our solar system as being either planets, dwarf planets, asteroids, meteoroids or comets.
13. Name the planets of our solar system.
14. Describe the process by which planetary magnetic fields are generated according to the dynamo model.
15. Compare and contrast the atmospheres, surfaces and interiors of the terrestrial planets.
16. Compare and contrast the atmospheres and interiors of the Jovian planets.
17. Outline the stages involved in the formation of our solar system.

ASTR 1010L. Introduction to Solar System Astronomy Laboratory

Course Description

Introduction to Solar System Astronomy Laboratory explores the principles and phenomena presented in the Introduction to Solar System Astronomy lecture. Through indoor and outdoor activities, students will investigate the properties and analyze the motions of objects in our solar system. Topics include measuring the sizes and distances of solar system objects, understanding the observational effects of Earth's motion, and the methods astronomers use to make new discoveries.

Student Learning Outcomes

1. Perform astronomical calculations (including Newton's Laws of Motion and Kepler's Laws of Planetary Motion) and express their answers using appropriate units and scientific notation.
2. Analyze the geocentric model of the universe and follow the early methods of measurements (the Earth's size) based on the astronomical observations and geometrical measurements.
3. Become familiar with astronomical tools (sky maps and telescopes), their various types and destinies.
4. Perform astronomical measurements of objects observed in the sky.
5. Perform and document local sky observations (both by eye and with a telescope) and changes in the sky (seasonal changes caused by the Earth's orbital motion and daily changes caused by the Earth's rotational motion) through the celestial objects identification.
6. Analyze geographical and celestial poles of the Earth (celestial sphere) through the location of North Star in the local sky and analyze magnetic poles of the Earth using the compass.
7. Analyze the heliocentric model of the universe and perform telescopic observations (plus calculations based on these results) of planetary motion.
8. Summarize the major planets of the Solar System: scale their sizes and distances to the Sun, understand their properties, and make telescopic observations.
9. Observe the Moon's rise and set and relate their observations to the analysis of the relative motion of the Earth-Moon-Sun system.
10. Observe and analyze the lunar phases and explain eclipse phenomena to the relative motion of the Earth-Moon-Sun system.
11. Explain the observational effects (the cause of tides) of the relatively short distance between the Earth and the Moon
12. Explore the surface of the Moon through astronomical observations and explain why only one of its sides can be observed from the Earth
13. Visit the planetarium and summarize the basics of the sky-view projection on the dome
14. Extend the understanding of annual and daily changes in the sky based on the projections on the planetarium dome.
15. Perform the sky observations with more professional (than school's) telescopes and compare their results (CNM telescope and planetarium settled telescope).
16. Analyze the brightness of observed objects and understand the light pollution problem in astronomical observations.
17. Understand the basics of our daily time measurements and summarize the origins of time zones.
18. Participate in the international campaign of searching for the new asteroids.
19. Explain the observed phenomena caused by Solar System debris.

ASTR 1110. Introduction to Stellar and Galactic Astronomy

Course Description

Stars, galaxies, and the structure of the universe are explored in this descriptive course. Starting with a review of the fundamentals of astronomy, the course then moves on to the formation, evolution, and death of stars. The course then continues with the nature of galaxies, galaxy evolution, current concepts in cosmology, and the large scale structure of the universe.

Astronomy 1110 is a course designed for students having little or no background in astronomy or physics. The course focuses on interpretation of the nature of the universe based on modern observational techniques and the properties of light and matter.

Student Learning Outcomes

By the end of the course, the student should be able to:

1. Solve simple problems employing Kepler's laws of planetary motion.
2. Apply Newton's laws of motion and Newton's law of gravitation.
3. Compare and contrast the properties of the different types of electromagnetic radiation.
4. Analyze blackbody curves using Wien's law and Stefan's law.
5. Use the principles of quantum mechanics to:
 - a. explain how atoms emit and absorb electromagnetic radiation (photons)
 - b. interpret the spectra of celestial objects.
6. Describe the functions of a telescope.
7. Explain the rationale for utilizing different types of telescopes for observing various celestial objects and phenomena.
8. Identify the major components of a star's interior and atmosphere.
9. Determine how the mass of a star influences its luminosity, evolution and life span.
10. Distinguish between the various types of nebulae populating the interstellar medium.
11. Outline the steps by which a star forms from an interstellar molecular cloud.
12. Summarize the various fusion reactions that supply a star with energy throughout its lifetime.
13. Compare and contrast the properties of stellar corpses (white dwarfs, neutron stars and black holes).
14. Illustrate the structure of the Milky Way galaxy.
15. List the characteristics of spiral, elliptical and irregular galaxies.
16. Calculate the distances to galaxies by applying Hubble's law.
17. Interpret galactic rotation curves and explain how they reveal the existence of dark matter.
18. Explain the evidence supporting the Big Bang theory.

ASTR 1110L. Introduction to Stellar and Galactic Astronomy Laboratory

Course Description

Astronomy 1110L is an optional laboratory for the investigation of the principles and phenomena discussed in Astronomy 1110. This course includes laboratory experiments concerning the nature of light, laws of motion, an introduction to the internet and computer simulations of data taking and analysis similar to current research in astronomy.

Student Learning Outcomes

The fundamental outcome of this course is for students to perform various laboratory exercises and investigations in order to deduce the nature of celestial objects and phenomena. Specifically, students will:

1. Plot and interpret data in graphical form.
2. Utilize Kepler's 3rd law to calculate the mass of a planet (Jupiter).
3. Investigate how astronomers calculate astronomical distances by employing the technique of parallax (or triangulation).
4. Use the Doppler effect to measure radial velocities and rotation rates.
5. Interpret emission line spectra and explain how they are formed.
6. Classify stars according to the characteristics of their spectra.

7. Measure the distances to celestial objects by employing spectroscopic parallax.
8. Explain how heavy elements are forged within stellar interiors through fusion reactions.
9. Calculate the age of the universe by measuring Hubble's constant and using Hubble's law.

ASTR 1115. Introduction to Astronomy

Course Description

This course surveys observations, theories, and methods of modern astronomy. The course is predominantly for non-science majors, aiming to provide a conceptual understanding of the universe and the basic physics that governs it. Due to the broad coverage of this course, the specific topics and concepts treated may vary. Commonly presented subjects include the general movements of the sky and history of astronomy, followed by an introduction to basic physics concepts like Newton's and Kepler's laws of motion. The course may also provide modern details and facts about celestial bodies in our solar system, as well as differentiation between them – Terrestrial and Jovian planets, exoplanets, the practical meaning of “dwarf planets”, asteroids, comets, and Kuiper Belt and Trans-Neptunian Objects. Beyond this we may study stars and galaxies, star clusters, nebulae, black holes, clusters of galaxies and dark matter. Finally, we may study cosmology -- the structure and history of the universe.

Student Learning Outcomes

Upon successful completion of the course:

1/Students will discuss the night sky as seen from Earth, including coordinate systems, the apparent daily and yearly motions of the sun, Moon, and stars, and their resulting astronomical phenomena.

1. Students will discuss the night sky as seen from Earth, including coordinate systems, the apparent daily and yearly motions of the sun, Moon, and stars, and their resulting astronomical phenomena.
2. Students will list and apply the steps of the scientific method.
3. Students will describe the scale of the Solar System, Galaxy, and the Universe.
4. Students will explain telescope design and how telescopes and spectra are used to extract information about Astronomical objects.
5. Students will describe the formation scenarios and properties of solar system objects.
6. Students will describe gravity, electromagnetism, and other physical processes that determine the appearance of the universe and its constituents.
7. Students will describe methods by which planets are discovered around other stars and current results.
8. Students will describe the structure, energy generation, and activity of the sun.
9. Students will compare our sun to other stars and outline the evolution of stars of different masses and its end products, including black holes.
10. Students will describe the structure of the Milky Way and other galaxies and galaxy clusters.
11. Students will describe the origin, evolution, and expansion of the universe based on the Big Bang Theory and recent Astronomical observations.
12. Students will describe conditions for life, its origins, and possible locations in the universe.

ASTR 1115L. Introduction to Astronomy Laboratory

Course Description

Introduction to Astronomy Lab will include hands-on exercises that work to reinforce concepts covered in the lecture and may include additional components that introduce students to the night sky.

Student Learning Outcomes

Upon successful completion of the course:

1. Students will discuss the night sky as seen from Earth, including coordinate systems, the apparent daily and yearly motions of the sun, Moon, and stars, and their resulting astronomical phenomena.
2. Students will list and apply the steps of the scientific method.

3. Students will describe the scale of the Solar System, Galaxy, and the Universe.
4. Students will explain telescope design and how telescopes and spectra are used to extract information about Astronomical objects.
5. Students will describe the formation scenarios and properties of solar system objects.
6. Students will describe gravity, electromagnetism, and other physical processes that determine the appearance of the universe and its constituents.
7. Students will describe methods by which planets are discovered around other stars and current results.
8. Students will describe the structure, energy generation, and activity of the sun.
9. Students will compare our sun to other stars and outline the evolution of stars of different masses and its end products, including black holes.
10. Students will describe the structure of the Milky Way and other galaxies and galaxy clusters.
11. Students will describe the origin, evolution, and expansion of the universe based on the Big Bang Theory and recent Astronomical observations.
12. Students will describe conditions for life, its origins, and possible locations in the universe.

ASTR 1115C. Introduction to Astronomy Lecture & Laboratory

Course Description

This course surveys observations, theories, and methods of modern astronomy. The course is predominantly for non-science majors, aiming to provide a conceptual understanding of the universe and the basic physics that governs it. Due to the broad coverage of this course, the specific topics and concepts treated may vary. Commonly presented subjects include the general movements of the sky and history of astronomy, followed by an introduction to basic physics concepts like Newton's and Kepler's laws of motion. The course may also provide modern details and facts about celestial bodies in our solar system, as well as differentiation between them – Terrestrial and Jovian planets, exoplanets, the practical meaning of “dwarf planets”, asteroids, comets, and Kuiper Belt and Trans-Neptunian Objects. Beyond this we may study stars and galaxies, star clusters, nebulae, black holes, and clusters of galaxies. Finally, we may study cosmology -- the structure and history of the universe.

The lab component of this course includes hands-on exercises that work to reinforce concepts covered in the lecture and may include additional components that introduce students to the night sky.

Student Learning Outcomes

Upon successful completion of the course:

1. Students will discuss the night sky as seen from Earth, including coordinate systems, the apparent daily and yearly motions of the sun, Moon, and stars, and their resulting astronomical phenomena.
2. Students will list and apply the steps of the scientific method.
3. Students will describe the scale of the Solar System, Galaxy, and the Universe.
4. Students will explain telescope design and how telescopes and spectra are used to extract information about Astronomical objects.
5. Students will describe the formation scenarios and properties of solar system objects.
6. Students will describe gravity, electromagnetism, and other physical processes that determine the appearance of the universe and its constituents.
7. Students will describe methods by which planets are discovered around other stars and current results.
8. Students will describe the structure, energy generation, and activity of the sun.
9. Students will compare our sun to other stars and outline the evolution of stars of different masses and its end products, including black holes.
10. Students will describe the structure of the Milky Way and other galaxies and galaxy clusters.
11. Students will describe the origin, evolution, and expansion of the universe based on the Big Bang Theory and recent Astronomical observations.

12. Students will describe conditions for life, its origins, and possible locations in the universe.

ASTR 1116. Introduction to Astronomy Lab, Special Course Description

This lab-only listing exists only for students who may have transferred to NMSU having taken a lecture-only introductory astronomy class, to allow them to complete the lab requirement to fulfill the general education requirement. at some other institution).

Student Learning Outcomes

Course is used to complete lab portion only of ASTR 1115C or ASTR 1120. Student Learning Outcomes are the same as those for the lab portion of the respective course.

ASTR 1120. The Planets

Course Description

Comparative study of the planets, moons, comets, and asteroids which comprise the solar system. Emphasis on geological and physical processes which shape the surfaces and atmospheres of the planets. Laboratory exercises include analysis of images returned by spacecraft. Intended for non-science majors, but some basic math required.

Student Learning Outcomes

1. Students will describe the sky as seen from Earth, the apparent daily and yearly motions of the Sun, Moon, planets and stars, and resulting astronomical phenomena.
2. Students will apply the process of the scientific method in an astrophysical setting.
3. Students will describe the structure of the solar system and explain the development of the currently accepted model of solar system formation.
4. Students will explain how telescopes and spectra are used to extract information about astronomical objects.
5. Students will describe properties of minor solar system objects, such as dwarf planets, moons, asteroids, meteoroids, and comets.
6. Students will compare and contrast bulk and unique properties of the Terrestrial and Jovian worlds.
7. Students will describe how gravity and other physical processes determine the appearance of the solar system and its constituents.

Optional outcomes

1. Students will describe the structure, energy generation, and activity of the sun.
2. Students will describe conditions for life, its origins, and possible locations in our solar system.

ASTR 1125. Survey of Astronomy

Course Description

Survey of Astronomy is descriptive physical science course that utilizes only basic math skills and the scientific method to develop an understanding of the structure Universe in both time and space. Our knowledge about the Universe has been acquired over thousands of years; in this class, these discoveries will be presented in a chronological fashion, beginning with first observations in prehistoric times, working up through Greek civilization's contributions to astronomy, continuing through the Middle Ages and the Renaissance, the Classical, and ending with our modern view of the Cosmos. Our emphasis will be on the people that made these discoveries.

Student Learning Outcomes

1. Students will be able to describe the physical processes that govern the appearance of the sky.
2. Students will be able to differentiate between the types of objects in the universe — their properties, formation, and evolution — and to demonstrate that knowledge by placing them in context based on the experiments performed in either the laboratory or the observatory.
3. Students will be able to describe the scientific methods and physical principles by which we study the universe.
4. Students will be able to describe modern cosmological theories.

5. Students will have fun observing the sky.

ASTR 1130. Constellation Mythology

Course Description

A study of the ancient mythological stories and philosophies of world cultures as seen in the patterns of stars in the night sky. A basic grounding in Greco-Roman myths and representations of star patterns will be compared to other world cultures, including but not limited to, Native American, Chinese, Arabic, South Pacific, Arctic.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Verbally relate classical (Greco-Roman) mythology stories and explain their importance in this culture's community.
2. Verbally relate and compare other cultures' mythology stories, explaining their importance in those cultures' communities.
3. Explain how star patterns in the heavens were used to help embody or visualize mythology stories.
4. Explain how mythology stories were used to help explain the motions of the heavens.
5. Exhibit familiarity with all parts of a star map.
6. Show how to find major constellations using a star map, the night sky, or a partial or full sky simulation.
7. Identify different versions of constellation patterns as perceived by different ancient cultures.

ASTR 1135. Deep-Space Astronomy

Course Description

Conceptual study of cosmology and relativity, emphasizing the Einsteinian perceptions of gravity, matter, energy, and space-time geometry. Also examines in detail anomalous subjects such as black holes, wormholes, "white fountains," and obstacles to superluminal ("faster than light") travel.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Explain different theories of cosmology and postulate possible different scenarios for the future of the known universe.
2. Exhibit an understanding of the properties of a "nested universe," in which our universe is only one of many in a higher-dimensional "multiverse." (Examples: hyperspace, quantum universes, infinite progression, etc.).
3. Describe General Relativity's application to our current understanding of the force of gravity, and Special Relativity's implications for travel near the speed of light, and the effects of these on time.
4. Explain the importance of the relation of matter and energy, implied in $E=mc^2$, in nuclear fusion and in acceleration of masses and the energy required to maintain it.
5. Define different types of black holes and their general and specific properties.
6. Define properties of anomalous objects such as quasars, "white fountains" (theoretical opposites to black holes), and wormholes by applying knowledge of relativity and cosmology.
7. Explain theoretical and experiential evidence for and against current astronomical anomalies. (Examples: wormholes, hyperspace, superluminal and subluminal space travel, contact with other life in the universe).

ASTR 1996. Topics in Astronomy

Course Description

Varies

Student Learning Outcomes

Varies

ASTR 2110. General Astronomy I

Course Description

This is an introductory course covering the basics of the night sky and the Solar System.

Student Learning Outcomes

At the end of this course, students will be able to...

1. Learn and construct physical models of astronomical objects to explain observations.
2. Understand properties of (exo)planets, and their moons.
3. Demonstrate an understanding of the modern theories about the origins, structure and evolution of the solar system.
4. Apply the "scientific method" to the study of the Solar System and exoplanets.
5. Synthesize material from multiple sources, critically assess it and present it clearly and concisely in written or oral form.

ASTR 2110L. General Astronomy I Laboratory

Course Description

Students learn how to carry out astronomical observations using actual telescopes. Students learn the basics of the celestial sphere, telescope design and characteristics planning observations, astronomical data reduction, how to make measurements from astronomical data, interpreting results, and writing reports. The topics of the lab are aligned with 2110. The level of math is trigonometry and pre-calculus. Three hours lab.

Student Learning Outcomes

At the end of this course, students will be able to...

1. Explain the basics of the celestial sphere
2. Explain the basics of telescope design and their properties.
3. Operate a small telescope.
4. Plan astronomical observations and make measurements from these observations.
5. Quantitatively interpret astronomical measurements and express the results in a written format.

ASTR 2115. General Astronomy II

Course Description

Students will learn about stars, our own Milky Way Galaxy, other galaxies and everything else in the Universe. This course will describe the nature of the Universe starting with stars and working up through star clusters, galaxies, clusters of galaxies and superclusters. Black holes, pulsars, supernovae, dark matter, the expanding Universe and other fascinating astronomical topics will also be explored. We will use math and physics as we explore the Universe. We will practice problem solving skills and discuss the methods and observations on which our understanding is based. The second course of a two-part sequence.

Student Learning Outcomes

1. Estimate the distance to stars, galaxies, and other astrophysical objects.
2. Use physical principles to describe how stars and galaxies form and evolve over time.
3. Explain the nature of the standard Big-Bang cosmological model.
4. Learn and construct physical models of astronomical objects to explain observations.
5. Apply the "scientific method" towards obtaining answers to (new) questions in the study of stars, galaxies and the Universe.

ASTR 2115L. General Astronomy II Laboratory

Course Description

Students learn how to carry out astronomical observations using actual telescopes. Students learn the basics of the celestial sphere, telescope design and characteristics planning observations, astronomical data reduction, how to make measurements from astronomical data, interpreting results, and writing reports. The topics of the lab are aligned with 2115.

Student Learning Outcomes

At the end of this course, students will be able to...

1. Estimate physical properties of planets, asteroids, and stars by means of their thermal emission characteristics.
2. Operate a small telescope similar to the one at the campus observatory.
3. Calculate rise, transit, and set times for any object in the night sky.
4. Demonstrate good measurement skills and application of the scientific method.

ASTR 2996. Topics in Astronomy

Course Description

Varies

Student Learning Outcomes

Varies

Basic Patient Care Skills (BPCS)

BPCS 1092

Course Description

Introduces students to the principles of providing basic patient care including communication, patient safety and infection control with practice in gloving, gowning and sterile procedures. Provides instruction and supervised practice of vital signs, transfer, moving and positioning techniques, protection of airway, Oxygen delivery devices, basic ECG monitoring, drains, tubes, IVs, pumps and other considerations for the hospitalized patient.

1. Demonstrate proper patient transfer, moving and positioning techniques.
2. Perform basic patient care skills during lab with peers while incorporating safety and infection control techniques.
3. Exhibit professional behaviors and effective communication while performing basic patient care skills in the laboratory setting.
4. Demonstrate understanding of principles of basic patient care.

Borderland and Ethnic Studies (BEST)

BEST 1110 – Introduction to Borderlands

Course Description

The field of Ethnic Studies is about 1) critical knowing and 2) unapologetic imagining and creation of a better, more just world. This course explores the roots, logics, and administrations of racism within the U.S. context, locally along the border, and framed within a larger global and historical context. The past few decades have borne witness to increasing global diversity and cross- border migrations, which has led many in the U.S. to imagine the nation as “post-racial.” Simultaneously, increasing clashes that can only be described as “racist” have led people to wonder about the dark racist underpinnings of a society that believes it has achieved the goals put forth by the distinct and intersecting Civil Rights Movements of the 1960s. Perhaps now, more than any other time in history, there is earnest desire to talk about race and racism and unpack these constructs/activities/outcomes. This course is designed to inform us about how colonization, racism, and hegemony function. Secondly, it is designed for self and collective exploration of these somewhat broad and abstract concepts in an applied manner. Finally, it is designed for us to arrive at a shared understanding of the decolonial turn, or a re-humanization imperative. How do we understand, apply, and heal as these activities each relate to coloniality of power.

Student Learning Outcomes

1. Learn and understand broad histories of social struggles, social movements, and ensuing human relationships.
2. Meaningfully engage classical and new materials from the Borderlands and Ethnic Studies “canon.”
3. Articulate observations using key terms, theories, and concepts in Borderlands and Ethnic Studies.

4. Apply key concepts in “everyday life” via course activities.
5. Gain a better understanding of your own worldviews and opinions towards issues of race, class, gender, nationalism, migration, borders, social movements, and resistance.
6. Learn mindful and constructive ways to engage peers about sometimes “difficult” topics like race, power, and privilege.

BEST 2750. Palestine Studies; History, Land, Resistance, and Justice.

Course Description

This course is an undergraduate general education “Palestine Studies” course that draws on “interdisciplinary and multidisciplinary”. Palestine studies that engage with critical ethnic studies, settler-colonial studies, critical media literacy studies, gender, sexuality, and queer studies, and decolonial Arab feminisms as set of knowledges, methodologies, and practices. It also draws on an array of historical content published by Palestinian and Palestine Studies scholars and Palestinians’ lived experiences represented in oral history studies, and cultural creations such as film, visual art, music, etc. and world media.

The course is structured to connect the themes addressed throughout the semester by going back and forth from the critical historical moments in Palestinian history to the ongoing and contemporary Palestinian displacement, resistance, and struggles for freedom, justice, and the right of return to the land of their ancestors.

The course aims to help participants understand how the Zionist form of settler-colonialism in Palestine is interlocked with settler-colonialism as an ongoing practice in the USA and other parts of the world. It also addresses the worldwide influence of settler-colonialism on the lives of colonized/gendered/racialized peoples, land theft and extraction, flow of capital, incarceration/detentions, mobility across borders, militarism and wars, mega sports events, and cultural and knowledge creation.

Student Learning Outcomes

1. Identify key major significant:
 - (a) Events in the history of Palestine (historicize) and in the contemporary context inside Palestine and in the diaspora (contextualize).
 - (b) Moments of solidarity with other global intersectional liberation struggles against settler colonialism (the indivisibility of justice).
2. Apply key concepts, theories, and approaches/methodologies in Palestinian Studies and Critical Ethnic Studies to critically assess:
 - (a) Historical and contemporary consequences on Palestine as indigenous land and Palestinians as indigenous people.
 - (b) Settler-colonialism, racism, and heteronormativity in the case of Palestine.
 - (c) Implication of Zionist settler-colonialism and global settler-colonial powers' complicities/alliances and logics/tactics that maintain the occupation of Palestine and the displacement, dispossession, and incremental ethnic cleansing of Palestinians and their struggles in the diaspora.
 - (d) Material presented by contemporary US media outlets.

Bilingual Education (BLED)

BLED 1110. Introduction with Internship in Bilingual Education/ESL

Course Description

An overview of the American Education system with emphasis on organization, governance, law, demographics, and professional practice. Will include supervised experience in bilingual education/ESL elementary settings for prospective bilingual education/ESL teachers.

Student Learning Outcomes

1. Complete 24 hours field observations in a classroom.
2. Articulate the attributes of an education professional entering the field.
3. Construct an individualized map to teacher licensure in the State of New Mexico.
4. Differentiate and summarize the major educational philosophies and historical events that have influenced the progression of educational practice.

BLED 2110. Introduction to Bilingual and ESL Education

Course Description

This course provides a historical overview of bilingual and ESL education including an emphasis on present trends and practices. Discussions of the aspects of bilingualism at both an individual and a societal level are included.

Student Learning Outcomes

Student Learning Outcomes are related to competencies for teachers adopted by the New Mexico State Board of Education. As a result of this course, students should be able to:

Culture

The bilingual teacher:

1. Develops awareness in the learner of the value of cultural diversity.
2. Prepares and assists students to interact successfully in cross cultural settings.
3. Recognizes and accepts different patterns of child development within and between cultures in order to formulate realistic instructional strategies.
4. Recognizes the similarities and differences between mainstream American and other cultures and the potential conflicts and opportunities they may create for students.
5. Demonstrates knowledge of the effects of culture and socio-economic variables in learning styles.

English Language Development

The bilingual teacher:

6. Demonstrates knowledge of the basic nature of language, language acquisition, language variation, language change, and the relation of language to society and culture.
7. Demonstrates knowledge of the nature of bilingualism and the process of becoming bilingual.

Instructional Methodology

The bilingual teacher:

8. Demonstrates knowledge of the historical, legal, theoretical, and sociological foundations of programs of instruction for second language learners.
9. Demonstrates knowledge of theories of first and second language acquisition.
10. Utilizes teaching methods appropriate to various age and language groups.

BLED 2120. Current Issues in Bilingual Education

Course Description

This course will introduce students to the various areas, programs, terminology, and philosophies of bilingual education.

Student Learning Outcomes

1. To demonstrate knowledge of the historical, legal, theoretical and sociological foundations of programs of instruction for second language learners. Instructional Methodology.
2. To demonstrate knowledge of major national and international models and prototypes of bilingual and English as a second language programs and the components of such programs. Instructional Methodology.

3. To demonstrate knowledge of theories of first and second language acquisition by utilizing teaching methods appropriate to different age and language groups. Instructional Methodology.
4. To recognize the importance of parental and community involvement for facilitating the learner's successful integration to his school environment. Community/Parent Involvement 1.
5. To demonstrate a concerned and caring attitude towards parents by establishing a trusting, mutual sharing relationship with parents. Community/Parent Involvement 2.
6. To demonstrate knowledge of the teaching and learning patterns of the students' home environment and incorporate these into the instructional areas of the program. Community/Parent Involvement 3.
7. To demonstrate the ability to involve parents within the classroom environment in teaching, curriculum development, and management and materials development. Community/Parent Involvement 4.
8. To act as a catalyst in enhancing the educational skills of second language speaking parents so that they may better assist their children. Community/Parent Involvement 5.
9. To demonstrate ability to move parents from passive observers to active change agents on behalf of the children's education. Community/Parent Involvement 6.
10. To acquire and use culturally relevant information and materials from the community that serve both for curriculum content and for instructional activities. Community/Parent Involvement 7.

BLED 2130. Multicultural Education

Course Description

This is an education foundations course for Teacher Education, Bilingual Education and English as a Second Language Education students. Students will participate in multicultural classroom practices that are; grounded in the lives of students, critical, anti-racist, pro-justice, participatory, experiential, visionary, academically rigorous, and culturally sensitive.

Student Learning Outcomes

1. The teacher understands the ways of knowing in his/her discipline, how it relates to other disciplinary approaches to inquiry, and the strengths and limitations of each approach in addressing problems, issues, and concerns.
2. The teacher is committed to deepening understanding of his/her own frames of reference (e.g., culture, gender, language, abilities, ways of knowing), the potential biases in these frames, and their impact on expectations for and relationships with learners and their families.
3. The teacher understands how learner diversity can affect communication and knows how to communicate effectively in differing environments.
4. The teacher understands major concepts, assumptions, debates, processes of inquiry, and ways of knowing that are central to the discipline(s) s/he teaches.
5. The teacher recognizes the potential of bias in his/her representation of the discipline and seeks to appropriately address problems of bias.
6. The teacher knows where and how to access resources to build global awareness and understanding, and how to integrate them into the curriculum.
7. The teacher values the input and contributions of families, colleagues, and other professionals in understanding and supporting each learner's development.
8. The teacher brings multiple perspectives to the discussion of content, including attention to learners' personal, family, and community experiences and cultural norms.
9. The teacher realizes that content knowledge is not a fixed body of facts but is complex, culturally situated, and ever evolving. S/he keeps abreast of new ideas and understandings in the field.

BLED 2996. Topics in Bilingual Education

Student Learning Outcomes

Varies

Biochemistry (BIOC)

BIOC 2110. Discovering the Biochemistry Major

Course Description

An engaging course designed to provide you with a foundation in biochemistry concepts, real world applications, and the diverse opportunities that our Biochemistry major present, both in the present and throughout your future career.

Student Learning Outcomes

By the end of this course, students should be able to:

1. Understand fundamental concepts and principles in biochemistry, providing a basis for further exploration in the field.
2. Apply basic biochemistry knowledge to practical situations.
3. Enhance communication skills within the scientific community, with a focus on clarity.
4. Develop basic critical thinking abilities to analyze and make simple interpretations of biochemistry-related information.
5. Explore the Biochemistry major and its numerous opportunities, both in the present and for future career prospects.

Biology (BIOL)

BIOL 1110. General Biology

Course Description

This course introduces non-science majors to basic biological concepts including, but not limited to, the properties of life, biochemistry, cell biology, molecular biology, evolution, biodiversity, and ecology.

Student Learning Outcomes

1. Explain the value of the scientific method as a means for understanding the natural world and for formulating testable predictions.
2. Explain how chemical and physical principles apply to biological processes at the cellular level.
3. Understand basic concepts of cell biology.
4. Understand that all organisms share properties of life as a consequence of their common ancestry.
5. Understand fundamental processes of molecular biology.
6. Understand the mechanisms of evolution, including natural selection, genetic drift, mutations, random mating, and gene flow.
7. Understand the criteria for species status and the mechanisms by which new species arise.
8. Understand methods for inferring phylogenetic relationships and the basis for biological classification.
9. Recognize the value of biological diversity (e.g., bacteria, unicellular eukaryotes, fungi, plants, and animals), conservation of species, and the complexity of ecosystems.
10. Explain the importance of the scientific method for addressing important contemporary biological issues.

BIOL 1110L. General Biology Laboratory

Course Description

This laboratory course for non-science majors complements the concepts covered in the associated general biology lecture course. Students will learn quantitative skills involved in scientific measurement and data analysis. Students will also perform experiments related to topics such as biochemistry, cell structure and function, molecular biology, evolution, taxonomic classification and phylogeny, biodiversity, and ecology.

Student Learning Outcomes

1. Employ critical thinking skills to judge the validity of information from a scientific perspective.

2. Apply the scientific method to formulate questions and develop testable hypotheses.
3. Analyze information/data and draw conclusions.
4. Operate laboratory equipment correctly and safely to collect relevant and quality data.
5. Utilize mathematical techniques to evaluate and solve scientific problems.
6. Recognize biodiversity in different ecological habitats and communities of organisms.
7. Communicate effectively about scientific ideas and topics.

BIOL 1110C. General Biology Lecture & Laboratory

Course Description

Combination of BIOL 1110 and 1110L.

BIOL 1111. General Biology II

Course Description

General Biology II stresses the origins of life, the diversity of viruses, bacteria, protists, and fungi; the diversity of plants, plant structure and function; animal diversity, animal structure and function; as well as animal behavior, ecology of populations, ecosystems, and environmental concerns. Concurrent enrollment

Student Learning Outcomes

Upon completion of this course, the students should be able to (but not limited to) the following:

Unit One:

1. Describe the scientific name used for classifying organisms and explain its importance.
2. List the 8 taxons used in the taxonomic classification system AND demonstrate its use.
3. Compare and contrast organisms found in the different domains/kingdoms and cite examples.
4. Describe the general structure & replication cycles of viruses.
5. Name the general shapes of bacteria and correlate their cellular structures with their functions.
6. Discuss how bacteria reproduce and the three mechanisms that genetic variations are generated.
7. Explain how prokaryotes differ with respect to acquiring nutrition & needing oxygen.
8. Discuss the environmental importance of prokaryotes.
9. List examples of diseases caused by microbes & discuss methods that are used to control outbreaks.
10. Discuss the basic characteristics of organisms found in the kingdom Protista.
11. Name AND give examples organisms found in the three different groups of Protista.

Unit Two:

12. Discuss the basic characteristics of Fungi.
13. Differentiate fungi based on their spore-producing sexual reproductive structures and give examples of each.
14. Discuss the ecological, economic, and medical importance of fungi.
15. List the basic characteristics of plants.
16. Compare and contrast the life cycles of non-vascular plants, seedless vascular plants, and seed vascular plants.
17. Contrast the following: sporophyte & gametophyte generations, meiosis & fertilization, bryophyte & tracheophyte, and angiosperm & gymnosperms.
18. Discuss the basic differences used to distinguish monocots from dicots (eudicots).
19. List the three major vegetative organs found in plants and state the basic functions of each.
20. Discuss the basic function(s) of the following tissues: ground, vascular, epidermal, & meristem
21. Draw a non-woody dicot root & stem cross-section and label the following: vascular bundle, vascular cylinder, endodermis, epidermis, cortex, pith, xylem, & phloem
22. Draw a monocot root & stem cross-section and label the following: vascular bundle, vascular cylinder, endodermis, epidermis, cortex, pith, xylem, & phloem
23. Draw a cross-section of a young woody stem and label the following: pith, wood, bark, cork, primary xylem & phloem

24. Draw a longitudinal section of a root tip and label the different zones of plant growth.
25. Draw a typical leaf cross-section and label the following: upper and lower epidermis, cuticle, stoma, palisade and spongy mesophyll, vein, xylem, and phloem
26. Briefly explain the mechanism of water transport according to the cohesion-tension model.
27. Briefly explain the flow of phloem according to the pressure-flow model.
28. Define the terms girdling and guttation and denote what process is responsible for each.
29. Draw/label a flower and differentiate between the female and male parts.
30. Distinguish between pollination and fertilization.
31. Differentiate between the seed germination and growth of a monocot and eudicot.

Unit Three:

32. Discuss the general characteristics of animals.
33. Compare the 8 phyla of invertebrate organisms in terms of the following: body plan, symmetry, number of germ tissue layers, level of organization, and presence of coelom.
34. Describe the basic characteristics of the 9 phyla of animals studied and give examples of each.
 6. Define the following terms: protostomes & deuterostomes, open & closed circulatory system, complete vs. incomplete digestive system, radial & bilateral symmetry, cephalization
35. Describe the amniote egg and discuss its importance from an evolutionary standpoint.
36. Discuss how birds are adapted for flight.

Unit Four:

37. State the two body systems that are responsible for controlling behavior.
38. Distinguish between innate and learned behaviors and give examples of each.
39. Discuss social interactions/constructs used to reduce aggression within a society.
40. List examples of the different types of communication and state advantages/disadvantages of each.
41. Define the terms: population, society, community, ecosystem, and biosphere
42. Apply the Competitive Exclusion Principle as it relates to the niche and habitat of organisms.
43. Define mutualism, commensalism, and parasitism. Give examples of each
44. Discuss various defense mechanisms used by prey to avoid predation. Give examples of each.
45. Distinguish between primary & secondary succession and pioneer & climax communities.
46. Contrast the flow of energy versus nutrients through an ecosystem and discuss the role of decomposers.
47. Draw an ecological pyramid and denote which trophic level represents the following: producers (autotrophs), primary consumers (herbivores), secondary consumers (primary carnivores), tertiary consumers (top carnivores)
48. Describe the function of the reservoir, exchange pool, and biotic community in biogeochemical cycles and state three examples.
49. Briefly discuss the cause of the following ecological concerns: eutrophication, acid deposition, global warming, ozone depletion, photochemical smog. and organic chemicals along with possible biological magnification.

Unit Five:

50. List the four basic tissue types found in animals and give a general function of each.
51. Explain the concept of homeostasis and give examples.
52. Distinguish between tissues, organs, and systems.
53. List the systems of the human body, the major organs of each, and the major functions of each.

BIOL 1120. Human Biology

Course Description

This course is an introduction to modern biological concepts with an emphasis on the relevance to humans and their relationships with the environment.

Student Learning Outcomes

1. Explain that biology is a scientific discipline based on observations and experimentations.

2. Explain the process of scientific inquiry and explain how scientific knowledge is discovered and validated.
3. Describe the chemical basis of living organisms and how biomolecules contribute to the structure and function of cells.
4. Develop a basic familiarity with cells and cell organelles.
5. Describe the structure and function of DNA as well as how DNA is used in the production of proteins.
6. Describe the basic principles of genetics and heredity leading to human diversity.
7. Identify the major features of the systems in the human body and understand the anatomy and physiology of them.
8. Describe the roles of the organ systems in maintaining homeostasis.
9. Explain the principles of evolution by means of natural selection explaining the diversity of life.
10. Describe how science and technology have impacted life in particular to society and the environment (e.g. medicine, forensic science, agriculture, ecology, sustainability).

BIOL 1120L. Human Biology Laboratory

Course Description

This course introduces exercises, experiences, and activities exploring biological concepts and theories relevant to humans and their relationship to the environment in a laboratory setting.

Student Learning Outcomes

1. Understand general principles of cell structure and function.
2. Understand general principles of genetics.
3. Understand basic human anatomy and physiology.
4. Communicate scientific information effectively.
5. Demonstrate an understanding of the scientific method.
6. Knowledge of appropriate laboratory skills
7. Apply quantitative reasoning and scientific thinking to real world problems.

BIOL 1120C. Human Biology Lecture and Laboratory

Course Description

Combination of BIOL 1120 and BIOL 1120L.

BIOL 1125. Human Biology

Course Description

Basic scientific principles are applied to understanding the human body and explored in a biology laboratory setting. Students will learn about how the Scientific Method is developing our understanding of major organ systems and how those systems function together. The course will also explore how our concepts of human physiology have changed through years of accumulation of scientific knowledge, how human physiology and evolution has been influenced by environmental changes, and how we influence our environment to maintain homeostasis. Course work will include group activities in the laboratory to see how organ systems work together and the development of a small group project that incorporates the information learned about human biology and how it relates to other aspects of life outside the realm of sciences.

Student Learning Outcomes

Upon completion of this course the student will be able to:

Outcome#1: Describe and apply the scientific method.

Components:

- a. Define what it means to be scientific and explain why science is restricted to using the scientific method.
- b. Apply the scientific method to a specific situation.
- c. Accurately describe the differences between a hypothesis and a scientific theory.
- d. Distinguish between science and pseudoscience and provide a comparative example.
- e. Design a simple experiment that properly uses the scientific method.

- f. Collect data from an experiment and produce a graph that can be used to interpolate and extrapolate information.
- g. Discern between reputable and non-reputable sources of scientific information

Outcome #2: Apply basic scientific terminology to the human body

Components:

- a. Explain the different levels of organization and provide examples of each level
- b. Define basic medical terms used by physicians to describe aspects of human health
- c. Apply basic medical terms to the understanding of one's own body

Outcome #3: Explain the roles of macromolecules in the human body

Components:

- a. List and define the four biological macromolecules and provide at least one example for each.
- b. Explain how nutrient labels of commercial foods relate to the macromolecules
- c. Describe how nutrients are used in the body to provide energy

Outcome #4: Explain the basic functions of at least 5 organ systems and how they interact with each other

Components:

- a. Describe the organs of systems so they may understand the structural and organizational relationships in the way the systems work
- b. Explain at least one way that the systems described can maintain homeostasis in a healthy person

Outcome #5: Explain how human health and activity influence the environment, economy, society and history.

Components:

- a. Describe how aspects of human physiology can affect the health and safety of local environments.
- b. Explain how the knowledge of human health and physiology has brought about changes in the ways we engage in health practices and develop therapies for disease.
- c. Provide examples of how human health has affected the history of a country and how it has resulted in the ways various countries derived their system of governance over time.

BIOL 1129. Anatomy & Physiology for Medical Assistant

Course Description

An introduction to human anatomy (structure) and physiology (function) of the Human body. Includes study of basic chemistry, molecules, cellular, tissues, Organs, organ systems and terminology related to these concepts.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define and explain anatomy and physiology.
2. Apply and interpret the principle of homeostasis in the human body.
3. Use anatomic directional, regional, and sectional terminology related to the human body.
4. Explain and describe the basic chemical principles of the human body including the structure and function of carbohydrates, lipids, proteins and nucleic acids.
5. Develop a basic familiarity with cells and cell organelles that include cell division, DNA replication, and protein synthesis.
6. Describe the structure and function of the major tissues in the human body.
7. Explain basic structure and function of the organs of the human body.
8. Describe the basic structure and function of the 11 major systems of the human body.

BIOL 1130. Introductory Anatomy & Physiology (non majors)

Course Description

This course introduces the anatomy (structure) and physiology (function) of the human body, which includes the study of basic chemistry, molecules, cells, tissues, organs, organ systems, and terminology related to these concepts.

Student Learning Outcomes

1. Define and explain anatomy and physiology.
2. Use anatomic directional, regional, and sectional terminology related to the human body.
3. Explain and describe the basic chemical principles of the human body including the structure and function of carbohydrates, lipids, proteins and nucleic acids.
4. Develop a basic familiarity with cells and cell organelles that include cell division, DNA replication, and protein synthesis.
5. Describe the structure and function of the major tissues in the human body.
6. Identify and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
7. Describe the basic physiological roles of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
8. Apply and describe the principles of homeostasis in the human body.

BIOL 1130L. Introductory Anatomy & Physiology Laboratory (non majors)

Course Description

This course introduces laboratory exercises in regards to human anatomy and physiology of the human body. This includes histological study, biochemical processes, mammal organ dissections, and the use of models to illustrate anatomical arrangement.

Student Learning Outcomes

1. Use and apply proper anatomic terms.
2. Develop skills using the microscope correctly.
3. Identify basic tissue types.
4. Discuss and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
5. Demonstrate and describe physiological roles of the integumentary, skeletal, muscle, nervous, endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.

BIOL 1130C. Introductory Anatomy & Physiology Lecture & Laboratory

Course Description

Combined BIOL 1130 and BIOL 1130L

BIOL 1131. Introduction to Biology & Biomedical Sciences

Course Description

Not Available.

Student Learning Outcomes

To explore many facets of the biological and biomedical sciences and to evaluate the relevance of these fields to your lives.

BIOL 1132. Introduction to Climate Studies

Course Description

An introduction to climate science that provides background on Earth's climate system, the scientific principles that govern climate, climate variability, and climate change with the implications for society.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate comprehension of the climate's influence on organisms including humans, ecosystems and societies

2. Quantify and demonstrate understanding of the impact of individuals and society on climate
3. Interpret and critique global climate models used in climate studies
4. Explain how ancient and contemporary ecological systems respond to changing climate.
5. Apply the scientific method to gather, analyze and interpret data.
6. Describe, critique and interpret climate change policy and its impacts.
7. Apply reading and writing skills for the scientific literature and deepen their critical thinking skills.

BIOL 1133C. Introduction to Wildlife and Fisheries Science

Course Description

Lecture: This course is an introduction to the fundamental principles of animal populations, communities and ecosystems, as well as the conservation and management of wild animals and their habitats.

Lab: This laboratory course involves scheduled field visits to local sites of interest in wildlife and fisheries management and/or science. Includes an emphasis on field identification and record keeping.

Student Learning Outcomes

1. Students will demonstrate an understanding of basic wildlife and fishery systems and organization, including habitats and habitat management.
2. Students will display knowledge of ecology and basic population dynamics.
3. Students will exhibit familiarity with the physiology of wildlife and fishes as well as basic animal behavior.
4. Students will demonstrate an understanding of data collection and use in the fields of wildlife and fisheries management.
5. Students will exhibit knowledge of endangered species, wildlife legislation and law enforcement.

BIOL 1135. Introductory Environmental Science

Course Description

This course includes a survey of environmental science and ecology with an introduction to problems of pollution, population, land use, energy, nutrients cycling, agriculture and pest control. Laboratory provides observation and experimentation relating to topics covered in the lecture.

Student Learning Outcomes

1. Demonstrate a knowledge of basic concepts and vocabulary of environmental science.
2. Apply the basic concepts of ecology.
3. Demonstrate an understanding of animal and plant diversity and biogeographic distribution of life on planet Earth.
4. Demonstrate an understanding of the development of environmental science as the concepts of ecology developed.

BIOL 1140. Biology for Health Sciences

Course Description

This introductory biology course for students interested in health science careers focuses on the concepts of chemistry, cell biology, metabolism, genetics, and regulation of gene expression.

Student Learning Outcomes

1. Explain the central ideas and process of biology, including the organization of life, evolution, selection and adaptation, and application of the scientific method.
2. Explain the role of science and critical thinking in society.
3. Apply basic chemistry to the biology of cells.
4. Describe the structures and functions associated with eukaryotic cells and compare/contrast to prokaryotic cells.
5. Describe the components and mechanisms of cellular metabolism.
6. Describe the DNA structure and replication, including mutation and DNA repair.
7. Explain the central dogma of genetic flow; explain gene expression and how it's regulated.
8. Explain the relationships between sexual reproduction, genetic diversity and inheritance.
9. Describe and contrast the processes of mitosis and meiosis.

10. Describe patterns of inheritance and human genetic disorders.
11. Explain homeostasis and identify major tissues, organs and organ systems and their function.

BIOL 1140L. Biology for Health Sciences Laboratory

Course Description

This course is a laboratory that complements the concepts learned in the theory course. Students will learn skills involved in scientific measurement, microscopy, and mathematical analysis. Students will also perform experiments and data analysis related to cell structure and function, chemistry, enzyme activity, and genetics.

Student Learning Outcomes

1. Explain the scientific method and use it develop and test a hypothesis.
2. Analyze and interpret graphical data.
3. Demonstrate use of laboratory equipment to perform scientific measurements.
4. Demonstrate skills used in microscopy.
5. Distinguish between eukaryotic and prokaryotic cells, including their structures and functions.
6. Describe selective permeability of membranes and movement of water and molecules across membranes by diffusion and osmosis.
7. Describe the structure and function of enzymes.
8. Describe the structure of DNA and the flow of genetic material in a cell from DNA to RNA to proteins.
9. Describe the processes of mitosis and meiosis.
10. Predict the inheritance of genetic traits.

BIOL 1140C. Biology for Health Sciences Lecture & Laboratory

Course Description

Combination of BIOL 1140 and BIOL 1140L.

BIOL 1141. A Survey of Anatomy and Physiology for Allied Health

Course Description

Anatomy and Physiology for Allied Health integrates diseases and disorders within each body system to maximize learning. Easy-to-understand language and numerous illustrations make the course ideal for learners in an introductory anatomy and physiology course with little or no science background or learners continuing their education in Allied Health. Highlights and class discussions that emphasize clinical applications help keep the material interesting and new. A review of Medical Terminology in each chapter helps fine tune medical language skills. Infection Control and Standard Precautions chapter emphasizes the importance of maintaining health and safety in the health care work environment. This course approaches the learning of anatomy and physiology through a “Systems Approach” which provides a good, basic understanding of the subject. A&P for Allied Health utilizes case studies, discussions and various other methods to help the student understand the relationship of anatomy and physiology to the patient in the medical setting. This course will also assist the student in developing a better understanding and interest in the medical field.

Student Learning Outcomes

Students will:

1. Analyze the relationship between structure and function within each body system.
2. Demonstrate an understanding of how each system helps to maintain homeostasis.
3. Build an anatomical/physiological vocabulary that is essential to success in this course and in future careers in healthcare.
4. Demonstrate an understanding of human development and apply that knowledge to the healthcare setting.
5. Apply the scientific method when thinking and learning about human anatomy and physiology.

BIOL 1150. Biodiversity

Course Description

Biodiversity is the variety of life on earth. There are 2-10 million species on earth, but this number surely is vastly underestimated. Moreover, 99% of all species that ever existed are extinct. This course provides a broad survey of biodiversity-past, present, and future-with an emphasis on major groups in the tree of life (e.g., insects, plants, vertebrates, fungi, bacteria, etc.) and how humans interact with earth's biodiversity. We will explore biodiversity as it relates to earth history, mass extinctions, conservation, economics, ecology, evolution, and human society. We will also explore ways in which we categorize biodiversity (taxonomy and systematics) and catalog it for study (museums).

Student Learning Outcomes

Students who successfully complete this course will be able to:

1. Identify broad measures of biodiversity, including what is a species and how many exist on Earth.
2. Identify the major groups in the tree of life (e.g., Archaea, Bacteria, Eukaryotes), as well as key groups such as vertebrates, arthropods, plants, fungi, etc.
3. Summarize biodiversity patterns through space and time. Explain the major patterns of biodiversity throughout earth's main biogeographic regions and provide examples from the fossil record of how biodiversity has changed throughout evolutionary time (e.g., mass extinctions; birds are dinosaurs, mammalian ancestors, etc.).
4. Understand the importance and interaction of humans and biodiversity as they relate to economics, conservation, extinction, infectious disease, etc.

BIOL 1165. Forest Management and Conservation

Course Description

Conservation work related to forestry, fire ecology, environmental policy, and wildlife management. The course utilizes hands-on opportunities through service work and mentorship from professionals in the aforementioned fields to give participants a well-rounded introduction to natural resource management

Student Learning Outcomes

1. Conduct ecological monitoring protocols used to assess forest condition.
2. Describe the relationship between forests, watersheds, and wildfire in the Southwest.
3. Explain the difference between federal, state, and private land management.
4. Describe various methods for restoring wildlife habitat.

BIOL 1170. Conservation Biology in a Changing World

Course Description

This course provides an initial foundation in the concepts for the Conservation Biology problems faced in today's world. There will be strong emphasis on ecological processes and how human activity affect them with an emphasis on the conservation of biodiversity, beyond sustainability as well as in the different way that environmental problems affect different people from different ethnic groups and different social classes. The course also addresses the economic and political issues affecting biodiversity in the planet both at the macro as well as at the individual level. It will be taught with either a service learning or research component and seeks to produce informed citizens that are able to affect positive change in helping stop threats to biodiversity within the framework of environmental justice and social inclusion. This is an entry level course available for any interested student. It addresses competencies of critical thinking, quantitative skills, and personal responsibility.

Student Learning Outcomes

With the skill acquired in this course students will:

1. Be able to explain how human activities affect ecological processes at the different levels and its implications for conservation.
2. Be able to apply the scientific method to explain the main threats for biodiversity in the planet.

3. Be able to interpret a dataset from scientific studies about conservation issues and draw conclusions regarding the cause of the problem based on the data presented.
4. Be able to explain how human activities affect biodiversity in the planet and rank development practices and policies from more to less hazardous.
5. Be able to explain how different ethnic and socioeconomic groups are differently affected by environmental problems such as pollution, environmental degradation, and access to needed resources.
6. Students also need to be able use basic forms of measurement and instrumentation commonly employed in biological studies, analyze data for the solution of conservation and communicate biological concepts using proper scientific terminology.

BIOL 1190. Contemporary Problems in Biology

Course Description

Fundamental concepts of biology will be presented using examples from relevant problems in ecology, medicine and genetics.

Student Learning Outcomes

1. Identify the unity and diversity of living things.
2. Identify the structure and function of cells and biological molecules.
3. Recognize and demonstrate patterns of inheritance.
4. Describe mechanisms of evolution.
5. Describe the human body systems including immune response.
6. Discuss population dynamics and ecological systems.
7. Describe the process of scientific inquiry, solve problems scientifically, and communicate on a scientific level.
8. Apply quantitative analysis and scientific thinking to scientific and real-world problems.

BIOL 1215. Biology for Environmental Sciences

Course Description

An introduction to ecology, current environmental problems and control measures. Emphasis on human impact, modern technology, natural ecosystems, social, political, and economic processes. The student will have the knowledge to become environmentally responsible and contribute to the quality of human life. This course is intended for non-biology majors in their first year (100 level) of their college career.

Student Learning Outcomes

After successfully completing this course, the student should be able to:

1. Explain the importance of environmental sciences in every day's life.
2. Recount historic events that shaped the environmental sciences placing them in the socioeconomic and political context.
3. Explain the relationship among the different components of the ecosystem.
4. Explain and apply the scientific method in case studies or new situations of scientific enquiry.
5. Describe the influence of chemistry in the functioning of life and ecosystems.
6. Explain what factors affect population dynamics.
7. Explain species interactions and community dynamics.
8. Explain biogeochemical cycles and how they affect life.
9. Describe energy cycles and its relevance on the ecosystem.
10. Compare and contrast energy sources for human activities in terms of their impact on their environment.
11. Explain how human activities affect water and air quality and how they affect life of humans and other organisms.

BIOL 1215L. Biology for Environmental Sciences Lab

Course Description

This course investigates relevant environmental science principles with emphasized analysis of water, soil, and air pollutants. Part of the course requires potential field trips and dissection.

Student Learning Outcomes

1. Apply the scientific method to ecological problems by generating observations in the laboratory and field, formulating hypotheses based on observations, and test these hypotheses.
2. Use techniques and methods similar to those used by professional ecologists to collect data in the field and in the laboratory.
3. Formulate an ecological profile of habitats, including characteristics.
4. Identify impacts of man as they relate to ecological value, such as prediction of the susceptibility to stress.
5. Identify and apply the principles of population ecology with respect to species in general and the human population in particular.
6. Perform and interpret basic ecological tests related to environmental quality.
7. Identify species through the use of dichotomous keys.
8. Recognize major ecosystem types in the field.

BIOL 1310. Introduction to Human Anatomy and Physiology I

Course Description

This introductory course is the first of two that covers the anatomy (structure) and physiology (function) of the human body, which includes the study of basic chemistry, molecules, cells, tissues, organs, organ systems, and terminology related to these concepts. Systems covered in this course include the integumentary, skeletal, muscle and nervous systems.

Student Learning Outcomes

1. Define and explain anatomy and physiology.
2. Use anatomic directional, regional, and sectional terminology related to the human body.
3. Explain and describe the basic chemical principles of the human body including the structure and function of carbohydrates, lipids, proteins and nucleic acids.
4. Develop a basic familiarity with cells and cell organelles that include cell division, DNA replication, and protein synthesis.
5. Describe the structure and function of the major tissues in the human body.
6. Identify and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous systems
7. Describe the basic physiological roles of the integumentary, skeletal, muscle, nervous,
8. Apply and describe the physiological roles of the above-mentioned system in maintaining homeostasis in the human body.

BIOL 1310L. Introduction to Human Anatomy and Physiology I Laboratory

Course Description

This course is the first of two that introduces laboratory exercises in regards to human anatomy and physiology of the human body. This includes histological study, biochemical processes, mammal organ dissections, and the use of models to illustrate anatomical arrangement.

Student Learning Outcomes

1. Use and apply proper anatomic terms
2. Develop skills using the microscope correctly.
2. Identify basic tissue types.
3. Discuss and describe the basic anatomical features of the integumentary, skeletal, muscle, nervous.
4. Demonstrate and describe the physiological roles of the integumentary, skeletal, muscle, nervous.

BIOL 1310C. Introduction to Human Anatomy and Physiology I Lecture & Laboratory

Combination of BIOL 1310 and BIOL 1310L.

BIOL 1320. Introduction to Human Anatomy and Physiology II

Course Description

This introductory course is the second of two that covers the anatomy (structure) and physiology (function) of the human body including the endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems as well as terminology related to these topics.

Student Learning Objectives:

1. Identify and describe the basic anatomical features of the endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
2. Describe the basic physiological roles of the endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
3. Apply and describe the physiological roles of the above-mentioned system in maintaining homeostasis in the human body.

BIOL 1320L. Introduction to Human Anatomy and Physiology II Laboratory

Course Description

This course is the second of two that introduces laboratory exercises in regards to human anatomy and physiology of the human body. This includes histological study, biochemical processes, mammal organ dissections, and the use of models to illustrate anatomical arrangement.

Student Learning Outcomes

1. Use and apply proper anatomic terms.
2. Develop skills using the microscope correctly.
3. Identify basic tissue types.
4. Discuss and describe the basic anatomical features of the endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.
5. Demonstrate and describe physiological roles of the endocrine, cardiovascular, lymphatic, digestive, respiratory, urinary and reproductive systems.

BIOL 1411. Genetics

Course Description

This course introduces the student to the basics of Genetics and heredity, and proceeds with an in-depth examination of genetic diseases, population Genetics, stem cell research and genetic engineering. Each topic will be accompanied by extensive lab work, experiments, semester projects and writing assignments with the aim to teach the student the methods of scientific writing.

Student Learning Outcomes

1. The student will identify and describe Mendelian Patterns of Inheritance by scoring 70% or higher on graded laboratory exercises.
2. The student will explain the molecular basis of Genetics by scoring 70% or higher on a faculty prepared examination.
3. The student will assess the frequency of genetic diseases and their distribution among various parts of a population.
4. The student will demonstrate the ability to perform various laboratory techniques used in the field of Genetics by submitting laboratory protocols and documentation of results.
5. The student will describe the general concepts of stem cell research and summarize its implications in the fields of Genetics, phylogeny, and medicine.

BIOL 1625. Introduction to Ecology and Field Biology

Course Description

This field course is an introduction to the concepts and techniques used in ecology and field biology. Topics include classification of ecosystems, population ecology, general environmental measurements, communities and field techniques for sampling populations and measuring productivity and community structures.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Apply basic ecological principles as applied to field biology.
2. Employ a number of basic ecological field sampling and measurement techniques.
3. Recognize the major habitat types present in northern New Mexico.
4. Use dichotomous key with proficiency to identify flora and fauna.

BIOL 1650. Wildlife Biology

Course Description

This course introduces the diversity of life on earth, evolutionary processes and fundamental principles of animal populations, communities and ecosystems. GIS-based conservation and management of wild animals will be emphasized.

Student Learning Outcomes

1. Understand the concepts, theories, facts, and principles related to fisheries, wildlife, and conservation biology, as well as their perspectives and associated values.
2. Develop the ability to draw reasonable inferences from observations and to distinguish between fact and opinion.
3. Improve communication skills through short writing assignments.
4. Be knowledgeable of many fundamental biological concepts and principles that govern wildlife biology and fisheries.
5. Be able to identify several common species of New Mexico wildlife by sight.
6. Appreciate the diversity of life and understand the objectives and principles of biological conservation.

BIOL 1650L. Wildlife Biology Laboratory

Course Description

Students will gain practical experience and hands-on application of the common techniques used in wildlife and fisheries sciences. This will be accomplished through the completion of exercises, discussions, and student presentations. The field of wildlife and fisheries is becoming more and more quantitative. Therefore, students will learn how to transform the data collected in the field to the Excel® format. Students will also get familiar with manipulating Google Earth and Geographic Information System and its use in wildlife sciences.

Student Learning Outcomes

Not Available

BIOL 1996. Topics in Biology

Course Description

Introductory level coverage of biological topics.

Student Learning Outcomes

Varies

BIOL 2101. Principles of Biology: Molecules to Cells

Course Description

Biology 2101 covers fundamental principles in molecular cellular biology and molecular genetics. Emphasis is placed on biological molecule structure and function, cell structure, metabolism, gene function and gene expression. This is one of three core courses serving as pre-requisites for all upper division courses in Biology.

Student Learning Outcomes

1. Demonstrate a coherent understanding of the necessity and molecular utility of carbon and water for the development and sustenance of life.

2. Demonstrate a coherent understanding of the structure and function of common macromolecules including lipids, carbohydrates, nucleic acids, and proteins.
3. Demonstrate a coherent understanding of the structure and function of prokaryotic v eukaryotic cells.
4. Demonstrate a coherent understanding of the cell cycle, mitosis, and meiosis.
5. Demonstrate a coherent understanding of DNA replication in prokaryotic and eukaryotic life.
6. Demonstrate a coherent understanding of energy and enzyme function in the cell.
7. Demonstrate a coherent understanding of cellular respiration.
8. Demonstrate a coherent understanding of photosynthesis.
9. Demonstrate a coherent understanding of intercellular and intracellular communication.
10. Demonstrate a coherent understanding of genes, alleles, and Mendelian genetics.
11. Demonstrate a coherent understanding of gene expression, mRNA processing, and tRNA.
12. Demonstrate a coherent understanding of regulation of gene expression in prokaryotic and eukaryotic life.
13. Demonstrate a coherent understanding of the diversity of single-celled life.
14. Demonstrate a coherent understanding of special topics in Molecules to Cells (Epigenetics, Aging, Medical Genetics, Cancer Biology)

BIOL 2102. Principles of Biology: Organisms to Ecosystems

Course Description

Biology 2102, one of the three courses that serve as prerequisites for all upper division courses in Biology, covers three major areas of Biology: 1) the fundamentals of evolution required to understand the origin of the diverse array of organisms observed in nature, 2) the diversity of structures and functions that have evolved to solve fundamental problems in organismal biology, and 3) the principles and characteristics of population, community, and ecosystem ecology.

Student Learning Outcomes:

Students who complete this course will be able to demonstrate a coherent understanding of:

1. Evolution by natural selection and the process of species formation.
2. Topological representation of species diversification through time (phylogenetic tree-thinking).
3. The relationship between tissues, organs, and organ systems from a structural, functional, and evolutionary perspective.
4. How multicellular organisms obtain energy from their environment.
5. Resource distribution in multicellular organisms.
6. How organisms sense and respond to environmental stimuli.
7. The variation in reproductive cycles across multicellular organisms.
8. The hierarchical organization of ecology from organisms to the biosphere.
9. How population growth is measured and how it is influenced by demography and life history.
10. The diversity and dynamics of species interactions and food webs.
11. How abiotic factors influence the diversity and distribution of biomes.
12. How human activities have impacted ecosystem function, ecosystem services, biodiversity, and biogeochemical cycles.

BIOL 2103L. Principles of Biology: Introductory Laboratory

Course Description:

The Biology Introductory Series introduces undergraduate students to the breadth of topics investigated in the field of biology. This laboratory course trains students in basic laboratory practices commonly used in a variety of fields in biology.

Student Learning Outcomes:

Student Learning Outcomes (required): Students who complete BIOL 2103L will be able to:

1. Demonstrate a knowledge of the scientific method and its application and effectively communicate scientific results in written and oral formats.
2. Demonstrate an ability to formulate biological hypothesis statements and corresponding statistical hypotheses about student laboratory exercises.
3. Demonstrate an ability to collect, organize, and graphically represent experimental data (including measurements of sample error) using spreadsheets and R.
4. Demonstrate an ability to calculate and summarize student-collected data using basic summary statistics including the mean, the median, variance, and standard deviation.
5. Demonstrate an ability to apply and interpret frequentist hypothesis testing using Student's one-tailed and two-tailed t-tests to draw conclusions about student-collected data.
6. Demonstrate an ability to apply and interpret the coefficient of determination in regression analysis of student-collected data.
7. Demonstrate the proper use of sources, bibliographic references, and citations in student writing.
8. Demonstrate proper use and care of common laboratory equipment in biology including compound microscopes, dissecting microscopes, calipers, micropipettes, and spectrometers.
9. Demonstrate proper sterile techniques in the laboratory environment.
10. Characterize the cellular morphology of Bacteria, Archaea, and Eukarya and explain the non-treelike relationships between the domains of life.

BIOL 2110. Principles of Biology: Cellular and Molecular Biology

Course Description

This course introduces students to major topics in general biology. This course focuses on the principles of structure and function of living things at the molecular, cellular and organismic levels of organization. Major topics included are introduction to the scientific process, chemistry of cells, organization of cells, cellular respiration, photosynthesis, cell division, DNA replication, transcription, and translation.

Student Learning Outcomes

1. Apply the scientific method to develop and evaluate hypotheses and propose an experiment to test a scientific hypothesis related to cell biology and molecular biology.
2. Describe the distinguishing characteristics of various biological molecules (water, carbohydrates, lipids, proteins, and nucleic acids). (HED Area 3, Competency 3)
3. Compare and contrast the basic features of cells and how prokaryotic cells differ from eukaryotic cells. (HED Area 3, Competency 3)
4. Understand how organisms maintain homeostasis in a dynamic environment.
5. Describe how biological molecules are acquired and how they are subsequently used to meet the metabolic needs of organisms. (HED Area 3, Competency 3)
6. Describe membrane structure and function.
7. Describe and analyze the nature of bioenergetic transformations and metabolism within the cell.
8. Describe the processes of cellular respiration and photosynthesis.
9. Analyze with specific detail the processes of DNA replication, transcription, and translation.
10. Analyze with specific detail the types, mechanisms, and regulation of cellular division.
11. Assess important applications of cell and molecular biology to energy use, medicine, and other day-to-day processes. (HED Area 3, Competency 1,3,4,5)

BIOL 2110L. Principles of Biology: Cellular and Molecular Lab

Course Description

This course introduces students to major topics in general biology. This course focuses on the principles of structure and function of living things at the molecular, cellular and organismic levels of organization. Major topics included are introduction to the scientific process, chemistry of cells, organization of cells, cellular respiration, photosynthesis, cell division, genetics, DNA replication, transcription, and translation.

Student Learning Outcomes

1. Describe and apply the scientific method to solve problems in biological context.
2. Demonstrate knowledge of laboratory safety skills and procedures.
3. Practice principles of scientific method while conducting laboratory activities and experiments.
4. Perform laboratory activities using relevant laboratory equipment, chemical reagents, and supplies to observe biological specimens, to measure variables, and to design and conduct experiments.
5. Operate light microscopes, prepare wet mount slides, and use stains.
6. Exhibit ability to use pipettes and other volumetric measuring devices, chemical glassware, balances, pH meters or test papers, spectrophotometers, and separation techniques, such as chromatography and/or electrophoresis to perform activities relevant to other course competencies.
7. Analyze and report data generated during laboratory activities and experiments.

BIOL 2110C. Principles of Biology: Cellular and Molecular Lecture & Lab

Course Description

Combination of BIOL 2110 and 2110L.

BIOL 2110R. Principles of Biology: Cellular and Molecular Recitation

Course Description

This course introduces students to the principles of biology with an emphasis on the structure, physiology, bioenergetics, cell division, and gene expression of microbe, plant, and animal cells. The recitation section focuses on problem solving and discussion. This course focuses on the principles of structure and function of living things at the molecular, cellular and organismic levels of organization. Major topics included are introduction to the scientific process, chemistry of cells, diversity of organic molecules and macromolecules, organization of cells, cellular respiration, photosynthesis, cell division, DNA replication, and protein synthesis.

Student Learning Outcomes

1. Describe the distinguishing characteristics of various biological molecules (water, carbohydrates, lipids, proteins, and nucleic acids). (HED Area 3, Competency 3).
2. Compare and contrast the basic features of cells and how prokaryotic cells differ from eukaryotic cells. (HED Area 3, Competency 3).
3. Interpret scientific data, formulate a scientific hypothesis, and propose an experiment to test a scientific hypothesis. (HED Area 3, Competency 1,2,4,5).
4. Assess important applications of cell and molecular to energy use, medicine, and other day-to-day processes. (HED Area 3, Competency 1,3,4,5).
5. Understand that organisms need to coordinate cellular activities and that such coordination is achieved through complex mechanisms of intracellular communication. (HED Area 3, Competency 1,3,4,5).
6. Describe how biological molecules are acquired and how they are subsequently used to meet the metabolic needs of organisms. (HED Area 3, Competency 3).
7. Use effectively metric conversions & significant digits.
8. Verbally present a summary of a scientific paper or problem.

BIOL 2120. Cellular & Molecular Biology

Course Description

This course takes a detailed look at the principles of cellular biology with an emphasis on the structure, physiology, bioenergetics, cell division, and gene expression of microbe, plant, and animal cells. Major topics include the diversity of organic molecules and macromolecules, metabolism, cellular respiration, photosynthesis, cell division, DNA replication, and protein synthesis. Major modern research tools will also be explored. This course is intended for science majors.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to analyze with specific detail the...

1. Structure and function in prokaryotic and eukaryotic cells.
2. Major macromolecules basic structure and uses.
3. Membrane structure and function and its roles in intra and inter cellular communication and cellular function.
4. Nature of bioenergetic transformations and metabolism within the cell.
5. Cellular respiration and photosynthesis.
6. Mechanism and regulation of cellular division.
7. DNA replication.
8. Relationship between genetic information and protein structure.
9. To interpret scientific data, formulate a scientific hypothesis, and propose an experiment to test a scientific hypothesis.

BIOL 2120L. Cellular & Molecular Biology Laboratory

Course Description

This course introduces the scientific method, with an emphasis on cellular structures and functions, and physiology. Laboratory demonstrations, experiments and exercises on molecular and cellular biology and organismal physiology.

Student Learning Outcomes

1. Understand the scientific method and how to use it to make hypotheses about cell processes.
2. Communicate scientific information and apply quantitative analysis of the scientific problems.
3. Apply scientific thinking to real world problems and be able to communicate those concepts through oral presentations.
4. Learn cell biology techniques that are widely used in modern research laboratories.
5. Be able to use different microscopes correctly and safely.

BIOL 2120C. Cellular & Molecular Biology Lecture & Laboratory

Combination of BIOL 2120 and BIOL 2120L.

BIOL 2121. Cellular & Organismal Biology

Course Description

This course introduces cellular structure and function, genetics, and physiology of microbes, plants, and animals.

Student Learning Outcomes

1. Understand the scientific method and use scientific literature to successfully research a project.
2. Characterize the major properties of water, pH, buffers, chemical bonds, energy thermodynamics, enzymes, and structure of molecules and their importance in biological systems.
3. Analyze the chemical structure and characteristics of carbohydrates, lipids, nucleic acids, and proteins.
4. Describe the cell cycle, including mitosis and meiosis.
5. Describe the structure and function of prokaryotic cells and eukaryotic cells.
6. Analyze the principles of heredity.
7. Describe and compare the processes of cellular respiration and photosynthesis, and explain their importance to life on Earth.
8. Characterize the processes of absorption, transpiration and related physiological processes in plants and animals.

BIOL 2121L. Cellular & Organismal Biology Lab

Course Description

This course introduces the scientific method, with an emphasis on cellular structures and functions, and physiology. Laboratory demonstrations, experiments and exercises on molecular and cellular biology and organismal physiology.

Student Learning Outcomes

1. Understand the scientific method and how to use it to make hypotheses about cell processes.
2. Communicate scientific information and apply quantitative analysis of the scientific problems.
3. Apply scientific thinking to real world problems and be able to communicate those concepts through oral presentations.
4. Learn cell biology techniques that are widely used in modern research laboratories.
5. Be able to use different microscopes correctly and safely.

BIOL 2130. Introduction to Biochemistry

Course Description

This course provides a foundation for the general functioning of biochemical processes. Includes the fundamental concepts such as atomic and molecular structure, bonding, and pH to facilitate understanding of the biochemistry of life. The structure and reaction mechanisms of the four biological macromolecules - proteins, nucleic acids, carbohydrates, and lipids. The class covers the basic strategies for biochemical pathway regulation, the chemistry regulation of energy metabolism, and the molecular basis of genetic information transfer.

Student Learning Outcomes:

1. Understand the following fundamental chemistry concepts as they relate to biology and biochemistry, electron structure, bonding and intermolecular forces, molecular shapes, acids, bases, pH, and molar measurement.
2. Describe the structure and function of amino acids, polypeptides, and the multiple levels of protein structure, the relationship between protein structure and their function, and their in biological and physiological processes.
3. Describe the mechanism of enzymatic reactions and their importance in biological process.
4. Understand the basic structure of the different carbohydrates and their biosynthesis, and role in biological and physiological process.
5. Describe the structure, biosynthesis, and function of lipids in physiology of the cell and the organism, including fatty acids phospholipids and their role in membrane formation and function.
6. Identify and describe different biochemical reactions central to anabolic and catabolic pathways with emphasis on photosynthesis and respiration.
7. Describe the biosynthesis of the nucleotides, as well as the structure and function of nucleic acids; and explain the mechanisms of DNA replication, damage, and repair.

BIOL 2141. Phage Discovery

Course Description:

Course-based research lab for entry level students focuses on isolation and characterization of novel bacteriophages from the environment.

Student Learning Outcomes:

1. Cultivate Bacteria and bacteriophages using standard microbiological techniques.
2. Determine appropriate controls for an experimental design.
3. Communicate scientific results in an appropriate audience manner.
4. Demonstrate proficiency in lab techniques.
5. Effectively communicate scientific information.

BIOL 2142. Phage Genome Annotation

Course Description:

Course-based computer research for entry level students focuses on assignment of gene function of a bacteriophage genome sequence. Prerequisite: BIOL 2XXX or permission of instructor.

Student Learning Outcomes:

1. Determine likeliest open reading frame in a DNA sequence.
2. Assign a function to a protein-coding sequence in a genome.
3. Communicate scientific results in an audience-appropriate manner.

BIOL 2151. Medical Imaging Anatomy and Physiology I

Course Description:

This is the first in a series of two courses that explore human anatomy and physiology for the student entering medical imaging programs. It is a combined course that includes both lecture theory and lab practices. Basic chemistry and biology concepts are covered along with what it means to be a scientist. An in-depth examination of 1) How organs are distributed within the human body, 2) Bone physiology and anatomy, and 3) Nervous System physiology and anatomy are covered. In addition, students learn the basics of the integumentary and muscular systems.

Student Learning Outcomes

1. Explain processes of biology, including an exploration of the scientific method.
2. Apply basic chemistry to the biology of cells.
3. Describe the structures and functions associated with eukaryotic cells.
4. Describe DNA structure.
5. Explain the central dogma of gene expression.
6. Apply mechanisms of cellular metabolism to how muscles function in the body.
7. Describe mitosis and meiosis.
8. Explain homeostasis and identify tissues, organs, and organ systems along with their functions.
9. Describe and apply anatomical terminology.
10. Describe structure and function of integumentary, skeletal, muscular, nervous system, and special senses.
11. Apply learned knowledge of organ anatomy, skeletal system, and nervous system to solve case studies using medical images that include x-rays, MRIs, ultrasound, and EEGs.

BIOL 2161. Medical Imaging Anatomy and Physiology II

Course Description

This is the second in a series of two courses that explore human anatomy and physiology for the student entering medical imaging program. It is a combined course that includes both lecture theory and lab practices. An in-depth examination of 1) Cardiovascular Physiology and Anatomy, 2) Digestive Tract, Endocrinology, and Urinary System including fluid dynamics and 3) Reproductive Systems with a focus on pregnancy are covered. In addition, students learn the basics of the Respiratory System and heredity.

Student Learning Outcomes

1. Describe and identify chemistry concepts while applying the autonomic nervous system to understanding homeostasis of organ systems.
2. Explain how fluid and electrolyte balance is maintained by the human body.

3. Describe the structure and function of the endocrine, cardiovascular, respiratory, digestive, urinary, and reproductive systems.
4. Apply learned knowledge of cardiovascular, digestive, urinary, endocrine, and reproductive systems to solve case studies using medical images that include x-rays, MRIs, ultrasound, and EEGs.
5. Describe pregnancy from conception to parturition including human growth and development from zygote to newborn.

BIOL 2210 Human Anatomy & Physiology I

Course Description

This course is the first of two that serve as an introduction to human anatomy and physiology for biology majors and allied health students. The course entails describing, explaining, and analyzing structure and function from the submicroscopic to the organismal level with emphasis on anatomic, directional, and sectional terminology, basic cellular structure and metabolism, tissue differentiation and characteristics, and organ system structure and function; specifically the integumentary, skeletal, muscular, and nervous systems.

Student Learning Outcomes

1. Describe and apply anatomical terminology.
2. Describe multicellular organization.
3. Distinguish and describe major tissue types.
4. Describe the structure and function of the integumentary system.
5. Describe the structure and function of the skeletal system.
6. Describe the structure and function of the muscular system.
7. Describe the structure and function of the nervous system.
8. Describe the structure and function of the special senses.
9. Define homeostasis and describe specific examples for the integumentary, skeletal, muscular, and nervous systems.

BIOL 2210L. Human Anatomy and Physiology I Laboratory

Course Description

This is the first in a series of two laboratory courses designed to introduce laboratory practices and techniques for human anatomy and physiology, from the basic cell structure through the organ system level; specifically the integumentary, skeletal, muscle, and nervous systems.

Student Learning Outcomes

1. Apply the scientific method correctly.
2. Collect, analyze, and interpret scientific data.
3. Use laboratory equipment, such as a microscope, correctly and safely.
4. Analyze the structure of cells, cell membranes, and cell organelles with respect to their respective physiological roles.
5. Identify the anatomical components of human tissues, organs, and organ systems using prepared microscope slides, models, diagrams, illustrations, or cadaver specimens.
6. Describe the functional characteristics of human tissues, organs, and organ systems using prepared microscope slides, models, diagrams, illustrations, or cadaver specimens.
7. Analyze the physiological processes of the integumentary, skeletal, muscle, and nervous systems.

BIOL 2210C. Human Anatomy and Physiology I Lecture & Laboratory

Course Description

Combined BIOL 2210 and BIOL 2210L

BIOL 2215. Comparative Vertebrate Anatomy

Course Description

This course presents an introduction to the anatomy of vertebrate animals. Students will explore the basic structure and functions of vertebrates including the skeleton, musculature and physiological systems. Laboratory exercises will emphasize the skeleton of mammals including humans, birds, and reptiles using real specimens and will include examination of fossil vertebrates and virtual dissections on computers.

Student Learning Outcomes

1. The student will understand the basic structure and phylogenetic interpretation of structures of vertebrates as demonstrated by 70% of the students scoring 70% or higher in a faculty prepared examination.
2. The student will understand the functional interpretation of vertebrate structures as demonstrated by 70% of the students scoring 70% or higher in a faculty prepared examination.
3. The student will understand the basic structure of a selected vertebrate animal or group of animals as demonstrated by 70% of the students completing a capstone project that is scored by the instructor with a grade of 80% or better.

BIOL 2221. Human Physiology

Course Description

Human physiology is the science of the mechanical, physical, and biochemical functions of humans, their organs, and the cells of which they are composed. The study of physiology dates back to the time of Hippocrates (the father of medicine) and has seen major advances since the implementation of the scientific method and experimental approaches to probe function at the levels of genes to organ systems.

This course is designed to introduce students to fundamental mechanisms by which humans function and to integrate and apply this information to solve case studies. Original scientific articles will be incorporated into lectures and homework assignments to discuss how experimentation is used to test the function of organ systems, organs, cells, and molecules that carry out the chemical and physical functions in the human body.

Student Learning Outcomes

1. Understand the central physiological principle of homeostasis.
2. Be able to explain why concentration gradients are essential to maintain homeostasis.
3. Understand the regulation of homeostasis by neuronal / endocrine chemical messengers.
4. Understand that changes in bodily function occur throughout the entire life span of the human animal.
5. Incorporate the importance of evolutionary biology to your understanding of human disease.
6. Teach a physiological concept to your classmates.
7. Design experiments to test physiological concepts.
8. Put in plain words how the laws of thermodynamics can explain human disease..

BIOL 2225. Human Anatomy and Physiology II

Course Description

This course is the second of two that serve as an introduction to human anatomy and physiology for biology majors and allied health students. The course entails describing, explaining, and analyzing structure and function from the submicroscopic to the organismal level with emphasis on specific cellular, tissue, and organ structure and physiology, and organ system structure and function; specifically the endocrine, cardiovascular, respiratory, urinary, and reproductive systems. Additionally, an analysis of these concepts is included: fluid and electrolyte balance, pregnancy, growth and development from zygote to newborn, and heredity.

Student Learning Outcomes

1. Identify and describe the major anatomical features of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems.
2. Analyze the physiological roles of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems in maintaining homeostasis in the human body.

3. Explain how fluid and electrolyte balance is maintained in the human body.
4. Compare and contrast the anatomy and physiology of male and female reproductive systems.
5. Describe pregnancy from conception to parturition including human growth and development from zygote to newborn.
6. Explain heredity and genetic control.

BIOL 2225L. Human Anatomy and Physiology II Laboratory

Course Description

This is the second in a series of two laboratory courses designed to introduce laboratory practices and techniques for human anatomy and physiology, from the basic cell structure through the organ system level; specifically the endocrine, cardiovascular, lymphatic, respiratory, urinary, and reproductive systems.

Student Learning Outcomes

1. Apply the scientific method correctly.
2. Collect, analyze, and interpret scientific data.
3. Use laboratory equipment, such as a microscope, correctly and safely.
4. Identify the anatomical components of human tissues, organs, and organ systems using prepared microscope slides, models, diagrams, illustrations, or cadaver specimens.
5. Describe the functional characteristics of human tissues, organs, and organ systems using prepared microscope slides, models, diagrams, illustrations, or cadaver specimens.
6. Analyze the physiological processes of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems.
7. Analyze the physiological processes of fluid and electrolyte balance and acid base balance in the human body.
8. Analyze heredity and genetic control.

BIOL 2225C. Human Anatomy and Physiology II Lecture & Laboratory

Course Description

Combined BIOL 2225 and BIOL 2225L

BIOL 2305. Microbiology for Health Sciences

Course Description

This course introduces the basic principles of microbial structure, genetics, and physiology, virology, parasitology, disease, pathogenicity, epidemiology and immunology. Only some emphasis is given to basic biological principles. The course is designed for those obtaining a career in the health sciences.

Student Learning Outcomes

1. Apply critical thinking and the information learned to problems encounter in health-related professions.
2. Have a basic understanding of cell structure for different types of bacteria.
3. Understand the metabolic mechanisms of prokaryotes and the use of these in classification systems.
4. Understand the genetic mechanisms of prokaryotes and the nature of mutations.
5. Have basic understanding of virus structure and function.
6. Be able to describe the basic functions of the immune system with respect to infectious disease processes.
7. Understand the principles of pathogenicity, disease, and epidemiology.
8. Be able to explain the basics of antimicrobial and antiviral chemotherapy.

BIOL 2310. Microbiology

Course Description

Introduction to the basic principles of microbiology, microbial pathogenesis, host defenses and infectious diseases. The course will emphasize concepts related to the structure and function of microorganisms, including their mechanisms of

metabolism and growth. Host parasite interactions will also be emphasized, including mechanisms of microbial pathogenesis and mechanisms of host defenses against infectious diseases.

Student Learning Outcomes

1. Describe and compare the structure and function of prokaryotic and eukaryotic cells.
2. Describe and compare the techniques used for staining of and microscopic observation of bacteria including morphology.
3. Describe the nutritional requirements for bacterial growth and the impact of environmental factors on bacterial growth (temperature, pH, oxygen, etc.).
4. Describe and compare the mechanisms of aerobic respiration, anaerobic respiration, and fermentative metabolism.
5. Describe the mechanism of bacterial growth by binary fission, and laboratory methods used for observing and measuring bacterial growth.
6. Describe the mechanisms of bacterial DNA replication, RNA transcription, and translation, and compare and contrast with eukaryotic cells.
7. Describe the structure and replication strategies of viruses.
8. Describe and contrast mechanisms of innate nonspecific immunity and adaptive specific immunity.
9. Describe immune hypersensitivity reactions, autoimmune diseases, and immunodeficiency diseases.
10. Differentiate between host microbe relationships, mechanisms of microbial pathogenesis, differentiate between communicable and noncommunicable diseases and describe mechanisms of direct and indirect transmission of communicable diseases.

BIOL 2310L. Microbiology Laboratory

Course Description

This course will emphasize both the theory and hands-on application of techniques used in a microbiology laboratory for the growth and identification of bacterial species. Students will learn microscopy skills and staining techniques for the observation of bacteria. Students will also learn aseptic techniques used for isolation of bacteria, inoculation of cultures, and interpretation of selective and differential growth media for the identification of bacterial species.

Student Learning Outcomes

1. Demonstrate skills of microscopy.
2. Demonstrate skills of bacterial staining.
3. Demonstrate aseptic technique for inoculation of bacterial growth media.
4. Interpret results from selective and differential media.
5. Demonstrate appropriate use of diagnostic reagents.
6. Interpret results of diagnostic assays.
7. Identify unknown bacterial species through the use of a dichotomous key, inoculation and interpretation of laboratory assays, and application of the scientific method.

BIOL 2310C. Microbiology Lecture & Lab

Course Description

Combined BIOL 2310 and BIOL 2310L.

BIOL 2320. Public Health Microbiology

Course Description

This course introduces microbiology on the health profession level. It incorporates cell structure, metabolism, growth, controls of growth, infectious epidemiology, etiology, pathogenicity, and relative virulence of pathogens. It will lead to students assessing a clinical infection scenario from the microbiological perspective that includes making diagnoses based on data from appropriate diagnostic tests, investigating appropriate treatment options, and making recommendations for prevention.

Student Learning Outcomes

1. Identify key physical features of various infectious agents and describe their structure and function in the pathogen.
2. Describe the microbiological, serological, biochemical and genetic tests that are used to identify infectious agents in a laboratory setting and be able to interpret test results in order to identify the pathogen.
3. Explain how structural and metabolic differences between infectious agents and human host can be exploited for chemotherapy.
4. Explain the observed effect of a particular environmental change on the growth of a given microorganism, and the relationship between bacterial growth patterns and selected foodborne illnesses.
5. Describe several mechanisms by which pathogens generate genetic diversity and the role genetic diversity plays in resistance to therapy and treatment failure.
6. Explain the role of innate, and adaptive immunity in host defense.
7. Describe general virulence strategies used by variety of pathogens, and different types of vaccines along with recommendations for vaccinations of specific populations.
8. Demonstrate understanding of signs and symptoms of selected diseases and be able to relate disease agents with environmental reservoirs and transmission.

BIOL 2410. Principles of Biology: Genetics

Course Description

This course introduces the fundamental principles of heredity; DNA structure and replication; the processes of transcription, translation, and regulation of gene expression; and structural, functional, and comparative genomics. The course covers the application of major genetic concepts, principles, and techniques to understand and solve biological questions.

Student Learning Outcomes

1. Students will be able to understand rules governing the segregation of genes carried on the same or different chromosomes.
2. Students will be able to explain and analyze human pedigrees.
3. Students will be able to describe the structure of DNA and how its information is transmitted to protein synthesis.
4. Students will be able to interpret scientific data, formulate a scientific hypothesis, and propose an experiment to test a scientific hypothesis.
5. Students will be able to describe molecular mechanisms governing why and how gene expression is regulated
6. Students will understand how deregulated gene expression contributes to human congenital disease and cancer.
7. Students will be able to understand how high throughput experiments are carried out and analyzed.
8. Students will be able to explain key principles of genomics to understand the content, organization, and function of genetic information contained in whole genomes.
9. Students will be able to apply genetic and physical mapping techniques to the understanding of structural genomics.
10. Students will be able to use comparative genomics to understand how genomes evolve in (i) genome size, (ii) gene content, (iii) gene functionality, (iv) nucleotide base content, (v) protein diversity, and/or (vi) transposable element proliferation.
11. Students will consider ethical issues related to genomics.

BIOL 2410L. Principles of Biology: Genetics Laboratory

Course Description

This laboratory course introduces the fundamental principles of heredity and uses scientific method to understand and solve genetic questions. Emphasis is placed on transmission genetics, molecular genetics, genomics, and biotechnology, with work focused on discussion and problem-solving activities. Students must engage with primary literature (e.g., written paper or annotated bibliography). Students must give oral presentations. Wet lab work is not required.

Student Learning Outcomes

1. Be able to conduct library-based research to produce an annotated bibliography or research paper that demonstrates the ability to distill and synthesize the primary literature.
2. Be able to verbally present a synthesis and interpretation of a published paper from the primary literature.
3. Be able to demonstrate critical thinking skills by interpreting scientific data, formulating a scientific hypothesis, and proposing an experiment to test a scientific hypothesis. (HED Area 3, Competency 1,2,4,5)
4. Be able to solve genetics problems involving single gene, X-linked, and non-Mendelian inheritance patterns.
5. Be able to conduct Chi-Square statistical analysis on genetics data.
6. Be able to describe the processes of DNA replication, transcription and translation.
7. Be able to compare and contrast the processes of gene regulation in prokaryotes versus eukaryotes.
8. Be able to understand how high throughput experiments are carried out and analyzed. (HED Area 3, Competency 3,4)
9. Be able to apply understanding of recombinant DNA techniques and RNA sequencing analysis in the biomedical sciences, biotechnology and/or bioengineering.
10. Be able to describe applications of structural, functional or comparative genomics in the biomedical sciences, biotechnology and/or bioengineering.

BIOL 2410C. Principles of Biology: Genetics Lecture & Laboratory

Course Description

Combination of BIOL 2410 and BIOL 2410L.

BIOL 2505. Pathophysiology

Course Description

This course is designed to provide the conscientious student with a solid foundation for understanding the pathophysiological processes of the human organism.

Student Learning Outcomes

The student will be able

1. To describe the general concepts of disease processes and factors associated with disease causation.
2. To identify the function of basic cellular structures, determining the process of cellular malfunctions.
3. To describe the response of the body to injury and immunologic challenge.
4. To discuss the etiology, pathogenesis, and treatment modalities of frequently occurring diseases.

BIOL 2510. Pathophysiology I

Course Description

This course focuses on the pathophysiology of cellular adaptation, injury and repair. Thereafter, the course focuses on the pathophysiology of anemia, neoplasms and white blood cell malignancies, brain and nervous system diseases, special senses, musculoskeletal system and joint diseases, and integumentary diseases. Immune defenses against infectious diseases and immunologic diseases are also covered. In addition, the etiology, pathophysiology, clinical manifestations and other clinical considerations of diseases in these systems will be discussed.

Student Learning Outcomes

1. Describe the pathophysiology of cellular adaptation, injury and death.
2. Describe the cellular and pathophysiologic basis of anemia.
3. Describe the cellular and pathophysiologic basis of genetic diseases.
4. Describe the cellular and pathophysiologic basis of diseases of the neoplasms and white blood cell malignancies.
5. Describe the cellular and pathophysiologic basis of diseases of the brain and nervous system diseases.
6. Describe the cellular and pathophysiologic basis of diseases of the special senses.
7. Describe the cellular and pathophysiologic basis of musculoskeletal and joint diseases.
8. Describe the cellular and pathophysiologic basis of integumentary diseases.

9. Describe the mechanisms of inflammation and immunological protection against infectious diseases.
10. Describe diseases of the immune system, including hypersensitivity reactions, autoimmunity and immunodeficiency diseases.

BIOL 2511. Pathophysiology I

Course Description

The first in a two-course sequence that covers changes in body physiology that result from disease or injury. Includes a general introduction to pathophysiology as well as an overview of altered cellular and tissue biology, injury, inflammation, and neoplasia. Students will also explore deviation from fluid, hemodynamic, and endocrinologic balance. Topics related to the science of pathophysiology, including pathology, pathogenesis, etiology, epidemiology, and clinical manifestations, are also discussed throughout the course where relevant.

Student Learning Outcomes

Not Available

BIOL 2512. Pathophysiology II

Course Description

The second in a two-course sequence that covers changes in body physiology that result from disease or injury. This course focuses on the pathophysiology of the nervous, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems. Topics related to the science of pathophysiology, including pathology, pathogenesis, etiology, epidemiology, and clinical manifestations, are also discussed throughout the course where relevant.

Student Learning Outcomes

1. The different types of sensory modalities; the different dysfunctions of the general and special senses; the different pain theories discussed in class; the various aspects of the neuroanatomy and neuromodulation of pain; the various clinical descriptions of pain; the various aspects of temperature regulation; components of the pathogenesis of fever; the various disorders of temperature regulation; the various aspects of sleep disorders; the various components of visual dysfunction; and the various aspects of auditory, gustatory, and olfactory dysfunction.
2. The various alterations in cognitive systems; the various alterations in arousal; the outcomes of alterations in arousal; the various alterations in awareness; the various seizure disorders; the various data processing deficits; various alterations in cerebral hemodynamics; and alterations in neuromotor function.
3. The various disorders of the central and peripheral nervous systems; and the various disorders of the neuromuscular junction.
4. The components of normal blood; the process/stages of hematopoiesis; the various normal RBC laboratory values; the components and functions of the lymphatic system; the various types of imbalances of erythropoiesis; the various types of anemias and their causes; the various types of polycythemia and their causes; the processes related to hemostasis; the various alterations of white blood cells and their causes; and the various alterations of lymphoid and hemostatic function.
5. The various diseases of the veins; the various diseases of the arteries; the various aspects of atherosclerosis; features related to the pathogenesis and consequences of coronary artery disease; the disorders of the heart wall and their consequences; the various aspects of valvular dysfunction; aspects of the pathogenesis and manifestations of rheumatic disease; the causes, pathogenesis, and manifestations of infective endocarditis; the causes, manifestations, and pathophysiology of heart failure; and the various types of shock.
6. The various signs and symptoms of pulmonary disease; the various conditions caused by pulmonary disease/injury; the various disorders of the chest wall and pleura; and the causes, manifestations, and pathophysiology of selected pulmonary disorders.
7. The features and consequences of upper and lower urinary tract obstruction; the various types of urinary tract infection; the causes, pathogenesis, and clinical manifestations of glomerulonephritis; the various features of

nephrotic and nephritic syndrome; and the various features (etiology, pathophysiology, and clinical manifestations) of both acute kidney injury and chronic kidney disease.

8. The various clinical manifestations of gastrointestinal dysfunction; the various aspects (etiology, pathophysiology, and clinical manifestations) of disorders of motility; the causes, manifestations, and pathophysiology of gastritis; features related to the causes, manifestations, and pathophysiology of peptic ulcer disease; features related to the etiology, pathogenesis and pathophysiology of selected malabsorption syndromes, inflammatory bowel diseases, diverticular disease of the colon, appendicitis, and irritable bowel syndrome; the various types of vascular insufficiency; the various disorders of nutrition and their causes and clinical manifestations; and the various disorders of the accessory organs of digestion.
9. The various features associated with alterations of sexual maturity (delayed puberty and precocious puberty); features related to the etiology, pathogenesis, and pathophysiology of the various disorders of the male reproductive system, including disorders of the urethra, disorders of the penis, disorders of the scrotum, disorders of the testes, disorders of the epididymis, disorders of the prostate gland, and disorders of the male breast; features related to the etiology, pathogenesis, and pathophysiology of male sexual dysfunction; features associated with abnormalities of reproductive tract development; the various hormonal and menstrual alterations and their causes and clinical manifestations; the various conditions related to infection, inflammation, and pelvic organ prolapse (uterine prolapse, cystocele, rectocele, and enterocele); conditions involving benign growths and cancer (endometriosis, cervical cancer, vaginal cancer, vulvar cancer, endometrial cancer, uterine sarcoma, and ovarian cancer); features related to the etiology, pathogenesis, and pathophysiology of female sexual dysfunction (disorders of desire, vaginismus, anorgasmia, and dyspareunia); features related to infertility; and features related to the etiology, pathogenesis, and pathophysiology of breast cancer.

BIOL 2520. Pathophysiology II

Course Description

Pathophysiology II builds on the concepts studied in Pathophysiology I. This course will focus on the molecular and cellular basis of diseases of the cardiovascular, clotting and coagulation, respiratory, gastrointestinal, urinary and endocrine systems. In addition, etiology, pathophysiology, clinical manifestations and other clinical considerations of diseases in these systems will be discussed.

Student Learning Outcomes

1. Describe the cellular and pathophysiologic basis of diseases of the cardiovascular system.
2. Describe the cellular and pathophysiologic basis of clotting and coagulation diseases.
3. Describe the cellular and pathophysiologic basis of diseases of the gastrointestinal system
4. Describe the cellular and pathophysiologic basis of diseases of the respiratory system.
5. Describe the cellular and pathophysiologic basis of diseases of the urinary tract system.
6. Describe the cellular and pathophysiologic basis of diseases of the endocrine system.
7. Describe the cellular and pathophysiologic basis of diseases of the reproductive system, including sexually transmitted diseases.

BIOL 2610. Principles of Biology: Biodiversity, Ecology, and Evolution

Course Description

This course is an introduction to the dynamic processes of living things. Major topics include the mechanisms of evolution, biological diversity, population genetics, and ecology.

Student Learning Outcomes

1. Understand the scientific method and apply it to biological topics of genetics, evolution, ecology, and biodiversity.
2. Apply quantitative reasoning and scientific thinking to real world problems.
3. Identify and describe the basic principles of evolution.
4. Analyze the relationships between the genetics of populations and evolution.

5. Analyze the processes of speciation.
6. Describe how the hierarchical classification scheme is used to categorize organisms.
7. Describe how DNA research has modernized bio systematics.
8. Compare and contrast the general characteristics of each of the living domains and kingdoms.
9. Relate the structure of organisms to the way they function.
10. Explain how the life histories of organisms are adapted for different environments.
11. Relate the complexity of behavior to the overall complexity of an organism.
12. Describe the ecological roles played by organisms in each kingdom.
13. Compare basic ecological principles at the population and community levels of organization.
14. Describe and compare energy relationships and the cycling of materials in ecosystems.

BIOL 2610L. Principles of Biology: Biodiversity, Ecology, and Evolution Laboratory

Course Description

This laboratory course is an introduction to the dynamic processes of living things. This course introduces students to the methods used in the study of evolution, ecology, and biological diversity. Designed for students continuing in life sciences.

Student Learning Outcomes

1. Describe and apply the scientific method to generate testable hypotheses in evolution and ecology.
2. Design and conduct laboratory experiments using relevant laboratory equipment and methods.
3. Analyze and report data generated during laboratory activities and experiments.
4. Communicate scientific results from experiments in evolution, ecology, and biodiversity.

BIOL 2610C. Principles of Biology: Biodiversity, Ecology, and Evolution Lecture and Laboratory

Course Description

Combined BIOL 2610 and BIOL 2610C.

BIOL 2615. Ecology & Evolution

Course Description

Presents various topics associated with principles of ecology and evolutionary biology: Darwinian principles, origin theory, the fossil record and patterns of diversification of ancient life, evolution of populations, speciation, phylogenetics, basics of ecology and study of the biosphere, behavioral ecology, population ecology, community ecology, ecosystem ecology, and conservation biology.

Student Learning Outcomes

Upon successful completion of this course, students will be proficient in their ability to:

1. Describe the development of evolutionary theory from ancient to modern times.
2. Describe the various lines of evidence for past evolution and common ancestry.
3. Describe the main processes of evolution and how they influence genetic variability in populations.
4. Describe the evolutionary processes that can lead to speciation.
5. Compare and contrast the benefits/limitations of different phylogenetic strategies for describing species relatedness.
6. Describe ecology in the context of the first biomes across the planet.
7. Describe population ecology and the ecological factors associated with population dynamics.
8. Describe community ecology and the ecological factors that can influence community dynamics.
9. Describe ecosystem ecology and the biotic and abiotic factors that influence ecosystem dynamics.
10. Describe climatic processes, how they influence ecological dynamics, and the influence changes in global climate.

BIOL 2615L. Ecology & Evolution Laboratory

Course Description

Laboratory exercises and recitation to complement concepts presented in BIO 2410

Student Learning Outcomes

Upon successful completion of this course, students will be proficient in their ability to:

1. Describe how the unique location, habitat and formation of the Galapagos Islands played a central role in the formulation of Darwin's theory of evolution.
2. Describe the role of natural selection in species formation and how that compares to artificial selection.
3. Describe the evolutionary history of humans and how their environment played a role in evolutionary changes.
4. Apply statistical analyses to population genetics to predict or analyze evolutionary processes.
5. Develop phylogenetic trees using multiple strategies.
6. Describe the interactions between species in the same habitat and how changes to the habitat can alter the interactions.
7. Describe the influence of habitat variables on community ecologies.
8. Describe the influence of global climate patterns on ecosystems and how ecosystems will be effected by changes in global climate patterns.

BIOL 2620. Ecology & Evolution

Course Description

This course provides an initial foundation in the concepts and models in the fields of evolution and ecology. There will be a strong emphasis on understanding the process of science as applied by ecologists and evolutionary biologists. By the end of this course, you will understand the major drivers of evolution and the major ecological patterns and processes in nature. Evolutionary concepts will include Darwinian principles, evolutionary processes within populations (including natural selection), the fossil record, the origin and diversification of life, and phylogenetics. Ecological concepts will include global patterns of species diversity and abundance, organismal and behavioral ecology, population dynamics, community ecology, ecosystem processes and conservation biology. Your analytical and quantitative abilities will be reinforced and improved, and you will gain skills in critical thinking that will make you a more scientifically aware citizen.

Student Learning Outcomes

Students who successfully complete this course will be able to:

1. Recognize the major drivers of evolution.
2. Recognize the major ecological patterns in nature.
3. Apply the scientific process to simple ecological and evolutionary problems.
4. Make informed predictions on how organisms respond (in both evolutionary and ecological time frames) to environmental conditions (abiotic forces) and to species interactions (biotic forces).

BIOL 2620L. Ecology and Evolution Lab

Course Description

This laboratory course complements the Ecology and Evolution lecture. Laboratory exercises and recitation focus on concepts associated with ecology and evolutionary biology: Darwinian principles, the fossil record and patterns of diversification of ancient life, evolution of populations, speciation, phylogenetics, ecology and study of the biosphere, behavioral ecology, population ecology, community ecology, ecosystem ecology, and conservation ecology.

Student Learning Outcomes

1. Apply scientific methods to formulate questions, analyze data and draw conclusions.
2. Use mathematical models to model biological systems.
3. Model ecological patterns and describe the interactions between organisms and their environment.
4. Synthesize knowledge of ecology and evolution in one or more projects and provide a report to demonstrate that synthesis.
5. Describe and contrast the major components of evolutionary biology and ecology.
6. Describe the different categories of evidence that evolution is occurring now and has occurred through a long series of geological periods.

7. Use a dichotomous key with proficiency to identify flora and fauna.

BIOL 2620C. Ecology and Evolution Lecture and Laboratory

Course Description

This course provides an initial foundation in the concepts and models in the fields of evolution and ecology. There will be a strong emphasis on understanding the process of science as applied by ecologists and evolutionary biologists. By the end of this course, you will understand the major drivers of evolution and the major ecological patterns and processes in nature. Evolutionary concepts will include Darwinian principles, evolutionary processes within populations (including natural selection), the fossil record, the origin and diversification of life, and phylogenetics. Ecological concepts will include global patterns of species diversity and abundance, organismal and behavioral ecology, population dynamics, community ecology, ecosystem processes and conservation biology. Your analytical and quantitative abilities will be reinforced and improved, and you will gain skills in critical thinking that will make you a more scientifically aware citizen. Laboratory exercises focus on concepts associated with ecology and evolutionary biology: Darwinian principles, the fossil record and patterns of diversification of ancient life, evolution of populations, speciation, phylogenetics, ecology and study of the biosphere, behavioral ecology, population ecology, community ecology, ecosystem ecology, and conservation ecology.

Student Learning Outcomes

1. Communicate in the biological arena.
2. Distinguish evolution as a process of natural selection acting on heritable genetic variation.
3. Measure, analyze, and present relevant data for the solution of a biological problem using biological instrumentation.
4. Discuss the limitations and potentials of science in social issues.
5. Compare processes at the population, community, and ecosystems levels of organization.
6. Map and explain the interdependence of organisms including human beings.
7. Recognize and distinguish among the diversity of life and the fundamental forces that have shaped this diversity.

BIOL 2625. Introduction to Ecology

Course Description

This course is an introduction to how organisms sustain themselves, maintain health and reproduce in the ecosystem in which they reside. Includes an introduction to how living things interact with their environment, including other organisms, and how organisms respond to the physical conditions of the habitat in which they live.

Student Learning Outcomes

1. Students will describe the organization of living systems and trophic interactions.
2. Students will explain how organisms respond to and interact with the physical (abiotic) environment.
3. Students will exhibit knowledge of ecosystems and ecosystem function, including the flow of energy and materials.
4. Students will demonstrate an understanding of basic population ecology, interactions between and among populations, and community function.
5. Students will examine evolutionary ecology, coevolution and symbiotic relationships.

BIOL 2626C. Ecology of the Southwest Uplands Lecture & Lab

Course Description

Not Available

Student Learning Outcomes

Not Available

BIOL 2627. Environmental Conservation

Course Description

A study of natural resources in a global context. Attention is given to public policies and programs which affect the long-range availability and utilization of these resources. This course is an introduction to several environmental issues that confront resources, technology, pollution and society.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Describe the steps of the scientific method and apply them to the design of an experiment.
2. Define sustainable development and describe why it is important.
3. Describe the roots of the environmental crisis.
4. Explain the equation $\text{Impact} = \text{Population Size} \times \text{Affluence} \times \text{Technology}$.
5. Explain the Tragedy of the Commons.
6. Be able to relate the topics we have covered to the resources-human systems-waste continuum.
7. Assess how individual actions can affect the global environment.
8. Describe human population growth historically; currently; and future projections.
9. List several impacts continued growth of the human population has on natural systems.
10. Describe problems with modern agriculture and delineate sustainable solutions to these problems.
11. Describe how genetically modified organisms are produced and describe advantages and disadvantages of their use.
12. Predict the impacts of continued growth of the human population on resource use.
13. List the fossil fuels and describe issues associated with their production and use.
14. Diagram nuclear fission.
15. Compare and contrast the forms of renewable energy: solar, wind, hydroelectric, hydrogen fuel cells, and geothermal.
16. Define toxic, hazardous, mutagen, teratogen and carcinogen.
17. Describe the health and environmental effects of common household chemicals.
18. List the criteria air pollutants, their sources, and health effects.
19. Explain ozone depletion, global warming and acid precipitation.
20. Describe sources and types of chemicals that cause water pollution.
21. Describe sustainable solutions to air and water pollution.
22. List the major chemical insecticides.
23. Describe the components of Integrated Pest Management.
24. Describe evolution by natural selection.
25. Sketch a food web.
26. Sketch the carbon, nitrogen and hydrological cycles.
27. Give examples of human impacts on these cycles, such as burning forests and dams.
28. Define and give examples of ecosystem services.
29. Use critical thinking skills to evaluate environmental issues.
30. Use a local or regional environmental issue as an example, evaluate the people with vested interests, their positions on the issue, their evidence, and propose a solution.
31. Analyze tabular or graphical data and make predictions based on the analysis.
32. Critically assess information from all sides of an environmental issue; choose a side; and defend the choice.

BIOL 2628C. Ecology of Big Bend Lecture & Laboratory

Course Description

Not Available

Student Learning Outcomes

Not Available

BIOL 2630. General Botany

Course Description

This course is an introduction to the fundamental principles of plant biology and botanical science. Topics covered include plant biochemistry, plant and fungal cell biology, plant reproduction, plant morphology and anatomy, plant physiology, plant genetics, plant ecology, Archaeal, bacterial, protistan, fungal and plant evolution.

Student Learning Outcomes

1. Be able to understand the cellular basis of plant life.
2. Understand plant and fungal development, growth, morphology, structure, and interaction with other species.
3. Describe basic cellular, morphological, and anatomical structure of representative plants and fungi.
4. Describe the function of representative plants and fungi including basic cellular and molecular processes such as membrane transport, photosynthesis, cellular respiration, life cycle of the cell, and methods of reproduction.
5. Understand the interrelationship of plants and fungi with their environment, how they adapt to their environment based on physiological requirements, and the role of plants and fungi in the ecosystem.
6. Understand relationships between plant and fungal communities, animal communities, and the ecosystems where they reside.
7. Hypothesize the directions of plant evolution and distribution based on interactions with pollination systems and the environment.
8. Examine plants using observational tools, scientific techniques, and empirical analysis.

BIOL 2630L. General Botany Lab

Course Description

This course is the laboratory course associated with the general botany lecture course. It will include an introduction to laboratory techniques dealing with plant biochemistry, plant, bacterial, and fungal cell biology, plant reproduction, plant morphology and anatomy, plant physiology, plant genetics, and plant evolution.

Student Learning Outcomes

1. Demonstrate appropriate skill levels in the use of the tools and technologies related to their major fields of study and obtain knowledge of the underlying theory and limitations of their use.
2. Learn the proper and safe use of all laboratory equipment, such as the use and care for the compound and dissecting microscope.
3. Learn to correctly measure, dispense and handle safely reagents and stains used in laboratory.
4. Apply critical thinking skills in the analysis of data and formation of well-developed arguments.
5. Be able to sort and assess the value of information and apply a variety of analysis techniques to arrive at rational answers to complex questions.
6. Demonstrate a thorough, up-to-date knowledge of the central concepts, theories, facts, and issues of botanical science.

BIOL 2630C. General Botany Lecture & Laboratory

Course Description

Combined BIOL 2630 and BIOL 2630L.

BIOL 2631. Introduction to Tropical Biology Lecture & Laboratory

Course Description

Not Available

Student Learning Outcomes

Not Available

BIOL 2632. Systematic Botany

Course Description

A study of classification and taxonomy of vascular plants. Topics covered in lecture and laboratory deal with taxonomic principles and philosophy, nomenclature, terminology, use of keys, and history of classification systems. The use of cytogenetics, anatomy, ecology, palynology, chemistry, and the computer in modern systematics is discussed. Students will learn to recognize many of the major plant families and will be taught the methods of botanical fieldwork. A plant collection will be made. Field trips are required, including a three-day excursion to southeastern Utah.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. Understand the components of scientific names.
2. Explain the difference between species, genus, and specific epithet.
3. Recognize the advantages and disadvantages of both scientific and common names.
4. Identify Four Corners examples of Lycopodiaceae, Selaginellaceae, Equisetaceae, Isoetaceae.
5. Identify selected Four Corners examples of Aspleniaceae, Dennstaedtiaceae, Dryopteridaceae, Marsileaceae, Ophioglossaceae, Polypodiaceae, and Pteridaceae.
6. Identify and explain the importance of Four Corners examples of Pinaceae and Cupressaceae.
7. Identify the Four Corners examples of Ephedraceae.
8. Understand terminology that applies to roots, stems, and leaves.
9. Understand terminology that applies to flowers, inflorescences, and fruits.
10. Identify examples from numerous Angiosperms found in the Four Corners region.

BIOL 2635. Plant & Animal Form and Function

Course Description

Focuses on comparative botany and zoology. Topics covered are plant structure and growth, transport, nutrition, reproduction and development in plants. Introduction to animal form and function, animal nutrition, circulation and gas exchange, immune system function and evolution, control of the internal environment, chemical signaling, reproduction and development, nervous systems, sensory and motor mechanisms.

Student Learning Outcomes

Upon successful completion of this course, students will be proficient in their ability to:

1. Describe the events that occur during fertilization, earliest cell divisions, and characteristics of distinct cell layers.
2. Describe the process of embryogenesis and mechanisms associated with transition from vegetative to reproductive development.
3. Describe the traits of green algae and land plants and describe their ecological importance.
4. Define distinctive animal characteristics and describe fundamental changes in morphology and development that occurred as animals diversified (symmetry, cephalization, germ layers, limbs, etc.).
5. Describe the major characteristics that differentiate the Ecdysozoa and the Lophotrochozoa and describe the basic traits of their phyla.
6. Describe the major evolutionary innovations that triggered the diversification of the protostomes, especially relating to the water-to-land transition, appendages and mouthparts, and metamorphosis.
7. List the basic traits of echinoderms and vertebrates and describe their ecological role.
8. Describe these innovations that occurred during the evolution of the vertebrates: jaws, limbs, flight, the amniotic egg, the placenta, and parental care.
9. Describe the main functions of the root and shoot systems and describe how variations in body size and shape contribute to harvesting water, light, and other resources in unique ways.
10. Describe the array of essential nutrients that plants require to support growth, how they are absorbed and specialized mechanisms plants use for obtaining nutrients.
11. Describe the selectivity of plant processing of sensory information, the processes of signal transduction and hormone production, and response of cells to hormonal stimulation.

12. Explain how animals maintain a constant environment inside their bodies and describe the various systems for generating and conserving heat and regulating body temperature.
13. Describe the structural and functional relationships of the vertebrate central nervous system and peripheral nervous system, and explain the mechanisms associated with electrical signaling and action potentials.
14. Describe how hormones affect embryonic development, sexual maturation, and homeostasis, and explain how hormone production and secretion are regulated by input from the nervous system, other hormones, and negative feedback.
15. Compare the innate and adaptive immune responses, and describe the mechanisms involved in innate immunity and adaptive immune responses.

BIOL 2635L. Plant & Animal Form and Function Lab

Course Description

Laboratory exercises and recitation to complement concepts presented in BIO 2510

Student Learning Outcomes

Upon successful completion of this laboratory course, students will be proficient in their ability to:

1. Identify laboratory safety equipment and explain lab safety protocol related to use of lab equipment and disposal of laboratory waste.
2. Identify the parts of the compound microscope and demonstrate appropriate use of compound microscope.
3. Identify the morphologic structures of a gymnosperm and describe the mechanisms of pollination and seed dispersal related to the environments in which they are found.
4. Identify the morphologic structures of angiosperm and describe the pollination strategies utilized by angiosperm.
5. Identify the surface structures of invertebrates and amphibians and describe their function related to protection and body support.
6. Identify the structures of animals associated with circulatory systems and gas exchange and compare these structures across different animal species.
7. Identify the structures of animals associated with the digestive and excretory systems and compare these structures across different animal species.
8. Identify the structures of animals associated with the reproductive system and compare these structures across different animal species.
9. Compare the developmental systems of different animal species.

BIOL 2640. Plant and Animal Form and Function

Course Description

Focuses on comparative botany and zoology. Topics covered are plant structure and growth, transport, nutrition, reproduction and development in plants. Introduction to animal form and function, animal nutrition, circulation and gas exchange, immune system function and evolution, control of the internal environment, chemical signaling, reproduction and development, nervous systems, sensory and motor mechanisms.

Student Learning Outcomes

1. Describe the diversity of animals and plants found on earth, how they function, and the processes/mechanisms that account for this diversity.
2. Identify the basic plant cell and tissue types, and describe their location and role in plant growth and nutrition.
3. Describe alternation of generations in plants from bryophytes to angiosperms, noting key evolutionary trends.
4. Describe the basic structure and function of respiratory, circulatory, and nervous systems.
5. Identify the structures and describe the functions of animal muscle tissue, integuments and support systems.
6. Describe the major structures and functions of animal digestive and excretory systems.
7. Describe the structures and functions associated with mammalian immune systems, endocrine systems, and reproductive systems.

BIOL 2640L Plant and Animal Form and Function Laboratory

Course Description

This laboratory course complements concepts learned in the lecture, focusing on comparative botany and zoology. Plant concepts covered include plant structure and growth, transport, nutrition, reproduction and development. Animal concepts covered include an introduction to animal form and function, nutrition, circulation and gas exchange, immune system function and evolution, homeostasis, chemical signaling, reproduction and development, nervous systems, and sensory/motor systems.

Student Learning Outcomes

1. Demonstrate appropriate use of microscopes.
2. Draw and label sketches of observed specimens.
3. Describe the diversity of structures found in prokaryotes, protists, bryophytes and ferns.
4. Describe and contrast the life cycles of gymnosperm and angiosperm.
5. Describe floral morphology and fruit production.
6. Describe structures associated with protection and support in plants and animals.
7. Perform dissections of selected animals and compare their organ systems.
8. Compare selected plant tissue systems.

BIOL 2642. Plant Form, Function and Diversity

Course Description

Introduction to plant biology summarizes the major disciplines of botany and includes study of the more important plant groups.

Student Learning Outcomes

1. Students will describe the process of scientific inquiry. Students should:
 - a. Understand that scientists rely on evidence obtained from observations rather than authority, tradition, doctrine, or intuition.
 - b. Students should value science as a way to develop reliable knowledge about the world.
2. Students will solve problems scientifically. Students should:
 - a. Be able to construct and test hypotheses using modern lab equipment (such as microscopes, scales, computer technology) and appropriate quantitative methods.
 - b. Be able to evaluate isolated observations about the physical universe and relate them to hierarchically organized explanatory frameworks (theories).
6. Students will communicate scientific information. Students should:

Communicate effectively about science (e.g., write lab reports in standard format and explain basic scientific concepts, procedures, and results using written, oral, and graphic presentation techniques.)
7. Students will apply quantitative analysis to scientific problems. Students should:
 - a. Select and perform appropriate quantitative analyses of scientific observations.
 - b. Show familiarity with the metric system, use a calculator to perform appropriate mathematical operations, and present results in tables and graphs.

BIOL 2642L. Plant Form, Function and Diversity Lab

Course Description

Introduction to plant biology lab: summarizes the major disciplines of botany and includes study of the more important plant groups.

Student Learning Outcomes

1. Students will describe the process of scientific inquiry. Students should:

- a. Understand that scientists rely on evidence obtained from observations rather than authority, tradition, doctrine, or intuition.
 - b. Students should value science to develop reliable knowledge about the world.
- 2. Students will solve problems scientifically. Students should:
 - a. Be able to construct and test hypotheses using modern lab equipment (such as microscopes, scales, computer technology) and appropriate quantitative methods.
 - b. Be able to evaluate isolated observations about the physical universe and relate them to hierarchically organized explanatory frameworks (theories).
- 3. Students will communicate scientific information. Students should:
 - a. Communicate effectively about science (e.g., write lab reports in standard format and explain basic scientific concepts, procedures, and results using written, oral, and graphic presentation techniques).
- 4. Students will apply quantitative analysis to scientific problems. Students should:
 - a. Select and perform appropriate quantitative analyses of scientific observations.
 - b. Show familiarity with the metric system, use a calculator to perform appropriate mathematical operations, and present results in tables and graphs.

BIOL 2644. Animal Form, Function and Diversity

Course Description

Introductory biology covering biological macromolecules, ecology, evolution, systematics, phylogeny, developmental biology, and a survey of major animal groups.

Student Learning Outcomes

Upon completion of this course the successful student should have an introduction and understanding of basic biological concepts, of the diversity of animals found on Planet Earth, how they function, and the processes and mechanisms that can account for that diversity.

BIOL 2644L. Animal Form, Function and Diversity Lab

Course Description

Introductory biology lab covering biological macromolecules, ecology, evolution, systematics, phylogeny, developmental biology, and a survey of major animal groups.

Student Learning Outcomes

Upon completion of this course, the successful student should have an understanding of basic biological concepts and the diversity of animals found on Planet Earth-including how individual animals function, as well as the processes and mechanisms that can account for the diversity of animals we encounter in our biosphere. Specifically, the lab portion of the course will introduce the student to the major animal phyla of the planet, with an emphasis on hands-on exploration and lab activities.

BIOL 2646. Field Biology

Course Description

A field-oriented course to be offered during semester break, spring break, interim session or summer. This course will consist of travel and field-based biological education at distant sites. The course may involve attendance at one or several preparatory classes before the fieldwork commences. The course may require additional travel and accommodation fees. The course may also involve rustic camping, swimming and/or strenuous field work although some offerings will be comfortable and accessible for all. Will present an opportunity for students to experience and learn about other organisms, habitats and biomes not available in the Four Corners area, such as coral reefs, humid tropical, cloud forest, arctic tundra, etc. No longer offered at San Juan College. Last semester offered was Summer 2007.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

- 1.1 Discuss building and maintenance of a demonstration sustainable harvest
- 1.2 Discuss local Panamanian farming practices and culture.
- 1.3 Discuss alternative farming practices.
- 1.4 Discuss some of the members of each of the main groups of animals and plants in Panama.
- 1.5 Discuss the ecological roles of some of the local species and describe some of the consequences of interactions and diversity.
- 1.6 Discuss factors involved in the stability of natural and man-made systems.
- 2.1 Demonstrate proper observation techniques for animals.
- 2.2 Demonstrate proper insect collecting techniques including inventory, identification, labeling, proper storage and organization of insects of Panama.
- 2.3 Demonstrate the use of GPS to navigate and record locations of work sites, travel sites and exact areas of collection.
- 4.1 Produce a journal and a formal report of summer activities including a review of the problems and solutions involved in farming of tropical rainforest areas, natural resources of Panama and their conservation and Panamanian culture.
- 4.2 Produce a topographic map showing farming areas, work sites, tour sites, collection information and sites using GIS software.
- 4.3 Assemble a working inventory of collected insect specimens
- 4.4 Participate in a voluntary presentation of documentation of the trip to staff and faculty at fall, 2006 convocation.

BIOL 2650. General Zoology

Course Description

Through systematic investigation of major animal groups, the student will apply structural, physiological, embryological, ecological characteristics, which exist in the field of zoology. The course will cover invertebrate and vertebrate representatives beginning at the microscopic level and advancing to the ecological realm.

Student Learning Outcomes

After successfully completing this course, the student should be able to:

1. Recall basic biological principles.
2. Apply basic biological concepts to the study of organisms.
3. Understand the origin and application of the binomial nomenclature and current taxonomy.
4. Recognize and correctly write scientific names and taxonomy.
5. Know characteristics of protozoans and animals.
6. Recognize and describe three common characteristics of protozoans.
7. Know characteristics of Phyla Porifera and Cnidaria.
8. Recognize and describe characteristics of Phyla Porifera and Cnidaria, and major classes of each.
9. Know characteristics of the worm phyla.
10. Recognize and describe characteristics of Phyla Platyhelminthes, Nematoda, and Annelida including major functions of each.
11. Know the characteristics of the invertebrate Phyla: Mollusca, Arthropoda, and Echinodermata.
12. Recognize and describe characteristics of each phyla and know the major classes and orders of Mollusca, Arthropoda and Echinodermata.
13. Distinguish characteristics of higher ordered organisms.
14. Describe characteristics and adaptations of chordates.
15. Know form, function, and characteristics of bony fish, cartilaginous fish and amphibians.
16. Recognize and describe form, function and classification of aquatic vertebrates from the Classes Osteichthyes, Chondrichthyes, and Amphibia.
17. Know the classification of Class Reptilia and Class Aves.

18. Recognize and describe form, function and classification of species in each of these phyla.
19. Know adaptations and taxonomy of mammalian species.
20. Recognize and describe major orders, families and species of Class Mammalia.

BIOL 2650C. General Zoology with Lab

Course Description

Laboratory, which may require dissection, is an integral part of this course

Student Learning Outcomes

After successfully completing this course the student should be able to:

1. Recall basic laboratory safety, microscope skills.
2. Utilize proper procedure in the lab and with microscopes.
3. Give appropriate taxa of protists for all specimens provided.
4. Recognize by site specimen provided.
5. Know structures and vocabulary of sponges and cnidarians.
6. Recognize and describe structures for each phyla.
7. Know characteristics of worms specimen provided in lab.
8. Recognize and describe characteristics of Classes: Turbellaria, Trematoda, and Cestoda and Genera: Ascaris, Lubricus, and Hirudo
9. Know characteristics of the mollusk classes.
10. Recognize and describe characteristics of Classes: Bivalvia, Gastropoda, and Cephalopoda.
11. Know the characteristics and significance of Echinodermata.
12. Recognize and describe adaptations of starfish classes and Class Holothuroidea
13. Distinguish characteristics of major taxa of arthropods.
14. Recognize and describe characteristics and adaptations of Subphyla Chelicerata, Crustacea, and Uniramia.
15. Know form, function, and characteristics of chordates.
16. Recognize and describe form, function of the major taxa for Phylum Chordata and compare development of Subphyla: Urochordata, Cephalochordata, and Vertebrata.
17. Know the structure and classification of vertebrate.
18. Recognize and describe form, function and adaptations of organisms for Class Reptilia and Class Amphibia
19. Know adaptations and taxonomy of avian and mammalian species.
20. Recognize function in adaptation of Class Aves and Class Mammalia.

BIOL 2710. Biotechnology I

Course Description

The goal of this course is to provide you with the core conceptual foundation and hands on experience required to perform basic laboratory techniques used in a biotechnology laboratory. It is essential that these skills are mastered, since this will be the basis for all of the techniques used in future courses. This class will provide theory and experience in lab safety and measurement, bacterial transformations and cloning, recombinant DNA, gel electrophoresis, tissue culture and basic bioinformatics skills.

Student Learning Outcomes

Outcome #1: Discuss the elements of laboratory safety

Components:

- a. Explain the four types of laboratory safety controls including how they are designed to keep laboratory workers safe
- b. Identify individuals and organizations responsible for workplace safety
- c. Recognize chemical, biological and physical hazards present in the biotechnology lab
- d. Demonstrate the safe handling, labeling and disposal of chemical, biological and physical hazards

Outcome #2: Demonstrate techniques of laboratory measurement.

Components:

- a. Explain the units of measurement used in the biotechnology laboratory
- b. Define key terminology used in measurement and solution making
- c. Demonstrate appropriate selection and usage of appropriate instruments for measurements based on the application they will be used for
- d. Demonstrate the ability to accurately use pipet-aids (serological pipets), micropipettors, and electronic balances

Outcome #3: Demonstrate the preparation of solutions.

Components:

- a. Solve basic equations used in making solutions including:
 - i. mass/volume solutions
 - ii. percent solution
 - iii. molar solutions
 - iv. making dilute solutions using a concentrated stock
- b. Demonstrate the basic steps used in solution making including technical considerations and safety
- c. Demonstrate the ability to accurately use pH meters

Outcome #4: Perform a bacterial transformation with plasmid DNA.

Components:

- a. Explain the fundamentals of bacterial transformation
- b. Define plasmid or vector DNA
- c. Explain and utilize antibiotic selection
- d. Demonstrate correct standard practices used in working with bacteria
- e. Perform a bacterial transformation experiment and interpret results
- f. Calculate the transfection efficiency of a bacterial transformation.

Outcome #5: Utilize a mini-prep to extract plasmid DNA from bacteria

Components:

- a. Explain the purpose of a mini-prep
- b. Explain the function of the major steps in an alkyllysis mini-prep
- c. Perform a mini-prep

Outcome #6: Utilize restriction enzymes to perform a restriction digest

Components:

- a. Explain what restriction enzymes are and how they are used in the biotechnology laboratory
- b. Demonstrate an understanding of the technical considerations associated with using restriction enzymes, both singly and in a double digest
- c. Utilize restriction enzymes to cut lambda DNA and plasmid DNA

Outcome #7: Perform agarose gel electrophoresis

Components:

- a. Explain how gel electrophoresis is used to separate macromolecules
- b. Demonstrate an understanding of how DNA migrates through an agarose gel and factors which can influence its' mobility
- c. Explain the use of loading dye, ethidium bromide and DNA size markers or ladders in gel electrophoresis
- d. Prepare and run agarose gels of different percentage
- e. Interpret agarose gel results and properly label a gel photograph

Outcome #8: Perform a basic subcloning experiment.

Components:

- a. Define subcloning
- b. Utilize previously taught skills to move a gene from one plasmid to another

- c. Interpret results from subcloning experiment

Outcome #9: Perform a ligation reaction

Components:

- a. Describe the use of ligations and their importance in recombinant DNA
- b. Explain the chemical reaction involved in ligation and identify required reaction components
- c. Utilize a ligation reaction in a cloning experiment

Outcome #10: Demonstrate Cell Culture Techniques

Components:

- a. Define cell culture
- b. Explain the usage of different cell lines, including immortalized and primary cells lines
- c. Demonstrate knowledge of the proper selection, preparation and storage of media
- d. Calculate quantities of reagents needed to formulate media
- e. Describe important technical considerations associated with performing cell culture
- f. Perform basic cell culture tasks, including:
 - i. Starting cells
 - ii. Feeding, splitting & counting cells
 - iii. Harvesting cells
- g. Utilize an on-line database to search for cell lines and appropriate growth media

Outcome #11: Utilize online resources to perform basic bioinformatics tasks.

Components:

- a. Utilize PubMed to search for scientific papers by author, date, subject and relevance
- b. Utilize an on-line search program to perform a basic restriction enzyme search and design a simple subcloning experiment

Outcome#12: Discuss the history and the current state of the field of biotechnology

Components:

- a. Define biotechnology
- b. Describe the many scientific disciplines that contribute to biotechnology
- c. Provide examples of historic applications of biotechnology
- d. Describe different types of biotechnology and their applications

Outcome #13: Discuss current topics of importance in Biotechnology

Components:

Stem Cells and Cloning

- a. Explain what stem cells are and their origins
- b. Explain why stem cells are so useful in biomedical research
- c. Describe obstacles to using stem cells in research and/or therapies
- d. Outline the ethical, religious and political concerns associated with embryonic stem cells
- e. Identify the relationship between stem cells and cloning
- f. Differentiate between therapeutic and reproductive cloning.

BIOL 2711. Biotechnology Laboratory Techniques I

Course Description

Not Available

Student Learning Outcomes

Not Available

BIOL 2715. Biotechnology II

Course Description

The goal of this course is to provide theory and experience with protocols used to characterize and manipulate nucleic acids. This course will reinforce and build upon techniques learned in Biotechnology I. Techniques include DNA isolation and quantification, PCR, qPCR, gel electrophoresis, recombinant DNA technology, cloning, DNA sequencing, site-directed mutagenesis, tissue culture, and basic bioinformatics skills. Current issues and topics related to biotechnology will be explored.

Student Learning Outcomes

Outcome #1: Perform phenol-chloroform DNA isolation.

Components:

- a. Perform phenol-chloroform DNA isolation
- b. Describe the function of the four basic steps of phenol-chloroform DNA isolation
- c. Identify important technical considerations associated with working with DNA

Outcome #2: Analyze the quantity and quality of DNA in a sample.

Components:

- a. Describe how a spectrophotometer works
- b. Utilize a spectrophotometer to quantify DNA samples
- c. Interpret data provided by a spectrophotometer
- d. Utilize an agarose gel to verify the quality of a DNA sample

Outcome #3: Utilize the polymerase chain reaction (PCR) to amplify and analyze genetic sequences.

Components:

- a. Explain the uses of the polymerase chain reaction and its importance in Biotechnology
- b. Identify the essential components of a PCR reaction and technical consideration associated with their use
- c. Explain the importance of primer design to the success of a PCR reaction
- d. Describe the three steps of the PCR reaction
- e. Perform multiple PCR- based experiments and identify how PCR is used differently in those experiments.

Outcome #4: Utilize real-time polymerase chain reaction (qPCR) to amplify and quantify a genetic sequence.

- a. Explain the fundamental principle underlying real-time PCR
- b. Describe the applications of real-time PCR
- c. Explain similarities and differences in real-time versus traditional PCR
- d. Describe the different types of reporter methods used in real-time PCR
- e. Conduct a real-time PCR experiment and interpret results
- f. Explain the use of and interpret results from a Melt Curve Analysis

Outcome #5: Demonstrate the procedures required to determine the DNA sequence of a gene.

Components:

- a. Explain how the dideoxy or chain termination method of DNA sequencing works, both in manual and automated (i.e. dye terminator) sequencing reactions
- b. Describe technical considerations associated with sequencing
- c. Perform a sequencing reaction using fluorescently labeled dideoxy nucleotides
- d. Interpret a sequencing gel
- e. Discuss goals and benefits of genome sequencing including the Human Genome Project.
- f. Describe the three steps of genome sequencing: preliminary sequencing, finishing and annotating
- g. Describe "next generation" high-through put sequencing methods.

Outcome #6: Perform the techniques required to clone a gene.

Components:

- a. Describe the process used to clone a gene
- b. Identify the characteristics of a cloning vector
- c. Perform a variety of previously learned techniques in order to clone a gene, including:
 - i. ligation

- ii. bacterial transformation
- iii. antibiotic screening
- iv. mini-preps
- v. restriction enzyme digestion
- d. Perform a variety of new techniques in order to clone a gene, including:
 - i. TA Cloning method
 - ii. Blue-white screening

Outcome #7: Perform a PCR-based site-directed mutagenesis protocol.

Components:

- a. Define site-directed mutagenesis and explain the theory underlying PCR-based site-directed mutagenesis
- b. Describe the uses of site-directed mutagenesis and its importance in biotechnology
- c. Outline the function of the three steps utilized in PCR-based site-directed mutagenesis
- d. Discuss technical considerations associated with site-directed mutagenesis, particularly primer design
- e. Perform a site-directed mutagenesis experiment and interpret results

Outcome #8: Discuss techniques involved in DNA forensics and conduct a DNA fingerprinting protocol.

Components:

- a. Describe the basic premise underlying DNA forensics
- b. Explain the uses of DNA forensics, including emerging uses
- c. Explain what short-tandem repeat (STR) analysis is and why it is currently the forensic DNA technique of choice
- d. Perform a basic DNA fingerprinting experiment (STR analysis) and interpret results

Outcome #9: Utilize online resources to perform basic bioinformatics tasks.

Components:

- a. Utilize Genbank to search for genomic sequences using gene name or accession number; interpret data found in Genbank entry and link to related entries
- b. Utilize BLAST to compare genomic sequences, find unknown genomic sequences, and find homologous genes in different species; interpret data from BLAST search and link to related entries
- c. Utilize on-line primer design software to design and evaluate PCR primers for a given genomic sequence

Outcome #10: Analyze scientific literature related to in-lab experiments

Components:

- a. Explain aims and methods of assigned scientific papers
- b. Interpret and critically analyze results and conclusions from scientific papers
- c. Relate material found in literature to in-class experiments

Outcome #11: Discuss current topics of importance in Biotechnology

Components:

Genetically Modified Organisms:

- a. Describe the impact of biotechnology and GM crops on the agricultural industry, both in the US and worldwide
- b. Outline the pros and cons of GM crops, including environmental, societal, and health concerns
- c. Identify GM crops currently available on the market, and those in production
- d. Describe the role of the USDA and/or EPA in regulating genetically modified crops
- e. Describe current regulations for labeling of biotechnology products
- f. Describe methods used to identify GM crops including ELISA and PCR

Gene therapy:

- a. Define gene therapy
- b. Explain different methods used in gene therapy
- c. Explain the history of gene therapy, including the current state of gene therapy in the U.S.
- d. Describe obstacles to using gene therapy in research and/or therapies
- e. Outline ethical concerns associated with gene therapy

BIOL 2720 Biotechnology III

Course Description

Provides theory and experience with protocols used to characterize and manipulate nucleic acids and proteins. Builds on techniques learned in Biotechnology II. Techniques include RNA and protein isolation and quantification, RT-PCR, RNA interference, mammalian transfections, polyacrylamide gel electrophoresis, 2-D gel analysis, Western blotting, ELISAs, and basic bioinformatics and proteomics skills. Current issues and topics related to biotechnology will be explored.

Student Learning Outcomes

Outcome #1: Demonstrate the isolation of RNA from cell pellets.

Components:

- a. Identify technical consideration associated with working with RNA
- b. Describe how the TRIzol or TriReagent method of RNA isolation works
- c. Perform an RNA isolation from cell pellets
- d. Quantify RNA using a spectrophotometer

Outcome #2: Employ reverse transcriptase PCR (RT-PCR) protocols.

Components:

- a. Define RT-PCR
- b. Describe the uses of RT-PCR and how these differ from traditional (DNA-based) PCR.
- c. Describe the multi-step process used in RT-PCR
- d. Explain the different methods of “priming” for cDNA synthesis and why one method might be chosen over another
- e. Explain why primer design is critical when performing RT-PCR
- f. Explain the importance of running a control PCR using a “housekeeping gene” following cDNA synthesis
- g. Set up, run and interpret results from an RT-PCR reaction using freshly isolated RNA

Outcome #3: Employ and analyze a real-time reverse transcriptase PCR protocol.

Components:

- a. Differentiate between applications of real-time PCR using DNA as a source versus real-time PCR using RNA as a source
- b. Utilize real-time RT-PCR to quantify and analyze results from siRNA transfection

Outcome #4: Describe RNA interference (RNAi)

Components:

- a. Define RNA interference and its role in transcriptional silencing
- b. Explain the siRNA activation pathway
- c. Describe the biological functions of RNAi
- d. Explain the uses of siRNA technology in the field of biotechnology

Outcome #5: Perform a mammalian transfection using siRNA

Components:

- a. Describe basic principles of transfection, including lipid-mediated transfections
- b. Describe the applications of transfection in biotechnology
- c. Describe factors which influence transfection efficiency
- d. Perform a transfection of siRNA into mammalian cells
- e. Utilize real-time PCR to analyze data from transfection and interpret results

Outcome #6: Examine and utilize a variety of tools and techniques to characterize proteins

Components:

- a. Describe technical considerations associated with working with proteins
- b. Define proteomics
- c. Explain research applications of proteomics
- d. Describe challenges associated with studying the proteome

- e. Utilize low- and high-throughput proteomics techniques in the laboratory
- f. Discuss proteins as biotechnology products in medicine, food and manufacturing

Outcome #7: Perform protein quantification using a Bradford Assay

Components:

- a. Identify technical considerations associated with performing protein Set up and perform a Bradford assay to quantify protein
- b. Utilize results from Bradford assay to generate a standard curve and quantify unknown protein samples

Outcome #8: Examine the applications of and perform polyacrylamide gel electrophoresis

Components:

- a. Describe a polyacrylamide gel including its composition and construction
- b. Identify uses, advantages and disadvantages of polyacrylamide gels versus agarose gels
- c. Describe technical considerations associated with pouring and running polyacrylamide gels
- d. Prepare and run a polyacrylamide gel to separate protein molecules by molecular weight

Outcome #9: Employ and analyze a 2-dimensional gel electrophoresis protocol

Components:

- a. Describe the function of 2-D gels and identify the two dimensions used in 2-D gel electrophoresis
- b. Define isoelectric point and relate this to the pH of a protein
- c. Explain the function of the isoelectric focusing and polyacrylamide gel electrophoresis steps
- d. Explain how pH range of a strip gel affects resolution
- e. Identify proper protein sample preparation techniques and precautions used in 2-D gel electrophoresis
- f. Prepare and run a 2-D gel electrophoresis to separate out molecules from a heterogeneous protein sample

Outcome #10: Demonstrate a western blotting protocol.

Components:

- a. Describe the function of a Western blot
- b. Describe steps used to prepare proteins prior to running on a Western blot
- c. Explain how to correctly transfer a gel to a nitrocellulose membrane
- d. Describe the principle behind blocking
- e. Explain the principles and technique behind immunoblotting membranes for specific protein detection, including the function of the primary and secondary antibodies
- f. Utilize a western blot protocol to detect a specific protein and interpret results including determining molecular weight

Outcome #11: Perform an ELISA assay

Components:

- a. Define an ELISA
- b. Identify the applications of ELISAs
- c. Describe how an ELISA works; i.e. the roles of the different antibodies in the detection of specific proteins
- d. Compare and contrast the function of an ELISA with that of a Western Blot
- e. Utilize a simple quantitative ELISA protocol to detect a specific protein and interpret results

Outcome #12: Analyze scientific literature related to in-lab experiments

Components:

- a. Explain aims and methods of assigned scientific papers
- b. Interpret and critically analyze results and conclusions from scientific papers
- c. Relate material found in literature to in-class experiments

Outcome #13: Utilize online resources to perform basic bioinformatics and proteomics tasks.

Components:

- a. Utilize an on-line search program to search for transcription factors found within a given genomic sequence
- b. Utilize appropriate on-line resources to identify unknown protein sequences

BIOL 2810. Scientific Writing**Course Description**

Concentrates on the format and organization of scientific papers, as well as the ability to express ideas and concepts clearly and concisely.

Student Learning Outcomes

Upon completion of this course, students will:

1. Be able to perform comprehensive scientific literature reviews.
2. Understand the basic principles of scientific writing.
5. Be able to write an annotated bibliography, research proposal, and scientific paper.
6. Improve writing skills.
7. Follow and understand style guidelines for scientific writings.
8. Understand experimental design.
9. Critically review scientific writing of peers.

Biomedical Technology (BMET)**BMET 1140 Applied Human Biology for Biomedical Technology****Course Description****Course Description**

Essential human biology, anatomy, physiology and medical terminology for biomedical equipment technicians. Focus on the vocabulary necessary for effective communication in the hospital environment as part of the health care team.

Student Learning Outcomes

1. Define the anatomic terms used to refer to the body.

2. Define the basic units of life and how they interact and function.
3. Classify the organization of the body.
4. Explain the normal functions of each body system.
5. Discuss how the different body systems work together to maintain homeostasis.
6. Explain the nature of disease and how it affects each body system.

BMET 1141. Medical Electronics and Safety in Healthcare

Course Description

Introduction to the biomedical equipment technology field. Operation of common biomedical equipment to include pressure and temperature systems, infusion devices, patient monitors, and other physiologic and patient systems. Hospital safety and health regulations explained.

Student Learning Outcomes

1. Identify historical developments of devices, explain the role of BMET personnel, and categorize the usage and methods of medical devices relating to the human body.
2. Identify and define, contrast, explain, and demonstrate the use of medical diagnostic and measurement devices.
3. Identify and define, compare, explain, and demonstrate the use of medical treatment devices.
4. Identify and define, and demonstrate medical system safety procedures, troubleshooting techniques, and testing methods.
5. Identify and compare, define, and demonstrate usage of biomedical test and calibration equipment.

BMET 2211. CBET Exam Preparation

Course Description

An overview of the Certified Biomedical Equipment Technician exam. Topics include anatomy and physiology, electronics principles, safety issues, equipment operation, and equipment troubleshooting.

Student Learning Outcomes

1. Identify the fundamentals of anatomy and physiology and match them to the interaction with medical equipment.
2. Identify and differentiate between public safety measures in the healthcare industry.
3. Categorize electricity and electronic aspects of the biomedical field and contrast their operation functions.
4. Contrast healthcare medical devices related to their functions and operations.
5. Identify and categorize problem solving steps and procedures related to multiple medical devices.
6. Identify and compare healthcare information technology standards, regulations, and operational methods in modern medical facilities.

BMET 2241. Advanced Medical Electronics

Course Description

Advanced study in biomedical equipment to include cardiovascular, pulmonary, telemetry and other critical life support systems.

Student Learning Outcomes

1. Identify and define, contrast, and explain patient safety and demonstrate patient safety electrical risk device maintenance.
2. Identify and define, contrast, and explain medical facility guidelines, codes, and standards and their associated regulatory agencies.
3. Identify and define, contrast, and explain electrodes, sensors, and transducers used in health care instrumentation.

4. Identify and define, contrast, and explain patient respiratory needs and distinguish between their related medical devices.
5. Identify and define, contrast, and explain intensive care unit (ICU) characteristics, types, devices, and support and demonstrate maintenance procedures for (ICU) equipment and devices.
6. Identify and define, contrast, and explain operating room needs, environments, and procedures, and distinguish between their medical devices.
7. Identify and define, contrast, and explain the need for and support requirements of medical imaging devices.
8. Identify and define, contrast, and explain clinical laboratory needs, functions, and equipment and demonstrate maintenance procedures for laboratory equipment and devices.

BMET 2998. Biomedical Technology Internship

Course Description

Student Learning Outcomes

Varies

Business Administration (BUSA)

BUSA 1110. Introduction to Business

Course Description

Fundamental concepts and terminology of business including areas such as management, marketing, accounting, economics, personnel, and finance; and the global environment in which they operate.

Student Learning Outcomes

Students should be able to:

1. Explain how business and entrepreneurship affect the quality of life and the world around us.
2. Explain the characteristics of the different forms of business ownership.
3. Perform basic stakeholder analysis concerning accountability, ethics and social responsibility of business.
4. Demonstrate knowledge of the various dimensions of the business environment including political and legal, socio-cultural, environmental, diversity, economic, technological, and global.
5. Describe the purpose and functions of finance, operations, marketing, management, accounting, and information systems.
6. Demonstrate basic skills such as use of common business terminology, information search skills, presentation and writing skills, and team skills.
7. Describe the purpose and content of a business plan.

BUSA 1115. Business English I

Course Description

This course focuses on the skill development with an emphasis on correct grammar, punctuation, sentence structure, vocabulary, preparation of business letters and reports, and on presenting information in a logical, forceful and acceptable form.

Student Learning Outcomes

Students should be able to:

1. Identify basic parts of speech
2. Use nouns, pronouns, verbs, prepositions, and conjunctions correctly.
3. Use subject/verb agreement principles correctly.

4. Demonstrate proper use of phrases and clauses and compose simple, compound, complex, and compound/complex sentence structures.
5. Demonstrate proper use of commas, semicolons and colons correctly in sentences and paragraphs.
6. Demonstrate proper grammatical usage for effective spoken and written English, in the business environment.
7. Develop coherent sentences and paragraphs using transitions, pronouns, and repetition of key words.
8. Utilize English skills in proofreading, editing, and writing business documents and various forms of communication such as emails, text messages, letters, reports, etc.

BUSA 1117. Business English II

Course Description

Training and application of the fundamentals of punctuation, numbers, basic writing and editing skills.

Student Learning Outcomes

Students should be able to:

1. Effective written, oral, and electronic business communication skills.
2. Ability to work in a team-based environment.
3. Application of personal integrity and ethical behavior.
4. Initiative and analytical thinking.
5. Competence using current technology and software.
6. Proficiency in keyboarding, numeric keypad, and formatting skills.
7. Time management and organizational skills.

BUSA 1130. Business Professionalism

Course Description

Focuses on developing professional behavior appropriate for the business environment. Topics include: Life Management, goal setting, workplace etiquette, job search skills, interviewing, teamwork and team building, motivation, leadership, business communication and workplace interaction.

Student Learning Outcomes

Students should be able to:

1. Communicate and interact in various business settings using professional etiquette.
2. Leverage self-awareness in order to interact successfully with others in the business world.
3. Prepare for a successful business career by using a variety of professional planning tools.
4. Demonstrate effective life management skills such as goal-setting, leadership, stress & time management, organizational skills, and conflict resolution.
5. Apply ethical decision-making in business situations.

BUSA 1140. Conflict Resolution in the Workplace

Course Description

Examines techniques for identifying and resolving conflict in the work environment.

Student Learning Outcomes

Students should be able to:

1. Understand one's own reaction to a difficult person and/or behavior.
2. Explore one's own attitudes and reactions to difficult people and situations.
3. Devise alternative coping strategies for some of the more common difficult personalities, problems, behaviors and situations.

BUSA 1160. Ethics in organizations

Course Description

Introduction to ethical issues in business, government and non-profit organizations and how to deal with those issues.

Emphasis on ethical reasoning and cases of ethical and unethical behavior in management and the professions.

Student Learning Outcomes

At the conclusion of the course, you should be able to:

1. Apply ethical reasoning and critical analysis to real world business situations.
2. Identify ethical issues that arise in everyday business and social situations.
3. Identify and analyze how businesspeople make ethical decisions and handle ethical issues.
4. Recognize how businesses evaluate social responsibility activities.
5. Understand how ethical concepts are incorporated into key business decisions.
6. Recognize major global ethics issues in international business.

BUSA 1170. Introduction to Quality Management

Course Description

Introductory practices of total quality management practices aimed at all levels of an organization to continually improve performance to include competitiveness in today's business world.

Student Learning Outcomes

Students should be able to:

1. Describe the critical connections between quality, organizational effectiveness, and professional advancement in today's competitive global economy.
2. Discuss the philosophies of quality management and continuous improvement.
3. Apply fundamental quality principles and tools in a specific organization and in personal life.
4. Explain how strategic plans guide effective organizations.
5. Describe the costs of quality.
6. Explain how benchmarking can be used to increase organizational effectiveness.
7. Demonstrate using a structured problem-solving process.
8. Describe why business results are key to effective organizations.

BUSA 1171. Fundamentals of Continuous Quality Improvement

Course Description

Focuses on data for clarifying customer expectations for service and product quality; choosing quality standards for business performance; selecting measures and indicators of quality and customer satisfaction; assessing effective ways to evaluate and improve both quality and customer satisfaction, improving quality based on customer feedback; and planning for practical application.

Student Learning Outcomes

Upon successful completion of this course, you will be able to:

1. Describe the critical connections between quality measurement, organizational effectiveness, customer satisfaction, and employee performance in today's competitive economy.
2. Explain how quality measurement is a powerful strategic management tool.
3. Use data driven measurement tools.
4. Identify key quality indicators for customer satisfaction and/or system performance in a specific organization.
5. Demonstrate practical application of quality measurements in a specific organization.

BUSA 1172. Quality Tools

Course Description

Focuses on recognizing and understanding applications for quality tools, developing skill and confidence in using quality tools, selecting and integrating quality tools to improve a specific work process; and planning for practical application of quality tools at work and in personal life.

Student Learning Outcomes

Upon successful completion of this course, you will be able to:

1. Select, use, and integrate multiply quality tools to improve a specific system or process.

2. Define statistical process control.
3. Describe potential applications for quality tools that improve employee productivity, organizational effectiveness, and customer satisfaction.
4. Identify opportunities for implementation of quality tools in a specific organization or personal life.

BUSA 1180. Business Math

Course Description

Applies basic mathematical operations to business and accounting applications.

Student Learning Outcomes

Students should be able to:

1. Select and interpret relevant information in narrative problems to solve a given business situation.
2. Choose appropriate formulas to solve quantitative business-related problems.
3. Use formulas accurately to solve quantitative business-related problems.

BUSA 1195. Introduction to Project Management

Course Description

This course teaches the basics of using Microsoft Project to help you manage projects, keep track of deadlines, resources, task distribution, constraints and contingencies. This is an inter-disciplinary course designed to assist in meeting project deadlines in all fields of study.

Student Learning Outcomes

1. Be proficient in customizing a project management life cycle and developing a comprehensive project plan.
2. Have acquired proficiency in all basic PM tools and techniques with an emphasis in communications, risk analysis, cost estimation and budgeting, and quality control.
3. Have obtained knowledge of tools for project scheduling, templates for managing a project, and an in-depth knowledge of techniques to control cost schedule.
4. Be an effective communicator, and demonstrate effective interpersonal communications skills in a team setting.

BUSA 1197. Introduction to Project Management

Course Description

This course introduces and applies the concepts, techniques and tools of project management in terms of scope, duration and costs.

Student Learning Outcomes

At the conclusion of the course, you should be able to:

1. Recognize and correctly use the terminology of project management as well as simple project management techniques including Gantt charts.
2. Construct and read basic Gantt charts and track scheduling, budgeting, timelines and resource allocation.
3. Construct flowcharts and critical paths to document project management inputs.

BUSA 1198. Project Management Fundamentals

Course Description

Provides an introduction to the field of project management in theory and practice, addresses the role of project managers in the current world of rapid change, increased competitive forces and increased expectations for the successful delivery of projects in organizations and exposes the student to “hard” and “soft” techniques of project management.

Student Learning Outcomes

Students completing this course should be able to:

1. Understand principles and techniques used by project managers.
2. Master key concepts, techniques, and decision tools used by project managers.
3. Identify critical behavior for successfully managing projects.

4. Determine the components of a project life cycle.
5. Develop project objectives.
6. Utilize work breakdown structures.
7. Utilize resource leveling techniques.

BUSA 1210. Records Management

Course Description

Principles, methods and procedures for the selection, operation and control of manual and automated records systems.

Student Learning Outcomes

Students should be able to:

1. Recognize Records Control and Management systems.
2. Utilize vocabulary pertaining to records management.
3. Recognize the importance of using organized, efficient records management systems.
4. Recognize various kinds of filing equipment and supplies (paper and electronic).
5. Apply ARMA (Association for Records Managers and Administrators) rules in alphabetic card and correspondence filing exercises.
6. Apply procedures for maintaining and controlling records including: requisitioning, charging-out, returning, and reserving files.
7. Discuss records retention cycle including: control procedures for transferring, storing, and destruction of files.
8. Recognize the use of color as a method for improving efficiency in filing systems.

BUSA 1220. Non-profit Business Management

Course Description

Students will examine operational and philosophical bases for not-for-profit entities, including IRS designations, partnerships, project planning, marketing and funding sources.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Understand nonprofit management, the nonprofit sector, and nonprofit organizations.
2. Manage the nonprofit organizations.
3. Obtain and manage resources

BUSA 1240. Customer Service and Relations

Course Description

Examines the techniques for successful customer service, how to handle difficult and irate customers, customer complaints, and to build relationships with internal and external clients.

Student Learning Outcomes

Students should be able to:

1. Understand who are internal and external customers.
2. Recognize the 6 keys to becoming customer centric.
3. Analyze "moments of truth" in every customer interaction.
4. Build internal and external customer feedback processes to fix problems.
5. Connect customer service with sales.

BUSA 1245. Organizational Skills for the Workplace

Course Description

Examines techniques for organizing workplace space and filing systems.

Student Learning Outcomes

Students should be able to:

1. Understand the need to develop an organizational mindset.

2. Identify areas of self, home and work that need better organization.
3. Present before and after-action plans to address organizational deficiencies.
4. Analyze, implement and evaluate specific organizational techniques.

BUSA 1250. Stress Management for the Workplace

Course Description

Examines techniques for recognizing and managing stress in the work environment.

Student Learning Outcomes

Students should be able to:

1. Recognize and mitigate stress/distress triggers at home, in life, on the job.
2. Respond appropriately to stress and perceptions of stressful situations.
3. Understand long-term health consequences of chronic higher levels of stress.

BUSA 1270. Time Management

Course Description

Examines methods of managing personal and professional time during the workday.

Student Learning Outcomes

At the conclusion of the course, you should be able to:

1. Plot out significant personal and professional goals for short, intermediate and long-term time frames.
2. Learn rudiments of block scheduling to increase routine efficiency.
3. Recognize time wasters and how to overcome them.

BUSA 1280. Self-Presentation and Etiquette

Course Description

Introduction to business etiquette based on tradition, social expectations, and professional behavior standards.

Student Learning Outcomes

Students should be able to:

1. Define professionalism, personality and attitude; describe the importance of personal financial management.
2. Name methods of dealing with stress; describe and defend the importance of professional behavior.
3. Identify and define: ethics and its impact both personally and professionally.
4. Define describe, or identify the concepts of empowerment, responsibility, and accountability; define productivity and its impact on organizational success; identify the primary functions performed by the human resource department.
5. Describe, identify, name, or define: the impact effective communication has in the work-place; the three types of communications media; define the basics of: utilizing modern workplace telecommunication tools; identify what motivates people.
6. Describe, identify, name, display, or define the basics of: conflict and its impact on performance.
7. Utilize the self-discovery process to identify the right career; identify the steps for building a resume package.
8. Explain strategies to implement when invited to an interview.

BUSA 1310. Office Procedures

Course Description

Student will learn the importance of following the proper procedures for maintaining an efficient office required in today's technology advanced business environment. Through the use of a simulation, students will utilize the skills acquired through their training program and work experience to prepare documents and complete common business tasks.

Student Learning Outcomes

1. Demonstrate an awareness of the processes, available technologies, and tools used for each project; modify the processes as they progress developing more effective, efficient results.

2. Select appropriate technology and software applications using existing data files, company guidelines, supervisor instructions, and information from other team members to prepare documentation and complete assigned tasks.
3. Organize, interpret and evaluate the results of your own work and share information as appropriate with other team members and other teams in the class.
4. Work productively to analyze and manipulate raw data, prepare mailable materials that respond to situations and identified criteria, and determine the appropriate media through which to communicate results.
5. Work individually and collaboratively as a team member within the course and within the office simulation.
6. Create and execute a professional presentation using PowerPoint (or alternate) presentation software.
7. Evaluate the advantages and disadvantages of working in offices of different sizes and types.
8. Develop a list of prospective employers and identify the sources of job opportunities in the community. Including advancement opportunities within this area.
9. Prepare a work portfolio with a multiple example of common office documents and completed projects including but not limited to: personal resume, letter of application, reference, transcript, and certificate of recognition.
10. Prepare for and complete an employment interview with administrators at San Juan College. And demonstrate use of all common interview related processes.

BUSA 1320. Supervision

Course Description

This course is intended for those who either want to become supervisors or want to improve their present level of supervisory skills and knowledge. Management principles and their application to actual on-the-job situations are presented enabling student to contribute more effectively to the goals of the organization.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Describe the roles of a supervisor and identify general supervisor functions, and what makes a successful supervisor.
2. Discuss the supervisor as a leader, explaining leadership theories and management styles presented through examples.
3. Develop and communicate guidelines for groups and teams in the workplace, emphasizing social responsibility and ethics in the workplace.
4. Discuss in detail the function of the supervisor by creating goals, problem solving, and decision-making.
5. Identify, examine, and discuss the core skills of a supervisor.
6. Distinguish and describe the role of supervision in human resources in an organization and discuss effective processes in the selection of employees, training employees, and conducting performance appraisals.
7. Define modern communication theory and discuss the importance of effective communication.
8. Describe human motivation theory and effective methods for building relationships.
9. Identify the techniques of managing change and stress.

BUSA 1996. Special Topics in Business

Course Description

Varies

Student Learning Outcomes

BUSA 1999. Business Co-op work phase

Course Description

Varies

Student Learning Outcomes

Varies

BUSA 2088. Business Administration Specialty

This course allows students to apply computer information technology elective credit towards a Business Administration program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

BUSA 2100. Agile Project Management**Course Description**

Students will build off of their existing project management knowledge to dive deeply into Agile project management methodologies. They will work through a summative project where they will use Agile concepts, tools and techniques to successfully manage a technical project from start to finish.

Student Learning Outcomes

Students will:

1. Manage a technical project from start to finish using key Agile methodologies, concepts, tools and frameworks.
2. Create and monitor a tracking board to organize sprints and share information with the project team throughout the lifecycle of an Agile project.
3. Initiate an Agile project by decomposing a release plan into user stories and analyzing project risks.
4. Plan an Agile kickoff sprint in PM software by grooming a backlog, establishing a point structure, and committing to the sprint.
5. Develop a hypothetical scrum team through executing a sprint by creating and analyzing a burn-down chart.
6. Develop a plan continuously improving team efficiency throughout sprint cycles by analyzing and resolving velocity issues.
7. Conduct a sprint review in PM software and close a project by facilitating a retrospective.

BUSA 2110. Business Communications**Course Description**

Skill development in business writing with an emphasis on the preparation of letters and reports, and on presenting information in a logical, forceful and acceptable form. Included are strategies for effective oral communication in a professional environment.

Student Learning Outcomes

Students should be able to:

1. Identify the key terms and major theories relevant to business and professional communication.
2. Integrate communication and research skills to create a professional presentation.
3. Produce effective business and professional writing (reports and memos) samples.
4. Apply theory in order to effectively communicate as both a team member and as a leader.
5. Apply effective writing and formatting techniques to the composition of email messages, routine letters/memos, goodwill messages, negative messages, and persuasive messages.
6. Identify components of effective applications, resumes, and cover letters that demonstrate accurate English usage, employability skills, and overall interest and visual appeal.
7. Recognize effective interviewing techniques and employment follow-up procedures.
8. Distinguish business communication from personal and social communication.
9. Use of technology to communicate in the business world; and
10. Gain insights into ethics, etiquette, listening, teamwork, and nonverbal communication and make relevant observations.

BUSA 2118. Introduction to Supply Chain Management

Course Description

Students develop an understanding of the strategic importance of the supply chain design, planning and operation. Explore acquisition, control and delivery of materials, parts, equipment, and services - to include transportation, inventory and warehousing for end use in the organization. Introduce analytical tools necessary to solve supply chain problems and measure key drivers of supply chain performance. Special application to manufacturing.

Student Learning Outcomes

1. List historical milestones leading-to development of Supply Chain Management (SCM) practice (PLO 1)
2. Identify primary drivers of transportation cost (PLO 1)
3. Describe considerations for making warehousing decisions (PLO 1)
4. Describe principal differences in moving from domestic to cross-border operations (PLO 1)
5. Explain challenges Generally-Accepted Accounting Principles (GAAP) present to development of SCM Key Performance Indicators - KPI (PLO 1)
6. Calculate a moving average to support time-series demand forecasting (PLO 2)
7. List chief concerns of upstream sourcing/purchasing/procurement (PLO 2)
8. Calculate Safety Stock levels to optimize the number of logistics network nodes (PLO 2)
9. Calculate Economic Order Quantity to support inventory planning (PLO 2)
10. Identify the key to effective SCM (PLO 3)
11. Identify the focus of Logistics planning (PLO 3)
12. Explain the functions of the Bill of Lading (PLO 3)

BUSA 2120. Introduction to Global Business

Course Description

Introduces international business and the globalization of the economy. The students are introduced to objectives, opportunities and challenges facing those who engage in business in foreign countries. Foreign organizations, cultural dynamics, trade channels, legal environment and political considerations are discussed.

Student Learning Outcomes

Students should be able to:

1. Describe important differences between international business and domestic business.
2. Synthesize the concept of globalization.
3. Define and use key terms relating to international business.
4. Identify basic trade patterns and underlying assumptions of trade theories.
5. Differentiate the major forms of operations, agreements, and organizational strategies firms may use to meet international objectives.
6. Discuss how home country, host country, and organizational cultures interact and how small business and the multinational enterprise are influenced by cultural variables.
7. Apply the strategy and structure of international business.

BUSA 2130. Business Statistics

Course Description

Use of statistics in business; techniques for describing and analyzing descriptive and numerical data; estimation, hypotheses testing, t-tests, and regression; application to business problems.

Student Learning Outcomes

1. Use descriptive statistics (graphic representation, numerical measures).
2. Apply basic probability concepts.
3. Use both discrete and continuous probability distributions.
4. Use the various sampling methods.
5. Calculate point estimates and construct confidence intervals.

6. Conduct one-sample and two-sample tests of hypothesis.
7. Develop a regression line and determine the strength of a correlation.
8. Apply statistical analysis to decision-making.
9. Use statistical software as available.

BUSA 2135. Business Statistical Analysis with Excel®®

Course Description

This introductory course in business statistics covers the collection, tabulation and analysis of business and economic data. Topics include averages, dispersion, statistical inference, correlation, regression and statistical decision-making. The student is expected to have an adequate knowledge of EXCEL®.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use descriptive statistics (graphic representation, numerical measures).
2. Apply basic probability concepts.
3. Use both discrete and continuous probability distributions.
4. Use the various sampling methods.
5. Calculate point estimates and construct confidence intervals.
6. Conduct one-sample and two-sample tests of hypothesis.
7. Develop a regression line and determine the strength of a correlation.
8. Apply statistical analysis to decision-making.
9. Use statistical Software: Excel® and Pearson's PHStat2.

BUSA 2137. Employability Skills

Course Description

This course is designed to help students/potential employees recognize and develop positive personal qualities in preparation for successful employment. It also focuses on the communications skills, including interviewing and resume preparation, customer service skills, effective interpersonal skills, productivity, ethical standards and career development that are demanded by employers.

Student Learning Outcomes

1. Define ethics and its impact both personally and professionally.
2. Explain the importance of a professional appearance and guidelines for professional attire.
3. Describe appropriate professional etiquette in business situations.
4. Describe the relationship among responsibility, accountability, teamwork and leadership.
5. Define and describe personality traits, values and learning styles.
6. Identify individual personality traits, values and learning styles.
7. Describe the importance of goal setting and setting priorities.
8. Create short-term and long-term goals.
9. Explain the key principles of money management.
10. Define quality and its importance to the business.
11. Identify and describe the importance of customers and customer service.
12. Describe the causes and signs for stress and the impact on workplace performances.
13. List the techniques for effective time management.
14. Create a professional networking list.
15. Create a preliminary resume.
16. Identify proper situational leadership and teamwork activities.
17. Create the proper message of professionalism through personal appearance.
18. State the key steps in conducting a job search.

19. Identify interview process activities: pre-interview, during the interview, post-interview.
20. Demonstrate the proper way to respond in an interview situation.
21. Create a personal brand through written correspondence.
22. Develop a standardized cover letter and resume.

BUSA 2140. Integrated Management

Course Description

This course provides a management-simulated environment to make critical decisions based on the situations that arise in operating competitive business enterprises.

Student Learning Outcomes

1. Manage people, processes, and resources within a diverse organization.
2. Apply knowledge of leadership concepts in an integrated manner.
3. Analyze the internal/external factors affecting a business/organization to evaluate business opportunities.

BUSA 2150. Integrated Business Concepts

Course Description

Business Administration Capstone Course—A review and assessment of integrated concepts in accounting, ethics, economics, finance, marketing, and management. Students should take this course in their last semester.

Student Learning Outcomes

Students should be able to:

1. Identify and be able to apply accounting concepts to a real-world example, including GAAP and analysis of financial statements.
2. Identify and be able to apply economic concepts to a real-world example, including opportunity cost; supply/demand; GDP and inflation; unemployment, fiscal and monetary policy; and elasticity, utility, and product markets.
3. Identify and be able to apply marketing concepts to a real-world example, including the 4 Ps of marketing (product, price, place, promotion), marketing strategies, target markets, and value creation.
4. Identify and be able to apply finance concepts to a real-world example, including time value of money and its application in decision-making; knowledge of capital markets and securities (debt and equity).
5. Identify and be able to apply management concepts to a real-world example, including functions of management, theories of management, and leadership styles.
6. Identify and be able to apply ethical concepts to a real-world example as they apply to accounting, economics, marketing, finance, and management.

BUSA 2170. Quality Management

Course Description

Quality Management is an advanced course focusing on the role of leadership in a quality–management environment. Specifically, the course will examine the characteristics, functions, and influence of leaders within the interconnected strategies that emphasize the application of the five pillars of a Total Quality organization: Customer Satisfaction, Systematic Support, Total Involvement, Measurement, and Continuous Improvement. Topics will include leadership, quality teams, Lean Management techniques and Business Process Re-Engineering (BPR).

Students Learning Outcomes

1. Identify the 7 key components of a quality organization:
 - a. Leadership (Characteristics; Organizational Culture)
 - b. Strategic Planning (Internal and External Factors)
 - c. Customer Focus (Relationships with Customers)
 - d. Information and Analysis (Measurement)

- e. Human Resources (Employee Engagement)
 - f. Process Management (Continuous Improvement)
 - g. Results (Bottom Line Impacts)
2. Recognize how the components are inter-related within a quality system (systems thinking).

BUSA 2175. Personal Development

Course Description

Development of a marketable, employable office systems person, to include interview, voice, manners, and apparel.

Student Learning Outcomes

Students should be able to:

1. Plan, compose and create a resume, list of references, letter of application and other job search documents.
2. Research job leads.
3. Prepare for job interviews.
4. Perform self-assessment and self-examination in order to improve soft skills.
5. Develop soft skills to improve employability and job success.

BUSA 2180. Introduction to E-Commerce

Course Description

Survey of methods and practices in e-commerce. Topics include the evolution and forms of e-commerce, secure online business transactions, and basic business concepts of e-commerce.

Student Learning Outcomes

Students should be able to:

1. Discuss the foundations and importance of e-commerce.
2. Analyze the impact of e-commerce on business models and strategy.
3. Describe the infrastructure for e-commerce.
4. Discuss legal issues and privacy concerns in e-commerce.
5. Analyze electronic payment systems.
6. Identify and discuss global e-commerce issues.

BUSA 2185. Business Communications

Course Description

Practice in the writing and editing of workplace documents, including correspondence, reports, and proposals.

Student Learning Outcomes

At the conclusion of the course, students should be able to:

1. Conduct self-directed research for user-centered projects.
2. Express a primary purpose in a compelling statement and order supporting points logically and convincingly.
3. Use effective rhetorical strategies to persuade, inform, and engage.
4. Employ writing and/or speaking processes such as planning, collaborating, organizing, composing, revising, and editing to create presentations using correct diction, syntax, grammar, and mechanics.
5. Integrate research correctly and ethically from credible sources to support the primary purpose of a communication.
6. Engage in reasoned civic discourse while recognizing the distinctions among opinions, facts, and inferences.

BUSA 2195. Budget and Resource Management

Course Description

Exposes the student to earned value method and resource allocation to establish a realistic project baseline. Strategies used to effectively monitor, measure and control cost and schedule are also addressed. Emphasis will be placed on applying effective methods for keeping the project budget and schedule on target, setting project standards and effective use of

metrics to measure project success.

Student Learning Outcomes

Students completing this course will be able to:

1. Create a Work Breakdown Structure (WBS) for a complex project and determine management control points within the WBS.
2. Demonstrate setting up Work Packages and Control Accounts.
3. Develop criteria for an Earned Value system.
4. Define different means of measuring progress on projects and understand which ones to select for a given type of project.
5. Calculate Earned Value variances and efficiency factors.
6. Evaluate the status of a project using Earned Value.
7. Be able to calculate different project Estimates at Completion and use them to predict where the project will actually finish compared to the baseline plan.

BUSA 2198. Project Management Applications

Course Description

This course applies the Project Management Body of Knowledge (PMBOK) to managing projects, schedules, labor, and resources. This body of knowledge aligns with the Certified Associate Project Manager (CAPM) certification, which is a nationally recognized documentation of the fundamental knowledge, terminology and processes of effective project management.

Student Learning Outcomes

Students completing this course will be able to:

1. Develop a project charter, project plan, and project proposal.
2. Create a Work Breakdown Structure (WBS) for a complex project and determine management control points within the WBS.
3. Formulate Work Packages and Control Accounts.
4. Characterize the range, scope, critical path, and complexity of modern projects.
5. Create a risk management plan.
6. Apply project management tools and techniques for a complex project.
7. Use critical thinking methods to analyze and incorporate various project management knowledge areas for a complex project.

BUSA 2210. Small Business Management

Course Description

The managerial functions and processes as related to the small business environment. These managerial functions include exploring entrepreneurial opportunities and analyzing new –venture activities needed for the successful operation of small firms. Students will also examine the benefits and risks of owning a small business. Topics include: facts about small business, essential management skills, how to prepare a business plan, financial needs, marketing strategies, and legal issues.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Recognize why entrepreneurship is important.
2. Explain small business management.
3. Recognize the general areas of management.
4. Discuss how business works.
5. Identify different ways to enter the business environment
6. Know how to search for information on the Web.

7. Identify the difference different forms of business ownership
8. Discuss issues surrounding human resource management in a small business setting
9. Describe methods used to create breakeven points for business.
10. Compare and contrast creating a new business, purchasing an established business, or franchise.
11. Specify the different organization and management styles used for business.
12. Identify and describe the different financial statements.
13. Understand the startup process for a small business.
14. Explain the various types of security risks that can threaten businesses.
15. Recognize the various types of communication and marketing technologies used by business.
16. Discuss the commercial applications of information technology in business.
17. Address contemporary trends and issues in the business world.
18. Discuss how e-commerce has changed the way we do business.
19. Use productivity software such as PowerPoint, Excel® and Microsoft.
20. Discuss issues surrounding entrepreneurship.

BUSA 2220. Human Resource Management

Course Description

This course covers those topics which would be relevant to the role of human resource department in today's firm. Topics include: human resource management, compensation and benefits, labor relations, E.E.O., affirmative action, employment and placement, training and development, and other related topics.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Present the relevant details of human resource management as it applies to organizational effectiveness and competitive advantage.
2. Provide a framework to describe the ramifications of human resource decisions upon the organizational environment.
3. Understand the legal and ethical aspects of human resources in manner that highlights the relevance of these aspects in human resources and the business environment.
4. Describe how firms can use human resource (HR) initiatives to cope with workplace changes and trends such as a more diverse workforce, the global economy, downsizing, and new legislation, including how a firm's human resources can influence its performance.
5. Formulate and implement HR strategies that can help the firm achieve a sustained competitive advantage.
6. Describe the different organizational structures and the business environments as it related to human resources.
7. List the factors influencing worker motivation that are under a manager's control.

BUSA 2230. Human Relations in Business

Course Description

This course is an examination and application of personal and interpersonal competencies and skills needed in a business setting to understand oneself, one's co-workers, employers, and customers. Students will investigate and examine attitudes, behavior, ethical behavior and cultural influences that affect the business environment. It offers structured situations in which interpersonal relationships and communication skills are explored.

Student Learning Outcomes

Students should be able to:

1. Identify and describe the relevance and development of human relations theories as they apply to management, interpersonal interactions, leadership, conflict resolution and other behaviors in the workplace.
2. Critically examine how individual beliefs, values, attitudes and perceptions of the world are formed and discuss how they affect self-esteem and human interactions in the workplace individually and in formal and informal groups.

3. Recognize differing communication styles and apply effective communication skills to various workplace situations.
4. Examine the interrelationships between self, culture, ethnicity, gender and personal environment and analyze their effects on the development of individual work behaviors.
5. Articulate the factors that influence the development of communication, self-esteem, motivation, trust, leadership and conflict resolution skills.
6. Apply knowledge of human behavior and its origins to the analysis of workplace case studies and the development of solutions to workplace dilemmas.
7. Apply ethical decision-making in business situations.

BUSA 2240. Customer Service in Business

Course Description

Established concepts of service quality in relationship to business success and maximization of returns to the organization. Explores techniques for delivering quality and service in a variety of business settings.

Student Learning Outcomes

Students should be able to:

1. Define customer service and the role it plays in business.
2. Identify and discuss the needs of customers, including online customers.
3. Identify and describe exceptional customer service.
4. Explain customer service strategy and its role in business.
5. Identify the skills need in order to provide exceptional customer service.
6. Discuss ways to resolve customer service problems and challenges.
7. Discuss ways to manage diverse customers.

BUSA 2250. Work Readiness

Course Description

Instruction in methods of selecting, seeking, acquiring and retaining employment. Work success skills, business etiquette, employer expectations and workplace norms are addressed.

Student Learning Outcomes

Students should be able to:

1. Catalog personal and professional information that will be aid in career planning and job search processes.
2. Develop methods of establishing short- and long-term career goals.
3. Recognize the strengths of the various kinds of resumes and how they are used based on the one's career status and type of job being sought.
4. Explain the importance of good communication and work etiquette in job success.
5. Demonstrate how to create a professional image to increase job search success.
6. Explore career management opportunities and practices.
7. Demonstrate successful interview techniques.
8. Compare and contrast employee and employer expectations.
9. Discuss and ethical and appropriate work practices.
10. Prepare a job specific resume, cover letter, and follow up/thank you letter which are professional and appropriate.

BUSA 2260. Principles of Strategy

Course Description

Case studies and projects that prepare students to apply their management training will be emphasized. Assignments in planning, decision making and problem solving will promote the development of capabilities in all areas of management.

Student Learning Outcomes

1. Students will be able to formulate and implement strategies as part of realistic business case studies.

2. Students will be able to integrate their overall business knowledge with the social, political, ethical, technological, and international dimensions of managerial decision making.

BUSA 2270. Organizational Behavior

Course Description

Covers the fundamentals of human behavior within business organizations, organizational relationships and communication processes that affect motivation and human behavior.

Student Learning Outcomes

Students completing this course will:

1. Define Organizational Behavior terms and concepts.
2. Explain how Organizational Behavior theories have been applied to the understanding of the organizational dynamics of leadership, management, employee engagement, and effectiveness.
3. Apply Organizational Behavior studies to organizational culture, strategic planning, and Human Resource Management.
4. Describe how individual capabilities and organizational citizenship behaviors (OCB) can be improved at all levels of the organization with an understanding/application of Organizational Behavior theories.

BUSA 2280. Total Compensation

Course Description

Covers the fundamentals of human behavior within business organizations, organizational relationships and communication processes that affect motivation and human behavior.

Student Learning Outcomes

Students completing this course will:

1. Describe the types of compensation that organizations can utilize.
2. Discuss pay equity methodologies.
3. Weigh choices of and between employee benefits offerings.
4. Demonstrate understanding of employee recognition and rewards best practices.
5. Describe the function and key components of HR Information Systems.

BUSA 2290. Maximizing Human Capital

Course Description

A wide-ranging overview of training and development, performance management, discipline, and staffing and succession planning. Introduction of HR's role in fostering positive leadership and teamwork, and a summary of professional career paths in the Human Resources field.

Student Learning Outcomes

1. Identify the major components of and differences between training, coaching, and employee development.
2. Describe HR's role and the essential steps in performance management and discipline.
3. Weigh choices in recruitment and selection methodologies and best practices.
4. Explain basic steps in succession planning and strategic staffing to support long-term objectives.
5. Discuss HR's role in fostering effective leadership and teamwork behaviors in employees.
6. List and describe career paths and professional development in professional Human Resources.

BUSA 2310. Principles of Advertising

Course Description

This course is a survey of the history of the advertising media available today, taking into consideration the

advantages/disadvantages of each. It discusses the psychological approach to consumer persuasion, the techniques used in media selection and the creative processes of advertising.

Student Learning Outcomes

Upon successful completion of this course, the student should be able to:

1. Discuss how advertising evolved, its history and its functions.
2. Identify the classifications of advertising used today and discuss why they are used.
3. Discuss the pros/cons of the economic impact of advertising.
4. Enumerate the social responsibilities and legal aspects of advertising today.
5. Recognize the major criticisms aimed at advertising and explain validity of these criticisms.
6. Locate and make use of specific laws that regulate advertising, (do's and don'ts).
7. List and describe the various regulatory bodies that influence advertisers' activities.
8. Explain the powers and limitations of these regulatory bodies.
9. List the steps that are involved in marketing and advertising research.
10. Discuss how market research relates to advertisement planning and strategy as it applies to consumer behavior and market segmentation.
11. List the creative processes used in advertising as they relate to the following items, (used by print media, electronic media, direct mail, out-of-home media, transit advertising, specialty advertising, and special promotional advertising):
 - a. Copywriting or writing copy.
 - b. Copy terminology.
 - c. Creating names for products.
 - d. Art direction.
 - e. Layout of advertisements
 - f. Packaging design.
 - g. Typography.
 - h. Typesetting methods.
 - i. Printing processes.
12. Recognize the various media available for planning purposes. List and discuss the factors that determine media selection.
13. Identify the kinds of advertising done today, the objective to be achieved and various institutions or entities that use each. I.e. corporate advertising—image enhancing, patronage, local, regional, international.
14. List and discuss the differences between domestic and international advertising and show how they interact and interrelate.

BUSA 2330. Retail Management

Course Description

Focuses on the changing demographics of retail marketing, the growth of new retail formats, the phases of retailing, and the organization, management, and operation of retail enterprises.

Student Learning Outcomes

Students should be able to:

1. Define retailing in its various perspectives and explain its importance.
2. Explain the steps in strategic planning for retailing.
3. Describe consumer demographics, lifestyle factors, needs and desires.
4. Discuss consumer attitudes toward shopping and consumer shopping behavior, including the consumer decision process and its stages.
5. Analyze the retailing process (e.g., store location and layout, buying, receiving, pricing and merchandising, and

inventory management), the environment, which it operates in, and the functions are that performed.

6. Explain and discuss merchandise mix, pricing, and assortment concepts and strategies.
7. Identify constraints placed on retail strategy by regulator and ethical environments.
8. Discuss the challenges and opportunities in managing a retailing organization.

BUSA 2340. Sales

Course Description

An analysis of the principles and techniques of personal selling as a form of persuasive communication. Sales principles, consumer behavior, the process of the sales interview, and demonstration of selling and promotional skills are explored.

Student Learning Outcomes

Students should be able to:

1. Define selling (considered from various perspectives); discuss its impact, and its special characteristics.
2. Explain the steps within the selling process.
3. Describe consumer behavior.
4. Explain the social and ethical responsibilities involved in sales transactions.
5. Identify opportunities in retail, industrial, and business-to-business sales.
6. Identify and discuss the six elements of the sales presentation mix.
7. Apply the seven techniques for handling customer objections.
8. Demonstrate effective communication and negotiation skills.

BUSA 2410. Leadership and Group Dynamics

Course Description

Focuses on the development of leadership skills. Course is designed to provide the basic steps in leadership and group dynamics to help individuals develop a personal philosophy of leadership of the moral and ethical responsibility of leadership.

Student Learning Outcomes

Students should be able to:

1. Demonstrate the importance of communication in achieving operational results in organizations.
2. Apply basic management theories to the supervisory/management of basic business functions.
3. Describe the interrelationship of resources in business operations and the importance of utilizing appropriate information technology to track resource allocation.
4. Apply a critical thinking /problem solving process for making a viable choice among a variety of options.
5. Demonstrate application of ethical standards in a socially responsible manner.
6. Explain the relationships among negotiation and conflict, influencing tactics, power, and politics.

BUSA 2420. Tribal Law

Course Description

This course will examine the special relationship that exists between the federal government and tribal governments. It includes jurisdiction in Indian country, state tribal relations and tribal governing structures.

Student Learning Outcomes

Upon completion of this course, the student should be able to:

1. Compare tribal governments to modern day tribal governments.
2. Identify tribal sovereignty and the U.S. government's obligation to protect tribal lands.
3. Identify jurisdictions in Indian Country.
4. Discuss what federal statutes mean and their implication in Indian Country.
5. Examine contemporary legal issues affecting tribes and how Supreme Court decisions affect tribal governments.
6. Discuss and utilize effective advocacy skills in moot court trial settings

BUSA 2430. Tribal Leadership

Course Description

This course will focus on the theories, practices and styles of Leadership, compared to the cultural theories and cultural styles of leadership among tribal leaders. Styles of leadership characteristics of tribal leaders of the past are also covered. Students will examine the foundations of community leadership in the areas of public policy and community development in Indian Country. The class will cover such topics as: (1) theory and fundamentals of leadership skills, (2) Tribal, State/Federal authority, (3) leadership issues unique to Indian communities, individuals within tribal government and within tribal businesses, and (3) the application of leadership skills in tribal leadership roles.

The course will also include biographies of and lectures by outstanding Native American community leaders throughout the trimester.

Student Learning Outcomes

Upon completion of this course, the student should be able to:

1. Examine and apply the knowledge and skills needed in working towards Indian community renewal by applying native and western leadership theory.
2. Identify and apply adaptive styles and techniques that link general tribal traditional views to the reforming of basic traditional and non-traditional government and economic institutions to meet the needs of the community.
3. Develop and apply basic leadership skills through critical thinking and the understanding of traditional theories using traditional tribal and modern western philosophies.
4. Recognize and understand various sides of critical issues facing tribal councils in Indian Country today.

BUSA 2440. Tribal Management

Course Description

This course will focus on basic management principles of tribal governments, including the functions of management within tribal reservations, tribal councils, tribal casinos and other business ventures.

Student Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify tribal values and styles of management that impact tribal management situations.
2. Identify principles of management within the various departments in traditional tribal government.
3. Distinguish principles of management and organization leadership in tribal councils, committees, casinos and other Indian business ventures.
4. Describe the management of tribal assets in the ceded territories
5. Apply the use of terminology in the preparation of written assignments.
6. Discuss global diversity issues.
7. Compare and contrast traditional management teachings and tribal management.

BUSA 2450. Tribal Resources and Economic Development

Course Description

This course will focus on current economic issues confronting tribes and the larger Indian society. Students will analyze and study the traditional economic systems in order to compare tribal and Western economic systems and concepts within cultural, legal and historical content. Students will explore new visions for the tribe and create a vision plan for economic development.

Student Learning Outcomes

Upon completion of this course, the student should be able to:

1. Examine and apply the knowledge and skills necessary to evaluate and utilize current economic issues confronting tribes and the larger Indian society for the benefit of tribes.
2. Identify and compare tribal and western economic systems and concepts within cultural, legal, and historical contents as they relate to current native economic development.

3. Develop and apply basic leadership skills through critical thinking and the understanding of traditional theories using traditional tribal and modern western philosophies.
4. Examine and apply concepts, which underlie the success of either individual or tribal entrepreneurial business ventures.
5. Examine and apply different business models, which have been used to create new businesses on reservations and the values expressed by those businesses.

BUSA 2460. Business Ethics

Course Description

The course examines the underlying dimensions of ethics in business, investigating ethics in relationship to the organization and its culture, stakeholders, and society. Exploration of ethical issues from a historical perspective, analyzing actual events through the lens of ethical business decision-making, including legal/political, sociocultural, economic and environmental considerations will be undertaken.

Student Learning Outcomes

1. Explain business ethics in the context of the varying demands and expectations of the organization's stakeholders.
2. Analyze how an organization's leadership impacts the ethical environment and culture of the workplace and the business decisions made by organizational members.
3. Examine the difference between personal ethical values and those of a business organization.
4. Discuss the ethical dilemmas presented by technology.
5. Discuss the consequences of unethical and ethical business decisions.
6. Examine the role of corporate social responsibility in the business enterprise.
7. Recognize the variety of social/ethical norms exhibited by business organizations internationally.
8. Develop a methodology for making ethical business decisions.

BUSA 2999. Capstone

Course Description

Focuses on assessment of Student Learning Outcomes for Business program of study.

Student Learning Outcomes

Students should be able to:

1. Apply general business, marketing and management concepts in a global environment.
2. Create and interpret financial documents (income statements, balance sheet, and profit and loss statements).
3. Work and interact with others as part of a team.
4. Systematically research and evaluate issues and problems and develop and apply possible solution.
5. Organize and express ideas clearly in verbal and written form; and
6. Apply solutions using technology to general business, marketing, and management situation.

BUSA XXXX. Principles of Supervision (IS THIS BUSA 1320?)

Course Description

Principles of supervision emphasizing planning, organization, rating of employees and procedures to develop good morale. Introduction to interpretation of case studies.

Student Learning Outcomes

Students should be able to:

1. Describe the history of management/supervision; organizational environments and cultures; and ethics and social responsibility.
2. Identify the elements that are necessary to be a successful supervisor in today's workforce.
3. Explain planning, how to make a plan that works, steps involved with decision making, organizational strategy, innovation and change in the business environment, and the global business climate.
4. Explain concepts concerning organizing, organizational structure, adaptive organizations, supervising teams and individuals, job design, managing human resource systems, diversity, and supervising individuals and a diverse workforce.
5. Explain components of leadership to develop good morale and motivation, including defining theories of motivation and leadership, and managing effective communication.
6. Explain the control process and methods, managing information and describing why productivity and quality matters to supervisors.
7. Define and analyze essential supervisory skills including: team cohesiveness, human relations, decision making skills, planning and goal setting.
8. Summarize the importance of high ethical standards within the organization and for the employee.

Business Computer Information Systems (BCIS)

BCIS 1110. Fundamentals of Information Literacy & Systems

Course Description

Examination of information systems and their impact on commerce, education, and personal activities. Utilization of productivity tools for communications, data analysis, information management and decision-making. (Statement added 7.1.24 – This course is designed for Associate of Science and Associate of Applied Sciences business type (non-computer science) degree programs.)

Student Learning Outcomes

Students should be able to:

1. Describe the social impact of information literacy and systems in relation to commerce, education, and personal activities.

2. Explain how to use the information resources legally, safely, and responsibly in relation to ethical, security, and privacy issues.
3. Evaluate bias, accuracy and relevance of information and its sources.
4. Use productivity tools for communications, data analysis, information management and decision-making.
5. Describe and use current information systems and technologies.

BCIS 1111. PC Basics for Home and Office

Course Description

This course is an introduction to common PC management and maintenance issues typically encountered by home and office users. Topics include hardware identification, using Windows utilities, modifying Windows settings, basic PC maintenance processes, and troubleshooting popular Windows features and applications. Basic elements of computer network setup and configuring security features will be discussed.

Student Learning Outcomes

1. Locate, configure, and use basic Windows operating system (OS) features and utilities.
2. Identify major PC internal components and resolve common hardware issues.
3. Evaluate app/driver settings and correct common deficiencies.
4. Detect and resolve basic network connectivity issues.
5. Identify basic cybersecurity threats and solutions.

BCIS 1115. Introduction to Computers

Course Description

This is a lecture and hands-on course on different technologies commonly used in business and different agencies like computer, printer and other computer devices. It includes introduction to hardware, operating software, and MS Office® applications like Excel® Word, Access, PowerPoint, Publisher, & other MS Office Tools. The class will include an overview of the history of technology and its future, as well as giving a fundamental introduction to industry-standard application software for word processing, spreadsheet, database management, and graphics. Basic computer use, files and file structure, windows, the Internet, programming, ethics, and security will also be addressed. (Statement added 7.1.24 – This course is designed for Associate of Arts in a business curriculum.)

Student Learning Outcomes (Updated 7.1.24)

Upon successful completion of this course students should be able to:

1. Describe and apply basic information technology terminology.
2. Identify and use hardware components of IT systems.
3. Describe and apply concepts of file management.
4. Demonstrate basic concepts of application and operating systems software.
5. Identify and explain basic concepts of information management, the principles of databases, and database management systems.
6. Identify and explain important ethical, security, and privacy issues in information systems.
7. Create and use spreadsheets.
8. Use Internet search engines for research.

BCIS 1120. Computer Literacy

Course Description

Overview of computer hardware, software, and the Windows or Linux environment. You will cover basic computer operating principles, file management, the using the Internet, along with an introduction to word processors, spreadsheets, and database programs.

Student Learning Outcomes

1. PC and other types of Computer terminology doing hands-on and assignments.
2. Fundamentals of hardware usage inside and outside PC working on assigned projects.

3. Know the difference of Operating systems through lectures and textbooks.
4. Communicate with other classmates and instructor using school email system.
5. Use different software (hands-on) to work on assigned projects.
6. Students will be able to do a final presentation using PowerPoint.

BCIS 1160. Windows

Course Description

This course prepares students to develop the skills needed to deploy and manage Windows. Students will learn how to manage and troubleshoot Windows 10 devices in a secure network environment. Students will also learn to run multiple operating systems using client Hyper-V. Microsoft Intune will be utilized to teach students to manage Windows 10 mobile and desktop devices in a cloud-based environment. Out-of-class computer work is required.

Student Learning Outcomes

At the conclusion of the course, the student should be able to:

1. Demonstrate how to install Windows.
2. Execute System Utilities.
3. Explain how to manage disks and file systems.
4. Recount the features of user management.
5. Describe Windows security features.
6. Identify the features of user productivity tools and application support.
7. Highlight the steps to complete performance tuning and system recovery.
8. Outline in detail how Microsoft Intune Device Management is utilized.
9. Summarize how to run multiple operating systems inside a virtual machine using Client Hyper-V
10. Summarize Enterprise Computing.
11. Illustrate Remote Access and Client Support processes.

BCIS 1210. Introduction to MS Access

Course Description (Description updated 7.1.24)

This course introduces MS Access software. Students will learn design, development, and maintenance of relational database management systems. Students will be expected to implement the concepts by developing projects. Students will learn techniques for adding, updating, querying, and sorting data, create forms, queries and reports using the stored data.

Student Learning Outcomes (Student Learning Outcomes updated 7.1.24)

Upon successful completion of this course students should be able to:

1. Identify the basic Access (Database) concept.
2. Describe and apply basic skills in data importing, data formatting, and table creation.
3. Recognize and demonstrate the concepts of creating, editing, and formatting Databases.
4. Apply and demonstrate the concepts of creating and working with queries, forms, and reports.
5. Utilize tables in creating databases.
6. Analyze data using reports.

BCIS 1211. MS Outlook

Course Description (Description updated 7.1.24)

Covers concepts such as managing messages, appointments, contacts and tasks, as well as tracking activities. Students should have basic computer knowledge and skills, including Windows operating systems, keyboarding, file management.

Student Learning Outcomes

1. Create and send Email messages.
2. Use Outlook tools to manage and archive Email messages.
3. Create a Calendar of appointments and events.

4. Create Contacts and Distribution Lists.
5. Create, assign, track, respond to, and organize Tasks.
6. Create and manage Notes.

BCIS 1215. Introduction to MS Excel® I

Course Description (Description updated 7.1.24)

This course introduces Microsoft Excel spreadsheet software. Coverage includes creating, editing, manipulating, and printing workbooks, charts, features and commands, spreadsheet design, formulas, and functions.

Student Learning Outcomes (Updated 7.1.24)

Upon successful completion of this course students should be able to:

1. Identify the basic Excel (spreadsheet) concept.
2. Describe and apply basic skills of worksheet and cell formatting, charts, and tables.
3. Recognize and demonstrate the concepts of creating, editing, and formatting worksheets.
4. Apply and demonstrate the concepts of working with charts.
5. Apply formulas and functions.
6. Analyze data using formulas and compiling workbook data.

BCIS 1220. Introduction to MS Word®

Course Description (Description updated 7.1.24)

This course introduces MS Word software. Basic word processing techniques and applications will be covered. Students will create, revise, store, share and retrieve documents. Students will learn various formatting techniques, use of tables, use of references tools.

Student Learning Outcomes (Updated 7.1.24)

1. Manage documents: navigate within documents; format documents; save and share documents; and inspect documents for issues.
2. Insert and format text, paragraphs, and sections: Insert text and paragraphs; format text and paragraphs; create and configure document settings.
3. Manage tables and lists: create tables; modify tables; create and modify lists.
4. Create and manage references: create and manage reference elements; create and manage reference tabs.
5. Insert and format graphic elements: insert illustrations/text boxes; format illustrations and text boxes; add text to graphic elements; modify graphic elements.
6. Manage document collaboration: add and manage comments; manage change tracking.

BCIS 1230. Introduction to MS PowerPoint®

Course Description (Description updated 7.1.24)

Introduction to the electronic presentation, specifically how to use, design and edit presentation graphics for use in a variety of personal and business applications. Students will learn how to create and work with design templates, auto layouts, and background slides. Also covered are how to add tables, charts, clip art, pictures, video, sound and animation effects.

Student Learning Outcomes (Updated 7.1.24)

Upon successful completion of this course students should be able to:

1. Create, edit, format, and save PowerPoint presentations.
2. Create and change templates.
3. Create, apply, and customize Master slides.
4. Create, apply, and customize presentation themes.
5. Create, apply, and customize styles presentations.

BCIS 1310. AI in Business Information Systems

Course Description

This course explores the transformative impact of Artificial Intelligence (AI) on contemporary business operations, with a focus on the capabilities and limitations of large language models (LLMs) like OpenAI's ChatGPT. Students will examine the evolution of AI, analyze its growing applications across industries, and learn to design effective AI prompts for various platforms. Emphasis will be placed on ethical considerations, responsible deployment, and the broader societal implications of AI technologies. Through hands-on projects and case studies, students will gain practical experience in evaluating, creating, and applying AI-driven tools to solve real-world business challenges while maintaining ethical integrity.

Student Learning Outcomes

1. Explain how artificial intelligence (AI) is transforming various business operations.
2. Identify the capabilities, limitations, and ethical considerations of OpenAI's ChatGPT and other large language models (LLMs).
3. Analyze the evolution of AI and evaluate its applications in modern business operations.
4. Design and engineer effective AI prompts across multiple platforms.
5. Evaluate the ethical implications and societal impact of AI technologies.
6. Create and apply AI-driven tools ethically and responsibly.
7. Assess the role of AI in modern business operations.

BCIS 1330. Introduction to Analytics and Data Visualization

Course Description

This course introduces basic concepts and applications of analytics and key concepts in data visualization and reporting. Topics include an overview of the analytical process and the role of the analyst, applied descriptive statistics, exploratory data analysis and methods used in graphical representation of data, exploration and reporting of data, and basic linear regression methods.

Student Learning Outcomes

Students completing this course should be able to:

1. Explain the analytical process and the role of the analyst.
2. Utilize applied descriptive statistics to make basic business decisions.
3. Utilize exploratory data analysis to make basic business decisions.
4. Utilize concepts and methods in the graphical representation of data.
5. Utilize concepts and methods in the exploration and reporting of data.
6. Conduct basic linear regression methods.
7. Apply data visualization concepts to communicate insights about data.

BCIS 1410. Data and Information Management

Course Description

The course will also include coverage of basic database administration tasks and key concepts of data quality and data security. In addition to developing database applications, the course helps the students understand how large-scale packaged systems are highly dependent on the use of DBMSs. Building on the transactional database understanding, the course introduces data and information management technologies that provide decision support capabilities under the broad business intelligence umbrella.

Student Learning Outcomes

1. Understand and use at least one conceptual data modeling technique (such as entity-relationship modeling) to compute the information requirements for an enterprise domain.
2. Understand the basic mechanisms for accessing relational databases from various types of application development environments and ability to design high-quality relational databases.

3. Understand the purpose and principles of normalizing a relational database structure.
4. Implement a relational database design using an industrial strength database management system, including the principles of data type selection and indexing.

BCIS 1610. Intermediate Computing

Course Description

This course is a continuation of BCIS 1115 Introduction to Computers. This is the second course in a series of three that prepare the student to become Microsoft Office User Specialist (MOUS) certified. Word processing, spreadsheet, database, and presentations software are continued with intermediate skills being obtained. Out-of-class computer work is required.

Student Learning Outcomes

At the conclusion of the course, the student should be able to:

MS Teams®

1. Create a personal planner MS Word®.
2. Develop a multi-page document.
3. Compose a resume and share documents.
4. Produce labels, letters, and envelopes using the mail merge feature MS PowerPoint®.
5. Generate custom slide masters and presentations.
6. Collaborate and add animation.
7. Format tables and charts within a presentation slide.
8. Enhance SmartArt and add media to slides.

MS Excel®

9. Implement financial functions, data tables, and amortization schedules.
10. Work with multiple worksheets and workbooks.
11. Create, sort and query a table.
12. Generate templates, import data and work with SmartArt, images and screenshots.

MS Access®

13. Maintain a database.
14. Construct reports and forms.
15. Compose advanced report techniques.
16. Design advanced form techniques.

BCIS 1750. Microsoft Outlook and Office Procedures

Course Catalog Description:

This course provides information about office principles and procedures that are used in the fast-paced offices of today. Student will become proficient using Microsoft Outlook and other current technologies to develop the foundational skills necessary to manage email, appointments, contacts, and tasks.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Demonstrate office skills in office communications, record management, proofreading, research techniques, planning meetings and conferences, writing and dictating correspondence.
2. Describe the technologies of the modern office such as electronic mail, word processing, information processing, and telecommunications.
3. Perform a mastery of punctuation, grammar, writing skills and indexing skills.
4. Manage records, make travel arrangements, and execute general administrative duties.
5. Define ethics and ethical behavior.

6. Manage the Outlook environment efficiently within a professional business setting.
7. Manage messages in an organized way for productivity.
8. Manage schedules to clearly communicate among professionals.
9. Manage contacts and groups to effectively connect business individuals.

BCIS 1890. Introduction to IT Support

Course Catalog Description:

This course is designed to provide an overview of the different types of helpdesks that exist as a single point of contact for managing customers' problems, and the varying roles and skills required within a typical helpdesk. In addition, the course will cover troubleshooting Microsoft Windows and Microsoft Office desktop applications, managing application updates and upgrades, as well as resolving folder and file issues.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Understand the history of end-user computing, how users increase their productivity with technology use, the resources users need to be productive, and common problems they encounter.
2. Describe the communication and customer service skills user support workers need.
3. Examine the many types of written communications a support specialist may be assigned to prepare, and explains how to plan, write, and evaluate end-user documents.
4. Learn problem-solving strategies that a user support specialist can apply to a troubleshooting situation.
5. Explore a multilevel support model and the incident management process.
6. Understand the mission of support groups and how to staff and train them.
7. Explore tools to help support workers analyze and assess user needs for technology solutions.
8. Understand how to plan training activities targeted at end users; how to prepare training materials; and how to present, evaluate, and improve training activities.

BCIS 1992. Directed Studies in Business Computer Information Systems

Student Learning Outcomes

Varies

BCIS 2110. Business Computer Applications

Course Description

The owner/manager approach to the use of microcomputers: systems design, software, business applications, and the Windows environment.

Student Learning Outcomes

1. Demonstrate an understanding of computing fundamentals terminology.
2. Be able to demonstrate and understand Essential Computer Skills.
3. Be able to use technology to solve problems.
4. Be able to use current applicable software.
5. Become knowledgeable consumers of technology.
6. Be able to use current information on emerging technologies (social networking, applications and converging technologies representing various fields which are in some way moving towards stronger inter-connection with existing technologies).

BCIS 2120. Desktop Publishing**Course Description**

This course utilizes a variety of software packages to produce reports, brochures, advertisements, correspondence and newsletters. Various software packages are used such as Microsoft Office Publisher® and Adobe® InDesign CS Suite.

Student Learning Outcomes (Updated 7.1.24)

Upon Completion of this course with a grade of a 'C' or better, the student will be able to:

1. Effectively utilize the features of Microsoft Publisher, such as create, open, edit, save, view and print a publication.
2. Design and create top quality publications using templates, color schemes, text and graphics suitable for academic professional, and personal use.
3. Merge publications while working with advanced formatting.
4. Produce publications using design techniques, font schemes, object manipulation, and layout guides.

BCIS 2130. Web Design**Course Description**

Design and create a website using HTML, CSS, web development tools and industry-recognized software while applying best practices in site management and business web presence.

Student Learning Outcomes

1. Identify and apply best practices for web design in a business setting
2. Create a basic web page utilizing WC# principles.
3. Explain the importance and impact of web presence in today's business environment.
4. Determine and utilize web page features and techniques for a specific business.
5. Create a web design management plan for business.
6. Discuss web page tools for performance and web traffic analytics.
7. Identify web design components for a mobile society.

BCIS 2140. Business Technology**Course Description**

Focuses on how technologies are used to support business needs or initiatives. Course will cover such topics as Customer Relations Management (CRM), Enterprise Resource Planning (ERP), Point of Sale (POS), Accounting Information Systems, E-commerce, Artificial Intelligence (AI), Business Continuity Planning (BCP), risk management, operation security, and/or information security in addition to discussion of ethics as related to technology usage.

Student Learning Outcomes

1. Explain how technologies are used to support business needs.
2. Describe Accounting Information Systems, E-Commerce, and Artificial Intelligence.
3. Describe the functions of risk management.

BCIS 2150. Advanced Computing

Course Description

This course is a continuation of BCIS 1610 Intermediate Computing. This is the third course in a series of three that prepare the student to become Microsoft Office User Specialist (MOUS) certified. Word processing, spreadsheet, database, and presentations software are continued with advance skills being obtained. Out-of-class computer work is required.

Student Learning Outcomes

At the conclusion of the course, the student should be able to:

MS Word®

1. Demonstrate Collaborating, Integration and Charts in MS Word
2. Compose a reference document
3. Create on online form
4. Enhance an online form using Macros

MS PowerPoint®

5. Create Photo Albums and Deliver Presentations
6. Develop PowerPoint Skills using MOS Skills Training: Managing Presentations
7. Enhance PowerPoint Skills using MOS Skills Training: Managing Slides
8. Complete and Pass MOS Skills Exams: Managing Presentations and Managing Slides

MS Excel®

9. Demonstrate working with Trendlines, Pivot Table Reports, PivotChart Reports, and Slicers
10. Analyze Formula Auditing, Data Validation, and Complex Problem Solving
11. Perform Data Analysis with Power Tools and Creating Macros
12. Demonstrate User Interfaces, Visual Basic for Applications (VBA), and Collaboration Features in Excel®

MS Access®

13. Design Macros, Navigation Forms, and Control Layouts
14. Administer a Database System
15. Design forms Administering a Database System

MOS Expert Exams®

16. Complete and pass the MOS Skills Exam for Word Expert: Using Advanced Word Features
17. Complete and pass the MOS Skills Exam for PowerPoint Associate: Applying Transitions and Animations
18. Complete and pass the MOS Skills Exam for Excel® Expert: Manage and Format Data
19. Complete and pass the MOS Skills Exam for Access Expert: Create and Modify Queries

BCIS 2210. Intermediate MS Access® (Title updated 7.1.24)

Course Description (Description updated 7.1.24)

This course provides an in-depth study of MS Access software. Students will develop intermediate to advanced projects that relate to supporting business needs and decision making. Intermediate topics include defining table relationships; import and export options; data validation; embedding; and use of the Table Analyzer for integrating and analyzing data.

Student Learning Outcomes (Updated 7.1.24)

Examine database concepts and explore the Microsoft Office Access environment.

1. Create, edit, format, and save Access databases.
2. Create, edit, and save tables, queries, forms, and reports.
3. Define a relationship between two tables.
4. Use the Like, In, Not, and & operators in queries.
5. Create a crosstab query.

6. Modify table designs using lookup fields, input masks, and data validation rules.
7. Use the Table Analyzer.
8. Understand the difference between importing, embedding, and linking external objects.

BCIS 2212. MS Access®

Course Description

This course provides an in-depth study of Microsoft Access® database software with a hands-on approach.

Student Learning Outcomes

Upon Completion of this course with a grade of a 'C' or better, the student will be able to:

1. Identify the basic Access (Database) concept.
2. Describe and apply basic to advanced skills.
3. Recognize and demonstrate the concepts of creating, editing, and formatting Databases.
4. Apply and demonstrate the concepts of working with queries, forms, and reports.
5. Utilize tables in creating databases.
6. Analyze data using reports from basic to advanced reports.

BCIS 2215. MS EXCEL®

Course Description

Microsoft Excel® 2010 is intended to provide comprehensive instruction in the major features of this spreadsheet application.

Student Learning Outcomes

1. Explore programs that comprise Microsoft Office 2010®.
2. Create MS Excel® spreadsheets.
3. Format workbooks.
4. Apply formulas and functions.
5. Enhance workbooks with charts and graphics.
6. Apply concepts related to PivotTables and Pivot Charts when working with tables.
7. Use advanced functions and conditional formatting.

BCIS 2217. MS EXCEL®II (Title updated 7.1.24) Check for course number change to BCIS 2118 when reviewed by CS Working committee

Course Description (Description updated 7.1.24)

This course provides an in-depth study of Microsoft Excel spreadsheet software. Coverage includes integration of Excel with other MS Office programs, using multiple worksheets/workbooks, what-if analyses, macros and forms, pivot tables and charts, and use of the Data Analysis Tool Pack.

Student Learning Outcomes (Updated 7.1.24)

Upon successful completion of this course students should be able to:

1. Develop and work with professional-looking worksheets.
2. Integrate Microsoft Excel with other Microsoft programs.
3. Work with multiple worksheets and workbooks.
4. Perform what-if analyses.
5. Enhance Microsoft Excel with Visual Basic.
6. Use and development of Pivot Tables and charts.
7. Introduction to the Data Analysis Tool Pack.

BCIS 2220. MS Word®II (Title updated 7.1.24) CHANGED TO BCIS 2221 to accommodate SIS course numbering logic as

HEIs.

Course Description (Description updated 7.1.124)

This course provides an in-depth study of MS Word software. Students will learn how to create professional business documents, templates, customize themes, mail merge, and reports with citations and references.

Student Learning Outcomes

Upon successful completion of this course students should be able to:

1. Create, edit, format, and save Word documents.
2. Create reports using chosen reference style which includes citations and bibliography.
3. Create a multiple-page report with tables, footnotes, and endnotes.
4. Create a professional newsletter, which includes inserting section breaks, formatting columns, inserting symbols, and distinguishing between online and inline objects.
5. Create and change templates.
6. Create, apply, and customize document themes.
7. Create, apply, and customize styles.
8. Create and edit documents using mail merge with data sources and main documents.

BCIS 2221. MS Word®II

Course Description (Description updated 7.1.124)

This course provides an in-depth study of MS Word software. Students will learn how to create professional business documents, templates, customize themes, mail merge, and reports with citations and references.

Student Learning Outcomes

Upon successful completion of this course students should be able to:

1. Create, edit, format, and save Word documents.
2. Create reports using chosen reference style which includes citations and bibliography.
3. Create a multiple-page report with tables, footnotes, and endnotes.
4. Create a professional newsletter, which includes inserting section breaks, formatting columns, inserting symbols, and distinguishing between online and inline objects.
5. Create and change templates.
6. Create, apply, and customize document themes.
7. Create, apply, and customize styles.
8. Create and edit documents using mail merge with data sources and main documents.

BCIS 2230. MS PowerPoint®

Course Description

Microsoft PowerPoint is a complete presentation graphics software program that produces a professional-looking presentation. PowerPoint enables informal presentations in a small conference room using overhead transparencies.

Student Learning Outcomes

1. Getting Started with Microsoft 2013.
2. Applying and Modifying Text and Graphic Objects.
3. Present several assigned presentations
4. Integration with other Programs

BCIS 2310. Spreadsheets and Data Analysis

Course Description

Evaluation of and advanced applications of electronic spreadsheets. Basic concepts of business statistics, data analysis, and management science integrated in a contemporary spreadsheet environment. Emphasizes practical applications and business decision making.

Student Learning Outcomes

Students will:

1. Develop and work with professional-looking worksheets.
2. Integrate Microsoft Excel® with other Microsoft programs.
3. Work with multiple worksheets and workbooks.
4. Perform what-if analyses.
5. Enhance Microsoft Excel® with Visual Basic®.
6. Use Microsoft Excel® to perform statistical analyses.

BCIS 2320. Introduction and Applied Analytical Programming

Course Description

This course introduces more advanced concepts of business analytics and the applications of statistical software for data management and reporting. Topics include an overview of data and text mining, forecasting and optimization techniques, data visualization, data security, ethics, data management, data preprocessing, and modeling including linear and logistic regression analysis using programming tools.

Student Learning Outcomes

Students completing this course should be able to:

1. Utilize statistical programming tools to conduct descriptive analytics.
2. Utilize business analytics and statistical software packages to solve advanced business analytical problems. Students will learn tools in predictive business analytics including:
 - a. Correlation and Linear Regression
 - b. Multiple Linear Regression
3. Logistic Regression

BCIS 2330. Introduction to Predictive Analysis and Applied Predictive Modeling

Course Description

This course introduces the foundations of predictive analytics and applying predictive models. Topics include basic predictive modeling methods for both classification and regression tasks, and the use of classification and regression models in real-world scenarios.

Student Learning Outcomes

Students completing this course should be able to:

1. Build and validate predictive models for classification tasks.
2. Build and validate predictive models for regression tasks.
3. Apply classification models to guide decisions.
4. Apply regression models to guide decisions.

BCIS 2340. Analytical Tools

Course Description

This course covers advanced statistical and analytic tools for use in decision-making, and the planning and execution of an analytics project that integrates the analytical knowledge and skills acquired through prior coursework. Topics include an overview of data mining, analysis of semi-structured and unstructured data, and text analytics. Students will define and carry out an analytics project from inception to final reporting.

Student Learning Outcomes

Students completing this course should be able to:

1. Analyze complex data, including semi-structured and unstructured data, using analytical tools and methods.
2. Apply analytical methods and best practices in a simulated business setting.

BCIS 2450. Social Media Management

Course Catalog Description:

In this introductory course, students will examine the role that social media plays in society, relationships, and enterprise. Learners will get hands-on experience with virtual communities and learn how to use a variety of social media tools to expand social awareness, create a digital presence, and develop a social media strategy. Upon completion, students should be able to create a blog, distribute digital content, lead a participative online community, and implement a social media campaign.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Define different types of social media channels along with key trends in this evolving medium.
2. Describe and apply best practices for utilizing various social channels in marketing plans.
3. Research/ analyze audience behavior and needs in order to define target segments and develop appropriate marketing programs to achieve business objectives.
4. Describe and apply marketing techniques used in social/emerging media.
5. Create social media accounts with targeted objectives & outcome measurements.
6. Identify and define appropriate metrics of success for each medium.
7. Describe ethical issues of social media such as privacy, security, regulation, political impact, and new/emerging technologies.

BCIS 2998. CIT Internship**Course Catalog Description:**

Students are required to work a minimum of nine hours per week in an office under the joint supervision of the employer and instructor. The instructor and student will meet with the employer to determine achievable student objectives for the semester. Students will meet in the Blackboard classroom every week to discuss their work placement and other work-related issues. They must also complete a Work Experience Handbook, time sheets totaling 135 hours, and present a detailed work experience report at the end of the semester.

Student Learning Outcomes

Upon successful completion of this course, the student will:

1. Get along well with co-workers and supervisors by receiving at least an average evaluation in this area.
2. Be cooperative and helpful in dealing with co-workers and supervisors by receiving at least an average evaluation in this area.
3. Be dependable and reliable in meeting all requirements and duties of your employer by receiving at least an average evaluation in this area.
4. Dress appropriately for the internship by receiving at least an average evaluation in this area.
5. Be productive and enthusiastic in performing the responsibilities required by your employer by receiving at least an average evaluation in this area.

6. Be prompt for work by receiving at least an average evaluation in this area.
7. Follow instructions by receiving at least an average evaluation in this area.
8. Display initiative by receiving at least an average evaluation in this area.
9. Produce acceptable work by receiving at least an average evaluation in this area.
10. Review and discuss workplace politics and personalities.
11. Present a detailed work experience report at the end of the semester.

Business Finance (BFIN)

BFIN 1010. Personal Financial Planning for College Students

Course Description

Introduces students to the basics of money management and financial skills necessary to meet real-world challenges. The course is interactive and will cover concepts and decision making through illustrations and real-life problems. Topics covered include budgeting, managing money, borrowing money and planning for the future.

Student Learning Outcomes

1. Explain how career selection is a financial decision.
2. Demonstrate the effect of career selection on personal budgeting.
3. Distinguish between types of consumer financial institutions.
4. Distinguish between types of consumer financial products.
5. Indicate the importance of personal history to consumer financial credit.
6. Explain how to select an appropriate consumer financial institution.
7. Describe personal tax responsibilities.
8. Describe types of personal risk and insurance products to help mitigate that risk.
9. Identify and use financial terminology appropriately.

BFIN 1110. Personal Financial Planning for College Students

Course Description

Introduces students to the basics of money management and financial skills necessary to meet real-world challenges. The course is interactive and will cover concepts and decision making through illustrations and real-life problems. Topics covered include budgeting, managing money, borrowing money and planning for the future.

Student Learning Outcomes

1. Explain how career selection is a financial decision.
2. Demonstrate the effect of career selection on personal budgeting.
3. Distinguish between types of consumer financial institutions.
4. Distinguish between types of consumer financial products.
5. Indicate the importance of personal history to consumer financial credit.
6. Explain how to select an appropriate consumer financial institution.
7. Describe personal tax responsibilities.
8. Describe types of personal risk and insurance products to help mitigate that risk.
9. Identify and use financial terminology appropriately.

BFIN 1115. Financial Services Career Exploration

Course Description

This course is designed to prepare students for a possible career in the financial services industry. Students will interact with financial industry experts, develop skills and knowledge necessary to obtain employment in the financial industry, and discover financial capability. Students will also gain personal finance, academic, and life skills necessary for successful transition into college and/or future employment.

Student Learning Outcomes

1. Describe methods of behavior and learning techniques to become more effective in school and the workplace.
2. Apply the personal and financial skills, knowledge and information needed to create and implement financial plans and be a good financial consumer.

3. Develop a career portfolio containing resume, cover letter, letter of recommendation and interview tip sheet.
4. Demonstrate effective interviewing techniques including appropriate dress, questions, responses, and non-verbal communication.
5. Collect key information regarding various employment opportunities within the financial services industry based on industry expert speakers and presenters.
6. Demonstrate knowledge of basic banking and non-banking services.
7. Examine the history of financial institutions in the United States and choices regarding financial empowerment and economic mobility.

BFIN 1210. Principles of Banking

Course Description

Survey of banking in today's economy. Topics include language, documents and processes of banking from the fundamentals of negotiable instruments to contemporary issues.

Student Learning Outcomes

Students should be able to:

1. Define and explain the importance of full-service commercial banking.
2. Explain the development of commercial banking in the United States and the federal legislation that shaped its development.
3. Explain the impacts of the banking industry on the economy, the community, and individuals.
4. Describe the major functions of commercial banks and their interrelationships.
5. Explain the functions and importance of the Federal Reserve System.
6. Compare and contrast time and demand deposits.
7. Define negotiable instrument and describe the features that make an instrument negotiable.
8. Explain check paying procedures and regulations.
9. Discuss the importance, necessity and process of bank investments.
10. Describe the role of the bank's board of directors in establishing and overseeing lending policy and identifying basic loan categories.
11. Explain the concepts of liquidity and its importance to the banking industry.

BFIN 1996. Special Topics in Business Finance

Course Description

Varies

Student Learning Outcomes

Varies

BFIN 2110. Introduction to Finance

Course Description

Introduces tools and techniques of financial management. Includes time value of money; financial planning, diversification and risk; debt and equity investment decisions; and financial statement analysis.

Student Learning Outcomes

Students should be able to:

Required

1. Explain the time value of money and its application in decision-making, including calculating present and future values of single payment and series of payments.
2. Identify the major sources of external long-term financing for corporations.
3. Explain risk-return tradeoff as it relates to diversification.
4. Differentiate the role of finance from other related disciplines such as accounting and economics.
5. Demonstrate knowledge of capital markets and securities (debt and equity).
6. Describe basic types of financial ratios and their uses.

7. Demonstrate the ability to prepare cash flows and make qualitative judgments on the relevance of the changes from one time frame to another.

Optional

1. Personal finance topics such as managing credit and investments.

BFIN 2140. Personal Finance

Course Description

Introduces tools and techniques of personal financial management. Includes budgeting, credit, insurance, personal income tax, and retirement/estate financial planning.

Student Learning Outcomes

Students should be able to:

Required

1. Explain the importance and relevance of personal financial planning.
2. Discuss personal financial goals; identify strategies for achieving personal financial goals; and develop a personal budget.
3. Analyze the advantages and disadvantages of credit; determine the cost of credit; and explain how to protect credit and manage debt.
4. Identify strategies for consumer purchasing and evaluate purchase options.
5. Determine insurance needs and distinguish between the different types of policies and companies.
6. Discuss personal income tax basics and select optimal tax strategies for financial planning.
7. Describe retirement planning and its importance.

Optional

1. Analyze the personal and legal aspects of estate planning and distinguish various types of wills and trusts.
2. Compare and contrast various personal investment options.

BFIN 2210. Healthcare Finance

Course Description

This course provides an overview of the general principles of healthcare accounting. It includes the fundamentals pertaining to revenues, expenses, financial reporting, capital planning, operating budgets, and vendor management applied in the health care environment.

Student Learning Outcomes

1. Explain the structure of the finance department, the role of finance in healthcare organizations, and issues currently facing healthcare managers.
2. Distinguish between the key differences of for-profit and not-for-profit businesses including the implications of tax laws for individuals, for-profit businesses, and not-for-profit corporations.
3. Explain the process of coding, billing, and reimbursement for healthcare systems through government and third-party payers.
4. Apply managerial accounting in determining, classifying, and allocating healthcare costs.
5. Describe the overall planning process and the key components of the financial plan as well as create a simple operating budget.
6. Describe the revenue cycle and its importance to healthcare managers and how managers monitor and control operations.
7. Analyze debt and equity financing options and their features and how to utilize it for capital investment.
8. Identify the elements of balance sheets, income statements, and statement of cash flows to determine profitability and financial stability.

Business Law (BLAW)

BLAW 2110. Business Law I**Course Description**

Survey of the legal environment of business and common legal principles including: the sources of law, dispute resolution and the U.S. court systems, administrative law, tort law, contract law, agency and employment law, business structure and governance, ethics and corporate social responsibility. Explores sources of liability and presents strategies to minimize legal risk.

Student Learning Outcomes

Students should be able to: Required:

1. Describe the sources of law.
2. Describe and explain dispute resolution and the court systems in the United States.
3. Describe the concepts of negligence, intentional torts and strict liability.
4. Describe and apply the essential aspects of contracts from creation, performance, breach and remedies, including basic contract law from Article 2 of the Uniform Commercial Code.
5. Explain the concept of ethics.

BLAW 2120. Business Law II**Course Description**

Property, advanced contract law, debtor-creditor relations, bankruptcy and Uniform Commercial Code topics including sales,

negotiable instruments, secured transactions and documents of title.

Student Learning Outcomes

Students should be able to: Required:

1. Explain the Uniform Commercial Code law of sales, negotiable instruments and secured transactions.
2. Explain the law of property, including the characteristics of real and personal property.

BLAW 2130. Survey of Business Law

Course Description

This course is a survey of the legal environment of business, including the sources of law, dispute resolution, the New Mexico and U.S. court systems, intentional torts, negligence, strict liability, contracts, introduction to the Uniform Commercial Code, organizational social responsibility, ethical applications of the law and the relationship between ethics and the law.

Student Learning Outcomes

1. Describe the sources of law.
2. Describe and explain dispute resolution and the court systems in the United States.
3. Explain the concepts of negligence, intentional torts and strict liability.
4. Describe and apply the essential aspects of contracts from creation, performance, breach and remedies, including basic contract law from Article 2 of the Uniform Commercial Code.
5. Explain the concepts of social responsibility, the ethical application of the law, and the relationship between ethics and the law.
6. Explain the law of property, including the characteristics of real and personal property and the ways property rights are transferred.
7. Recognize how an agency relationship is formed and discuss its legal implications.

Chemical Dependency (CHDP)

CHDP 2110. Introduction to Addiction Counseling

Course Description

This course provides the knowledge of the basic components in the field of addiction counseling. The following areas will be examined: models, functions, meanings, assessment, family, adult children, codependency, shame, intervention, co-occurring disorders, treatment, and prevention.

Student Learning Outcomes

Students will:

1. Demonstrate knowledge of the basic components in the field of addiction counseling.
2. Demonstrate knowledge of the origin and development of the addiction counseling field.
3. Be provided with practical experiences in the field of addiction counseling.
4. Recognize, understand, and utilize the basic concepts of addiction counseling in their everyday lives.
5. Exhibit college-level writing skills.

Chemical Engineering (CHME)

CHME 1110. Introduction to Chemical Engineering

Course Description

Students will gain fundamental engineering skills that apply to all engineering disciplines through problem and cooperative based learning exercises and attain a clear understanding of what chemical engineers practice versus other engineering disciplines, in both traditional and contemporary work environments and careers. This course will introduce engineering calculations such as material and energy balances, cost analysis, and engineering software programs. The lab focuses on firsthand experience of engineering design, calculations, and simulations using ChemCAD, Lab VIEW, and Excel. Additionally,

data acquisition and analysis will be introduced. Small teams will design, build, and test a system, resulting in a written report, oral presentation, and design competition.

Student Learning Outcomes:

1. Gain fundamental engineering skills that apply to all engineering disciplines, such as the ability to solve word problems by demonstrating basic engineering concepts such as force, energy, and pressure.
2. Explain the engineering design process.
3. Form relationships with other first-year engineering students.
4. Evaluate/analyze ethical situations using the Engineering Code of Ethics; Give an example of a violation of an ethical situation.
5. Generate and give technical presentations using Microsoft PowerPoint.
6. Collect and analyze engineering data using Microsoft Excel and National Instruments LabVIEW.
7. Attain a clear understanding of what chemical engineers practice versus other engineering disciplines, in both traditional and contemporary work environments and what careers are possible with a degree in chemical engineering.
8. Design and create a small car powered by a chemical reaction.
9. Demonstrate correct uses of unit systems and unit conversions.
10. Solve engineering problems as a member of a team.
11. Acquire an appreciation for the role of laboratory safety in the field of chemical engineering.
12. Construct a four-year academic plan using input from his/her academic advisor and course instructor.

CHME 1110L. Introduction to Chemical Engineering Laboratory

Students will gain fundamental engineering skills that apply to all engineering disciplines through problem and cooperative based learning exercises and attain a clear understanding of what chemical engineers practice versus other engineering disciplines, in both traditional and contemporary work environments and careers. This course will introduce engineering calculations such as material and energy balances, cost analysis, and engineering software programs. The lab focuses on firsthand experience of engineering design, calculations, and simulations using ChemCAD, Lab VIEW, and Excel. Additionally, data acquisition and analysis will be introduced. Small teams will design, build, and test a system, resulting in a written report, oral presentation, and design competition. Lab Component.

Student Learning Outcomes

1. Gain fundamental engineering skills that apply to all engineering disciplines, such as the ability to solve word problems demonstrating basic engineering concepts such as force, energy, and pressure.
2. Explain the engineering design process.
3. Form relationships with other first-year engineering students.
4. Evaluate/analyze ethical situations using the Engineering Code of Ethics; Give an example of a violation of an ethical situation.
5. Generate and give technical presentations using Microsoft PowerPoint.
6. Collect and analyze engineering data using Microsoft Excel and National Instruments LabVIEW.
7. Attain a clear understanding of what chemical engineers practice versus other engineering disciplines, in both traditional and contemporary work environments and what careers are possible with a degree in chemical engineering.
8. Design and create a small car powered by a chemical reaction.
9. Demonstrate correct uses of unit systems and unit conversions.
10. Solve engineering problems as a member of a team
11. Acquire an appreciation for the role laboratory safety in the field of chemical engineering.
12. Construct a four-year academic plan using input from his/her academic advisor and course instructor.

Chemistry (CHEM)

CHEM 1105. Preparation for College Chemistry

Course Description

A preparatory course for students who feel they are not prepared or who do not have the pre-requisite requirements.

Student Learning Outcome

Students will be able to

1. Apply mathematical knowledge of college algebra, graphing, exponential, and logarithm in chemistry word problems.
2. Handle significant figures for addition, subtraction, multiplication, and division;
3. Carry out simple unit conversions.
4. Use periodic table.
5. Balance simple chemical equations
6. Solve fundamental stoichiometric problems of chemical formula and reactions
7. Do calculations involving moles, molarity, weight percent
8. Understand and explain the relationship between pH and acidity

CHEM 1106. Foundations of Chemistry

Course Description

Chemistry 1106 is a unique preparatory course for Chemistry 1215 and your subsequent chemistry courses. It has a dual purpose; firstly, to help you obtain a solid foundation in the chemical concepts that are essential to your future Chemistry and Science classes, and secondly to optimize your set of learning skills to help you learn more efficiently, demonstrate your knowledge and succeed in your future fast-paced high-level science courses.

Student Learning Outcomes

1. Express uncertainty in measurements using appropriate significant figures. Determine the appropriate significant figures to express the result of any series of calculations involving simple arithmetic operations.
2. Use dimensional analysis to solve multi-step unit conversion problems.
3. Use the concept of density in qualitative and quantitative problems.
4. Describe the structure of the atom in terms of location, charge and relative size of subatomic particles. Use atomic notation for atoms and their isotopes and ions.
5. Determine average atomic mass of an element and use the mole concept to determine the number of atoms or moles in a particular mass.
6. Use the periodic table to predict the nature of bonding between two elements and name the resulting compound based on IUPAC convention.
7. Use the mole concept to relate numbers of molecules to moles and masses.
8. Classify matter by state and composition. Distinguish between physical & chemical properties & states.
9. GeolWrite and balance equations to describe chemical reactions.
10. Relate quantities of reactants and products in chemical equations in stoichiometric calculations.

CHEM 1107. Foundational Chemistry for STEM

Course Description

This course prepares students for further work in STEM disciplines, especially in chemistry. Students are introduced to the foundations of chemistry using a historically oriented approach, followed by detailed introduction to some aspects of modern chemistry. A significant portion of the course is devoted to atomic structure (quantum chemistry). Students engage in extensive laboratory work. Each lecture topic is explored further with a laboratory exercise, generally emphasizing reactions and chemical experimentation. Students learn to reason quantitatively and qualitatively within the context of chemistry.

Student Learning Outcomes

1. Characterize and separate compounds, elements, and mixtures.
2. Use dimensional analysis to carry out various calculations.
3. Quantitatively apply fundamental laws of matter, such as conservation of mass, definite proportions, multiple proportions, and combining volumes.
4. Represent reactions using chemical equations.
5. Distinguish accuracy and precision, and evaluate the uncertainty of measured values.
6. Use significant figures to represent uncertainty in measured and calculated quantities.
7. Predict the products of precipitation reactions.
8. Describe matter in terms of atoms and subatomic particles.
9. Use the periodic table of elements to calculate quantities such as molar mass and to predict properties such as metallic character.
10. Describe the electronic structure of atoms, in terms of orbitals and allowed states.
11. Relate atomic line spectra to transitions among electronic states.
12. Write electron configurations for atoms.
13. Distinguish ionic and covalent compounds.
14. Use standard chemical nomenclature for various classes of compounds.
15. Draw Lewis structures of molecules.
16. Balance chemical equations and apply reaction stoichiometry.
17. Demonstrate proficiency with common chemistry laboratory techniques.
18. Analyze data and draw conclusions from laboratory experiments.

CHEM 1110. Chemistry in Our Community

Course Description

This course will introduce nonscience majors to the basic chemistry required to understand topics of current interest affecting their communities, such as air and water quality, global climate change, use of fossil fuels, nuclear power, and alternative energy sources, to illustrate chemical principles, acquaint students with scientific methods, and to critically evaluate scientific claims as presented in the media and in other communicative forums.

Student Learning Outcomes

1. Define and explain basic chemical terms, principles and concepts.
2. Recognize simple compounds.
3. Utilize the scientific method to analyze arguments.
4. Interpret information from data presented in charts, graphs, tables and spreadsheets.
5. Balance chemical and nuclear reactions and solve simple stoichiometry problems.
6. Analyze the quality of an argument provided in support of a position.
7. Identify reliable government and scientific websites for accessing data relevant to current local, national and international issues.
8. Understand and explain the basic chemistry behind and major issues of debate concerning topics such as air and water quality, global climate change, use of fossil fuels, nuclear power, and alternative energy sources.

CHEM 1110L. Chemistry in Our Community Laboratory

Course Description

This course will introduce nonscience majors to the basic chemistry required to understand topics of current interest affecting their communities, such as air and water quality, global climate change, use of fossil fuels, nuclear power, and alternative energy sources. Experiments will illustrate chemical principles and acquaint students with scientific methods, data processing, critical thinking and scientific writing.

Student Learning Outcomes

1. Define and explain basic chemical terms, principles and concepts.

2. Evaluate safety issues in chemical reactions, laboratories and industry.
3. Observe the operation of laboratory equipment to collect data and as used in industry.
4. Discuss chemical reactions that take place in various environments and their effects on air and water quality, climate change, nuclear power, fossil fuels, and alternative energy sources.
5. Discuss the use and harmful effects of chemicals to the environment, including the importance of safe disposal of toxic chemicals.
6. Examine the effects of public policy on environment.
7. Examine how energy production affects climate change, including basic calculations.
8. Interpret information from data represented in charts, graphs, tables and spreadsheets.

CHEM 1110C. Chemistry in Our Community Lecture and Laboratory

Course Description

This course will introduce nonscience majors to the basic chemistry required to understand topics of current interest affecting their communities, such as air and water quality, global climate change, use of fossil fuels, nuclear power, and alternative energy sources. Experiments will illustrate chemical principles and acquaint students with scientific methods, data processing, critical thinking and scientific writing.

Lecture Student Learning Outcomes

1. Define and explain basic chemical terms, principles and concepts.
2. Recognize simple compounds.
3. Utilize the scientific method to analyze arguments.
4. Interpret information from data presented in charts, graphs, tables and spreadsheets.
5. Balance chemical and nuclear reactions and solve simple stoichiometry problems.
6. Analyze the quality of an argument provided in support of a position.
7. Identify reliable government and scientific websites for accessing data relevant to current local, national and international issues.
8. Understand and explain the basic chemistry behind and major issues of debate concerning topics such as air and water quality, global climate change, use of fossil fuels, nuclear power, and alternative energy sources.

Laboratory Student Learning Outcomes

1. Define and explain basic chemical terms, principles and concepts.
2. Evaluate safety issues in chemical reactions, laboratories and industry.
3. Observe the operation of laboratory equipment to collect data and as used in industry.
4. Discuss chemical reactions that take place in various environments and their effects on air and water quality, climate change, nuclear power, fossil fuels, and alternative energy sources.
5. Discuss the use and harmful effects of chemicals to the environment, including the importance of safe disposal of toxic chemicals.
6. Examine the effects of public policy on environment.
7. Examine how energy production affects climate change, including basic calculations.
8. Interpret information from data represented in charts, graphs, tables and spreadsheets.

CHEM 1111. Basic Chemistry

Course Description

For students whose preparatory science or math training has been deficient. Does not meet the chemistry requirement in any curriculum.

Student Learning Outcomes

The goals and objectives for CHEM 1111 are to equip students with the necessary problem solving skills to be successful in CHEM 1216C/1226C

CHEM 1115. Chemistry in Art

Course Description

This course will introduce non-science majors to the basic chemistry required to understand topics of interest to the artistic community, such as solubility, color and preparation of pigments, electrochemistry, chemical safety and toxicity. The course will illustrate chemical principles, acquaint students with scientific methods, allow them to critically evaluate scientific claims as presented in the media and in other communicative forums, and emphasize the creation of works of art using their knowledge of chemistry.

Student Learning Outcomes

1. Define and explain basic chemical terms, principles and concepts including the scientific method, atoms, molecules, elements, and compounds.
2. Use dimensional analysis and the SI system of units to solve quantitative scientific calculations.
3. Recognize simple chemical compounds and describe differences between physical and chemical properties.
4. Discuss the relationship of color to electromagnetic radiation.
5. Calculate molar mass of chemical compounds, and molarities of solutions to prepare solutions to be used in the art studio.
6. Use Lewis structures to describe formation of ionic and covalent compounds and describe how electronic structure determines the three-dimensional spatial arrangement of atoms in compounds and ultimately, molecular polarity as it relates to solvents and solubility.
7. Balance chemical reactions and solve simple stoichiometry problems relevant to the synthesis of pigments, binders, and other art materials.
8. Recognize periodic trends of elements in the periodic table and their electron configurations to relate these properties to chemical structure, bonding and reactivity.
9. Explain the differences between covalent, ionic, network covalent and metallic bonding and give examples of art materials that exhibit these types of bonding.
10. Recognize and name simple hydrocarbons and organic functional groups and identify the properties of organic compounds used in the world of art.

CHEM 1115L. Chemistry in Art Laboratory

Course Description

Chemistry in Art Laboratory is a laboratory course designed to complement the theory and concepts presented in the Chemistry in Art lecture component. The laboratory allows students to develop basic chemical laboratory techniques for obtaining and analyzing experimental observations pertaining to chemistry and art using diverse methods and equipment.

Student Learning Outcomes

1. Define and explain basic chemical terms, principles and concepts presented in the lecture.
2. Properly operate laboratory equipment to collect data to be used in art projects.
3. Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation and filtration.
4. Discuss chemical reactions that take place under various circumstances and their uses in the creation of both 2 and 3-dimensional works of art.
5. Discuss the use and harmful effects of chemicals to the environment and to human health, including the importance of safe disposal of toxic chemicals.
6. Evaluate safety issues in chemical reactions, laboratories and the art studio and take precautions to minimize risk.
7. Utilize chemical mixtures prepared in the laboratory to create works of art.
8. Calculate molar mass of chemical compounds, and molarities of solutions to prepare solutions to be used in art projects.

9. Understand qualitative chemical techniques for determining the presence of particular chemicals in a piece of art and relate this information to the art's authenticity.
10. Interpret information from data represented in charts, graphs, tables to relate laboratory experimental observations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1120. Introduction to Chemistry

Course Description

This course covers qualitative and quantitative areas of non-organic general chemistry for nonscience majors and some health professions. Students will learn and apply principles pertaining, but not limited to, atomic and molecular structure, the periodic table, acids and bases, mass relationships, and solutions.

Student Learning Outcomes

1. Use the different systems of measurements and perform conversions within the same system of measurement and between different systems of measurements
2. Identify elements from their name or symbol, use the periodic table to describe reactivity patterns of elements and to predict compound formation.
3. Describe the basic structure of an atom using subatomic particles and apply these concepts to nuclear reactions.
4. Describe ion formation and the difference between covalent and ionic compounds. Name and write formulas for ionic and simple molecular compounds.
5. Write and balance chemical reactions. Use balanced reactions in stoichiometric calculations.
6. Describe the differences between the solid, liquid and gas phases. Use the gas laws in calculations and apply these laws to everyday situations.
7. Explain different types of energy, and how energy is released or absorbed in a reaction
8. Describe acid and base behavior and the nature of buffer solutions.

CHEM 1120L. Introduction to Chemistry Laboratory

Course Description

Introduction to Chemistry Laboratory is a laboratory course designed to complement the theory and concepts presented in the Introduction to Chemistry lecture component and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Student Learning Outcomes

1. Practice concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
2. Demonstrate the computational skills needed to perform appropriate laboratory related calculations to include, but not be limited to determining the number of significant figures in numerical value, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
3. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).
4. Record quantitatively measured values to the correct number of significant figures and assign the correct units.
5. Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation, filtration, and titration.
6. Draw appropriate conclusions based on data and analyses.
7. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.
8. Determine chemical formulas and classify different types of reactions.

9. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1120C. Introduction to Chemistry Lecture and Laboratory

Course Description

This course covers qualitative and quantitative areas of non-organic general chemistry for non-science majors and some health professions. Students will learn and apply principles pertaining, but not limited to, atomic and molecular structure, the periodic table, acids and bases, mass relationships, and solutions. The laboratory component introduces students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Lecture Student Learning Outcomes

1. Use the different systems of measurements and perform conversions within the same system of measurement and between different systems of measurements
2. Identify elements from their name or symbol, use the periodic table to describe reactivity patterns of elements and to predict compound formation.
3. Describe the basic structure of an atom using subatomic particles, and apply these concepts to nuclear reactions.
4. Describe ion formation and the difference between covalent and ionic compounds. Name and write formulas for ionic and simple molecular compounds.
5. Write and balance chemical reactions. Use balanced reactions in stoichiometric calculations.
6. Describe the differences between the solid, liquid and gas phases. Use the gas laws in calculations, and apply these laws to everyday situations.
7. Explain different types of energy, and how energy is released or absorbed in a reaction
8. Describe acid and base behavior.
9. Explain the intermolecular attractive forces that determine physical properties; apply this knowledge to qualitatively evaluate these forces and predict the physical properties that result.
10. Explain the intermolecular attractive forces that determine physical properties; apply this knowledge to qualitatively evaluate these forces and predict the physical properties that result

Laboratory Student Learning Outcomes

1. Practice concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
2. Demonstrate the computational skills needed to perform appropriate laboratory-related calculations to include, but not be limited to determining the number of significant figures in numerical value, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
3. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).
4. Record quantitatively measured values to the correct number of significant figures and assign the correct units.
5. Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation, filtration, and titration.
6. Draw appropriate conclusions based on data and analyses.
7. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.
8. Determine chemical formulas and classify different types of reactions.
9. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.

CHEM 1121. General Supplemental Instruction I**Course Description**

Collaborative workshop for students in General Chemistry I. Course does not count toward departmental degree requirements.

Student Learning Outcomes

Not Available

CHEM 1122. General Supplemental Instruction II**Course Description**

Collaborative workshop for students in General Chemistry II. Course does not count toward departmental degree requirements.

Student Learning Outcomes

Not Available

CHEM 1123. Principles of Supplemental Instruction III**Course Description**

Collaborative workshop for students in CHEM 1120G, Principles and Applications of Chemistry. Course does not count toward departmental degree requirements.

Student Learning Outcomes

Not Available

CHEM 1215. General Chemistry I for STEM Majors**Course Description**

This course is intended to serve as an introduction to General Chemistry for students enrolled in science, engineering, and certain preprofessional programs. Students will be introduced to several fundamental concepts, including mole, concentration, heat, atomic and molecular structure, periodicity, bonding, physical states, stoichiometry, and reactions.

Student Learning Outcomes

1. Use dimensional analysis, the SI system of units and appropriate significant figures to solve quantitative calculations in science.
2. Explain the structure of atoms, isotopes and ions in terms of subatomic particles.
3. Understand the differences between physical and chemical changes to matter and utilize the IUPAC system of nomenclature and knowledge of reaction types to describe chemical changes, predict products and represent the process as a balanced equation.
4. Apply the mole concept to amounts on a macroscopic and a microscopic level and use this to perform stoichiometric calculations including for reactions in solution, gases and thermochemistry.
5. Apply the gas laws and kinetic molecular theory to relate atomic level behavior to macroscopic properties.
6. Describe the energy conversions that occur in chemical reactions and state changes, relating heat of reaction to thermodynamic properties such as enthalpy and internal energy, and apply these principles to measure and calculate energy changes in reaction.
7. Use different bonding models to describe formation of compounds (ionic and covalent), and apply knowledge of electronic structure to determine molecular spatial arrangement and polarity.
8. Analyze how periodic properties (e.g. electronegativity, atomic and ionic radii, ionization energy, electron affinity, metallic character) and reactivity of elements results from electron configurations of atoms.

CHEM 1215L. General Chemistry I Laboratory for STEM Majors**Course Description**

General Chemistry I Laboratory for Science Majors is the first semester laboratory course designed to complement the theory and concepts presented in General Chemistry I lecture. The laboratory component will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Student Learning Outcomes

1. Demonstrate and apply concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
2. Demonstrate the computational skills needed to perform appropriate laboratory related calculations to include, but not be limited to determining the number of significant figures in numerical value with the correct units, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
3. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).
4. Prepare solutions with an acceptable accuracy to a known concentration using appropriate glassware.
5. Master basic laboratory techniques including, but not limited to weighing samples (liquid and solid), determining sample volumes, measuring the temperature of samples, heating and cooling a sample or reaction mixture, decantation, filtration, and titration.
6. Demonstrate mastery in experimental techniques, such as pressure measurements, calorimetric measurements, and spectrophotometric measurements
7. Draw conclusions based on data and analyses from laboratory experiments.
8. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.
9. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.
10. Design experimental procedures to study chemical phenomena.

CHEM 1215C. General Chemistry I Lecture and Laboratory for STEM Majors

Course Description

This course covers descriptive and theoretical chemistry.

Student Learning Outcomes

Upon completion of this course all students will be able to demonstrate an appropriate level of mastery of: The Metric system, Heat, Density, Atomic Theory, Moles and Stoichiometry, Solutions, Chemical Formulas and Equations, Gas Laws, Kinetic Theory, Electronic Structure, Periodic Relationships, Calorimetry and Enthalpy, Bonding, Molecular Structure, Liquid and Solid States.

1. Students will describe the process of scientific inquiry.
 - a. Understand that scientists rely on evidence obtained from observations rather than authority, tradition, doctrine, or intuition.
 - b. Students should value science as a way to develop reliable knowledge about the world.
2. Students will solve problems scientifically.
 - a. Be able to construct and test hypotheses using modern lab equipment (such as microscopes, scales, computer technology) and appropriate quantitative methods.
 - b. Be able to evaluate isolated observations about the physical universe and relate them to hierarchically organized explanatory frameworks (theories).
3. Students will communicate scientific information.
 - a. Communicate effectively about science (e.g., write lab reports in standard format and explain basic scientific concepts, procedures, and results using written, oral, and graphic presentation techniques).

4. Students will apply quantitative analysis to scientific problems.
 - a. Select and perform appropriate quantitative analyses of scientific observations.
 - b. Show familiarity with the metric system, use a calculator to perform appropriate mathematical operations, and present results in tables and graphs.
5. Students will apply scientific thinking to real world problems.
 - a. Critically evaluate scientific reports or accounts presented in the popular media.
 - b. Understand the basic scientific facts related to important contemporary issues (e.g., global warming, stem cell research, cosmology), and ask informed questions about those issues.

CHEM 1216. General Chemistry

Course Description

This course explores all the realms of basic chemistry. Students will examine and explore such topics as the periodic table, the structure of atoms and molecules, chemical properties, chemical reactions, chemical equations, bonding, chemical equilibrium and scientific laboratory procedures. Laboratory exercises are included.

Student Learning Outcomes

Successful course completion implies that a student should be able to do the following with at least 70% accuracy:

1. Students of chemistry basics will:
 - a. Describe the main features of atoms and molecules.
 - b. Explain the Periodic Table.
 - c. List methods of measurement in chemistry.
2. Students of the structure of atoms and molecules will:
 - a. Describe atomic structure.
 - b. Describe molecular structure.
3. Students of chemical reactions will:
 - a. Explain the principles of chemical equations.
 - b. Describe the main elements of stoichiometry.
4. Students of gases, light and periodicity will:
 - a. Describe the behavior of gases.
 - b. Explain the relationship between atoms and light.
 - c. Atomic structure and periodicity.
5. Students of bonding and intermolecular forces will:
 - a. Outline the fundamentals of bonding.
 - b. Describe the nature of multiple bonds.
 - c. Explain the structure of macromolecules.
 - d. Describe the principal intermolecular forces.
6. Students of the rates of chemical reactions will:
 - a. Describe the principles that govern the rates of reactions.
 - b. Explain the main features of experimental kinetics.
7. Students of chemical equilibria will:
 - a. Outline the main features of dynamic equilibrium.
 - b. List the types of equilibria.
 - c. Explain the principles thermodynamics and equilibrium.

CHEM 1216C. General Chemistry I

Course Description

As the first of a two-semester sequence, this course teaches fundamental concepts in chemistry, including the electronic structure of atoms, chemical periodicity, nature of chemical bonds, molecular structure, the three phases of matter, etc. Designed for majors in chemical and other physical sciences, including engineering. May be appropriate for the life science major. It is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements. The laboratory component is designed to complement the theory and concepts presented in lecture and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Student Learning Outcomes

1. Apply the mole concept to amounts at a microscopic level and use this to perform stoichiometric calculations for reactions in solution, gases and thermochemistry.
2. Calculate solution concentrations in various units.
3. Apply the gas laws and kinetic molecular theory to relate atomic level behavior to macroscopic properties.
4. Explain the electronic structure of atoms, isotopes and ions in terms of its subatomic particles.
5. Analyze how periodic properties (e.g. electronegativity, atomic and ionic radii, ionization energy, electron affinity, metallic character) and reactivity of elements results from electronic configurations of atoms.
6. Understand the nature of chemical bonds (ionic and covalent). Apply knowledge of electronic structure to determine molecular structure and polarity.
7. Understand the formation of different phases of matter and the underlying fundamental intermolecular interactions.
8. Describe physical states and changes and distinguish these from chemical changes.
9. Describe the energy conversions that occur in chemical reactions and state changes, relating heat of reaction to thermodynamic properties such as enthalpy and internal energy; apply these principles to measure and calculate energy changes in reaction.
10. Apply principles of general chemistry to specific real-world problems in environment, engineering and health-related fields.

CHEM 1217. Principles of Chemistry I

Course Description

As the first of a two-semester sequence, this course teaches fundamental concepts in chemistry, including the electronic structure of atoms, chemical periodicity, nature of chemical bonds, molecular structure, the three phases of matter, etc. In addition, the application of these concepts to various chemical sub-disciplines, such as organic chemistry, biochemistry, and materials chemistry. Designed for majors in chemical sciences and engineering, it is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements.

Student Learning Outcomes

1. Apply the mole concept to amounts at a microscopic level and use this to perform stoichiometric calculations for reactions in solution, gases and thermochemistry.
2. Calculate solution concentrations in various units.
3. Apply the gas laws and kinetic molecular theory to relate atomic level behavior to macroscopic properties.
4. Explain the electronic structure of atoms, isotopes and ions in terms of its subatomic particles.
5. Analyze how periodic properties (e.g. electronegativity, atomic and ionic radii, ionization energy, electron affinity, metallic character) and reactivity of elements results from electronic configurations of atoms.
6. Understand the nature of chemical bonds (ionic and covalent). Apply knowledge of electronic structure to determine molecular structure and polarity.
7. Understand the formation of different phases of matter and the underlying fundamental intermolecular interactions.
8. Describe physical states and changes, and distinguish these from chemical changes.

- Describe the energy conversions that occur in chemical reactions and state changes, relating heat of reaction to thermodynamic properties such as enthalpy and internal energy; apply these principles to measure and calculate energy changes in reaction.
- Apply principles of general chemistry to specific real-world problems in environment, engineering and health-related fields.

CHEM 1217C. General Chemistry I Lecture and Laboratory

Course Description

This course introduces students to chemistry measurements, atomic structure, chemical reactions, stoichiometry, thermochemistry, quantum chemistry, periodic properties, atomic and electronic structures of atoms, and bonding.

Student Learning Outcomes

- Use the scientific method to carry out an experiment
- Understand and perform measurements used in chemistry
- Analyze chemical reactions and predict products
- Study the energies involved in chemical reactions
- Examine atomic structure
- Explore the periodic table, electron activities, and reactivity of elements.

CHEM 1225. General Chemistry II for STEM Majors

Course Description

This course is intended to serve as a continuation of general chemistry principles for students enrolled in science, engineering, and certain preprofessional programs. The course includes but is not limited to a theoretical and quantitative coverage of solutions and their properties, kinetics, chemical equilibrium, acids and bases, entropy and free energy, electrochemistry, and nuclear chemistry. Additional topics may include (as time permits) organic, polymer, atmospheric, and biochemistry.

Student Learning Outcomes

- Explain the intermolecular attractive forces that determine physical properties and phase transitions, and apply this knowledge to qualitatively evaluate these forces from structure and to predict the physical properties that result.
- Calculate solution concentrations in various units, explain the effects of temperature, pressure and structure on solubility, and describe the colligative properties of solutions, and determine solution concentrations using colligative property values and vice versa.
- Explain rates of reaction, rate laws, and half-life, determine the rate, rate law and rate constant of a reaction and calculate concentration as a function of time and vice versa, as well as explain the collision model of reaction dynamics and derive a rate law from a reaction mechanism, evaluating the consistency of a mechanism of a given rate law.
- Describe the dynamic nature of chemical equilibrium and its relation to reaction rates, and apply Le Chatelier's Principle to predict the effect of concentration, pressure and temperature changes on equilibrium mixtures as well as describe the equilibrium constant and use it to determine whether equilibrium has been established, and calculate equilibrium constants from equilibrium concentrations and vice versa.
- Describe the different models of acids and base behavior and the molecular basis for acid strength, as well as apply equilibrium principles to aqueous solutions, including acid base and solubility reactions, and calculate pH and species concentrations in buffered and unbuffered solutions.
- Explain titration curves and speciation diagrams, as well as calculate concentrations of reactants from the former and determine dominant species as a function of pH from the latter.
- Explain and calculate the thermodynamic functions, enthalpy, entropy and Gibbs free energy, for a chemical system, and relate these functions to equilibrium constants and reaction spontaneity; balance redox equations, express

them as two half reactions and evaluate the potential, free energy and equilibrium K for the reaction, as well as predict the spontaneous direction.

8. Construct a model of a galvanic or electrolytic cell; or describe organic reactions.
9. Describe bonding theories, such as valence and molecular orbital theory.

CHEM 1225L. General Chemistry II Laboratory for STEM Majors

Course Description

General Chemistry II Laboratory for Science Majors is the second of a two-semester sequence of laboratory courses designed to complement the theory and concepts presented in General Chemistry II lecture. The laboratory component will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Student Learning Outcomes

1. Demonstrate and apply concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
2. Demonstrate the computational skills needed to perform appropriate laboratory related calculations to include, but not be limited to determining the number of significant figures in numerical value with the correct units, solving problems using values represented in exponential notation, solving dimensional analysis problems, and manipulating mathematical formulas as needed to determine the value of a variable.
3. Perform laboratory observations (both qualitative and quantitative) using sensory experience and appropriate measurement instrumentation (both analog and digital).
4. Prepare solutions with an acceptable accuracy to a known concentration using appropriate glassware.
5. Perform basic laboratory operations related to, but not limited to, gas behavior, colligative properties of solutions, calorimetry, chemical kinetics, chemical equilibria, acid/base titrations, electrochemistry, metal reactivity, and qualitative analyses of ions.
6. Draw conclusions based on data and analyses from laboratory experiments.
7. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes, as required.
8. Relate laboratory experimental observations, operations, calculations, and findings to theoretical concepts presented in the complementary lecture course.
9. Design experimental procedures to study chemical phenomena

CHEM 1225C. General Chemistry II Lecture and Laboratory for STEM Majors

Course Description

This course is a continuation of General Chemistry I and emphasizes the quantitative aspects of chemical behavior. Completion of the two-course sequence fulfills the General Education requirement of the College of Arts and Sciences. To succeed in this course, daily work on practice problems must be done. Exams will test both conceptual understanding as well as quantitative manipulations. Practice will build the required critical thinking and problem-solving skills required on the exams.

Student Learning Outcomes

The student will:

1. Describe the process of scientific inquiry.
2. Solve problems scientifically.
3. Communicate scientific information.
4. Apply quantitative analysis to scientific problems.
5. Apply scientific thinking to real world problems.

CHEM 1226C. General Chemistry II Lecture and Laboratory for STEM Majors

Course Description

As the second of a two-semester sequence, this course teaches fundamental concepts in chemistry, including solutions, equilibria, electrochemistry, thermodynamics and kinetics. Designed for majors in chemical and other physical sciences, including engineering. May be appropriate for the life science major. It is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements. The laboratory component is designed to complement the theory and concepts presented in lecture and will introduce students to techniques for obtaining and analyzing experimental observations pertaining to chemistry using diverse methods and equipment.

Student Learning Outcomes

1. Describe the colligative properties of solutions and explain them using intermolecular forces. Determine solution concentrations using colligative property values and vice versa.
2. Explain rates of reactions, rate laws, and half-life; determine the rate, rate law and rate constant of a reaction and calculate concentration as a function of time and vice versa. Understand the principle of catalysis.
3. Explain the collision model of reaction dynamics, including activation energy, catalysts and temperature; Derive a rate law from a reaction mechanism and evaluate the consistency of a mechanism with a given rate law.
4. Describe the dynamic nature of chemical equilibrium and its relation to reaction rates; apply Le Chatelier's Principle to predict the effect of concentration, pressure and temperature changes on equilibrium mixtures.
5. Describe the equilibrium constant and use it to determine whether equilibrium has been established; calculate equilibrium constants from equilibrium concentrations (including pressures) and vice versa.
6. Describe the different models of acids and base behavior, and the molecular basis for acid strength.

CHEM 1227. General Chemistry II

Course Description

As the second of a two-semester sequence, this course teaches fundamental concepts in chemistry, including solutions, equilibria, electrochemistry, thermodynamics and kinetics. Designed for majors in chemical sciences and engineering, it is assumed that the students are familiar with college algebra, chemical nomenclature, stoichiometry, and scientific measurements.

Student Learning Outcomes

1. Describe the colligative properties of solutions and explain them using intermolecular forces. Determine solution concentrations using colligative property values and vice versa.
2. Explain rates of reactions, rate laws, and half-life; determine the rate, rate law and rate constant of a reaction and calculate concentration as a function of time and vice versa. Understand the principle of catalysis.
3. Explain the collision model of reaction dynamics, including activation energy, catalysts and temperature; Derive a rate law from a reaction mechanism and evaluate the consistency of a mechanism with a given rate law.
4. Describe the dynamic nature of chemical equilibrium and its relation to reaction rates; apply Le Chatelier's Principle to predict the effect of concentration, pressure and temperature changes on equilibrium mixtures.
5. Describe the equilibrium constant and use it to determine whether equilibrium has been established; calculate equilibrium constants from equilibrium concentrations (including pressures) and vice versa.
6. Describe the different models of acids and base behavior, and the molecular basis for acid strength.
7. Apply equilibrium principles to aqueous solutions, including acid-base and solubility reactions; calculate pH and species concentrations in buffered and unbuffered solutions.
8. Explain titration curves and speciation diagrams; calculate concentrations of reactants from the former and determine dominant species as a function of pH from the latter.
9. Explain and calculate the thermodynamic functions enthalpy, entropy and Gibbs free energy for a chemical system; relate these to equilibrium constants and reaction spontaneity.
10. Balance redox equations, express them as two half reactions and evaluate the potential, free energy and equilibrium K for the reaction, as well as predict the spontaneous direction.

11. Construct a galvanic or electrolytic cell; determine the standard (and non-standard) cell potential of the former and relate current to electron transfer rates in the latter.
12. Understand the basic chemical properties of main group and transition metal elements and develop a broad understanding of several key branches of chemistry.

CHEM 1996. Topics in Chemistry

Course Description

Varies

Student Learning Outcomes

Varies

CHEM 2111. Explorations in Chemistry and Biochemistry

Course Description
An introduction to the experience of chemistry and biochemistry degrees. In this course, students will prepare a degree plan and personal statement. Career opportunities in chemistry and biochemistry will be presented and discussed.

Student Learning Outcomes

1. Demonstrate knowledge and understanding of the subdisciplines of Chemistry and Biochemistry.
2. Demonstrate knowledge and understanding of the requirements for the Chemistry and Biochemistry majors and career opportunities available to these majors.
3. Adopt strategies to prepare for future success in a job search or graduate school application.
4. Learn about undergraduate research opportunities in chemistry and biochemistry.

CHEM 2115C. Survey of Organic Chemistry and Laboratory

Course Description

This course is a one semester survey of organic and biological chemicals. Students will be introduced to nomenclature, molecular structure, properties, and reactions of hydrocarbons, alcohols, carbonyls, organic acids and bases, carbohydrates, lipids, and proteins. The handling of organic chemicals, simple organic reactions, tests for functional groups, and synthesis will be learned in the laboratory component of this course.

Student Learning Outcomes

1. Identify common organic functional groups.
2. Translate between the IUPAC names and structures of simple organic molecules.
3. Predict the products of certain organic chemical reactions from reagents and conditions presented.
4. Predict physical and chemical behavior of organic molecules based on structure.
5. Synthesize several classes of organic compounds in the laboratory that were previously studied in the lecture component of this course.
6. Recognize and name the four basic bioorganic units and certain of their derivatives and macromolecules.
7. Construct 3 dimensional models of organic compounds.
8. Understand and apply safety principles associated with Organic Chemistry laboratory operations and activities.
9. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.
10. Draw/recognize stereochemistry and explain its relevance to bioorganic molecules.

CHEM 2120. Integrated Organic Chemistry and Biochemistry

Course Description

This course is a one semester introduction to Organic Chemistry and Biochemistry designed for students in health and environmental occupations. The course surveys organic compounds in terms of structure, physical, and chemical properties, followed by coverage of the chemistry of specific classes of organic compounds in the biological environment. Students will

apply course concepts to everyday organic and biological chemistry problems in preparation for careers in health and environmental fields.

Student Learning Outcomes

1. Identify and name basic organic compounds.
2. Construct/draw organic compounds from the names.
3. Predict the products of certain organic chemical reactions from reagents and conditions presented.
4. Recognize and name the four basic bioorganic units and certain of their derivatives and macromolecules.
5. Compare and contrast the function and location of the four bioorganic units and their macromolecules and cofactors.
6. Draw/recognize stereochemistry and explain its relevance to bioorganic molecules.
7. Discuss the pathways and functions of some of the cellular metabolic processes.
8. Recognize and describe metabolic cellular processes and macromolecular structure with respect to health and/or disease states.

CHEM 2120L. Integrated Organic & Biochemistry Lab

Course Description

This course provides experiences with the physical properties and laboratory synthesis of organic compounds.

Student Learning Outcomes

Course content upon which a student's level of mastery will be assessed includes the capability to...

1. Discuss the chemical, structural, and physical differences among the different functional groups
2. Prepare, label, and use solutions of appropriate and known concentrations
3. Recognize chiral organic molecules, and explain their biological significance.
4. Understand and be able to identify the process of organic reactions: nucleophilic and electrophilic, redox reactions, and enzyme catalyzed reactions.
5. Predict the products of substitution, elimination, condensation, and redox reactions.
6. Explain why certain lipids and amino acids are essential while others are not.

CHEM 2130. ORGANIC CHEMISTRY I

Course Description

This course is the first of a two- semester sequence of Organic Chemistry, the chemistry of carbon containing compounds, as required for chemistry, medical science, and engineering majors. The course includes theoretical, qualitative, and quantitative discussion of Organic Chemistry concepts, including but not limited to a review of electronic structure and bonding, acids and bases, stereochemistry, an introduction to organic compounds, isomers, substitution and elimination reactions of alkyl halides, reactions of alkenes, alkynes, alcohols, ethers, epoxides, amines, and thiols, mass and infrared spectrometry, ultraviolet/visible spectroscopy, and nuclear magnetic resonance.

Student Learning Outcomes

1. Review properties of elements and molecules discussed in general chemistry (electronegativity, bonding, formal charge, octet rule).
2. Review chemical reactions discussed in general chemistry (products, reactants, balanced equations, byproducts).
3. Classify organic compounds and their properties by functional group, including substitution and elimination reactions of alkyl halides, reactions of alkenes, alkynes, alcohols, ethers, epoxides, amines, and thiols.
4. Use common and IUPAC rules of nomenclature to name organic compounds.
5. Review the structure and stability of compounds.
6. Comprehend the relationship between structure and reactivity.
7. Comprehend configurations of organic compounds (resonance structures, stereochemistry, isomers).
8. Interpret spectral properties and use in structure determination.
9. Correctly describe the 4-5 step synthesis of a simple organic molecule using reactions learned in the class.

CHEM 2130L. Organic Chemistry I Laboratory

Course Description

Organic Chemistry I Laboratory is the first semester laboratory course designed to complement the theory and concepts presented in Organic Chemistry I lecture. The laboratory component will introduce students to techniques for obtaining and analyzing experimental observations pertaining to Organic Chemistry using diverse methods and equipment.

Student Learning Outcomes

1. Appreciate, understand, and conduct experiments safely in the laboratory, being aware of the possible consequences of not adhering to appropriate safety guidelines.
2. Practice and demonstrate skill in the use of molecular drawing and modeling software.
3. Conduct laboratory scale separations to include, but not be limited to distillation, filtration, extraction, recrystallization and chromatography.
4. Conduct characterization experiments using the following techniques: melting points, solubility tests, IR spectroscopy, MS, TLC, and GC.
5. Synthesize, purify, and characterize simple organic compounds.
6. Apply theory and practice in the interpretation of spectroscopic data including, but not limited to FTIR, MS, ¹H NMR, ¹³C NMR and UV/VIS.
7. Assess and account for sources of error in data collection and analysis.
8. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.

CHEM 2135. Organic Chemistry II

Course Description

This course is the second of a two-semester sequence of Organic Chemistry, the chemistry of carbon containing compounds, as required for chemistry, medical science, and engineering majors. The course will emphasize structure, main physical properties, chemical reactivity, and reaction mechanisms relating to alcohols, arenes and carbonyl compounds, as well as continued integration of mass and infrared spectrometry, ultraviolet/visible spectroscopy, and nuclear magnetic resonance technique and analysis.

Student Learning Outcomes

1. Identify functional groups and other key features of different organic compounds.
2. Correctly name organic compounds using the proper nomenclature (IUPAC and common names).
3. Analyze relationships among molecular structure, chemical reactivity, physical and spectral properties.
4. Understand chemical reactivity and reaction mechanisms relating, but not limited to dienes, arenes, alcohols, ethers, amines, phenols, and carbonyl compounds, i.e. aldehydes, ketones, carboxylic acids and derivatives.
5. Write out correctly the mechanisms of electrophilic aromatic substitution, formation and hydrolysis of acetals and ketals, formation and hydrolysis of imines and enamines, conjugate addition of nucleophiles to α,β -unsaturated carbonyl compounds, Fischer esterification and hydrolysis of esters under both acidic and basic conditions, transesterification under acidic and basic conditions, amide hydrolysis under acidic and basic conditions, the aldol reaction and condensation, and the Claisen condensation/Dieckmann cyclization for examples that are different than those studied in class.
6. Relate structures to spectral properties, interpreting IR, ¹³C and ¹H NMR.
7. Describe the 6-7 step synthesis of a simple organic molecule using reactions learned in this class.
8. Convert the Fischer projection of a carbohydrate to its corresponding Haworth projection, or convert the Haworth projection of a carbohydrate to its Fischer projection.
9. Recognize derivatives of carbonic and phosphoric acids, alkaloids, carbohydrates, peptides, steroids, prostaglandins, aglycones, carbohydrate anomers, reducing sugars, waxes, fats, and oils.

CHEM 2135L. Organic Chemistry II Laboratory

Course Description

Organic Chemistry II Laboratory is the second semester laboratory course designed to complement the theory and concepts presented in Organic Chemistry II lecture. The laboratory component will introduce students to techniques for obtaining and analyzing experimental observations pertaining to Organic Chemistry using diverse methods and equipment.

Student Learning Outcomes

1. Appreciate, understand, and conduct experiments safely in the laboratory, being aware of the possible consequences of not adhering to appropriate safety guidelines.
2. Practice and demonstrate skill in the use of molecular drawing and modeling software.
3. Conduct laboratory scale separations to include, but not be limited to distillation, filtration, extraction, recrystallization and chromatography.
4. Conduct characterization experiments using the following techniques: melting points, solubility tests, IR spectroscopy, MS, TLC, and GC.
5. Synthesize, purify, and characterize simple organic compounds.
6. Apply theory and practice in the interpretation of spectroscopic data including, but not limited to FTIR, MS, ¹H NMR, ¹³C NMR and UV/VIS.
7. Assess and account for sources of error in data collection and analysis.
8. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.

CHEM 2226. General Chemistry III

Course Description

Quantitative aspects of general chemistry: solid state structure, equilibrium, thermodynamics, and kinetics.

Student Learning Outcomes

The Higher Education Department has identified several common core competencies which the student will achieve through science courses. The student will:

1. describe the process of scientific inquiry
2. solve problems scientifically
3. communicate scientific information
4. apply quantitative analysis to scientific problems
5. apply scientific thinking to real world problems

CHEM 2305. Analytical Chemistry

Course Description

Fundamentals of instrumental chemical analysis. Topics include: statistical methods, digital control and data acquisition, gas/liquid chromatography, emission/absorption spectroscopy, capillary electrophoresis, volumetric, gravimetric, and electrochemical analysis. For chemistry and some pre-professional majors.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Prepare solutions of desired molarity.
2. Interconvert between molarity, weight percent, parts per million, and parts per billion.
3. Perform equilibrium constant calculations, manipulations, and apply towards Le Chatelier's principle.
4. Use the buoyancy equation and correct for buoyancy.
5. Correctly use volumetric glassware such as burets, flasks, and pipets.
6. Calibrate volumetric glassware.
7. Describe and perform filtration, and drying procedures.
8. Describe and perform dissolution, fusion, digestion, and extraction sample prep procedures.

9. Use correct significant figures in calculations.
10. Describe and distinguish systematic and random errors.
11. Compute absolute and relative uncertainty.
12. Propagate errors in calculations.
13. Properly set up, annotate, and use spreadsheets.
14. Use spreadsheets for graphing.
15. Calculate mean, standard deviation, and relative standard deviation.
16. Compute and use the F test to determine if two sets of measurements are statistically different.
17. Use student's t to compute the confidence interval of replicate measurements.
18. Compare means with student's t test to determine if they are statistically different.
19. Set up a spread sheet for the t test.
20. Use Grubbs test for determining outliers.
21. Construct a calibration curve including error bars using a spread sheet.
22. Set up a spreadsheet to compute slope and intercept with errors using least squares analysis.
23. Outline quality assurance procedures and methods.
24. Perform analysis by standard addition.
25. Set up and use a spreadsheet for standard addition.
26. Perform analysis using internal standards.
27. Perform a back titration.
28. Perform a blank titration.
29. Perform a direct titration.
30. Perform a standardization.
31. Perform Volhard and Fajans argentometric titrations.
32. Perform gravimetric analysis.
33. Calculate pH and concentrations involved in acid base equilibria.
34. Prepare buffer solutions.
35. Use pH electrode and spreadsheet to find the endpoint numerically in an acid base titration.
36. Perform a Kjeldahl nitrogen analysis.
37. Compute ionic strength of solutions.
38. Compute activity coefficients.
39. Compute activities of species in solution.
40. Perform an EDTA titration.
41. Analyze and diagram an electrochemical cell.
42. Compute electrode and cell potentials.
43. Describe and use reference electrodes.
44. Describe how a AgCl electrode works.
45. Describe how a calomel electrode works.
46. Interconvert potentials between different reference electrodes.
47. Describe and use a silver indicator electrode.
48. Describe and use ion selective electrodes.
49. Describe and use pH electrodes.
50. Describe and use amperometry and voltammetry techniques.
51. Perform cyclic voltammetry in chemical analysis.
52. Describe and calculate properties and quantities involving light.
53. Use Beer's law.
54. Describe single and double beam spectrophotometers.
55. Describe photo-detection schemes including diode array and photo-multiplier-tubes.

56. Describe fluorescence and phosphorescence physical processes.
57. Describe absorbance and luminescence instrumentation.
58. Describe processes and components of an atomic absorption spectrophotometer.
59. Describe processes and components of an inductively coupled plasma spectrophotometer.
60. Perform analysis using an inductively coupled plasma spectrophotometer.
61. Describe gas/liquid chromatographic theory, equipment, and techniques.
62. Describe capillary electrophoresis theory, equipment, and techniques.
63. Calculate theoretical plates and resolution of columns.
64. Describe band dynamics.
65. Perform quantitative analysis using Gas Chromatography Mass Spectroscopy.

CHEM 2305L. Analytical Chemistry I Laboratory

Course Description

This laboratory course provides hands-on training in quantitative chemical analysis with an emphasis on solution preparation, titration techniques, and sample preparation methods. Students gain experience using volumetric glassware, electrodes, spectrophotometers, and electroanalytical techniques while applying statistical methods and spreadsheet tools to analyze and present data. The course integrates classical and instrumental methods, preparing students for advanced study and professional laboratory work.

Student Learning Outcomes

1. Prepare solutions of desired molarity.
2. Interconvert between molarity, weight percent, parts per million, and parts per billion.
3. Correctly use volumetric glassware such as burets, flasks, and pipets.
4. Calibrate volumetric glassware.
5. Describe and perform dissolution, fusion, digestion, and extraction sample prep procedures. This laboratory course provides hands-on training in quantitative chemical analysis with an emphasis on solution preparation, titration techniques, and sample preparation methods. Students gain experience using volumetric glassware, electrodes, spectrophotometers, and electroanalytical techniques while applying statistical methods and spreadsheet tools to analyze and present data. The course integrates classical and instrumental methods, preparing students for advanced study and professional laboratory work.
6. Use correct significant figures in calculations.
7. Properly set up, annotate, and use spreadsheets.
8. Use spreadsheets for graphing.
9. Calculate mean, standard deviation, and relative standard deviation.
10. Construct a calibration curve including error bars using a spread sheet.
11. Set up a spreadsheet to compute slope and intercept with errors using least squares analysis.
12. Perform analysis by standard addition.
13. Set up and use a spreadsheet for standard addition.
14. Perform a back titration.
15. Perform a blank titration.
16. Perform a direct titration.
17. Perform a standardization. 1
18. Prepare buffer solutions.
19. Perform a Kjeldahl nitrogen analysis.
20. Perform an EDTA titration.
21. Describe and use reference electrodes.
22. Describe and use pH electrodes.
23. Describe and use amperometry and voltammetry techniques.

24. Perform linear sweep voltammetry in chemical analysis.
25. Use Beer's law.
26. Perform analysis using an inductively coupled plasma spectrophotometer.

CHEM 2307. Analytical Chemistry

Course Description

This course familiarizes the student with basic laboratory techniques for chemical analysis, and the appropriate selection and use of analytical methods. It includes an overview to analytical chemistry, the importance of measurements and data management, along with good laboratory practices. The topics will include equilibrium, solubility, gravimetric analysis, and acid-base/redox reactions/titrations.

Student Learning Outcomes

Not Available

CHEM 2307L. Analytical Chemistry Laboratory

Course Description

The laboratory is an integral part of the course and must be taken at the same time. The experiments will include good laboratory practices and the proper procedures for mass and volume measurements. In addition, basic laboratory techniques, such as titration, precipitation, and electrochemical analysis will be covered. The laboratory experiments are designed to support the lecture topics.

Student Learning Outcomes

Not Available

CHEM 2310. Quantitative Analysis

Course Description

Quantitative Analysis is a subdiscipline within analytical chemistry which deals with the identification and assay of a material or its components. Students will learn how chemical characterization involves chemical reactivity, physical measurement, and data interpretation with an emphasis on solution equilibria and electrochemistry. The study of precise and reliable chemical characterization is fundamental to further study and practice in chemistry, biology, medicine, geology, chemical engineering, and many other related fields. The understanding of the methods and limitations of chemical characterization can aid in making informed judgments on a large variety of social and political issues.

Student Learning Outcomes

1. Gain fundamental understanding of the principles and methodologies of quantitative analysis.
2. Understand how random measurement errors lead to the Gaussian distribution, and how to use this distribution for probability calculations.
3. Use and interpret statistical tests like the T-test, F-test, Grubbs test and linear regression.
4. Understand the basis of equilibrium treatment for aqueous reactions, proton transfer, electron transfer, solubility, metal complexation.
5. Predict (calculate) equilibrium speciation in complex systems, accounting for multiple reactions and ionic activities.
6. Understand the physical/chemical basis for common classical (volumetric, gravimetric) and instrumental (potentiometric, spectrophotometric, chromatographic, mass spectrometric) methods.
7. Recognize interferences in chemical and instrumental analysis.
8. Comprehend and analyze applications of quantitative analysis to everyday social and political issues.

CHEM 2310L. Quantitative Analysis Lab

Course Description

This course is designed to introduce you to techniques of Quantitative Analysis and complement the theory and concepts presented in lecture. Students will obtain reproducible quantitative laboratory data using classical (volumetric, gravimetric) and simple instrumental (potentiometric, spectrophotometric, chromatographic) methods, as well as analyze and interpret laboratory data using standard statistical and validation approaches.

Student Learning Outcomes

1. Comprehend the importance of stoichiometry, chemical equilibrium and kinetics in analysis.
2. Apply and assess concepts of availability and evaluation of analytical standards and formulate standardization methodology.
3. Comprehend concept of and perform calibration of measurement instruments.
4. Demonstrate knowledge of sampling methods for states of matter.
5. Use statistical and validation methods for evaluating and interpreting data.
6. Assess and account for sources of error in data collection and analysis.
7. Appreciate, understand, and practice concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
8. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.

CHEM 2310C. Quantitative Analysis Lecture and Laboratory

Course Description

Quantitative Analysis is a subdiscipline within analytical chemistry which deals with the identification and assay of a material or its components. Students will learn how chemical characterization involves chemical reactivity, physical measurement, and data interpretation with an emphasis on solution equilibria and electrochemistry. The study of precise and reliable chemical characterization is fundamental to further study and practice in chemistry, biology, medicine, geology, chemical engineering, and many other related fields. The understanding of the methods and limitations of chemical characterization can aid in making informed judgments on a large variety of social and political issues. This course is designed to introduce you to techniques of Quantitative Analysis and complement the theory and concepts presented in lecture. Students will obtain reproducible quantitative laboratory data using classical (volumetric, gravimetric) and simple instrumental (potentiometric, spectrophotometric, chromatographic) methods, as well as analyze and interpret laboratory data using standard statistical and validation approaches.

Student Learning Outcomes – Lecture

1. Gain fundamental understanding of the principles and methodologies of Quantitative Analysis.
2. Understand how random measurement errors lead to the Gaussian distribution, and how to use this distribution for probability calculations.
3. Use and interpret statistical tests like the T-test, F-test, Grubbs test and linear regression.
4. Understand the basis of equilibrium treatment for aqueous reactions proton transfer, electron transfer, solubility, metal complexation.
5. Predict (calculate) equilibrium speciation in complex systems, accounting for multiple reactions and ionic activities.
6. Understand the physical/chemical basis for common classical (volumetric, gravimetric) and instrumental (potentiometric, spectrophotometric, chromatographic, mass spectrometric) methods.
7. Recognize interferences in chemical and instrumental analysis.
8. Comprehend and analyze applications of Quantitative Analysis to everyday social and political issues.

Student Learning Outcomes – Lab

1. Comprehend the importance of stoichiometry, chemical equilibrium and kinetics in analysis.
2. Apply and assess concepts of availability and evaluation of analytical standards and formulate standardization methodology.
3. Comprehend concept of and perform calibration of measurement instruments.
4. Demonstrate knowledge of sampling methods for states of matter.

5. Use statistical and validation methods for evaluating and interpreting data.
6. Assess and account for sources of error in data collection and analysis.
7. Appreciate, understand, and practice concepts associated with laboratory safety, including the possible consequences of not adhering to appropriate safety guidelines.
8. Present experimental results in laboratory reports of appropriate length, style and depth, or through other modes as required.

CHEM 2325. Environmental Chemistry

Course Description

This course introduces students with a topics-based approach to chemistry of the environment. They are expected to have some knowledge of chemistry, with a desire of applying this knowledge to the environment. Topics of interest include environmental of water, water pollution, water treatment, geochemistry, atmospheric chemistry, air pollution, radioactivity, hazardous materials and resources.

Student Learning Outcomes

The students will be able to discuss the:

1. A strong understanding of environmental issues in Navajo Nation, state, federal, and global issues.
2. The present concepts and application into the environment.
3. The basic theories and methods of environmental chemistry.
4. Be able to describe and understand environmental threats to air, water, soil, ozone depletion, groundwater pollution, and agricultural impact to water and soil.

CHEM 2991. Introduction to Research in Chemistry

Course Description

Techniques and procedures of chemical research.

Student Learning Outcomes

Varies

CHEM 2993. Workshop in Chemistry

Course Description

Varies

Student Learning Outcomes

Varies

CHEM 2996. Topics in Chemistry

Course Description

Specific subjects in Chemistry. These subjects will be announced in the 'Schedule of Classes'.

Student Learning Outcomes

Child Advocacy Studies (CAST)

CAST 1110. Introduction to Child Advocacy

Course Description

This is the introductory course for child advocacy studies (CAST). It covers different models for understanding child maltreatment, types and indicators of child maltreatment, controversial topics in the field, and issues and laws related to child maltreatment in various countries around the world. Students will develop critical thinking and analytical skills in assessing child maltreatment. Restricted to Dona Ana campus only.

Student Learning Outcomes

1. Demonstrate how to apply a model of critical thinking and analysis to child maltreatment issues.
2. Describe historical trends in child maltreatment and child advocacy.
3. Compare and contrast theories and models of child maltreatment.
4. Compare and contrast the indicators and consequences of different types of maltreatment.
5. Discuss cultural issues related to assessing and working with families.

CAST 2110. Professional and Systems Responses to Child Maltreatment

Course Description

Course examines the professionals and systems that respond to allegations of child abuse and neglect. Includes the differences between civil and criminal proceedings; components of a court-worthy child abuse and neglect investigation; basic child forensic interviewing; an overview of child sex offenders; and current research and controversial issues affecting the field. Restricted to Dona Ana campus only.

Student Learning Outcomes

1. Define neglect, abuse, and violence including psychological, emotional, and spiritual maltreatment.
2. Describe the interpersonal dynamic of violence and abuse, and the varied and changing types of violence and abuse.
3. Identify risk factors for various categories of child abuse in the general population and identify high-risk population.
4. Describe the physical and behavioral health effects of violence, neglect, and abuse, including mental health impacts.
5. Identify the barriers to help-seeking for victimized children.
6. Describe models for intervention and prevention of child maltreatment.
7. Discuss various factors that affect children's motivation for disclosure.
8. Discuss how values, attitudes, beliefs, and experiences related to child maltreatment may effect interaction with children and families

CAST 2120. Prevention, Trauma Informed Treatment and Advocacy

Course Description

The purpose of this course is to prepare students to recognize the effects of child maltreatment and apply interventions strategies for children and their families. Multidisciplinary approaches to prevention, advocacy and treatment of child maltreatment survivors will be presented and discussed. Topics include violence prevention research, interdisciplinary family programs, how to advocate for survivors of child abuse, case management, working with families, mental health service and controversial issues.

Student Learning Outcomes

1. Be able to create goals and identify services needed by maltreating families.
2. Understand the development of psychopathology in the child related to maltreatment
3. Understand the documented effects of maltreatment such as depression, anxiety, sexualized behavior, neurobiological, suicide, and damaged ego development/ sense of self
4. Describe interdisciplinary family intervention programs such as in-home parenting programs, Stay Safe program, Incredible Years, Project Safe Care, ECFE, etc.
5. Explain mental health assessment, diagnosis, treatment, and availability of services for the survivor, the family and the offender.
6. Understand PTSD, reactive attachment disorder and other trauma responses; assessment and treatment
7. Describe issues for adolescent and adult survivors of maltreatment such as eating disorders, low self-esteem and personality disorders.
8. Identify professional issues related to maltreatment such as how to approach families and an awareness of the effect of working with families on the professional.
9. Discuss the role of interdisciplinary approaches to child maltreatment intervention in planning for the future and advocating for the rights of children
10. Explain violence prevention research, strategies, and programs

11. Understand how battering, chemical dependency/maltreatment, mental illness, chronic illnesses, disabilities, and other family stressors influence intervention with survivors, their families and the offender
12. Explain how issues of race, class, sexual orientation, religion, gender and social justice can influence professional practice with children who have been maltreated
13. Explain the role of the child advocate in addressing social justice issues associated with intervention and prevention of child maltreatment, and in promoting social change that will result in fewer incidents of child maltreatment.

Chicano and Chicana Studies (CCST)

CCST 1110. Introduction to Comparative Global and Ethnic Societies

Course Description

The course explores historical and contemporary social forces that impact ethnic communities across the Americas. Students will examine social and economic dynamics of Indigenous, Latino, Asian Pacific, Africana communities and women's experiences in these societies.

Student Learning Outcomes

By the end of the course, students will

1. Apply various transdisciplinary perspectives and processes used by social scientists to discover, describe and understand human behavior across a range of diverse ethnic and gendered societies.
2. Write informed analytical essays that comprehensively explores key issues or events in order to provide the reader will a full understanding of the subject under evaluation.
3. Effectively identify, evaluate, and share information for the problem or issue at hand in all course assignments and discussions.
4. Articulate their roles as citizens in a global context; and develop an awareness and appreciation for diverse value systems in order to critically examine and work toward quality of life within a framework of human understanding and social justice.
5. Develop and explicate arguments supported by quantitative evidence (words, tables, and graphs) based in the authentic contexts of everyday life situations.

CCST 1125. Chicana/o Latina/o Musical Cultures and Expressions

Course Description

The course explores diverse musical expressions of Chicana/o and Latina/o peoples in the present geographical boundaries of the United States. The course emphasizes the intercultural dynamics in the formation of Chicano and Latino music, which incorporates American, Latin American, African, Native American, and European roots.

Student Learning Outcomes

Students will:

1. Apply intercultural reasoning and intercultural competence in analyzing contemporary Chicano Latino Music in the United States.
2. Develop conclusions about cultural sources and outcomes of creativity among Latina/o populations in the arts.
3. Analyze the influence of musical cultural diversity and its applications to multicultural populations in the United States.
4. Applying diverse theoretical lens (e.g. cultural, political, economic) to understand and evaluate messages in terms of aesthetic rhetorical situation (audience, purpose, and context).
5. Develop critical thinking and communication skills through the use of surveys, quizzes, creative projects, identification analysis, on-line essays and exams.
6. Produce a music album reflective of intercultural practices and theories.

CCST 1996. Topics in Chicana/o Studies

CCST 2088.Chicana and Chicano Studies Specialty**Course Description**

This course allows students to apply computer information technology elective credit towards a Chicana and Chicano Studies program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

CCST 2110. Introduction to Chicana and Chicano Studies**Course Description**

Introductory survey of the Mexican American experience in the United States, with special reference to New Mexico.

Exploration of historical, political, social and cultural dimensions.

Student Learning Outcomes

By the end of the course, students will

1. Apply various transdisciplinary perspectives and processes to understand humanist expressions through a variety of creative productions.
2. Assess and apply social, historical, economic and cultural perspectives as they impact diverse populations over a period of time.
3. Explain the ways in which narratives help people understand one another more clearly and profoundly across ethnic and cultural groups.
4. Design presentations that foster and increase a full understanding of a subject in order to promote change in the listeners' attitudes, values, beliefs, or behaviors.
5. Apply qualitative and numerical data to explain diverse human actions in an everyday context of life.

CCST 2332. Introduction to Chicana Studies**Course Description**

This general survey course introduces students to Chicana women's diverse and changing social statuses from the times of Indigenous sovereignties preceding European interventions in Mexico to the 21st century. The purpose is to familiarize students with the diversity and complexity of Chicana experiences and to introduce some key issues central to those experiences. Course materials will highlight Chicana/Mexican/Indigenous women's attempts to challenge notions of inferiority and rationalizations for dominance through actions and power contestations and, in turn, contextualize these actions socially, economically and politically. In Mexico and the U.S., women served as agents of social and political change in the formation of the society and the state.

Student Learning Outcomes

By the end of the course, students will

1. Summarize the major economic, political, social and cultural forces influencing Chicana women's status and experience in the United States
2. Explain the multidisciplinary diversity and intellectual rigor that make up the field of Chicana Studies
3. Develop compelling and logical arguments for class discussion, individual and group presentations and writing assignments, based on course readings and discussions
4. Interpret, understand, and engage literary works within cultural, social and historical contexts
5. Gather, analyze, and evaluate information from a variety of sources
6. Compose texts in a variety of media formats.

Chinese (CHIN)

CHIN 1110. Mandarin Chinese I

Course Description

This is the first semester of a two-semester sequence in first year modern standard Chinese (“Mandarin”). This course is recommended for students who have had little or no experience in the Chinese language. A beginning Mandarin Chinese course is designed to introduce the Mandarin sound system (“pinyin”), basic vocabulary, Chinese characters (either in Simplified or Traditional characters), and basic grammatical concepts and structures. In order to help beginners develop their communicative competence in the four basic skills, the 5Cs (Communication, Cultures, Comparisons, Connections, and Communities) will be integrated consistently into the content and exercises in the course.

Student Learning Outcomes

At the conclusion of this course, students should be able to:

1. Approach a novice--mid proficiency (ACTFL) in speaking, listening, reading, writing, as well as to develop their cultural awareness.
2. Demonstrate knowledge of the phonetic system in Mandarin Chinese
3. Pronounce Chinese pinyin in correct tones.
4. Demonstrate the mastery of the most commonly used characters (approximately 400-500)
5. Understand basic Chinese grammatical concepts.
6. Use basic Mandarin vocabulary, introductory phrases and sentences in both oral and written forms.
7. Understand greetings in China, countries and nationalities, Chinese family values, hobbies, and being someone's guest in China.
8. Apply the language to greet each other, identify countries and nationalities, talk about his/her family, discuss important dates, talk about hobbies, and visit a friend in China.
9. Develop basic reading and writing skills in Chinese.
10. Develop initial understanding of Chinese culture, compare aspects of different cultures, make connections to their daily life, and build links among communities.

CHIN 1120. Mandarin Chinese II

Course Description

This is the second semester of a two-semester sequence in first year modern standard Chinese (“Mandarin”). This course is designed for students who have taken 1st Semester Mandarin Chinese, and focuses on enhancing pronunciation and expanding the vocabulary and grammar dealing with daily activities. In order to help beginners develop their communicative competence in the four basic skills, the 5Cs (Communication, Cultures, Comparisons, Connections, and Communities) will be integrated consistently into the content and exercises in the course.

Student Learning Outcomes

At the conclusion of this course, student should be able to:

1. Maintain a novice-mid and approach a novice--high proficiency (ACTFL) in speaking, listening, reading and writing, as well as to enhance their cultural awareness
2. Demonstrate continued mastery of the four tones used in Mandarin Chinese
3. Demonstrate continued mastery of the most commonly used characters (approximately 500-600)

4. Apply basic grammatical concepts and structures, and begin exploring intermediate grammatical concepts
5. Demonstrate continued growth in vocabulary and expressions necessary for conversation in and about real life situations
6. Understand basic phone calls, discussion of studies, school life, shopping and transportation
7. Apply the language to make simple phone calls, discuss studies, talk about school life, go shopping and use transportation
8. Continue developing basic reading and writing skills in Chinese
9. Develop further understanding of Chinese culture, compare aspects of different cultures, make connections to their daily life, and build links among communities.

CHIN 1130. Mandarin Chinese I Intensive

Course Description

This is the first semester of a two-semester sequence in first year modern standard Chinese (“Mandarin”). This course is recommended for students who have had little or no experience in the Chinese language. The 1st year intensive Mandarin Chinese course is designed to introduce the Mandarin sound system (“pinyin”), basic vocabulary, and Mandarin Chinese characters (Simplified), and basic grammatical concepts and structures. In order to help beginners develop their communicative competence in the four basic skills, the 5Cs (Communication, Cultures, Comparisons, Connections, and Communities) will be integrated consistently into the content and exercises in the course.

Student Learning Outcomes

At the conclusion of this course, students should be able to:

1. Achieve a novice-mid proficiency (ACTFL) in speaking, listening, reading, writing, as well as to develop their cultural awareness
2. Demonstrate solid knowledge of the phonetic system in Mandarin Chinese
3. Pronounce Chinese pinyin in correct tones comfortably
4. Demonstrate skillful mastery of the most commonly used characters (approximately 400-500)
5. Understand and apply basic Chinese grammatical concepts
6. Use basic Mandarin vocabulary, introductory phrases and sentences in both oral and written forms with confidence
7. Understand the following topics with no hesitation: greetings in China, countries and nationalities, Chinese family values, hobbies, and being someone's guest in China
8. Apply the language instantly to greet each other, identify countries and nationalities, talk about his/her family, discuss important dates, talk about hobbies, and visit a friend in China
9. Develop reading and writing skills in Chinese
10. Develop understanding of Chinese culture, compare aspects of different cultures, make connections to their daily life, and build links among communities.

CHIN 1140. Mandarin Chinese II Intensive

Course Description

This is the second semester of a two-semester sequence in first year modern standard Chinese (“Mandarin”). This course is designed for students who have taken 1st Semester Intensive Mandarin Chinese, and focuses on enhancing pronunciation and expanding the vocabulary and grammar dealing with daily activities. In order to help beginners develop their communicative competence in the four basic skills, the 5Cs (Communication, Cultures, Comparisons, Connections, and Communities) will be integrated consistently into the content and exercises in the course.

Student Learning Outcomes

At the conclusion of this course, student should be able to:

1. Maintain a novice-mid and achieve a novice-high proficiency (ACTFL) in speaking, listening, reading and writing, as well as to enhance their cultural awareness
2. Demonstrate continued fluent mastery of the four tones used in Mandarin Chinese

3. Demonstrate continued skillful mastery of the most commonly used characters (approximately 500-600)
4. Apply basic grammatical concepts and structures with confidence, and begin exploring intermediate grammatical concepts
5. Demonstrate continued fast growth in vocabulary and expressions necessary for conversation in and about real life situations
6. Understand the following topics with no hesitation: basic phone calls, discussion of studies, school life, shopping and transportation
7. Apply the language instantly to make simple phone calls, discuss studies, talk about school life, go shopping and use transportation
8. Continue developing reading and writing skills in Chinese
9. Develop further understanding of Chinese culture, compare aspects of different cultures, make connections to their daily life, and build links among communities.

CHIN 1145L. Chinese Language Lab

Course Description

A self-paced language lab designed to accelerate, reinforce and support all levels of Chinese. The course provides an opportunity to practice and strengthen listening, speaking, reading, and writing skills through the use of software, audio and video tapes, and other technologies.

Student Learning Outcomes

Not Available

CHIN 2110. Mandarin Chinese III

Course Description

This is the first semester of a two-semester sequence in second year modern standard Chinese ("Mandarin"). This course is designed for students who have taken 1st and 2nd Semester Mandarin Chinese (or equivalence), and have a basic foundation on Chinese phonetics, characters, and grammars. In order to help students develop their communicative competence in the four basic skills, the 5Cs (Communication, Cultures, Comparisons, Connections, and Communities) will be integrated consistently into the content and exercises in the course.

Student Learning Outcomes

At the end of this course, students should be able to:

1. Maintain a novice-high and approach an intermediate-low proficiency (ACTFL) in speaking, listening, reading and writing, as well as to enhance their cultural understanding
2. Pronounce the four tones used in Mandarin Chinese comfortably
3. Demonstrate continued mastery of the most commonly used characters (approximately 600-800)
4. Apply intermediate grammatical concepts and structures
5. Demonstrate continued growth in vocabulary and expressions in a variety for conversation in and about real life situations
6. Understand topics including but not limited to simple weather reports, dinning, directions, birthday party stories, and seeing a doctor
7. Apply the language to talk about weather, order food, ask and give directions, describe birthday parties, and see a doctor (these are suggested topics, no intention to limit the topic range)
8. Continue developing paragraph-length reading and writing skills in Chinese
9. Deepen understanding of Chinese culture, compare aspects of different cultures, make further connections to their daily life, and build stronger links among communities.

CHIN 2120. Mandarin Chinese IV

Course Description

This is the second semester of a two-semester sequence in second year modern standard Chinese (“Mandarin”). This course is designed for students who have taken 1st, 2nd, and 3rd Semester Mandarin Chinese (or equivalence), and have a good foundation on Chinese phonetics, characters, and grammars. In order to help students develop their communicative competence in the four basic skills, the 5Cs (Communication, Cultures, Comparisons, Connections, and Communities) will be integrated consistently into the content and exercises in the course.

Student Learning Outcomes

At the end of this course, students should be able to:

1. Maintain an intermediate-low and approach an intermediate-mid proficiency (ACTFL) in speaking, listening, reading and writing, as well as strengthening their cultural understanding
2. Pronounce the four tones used in Mandarin Chinese fluently
3. Demonstrate continued mastery of the most commonly used characters (approximately 800-1000)
4. Apply more intermediate grammatical concepts and structures
5. Demonstrate continued growth in vocabulary and expressions in a variety for conversation in and about real life situations as well as simple academic settings
6. Demonstrate language skills that would help them travel or live in China
7. Understand topics including but not limited to dating, renting an apartment, sports, traveling, conversations at an airport
8. Apply the language to extend/decline invitations, rent an apartment, talk about sports, travel, check in and arrive at an airport (these are suggested topics, no intention to limit the topic range)
9. Continue developing multiple-paragraph-length reading and writing skills in Chinese
10. Deepen understanding of Chinese culture, compare aspects of different cultures, make further connections to their daily life, and build stronger links among communities

CHIN 2150. Chinese Calligraphy

Course Description

This course will include lectures about the history of Chinese calligraphy, the tools used in calligraphy, the five major writing scripts/styles, and strategies to effectively memorize and write Chinese characters. A major part of class time will be dedicated to actual calligraphy writing practice. Student will be practicing and mastering the basic writing techniques of the Standard script/style.

The pre-requisite is CHIN 1140 or equivalent of two semesters of college-level Chinese language courses.

Student Learning Outcomes

1. Upon completion of this course, students will be able to:
2. Identify five major calligraphy scripts/styles, namely Seal, Clerical, Standard, Running, and Cursive.
3. Write Chinese characters in the Standard script/style using calligraphy techniques.
4. Fluently and confidently write 300-400 Chinese characters.
5. Develop individualized strategies to memorize Chinese characters efficiently.

Classical Studies (CLST)

CLST 1110. Greek Mythology

Course Description

Introduction to mythology; primary readings in stories about the gods and heroes, usually including Homer, Hesiod, Homeric Hymns and Tragedies. All texts will be in English.

Student Learning Outcomes

1. By the end of this class, students will gain a broader understanding and appreciation of the representation, interpretation and influence of the classical Greek myths.
2. Students will gain factual knowledge about the archetypal figures and narratives in Greek mythology and the development of patterns in different representational media and literary genres.

3. Students will gain understanding about how the Greek myths continue to influence culture today.

CLST 2110. Greek Civilization

Course Description

An interdisciplinary introduction to ancient Greece. Lectures on Greek art, history, literature and philosophy.

Student Learning Outcomes

By the end of this class, students will

1. Gain a broader understanding and appreciation of the intellectual and cultural activity of ancient Greece (esp. in terms of its art and literature).
2. Gain factual knowledge about the history and culture of ancient Greece.
3. Develop skill in expressing their critical ideas in writing.

CLST 2120. Roman Civilization

Course Description

An interdisciplinary introduction to ancient Rome. Lectures on Roman literature, history, art and philosophy.

Student Learning Outcomes

By the end of this class, students will

1. Gain a broader understanding and appreciation of the intellectual and cultural activity of ancient Rome.
2. Gain factual knowledge about the history and culture of ancient Rome.
3. Develop skill in expressing their critical ideas in writing essays organized around a clearly articulated argument.

Clothing, Textiles & Fashion Merchandising (CTFM)

CTFM 1110. Fundamentals of Fashion

Course Description

Survey of the fashion business from fiber to end product.

Student Learning Outcomes

Through a variety of learning activities, students will demonstrate their ability to:

1. Describe the roles and functions of industry jobs and sectors involved in the designing, production, marketing, and distribution of fashion brands within the global context.
2. Describe the business strategies of industry sectors involved in the designing, production, marketing, and distribution of fashion brands within the global context.
3. Describe the interrelationships among line planning, line development, and line presentation at manufacturing and retail levels.
4. Provide examples of the fashion industry's environmental and social impact.
5. Learn about all career tracks involved in the fashion industry and the global fashion supply chain.
6. Synthesize industry-relevant information on current issues in the fashion industry.

CTFM 2110. Fashion Studio I

Course Description

Applied principles in the criteria of pattern making: flat pattern and draping techniques. Projects will require three dimensional approaches in apparel design. Restricted to: CTFM majors. Restricted to Las Cruces campus only.

Student Learning Outcomes

Upon completion of the course, student will be able to:

1. Explain the basic relationship of the 2-dimensional plane to the 3- dimensional body in developing pattern shapes.
2. Utilize flat pattern manipulation to vary pattern style while maintaining size in the design of clothing.
3. Examine, evaluate, and utilize pattern development techniques as appropriate for selected clothing designs.

4. Demonstrate an understanding of the basic process of clothing design ideation through use of a variety of research techniques.
5. Implement the basic process of apparel pre-production, from design concept through finished sample.

CTFM 2120. Fashion Illustration

Course Description

This course explores aspects of fashion illustration, from drawing basic fashion figures to producing finished professional illustrations in color. This course provides the opportunity for students to integrate their fashion design development with computer-aided systems. The emphasis is on fashion innovation and concept design exploration enhanced by computer applications.

Student Learning Outcomes

1. To learn Adobe® Illustrator and Adobe® Photoshop® as drawing and design tools for electronic design and rendering.
2. To understand and utilize the computer as a tool for fashion design.
3. To understand methods of design input, including scanning, digitizing and resizing.
4. To develop customer profiles
5. To Understand Concept & Style.

CTFM 2130. Concepts in Apparel Construction

Course Description

Students are introduced to professional standard sewing techniques and apparel construction. The techniques learned are applied to produce finished garments.

Student Learning Outcomes

Upon the completion of this course, student will be able to:

1. Define sewing construction terminology, equipment and sewing machine parts.
2. Learn to select suitable patterns and fabrics for garments.
3. Learn to alter commercial patterns for different body types.
4. Identify fabric types, finishes, and labeling.
5. Perform standard operating procedures on sewing machines.
6. Perform clothing construction techniques for various garments.
7. Apply knowledge of industry sewing methods to recognition of garment workmanship.

CTFM 2990. Fashion Practicum

Course Description

Applied field experience in the related areas of apparel design, fashion merchandising, and textile science. May be repeated up to 3 credits. Restricted to: CTFM majors. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. Gain hands-on knowledge of the fashion industry.
2. Demonstrate the ability to analyze the practices of management, as observed in the industry.
3. Demonstrate an attitude that is appropriate for a prospective manager in the industry.
4. Demonstrate the understanding of, and the ability to use research and problem solving methods to develop, analyze, and present a critical incident analysis.

Communication (COMM)

COMM 1115. Introduction to Communication

Course Description

This survey course introduces the principles of communication in the areas of interpersonal, intercultural, small group, organizational, public speaking, and mass and social media.

Student Learning Outcomes

1. Describe basic communication terms, forms and concepts.
2. Identify basic communication research methods and theories.
3. Explain the significance of ethics and diversity in communication processes.
4. Apply various concepts and skills in multiple communication contexts.

COMM 1120. Beginning Television Production

Course Description

An introduction to the principles and techniques of studio production for television. This includes producing, directing, camera, lighting, switching, sound and graphic design. Course covers the technical and creative aspects of the television production process and the basics of non-linear editing.

Student Learning Outcomes

1. Have a general understanding of how a variety of television programming is created
2. Run television cameras, lighting the studio, live editing, sound design, and live graphics.
3. Analyze television shows and other media.
4. Apply television production skills in individual and group projects.
5. Identify and analyze effects of television production on society.

COMM 1130. Public Speaking

Course Description

This course introduces the theory and fundamental principles of public speaking, emphasizing audience analysis, reasoning, the use of evidence, and effective delivery. Students will study principles of communication theory and rhetoric and apply them in the analysis, preparation and presentation of speeches, including informative, persuasive, and impromptu speeches.

Student Learning Outcomes

1. Demonstrate effective speech preparation.
2. Demonstrate effective speech delivery through use of language, nonverbal elements and the creation of presentation aids.
3. Analyze a potential audience and tailor a speech to that audience.
4. Evaluate presentations according to specific criteria.
5. Explain common propaganda techniques and logical fallacies, and identify them in the speeches of others.
6. Recognize diversity and ethical considerations in public speaking.

COMM 1140. Introduction to Media Writing

Course Description

This course combines a theoretical foundation with practical applications. It provides an introduction to journalism, as well as an overview of the most common types of writing required in public relations, advertising and strategic communication.

Student Learning Outcomes

1. Explain basic concepts of journalism and strategic communication, as well as some of the legal restraints and ethical issues facing media workers.
2. Write accurately, fairly, ethically, correctly, and clearly in forms and styles appropriate for communication professionals.
3. Recognize news values and the way that professionals critically evaluate information, including an introduction to basic statistics.
4. Apply media literacy knowledge and skills.

COMM 1145. Sex, Lies, and Fake News: How to Use Media Wisely**Course Description**

A preponderance of fake news, propaganda, rumors, advertising and opinion that masquerade as news make it difficult to separate fact from fiction. The resulting confusion and distrust has potential to harm society and institutions. This survey course will help students recognize the differences between truth and rumor, news and advertising, fact and opinion, and bias and fairness. It will emphasize responsible and ethical decision-making in consuming media and in producing media.

Student Learning Outcomes

1. Analyze, compare, appraise and think critically about media.
2. Identify, recognize and summarize knowledge of journalism ethics.
3. Describe and express a coherent understanding of the media environment.
4. Demonstrate and practice fact-checking skills and verification methods.
5. Analyze news reports, weighing evidence, evaluating sources, noting context and transparency - to judge reliability.
6. Distinguish between journalism, opinion journalism and unsupported assertion.
7. Identify and distinguish between news media bias and audience bias.
8. Produce writing that blends scholarship and course materials to write effectively about journalism standards and practices, fairness and bias, First Amendment issues and individual rights and responsibilities.

COMM 1150. Introduction to Mass Communication**Course Description**

This course introduces students to the history, models, theories, concepts, and terminology of mass communication, focusing on various media and professions. The course will enable students to develop media literacy skills to interpret mass communication and understand the effects of media on society and their lives.

Student Learning Outcomes

1. Explain various applications of media literacy knowledge and skills
2. Identify components that guide the creation, distribution and exhibition of media.
3. Describe the goals and methods of various media industries
4. Analyze current mass media issues, including ethical issues.
5. Describe the evolution of media and its cultural, social, geopolitical and economic impact.

COMM 1155. Communication across Cultures**Course Description**

COMM 1996. Topics in Communication**Course Description**

Varies

Student Learning Outcomes

Varies

COMM 2110. Communication Theory**Course Description**

This course provides an exploration of major theories, concepts and methods of research in the study of human communication.

Student Learning Outcomes

1. Identify, explain, and illustrate key concepts and principles of the major traditions of communication theory.
2. Analyze practical problems and situations using theories.
3. Integrate research correctly and ethically from credible sources to support the primary purpose of communication.

COMM 2111. Introduction to Communication Major

Course Description

This is a one-credit course for new Communication Studies majors. It helps them get acquainted with the department, the department head (professor for this course, the professors, other students, and the department student organizations. It also deals with degree mapping and career mapping and any problems the students are having in their first year. Finally, the students learn about the Communication Studies discipline and various communication careers they can pursue with their degree. The class meets one day each week for one hour. Restricted to: Communication Studies majors. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. To give you some knowledge about your major and this department.
2. To help you learn more about the study of human communication in general and we approach it in our various courses.
3. To make you comfortable with the department, its professors and graduate students, as well as staff.
4. To assist you in finding important resources for earning your degree in Communication Studies with a high GPA.
5. To engage you and your concerns in earning your degree.
6. To advise you in ways that match your goals with the department goals.

COMM 2115. Graphics for Television/Video

Course Description

This course will develop necessary skills needed in broadcast production through hands-on projects and “real world” activities, to include designing still graphics for television production, designing animation elements for television production, incorporating graphic elements with live video, live character generation/Chyron operation, and processing video for web publication.

Student Learning Outcomes

1. Understand the definitions and functions of media in relationship to culture.
2. Will be able to engage in critical and analytical discussions about media.
3. Will be able to construct a paper/performance that explores the complexities of mediated mass media phenomenon.

COMM 2120. Interpersonal Communication

Course Description

This course introduces the study of interpersonal communication. Students will examine the application of interpersonal communication in personal and professional relationships.

Student Learning Outcomes

1. Define and describe basic interpersonal communication terms and concepts
2. Identify and analyze interpersonal communication across a variety of personal and professional contexts in both face-to-face and mediated forms.
3. Identify and demonstrate a variety of skills that will enhance interpersonal communication
4. Analyze a variety of purposes of and goals in interpersonal communication interactions
5. Recognize diversity and ethical considerations in interpersonal interactions.

COMM 2121. Introduction to Interpersonal Health Communication

Course Description

The goal in of this class is to enhance students' understanding of the major theories and processes of health communication in interpersonal settings, to support students in becoming effective communicators who can apply different communication strategies in diverse health settings.

Student Learning Outcomes

1. Identify at least two medical models and their approach to health communication
2. List major issues facing health care and their implications for health communication
3. Understand the impact of health communication on patients' health outcomes
4. Apply concepts of the medical talk in patient-provider simulations
5. List major approaches to effective communication in culturally diverse health care organizations
6. Identify underserved communities and groups and inclusive communication strategies
7. Describe the role of technology in health communication
8. Understand basic methods of health communication research

COMM 2130. Media Theories

Course Description

Introduces students to a variety of media theories and models. Focuses on the key issues in media theory, including the nature of mass media, influences on human behavior, and the media as reflector and creator of society.

Student Learning Outcomes

1. Compare and contrast various theories and models of media in society.
2. Explain historical development of media theories and link developments to historically important societal, political, and technological events or issues
3. Recognize recurring criticisms of media, and the strengths and imitations of these criticisms
4. Identify origins, advantages and disadvantages of media professionalization
5. Recognize how conceptualizations of media roles have changed over the years, and explain advantages and limitations of these ideas.

COMM 2135. Media Ethics and Law

Course Description

The material will introduce you to the history of ethics and sources of our American legal system. We will examine how the law and ethical action are chosen and evolve through resolution of a dilemma - a choice between countervailing interests. Foundational principles, expressed in our charter documents, carry through those areas of law which are most critical to media: We'll examine fundamentals of law, of First Amendment, libel, privacy, open government, copyright and commercial speech. Consequently, this course's content will be relevant in every other Journalism and Mass Communication course you take between now and your completion of your degree program.

Student Learning Outcomes

1. Develop an appreciation for the relationship of truth, accuracy and fairness through analysis of principles and practices in media law and ethics.
2. Gain understanding of the fundamentals of constitutional interpretive theories, especially the First Amendment; law of libel, privacy, open government, intellectual property and regulation of political and commercial speck; and of how law develops.
3. Examine ethical principles, including well-established ethical theories, to better understand what constitute ethical ways of thinking and acting.
4. Learn history and role of the media in development and refinement of media law. Gain awareness of contemporary legal issues posed by new technology.
5. Become careful and critical producers and consumers of media messages.

6. Use research and critical evaluation skills to articulate our analysis and resolution of an issue in media ethics.

COMM 2140. Small Group Communication

Course Description

Explores the principles and practices of effective participation in small groups, with emphasis on critical thinking, problem solving, organizational skills, role theory, conflict resolution, and creative decision-making methods. It combines a theoretical foundation with practical application to help students better understand the dynamics of group communication in both professional and social contexts.

Student Learning Outcomes

1. Apply basic group communication principles in a variety of contexts.
2. Demonstrate effective group interaction skills in a variety of contexts.
3. Identify and apply group communication strategies and skills that facilitate the achievement of group goals in a variety of contexts.
4. Explain and apply the principles and practices of ethical communication in a variety of group contexts.

COMM 2150. Communication for Teachers

Course Description

This course will investigate and critically evaluate the influence of identity, communication, and culture on instruction, learning, engagement, classroom community, and the teacher-student relationship.

Student Learning Outcomes

1. Define and demonstrate various components of effective classroom communication.
2. Recognize one's own strengths and weaknesses in classroom communication and describe ways to improve
3. Recognize how culture shapes classroom communication strategies and describe ways to ethically connect and communicate with a diverse student population
4. Design communication strategies to achieve particular classroom goals.

COMM 2160. Gender Communication

Course Description

This course focuses on exploring gendered identities and how they inform and are informed by communication. It includes consideration of the development and influence of gender over the lifespan, cultural understandings and critiques of gender, strategies for understanding gendered communication differences, and the implications and consequences of these differences in business, media, and educational and intimate contexts.

Student Learning Outcomes

1. Describe and define basic communication terms and concepts that relate to gender from a communication perspective.
2. Identify the influence of gender norms and roles on how people communicate, including listening, use of language, and nonverbal communication.
3. Explain the complex relationship between gender and communication
4. Analyze the role of gendered communication differences in a variety of communication contexts: business, media, education, interpersonal.

COMM 2170. Intercultural Communication

Course Description

This course introduces students to the basic concepts, theories and skills necessary to succeed in an increasingly multicultural world.

Student Learning Outcomes

1. Define and describe basic intercultural communication terms and concepts

2. Differentiate between key theories related to intercultural communication
3. Explain how cultural values, cultural patterns, and belief systems affect self and others in a variety of communication contexts
4. Recognize obstacles to competent intercultural communication
5. Identify and demonstrate skills that could lead to intercultural communication competence

COMM 2180. Business and Professional Communication

Course Description

This course develops the interpersonal, small group, and public communication skills most useful in business relationships and professional organizations.

Student Learning Outcomes

1. Identify ways in which communication creates and defines personal and professional relationships.
2. Analyze the impact of particular techniques in differing communication contexts.
3. Demonstrate skills in these areas: communicating in dyads, listening, interviewing, functioning in problem-solving groups, conducting meetings, presenting to large groups, and handling questions and answer sessions.
4. Explain the nature and impact of diversity in the workplace.

COMM 2182. Introduction to Public Relations

Course Description

Introduction to the theory and practice of public relations, including its functions in organizations and society, as well as issues, concepts and theories. Emphasis on practical applications.

Student Learning Outcomes

The primary objective of this course is to familiarize you with the basic concepts, principles, practice and profession of public relations. It is the foundation course for other courses in public relations and a supplemental course for students majoring in other fields. At the end of the course students should have attained knowledge and understanding of the following central concepts:

1. The role and functions of public relations in a contemporary society.
2. The contingency views of public relations practice in the worlds of managing competition and conflict
3. The historical evolution of public relations, career opportunities in the field, and professional/ethical/legal responsibilities.
4. The basic process of public relations - research, planning, communication, evaluation - and the use of communications strategies and tactics to achieve organizational goals and objectives.
5. The persuasion of public opinion and audience analyses and how to reach diverse audiences.
6. Practical guidelines for utilizing written, spoken, and visual techniques to reach selected audience(s).
7. An understanding of how public relations is a global phenomenon.
8. How the Internet and social media are changing the way public relations professionals build and sustain relationships between an organization and its constituents.
9. An understanding of public relations activities in business, sports, tourism and entertainment.
10. An understanding of public relations activities in nonprofit, education and government organizations.

COMM 2185. Multimedia & Visual Communication

Course Description

This course is an exploration of visual images in mass media. It emphasizes the visual world and promotes visual literacy by helping students to decipher the language of pictures through studying history, technique and imagery.

Student Learning Outcomes

1. Develop competencies in the use of multimedia production technologies.

2. Develop an understanding of research and critical evaluation skills including use of the Internet and visual media, to become visually literate.
3. Learn to shoot professional multimedia content.
4. To identify principles of visual communication.
5. To acquire basic visual/technical communications skills.
6. To create visual presentations that demonstrate an understanding of visual communication principles.
7. To develop competencies in the use of computer design and editing technologies.
8. To become familiar with current multimedia knowledge and theory.
9. To provide practical experience in evaluating visual communication.

COMM 2190. Writing and Editing for Multimedia Journalism

Course Description

This course builds on the skills you have learned, focusing more deeply on the theory and practice of journalism in the digital age. Classes are in a lecture/discussion format, with emphasis on participation by students. We will practice strict adherence to deadlines, writing under pressure sometimes, rewriting, peer editing of stories, constructive criticism, coaching and teamwork. Students will hone skills in grammar, accuracy, attribution, interviews and story structure. We will also study what constitutes a compelling and well-reported, well-written news story — and the multimedia possibilities that go hand-in-hand with such stories.

Student Learning Outcomes

This course is intended to:

1. Develop professional newswriting skills, with particular attention to truth, accuracy, fairness, objectivity, ethics and diversity of voices
2. Obtain writing and editing skills necessary in a convergent newsroom
3. Develop a clear understanding and appreciation for the role of journalism in a democratic society
4. Hone students' critical and creative thinking skills
5. Cultivate a practice of regular news-reading

COMM 2210. Audio Production

Course Description

Basic orientation of principles and techniques of radio and television audio production equipment. Course includes technical and creative use of microphones, mixing consoles, music, sound effects and recorders for radio, television and film sound tracks.

Student Learning Outcomes

The objectives in this course are geared to the understanding of audio and the skills needed to obtain professional results.

Specific objectives are:

1. Learn basic audio principles.
2. Understanding signal flow and how the various modules work within the audio chain
3. Development of the student producer in the areas of pre-production planning, and production techniques, and basic trouble shooting
4. Cultivating additional producer skills such as field recording, music recording (studio and field).

COMM 2220. Intermediate Television Production

Course Description

Emphasis on electronic field production (EFP), and post production editing. Principles and techniques of single-camera field production for television, including camera and lighting. Nonlinear editing includes continuity editing for informational and dramatic television forms. This class will concentrate on the use of Adobe® Premiere Pro CC non-linear editing software.

Student Learning Outcomes

Students will use Premiere video editing skills, and the field production skills they learn in this class, to produce, shoot, and edit their own creative projects.

COMM 2222. Asian American Communication

Course Description

This course introduces students to issues and concerns of Asian Americans in communication. By communication, we mean a process of articulation and rearticulation about culture, society, and media. Specifically, this course will not only be committed to questioning the historical and political context in which “Asian Americans” have been socially constructed as a racial category. But it also reevaluates how “Asian Americans” are ongoing communication projects ignoring, erasing, and marginalizing complexities of differences such as ethnicity, gender, sexuality, class, religion, citizenship, migration, national origin, language, and the body. Doing so, this course invites students to re-approach Asian Americans as multidimensional concepts of possibilities suggesting networks of collective resistances and solidarities.

Student Learning Outcomes (required):

After finishing this course, students will be able to

1. Read and analyze the literature related to communication studies focusing on Asian Americans.
2. Discuss multidimensional issues and concerns of Asian Americans in communication.
3. Deliver contemporary issues in Asian American communication.
4. Acquire writing skills to assess Asian American communication.
5. Obtain fundamental understandings of Asian American communication.

COMM 2223. Nonverbal Communication Studies

Course Description

Examines how the face and eyes, gestures, touch, voice, physical appearance, space, time and environment communicate in personal and professional interactions.

Student Learning Outcomes

1. discuss the definition of human communication, nonverbal communication, and the myths about nonverbal communication.
2. investigate the functions of nonverbal communication messages.
3. analyze the basic forms of nonverbal communication including kinesics, vocalics, chronemics, proxemics, haptics, olfactics, appearances, and the environment.
4. examine the impact nonverbal behaviors have on communication within a variety of relationships including superior/subordinate, teacher/student, male/female, and intercultural.
5. apply course information and skills to work/career settings.

COMM 2230. Digital Photography

Course Description

This course provides instruction in digital photography, emphasizing the relationship between new digital imaging processes and color photographic techniques. Assigned reading and class discussion will address contemporary issues in art and digital photography. Examination of the functions of light and color, crucial elements in the context of image capture, will be central to the course. Assignments will require the generation and alteration of digital photographs, with some emphasis on montage techniques. The course includes instruction in camera operation, scanning processes, lighting, image editing software, digital workflow, and output for print.

Student Learning Outcomes

1. Students will create digital images, applying concepts relating to digital photographic processes, color theory and the history and process of photomontage.
2. Students will assess and evaluate the creative work of their peers through both written and verbal critique.

3. Students will research and analyze the creative work of a contemporary artist and write a scholarly paper.
4. Students will choose and develop proposals for two photography portfolios, which they will create, one as a group, and individually.

COMM 2231. Sports Writing

Course Description

This course explores the principles and techniques of effective sports writing and reporting in various media platforms. Students will learn how to craft compelling narratives, conduct interviews, analyze sporting events, and report on athletes and teams. Emphasis will be placed on developing strong storytelling skills, understanding sports journalism ethics, and adapting writing styles for different audiences and platforms.

Student Learning Outcomes

At the end of the course students should have attained knowledge and understanding of the following central concepts:

1. Explain the basics of reporting on the sports beat.
2. Identify different types of stories, such as game stories, features and columns.
3. Demonstrate the mechanics of sports writing.
4. Discuss properly attending sporting events as a reporter.
5. Explain the importance of objectivity when covering a sports team.

COMM 2232. Sports Commentary

Course Description

This course will focus on the theory and practice of sports commentary across various media platforms. Students will study the art of providing insightful analysis, engaging commentary, and compelling storytelling in the context of live sports events. Students will learn the fundamentals of sports broadcasting including voice modulation, storytelling techniques, and on-air presentation skills. Emphasis will be placed on developing a unique voice as a sports commentator, mastering the use of statistics and analytics in commentary, and understanding the ethical considerations inherent in sports broadcasting.

Student Learning Outcomes

At the end of the course students should have attained knowledge and understanding of the following central concepts:

1. Understand the real objectives of television sports commentary.
2. Provide context and insights from an expected source.
3. Learn how to prepare properly for a match.
4. To add value to viewers through information and voice modulation.
5. Work with directors and use the monitor effectively.

COMM 2240. Organizational Communication Studies

Course Description

Focuses on communication networks, power and authority, manager/employee relationships, leadership and interviewing in organizational contexts.

Student Learning Outcomes

Upon completion of this course, successful students will be able to:

1. Define and describe key elements of theories components and processes related to organizational communication
2. Analyze organizational communication interactions in various context
3. Analyze the importance of listening, interpreting and nonverbal skills in communication within organizations
4. Develop and apply appropriate and effective communicative messages for various interactions with others within an organizational setting

COMM 2245. Web Design

Course Description

This course introduces web page and web design concepts, basic HTML coding skills progressing to the use of Dreamweaver to design a website. Students will gain practical experience in the production of an electronic information delivery product. This course assumes that you already have basic skills as a journalist, and will focus on helping you transfer your skills to the online format.

Student Learning Outcomes

After the successful completion of the course the student will be able to:

1. Visualize and communicate ideas effectively in publishing webpages and websites.
2. Demonstrate the ability to think critically and creatively about how online technologies are changing traditional media for journalism.
3. Transfer journalism skills to hyper-based media, such as web pages or other new media formats.
4. Demonstrate understanding of visual design principles with an emphasis on presenting journalism online.
5. Design web pages using HTML and CSS to tell stories using new media.

COMM 2250. Newspaper Practicum**Course Description**

Practical experience through work on student newspaper or yearbook as staff writers or editors under the supervision of the instructor. (May be repeated for a maximum of four hours).

Student Learning Outcomes

1. A general understanding of the nature, elements, and principles of interpersonal communication including: universal processes, and the impact of culture, perception, self-awareness and listening.
2. An understanding of messages - verbal and nonverbal.
3. An understanding of interpersonal relationships including: stages and theories; growth and deterioration: friendship, love, and workplace relationships and an awareness of interpersonal conflict and the principles of power and influence.
4. An awareness of interpersonal conflict and the principles of power and influence.

COMM 2282. Family Communication Studies**Course Description**

Examines family systems theory, communication patterns, rules, roles, themes, power, intimacy ethnicity and conflict in families.

Student Learning Outcomes

Successful students will

1. Develop a communication perspective on the family as a system.
2. Recognize and explain how factors such rules, roles, power, ethnicity and societal influences affect communication between family members.
3. Analyze the effects of family communication during periods of stress or conflict.
4. Apply theories and concepts to real life scenarios.

COMM 2289. Listening Communication Studies**Course Description**

Investigates and applies current research in listening theory. Analyzes the appropriateness and applicability of five major types of listening in academic, business, media and interpersonal contexts.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Define and describe basic listening terms and techniques.
2. Identify one's own listening strengths and weaknesses

3. Discuss the impact of culture, gender, self-esteem, and context on listening.
4. Identify and demonstrate listening skills which enhance communication in a variety of contexts: academic, business, familial, therapeutic, relational and intrapersonal.

COMM 2993. Workshop in Communication

Course Description

Varies

Student Learning Outcomes

Varies

COMM 2996. Topics in Communication

Course Description

Specific subjects and credits to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

COMM 2997. Independent Study

Course Description

Individualized, self-paced projects for students with a special interest in communication topics.

Student Learning Outcomes

Varies

COMM 2998. Internship

Course Description

Varies

Student Learning Outcomes

Varies

COMM 2999. Programmatic Capstone

Course Description

Varies

Student Learning Outcomes

Varies

Community and Regional Planning (PLAN)

PLAN 1165. Introduction to Community and Regional Planning

Course Description

Introduction to the social, economic, political and physical factors involved in development of cities and towns. Overview of the development of community and regional planning, as well as prominent theories of planning practice. Emphasizing the connection between theoretical and historic material and current planning practice and the interrelationships between various land uses.

Student Learning Outcomes

1. Describe the basic principles and dimensions of community and regional planning.
2. Distinguish objectives and issues specific to selected sub-fields of community and regional planning.
3. Identify various techniques and tools used by planners.

4. Apply correct technical vocabulary when discussing pertinent community and regional planning issues in an educated manner.
5. Explain the relationship between types of places and planning principles.

PLAN 2265. Sustainable Community Planning Methods

Course Description

An overview of sustainability covering topics such as the origins of sustainability, tools for sustainability planning, global dimensions of sustainability (including different approaches to planning), and visions for creating sustainable futures through the basic concepts, processes and techniques of planning.

Student Learning Outcomes

1. Describe how an understanding of environmental limits and the creation of inequities in society underlie our approach to sustainability
2. Describe the core tenants of sustainability in a concise manner – environment, economy and equity
3. Apply sustainability planning tools such as sustainability indicators, ecological footprint analysis, and green building certification
4. Explain interactions, flows of people and materials, cultures, and differing approaches to sustainability planning
5. Explain how sustainability goals and values can be embedded into the everyday practice of land use planning

PLAN 2275. Community Change in a Global Era

Course Description

We live in a global world and in local communities. How do global processes influence what happens in our communities? How can we shape global processes, or intervene to create local outcomes that strengthen diverse communities, communities that are situated differently in relationship to established institutions and have different worldviews, priorities and interests? How can local action effect lasting change locally or globally? This course explores these questions through the intersections among global processes, community outcomes, and local, national and global action.

Student Learning Outcomes

By the end of the course, you will be able to

1. Analyze how global processes interact locally in everyday spaces.
2. Explain how global economic, environmental and social processes shape communities in fast growing urban and rural areas and those that are growing slowly or shrinking.
3. Analyze how different forms of action shape local outcomes.
4. Convey global concepts professionally.

Community Health & Social Sciences (CHSS)

CHSS 1110. Introduction to Health & Community Services

Course Description

This course offers a holistic and multidisciplinary approach towards health promotion, wellness and a healthy lifestyle. Emphasis is placed on the major problems/issues that have the greatest significance to personal and community health. Topics to be discussed include: nutrition, fitness, stress management, sexuality, drug education and others.

Student Learning Outcomes

1. Understand basic foundations of community health – history, framework and present progress
 - a. Identify key historical advances, people and events in public health
 - b. Understand Healthy People 2020 goals and objectives
 - c. Understand the levels of prevention (primary, secondary, tertiary) of public health

2. Identify organizations that help shape community health and their role in promoting health
 - a. Governmental
 - b. Quasi-Governmental
 - c. Nongovernmental
 - d. Identify local resources/agencies focused on health and human services
3. Conduct research in public health
 - a. Identify major sources for public health research
 - b. Governmental websites
 - c. Journals
 - d. Interpret and evaluate public health resources for academic use
 - e. Write a basic journal article critique
4. Understand the history and function of the school health program
 - a. Identify components of a coordinated school health program
 - b. Identify and overcome barriers common to CSHP
 - c. Apply the CSHP to contemporary issues in child/adolescent health

CHSS 2110. Ethical & Research Issues in Human & Community Service

Course Description

Ethical and legal responsibilities of health personnel with an emphasis on research applications.

Student Learning Outcomes

1. Describe the need for research.
2. Develop a research proposal.
 - a. Identify and write problem statements and research questions.
 - b. Identify and formulate a hypothesis.
 - c. Describe the basic format of research.
2. Review of Literature and Information Sources.
 - a. Describe the steps in a literature review process.
 - b. Conduct a library search for scholarly articles.
 - c. Differentiate primary and secondary sources.
3. Ethics in Research.
 - a. Describe common ethical issues in public health research.
 - b. Identify vulnerable populations.
 - c. Explain the main components of informed consent.
 - d. Describe the researchers obligations regarding confidentiality
 - e. Describe the role of the Institutional Review Board
4. Conducting Experimental and Quasi-Experimental Research.
 - a. Describe case study and control in experiments.
 - b. Recognize the role of the Hawthorne Effect in research.
 - c. Explain internal and external validity, threats to validity and research methods for overcoming threats.
5. Data Collection through Surveys and Self-Reports.
 - a. Evaluate various survey methodologies for applicability in public health research.
 - b. Identify the components of a questionnaire.
 - c. Explain the process for conducting focus groups.
6. Sampling Designs and Techniques.
 - a. Recognize the role sampling plays in research.
 - b. Identify commonly used sampling techniques.
 - c. Explain the role sample size plays in research validity.

7. Qualitative Research.
 - a. Explain the theoretical foundations for qualitative research.
 - b. Practice the most commonly used methods of qualitative research.
8. Evaluation Research.
 - a. Explain the purpose of evaluation research.
 - b. Connect appropriate evaluation strategies with
 - c. Describe commonly used evaluation models.
9. Analytical Epidemiologic Studies.
 - a. Compare and contrast the two most common Analytical Epidemiology Studies
 - b. Explain the most common methods for establishing causation.
 - c. Describe the most common types of error.
10. Descriptive Analysis.
 - a. Describe inferential and advanced data analysis techniques.
 - b. Identify the characteristics of Meta-Analysis.

CHSS 2510. Service Learning

Course Description

Service Learning Experience in Human and Community Service: Exploration of contemporary social, civil, economic and ethical problems that require student participation in collaborative efforts within the community.

Student Learning Outcomes

By the end of the semester, students should be able to:

1. Understand the importance of service learning in community building and civic participation.
2. Students should have completed at **least 90 hours** of service learning experience with a community agency of their choice.
3. Compile and submit a list of detailed daily service learning activities including contact individuals, meetings attended, presentations, specific tasks accomplished or contributions to agency or community, new skills learned, trainings, and number of hours spent on each activity.
4. Design a service learning project incorporating the key elements of Public Health, and addressing a need in the community.
5. Provide an oral presentation and write a personal reflection of the service learning experience in class.
6. Practice critical thinking, decision making skills, and civic responsibility in promoting better health and general well-being.

CHSS 2511. Service Learning-Community Health Worker

Course Description

Service Learning Experience in Community Health Work: Exploration of contemporary social, civil, economic and ethical problems that require student participation in collaborative efforts within the community.

Student Learning Outcomes

1. Understand the importance of service learning in community building and civic participation.
2. Students will complete 30 hours of service learning experience with a collaborating community agency focusing on Community Health Work.
3. Compile and submit a list of detailed daily service learning activities including contact individuals, meetings attended, presentations, specific tasks accomplished or contributions to agency or community, new skills learned, trainings, and number of hours spent on each activity.
4. Attend CHW trainings focused on community health including (but not limited to) chronic disease, environmental and mental health.
5. Provide an oral presentation and write a personal reflection of the service learning experience in class.

Comparative Literature (COMP)

COMP 2222. Fairy and Folk Tales

Course Description

An exploration of fairy and folk tales from a variety of cultures. The course introduces methods of analysis while exploring historical and contemporary roles and interrelationships of the tales.

Student Learning Outcomes

1. Students will be able to describe and analyze literary and cultural texts with awareness of their cultural specificity. (Integrative Learning)
2. Students will be able to communicate ideas effectively in speech and writing. (Integrative Learning)
3. Students will be able to distinguish the salient features of several individual cultures in historical and contemporary contexts. (Integrative Learning)
4. Students will be able to identify the role played by several significant forms of representation in several global cultures. (Integrative Learning)
5. Students will be able to make comparative analyses of ethical, stylistic, and cultural viewpoints from different cultures with an understanding of how these differences impact society. (Critical Thinking)

COMP 2225. Health, Illness, and Culture

Course Description

Cultural difference is a central preoccupation of health humanities, reflective of the discipline's expansion as well as the increasing diversity of US society. In this course, we will explore how bodies, health, and pathology have been conceptualized in different cultures and at different times; how social categories such as gender, sexuality, race, and class are implicit in these concepts; and how these concepts shape different understandings of healthcare and health regimens.

Student Learning Outcomes

1. Students will describe and explain how the body, health, and illness are represented in select texts, illustrations, and other media from different world regions and historical periods.
2. Students will explain how different regions and periods address health and illness in different ways.
3. Students will identify sources and evaluate their trustworthiness.
4. Students will communicate in different situations and with diverse people.

COMP 2240. Cultures, Texts, Worlds

Course Description

Multi-disciplinary course explores how literature, film and media shape identity and belonging, emphasizing cross-cultural perspectives. Explores how cultural texts confer meaning and value on human experience, shape different communities, and forge links among individuals and groups.

Student Learning Outcomes

1. Identify, investigate, and compare cultural and textual traditions and practices (such as literature, cinema, media, and other arts) from two or more geopolitical zones (delineated by markers such as language, nation, or empire)
2. Understand critical concepts and methods from two or more disciplines in the humanities (such as history, linguistics, philosophy, political science, and gender studies), their intersections with literary, cinema, or media studies, and their relevance to the reading and interpretation of cultural texts and art forms
3. Analyze the composition, defining traits, and significance of a cultural text or art form with regard for its historical, political, and cultural context
4. Formulate and investigate a problem or question in light of a configuration of identity and community (shaped by categories such as nation, race, class, and gender), using a comparative, interdisciplinary approach
5. Understand how literary, cinematic, and artistic practices from different areas of the globe create an idea of a common world, producing forms of participation and exchange within a sphere of human experience.

Computer Information Systems Technology (CIST)

CIST 1110. Introduction to Operating Systems

Course Description

This course offers a comprehensive introduction to operating systems, covering topics such as process and memory management, file systems, I/O systems, security, mobile computing, and networking. With a focus on Windows-based systems, students will learn the implementation, configuration, installation, and maintenance of operating systems, gaining a deeper understanding of current systems.

Student Learning Outcomes

Students completing this course should be able to:

1. Identify and explain computer hardware including the components of a computer system and its functions.
2. Install, configure, and troubleshoot hardware components such as CPUs, RAM, motherboards, hard drives, and expansion cards.
3. Identify and explain the different types of computer operating systems, including Windows, macOS, and Linux, and their respective features and functions.
4. Install, configure, and troubleshoot operating systems and software applications, and use various system tools and utilities to diagnose and resolve common hardware and software issues.
5. Understand and implement basic networking concepts, including IP addressing, subnetting, and network protocols.
6. Implement security concepts, including user authentication, access controls, firewalls, encryption and resolve common security threats and vulnerabilities.

CIST 1111. Introductions (Foundations) of Information Systems

Course Description

Information systems are an integral part of all business activities and careers. This course is designed to introduce students to contemporary information systems and demonstrate how these systems are used throughout global organizations. The focus of this course will be on the key components of information systems-people, software, hardware, data, and communication technologies, and how these components can be integrated and managed to create competitive advantage. through the knowledge of how IS provides a competitive advantage students will gain an understanding of how information is used in preorganization's and how IT enables improvement in quality, speed, and agility. This course also provides an introduction to systems and development concepts, technology acquisition, and various types of application software that have become prevalent or are emerging in modern organizations and society. The course introduces the Information Assurance and INFOSEC process. Includes participating in the National Cyber League Competition.

Student Learning Outcomes

1. Demonstrate an understanding of the history of computers, current computer technology and terminology.
2. Understand computing disciplines: computer science and information systems.
3. Understand networking and the Internet.
4. Demonstrate knowledge of the Systems.
5. Development of Life Cycle process how technology is issued in business.
6. Understanding of INFOSEC processes and methodology and computer, network security and some of the societal implications of computers and related technology.

CIST 1115. Principles of Computer Science Information Systems

Course Description

This course is an introduction to the fundamental concepts and terminology in the computing field, including computer history, algorithms, computer architecture, programming languages, applications, social issues, and ethics. It covers both computer science and computer information systems and aims to prepare students for further studies in these disciplines. Students should have prior knowledge of basic computer usage and software, such as MS Word, MS Excel, Power BI, and the Internet. Additionally, the course may cover topics such as problem-solving, computer organization, and information assurance.

Student Learning Outcomes

1. Discuss the fundamental concepts and terminology of computer science and computer information systems, including computer history, algorithms, and computer architecture.
2. Analyze and apply problem-solving strategies to different computing problems using various programming languages.
3. Evaluate and assess the social and ethical implications of computing technologies.
4. Describe and differentiate between various computer applications, software, and hardware components.
5. Explain the importance of information assurance and security in the computing field.
6. Apply the knowledge gained from this course to further studies and future career paths in the computing field.

CIST 1116. Introduction to Windows Operating System

Course Description

This course introduces the most widely used graphical user interface (GUI) operating system for personal computers. Students will learn fundamental skills in file management, including creating, saving, organizing, and backing up files and folders. The course also explores basic personal computer concepts, hardware requirements for running Windows, and practical techniques for navigating and using the Windows environment. Topics include mouse usage, managing and customizing windows, working with drop-down menus, multitasking with multiple applications, and transferring data between programs.

Student Learning Outcomes

By the end of this course, the student will be able to

1. Navigate and manage the Windows desktop environment, to include creating, arranging, and using shortcuts; using the Recycle Bin; and managing the Start menu.
2. Perform file and folder management tasks, such as creating, organizing, renaming, and backing up files and folders using Windows tools.
3. Customize the Windows environment by adjusting system settings, themes, and display preferences to personalize the user experience.
4. Apply advanced personalization and customization techniques to optimize system functionality, including configuring features such as time and region settings, hardware and sound settings, and basic firewall settings.
5. Use advanced searching techniques to efficiently locate files, folders, and system settings within the Windows environment.
6. Perform fundamental browser tasks such as surfing the Internet, managing bookmarks, and enhancing digital media experiences while maintaining security and privacy.

CIST 1117. Introduction to the Internet

Course Description:

This course introduces foundational concepts and skills for navigating the Internet and using web-based tools effectively. Students will learn browser basics, including navigating web pages and managing settings, as well as email communication, web searching, and evaluating online content. Topics include accessing and citing information resources, exploring user-generated content such as podcasts and social networks, understanding Internet security practices, and explaining wireless networking technologies. The course aligns with Certified Internet Web (CIW) and Internet & Computing Core Certification (IC3) standards, providing essential knowledge for beginners with no prior experience.

Student Learning Outcomes

By the end of this course, students will be able to:

1. Navigate web pages, use bookmarks or favorites, manage cookies, and employ private browsing within a web browser.
2. Create, organize, and manage email communications effectively, utilizing common message features and email application functions.
3. Conduct web searches using search engines, evaluate the credibility of websites, and apply search engine optimization techniques.
4. Locate, understand, and cite current and specific Internet content, including text-based and multimedia resources.
5. Identify, explain, and use user-generated content, including pull technologies like podcasts and feeds, and push technologies like messaging and social networks.
6. Identify and explain physical and logical security processes, including firewalls, anti-malware applications, and enhanced security practices.
7. Describe the evolution of wireless technologies and differentiation between various types of wireless networks.

CIST 1119. Introduction to Cloud Computing

Course Description

An overview in the knowledge and skills required to implement, maintain, and deliver cloud technologies and infrastructures (e.g. server, network, storage, and virtualization technologies), and to understand aspects of IT security and use of industry best practices related to cloud implementations and the application of virtualization. Various models of cloud services and deployments will be discussed. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Describe cloud architecture and design.
2. Deploy cloud services and solutions.
3. Successfully maintain, secure, and optimize a cloud environment.
4. Troubleshoot common issues related to cloud management.

CIST 1121. A+ Hardware and Operating Systems

Course Description

Introduction to PC hardware, peripherals, and operating systems. Includes problem diagnosis, troubleshooting processes, Windows utilization, and system optimization. May be used to prepare for industry certification exams.

Student Learning Outcomes

1. Install, configure, and maintain computer equipment, mobile devices, and software for end users.
2. Service components based on customer requirements.
3. Understand networking basics and apply basic cybersecurity methods to mitigate threats.

4. Properly and safely diagnose, resolve, and document common hardware and software issues.
5. Apply troubleshooting skills and provide customer support using appropriate communication skills.
6. Describe the basics of scripting, cloud technologies, virtualization, and multi-OS deployments in corporate environments.

CIST 1213. Web Publishing

Use Content Management Systems (CMS) to publish websites optimized for search engine success. Introduce visitor tracking and web analytics. Use the CMS dashboard to develop content, select themes, install plugins, and manage users.

Student Learning Outcomes

1. Identify standards compliant HTML and CSS.
2. Use a Content Management System (CMS) to publish websites.
3. Apply search engine optimization (SEO) success factors to website content.
4. Describe a web analytics framework to track and measure success.
5. Identify factors that impact web client and web server.

CIST 1217. Overview of Web Technologies

Course Description

Identify the markup, style, and coding languages common to web development. Apply HTML and Cascading Style Sheets (CSS) to create web documents. Use a content management system to develop a website. Distinguish between browser and server-side coding. Explore the interactions between the web server, network, and web browser.

Student Learning Outcomes

Students completing this course should be able to:

1. Describe the interaction that occurs between web browsers and web servers.
2. Create documents with HTML and CSS.
3. Describe the UTF8 encoding scheme used for web documents.
4. Identify key Internet organizations.
5. Classify web programming languages.
6. Describe how domain names are allocated, managed, and used in the web browser.
7. Implement a framework to build content management style website.

CIST 1220. Programming Fundamentals

Course Description

This is an entry level programming course designed to teach students the basic concepts of computer programming. By the end of the course, students will have the skills and confidence needed to succeed in future programming language courses.

Student Learning Outcomes

Students completing this course should be able to:

1. Explain what is computer programming.
2. Create pseudo code from a problem definition.
3. Create executable code from pseudo code.
4. Create basic calculator programs that ask users for input, perform some calculations and display results.
5. Create programs that use loops and conditionals.
6. Utilize data structures that store collections with multiple values.

7. Create programs that use functions.

CIST 1258. Visual Basic Programming

Course Description

Introduction to concepts of programming in the Visual Basic language. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging code. This is a hands-on course that does not require students to have prior programming experience.

Student Learning Outcomes

1. Demonstrate understanding of Integrated Development Environments (IDE).
2. Demonstrate understanding of the concept of variables.
3. Demonstrate understanding of programming operators to calculate mathematical formulas and create expressions using logical operators.
4. Utilize system, library, and user created methods.
5. Exercise the use of a program control with IF THEN ELSE and SELECT CASE constructs.
6. Apply the three basic loop constructs.
7. Create and manipulate a collection of data.
8. Demonstrate an understanding of exception handling.

CIST 1260. Java Programming

Course Description

Introduction to concepts of programming in the Java language. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging code. This is a hands-on course that does not require students to have prior programming experience.

Student Learning Outcomes

1. Install and configure Java JDK from Oracle and IDE (Eclipse, NetBeans, IntelliJ).
2. Understand Java language hardware, software requirements, and methodology.
3. Design software workflows and outcomes utilizing Java programming language.
4. Code and execute Java programs.
5. Demonstrate basic programming methodologies and workflows.
6. Demonstrate coding fundamentals, including the use of variables, arrays, and loops.

CIST 1261. JavaScript Web Programming

Course Description

Use JavaScript libraries and frameworks including jQuery to implement web widgets and validate form data. Create interactive web pages with JavaScript manipulation of HTML and CSS. Use AJAX and other technologies for browser-to-server interactions.

Student Learning Outcomes

Students completing this course should be able to:

1. Describe JavaScript, browser, and HTML DOM objects.
2. Implement control structures, expressions, and functions.
3. Demonstrate declaring variables, calculating values and displaying the results.
4. Analyze and debug an application.
5. Utilize JavaScript Frameworks and Libraries.

CIST 1263. PHP Web Programming

Course Description

Use PHP/MySQL libraries and frameworks to develop dynamic database-driven websites. Explore a range of PHP solutions including image management, network socket data transfer, and XML parsing.

Student Learning Outcomes

Students completing this course should be able to:

1. Create functions and PHP control structures.
2. Formulate PHP variables.
3. Operate databases with PHP.
4. Apply query strings, cookies and sessions to state information.

CIST 1409. IT Essentials I: PC Hardware, Software, and Practical Applications

Course Description

This course provides student with the knowledge required to understand the fundamentals of computer technology, networking, and security, and the skills required to identify hardware, peripheral, networking, and security components.

Student Learning Outcomes:

1. Analyze and evaluate basic computer hardware/software problems.
2. Understand customer service and helpdesk.
3. Categorize network problems and solutions following the to the OSI model.
4. Demonstrate use of internet resources for hardware/software problem identification, solutions, analysis, and upgrades.
5. Demonstrate ability to build, repair, configure, optimize, upgrade and install hardware.
6. Demonstrate ability to troubleshoot, upgrade and install software.
7. Understand and apply security policies, practices, and standards in a PC environment.

CIST 1410. IT Essential: Hardware

Course Description

Hands-on instruction of Linux system administration with an emphasis on security and performance. Prepares students to work as professional Linux system administrators. Learn the key principles to install and manage virtual machines, both their performance and security. Learn advanced networking concepts, including clustering and high availability.

Student Learning Outcomes

1. Install, configure, and manage Linux network services.
2. Install and manage virtual machines (VMs), both for high-performance computing and high availability.
3. Manage networked file systems.

CIST 1411. Introduction to Networks

Course Description

An introduction to the TCP/IP and OSI networking models and concepts for implementing those models in Wide Area and Local Area Networks. TCP/IP network fundamentals will be presented. Topics include network device configuration, IPv4 and IPv6 network addressing, basic security administration and network troubleshooting principles. This course uses the Cisco Networking Academy curriculum and is preparation for current industry certifications.

Student Learning Outcomes

By the end of this course, the student will be able to

1. Configure routers, switches, and end devices to establish end-to-end connectivity and provide access to local and remote network resources.
2. Explain how physical and data link layer protocols support the operation of Ethernet in a switched network.
3. Create and implement IPv4 and IPv6 addressing schemes.
4. Explain how the upper layers of the OSI and TCP/IP models support network applications.
5. Use security best practices to configure and protect a small network.
6. Troubleshoot connectivity issues in a small network.

CIST 1412. Network Device Configuration

Course Description

This course covers the architecture, components, and operations of routers and switches in a small network and introduces wireless local area networks (WLAN) and security concepts. Students learn how to configure routers and switches, perform basic network configuration and troubleshooting, identify and mitigate LAN security threats, configure static and dynamic addressing, and configure and secure a basic WLAN. This course uses the Cisco Networking Academy curriculum and is preparation for current industry certifications.

Student Learning Outcomes

Students completing this course should be able to:

1. Configure and troubleshoot VLANs and Inter-VLAN routing.
2. Configure and troubleshoot redundancy issues on switched networks using Spanning Tree Protocol and EtherChannel.
3. Explain how to support available and reliable networks [and configure] first-hop redundancy protocols.
4. Configure IPv4 and IPv6 static routing and dynamic addressing on network devices.
5. Configure WLANs using wireless routers and controllers.
6. Configure and apply security best practices to mitigate Layer 2 and Layer 3 network attacks.

CIST 1413. Network Administration Concepts

Course Description

Students will learn to design, configure, and troubleshoot various types of networks, implement security measures to protect network assets, analyze network protocols and services, diagnose network issues, and monitor network performance. Students will engage in hands-on/virtual lab exercises, performance-based assessments, and written assessments to apply their knowledge and skills. Upon completion of this course, students will be equipped for a successful career in network administration. The course aligns with the domains and objectives of the CompTIA Network+ and TestOut Network Pro certification exams.

Student Learning Outcomes

Students completing this course should be able to:

1. Implement security measures to protect network assets, including the use of firewalls, access controls, and encryption methods.
2. Apply network protocols and services such as TCP/IP, DNS, DHCP, and SMTP.
3. Execute network troubleshooting and optimization techniques by diagnosing and resolving network performance and optimizing issues, including problems, network operations for LAN, WAN, and wireless networks.
4. Apply network monitoring and maintenance procedures by monitoring network performance, implementing maintenance, and understanding the importance of backup and disaster recovery planning.
5. Employ virtualization and cloud technologies such as virtual networks, virtual servers, and cloud storage.

CIST 1605. Internet of Things

Examines the evolution of the Internet and how the interconnection of people, processes, data, and things is transforming every industry. This hands-on IoT course addresses the main stages of digitization including identifying and communicating a business or social problem and designing and connecting IoT devices to interact with the physical world. Students will develop high-demand skills such as creative problem-solving, critical thinking, collaboration and communication in hands-on lab and hackathon experiences.

Student Learning Outcomes

1. Analyze the things and connections that make up the IoT.
2. Build sensor/actuator systems using the Arduino microcontroller.
3. Create programs in Python that provide IoT functionality to the Raspberry Pi single-board computer.
4. Create an end-to-end IoT system.
5. Design an IoT system that can solve a problem of interest to the student.

CIST 1610. IT Essentials: Software

Course Description

Covers common features and functionality of known operating systems, system management, file management, common security threats and vulnerabilities. The basics of computer software technologies are introduced in a lab-oriented environment and will assist in preparation for the CompTIA A+ Software certification.

Student Learning Outcomes

1. Apply the basic concepts of system management.
2. Demonstrate the elements of pre-installation, installation, and post installation of the Windows Operating Systems.
3. Manage the location of system files, file extensions and file attributes, and the commands to manage files.
4. Demonstrate the basics of securing a computer system.

CIST 1611. Azure Fundamentals

Course Description

This course will provide foundational level knowledge of cloud services and how those services are provided with Microsoft Azure including workloads, security, privacy, and support. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Describe Cloud Concepts.
2. Explain Core Azure Services.
3. Compare and contrast core solutions and management tools on Azure.
4. Identify general security and network security features.
5. Describe identity, governance, privacy, and compliance features.
6. Compare Azure Cost Management and Service Level Agreements.

CIST 1680. Linux Essentials

Course Description

Introduces the Linux operating system with emphasis on command line application. Students will learn management of the Linux file system, processes, storage devices, users and groups. Learning objectives also include configuration of boot activity, network, and printers.

Student Learning Outcomes

Students completing this course should be able to:

1. Install and maintain Linux operating systems.

2. Locate Help resources in the Linux operating systems.
3. Use the package management utility to administer the Linux operating systems.
4. Explain the fundamental properties of the shell.
5. Administrate Linux operating systems using Command Line Interface (CLI) and Graphic User Interface (GUI).

CIST 1811. Business Continuity and Disaster Recovery

Course Description

Presents methods to identify vulnerabilities and take appropriate countermeasures to prevent and mitigate failure risks for an organization. It will take an enterprise-wide approach to developing a disaster recovery plan.

Student Learning Outcomes

1. Understand the key functions of the disaster plan and can implement disaster recovery procedures.
2. Define and explain information security, basic concepts of risk management and how to conduct risk assessments and implement risk mitigation.
3. Identify and define the components of contingency planning.
4. Know some of the concerns and trade-offs to be managed when assembling the final IR plan, understand the elements of an incident recovery response, and beware of the impact of selecting a reaction strategy, developing a notification mechanism, and the creation of escalation guidelines.
5. Know and understand the relationships between the overall use of contingency planning and the subordinate elements of incident response, business resumption, disaster recovery, and business continuity planning.
6. Recognize what critical elements compose the response phase of the DR plan.
7. Know the methodology used to construct the business continuity policy and plan and be able to participate in such a planning process when required.
8. Understand the CSET risk assessment tool and how to perform assessment using the tool.

CIST 1858. Introduction to Cyber Security

Course Description

This course is an overview of the field of Cyber Security and cyber areas. It will cover terminology, principles, best practices, and ethics which will provide foundation attacks, and defenses used to attack or protect critical infrastructure. The course is designed as a starting point for IT, business, and health care management professionals to help develop a cyber security mindset in both professional and personal lives.

Student Learning Outcomes

1. Identify Security Goals (Confidentiality, Integrity, and Availability).
2. Recognize Relationships between Threats, Vulnerabilities and Attacks.
3. Describe Cyber defense and offense strategies for counteracting cyber-attacks.
4. Describe Security design principles and architectural frameworks.
5. Describe Risk Analysis and Mitigation Techniques.
6. Describe Computer, Network and Data security principles.
7. Identify Social Engineering attacks.
8. Describe best practices for cyber security.

CIST 1996. Topics in Computer Information Systems Technology

Course Description

Varies

Student Learning Outcomes

Varies

CIST 2088. Computer Information Systems Specialty

Course Description

This course allows students to apply computer information technology elective credit towards a Computer Information System program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

CIST 2210. Introduction to SQL (Structured Query Language)**Course Description**

Introduction to Structured Query Language (SQL) within the context of an Oracle database. Students will create basic and complex queries (joining, sub-queries, aggregate functions, grouping data) and learn to manipulate data using insert, update and delete statements. Students will create tables, views, and constraints and benefit by learning the industry standards while utilizing the latest database software and online training materials. This course also prepares students to pass the 1st Oracle Associate Certification Test.

Student Learning Outcomes

Students completing this course should be able to:

1. Create basic and advanced queries used to retrieve data from multiple tables utilizing proprietary and ANSI standard JOIN commands.
2. Construct queries with aggregate & grouping functions.
3. Compose DML queries that manipulate, sort, and restrict data.
4. Build DDL queries that can create or alter tables and utilize transaction control for saving objects and data.
5. Construct advanced Queries: rollup, cube, set operators, merge, subqueries, and correlated subqueries.
6. Build, maintain, and execute views.

CIST 2211. Azure Administrator**Course Description**

An introduction to the skills and knowledge necessary for implementing, managing, and monitoring identity, governance, storage, computing, and virtual networks in a cloud environment, plus provision, size, monitor, and adjust resources, when needed. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Explain Azure identities and governance.
2. Implement and manage storage.
3. Deploy and manage Azure computer resources.
4. Configure and manage virtual networking.
5. Monitor and back up Azure resources.

CIST 2215. iPhone Programming with Swift**Course Description**

Swift is a programming language created by Apple for building apps for iOS, Mac, Apple TV and Apple Watch. Students will learn to develop apps using the Swift language. The course is taught with Apple Equipment. Students can use their own equipment or check out the appropriate hardware.

Student Learning Outcomes

Students completing this course should be able to:

1. Use the Apple's IDE for IOS development in the Swift language.
2. Implement Model-View-Controller Design Pattern.

3. Design, implement, test, and deploy a fully featured, graphically rich IOS phone application that creates persistent data.
4. Implement common and advanced controls, such as UITableView, CollectionViews, AutoLayout and StackView.
5. Use JSON or XML data to download data from a web site to display in an app.
6. Create an application that reads a list of views from a site on the Web, stores it persistently on the device, downloads selected image data and displays it to the user.

CIST 2220. .NET/C#

Course Description

Provides an accelerated introduction to the .NET Framework and the C# development environment within a C# context. Course scope includes review of C#.NET language syntax and structure, development of C#.NET event driven applications incorporating a graphical user interface (GUI) and user defined classes and interfaces. Course includes abstract classes, stressing inheritance and polymorphism, and concludes with a web application interfacing with a database.

Student Learning Outcomes

Students completing this course should be able to:

1. Demonstrate use of basic and intermediate language features and data structures within the language.
2. Demonstrate how to design and implement user-defined classes.
3. Demonstrate how to implement encapsulation and inheritance in an object-oriented program.
4. Demonstrate how to design and implement a multi-class simulation and one which demonstrates composition using user-written classes.
5. Demonstrate how to implement abstract classes and polymorphism in an object-oriented program.
6. Demonstrate how to implement a user friendly, state of the art, graphical user interface (GUI)
7. Demonstrate how to implement exception handling.
8. Demonstrate how to implement interfaces.
9. Demonstrate how to connect to and manipulate a database.

CIST 2225. Game Development

Course Description

Teaches how to develop computer games and simulations. Covers Agile software development, working as a team, building assets, creating scenes, coding object behaviors and other topics. Students will learn how to deploy a game/simulation to Windows, to the Web and/or to Android. Students may also learn to integrate game peripheral Software Development Kits for example: Oculus Rift, Google Cardboard, Kinect and/or other systems.

Student Learning Outcomes

Students completing this course should be able to:

1. Demonstrate how to build a first-person 3-D game.
2. Demonstrate how to create 3-D game assets.
3. Demonstrate how to build a 3rd-person 3-D game.
4. Demonstrate how to use machine learning in a 3-D game.
5. Demonstrate how to plan, organize and build a game with a group of developers using the Agile Methodology and version control.
6. Demonstrate how to use Unity's cross platform deployment capability to deploy a game to Windows, to the Web and to Android.

CIST 2235. Java Programming I

Course Description

Provides an accelerated introduction to JAVA programming language. Covers class design and implementation, object-oriented design topics, Graphic User Interface development, exception handling, file input/output, inheritance, polymorphism.

Student Learning Outcomes

1. Prepare a personal computer's Java environment by installing the software and setting necessary environment variable so that Java can be executed in a command line mode.
2. Install Java's NetBeans Integrated Development Environment on a personal computer so that Java programs can be developed in the IDE.
3. Describe the concept of scope for variables-including local and global declarations.
4. Select and declare the appropriate primitive data types that are part of the Java language.
5. Write a Java class that includes private members and public members. The class should have overloaded functions including constructors, sets and gets. Instantiate this class and use all class member functions.
6. Create objects in various ways from a programmer-written class that contains several overloaded constructors.
7. Write a Java program that has (at least) two programmer-written classes that demonstrate the "has a" relationship.
8. Construct GUI programs using AWT and Swing components and contains classic GUI controls including sliders, buttons, check boxes, spinners.
9. Construct GUI programs that includes menu systems.
10. Construct GUI programs that contains both languages provided dialog boxes and programmer designed dialog boxes.
11. Construct Java GUI programs using JavaFX.
12. Write Java program that performs text-based file input/output using a standard File Dialog.
13. Incorporate Exception Handling techniques in Java programs.
14. Design and write Java programs that implement interfaces.
15. Incorporate the principle of inheritance to derive new, customized classes where parental functions are called internally and other functions are overridden. Create and use objects of this new class.
16. Implement inheritance polymorphism in a Java program.

CIST 2237. Android Application Development with Java and Kotlin

Course Description

Focuses on advanced Java technologies. Course covers design, implementation and deployment of advanced programs based on Java which may include web programming, small device applications (Android, phones, pads, etc.), and related technologies including web services, advanced graphics, databases, multimedia, and other relevant technologies.

Student Learning Outcomes

Students completing this course should be able to:

1. Install and use an Android IDE for developing android apps.
2. Use both Java and Kotlin Programming languages to code the assignments.
3. Integrate Android Material Design features.
4. Implement common Android features, for example: Shared Preferences, splash screens, fragments, multi-threading and SQLite Database.
5. Implement current programming techniques as they evolve, such as Jetpack's Navigation, Room Database API, etc.
6. Implement JUnit Testing.
7. Describe the steps in publishing an app.

CIST 2251. Python Programming II

Course Description:

In this course, students will take Python machine learning ideas and create serverless web applications accessible by anyone with an Internet connection. Students will work through a series of common Python data science problems in an increasing order of complexity. Students will learn to create a web application around numerical or categorical predictions, Machine Learning tools like TensorFlow, understand the analysis of text, create powerful and interactive presentations, serve restricted access to data, and leverage web plugins to accept credit card payments and donations.

Student Learning Outcomes

Students completing this course should be able to:

1. Demonstrate how to use Serverless Technologies.
2. Demonstrate how to use client-side intelligence using regression coefficients.
3. Demonstrate how to use Real-Time Intelligence with Logistic Regression.
4. Demonstrate how to use Pretrained Intelligence with Gradient Boosting Machine.
5. Demonstrate how to Support Both Web and Mobile Browsers.
6. Demonstrate how to Display Predictions with Google Maps.
7. Demonstrate how to Forecast with Naive Bayes and OpenWeather.
8. Demonstrate how to use Interactive Drawing Canvas and Digit Predictions Using TensorFlow.
9. Demonstrate how to display dynamic charts.
10. Demonstrate how to use Recommending with Singular Value Decomposition.

CIST 2263. Web Programming Framework

Course Description

This course introduces concepts, techniques, technologies and APIs for web application development. The main focus of the course is on design patterns employed by modern full-stack web frameworks.

Student Learning Outcomes

Students completing this course should be able to:

1. Describe programming frameworks.
2. Describe Content Management System frameworks.
3. Create and implement a theme using a content management system such as WordPress, Drupal or Joomla.
4. Create and implement a plugin using a content management system such as WordPress, Drupal or Joomla.

CIST 2275. C++ Programming II

Course Description

Continues coverage of C++ programming. Covers structures, enumerated data types, C++ function enhancements, classes and objects, inheritance, polymorphism and virtual functions. This advanced course provides a solid foundation in object-oriented programming methods.

Student Learning Outcomes

Students completing this course should be able to:

1. Construct and use a C++ Class that models a “real-world item or task.” The class will include private members and public methods, including constructors, accessors and mutators. The class will demonstrate good OOP C++ programming practice.
2. Construct a C++ program that has (at least) two programmer-written classes that demonstrate the “has a” relationship of composition.
3. Construct a program that contains an array of programmer-written objects.
4. Construct a program with at least one class that overloads basic operators to perform conditional comparisons or

object data updates.

5. Demonstrate the ability to pass objects between functions using pass by address using pointer and references.
6. Construct a C++ program that incorporates the principle of inheritance to derive new, customized classes where parent methods are called internally and other methods are overridden. Access the derived classes polymorphically.

CIST 2277. C++ Programming III

Course Description

Covers advanced programming including stacks, queues, linked lists, template classes, inheritance and polymorphism and other computer science problems.

Student Learning Outcomes

Students completing this course should be able to:

1. Demonstrate dynamic memory allocation and management of an array of objects. Use the ** for the dynamic array of dynamic objects.
2. Construct a generator class that generates an object, either on the stack or on the free store. Prepare a static library for that class and demonstrate using it.
3. Create a program that uses three search algorithms to search a list of objects and compare the performance of the three searches. For example, the search algorithms could be sequential, binary and recursive binary.
4. Write a C++ class that includes eight sort algorithms including for example, Bubble, Shell, Quick, Shaker or Merge sort for sorting a list of objects. Compare the performance of the different sorts.
5. Build a C++ class that represents a linked list node. Demonstrate its correct use by building a C++ “Linked List Manager” class that provides the tools to build a standard doubly linked list.
6. Build a template class in C++ for sorting. The class incorporates five sorts.
7. Create a program with an original hashing algorithm to build a Hash Table using linked lists. Evaluate its performance.
8. Demonstrate proper use of Smart Pointers in two C++ applications, one using unique pointers and one using shared pointers.

CIST 2284. .NET II/C#

Course Description

The course focuses on the development of Microsoft >NET web applications using Microsoft’s Visual Studio Integrated Developer Environment. Students will learn to and apply Microsoft’s .NET framework to build web applications that use a variety of web controls, can be used by users to access information stored in relational databases, implement site navigation and provides the capability to administer web site membership, roles and permissions. Students will define their web site using the Agile methodology then implement it using the techniques learned in the class.

Student Learning Outcomes

Students completing this course should be able to:

1. Demonstrate how to build a web application using HTML, CSS and JavaScript.
2. Demonstrate how to create web applications using Microsoft .NET technologies.
3. Demonstrate how to code the front-end of a web application using Microsoft .NET technologies.
4. Demonstrate how to code the server-side of a web application using Microsoft .NET technologies.
5. Demonstrate how to implement site security to control access to information.
6. Demonstrate how to incorporate databases that allow users to Create, Read, Update and Delete (CRUD) data from a website.
7. Demonstrate how to use the agile process and version control software to plan, organize, check in, check out and merge changes into solutions.

CIST 2311. Database Concepts and Principles

Course Description

A study of how relational databases are designed for maximum data manipulation is the first step in the field of data management and analytics. Topics covered include core database concepts, how to create database objects and manipulate data. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Discuss relational database concepts.
2. Select, insert, update and delete data in databases.
3. Explain data manipulation language (DML) and data definition language (DDL).
4. Choose data types, build tables, and create views.
5. Build primary, foreign, and composite keys.
6. Create stored procedures and functions and construct indexes.
7. Examine database security concepts.
8. Design database backups and restoration processes.

CIST 2321. Visual Analytics

This course explores the principles and practices of Business Intelligence (BI), which is a critical component of modern decision-making in organizations. Students will learn how to collect, analyze, and visualize data to support strategic and tactical business decisions.

Student Learning Outcomes

1. Explain the fundamentals of Business Intelligence.
2. Describe various BI tools and technologies.
3. Perform data extraction, transformation, and loading (ETL).
4. Create interactive dashboards and reports.
5. Analyze real-world BI case studies and applications.
6. Describe the ethical and legal considerations in BI.

CIST 2331. Predictive Analytics

Course Description

This course delves into the field of predictive analytics, equipping students with the skills to use historical data to make future predictions. Students will learn various predictive modeling techniques, data preprocessing, model evaluation, and the practical applications of predictive analytics in real-world scenarios.

Student Learning Outcomes

1. Explain the fundamentals of predictive analytics.
2. Describe techniques for data preparation and feature engineering.
3. Explain how to build and evaluate predictive models.
4. Explore predictive analytics applications across industries.
5. Apply predictive modeling skills to real-world datasets.
6. Identify the ethical considerations in predictive analytics

CIST 2411. Enterprise Networking

Course Description

This course describes the architecture and considerations related to designing, securing, operating, and troubleshooting enterprise networks. Topics include wide area network (WAN) technologies and quality of service (QoS) mechanisms used for secure remote access and software-defined networking, virtualization, and automation concepts that support the digitalization of networks. Students configure and troubleshoot enterprise networks and learn to identify and protect against cybersecurity threats. Network management tools and key concepts of software-defined networking, including controller-based architectures and how application programming interfaces (APIs) enable network automation, are introduced. **This course uses the Cisco Networking Academy curriculum and is preparation for current industry certifications. The last part of this course description is for institutions that offer the Cisco Networking Academy. If your institution does not offer the curriculum but offers this course you do not need to include this in your course description.**

Student Learning Outcomes

Students completing this course should be able to:

1. Configure single-area OSPFv2 in both point-to-point and multiaccess networks.
2. Explain how to mitigate threats and enhance network security using security best practices.
3. Implement access control lists (ACLs) to filter traffic and secure administrative access.
4. Explain techniques to provide address scalability and configure NAT services.
5. Explain QoS and how to optimize, monitor, and troubleshoot scalable network architectures.
6. Explain and implement network management protocols.
7. Explain how technologies such as virtualization, software defined networking, and automation affect evolving networks.

CIST 2427. Trouble Shooting Networks

Course Description

Allows students to run a wide variety of applications over a network and apply troubleshooting techniques using software and LAN and WAN analyzing equipment.

Students Learning Outcomes:

1. Create configuration documentation.
2. Create a network configuration table and topology diagram based on network components.
3. Devise and apply various troubleshooting strategies to a physical network.
4. Identify and resolve problems at the Physical, Data Link, and Network layers of the OSI Model.
5. Write concise trouble tickets, speak in front of small groups, and make short presentations.

CIST 2428. Juniper Fundamentals

Course Description

This course provides a core understanding of the Juniper Networks core operating system used in Enterprise and Service Provider level systems. Students will be eligible to take the JNCIA Associate Certification Exam.

Student Learning Outcomes

1. Configure the Junos Operating System using CLI and the J-Web Interface.
2. Describe and configure user authentication.
3. Configure archiving for system configurations.
4. Perform upgrade, storage and system cleanup tasks.
5. Implement routing policies.
6. Explain default Junos import and export routing policies.
7. Implement a policer within Junos.
8. Implement traffic classification and scheduling within Junos.

9. Describe the purpose and benefits of CoS.

10. Demonstrate the ability to access and use Juniper support resources to manage Juniper Products.

Describe the Juniper Connected Security components.

CIST 2450. Fundamentals Network Security

Course Description

Introduces Network Security and overall security processes. The focus of the course will be hands-on experience for students with emphasis on: security policy design and management, security technologies, products and solutions.

Student Learning Outcomes

Students completing this course should be able to:

1. Define information security and describe the components of a security architecture.
2. Explain the purpose of cryptography, including 3DES, RSA, hashing and certificates.
3. Design, implement and enforce sound security policies.
4. Describe the fundamentals of a secure network design.
5. Apply techniques to secure HTTP traffic by hardening operating systems, servers, and Browsers.
6. Protect network routers through administrative access policies and services.
7. Implement firewalls to implement network security to its maximum potential.
8. Inspect and monitor networks activity using Intrusion detection systems.
9. Apply VPNs for secure remote access.
10. Describe the hardware and software solutions for a secure wireless design.
11. Use logging and auditing tools to manage network traffic.

CIST 2611. Windows Hybrid Server Administration

Course Description

This course provides students with the skills to perform the following technical tasks: deploy and manage Active Directory Domain Services (AD DS) in on-premises and cloud environments; and manage Windows Servers and workloads in a hybrid environment. Students will also learn how to manage virtual machines and containers; implement and manage an on-premises and hybrid networking infrastructure; and manage storage and file services.

Student Learning Outcomes:

1. Deploy and manage Active Directory Domain Services (AD DS) in on-premises and cloud environments.
2. Manage Windows Servers and workloads in a hybrid environment.
3. Manage virtual machines and containers.
4. Implement and manage an on-premises and hybrid networking infrastructure.
5. Manage storage and file services.

CIST 2616. Introduction to Competitive Robotics

Course Description

Using projects and hands-on exercises, students will learn to build and program small scale robots. Arduino and Raspberry Pi prototyping platforms will be used to perform basic/intermediate navigation under program control, with various sensor inputs, feedback and control techniques. Robots built in this course will be capable of competing in PiWars, SkillsUSA and RoboRave robotics competitions.

Student Learning Outcomes

1. Build a Raspberry Pi-controlled robot, combining hardware and software.

2. Control a robot with Python text-based code to move in multiple directions using multiple control methods.
3. Select and use input sensors (ultrasonic and camera) to control a robot using Python code using obstacle detection and avoidance.
4. Use the camera component to detect specific colors and track objects.
5. Use color information to control the driving behavior of a robot.

CIST 2620. Windows Server Administration

Course Description

This course addresses the implementation and support needs of IT professionals that are planning to deploy and support Window Servers(s). It provides in-depth, hands-on training for IT professionals responsible for the planning, implementation, management, and support of Windows Server operating systems(s). Assists in preparation for the Microsoft certification.

Student Learning Outcomes

1. Be able to manage back-ups, disks and volumes and storage pools.
2. Be able to manage basic networking, DNS, and DHCP services.
3. Be able to configure, deploy, and manage servers; manage files and folders, quotas and printing.
4. Be able to create and manage virtual hard disks and volumes, machines, switches, and storage.
5. Be able to create domain controllers and manage users, devices and organizational units using AD DS.
6. Be able manage domain policies, rights, and permissions.

CIST 2621. Windows Hybrid Server Administration II

Course Description

This course provides students how to following technical tasks: deploy, package, secure, update, and configure Windows Server workloads using on-premises, hybrid, and cloud technologies. In this role, you implement and manage on-premises and hybrid solutions, such as identity, security, management, compute, networking, storage, monitoring, high availability, and disaster recovery.

Student Learning Objectives

1. Integrate Windows Server environments with Azure services.
2. Manage Windows Server in on-premises networks.
3. Identify and secure Windows Server on-premises and hybrid infrastructures.
4. Implement and manage Windows Server high availability and disaster recovery.
5. Migrate servers and workloads; and monitor and troubleshoot Windows Server environments

CIST 2626. Advanced Competitive Robotics

Course Description

Through hands-on exercises, projects, and robotics competition challenges, students will learn to design, build and program small-scale robots using the Arduino and Raspberry Pi prototyping platforms to perform intermediate/advanced navigation, decision making, and computer vision tasks under autonomous control. Robots built in this course will be capable of competing in PiWars, RoboRave, and VEXU robotics competitions at intermediate and advanced levels.

Student Learning Outcomes

1. Use cameras and various sensor inputs to assist the robot in making decisions.
2. Use artificial intelligence and machine learning to teach robots how to react, given different situations and scenarios.

CIST 2636. CLOUD Computing

Course Description

Investigation of technology skills related to maintaining and optimizing cloud infrastructure services. These skills include virtualization, configuration, maintenance, management, securing and troubleshooting of cloud infrastructure services.

Student Learning Outcomes:

1. Analyze the different cloud models to design the best solution to support business requirements.
2. Manage and maintain servers, including OS configurations, access control and virtualization.
3. Analyze system requirements to successfully execute workload migrations to the cloud.
4. Maintain and optimize cloud environments, including proper automation and orchestration procedures, backup and restore operations, and disaster recovery tasks.
5. Troubleshoot capacity, automation, connectivity and security issues related to cloud implementations.

CIST 2640. PowerShell for System Administration

Course Description

Students will be introduced to the fundamentals of PowerShell. Students will learn how to use PowerShell to manage tasks, automate tasks, and link various tools. Students will use the basic tools and commands to write PowerShell scripts to create interactive menus, read and write files, and create code that talks over the network to other scripts.

Student Learning Outcomes

1. Understand the fundamentals of PowerShell.
2. Use PowerShell commands to access data.
3. Run PowerShell scripts to automate tasks.
4. Use PowerShell to create a hands-off, completely automated Windows deployment.
5. Use PowerShell to handle errors.

CIST 2641. AWS Solutions Architect Associates

Course Description

This course covers the fundamentals of building IT infrastructure on AWS. The course teaches students how to optimize use of the AWS Cloud by understanding AWS services and how they fit into cloud-based solutions.

Student Learning Outcomes

1. Design secure architectures in Amazon Web Services (AWS)
2. Design resilient architectures in AWS.
3. Design high-performing architectures in AWS.
4. Design cost-optimized architectures in AWS.

CIST 2650. Advanced Windows Server

Course Description

This course focuses primarily on the installation, storage, and compute features and functionality available in Windows Server. This course may assist in preparation for Microsoft certifications. Version being taught subject to change. Please check with school.

Students Learning Outcomes

1. Install and manage Active Directory on a Windows 2019 Server.
2. Use appropriate utilities to configure and manage Files and Shares on a Windows 2019 Server.
3. Implement Remote Access Services on a Windows 2019 Server.
4. Configure Web Services and Cloud Technologies on a Windows 2019 Server.
5. Manage and secure a Windows 2019 Server network.
6. Monitor and Troubleshoot Windows Server 2019.

CIST 2680. Linux Administration

Course Description

Hands-on instruction of Linux system administration with an emphasis on security and performance. Prepares students to work as professional Linux system administrators. Learn the key principles to install and manage virtual machines, both their performance and security. Learn advanced networking concepts, including clustering and high availability.

Student Learning Outcomes

Students completing this course should be able to:

1. Install, configure, and manage Linux network services.
2. Install and manage virtual machines (VMs), both for high-performance computing and high availability.
3. Manage networked file systems.

CIST 2811. Foundations of Security

Course Description

This course is a study of encryption technologies, system and network security, firewall implementation, intrusion detection and prevention. It also covers operating system, user account, and file resource security, assessing risk, auditing, and

Student Learning Outcomes

1. Assess the security posture of an enterprise environment and recommend and implement appropriate security solutions.
2. Monitor and secure hybrid environments, including cloud, mobile, and Internet of Things (IoT).
3. Discuss applicable regulations and policies, including principles of governance, risk, and compliance.
4. Identify, analyze, and respond to security events and incidents.

CIST 2812. Fundamentals of Cybersecurity

Course Description

An introduction that explores various methods for attacking and defending a network, security concepts and attack methodologies. Topics may include Internet architecture, routing, addressing, topology, fragmentation and protocol analysis, and the use of various utilities to explore TCP/IP. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Apply environmental reconnaissance techniques using appropriate tools and processes.
2. Implement or recommend the appropriate response and countermeasure.
3. Analyze the output resulting from a vulnerability scan and compare and contrast common vulnerabilities found in targets within an organization.
4. Explain the importance of communication during the incident response process.
5. Analyze common symptoms to select the best course of action to support incident response.
6. Explain the relationship between frameworks, common policies, controls, and procedures.
7. Review security architecture and make recommendations to implement compensating controls.
8. Compare and contrast the general purpose and reasons for using various cybersecurity tools and technologies

CIST 2816. Penetration Testing

Course Description

This hands-on course focuses on offense through penetration testing and vulnerability assessment. Students will learn penetration testing, and vulnerability assessment and management skills necessary to determine the resiliency of the network against attacks. Students will also learn skills required to customize assessment frameworks to effectively collaborate on and report findings. May be preparation for an industry certification exam.

Student Learning Outcomes

1. Explain the importance of planning for an engagement
2. Conduct information gathering using appropriate techniques
3. Compare and contrast social engineering attacks
4. Recommend mitigation strategies for discovered vulnerabilities

- 5 Explain the importance of communication during the penetration testing process

CIST 2853. Cyber Defense Basics

Course Description

Introduces the Linux operating system with emphasis on command line application. Students will learn management of the Linux file system, processes, storage devices, users and groups. Learning objectives also include configuration of boot activity, network, and printers.

Student Learning Outcomes

1. Install and maintain Linux operating systems.
2. Locate Help resources in the Linux operating systems.
3. Use the package management utility to administer the Linux operating systems.
4. Explain the fundamental properties of the shell.

CIST 2854. National Cyber League (NCL) Competition

Course Description

This course offers engaging, entertaining, measurable, and scalable methods of learning to enlist a new generation of cybersecurity professionals. These games will be created and optimized for individuals and teams and are designed to provide hands-on experiences and challenges to help students to develop and improve cybersecurity skills and problem-solving abilities. All games will be conducted remotely, in virtual cyber stadiums, equally accessible to all.

Student Learning Outcomes

1. Provides an inclusive individual and team competitive sport experience Enriching the classroom learning experience.
2. Enriching the classroom learning experience by creating a fun, experiential learning opportunity where students demonstrate skills/knowledge sets.
3. Promoting proficiency for specific cybersecurity skills.
4. Preparing students in team environments to solve cybersecurity tasks.
5. Develop skills tied to curriculum, industry needs, and professional Certifications, I.E. CompTIA A+, network+, Security+.
6. Knowledge, Skills, Abilities to perform NICE Work Roles.

CIST 2858. Cyber Ethics, Professionalism, and Career Development

Course Description

This course exposes the student to the topics of Cyber Ethics, Professionalism, and Career Development. The course provides students seeking a career in Cyber security insight on professional behavior required in a security job and how to develop a professional career in Cyber Security.

Student Learning Outcomes

1. Understand the traditional ethical frameworks that can guide the student's analysis of the moral dilemmas and social problems that arise in cyberspace.
2. Describe and understand the directive and architectonic role of moral ideals and principles in determining responsible behavior in cyberspace.
3. Describe and understand the capacity of free and responsible human beings to exercise some control over the forces of technology.
4. Explain and understand the appropriate regulatory response to social problems that have emerged in the online world and formulate and apply answer to the idea that market forces handle social problems or that government intervention is essential.
5. Understand and explain the bottom-up and top-down approaches to regulating the internet.
6. Describe and formulate the optimal approach and interaction of regulatory policy and technology.
7. Understand and apply career development processes and best practices.

CIST 2860. Digital Forensics and Incident Response

Course Description

This course offers students a structured approach to the field of computer forensics and the analysis of digital evidence. Through a combination of theoretical knowledge and hands-on practical exercises, students will develop the skills necessary to conduct effective computer forensic investigations. The course will cover various forensic investigation techniques and utilize standard forensic tools to successfully gather, preserve and analyze digital evidence. This class prepares students for a position as a cybersecurity incident handler.

Student Learning Outcomes: Students completing this course should be able to:

1. Understand core concepts in digital forensics, incident response and chain of custody.
2. Execute data analysis for forensic or incident purposes.
3. Explain the relationship between digital forensics and incident response.
4. Conduct and report on system investigations across different platforms.
5. Apply cryptographic hash functions to forensic artifacts.
6. Employ steganography for data hiding and recovery in media files.

CIST 2880. Introduction of SCADA Cybersecurity

Course Description

This course provides a foundational set of standardized skills and knowledge for industrial cybersecurity professionals. The course is designed to ensure that the workplace involved in supporting and defending industrial control systems is trained to keep the operational environment safe, secure, and resilient against current and emerging cyber threats.

Student Learning Outcomes

1. Understand various industrial control systems and their purpose, application, function, and dependencies on network IP and industrial communication.
2. Understand control network infrastructure design (network architecture concepts, including topology, protocols, and components) and their relation to IEC 62443 and the PurdueModel.
3. Understand information assurance principles and tenets (confidentiality, integrity, availability, authentication, non-repudiation).
4. Apply skills in computer network defense (detecting host and network-based intrusions via intrusion detection technologies).
5. Implement incident response and handling methodologies. Map different ICS technologies, attacks, and defenses to various cybersecurity standards including NIST Cyber Security Framework, ISA/IEC 52443, ISO/IEC 27001, NIST SP 800-53, Center for Internet Security Critical Security Controls, and COBIT.

CIST 2881. Cybersecurity Fundamentals

Course Description

This course covers a range of topics including network and computer security, general security concepts, communication security, infrastructure security, operational and organizational security, encryption technologies, system and network security types of attacks, risk management, intrusion detection and prevention, assessing risk, auditing, and security control procedures. The course is designed to prepare students for an industry certification exam.

Student Learning Outcomes

1. Identify and mitigate various types of security threats, such as malware, social engineering, and network attacks.
2. Utilize security technologies, including firewalls, intrusion detection and prevention systems, and VPNs, to secure a network.
3. Implement security principles and practices in the design and implementation of secure networks and systems.
4. Manage user authentication, authorization, and access control to secure sensitive data.
5. Respond to security incidents and have a disaster recovery plan in place.

CIST 2882. Threat Intelligence and Threat Hunting

Course Description

A comprehensive overview of network security concepts that includes remote access, e-mail, the Web, directory and file transfer, wireless data, common network attacks, cryptography, operational/organizational security, disaster recovery, business continuity, and Cyber Ethics.

Student Learning Outcomes

1. Understand and apply identity management and authentication functions, technologies, policies, and users.
2. Understand and apply physical and network security devices.
3. Understand, analyze, apply host and application defenses devices, functions, applications, and processes.
4. Understand and apply data security practices and policies.
5. Understand, analyze, and implement audit and security assessment functions, tools, processes, and policies.

CIST 2883. Firewall and How They Work

Course Description

A comprehensive overview of network security concepts that includes remote access, e-mail, the Web, directory and file transfer, wireless data, common network attacks, cryptography, operational/organizational security, disaster recover, business continuity, and Cyber Ethics.

Student Learning Outcomes

1. Describe the goals of the threats to network security.
2. Explain the Common Vulnerabilities and Exposures (CVE) standard.
3. Describe router security controls.
4. Describe security solutions for wireless networking.
5. Identify the components of an intrusion detection and prevention system.
6. Explain basic VPN concepts.
7. Strengthen network control by managing security events.

CIST 2884. Advanced Threat intelligence and Threat Hunting

Course Description

This course focuses on advanced concepts and applications of cyber threat intelligence. This is the third course in a sequence of four courses towards a Threat Intelligence pathway that is mapped to the Threat Analyst work role. The course lectures are supplemented with hands-on exercises to reinforce the learning process. The outline is built upon the National Institute of Standards and Technology (NIST guidelines documented in the following Special Publications (SP): 800-181 rev 1 (NICE Cybersecurity Workforce Framework.)

Student Learning Outcomes

1. Ability to provide subject matter expertise to the development of cyber operations specific indicators (T0585).
2. Ability to assist in the identification of intelligence collection shortfalls and to identify threat tactics, and methodologies (T0589) and (T0708).
3. Ability to monitor and report on validated threat activities (T0749).
4. Ability to report intelligence-derived significant network events and intrusions (T0805).
5. Ability to coordinate with enterprise-wide cyber defense staff to validate network alerts (T0043).
6. Ability to perform event correlation using information gathered from a variety of sources within the enterprise to gain situational awareness and determine the effectiveness of an observed attack (T0166).
7. Ability to determine tactics, techniques, and procedures (TTPs) for intrusion sets (T0290).

CIST 2885. Certified SOC Analyst-CSA

Course Description

This course focuses on creating new career opportunities through extensive, meticulous knowledge with enhanced level capabilities for dynamically contributing to a SOC team. It covers fundamentals of SOC operations, before relaying the knowledge of log management and correlation, SIEM deployment, advanced incident detection, and incident response. Additionally, the student will learn to manage various SOC processes and collaborate with CSIRT at the time of need. Students will be ready to take EC Council Ethical Hacking Certificate Exam EC|CSA.

Student Learning Outcomes

1. Understand basic concepts of SOC processes, procedures, technologies, and workflows.
2. Gain basic understanding and in-depth knowledge of security threats, attacks, vulnerabilities, attacker's behaviors, cyber kill chain, etc.
3. Able to monitor and analyze logs and alerts from a variety of different technologies across multiple platforms.
4. Understand the architecture, implementation and fine tuning of SIEM solutions and learn use cases that are widely used across the SIEM deployment.
5. Understand the fundamental concepts on Threat Intelligence, different Threat Intelligence Platform (TIP), how it helps SOC and benefits of integration of Threat Intelligence into SIEM.
6. Gain knowledge of Incident Response process and understand SOC and IRT collaboration for better incident response.

CIST 2887. Ethical Hacking

Course Description:

This course introduces the essential concepts and practices of ethical hacking. Students will learn to use various ethical hacking tools and techniques to assess the security posture of a network and identify potential vulnerabilities that could be exploited by malicious actors. The course is based on the EC Council Ethical Hacking ECH Version 12 and TestOut Ethical Hacker Pro certification exam domains/objectives. By the end of the course, students will have a solid understanding of network security threats and vulnerabilities, and the ability to perform a comprehensive security assessment of a network. The course is suitable for students interested in pursuing a career in cybersecurity or who want to improve their understanding of network security and ethical hacking.

Student Learning Outcomes: Students completing this course should be able to:

1. Apply vulnerability scanning tools to identify network security weaknesses.
2. Use penetration testing tools to assess network security and identify potential vulnerabilities.
3. Analyze the impact of various network security threats and recommend appropriate countermeasures.
4. Develop and implement appropriate security controls to protect a network from security threats.
5. Create a comprehensive security assessment report that presents findings and recommendations in a clear and concise manner.

CIST 2910. Cyber Security Technician Apprenticeship

Course Description

This course is designed to equip apprentices with the fundamental skills and knowledge necessary to excel in the dynamic field of cybersecurity. Through a combination of theoretical learning and practical application, apprentices will develop a comprehensive understanding of cybersecurity principles, tools, and techniques essential for safeguarding digital assets and mitigating cyber threats. This apprenticeship program offers a hands-

on approach, allowing apprentices to gain real-world experience in identifying vulnerabilities, implementing security measures, and responding to cyber incidents.

Student Learning Outcomes

1. Demonstrate a thorough understanding of cybersecurity concepts, including but not limited to encryption methods, network security protocols, malware detection, and ethical hacking principles. They will be able to recall and explain key terminology, theories, and best practices in cybersecurity.
2. Develop practical skills in configuring and administering cybersecurity tools and technologies.
3. Ability to apply various security measures such as firewalls, intrusion detection systems, and access controls to protect digital assets and networks from unauthorized access and malicious activities.
4. Enhance analytical and problem-solving abilities in identifying security vulnerabilities and devising effective countermeasures. They will analyze security incidents, assess risks, and formulate appropriate responses to mitigate potential threats and minimize the impact of cyber-attacks.
5. Cultivate teamwork and collaboration skills by working on group projects and engaging in peer-to-peer learning activities.
6. Ability to assess the effectiveness of cybersecurity strategies and propose improvements to enhance resilience and adaptability in the face of emerging threats.

CIST 2911. Programmatic Capstone/Cybersecurity Challenge

Course Description

This course offers engaging, entertaining, measurable, and scalable methods of learning to enlist a new generation of cybersecurity professionals. These games will be created and optimized for individuals and teams and are designed to provide hands-on experiences and challenges to help students to develop and improve cybersecurity skills and problem-solving abilities. All games will be conducted remotely, in virtual cyber Stadiums, equally accessible to all.

Student Learning Outcomes

1. Provide an inclusive individual and team competitive sport experience enriching the classroom learning experience.
2. Creating a fun, experiential learning opportunity where students demonstrate skills/knowledge sets.
3. Promoting proficiency for specific cybersecurity skills.
4. Preparing students in team environments to solve cybersecurity tasks.
5. Develop skills tied to curriculum, industry needs, and professional.
6. Knowledge, Skills, Abilities to perform NICE Work Roles.
7. Successful completion of NICE Challenge Labs competency assessment.

Computer Science (CSCI)

CSCI 1108. CS for All: Introduction to Computer Modeling

Course Description

Introduction to Computational Science using modeling and simulation. Apply the fundamentals of computational thinking to solve realistic, interdisciplinary problems. Employing lab activities integrated into the course, students will learn an agent-based programming language to formulate their problem modules, experiment to find solutions, and evaluate the results. Students will practice cycling through the formulation, experiment, and evaluation process in search of realistic conclusions

Student Learning Outcomes

1. Describe the fundamental structures of an agent-based programming language.
2. Solve a problem by using an agent-based programming language.
3. Compose logical structures algorithms to produce an adequate solution for a problem.
4. Apply quantitative method to evaluate and analyze computation results and make further improvement.
5. Develop and enhance problem-solving skills by applying computational thinking methodologies.

CSCI 1110. Computer Science Orientation

Course Description

Introduction to the computer science field and profession. Problem solving and study skills. Social and ethical issues in computing.

Student Learning Outcomes

1. Explain what Computer Science is.
2. Describe the main functionalities of computers Write algorithms to solve simple problems.
3. Recognize the main properties of programming languages *Contrast the traditional data structures.
4. Explain how computers are connected in a network *Discuss the social and ethical issues of computer science.

5. Enumerate new trends on the Computer Science domain

CSCI 1153. Programming in MATLAB

Course Description

An introduction to computing using MATLAB, a special-purpose language for writing moderate-size programs that solve problems involving the manipulation of numbers. This course is intended to assist students in learning the general concepts of computing and programming, help students understand the relationship between computer programming and problem solving, and provide a solid foundation in the use of MATLAB.

Student Learning Outcomes

1. Understand the MATLAB computer programming environment.
2. Use MATLAB (data types, variables, basic mathematical and logical expressions, arrays and vectors, structures, file manipulation) to solve computation problems.
3. Apply the software to create, test and debug programs.
4. Write programs using predefined functions and procedures, conditional statements, control structures, matrix computations, and graphing and plotting.
5. Design and write functions with parameters, and reuse function m-files.
6. Compose structured programs using symbolic algebra, equation solving, differentiation and integration, and numerical techniques.

CSCI 1210. Computer Programming Fundamentals

Course Description

This course is an introduction to problem-solving methods and algorithm development. Students will learn how to design, code, debug, and document programs. Students will explore basic programming concepts including variables, data types, operators and expressions. Students will learn about input/output mechanisms, including command prompt interaction, and reading and writing data to files. Students will be introduced to control structures such as branching, conditionals, iteration, and loops and arrays. They will also learn how to define and use functions/methods to structure code and improve code reuse.

Student Learning Outcomes

Students completing this course should be able to:

1. Demonstrate an understanding of procedural programming techniques by implementing programs which employ structured programming techniques.
2. Implement control flow structures in programs to execute statements in a specified order, repeat sequences of statements, and execute different statements based on conditions.
3. Apply modularization principles by defining and using functions/methods to structure code and improve code reuse and maintainability.
4. Write code utilizing data structures such as arrays, simple classes and objects, to provide useful access to, and operations on, data.
5. Input/output mechanisms to collect user input and display data, including implementing error handling mechanisms to handle invalid input and output operations. the concept of recursion and identify base case and inductive step.

CSCI 1220. Computer Programming Fundamentals: Python

Course Description

This course is an introduction to fundamental programming concepts, with a focus on problem-solving techniques and algorithm development using the Python programming language. Students will learn how to create basic scripts, work with data types and variables, use control structures, and build functions. The course is designed for students with little or no prior experience in programming and is intended to provide a foundation in programming that can be applied in a variety of fields.

Student Learning Outcomes

Student completing this course should be able to:

1. Apply programming concepts to design and develop solutions for computational problems.
2. Utilize optimal flow-control strategy for solving a given problem.
3. Design and implement functions to support organization, decomposition and reusability of code.
4. Evaluate and select data structures to efficiently organize and store information for a given problem.
5. Demonstrate the concept of scope to control access to global, local, and class variables.
6. Create and use a simple class to demonstrate object-oriented programming principles.
7. Utilize basic file input/output with text-based files.

CSCI 1220L. Computer Programming Fundamentals: Python Laboratory

Course Description

This lab aims to provide students with hands-on experience in Python programming, reinforcing concepts learned in lectures. The lab sessions will guide students through practical exercises, helping them develop problem-solving skills and understand fundamental programming concepts. Lab work will consist of lab questions from the required textbook, and mini project given to the students by the instructor.

Student Learning Outcomes

Students completing this course should be able to:

1. Demonstrate an understanding of procedural programming techniques by implementing program which employ structured programming techniques.
2. Implement control flow structure in programs to execute statements in a specified order, repeat sequences of statements, and execute different statements based on conditions.
3. Apply modularization principles by defining and using functions/methods to structure code and improve code reuse and maintainability.
4. Write code utilizing data structure such as array, simple classes and objects, to provide useful access to, and operations on, data.
5. Input/output mechanism to collect user input and display data, including implementing error handling mechanism to handle invalid input and output operations, The concept of recursion an identity base case and inductive step.

CSCI 1230. C Programming

Course Description

Introduction to programming in the C language. Topics include input and output, operators and expressions, control structures for branching and looping, functions, pointers and arrays. Functions in the standard libraries will be covered.

Student Learning Outcomes

Students completing this course should be able to:

1. Develop C programs that apply the functions in the C libraries to read input data and generate output.
2. Understand the various operators, and the rules of precedence, available in C, and be able to combine them to produce complex expressions to correctly calculate formulas.
3. Develop C programs that use selection statements (if-else, switch) and loop constructs (while, for do) to solve problems.
4. Modularize their C programs appropriately by using functions, with an understanding of call-by-value parameters.
5. Employ the C pre-processor features, such as #define, as appropriate.

CSCI 1240. C++ Programming I

Course Description

This course is an introduction to problem-solving methods and algorithm development using C++. Students will learn how to design, code, debug, and document programs. Students will explore basic programming concepts including variables, data types, operators and expressions. They will also learn how to work with the C++ preprocessor directives and libraries. Students will learn about input/output mechanisms, including command prompt interaction, reading and writing data to files. Students will be introduced to control structures such as branching, conditionals, iteration, and loops and arrays. They will also learn how to define and use functions to structure code and improve code reuse.

Student Learning Outcomes

Students completing this course should be able to:

1. Implement programs which employ structured programming techniques.
2. Implement control flow structures.
3. Apply modularization principles by defining and using functions/methods to structure code and improve code reuse and maintainability.
4. Write code utilizing data structures such as arrays, using pointers, and simple classes to provide useful access to, and operations on, data.
5. Use input/output mechanisms to collect user input and display data, including implementing error handling mechanisms to handle invalid input and output operations.

CSCI 1250. Web Development

Course Description:

Introduction to HTML. Creating and designing a web page in HTML, adding tables and using frames in web design. Use XML to create interactive, dynamic Web pages. Implement cascading style sheets.

Student Learning Outcomes

Students completing this course should be able to:

1. Construct a functional webpage using HTML.
2. Plan a webpage using a site map.
3. Construct uniform style applications.
4. Develop applications in a current web programming language.
5. Demonstrate a working knowledge of the latest technologies used in creating webpages.

CSCI 1260. Computer Programming Fundamentals Java I

Course Description

This course is an introduction to problem-solving methods and algorithm development using Java. Students will learn how to design, code, debug, and document programs. Students will explore basic programming concepts including variables, data types, operators and expressions. They will also learn how to work with the Java preprocessor directives and libraries. Students will learn about input/output mechanisms, including command prompt interaction, reading and writing data to files. Students will be introduced to control structures such as branching, conditionals, iteration, and loops and arrays. They will also learn how to define and use functions to structure code and improve code reuse.

Student Learning Outcomes

Students completing this course should be able to:

1. Implement programs which employ structured programming techniques.
2. Implement control flow structures.
3. Apply modularization principles by defining and using functions/methods to structure code and improve code reused and maintainability.
4. Write code utilizing data structures such as arrays, using pointer, and simple classes to provide useful access to, and operations on data.
5. Use input/output mechanisms to handle invalid input and output operations.

CSCI 1996. Topics in Computer Science

Course Description

Varies

Student Learning Outcomes

Varies

CSCI 2110. Application Development

Course Development

The purpose of this course is to introduce the students to the fundamental concepts and models of application development so that they can understand the key processes related to building functioning applications and appreciate the complexity of application development. Students will learn the basic concepts of program design, data structures, programming, problem solving, programming logic, and fundamental design techniques for event-driven programs. Program development will incorporate the program development life cycle: gathering requirements, designing a solution, implementing a solution in a programming language, and testing the completed application.

Student Learning Outcomes

1. Use primitive data types and data structures offered by the development environment and choose an appropriate data structure for modeling a simple problem.
2. Understand basic programming concepts and write simple applications that relate to a specific domain.
3. Design, implement, test, and debug a program that uses each of the following fundamental programming constructs: basic computation, simple I/O, standard conditional and iterative structures, and the definition of functions.
4. Test applications with sample data.
5. Apply core program control structures.
6. Understand and apply secure coding principles.

CSCI 2210. Object-Oriented Programming

Course Description:

This course is an introduction to object-oriented programming. Classes and objects, and associated topics such as constructors, properties, and methods, inheritance, polymorphism, encapsulation, abstraction, exception handling and best practices.

Student Learning Outcomes

Students completing this course should be able to:

1. Implement object-oriented designs based on project requirements.
2. Use encapsulation to write programs that are loosely coupled and easy to debug, maintain and modify.
3. Use inheritance to define simple class hierarchies that allow code to be reused by distinct subclasses.
4. Implement and reason about control flow in a program using polymorphism to solve common programming problems.

CSCI 2210L. Object-Oriented Programming Laboratory

Course Description

This lab component complements the theoretical understanding of Object-Oriented Programming (OOP) in Python. Students will engage in hands-on activities to design, implement, and test Python programs using OOP principles. The labs will reinforce key concepts such as classes, objects, inheritance, polymorphism, encapsulation, and design patterns.

Student Learning Outcomes

1. Understand and apply the principles of OOP in Python.
2. Design Python programs using classes and objects.

3. Implement inheritance, polymorphism, and encapsulation in Python.
4. Develop Python programs that handle exceptions effectively.
5. Use design patterns to solve common programming problems.

CSCI 2220. Introduction to Data Structures and Algorithms

Course Description:

Design, implement, and use fundamental abstract data types including linked lists, stacks, queues, and trees. Analyze the time and space complexity of algorithms, such as sorting.

Student Learning Outcomes

Students completing this course should be able to:

1. Implement basic data structures such as linked lists, stacks, queues, and trees in a high-level programming language.
2. Compare alternative implementations of data structures with respect to time and space complexity.
3. Explain the advantages and disadvantages of a variety of sorting algorithms.

CSCI 2220L. Introduction to Data Structures and Algorithms

Course Description

The Data Structures and Algorithms lab is designed to provide hands-on experience and practical implementation of the core concepts taught in the corresponding lecture course. This lab aims to deepen students' understanding of various data structures and algorithms by engaging them in exercises that require the application of theoretical knowledge to solve real-world problems. Students will work with fundamental data structures like arrays, linked lists, stacks, queues, trees, graphs, and hash tables, and will implement and analyze algorithms for sorting, searching, and more advanced topics such as dynamic programming and graph algorithms.

Student Learning Outcomes

Students completing this course should be able to:

1. Understand and Implement Core Data Structures: Gain proficiency in implementing and using various data structures such as arrays, linked lists, stacks, queues, trees, heaps, hash tables, and graphs.
2. Design Efficient Algorithms: Develop algorithms that effectively solve problems while minimizing resource usage, and understand the trade-offs involved in algorithm design.
3. Analyze Algorithm Efficiency: Be able to analyze the performance of algorithms using Big-O notation and optimize algorithms for better performance.
4. Solve Real-World Problems: Apply data structures and algorithms to solve complex problems, simulating real-world scenarios that require efficient computational solutions.
5. Collaborate and Communicate: Work effectively in teams to design, implement, and test solutions, and communicate findings and challenges clearly in both written and oral formats.
6. Prepare for Advanced Studies: Build a strong foundation for advanced topics in computer science, such as software engineering, systems design, and competitive programming.

CSCI 2222. Data Structures in Python

Course Description

Using objects, lists, tuples, and dictionaries to implement data structures such as trees and graphs. Algorithms for sorting, searching, and other fundamental operations. Introduction to mathematical foundations for analysis of iterative and recursive algorithms and for basic correctness proofs. The math skills used in the algorithm analysis (e.g., series, inductive proofs) will be included in the course. Implementation of selected algorithms for different applications (e.g., data science, cybersecurity) using sound programming methodologies.

Student Learning Outcomes

1. Understand fundamental data structures and algorithms, both those built-in to Python and those that must be coded.

2. Know the basics of time and space complexity and the big O notation.
3. Understand different kinds of graph-based structures including trees and be able to perform common operations such as searching and sorting.
4. Be able to implement common data structures and algorithms in the Python language and use them in an application domain.

CSCI 2230. Assembly Language and Machine Organization

Course Description

Computer structure and system organization, instruction execution, memory addressing modes, hardware/software interface. Programming in assembly language.

Student Learning Outcomes

Students completing this course should be able to:

1. Describe the architecture of a microcontroller, the interconnections between the components, and the major units inside the CPU.
2. Use signed and unsigned numbers, bitwise operations, branching instructions, and the corresponding flags in the status register.
3. Use immediate, direct, indirect addressing modes in assembly instructions.
4. Map high-level programming language features to assembly instructions, such as loops, conditionals, procedure calls, value and reference parameter passing, return values, and recursion.
5. Interface with input/output devices via instructions, memory addressing, or interrupts.
6. Design and implement an assembly language program.

CSCI 2240. Systems Programming

Course Description

This course provides an introductory overview of operating systems and system programming, mainly focusing on system-level programming based on OS services and other APIs. Topics include system calls, file I/O, files and directories, memory management, process control, inter-process communication (IPC), socket-based network programming, remote procedure call (RPC) programming, and basic security mechanisms. Coursework includes substantial programming homework and team-based projects.

Student Learning Outcomes

1. Have knowledge of the fundamentals of UNIX operating systems including systems programming, shell programming, UNIX file systems and basic knowledge of threads.
2. Have knowledge of the basic principles of processes, inter-process communication (IPC) and signals.
3. Have knowledge of the basic principles of socket-based network programming.

CSCI 2260. Computer Programming Fundamentals: Java II

Course Description

This course is a continuation of Java object-oriented programming. This course is a deeper exploration of object-oriented programming. Including: Classes and objects, and associated topics such as constructors, properties, and methods, inheritance, polymorphism, encapsulation, abstraction, exception handling and best practices.

Student Learning Outcomes:

Students completing this course should be able to:

1. Implement appropriate object-oriented designs based on project requirements.
2. Use encapsulation to write programs that are loosely coupled and easy to debug, maintain, and modify.
3. Use polymorphism to solve common programming problems.

CSCI 2293. Social and Ethical Issues in Computing

Course Description

Overview of philosophical ethics, privacy and databases, intellectual property, computer security, computer crime, safety and reliability, professional responsibility, and codes, electronic communities and the Internet, and social impact of computers. Students make oral presentations and produce written reports.

Student Learning Outcomes

Through essay writing, presentations, and discussions, students are expected to achieve the following learning outcomes:

1. Can describe and appreciate the impact of computing.
2. Can describe and explain the professional, ethical, legal and social issues and responsibilities.
3. Communicate effectively in both written and oral form.
4. Recognize the need for continued professional development and lifelong learning.

CSCI 2310. Discrete Mathematics for Computer Science

Course Description

Discrete mathematics required for Computer Science, including topics such as the basics of logic, number theory, methods of proof, sequences, mathematical induction, set theory, counting and functions.

Student Learning Outcomes

1. Use the concept of sets and functions to reason about application domain problems.
2. Apply counting principles to determine the number of various combinatorial problems.
3. Use logic to specify precise meaning of statements, demonstrate the equivalence of statements, and test the validity of arguments.
4. Use summations, formulas for the sum of arithmetic and geometric sequences.
5. Construct and recognize valid proofs using different techniques including the principle of mathematical induction.

CSCI 2410. Practical Programming

Course Description

A hands-on dive into practical programming skills development. Students will practice skills such as implementing algorithms that manipulate data in arrays and other data structures, implementing and using hashing-based data collections, using I/O in programs to access and create data, and object-oriented programming. Students will also focus on honing their use of tools such as command line, integrated development environments, debuggers, and profilers for software development.

Student Learning Outcomes

1. Perform simple manipulation of arrays and other basic data structures.
2. Utilize objects and objects-oriented programming.
3. Utilize different tools for building, debugging, and improving their programs.
4. Learn and use a new programming language quickly.
5. Use basic I/O capabilities in a variety of languages.
6. Use documentation to learn important features of a programming languages.
7. Write programs that solve interview-like problems.

CSCI 2993. Workshop in Computer Science

Construction (CNST)

CNST 1110. General Carpentry or Building Trades I**Course Description**

This course will have two components: a classroom segment, where carpentry concepts will be explored, and a hands-on segment where students will be able to participate in the actual construction of a structure. Habitat for Humanity has generously offered one of their projects as a “hands-on” site.

Student Learning Outcomes

1. Identify and define various elements of a Structural Wood Wall.
2. Build structural and non-load bearing walls and partitions using OSHA compliant safety practices.
3. Size floor joists and roof rafters according to local building codes.
4. Hang and “Trim Out” Doors and Windows for Residential Construction Projects
5. Choose construction project foundations.

CNST 1115. NCCER Safety Core**Course Description**

Required introduction to the National Center for Construction Education and Research for certification. Topics studied include basic safety, technical math and communication, blueprints, methods, and ethics. Students demonstrate skills level through laboratory assignments. Orientation prepares individuals for employment in a construction field. NCCER modules provide the student with the opportunity to test for related NCCER credentials.

Student Learning Outcomes

1. Explain safety culture and its importance in the construction craft.
2. Explain the role of OSHA job site safety.
3. Hazard recognition and risk assessment of job site.
4. Demonstrate the use and care of appropriate personal protective equipment (PPE).
5. Identify other construction hazards on the job site, including hazardous material exposure and environmental.
6. Prepare for OSHA 10 Safety Certification.
7. Learn all phases of safety used in construction.
8. Learn concepts related to applied mathematics in construction.

CNST 1117. OSHA 10

Course Description

This course teaches students safety awareness and standards from guidelines set by the United States Occupational and Safety Administration. Students will receive a plastic wallet card with a QR code linked to a national database that acknowledges that the recipient has successfully completed the required training to be designated as an OSHA 10 cardholder. Please note that this is very specific training with guidelines set by the OSHA Administration, not UNM-Taos. Therefore, any student who does not attend during the required hours will not be eligible to receive the OSHA 10 Card. Also please note that this course is specifically designed for Construction and Safety, not General Industry Safety, which is a separate OSHA category.

Student Learning Outcomes:

1. Know their rights to a safe workplace as prescribed by the 1970 OSH act.
2. Read and navigate the OSHA regulations and standards for Construction Safety and Health
3. Evaluate construction sites for OSHA Compliance
4. Communicate to employers about how to address unsafe conditions.

CNST 1120. Construction Drawings

Course Description

An introduction to the various construction documents with symbols. Emphasizing extraction of information and specifications from drawings.

Student Learning Outcomes

1. Interpret construction documents.
2. Identify and navigate the basic views commonly displayed in a technical drawings.
3. Identify and describe common components on construction documents.
4. Demonstrate the use of measuring devices.
5. Use appropriate construction terminology.

CNST 1121. Introduction to Construction I

Course Description

Basic safety, including personal protective equipment, how to perform basic construction tasks safely, and what to do if an accident occurs. Includes basic construction methods.

Student Learning Outcomes

1. Students will be able to operate hand and power tools safely.
2. Demonstrate the ability to read construction drawings.
3. Students will demonstrate the ability to effectively work in a team.
4. Demonstrate how related industry theories apply to real world settings.
5. Investigate mechanical processes found in building trades.
6. Identify and resolve ethical workplace issues.
7. Describe the responsibilities of safety related to the construction industry.
8. Students will be able to select the proper tools for the job.

CNST 1130. Green Building Concepts

Course Description

This course will provide students with an overview of the history, development and environmental issues relating to the emergence of the Green Building sector of the construction industry. It will also provide students with a basic understanding

of Green Building considerations such as: site planning, energy generation and efficiency, material selection, building envelope, waste management and water conservation and management and how they affect a construction project.

Student Learning Outcomes

1. Describe how a wide range of Green Building techniques effect energy efficiency and carbon emission
2. Analyze and select building materials and methods that support Green Building concepts and goals
3. Identify and define energy efficiency considerations and energy generation options for various types of building projects
4. Describe the main components of a construction project and how they are addressed from a Green Building standpoint.

CNST 1135. OSHA 30

Course Description

The OSHA 30 Hour Construction Industry Training course is a comprehensive safety program designed for anyone involved in the industry. Specifically devised for safety directors, foremen, and field supervisors; the program provides complete information on OSHA compliance issues.

Student Learning Outcomes:

1. Describe types of personal protective equipment (PPE), and the requirements for its use in OSHA standards (Subpart E - Personal Protective Equipment).
2. Recognize the requirements for fire protection in the workplace (Subpart F - Fire Protection and Prevention)
3. Identify the various types of rigging equipment used to protect employees (Subpart H - Rigging; Subpart N - Cranes and Rigging).
4. Identify the critical health and safety hazards of welding and cutting in the construction industry (Subpart J - Welding and Cutting).

CNST 1140. Concrete Finishing I

Course Description

Includes methods, procedures and terms used in concrete finishing. Students identify methods to prepare, place, apply finishes and learn the different curing and protecting methods of concrete. Properties of chemical and mineral mixtures, tools, equipment and troubleshooting of concrete is also covered, while following the American Concrete Institute (ACI), International Building Code (IBC) and OSHA guidelines, procedures and regulation.

Student Learning Outcomes

1. Identify the composition and characteristics of concrete
2. Define the uses of concrete as a building material
3. Identify how to safely handle concrete when forming, mixing, placing, curing, and finishing
4. Describe how the ingredients of concrete influence mix, placement, finishing, durability, and performance
5. Describe and identify control test on concrete
6. Define compaction activities done on subgrades
7. Identify the procedures for properly locating, grading, and building forms for horizontal placement
8. Identify the basic concrete finishing hand tools and describe the basic finishing process
9. Describe the proper method for finishing, screeding, leveling, finishing and curing concrete
10. Describe the basic troubleshooting methodology that can be used to identify a variety of concrete construction problems and their cause.

CNST 1150. Layout and Framing

Course Description

A study of wood form construction techniques which include methods of wall, roof and deck framing. Planning the layout of structural members is emphasized. Stress and strain on these structural members is studied in conjunction with the structural capacities of various types of wood and other materials. These courses consist of lab and classroom experiences.

Student Learning Outcomes

1. Students will understand the function of all major structural members in a home;
2. Students will understand the IRC Building Code as it applies to Residential construction;
3. Students will understand how to correctly specify Rafters for roof snow loading;
4. Students will learn "Advanced Framing" methods to build energy efficient homes;
5. Students will be able to understand how to safely build a simple residential structure.

CNST 1160. Plumbing Theory I

Course Description

Covers occupational introductions, human relations, safety, tools and equipment used in plumbers trade, plumbing components, sizes of various residential and commercial plumbing systems, pipe fittings, pipe joining and cost estimation.

Student Learning Outcomes

1. Demonstrate the ability to use equipment safely and to demonstrate these practices in the classroom.
2. Demonstrate diagramming and explain the drain, waste, and vent system.
3. Demonstrate the ability to diagram and explain the potable water system.
4. Demonstrate the ability to draw and explain storm water systems.
5. Demonstrate an awareness of the various materials and fittings used in plumbing.
6. Demonstrate soldering of copper pipe. Demonstrate gluing of PVC pipe.

CNST 1170. Construction Methods I

Course Description

This course will focus on carpentry industry, skills, materials, drawings, and documents. Overall safety will be addressed, including the use of hand and power tools. An applied course in foundation, footing, and stem-wall construction. Other topics include cutting and assembly of structural material for floor, wall, and roof systems in accordance with the International Building Code (IBC).

Student Learning Outcomes

1. Identify the skills, responsibilities, and job opportunities in carpentry.
2. Explain safety hazards and hazard mitigation in carpentry.
3. Identify various materials and calculate materials needed for a given construction drawing.
4. Demonstrate correct installation and fastening of common building materials in carpentry.
5. Safely use hand and power tools common to carpentry.
6. Interpret common carpentry construction documents.

CNST 1180. Alternative Building Construction

Course Description

Students in this course will study in depth the materials and methods used in Alternative Construction processes that are not typically found in the generic building codes used throughout the modern world.

Student Learning Outcomes

1. Identify and implement various types of Residential Alternative Construction Systems.
2. Demonstrate an estimated costs.

3. Demonstrate the steps necessary for obtaining a Building Permit using Structural & Mechanical Systems not found in the (IRC) International Residential Code.

CNST 1190. Mechanical, Electrical and Plumbing Systems

Course Description

This course introduces students to the basic principles of mechanical, electrical, and piping (MEP) systems common to construction projects. It involves basic science principles of MEP systems, basic design principles of MEP systems, and understanding of the MEP components and installation.

Student Learning Outcomes

1. Understand the basic science principles with MEP systems
2. Understand the operation and installation of MEP systems
3. Understand the construction manager's role with MEP systems
4. Understand the basic design principles of mechanical and electrical systems.
5. Understand selected installation methods for basic mechanical and electrical systems.
6. Understand related building codes and standards.

CNST 1210. Construction Cost Estimating

Course Description

Covers various methods of computerized estimating techniques including spreadsheets, estimating software, digitized take-off and Web based plan rooms and project files. This class will utilize industry standard applications.

Student Learning Outcomes

1. Use computer application to perform a material takeoff.
2. Perform a manual material takeoff.
3. Use computer application to price the material takeoff.

CNST 1215. Weatherization In Construction

Course Description

Introduction to industry weatherization standards and practices utilized in the construction of buildings for the purpose of energy conservation. Economic and environmental impacts of the use of energy in heating and cooling building will be examined.

Student Learning Outcomes

1. Knowledge of the construction industry.
2. Knowledge of related career pathways.
3. Applicable knowledge and skills related to specific industry fields.
4. Knowledge and ability to follow industry safety practices and procedures.
5. Understand applicable codes, rules, and regulations.

CNST 1220. Construction Project Management I

Course Description

An introduction to residential building construction-site observation, quantity surveying, cost analysis, subcontractor and material prices solicitation and summary and tabulation for a total bid price.

Student Learning Outcomes

1. Produce a written and illustrated report of site visits. Students are required to record the presence and numbers of trades, equipment and tools and the quantities of materials stored and used on site.
2. Complete a quantity survey on a small commercial or residential project.
3. Price out and organize a project into a project bid.
4. Demonstrate ability to write a simple subcontract and purchase orders.

CNST 1225. Building Codes and Inspections

Course Description

This course introduces students to the building codes and standards applicable to the building construction and inspection processes.

Student Learning Outcomes

1. Understand the basic structure of the International Building Code and how to use it.
2. Understand the necessity for a uniform standard of building codes to ensure life safety.
3. Understand the roles of governing agencies and how to interact with those agencies.

CNST 1230. Cabinet Layout and Installation

Course Description

Understand the process of layout and installation of cabinets for kitchens, bathrooms, utility rooms and other spaces.

Student Learning Outcomes

1. Identify and demonstrate the basic elements of kitchen and bath cabinet layout.
2. Demonstrate how to read a kitchen or bath cabinet plan.
3. Identify the tools and materials necessary to successfully install kitchen or bath cabinets.
4. Demonstrate how to install cabinets.
5. Demonstrate how to install matching finish moldings.
6. Demonstrate how to perform final cabinet door and drawer adjustments.
7. Demonstrate how to perform cabinet hardware installation.

CNST 1240. Cabinet Making

Course Description

Covers advanced design and construction of cabinets including safety and use of hand and power tools, and materials.

Student Learning Outcomes

1. Demonstrate the safe use of various hand and power tools used in cabinet making.
2. Demonstrate the proper selection of tools for required tasks.
3. Design cabinet projects and prepare accurate materials lists.
4. Perform planning, joining, cutting, routing and other procedures used for cabinet making.
5. Demonstrate how to select and apply various finishes.
6. Properly assemble, install, assess and adjust cabinet project components.

CNST 1250. Interior Finishing

Course Description

A study of the interior of a building wall, ceiling, and floor finishing. The use of different types of covering, paint, paneling, and texture will be emphasized. The installation of decorative tile for bathroom, kitchen, and floors will be explored.

Student Learning Outcomes

1. Demonstrate how to hang, tape and texture drywall.

2. Demonstrate a knowledge of a variety of painting techniques.
3. Demonstrate how to install interior doors and cabinetry.
4. Demonstrate how to apply millwork.
5. Demonstrate the installation of ceramic tile.
6. Demonstrate the installation of interior flooring,

CNST 1255. Exterior Finishing

Course Description

A study of exterior trim techniques; selection of doors and windows; method of installing doors and windows. Includes paint, stain, and prefabrication materials. Taught through lab and classroom experiences.

Student Learning Outcomes (required):

1. Practically apply techniques and processes learned throughout the course, through hands-on experiences.
2. Describe different types of doors and windows/paints and stains.
3. Describe how to install doors and windows.
4. Identify the types and parts of a cornices and trim.
5. Describe lap, panel, metal & wood siding application and roof application.
6. Describe types and styles of gutters, down spouts and accessories and explain stucco application.

CNST 1270. Construction Methods II

Course Description

This course is a continuation in construction methods and will focus on both Commercial & Residential carpentry. The proper safety use of hand and power tools will continue in the new subject areas. The student will enhance their skills in the installation of exterior wall and roof finishes, windows, and doors in accordance with the International Building Code (IBC). Students also practice insulation techniques, drywall installation, taping and texture of drywall, trim work, and other finish work in a safety-focused environment.

Course Outcomes

1. Demonstrate the correct methods for measuring, to identify the correct materiel to installed.
2. Identify various materials that are needed per the drawing blueprint. (Take off List).
3. Demonstrate correct installation and fastening of common building materials in commercial and residential carpentry.
4. Safely use hand and power tools common in commercial carpentry.
5. Interpret common commercial/residential carpentry construction documents.

CNST 1310. Furniture Making

Course Description

Includes fundamental design and construction of simple furniture including safety and use of hand and power tools. Students will design and construct a furniture project.

Student Learning Outcomes

1. Safely operate various hand and power tools used in furniture making.
2. Properly select correct tools for required tasks.
3. Design furniture projects and prepare accurate materials lists.
4. Perform planning, joining, cutting, routing and other procedures used for furniture making.
5. Select and apply various finishes.
6. Properly assemble, assess and adjust furniture project components.

CNST 1320. Construction Project Management II

Course Description

Covers various methods of software-based scheduling methods and techniques. Exposes the student to state of the art project scheduling software and project management techniques used by local industry. The student will participate in group projects and will develop real world project schedules.

Student Learning Outcomes

1. Identify project activities.
2. Assign resources to project activities.
3. Develop activity logic.
4. Refine project logic.

CNST 1330. Professional Development and Leadership

Course Description

As members and/or officers of various student professional organizations, students gain experience in leadership, team building, and community service. Students competing or participating in Skills USA are required to register for the course.

Student Learning Outcomes

1. Apply knowledge of conduit types and sizes to select appropriate bending methods.
2. Describe the purpose and function of raceways and fittings.
3. Restate the properties, ratings, and applications of different conductors and cables.
4. Identify the layout and organization of electrical drawings, including plans, elevations, and details.
5. Determine residential service sizing, grounding, and bonding requirements.
6. Apply knowledge of test equipment usage and safety practices to perform accurate electrical measurements and diagnostics.

CNST 1370. Construction Methods III

Course Description

This course is the third of three methods and is a advanced class in the establishment of footings, slabs, stem walls, vertical and horizontal framework, tilt-up wall systems, and the reinforcement of concrete. The student will learn advance skills in problem solving and leadership skills

Student Learning Outcomes

1. Identify the skills, responsibilities, and job opportunities in carpentry.
2. Demonstrate the safety hazards and hazard mitigation in carpentry and on the job site.
3. Identify various materials and calculate materials needed for reinforcement of concrete.
4. Demonstrate correct installation and fastening of common building materials in carpentry
5. Interpret construction drawings, be able to demonstrate the need for a field change order.
6. Demonstrate leadership skills in crew leadership

CNST 1611. Construction Safety

Course Description

This course provides students with an introduction to construction safety, material handling, hand and power tools, reading a tape measure and construction math. Students will also gain an understanding of the skills and traits necessary to become an employable construction professional.

Student Learning Outcomes

1. Explain the idea of a safety culture and its importance in the construction industry.
2. Explain the causes of accidents and the impact of accident costs.

3. Define safe work procedures to use around falling, electrical, struck-by, and caught-in-between hazards.
4. Demonstrate the use and care of appropriate personal protective equipment (PPE).
5. Add, subtract, multiply, and divide whole numbers and fractions, with and without a calculator.
6. Use a measuring tape to measure, mark and cut material.
7. Recognize and safely use some of the basic hand and power tools used in the construction trade.
8. Visually inspect hand tools to determine if they are safe to use.
9. Explain how to maintain power tools properly.
10. Explain the role of an employee in the construction industry.
11. Recognize workplace issues such as sexual harassment, stress, and substance abuse.
12. Use equipment, recognize hazards and follow safety procedures required for materials handling.
13. Inspect, sort, and store material based on defect, wood characteristics, and type.

CNST 1621. Foundations and Floor Framing

This course will teach the basics of site layout, building foundations, and floor framing. The on-campus laboratory experience will include hands on projects that require the forming, mixing and placement of concrete and the framing of a floor system.

Student Learning Outcomes

1. Identify the basic ingredients and the characteristics of concrete that make it a useful building material.
2. Calculate volume quantities for soil and concrete.
3. Describe and demonstrate how to mix, form, reinforce, and place a small batch of concrete.
4. Demonstrate the set up and operation of a laser level to perform building layout.
5. Identify the types of foundation systems and their related components.
6. Identify the components of a wood framed floor.
7. Demonstrate how to measure, cut and assemble components of a wood framed floor.

CNST 1622. Fundamentals of Wall Framing

Course Description

This course will teach theory, methods and procedures for basic wall framing. Wall plate layout, selecting and cutting wall components and wall assembly will be introduced for exterior and interior wall construction. An on-campus laboratory experience will include hands on projects that require the framing of wall sections.

Student Learning Outcomes

1. Identify the reasons for proper layout spacing in relation to material selection and installation.
2. Demonstrate how to layout a building with chalk lines and notation.
3. Demonstrate how to accurately layout wall plates for interior and exterior wall sections.
4. Demonstrate how to measure, cut and assemble wall components properly.
5. Demonstrate how to correctly size window and door headers.
6. Demonstrate how to plumb and brace wall sections.
7. Demonstrate how to install structural wall sheathing on exterior wall sections.

CNST 1623. Roof Framing and Shingles

Course Description

This course will teach theory, methods and procedures for roof framing. Framing layout, selecting and cutting roof components and roof assembly will be introduced. This course will also cover the finish of a framed roof assembly using asphalt shingles and other related materials. The on-campus laboratory experience will include hands on projects that require the framing and shingling of a roof.

Student Learning Outcomes

1. Identify basic roof types and their related components.

2. Explain the difference between a rafter-framed and engineered-truss roof system.
3. Demonstrate how to correctly prepare framed walls for the installation of a roof system.
4. Demonstrate how to correctly measure, cut and assemble roof components.
5. Demonstrate how to correctly select and install finish roof materials.
6. Demonstrate an understanding the International Residential Code requirements for roof ventilation.

CNST 1624. Window and Exterior Door Install

Course Description

This course will introduce students to the window and exterior door products used in residential construction. The on-campus laboratory experience will include hands on projects that require the installation of windows and exterior doors.

Student Learning Outcomes

1. Identify different window and exterior door styles and sizes.
2. Demonstrate an understanding of different frame, glazing, and performance options for windows and exterior doors.
3. Demonstrate how to prepare a rough opening for window or exterior door installation.
4. Demonstrate how to correctly measure rough openings to place an order for windows and exterior doors.
5. Demonstrate how to properly install a window and exterior door unit.
6. Demonstrate how to properly flash and seal windows and exterior doors.

CNST 1626

Course Description

This course will teach students about the theory, methods and procedures for stair construction. Stringer layout, selecting and cutting stair components and stair assembly will be introduced. The on-campus laboratory experience will include hands on projects that require the construction of a set of stairs.

Student Learning Outcomes

1. Identify the type of construction used on any stairway.
2. Identify the different components of a stairway and the purpose of each component.
3. Explain the International Residential Code requirements that apply to stairs.
4. Select the correct material for a set of stairs.
5. Calculate the stair values to layout stringers for a given set of stairs.
6. Construct a set of cut-stringer stairs.

CNST 1651. Practical Cost Estimating

Course Description

This course will teach students how to accurately estimate material quantities and project costs for residential buildings.

Student Learning Outcomes

1. Demonstrate proficiency using common mathematical equations (i.e.: lineal footage, area and volume).
2. Demonstrate proficiency using a construction calculator to estimate quantities.
3. Identify the correct materials needed when estimating for specific construction tasks.
4. Identify the correct sequence for tasks during the construction process.
5. Complete a quantity take off for the construction of a completed house.

CNST 1652. Insulation and Drywall

Course Description

This course will teach students about the use and installation of insulation products available for use in residential construction. This course will also teach students about the materials, tools and proper techniques used in the installation and finish of drywall.

Student Learning Outcomes

1. Explain the concepts of heat transfer, moisture control and air ventilation.
2. Identify the common types of insulation and where they are used in building construction.
3. Demonstrate knowledge, selection, and expertise with tools for hanging drywall.
4. Demonstrate how to correctly measure, cut and install drywall.
5. Demonstrate knowledge, selection, and expertise with tools for taping and texturing drywall.
6. Demonstrate how to correctly tape and texture drywall joints.

CNST 1653. Finish Carpentry and Painting**Course Description**

This course will teach students about the materials, tools and methods used to complete the interior finish of a home. Installing interior doors, casing, baseboard and closet shelving will be discussed. This course will also teach students about the selection and application of paint products using brush, roller, and spray applications.

Student Learning Outcomes

1. Demonstrate the installation of an interior pre-hung door unit.
2. Demonstrate the installation of different types of finish trim and molding.
3. Demonstrate the installation of closet shelving, rods, cleats, and brackets.
4. Demonstrate the correct selection and use of the tools associated with finish carpentry.
5. Demonstrate the correct application of paint using brush, roller and spray techniques.
6. Identify the correct paint products for interior and exterior applications.

CNST 1662. Finish Flooring**Course Description**

This course will teach students about the different types of finish flooring materials available in residential construction. The on-campus laboratory experience will include hands on projects that require finish flooring.

Student Learning Outcomes

1. Demonstrate an understanding of subfloor or slab preparation regarding finish flooring.
2. Demonstrate how to properly estimate materials for finish flooring.
3. Correctly identify and use the tools necessary to install finish flooring materials.
4. Install finish flooring materials.

CNST 1663. Exterior Wall Finish**Course Description**

This course will teach students about the different types of exterior wall finish used in residential construction. An on-campus laboratory experience will include hands on projects that require exterior wall finish.

Student Learning Outcomes

1. Identify the materials available in exterior wall finishes.
2. Identify and use the tools necessary to install exterior wall finish materials.
3. Demonstrate an understanding of exterior wall and roof overhang preparation.
4. Demonstrate how to correctly estimate exterior finish materials.
5. Demonstrate how to install exterior finish materials.

CNST 1670. Construction Supervision**Course Description**

Available to degree seeking and advanced Building Trades students only. Students will be introduced to construction supervision through interaction with beginning students. Students in this course will also work on developing a full set of construction drawings and creating a complete material and cost estimate for a residential building project.

Student Learning Outcomes

1. Identify ways to give and receive constructive feedback to employees in the work setting.
2. Identify ways in which students learn and process information differently.
3. Identify different styles of leadership and have an opinion about their preferred style.
4. Identify and maintain attributes of a well-organized, efficient and safe jobsite.
5. Create and complete managerial forms and paperwork, including personnel evaluations.
6. Demonstrate project management by completing material, tool, and fastener inventories.
7. Demonstrate project maintenance by organizing and cleaning the wood shops and job site.
8. Create a complete set of architectural drawings to include: floor plan, elevations, section plans (footing, foundation, floor, wall, roof), truss plan, and electrical plan
9. Perform a complete project cost analysis, including estimates and bids for materials and subcontractors.

Counseling & Education Psychology (CEPY)

CEPY 1110. Introduction to Counseling Theories

Course Description

This course provides knowledge in current theoretical approaches to counseling. Theoretical models such as psychodynamic, existential, person-centered, cognitive and behavioral therapy, rational emotive behavioral therapy, family systems, individual, and solution-focused therapies will be studied.

Student Learning Outcomes

Not Available

CEPY 1120. Human Growth and Behavior

Course Description

Introduction to the principles of human growth and development throughout the life span.

Student Learning Outcomes

1. Students will demonstrate an understanding of the scientific study of processes of change and stability throughout the human lifespan (i.e. Human Development).
2. Students will demonstrate a familiarity with the generally recognized stages of human development from conception to death.
3. Students will be able to demonstrate understanding of the normal and exceptional patterns of human development.
4. Students will be able to demonstrate understanding of recent research development regarding the identified stages of human development as they relate to gender and multicultural issues

CEPY 1130. Counseling Substance Abuse in Schools and Communities

Course Description

This course will cover substance abuse issues in the society. Substance abuse and addiction within family, impacts to members of the community as well as intervention and treatment approaches will be discussed.

Student Learning Outcomes

1. A strong understanding of substance abuse in the society
2. A strong understanding of intervention and treatment projects, and quizzes.
3. A strong understanding of substance abuse prevention.

CEPY 1140. Personality Psychology

Course Description

This course will provide a foundational knowledge of the nature and nurture determinants of human behavior. It will include the definition and scientific measurement of personality. Theories studied will include the psychodynamic, Neo-Freudian, biological, humanistic, cognitive, traits, and behavioral theories.

Student Learning Outcomes

1. A strong understanding of psychodynamic
2. A strong understanding of Neo-Freudian projects, and quizzes.
3. A strong understanding of biological, humanistic, cognitive, and traits.
4. A strong ability to understand behavioral theories

CEPY 1150. Career Excel®lence**Course Description**

Professional career curriculum to assist students in developing an understanding and ability to articulate who they are as emerging professionals through personal assessment activities. The focus will be on providing students with tools and strategies for reflection, planning, and goal setting.

Student Learning Outcomes

1. Demonstrate an understanding of the relationship between academic and professional career success.
2. Express a familiarity with professionalism and career culture and communicate a comprehension of various professional career skills.
3. Apply material learned to other aspects to professional Excel®lence.
4. Develop a career life plan that will highlight goals, taking into account life circumstances.
5. Become competent in appropriate professional communication.

CEPY 1160. Academic Excel®lence**Course Description**

This course is designed to provide students with a foundation in their personal academic process. The course will assist students in developing an understanding and ability to articulate who they are as beginning college students through personal assessment activities. The focus will be on providing students with tools and strategies for reflection, planning, and goal setting. Topics discussed will include time management, study skills, test taking skills, stress management, motivational and academic discipline skills, interpersonal skills and college survival skills. We intend for this to be a supportive, respectful and collaborative environment where everyone can learn and grow.

Student Learning Outcomes

1. Students will be able to demonstrate an understanding of the relationship between time management and academic success.
2. Students will be able to express a familiarity with college culture.
3. Students will be able to communicate a comprehension of study skills and test taking strategies.
4. Students will be able to apply material learned to other aspects to enhance academic Excel®lence.
5. Students will be able to develop an academic life plan that will highlight goals, taking into account life circumstances.
6. Become competent in appropriate academic communication.

CEPY 1198. Internship**Course Description**

CEPY 2110. Learning in the Classroom**Course Description**

This class introduces you to the basic principles of learning, including cognition, motivation, and assessment. You will examine the relationships between theory, research, and practice in learning, memory, child development, motivation, and educational assessment for the school setting. This course will provide the student with concepts and principles of educational psychology that will form a framework for thinking about learning and instruction and how theories of learning are connected to classroom situations.

Student Learning Outcomes

1. Define learning and compare and contrast the factors that cognitive, behavioral, and humanistic theories believed to influence the learning process, giving specific examples of how these principles could be used in the classroom.

2. Observe and reflect upon the teaching learning processes in economically, socially, culturally and educationally diverse classroom populations in order to develop a current understanding of students and families in public and private school.
3. Discuss how theories of information processing and cognitive theories of learning can impact memory, study strategies, and how certain teaching techniques can help students learn.
4. Compare teacher-centered and student-centered approaches to learning, and to identify a positive learning environment.
5. Identify various methods to motivate students and create effective learning environments.
6. Use major concepts of child and adolescent development, human learning, and social and cultural influences in planning and implementing classroom instruction, strategies, and management.
7. Evaluate the best means of accommodating instruction to meet individual needs and differences.
8. Students will examine how learning style, cultural and social issues and learning disabilities impact the learner's effectiveness in the classroom setting.
9. Explain different types of assessment used to assess learning and provide examples of effective assessment practices.
10. Discuss the relationship between motivation and classroom management

CEPY 2120. The Preschool Child

Course Description

Survey of psychological development from conception to age five.

Student Learning Outcomes

1. Demonstrate an understanding of major theories of early childhood development
2. Demonstrate an understanding of recognized stages of human development from prenatal to preschool years
3. Explore cultural influences that may create variability in human development
4. Apply major theories to themselves and reflect on their early childhood development

CEPY 2130. Adolescence - School Setting

Course Description

This course is designed to present the student with an introduction to the area of adolescent development with an emphasis on the positive aspects of this life stage. Students will be encouraged to be reflective on the topics presented in class that will include issues on diversity, culture, health, and well-being, emerging adulthood and suggestions for improving the lives of adolescents.

Student Learning Outcomes

1. Students will become knowledgeable about the historical background of adolescent development.
2. Students will become knowledgeable about the major theories related to adolescence.
3. Students will evaluate different developmental theories and their fit across cultures as you reflect on your personal experiences through discussions and videos you will watch.
4. Students will identify key developmental milestones, conflicts, and concepts of each chapter presented by utilizing critical thinking skills as you complete summary questions.
5. Students will define relevant terms, ideas, and concepts in the study of adolescent development through quizzes and homework assignments.

CEPY 2140. Explorations of Counseling & Community Psychology

Revise course description and SLOs

Course Description

An introduction and exploration of various career options and functions within the mental health disciplines to aid in professional development. Emphasis will be placed on depth and scope of the choices available including research, teaching,

community work, public policy, and clinical work and prevention (e.g. counseling, psychotherapy, assessment, consultation). May be repeated up to 6 credits.

Student Learning Outcomes

1. Acquire knowledge of historical and contemporary issues which affect the provision of mental health services by members of diverse mental health disciplines including clinical, counseling, school, and community psychologists, clinical mental health counselors, and others.
2. Acquire knowledge pertaining to education and training requirements for various disciplines.
3. Acquire survey-level knowledge of psychological assessment, measurement, and treatment.
4. Acquire survey-level knowledge of various inquiry approaches applicable to research pertaining to mental health and well-being—both at the individual and community level.
5. Understand the mental health recovery model and explore the lived experiences of individuals with mental health problems in contemporary society.
6. Understand the principles of sensitivity and respect for diverse populations as integral to professional practice in diverse mental health disciplines and settings, including practice in educational and community settings.

CEPY 2150. Academic Excel[®]lence Classes

Course Description

Academic curriculum of Excel[®]lence that includes an in-depth understanding of the elements that promote student academic success. Students will develop leadership and presentation skills needed to forge effective student mentor relationships and conduct outreach to campus and local community leaders to cultivate a collaborative learning environment. May be repeated up to 6 credits.

Student Learning Outcomes

Counselor Education (COUN)

COUN 1110. Introduction to Human Services

Course Description

This course provides a broad overview of the Human Services field. Students will be exposed to the broader mission of the Human Services professions, as well as trace its development across history.

Student Learning Outcomes

1. Explain the interactions of social institutions, cultural factors, dimensions of identity, and environment with the human development and behavior of individuals.
2. Demonstrate knowledge of the helping professions' focus on addressing contemporary social issues in the United States.
3. Describe the mission and services provided by social service agencies at the regional, national, and global levels.
4. Demonstrate a basic understanding of the helping professions, their histories, career opportunities, and contemporary issues facing human service workers in the United States today.
5. Recognize how students' knowledge, skills, and attitudes impact their competence as helping professionals.

COUN 1120. Introduction to Helping Skills

Course Description

This course is designed to teach basic interviewing techniques used in a variety of settings. Theoretical foundations of various interviewing styles and techniques will be examined. The student will develop an awareness of ways in which the interviewer's background, attitudes, and behaviors influence the interview.

Student Learning Outcomes

1. Identify, describe, and assess the standards of confidentiality and ethical practice for interviewing
2. Identify the stages of an interview and appropriate communication skills associated with each stage
3. Demonstrate interpersonal skills of establishing rapport, clarifying expectations, and dealing with conflict
4. Identify, discuss, and understand proven methods and techniques used to conduct effective clinical interviews
5. Survey various theoretical orientations currently in use and provide an overview of how they impact the clinical interview process
6. Apply core interviewing skills for engaging clients
7. Describe the major theories of crisis intervention and crisis intervention models
8. Be able to identify and use various methodologies to perform an effective interview

COUN 2110. Introduction to Group Dynamics

Course Description

An introduction to basic issues and stages of development in the group counseling process; overview of types of counseling groups, group theory, leadership ethical guidelines, group formation and termination.

Student Learning Outcomes

1. Demonstrate a basic understanding of different types of groups.
2. Demonstrate an understanding of group leadership characteristics.
3. Demonstrate ability to identify the major characteristics of each of the stages of a group.
4. Demonstrate growing self-awareness of personal values and how they affect group leaders.
5. Demonstrate knowledge of the major tasks of group leadership at each of the stages of a group.
6. Demonstrate the ability to formulate an agenda for a group session.
7. Demonstrate a maturing understanding of the roles and expectations of group members at the various stages of a group.
8. Demonstrate the ability to apply certain techniques in opening and closing a group session.
9. Demonstrate awareness of the importance of building a climate of trust in a group setting.
10. Development of a personal philosophy of working with individuals in a group that respects human diversity.

COUN 2120. Life Designing and Career Development in Human Services

Course Description

This course provides a practical and theoretical foundation for understanding the life design paradigm. Included are career development theories, occupational and educational information, life balance and decision-making processes, and career and life design techniques for working in the human services field.

Student Learning Outcomes

1. Demonstrate knowledge of historical and emerging theories and models of career development, counseling, and decision-making over the lifetime.
2. Identify assessment tools and techniques, and technologies relevant to career planning and decision-making.
3. Demonstrate growing competencies in understanding the unique needs and characteristics of a diverse population in relation to employment expectations, socioeconomic issues, career information resources, and the impact of globalization on careers.
4. Identify professional organizations, preparation standards, and credentials relevant to the practice of career counseling.
5. Understanding ethical and culturally relevant strategies for addressing career development.
6. Identify strategies for facilitating client skill development for career, educational, job search/creation, and life-work planning and management.

Criminal Justice (CJUS)

CJUS 1110. Introduction to Criminal Justice

Course Description

This course provides an overall exploration of the historical development and structure of the United States criminal justice system, with emphasis on how the varied components of the justice system intertwine to protect and preserve individual rights. The course covers critical analysis of criminal justice processes and the ethical, legal, and political factors affecting the exercise of discretion by criminal justice professionals.

Student Learning Outcomes

1. Describe the history, structure and function of the criminal justice system in the United States.
2. Discuss the role of law enforcement, court systems, corrections, and security in maintaining social order.
3. Identify and describe crime causation theories, various measures of crime and their reliability and victimization theories.
4. Relate fundamental principles, concepts and terminology used in criminal justice to current events.
5. Apply basic analytical and critical thinking skills in evaluating criminal justice issues, policies, trends and disparities.

CJUS 1120. Criminal Law

Course Description

This course covers basic principles of substantive criminal law including elements of crimes against persons, property, public order, public morality, defenses to crimes, and parties to crime.

Student Learning Outcomes

1. Explain the concepts of substantive criminal liability in the United States, including actus reas, mens rea, causation, concurrence, and parties to crime.
2. Define the differences between criminal law and civil law in the United States.
3. Demonstrate basic knowledge of legal terminology as it relates to criminal law.
4. Identify the elements of crimes against persons, property, public order and the administration of justice, public morality, and the inchoate crimes.
5. Describe the various defenses to crimes.

CJUS 1130. Forensic Science I

Course Description

This course covers the application of science in criminal investigations. This includes the techniques, limitations, and significance of crime laboratory analysis, with emphasis on physical evidence and how it relates to the crime solving process. Proper techniques in collection and preservation of evidence will be covered.

Student Learning Outcomes

1. Apply the basic concepts behind more commonly utilized forensic disciplines and recognize the diversity of the forensic disciplines.
2. Describe the scientific, ethical, and legal concepts applicable to the collection, storage, and analysis of forensic evidence including legal standards for the introduction of forensic evidence in judicial proceedings.
3. Assess the significance of crime laboratory analysis and their applications in criminal cases.
4. Demonstrate the ability to apply forensic analysis methods to a variety of types of evidence.

CJUS 1140. Juvenile Justice

Course Description

This course covers the diversity of the informal and formal juvenile justice system, the process of identifying delinquent behavior, the importance of legislation, law enforcement, courts, diversion, referrals, and juvenile correctional facilities.

Student Learning Outcomes

1. Identify distinct aspects of the juvenile court system, law and procedure.

2. Compare and contrast the juvenile justice system with the adult criminal justice system.
3. Apply criminological theories in explaining juvenile crime.
4. Outline the historical development of juvenile justice.
5. Describe the processes of informally and formally handling juveniles within the juvenile justice system.
6. Explain the role and impact of community-based and institutional corrections within the juvenile justice system.

CJUS 1143. Report Writing

Course Description

This course covers the fundamentals of writing concise and accurate police, corrections, security and pre-sentence reports, including writing and use of forms. This implies written communication that implements proven methods, current techniques, proper mechanics and processes necessary for quality report writing.

Student Learning Outcomes

1. Conduct an interview and write reports from notes and resources that cover the essential elements of the incident
2. Demonstrate basic writing guidelines, including grammar, abbreviations, dates, names of places and numbers
3. Demonstrate an ability to complete and submit accurate and timely reports
4. Apply basic report writing standards and techniques for criminal justice.
5. Recognize the importance of accurate and timely reports and be able to apply their knowledge
6. List the general types of reports used and the names of specific operational uses.
7. Identify the ethical imperatives in technical writings.
8. Verbally articulate factual information.

CJUS 1146. Personal Fitness

Course Description

This course provides those entering a criminal justice profession with a comprehensive fitness program to develop the skills and physical conditioning that are necessary to meet the requirements for satisfactory performance within the career field.

Student Learning Outcomes

1. Understand the need to construct a basic workout regimen, including mobility/warm-up and stretching/cool-down exercises
2. Understand the basic concepts of good nutrition and its importance in physical health
3. Participate in a personalized fitness exercises regimen and perform selected fitness measures at a satisfactory level.

CJUS 1170. Introduction to Criminology

Course Description

The course will explore the crime problem, its context, and especially to explain causes of crime. The course will cover Foundations for Criminology, Theories of Crime, and Types of Crime. The first half of the class will be lectures on Crime and Criminology, The Nature and Extent of Crime, and Victims and Victimization. The second part of the class will be lectures on Rational Choice Theories, Trait Theories, Social Structure Theories, Social Conflict, Developmental Theories, Social Structure Theories of Crime, Social Process Theories of Crime, Social Reaction Theories of Crime. The third part will cover lectures in Interpersonal Violence, Political Crime and Terrorism, Property Crime, Enterprise Crime, Public Order Crime. The class will also be devoted to discussion groups who will be assigned special discussion questions related to the chapter being discussed. Discussion groups will give opportunity to students to use communication skills with each other as they work as a team to resolve a question/problem. The instructor will use handouts, films and guest speakers as additional information on topics.

Student Learning Outcomes

Not Available

CJUS 1180. Introduction to Cybercrime

Course Description

An examination of the nature and scope of cybercrime. Students study major theories and explore strategies necessary to deal with common types of fraudulent schemes, as well as laws that have been enacted for computer crime. Causes, victimization, legal issues, control strategies, and societal costs regarding the "computer-crime" problem will also be explored and evaluated. The course encourages analytical thinking and reasoning about computer crime topics and relevant legal issues so that students can identify, analyze, and solve problems in the continually emerging cybercrime and cyberlaw issues and trends.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and discuss the key laws and issues that relate to cybercrime and cyberspace
2. Label and describe different types of cybercrime
3. Determine the evidentiary value of computer-related devices and media
4. Describe how to seize, preserve, protect and transport computer-related evidence In accordance with legal statutes and official guidelines

CJUS 1190. Introduction to Protective Services

Course Description

A survey in concepts, principles, leadership, and practices of local law enforcement. The course is designed to prepare students for entry into local protective services and examines the structure, purpose, scope of authority, and jurisdictions of local law enforcement agencies. Students learn how protective services interact with local communities and agencies in local, state, tribal, and federal venues. In addition, the course reviews candidate characteristics, qualifications, and requirements for career opportunities in the protective services arena. A local background check is required. Students must be 18 years of age at the start of course. Permission required.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of protective service relationships and practices
2. Describe the roles of local, state, tribal, and federal law enforcement agencies
3. Explain the scope, jurisdiction, and authority of local, state, tribal, and federal agencies
4. Identify and describe protective services careers and candidate requirements

CJUS 1210. Private Security Officer I

Course Description

NM has, since 2006, required that private security guards have a minimum amount of training. Security guards are limited in their duties by level. There are three levels, each with an additional 40 training hours required. This course will be taught by at the ProForce Academy and has been successfully offered by ProForce in the past. This course meets New Mexico legislative training requirements for employment as level one security guard.

Student Learning Outcomes

At the conclusion of this course, student will be able to

1. successfully pass the New Mexico Alcohol Server examination
2. understand basic principles of asset protection and security
3. write an accurate and concise incident report
4. utilize effective radio communications techniques
5. understand basic principles of physical security and crime prevention
6. understand basic principles of criminal and civil law and liability
7. conduct themselves in an ethical and professional manner

CJUS 1220. Private Security Officer II

Course Description

NM has, since 2006, required that private security guards have a minimum amount of training. Security guards are limited in their duties by level. There are three levels, each with an additional 40 training hours required. This course will be taught by at the ProForce Academy and has been successfully offered by ProForce in the past. This course meets New Mexico legislative training requirements for employment as level two security guard.

Student Learning Outcomes

At the conclusion of this course students will be able to:

1. understand principles of the investigative process
2. understand when and how to use physical force in protection persons and property and in taking persons into custody
3. use handcuffs and other restraint devices
4. use batons, OC spray, tasers and other less-than-lethal weapons
5. understand basic first aid techniques
6. be able to perform CPR

CJUS 1230. Private Security Officer III**Course Description**

NM has, since 2006, required that private security guards have a minimum amount of training. Security guards are limited in their duties by level. There are three levels, each with an additional 40 training hours required. This course will be taught by at the ProForce Academy and has been successfully offered by ProForce in the past. This course meets New Mexico legislative training requirements for employment as level three security guard.

Student Learning Outcomes

At the conclusion of the course, students will be able to:

1. understand basic principles of firearms safety and operation
2. understand the legal prerequisites for the use of deadly force by a security officer
3. make quick and accurate decisions concerning the use of deadly force
4. successfully pass a firearms qualification exam
5. pass the Security Officer examination

CJUS 1240. Detention Officer I**Course Description**

This course is an introduction to jail operations as well as booking and intake processes, and dealing with weapons and contraband. There is no legislative requirement in New Mexico for detention officers in jails (as opposed to corrections officers working in prisons). However, jail administrators are increasingly concerned about the potential liability associated with a lack of standardized training. This course will be taught by at the ProForce Academy and has been successfully offered by Pro Force in the past.

Student Learning Outcomes

At the conclusion of this course, students will:

1. understand the basic principles of jail operation and design
2. understand the different populations that are housed in local jails
3. understand the intake procedures used to process new inmates
4. understand basic first aid principles and be able to perform CPR
5. be able to write an accurate and concise incident report

CJUS 1250. Detention Officer II**Course Description**

This course covers principles and practices of inmate supervision including such topics as escapes, suicide prevention, and covert communications. There is no legislative requirement in New Mexico for detention officers in jails (as opposed to corrections officers working in prisons). However, jail administrators are increasingly concerned about the potential liability associated with a lack of standardized training. This course will be taught by at the ProForce Academy and has been successfully offered by ProForce in the past.

Student Learning Outcomes

At the conclusion of this course, students will:

1. understand the concept of "contraband" in the context of statutes and facility regulations
2. understand basic principles of inmate supervision
3. understand principles of suicide prevention, intervention, and response
4. understand how inmates conduct covert communications
5. understand how the law and policies regulate the use of force
6. use less-than-legal instruments such as OC spray and batons
7. understand the importance of tattoos and the meaning of gang symbols

CJUS 1260. Detention Officer III

Course Description

This course covers the law, policies, and methods of using force in a detention facility and also includes topics such as tattoos and symbols. Successful students will be certified in the use of OC spray and tasers. There is no legislative requirement in New Mexico for detention officers in jails (as opposed to corrections officers working in prisons). However, jail administrators are increasingly concerned about the potential liability associated with a lack of standardized training. This course will be taught by at the ProForce Academy and has been successfully offered by ProForce in the past.

Student Learning Outcomes

At the conclusion of this course, students will:

1. understand the principles of cell extraction and disturbance resolution
2. successfully complete scenarios in cell extraction and quelling disturbances

CJUS 1268. Pre-Academy Fitness & Testing

Course Catalog

This course will introduce the student to the State of New Mexico Law Enforcement Police Academy entrance requirements. During the course the student will be administered the 5 stages of testing for police academy admission involving: 1-psychological, 2-medical, 3-drug screen/hearing, 4-criminal history and 5-physical fitness test battery. Any failure of a stage will result in denial of admission to the police academy. Regular class sessions will focus on the fitness preparation and testing to meet the fitness entrance requirements as established by the New Mexico Law Enforcement Academy Board.

Student Learning Outcomes

Upon completion of the course the student will be able to:

1. Describe and demonstrate the correct protocols and understanding of mobility/warm-up prior to engaging in an academy exercise program.

Expected Outcomes:

- a. Describe the purpose of mobility/warm-up exercises.
 - b. Identify the prescribed academy exercises and describe the correct form/technique for each exercise.
2. Describe and demonstrate the correct protocols for post-exercise cool-down/stretching in an academy exercise program.

Expected Outcomes:

- a. Describe the purpose of cool-down/stretching exercises.

- b. Identify the prescribed academy cool-down/stretching exercises and describe the correct form/technique for each exercise.
- 3. Identify each fitness standard that must be passed for police academy admission.
- Expected Outcomes:
 - a. Describe the four standardized areas of fitness entrance testing required by the State of New Mexico and the correct protocols of each exercise.
 - b. Describe and/or demonstrate the correct form/technique for each exercise.
 - c. Identify the minimum repetitions, or time, they must personally achieve to pass each of the four standardized tests.
- 4. Perform a complete fitness battery.
- Expected Outcomes:
 - a. Perform correctly the four standardized fitness entrance tests.
 - b. Identify in each of the four entrance tests, their current fitness level strengths and weaknesses.
- 5. Participate in a weekly prescribed fitness program of fitness activity.
- Expected Outcomes:
 - a. Perform correctly prescribed calisthenics with increasing duration and intensity.
 - b. Perform correctly prescribed planks with increasing duration and intensity.
 - c. Perform correctly prescribed kettlebell exercises with increasing duration and intensity.
 - d. Perform correctly prescribed "wild rope" exercises with increasing duration and intensity.
 - e. Perform correctly prescribed distance runs with increasing duration and intensity.
 - f. Perform correctly prescribed interval runs with increasing duration and intensity.
- 6. Psychological Examination Protocols
 - a. Written Examinations
 - b. Interview
- 7. Medical Examination Protocols
- 8. Drug Screen and Hearing Test Protocols
- 9. Criminal History Protocols
- 10. Required LEA Forms

CJUS 1270. Law Enforcement Training Academy I

Course Description

The spring semester is Part 1 (18-credit hours) of the two-part semester program for the New Mexico Basic Law Enforcement Certification program. Part 2 immediately follows Part 1 and concludes with the 10-credit hour portion of the program and the administration of the NM State Law Enforcement Certification Examination. Part 1 covers all academic and foundation topics and an introduction to the skills based and psychomotor development courses, which must be mastered in order to become eligible for certification as a police officer in the State of New Mexico.

Student Learning Outcomes

Upon completion of the course students will have sufficient knowledge of the 16 block curriculum to pass the Law Enforcement Officer Certification Examination.

CJUS 1280. Law Enforcement Training Academy II

Course Description

The summer semester portion of a program covering training topics and skills, which must be mastered in order to become eligible for certification as a police officer in the State of New Mexico.

Student Learning Outcomes

Upon completion of the course students will have sufficient knowledge of the 16 block curriculum to pass the Law Enforcement Officer Certification Examination.

CJUS 1310. Patrol Communications and Investigations

Course Description

An outline of the functions of a patrol officer as it relates to law enforcement. It also provides guidelines for effective communication skills, professional written skills, and effective investigative skills associated with being the first responder at a crime scene.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. This course will prepare the student towards understanding, responding to and handling a variety of situations including role of patrol, patrol procedures, patrol activities and incidents, vehicle stop techniques, roadblocks and barricades, crimes in progress, sex crimes, child abuse, domestic violence, crowd control, civil disorder, injury and death cases, and technology crimes.
2. The student will be able to identify factors, which affect perception by an individual, such as past experiences, maturity, mental condition, physical condition, environment, emotional involvement.
3. Demonstrate, during a mock exercise, effective communication skills in dealing with the following types of persons- hostile, angry, hysterical, drunk, deranged, young, old, racist, etc.
4. The student will be able to apply the basic skills and practices, which will enable the officer to bring disputes under control, manage conflict and recognize / handle situations involving suicidal persons.
5. The student will be able to apply and demonstrate proper radio procedures using concise radio transmissions in in order to conduct records checks and relay needed information.
6. The student will be able to list common Spanish words and phrases to assist in conducting field interviews and traffic stops, to include words or phrases that signal danger or impending danger to a law enforcement officer.
7. The student will be able to identify the difference between interviews and interrogations and have a basic knowledge of the legal requirements concerning interviews and interrogations.
8. The student will be able to conduct a basic crime scene investigation to include identifying, collecting, and processing evidence.

CJUS 1320. Patrol Procedures

Course Description

This class introduces basic patrol functions, practices and problems faced by today's law enforcement officers.

Student Learning Outcomes

1. Describe police organization and patrol function and the problems associated with police discretion.
2. List safety risk factors for officers.
3. Explain legal principles and strategies for patrol.
4. Define investigatory stops, field interviews, interviews and interrogations.
5. Recognize and define the various forms of evidence and crime scene protocol.
6. Demonstrate professional communication with the chain-of-command and diverse community members.
7. Demonstrate common skills required of patrol officers, including cuffing, conceal and cover, traffic stops and lawful use of force.

CJUS 1330. Constitutional Policing

Course Description

Students will examine the constitutional principles related to the investigation of crimes, including search and seizure, arrests, confessions and pre-trial processing of offenders. The focus will be on individual rights found in the First, Fourth, Fifth, Sixth, Eighth and Fourteenth Amendments of the United States Constitution and the comparable provisions of the New Mexico Constitution.

Student Learning Outcomes

1. Identify Constitutional limits on police actions of arrest or search.
2. Explain the history and development of the exclusionary rule and the impact of the 'due process revolution' on criminal procedure.
3. Explain limits on field interviews and police interrogations of suspects.
4. Describe pretrial identification procedures that conform to the Constitution.
5. Summarize Constitutional civil liability for police.
6. Write effectively using the APA format.

CJUS 1340. Courtroom Survival for Law Enforcement

Course Description

Preparation for effective court appearances. Students learn techniques necessary for expert, effective testimony and the techniques used to attack and discredit police officers on the witness stand. Mock trial practice provides students with experience in methods for presenting a court case, methods used by both defense and prosecuting attorneys and an understanding of why defense attorneys ask the questions they do.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Produce effective testimony in court
2. Identify techniques used by prosecutors when cross examining witnesses
3. Prepare incident reports that will hold up in court and under examination
4. Recognize common mistakes made by police officers on the witness stand
5. Demonstrate awareness of methods used by defense and prosecuting attorneys in trial

CJUS 1350. Self Defense for Law Enforcement

Course Description

Instructs students entering the Law Enforcement profession in a comprehensive self-defense program designed to meet the New Mexico Law Enforcement Academy for basic police officer training.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. The student will be able to determine how case law is relevant to law enforcement use of force and how civil liability is created.
2. The student will be able to identify the appropriate response to a given situation based on subject's aggression.
3. The student will have general knowledge in the development and protection of Body Armor, use of Police Baton, and the development and application Oleoresin Capsicum Spray (OC spray).
4. The student will be able to identify the appropriate skills to receive custody/responsibility of a prisoner and safely transport the offender to a correctional facility or detention center.

CJUS 1360. Foundations of Professional Investigation

Course Description

An introduction to the investigative profession, including how professional investigators assist attorneys, businesses, and the public with a variety of cases. Students study the Investigative process and conduct, the skills and traits required of professional investigators as well as the methodology that investigators use in both civil and criminal cases.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Analyze an investigation from a legal point of view
2. Apply the investigative process to criminal and civil cases
3. Describe the components of a basic investigation
4. Recognize the skills needed to be a professional investigator

CJUS 1410. Law**Course Description**

An introduction to persons seeking a career in the law enforcement profession with an understanding of criminal law and how it represents the power of government to prevent and punish socially harmful behavior. This course also examines the extent and limits of established rules of procedure in applying the rule of law.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. identify the role of constitutional law and how it is applied in our society.
2. identify particular amendments of the US Constitution most applicable to law enforcement
3. identify criminal and civil laws that are applicable to a variety of situations related to law enforcement.
4. identify the scope and authority of the Children's Court and define the similarities and differences between juvenile and adult justice systems in New Mexico.
5. identify the role of law enforcement when it involves the child safety and what is in the best interest of children.
6. apply the Family Violence Protection Act and the Mutual Order of Protections

CJUS 1510. Handgun Training**Course Description**

The Handgun Training course is designed to prepare students to obtain a license to carry a concealed handgun. This course covers the safe handling and storage of handguns, as well as strategies for home and personal safety. This training course incorporates classroom instruction with the live firing of a handgun as required by the New Mexico statutory course requirements.

Student Learning Outcomes

Not Available

CJUS 1525. Crime Scene Investigation I**Course Description**

Introduction to crime scene investigation, from first response to documenting crime scene evidence. Students learn how to search the crime scene, record findings, collection and preservation of evidence, and preparation of evidence for courtroom presentation.

Student Learning Outcomes

Not Available

CJUS 1996. Topics in Criminal Justice**Course Description**

Specific subjects to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

CJUS 2110. Professional Responsibility in Criminal Justice**Course Description**

This course covers the application of various ethical systems to decision making in criminal justice professions. This includes discussion of misconduct by criminal justice professionals and strategies to prevent misconduct. Well known philosophers will be discussed and incorporated into the course material.

Student Learning Outcomes

1. Articulate the history and principles of various ethical systems.
2. Identify and describe the effects on moral and ethical reasoning in lieu of subcultural expectations.

3. Demonstrate critical and analytical thinking skills by applying ethical theories and principles in decision-making situations relevant to policing, corrections and other criminal justice career fields.
4. Describe and apply tools for moral decision-making.
5. Discuss various techniques employed by criminal justice professionals, which might have ethical concerns.

CJUS 2120. Criminal Courts and Procedure

Course Description

This course covers the structures and functions of American trial and appellate courts, including the roles of attorneys, judges, and other court personnel, the formal and informal process of applying constitutional law, rules of evidence, case law and an understanding of the logic used by the courts.

Student Learning Outcomes

1. Explain the application of the Constitutional Amendments that apply to criminal justice.
2. Explain and describe the dual court system in the U.S. and how courts enforce the rule of law.
3. Identify and list the duties and requirements of the courtroom workgroup.
4. Describe courtroom procedures, rules of the court, and due process of law.
5. Articulate basic knowledge of the U.S. criminal court system.
6. Define legal terms.
7. Explain the use of discretion in criminal procedure.
8. Differentiate the role of courts of limited jurisdiction, courts of general jurisdiction, and the appellate courts in the processing of criminal cases.

CJUS 2130. Police and Society

Course Description

The course presents a focused practical introduction to the key principles and practices of policing. Topics covered include issues of law enforcement fragmentation and jurisdiction, philosophies of policing, enforcement discretion, deployment strategies, use of force, personnel selection, socialization, tactics, and stress.

Student Learning Outcomes

1. Describe the historical development of and current issues in policing in America.
2. Demonstrate knowledge of law enforcement, i.e., police role and function, police and community interaction, crime control, discretion, public perception, and preservation of democratic ideals within the criminal justice system.
3. Identify the structure of law enforcement agencies at federal, state and local levels.
4. Summarize police culture (e.g., discretion, ethics, corruption, blue wall of silence).
5. Identify significant trends in law enforcement.
6. Utilize the SARA model.

CJUS 2140. Criminal Investigations

Course Description

This course introduces criminal investigations within the various local, state, and federal law enforcement agencies. Emphasis is given to the theory, techniques, aids, technology, collection, and preservation procedures, which ensure the evidentiary integrity. Courtroom evidentiary procedures and techniques will be introduced.

Student Learning Outcomes

1. Identify developments in investigation technology.
2. Identify common types of criminal investigations and their key components.
3. Apply proper crime scene investigative protocols.
4. Explain proper evidentiary gathering and handing procedures, and utilize various interviewing techniques.
5. Identify and compare different law enforcement agencies and the role they play in criminal investigations.
6. Describe proper collection, evidence preservation, documentation, and court presentation.

7. Develop effective search authorization.

CJUS 2150. Corrections System

Course Description

This course introduces the corrections system in the United States, including the processing of an offender in the system and the responsibilities and duties of correctional professionals. The course covers the historical development, theory, and practice, as well as the institutional and community-based alternatives available in the corrections process.

Student Learning Outcomes

1. Describe the purposes of the corrections system and the issues facing the corrections system.
2. Explain the components of the corrections system and describe their functions.
3. Compare and contrast the different forms of correction practices.
4. Explain the goals of corrections, the different factors affecting the sentencing process, the legal rights of prisoners, and the issues concerning prison violence.
5. Explain the impact of reentry into society.
6. Identify the issues concerning capital punishment.
7. Describe the effectiveness of various correction programs on offenders.

CJUS 2153. Community-Based Corrections

Course Description

A detailed analysis of community-based corrections. The philosophical basis of community corrections will be explored in the context of diversion, pretrial release programs, probation, parole, intermediate sanctions, alternative sanctions, mental health and substance abuse treatment in both the juvenile and adult systems.

Student Learning Outcomes

At the completion of this course the student will be able to:

1. Describe the goals of community-based corrections.
2. Explain the organization, functions, practices of the community-based corrections systems in the U.S.
3. List the various community based sentencing options available to the courts.
4. Apply the tools used to identify offender needs and risk to the community and how those tools are used to connect offenders with evidence based correctional practices;
5. Explain the concept of “evidence based practices” and the research methodologies used to identify them.
6. Describe when, why, and how the terms and conditions of probation and parole can be revoked based on statutory provisions and case law.
7. Identify legal issues related to probation and parole and their impact on the criminal justice system, specifically in the administrative and management of state and federal systems.

CJUS 2156. Institutional Corrections

Course Description

Covers the historical evolution of jails and prisons for each jurisdiction, intake, classification, security, inmate subculture, security threat groups, programs and services, supervision, pre-release, and special management inmates.

Student Learning Outcomes

1. Demonstrate knowledge of the evolution of prisons and jails.
2. Identify the levels of custodial security.
3. Demonstrate knowledge of the issues related to custody, treatment and programs within penal institutions.
4. Demonstrate knowledge of the lifestyles in correctional environments and patterns of inmate-staff interaction within these environments.
5. Explain fundamental safety, security and control practices to maintain order in jails and prisons

CJUS 2160. Field Experience in Criminal Justice

Course Description

This course is designed to provide actual experience working for a criminal justice agency and the opportunity to apply criminal justice concepts and theory to a field situation. Students already working in an agency will complete an approved learning project while on the job.

Student Learning Outcomes

1. Obtain practical experience by observing, researching, and working in a criminal justice agency.
2. Apply the knowledge of principles, theories, and methods that were learned in the classroom to situation in which field experience will be devoted
3. Instill an understanding for general and specific problems that criminal justice agencies encounter on a daily basis.
4. Develop a professional work ethic and attitudes, including reliability, professional responsibility, and the ability to work cooperatively with others.

CJUS 2210. American Correctional Systems

Course Description

This course covers the history and philosophy of adult and juvenile corrections. It examines institutional and community based corrections, reintegration of offenders into society, correctional administration and legal issues, and future challenges to the correctional system.

Student Learning Outcomes

At the conclusion of this course, the student should be able to.

1. Describe the history and evolution of corrections.
2. Discuss the components of the juvenile and adult correctional process.
3. Discuss reintegration of offenders into society.
4. Understand correctional administration and the legal issues involved.
5. Discuss the further challenges facing American correctional systems.

CJUS 2215. American Judicial System

Course Description

Analysis of law and society with emphasis on the rights of the accused; the roles of the district attorney, the judge and the defense attorney; and legal terminology.

Student Learning Outcomes

Successful students will be able to:

1. Identify structures and functions of the dual court system.
2. Explain roles of actors in the Criminal Justice System.
3. Describe informal system processes (e.g., plea negotiation).
4. Compare and contrast pretrial, trial, and appellate processes.
5. Summarize varied sentencing processes.

CJUS 2220. American Law Enforcement System

Course Description

This course covers the historical and philosophical foundations of law and order, with an in-depth examination of the various local, state, and federal law enforcement agencies and how they interact within the criminal justice system.

Student Learning Outcomes

1. Discuss, evaluate, and analyze the role of police in the democratic society today, and the historical development of modern day law enforcement
2. Define and explain the different types of community policing and the valid reasons behind their application within a community

3. List and discuss the ways to overcome the barriers to change within a police organization, good recruitment, screening, and retention of employees
4. Analyze and discuss the history of and the different types of police patrol, as well as the use of force and deadly force, and methods used for controlling police behavior
5. Describe and discuss the different types of police behavior, potential oversight, and remedy and their limitations
6. List and discuss the benefits of higher and continued education, along with the minimum educational requirements for police officers
7. Evaluate and discuss the reasons for police stress and the methods of dealing with stressors
8. Interpret current court cases, both state and federal, that affect police procedures

CJUS 2225. Introduction to Corrections

Course Description

This class will be a basic introduction to the corrections system in the United States, to include the process of an offender in the system and the responsibilities and duties of guards.

Student Learning Outcomes

1. Describe the purpose of the corrections system and the current issues facing the corrections system today.
2. Explain the different components of the corrections system and describe their functions.
3. Explain the goals of punishment and how different factors affect the sentencing process.
4. Explain the legal rights of prisoners and the issues concerning prison violence.
5. Describe the issues over capital punishment.

CJUS 2230. Introduction to Death Investigation

Course Description

This course covers the principles of the medicolegal system in handling the investigation of the cause, manner and mechanism of death. It includes the determination of time of death, documentation of injuries, identification of the deceased, the deduction of how injuries occurred and the collection of evidence.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Analyze and determine various types of injury leading to and contributing to death
2. Identify and determine the cause, manner and mechanism of death
3. Solve scenarios involving cause, manner and mechanism of death
4. Complete an injury diagram of the deceased to document the injuries or artifacts of the body
5. Describe, in written form, all findings of an investigation involving an unnatural death
6. Identify and differentiate various manners of injuries relating to death
7. Recognize the steps performed in the autopsy procedures

CJUS 2235. Constitutional Criminal Procedure

Course Description

An examination of the constitutional principles related to the investigation of crimes, arrests, confessions and pre-trial processing of offenders. The focus will be on individual rights found in the First, Fourth, Fifth, Sixth, Eighth and Fourteenth Amendments of the United States Constitution and the comparable provisions of the New Mexico Constitution.

Student Learning Outcomes

As a participant in this class, you will identify the rights of individuals and their application to real-life events. Through case studies, you will also get a basic understanding and appreciation of how criminal procedure has developed and its role in our modern day criminal system

CJUS 2240. Investigative Surveillance

Course Description

Basic surveillance techniques and procedures. Students plan and conduct a typical surveillance assignment and learn when to apply a particular technique and how to select and use the appropriate technology. Students also learn how to prepare and present results of surveillance activities to clients, courts and law enforcement agencies.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize the technology and tools available to the criminal investigator for surveillance
2. Describe how to assess the crime
3. Summarize exercises to develop observation skills.
4. Demonstrate creating a criminal profile

CJUS 2245. Crime Profiling**Course Description**

An examination of techniques for applying socio-psychological profiling in modern criminal investigations. The uses of inductive and deductive profiling within the criminal justice system are examined.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Define forensic inductive and deductive profiling.
2. Describe the origins, history, concepts and applications of forensic profiling.
3. Identify and define the following: victimology, psychological crime scene variables, psychological autopsies, equivocal case analysis (death analysis), retrospective behavioral profile analysis and offender typology.

CJUS 2255. Rules of Criminal Evidence**Course Description**

This course covers the application of the Federal Rules of Evidence and the New Mexico Rules of Evidence in a criminal case from investigation through sentencing.

Student Learning Outcomes

Upon successful completion of this course, students will be able to:

1. Identify the primary rules and theories guiding the application of evidence in a criminal case.
2. Develop a framework for the comprehensive analysis of criminal evidence in a given fact situation.
3. Correctly brief a court decision.
4. Recognize and apply the appropriate response during the pretrial stage to the requirements of a specific evidentiary rule.
5. Communicate ideas concisely and accurately.
6. Evaluate relationships between objectives or issues and use reasoning/critical thinking skills to arrive at a valid solution to problems.
7. Read with understanding.

CJUS 2255L. Investigations Laboratory**Course Description**

Introduces exercises and practical demonstrations related to the investigations of crime.

Student Learning Outcomes

The student will be able to:

1. Identify the types, value and advantages of physical evidence
2. Explain the actions to be taken at a crime scene by a first responder
3. Understand the role of a crime scene investigator
4. Know the types of fingerprints and impressions

5. Know the objectives of crime scene photography
6. Know the objectives of crime scene sketching and diagramming
7. Understand the role of physical evidence in sexual assault investigations
8. Understand the dynamics of homicide investigation
9. Complete an Operations Order
10. Conduct stationary surveillance
11. Recognize a crime scene
12. Secure a crime scene as a first responder
13. Identify and document physical, circumstantial and testimonial evidence
14. Respond to a crime scene and assume the role of a Criminal Investigator
15. Demonstrate the objectives of crime scene photography
16. Demonstrate universal cautions utilizing PPE
17. Document a crime scene utilizing one of three methods for diagramming
18. Document bloodstain evidence
19. Reconstruct a crime scene
20. Properly use and explain the chain of custody
21. Properly collect and preserve evidence to include biological, trace, and latent fingerprint
22. Prepare supplemental reports
23. Establish probable cause
24. Regularly a pattern of professional behavior with respect to issues such as attendance, tardiness and quality task completion
25. Interact appropriately and positively with others while demonstrating respect for all people
26. Participate and contribute to the group/class in ways that support class goals
27. Demonstrate high expectations for self and peers, evaluates self and uses results to generate personal and professional improvement
28. Behaves in a way that reflects both an understanding and commitment to serve others
29. Demonstrate and model personal integrity in dealing with others
30. Recognize personal strengths and weaknesses for career development.
31. Develop critical thinking skills.

CJUS 2260. Forensic Anthropology

Course Description

Forensic anthropology is a specialized field of study in forensic science, which focuses on the examination of the human skeleton in a legal context. In this course, we will BRIEFLY review the bones of the body so that you are able to understand the most basic terminology of the field. For the most part, we will examine how forensic anthropology functions within criminal investigation, including how we locate, recover, document and analyze the bones to decipher individualizing characteristics and signs of damage or trauma. Finally, we will cover how to apply these techniques to a criminal investigation.

Student Learning Outcomes

1. Students will understand the application of anthropology within a medicolegal context.
2. Students will understand and be able to apply the ethical responsibility of working with human skeletal remains.
3. Students will apply anthropological knowledge through supervised research on a topic relevant to anthropology.
4. Students will demonstrate a thorough understanding of the scientific method.

CJUS 2265. Forensic Science II

Course Description

A continuation of the study of the modern crime laboratory and the application of science in criminal investigations. The course includes a presentation of techniques, limitations and significance of crime laboratory analysis, with emphasis on physical evidence and how it relates to the crime-solving process. Offered: Occasionally. Three lecture hours.

Student Learning Outcomes

1. Understand what Forensic Science and the significance of scientific analyses of physical evidence in the criminal justice system
2. Understand the relationship of Forensic Science to the criminal justice system
3. Understand how various types of physical evidence analyses fit into the process of a criminal trial
4. Understand the term expert witness.

CJUS 2310. Domestic Violence

Course Description

This course is meant to provide a comprehensive introduction to the topic of family violence by introducing the student to crime victims. Students will develop an understanding of the impact of crime on the victim and the victim's role and rights in the criminal justice system.

Student Learning Outcomes

KNOWLEDGE

The student will be able to:

- Examine the history, prevalence, and significance of family/intimate partner violence from both a domestic and international perspective.
- Identify and define the most common terms related to family/intimate partner violence.
- Understand the impact family/intimate partner violence has on practice, research, and policy.
- Distinguish between the various types and forms of violence
- Describe how professional systems respond to family/intimate partner violence.

SKILLS

- Evaluate theories, policies, and practice based on empirical evidence.
- Demonstrate ability to orally communicate in a clear and professional manner.
- Demonstrate effective written communication skills.
- Differentiate law enforcement, court, and correctional practice, and describe the professional skills associated with each.
- Accurately apply criminological theories and principles of criminal law, criminal procedures, and rules of evidence.
- Explain how diversity, multiculturalism and ethics impact professional practice.

BEHAVIORS

The student will be able to:

- Regularly a pattern of professional behavior with respect to issues such as participation and quality task completion
- Interact appropriately and positively with others while demonstrating respect for all people
- Participate and contribute to the group/class in ways that support class goals
- Demonstrate high expectations for self and peers, evaluates self and uses results to generate personal and professional improvement
- Demonstrate and models personal integrity in dealing with others
- Recognize personal strengths and weaknesses for career development.
- Develop critical thinking skills.

CJUS 2320. Gangs in American Society

Course Description

The study of juvenile and adult groups that have joined together to engage in delinquent and criminal acts

Student Learning Outcomes

The learner will demonstrate knowledge pertaining to the social factors that contribute to the development of gangs, the ongoing criminal activities of gangs, the racial and gender issues associated with gangs, and proposed actions to curb gang violence in America.

CJUS 2330. Juvenile Corrections**Course Description**

Covers: Juvenile Probation, Detention, Training Schools and Juvenile Parole. This course will require students to work in teams that will design programs and facilities for juvenile corrections. Designs will be evaluated for their practical value and compliance with ACA Standards

Student Learning Outcomes

Upon completion of this course, the student will be able to accomplish the following:

1. Explain how juvenile corrections interfaces with the courts.
2. Interpret landmark court cases that affect the operations of corrections.
3. Research and develop a conceptual framework for a correctional institution.
4. Interpret and apply standards to program functions.
5. Explain the purpose of alternatives to detention.
6. Write the purpose and expectations for a cottage unit behavior program.
7. Research existing programs and facility designs.
8. Identify best practices for probation and aftercare programs.
9. Listen to, interpret, and respond to oral cues.
10. Communicate ideas concisely and accurately.
11. Discover relationships between objects or issues and arrive at a valid solution to problems by logical reasoning.
12. Understand the importance of personal honesty.
13. Work with others of diverse backgrounds

CJUS 2340. Victimization in American Society**Course Description**

Study of crime victims to understand the physical, psychological and economic impact of crime upon victims, their families and society; review of how the American justice system responds to victims.

Student Learning Outcomes

1. Explore the historical development of victimology and the victim's movement.
2. Discuss the progress away from a victim justice system towards the development of a criminal justice system.
3. Discuss the ways that crime impacts victims and the various methods developed to assist victims in dealing with the effects of crime and with the criminal justice system.
4. Understand and evaluate research into various victim-related issues.
5. Discuss the impacts of specific types of violent crimes on victims.
6. Discuss the development of victim rights in the United States.
7. Employ critical thinking and analytical skills in writing assignments and demonstrate advanced communication skills.

CJUS 2350. Organized Crime/Terrorism**Course Description**

This course familiarizes the learner with a broad overview of the unlawful activities of people and groups whose purpose is to profit through legitimate gain by illegal enterprises or advance their agendas through violence. The course also examines terrorism and its relationship to traditional organized crime as well as its impact on law enforcement. The history of organized crime and terrorism will be explored as well as their relevance to criminal justice in today's world.

Student Learning Outcomes

The student will be able to:

1. Analyze the various definitions of organized crime.
2. Examine the “traditional” model of organized crime.
3. Trace the historical development of organized crime.
4. Trace the history of organized crimes in New York and Chicago.
5. Identify the people historically associated with organized crime.
6. Discover the types of crime associated with organized crime
7. Distinguish among different types of organized crime.
8. Critically analyze and discuss the growth of post-WWII organized crime groups.
9. Identify the different theories used to explain the cause of organized crime.
10. Investigate the issues associated with enforcing laws dealing with organized crime.
11. Describe the Federal and New Mexico State law enforcement agencies responsible for the investigation and prosecution of criminal acts committed by organized crime groups.
12. Define and describe terrorism.
13. Discuss the history of terrorism.
14. Discuss the role and future of counterterrorism.
15. Identify the connections between organized crime and terrorism.
16. Discuss the relationship between terrorism and organized crime.
17. Develop the ability to recognize organized crime or terrorist activity.
18. Listen to varied factual matters and correctly apply them to specified criminal statute relating to organized crime or terrorism.
19. Competently discuss law enforcement’s identification of and response to organized crime and terrorist activity.
20. Develop problem-solving skills.
21. Write effectively using the APA format.

CJUS 2360. Criminal Procedures

Course Description

Criminal procedure, including laws of arrest, search and seizure, and leading case law.

Student Learning Outcomes

Upon completion of this course, students will be able to discuss the following topics giving them a better understanding of the law and policing strategies.

1. Identify Constitutional limits on police actions to arrest or search including the history and development of the exclusionary rule and the impact of the ‘due process revolution’ on criminal procedure.
2. Explain limits on field interviews and police interrogations of suspects.
3. Describe trial court procedures that conform to the Constitution.
4. Summarize Constitutional civil liability for police.
5. Assess elements of judicial review in American courts to fact scenarios found in case law.

CJUS 2410. Probation, Parole, and Community Corrections

Course Description

A survey and analysis of probation, parole, other community reintegration procedures, halfway houses, community treatment centers, volunteer programs and graduated release. Special emphasis is placed upon the functions, possibilities and problems of community-based programs.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Discuss the philosophy, development and basis for Probation Services and Programs.
2. Describe the development of Parole Services and Programs.

3. Explain the uses of alternative sentencing programs, including Community Based Corrections.
4. Demonstrate knowledge of the US, State and Local sentencing policies.
5. Explain Restorative Justice Programs.

CJUS 2420. Public Policies and Strategies

Course Description

Presents issues and strategies involved in developing and implementing public policy, including problems in criminal justice, standard police operations, public security, public safety, corrections, and juvenile justice.

Student Learning Outcomes

Upon successful completion of this course, students will be able to:

1. Identify the primary theories and models guiding contemporary policy analysis.
2. Develop a framework for the comprehensive analysis of criminal justice/security policy.
3. Identify and explain the various influences on crime/security policy.
4. Apply the basic skills of policy evaluation in the policy-making process.
5. Evaluate the roles of participants and analysts in the field of criminal justice/security.
6. Recognize effective organizational policies and procedures within the parameters of institutional guidelines.
7. Distinguish effective policies from ineffective or faulty policies.
8. Delineate standards of professional behavior within criminal justice/security.
9. Communicate ideas concisely and accurately.
10. Evaluate relationships between objectives or issues and use reasoning/critical thinking skills to arrive at a valid solution to problems.
11. Recognize the importance of personal honesty and integrity and choose the correct ethical course of action.
12. Read with understanding.
13. Write effectively using the APA format.

CJUS 2430. Mechanics of Arrest/Control

Course Description

Encompasses a portion of the police officer training standards mandated by the New Mexico Law Enforcement Academy for basic police officer training in the area of Arrest and Control.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

The student will demonstrate proficiency of arrest and control of subjects through practical application. This includes control holds, blocking, leverage take downs, a variety of strikes, ground control, ground defense, handcuffing, handgun retention, edged weapon defense, and handgun takeaway.

CJUS 2440. Police & Patrol Procedures

Course Description

This course covers the role and functions of police officers, including the basic tasks of preventing crime, enforcing the laws, protecting the innocent, and providing services while utilizing various patrol techniques. In addition, the course will discuss officer safety, use of force and the law enforcement code of ethics.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe in written form the various patrol techniques
2. Recognize and describe in written form the utilization of patrol to prevent crime
3. Identify and define the use of crime mapping to deter criminal activity
4. List and name the various steps in the use of force ladder and basic officer safety techniques

CJUS 2460. Traffic**Course Description**

Encompasses a portion of the police officer training standards mandated by the New Mexico Law Enforcement Academy for police officer training. It provides the student with the knowledge and skills necessary to recognize and properly enforce traffic laws

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. The student will be able to identify proper procedures to stop vehicles to investigate, cite, or arrest occupants during day and nighttime operations.
2. The student will be able to identify laws regarding the motor vehicle code for enforcement action.
3. The student will be able to conduct basic motor vehicle collision investigations.
4. The student will be able to identify persons under the influence of intoxicating liquor and conduct investigations involving DWI.

CJUS 2470. Basic Firearms**Course Description**

Encompasses a portion of the police officer training standards mandated by the New Mexico Law Enforcement Academy for basic police officer training. This course includes instruction in the area of basic firearms.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

1. The student will be able to identify the Firearms safety rules, handgun nomenclature, steps in weapon presentation for pistol, elements of marksmanship, handgun manipulations, weapons malfunctions, and shooting positions
2. The student will demonstrate competency in the area of Police Handgun through practical application.

CJUS 2480. Security Systems**Course Description**

Not Available

Student Learning Outcomes

Not Available

CJUS 2510. Law Enforcement Supervision – First Line**Course Description**

This course covers the principles of supervision for law enforcement first line supervisors. It includes the role and function of first line supervisors; leadership skills; the hiring, growth, training, and promotion of subordinates; handling personnel problems; and problem solving.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe in written form the basic supervisory responsibilities and administrative functions.
2. Recognize and interpret leadership qualities, types of leaders and teamwork within an organization
3. Solve scenarios provided by the instructor involving employee-supervisor situations.
4. Identify through interaction with fellow students and instructor; how to motivate a "marginal employee"
5. Describe the communication process and be able to communicate effectively both orally and in writing.
6. Discuss the concept, requirements, of and implementation of community policing.

CJUS 2514. Introduction to Homeland Security**Course Description**

Covers the history, creation, legislative background and operations of the U.S. Department of Homeland Security. Explores the agencies that currently comprise the Department and describes their roles and responsibilities. Provides students with an opportunity to explore the future of Homeland Security and develop ideas leveraging advances in science and technology as basis for improvement of the Homeland Security mission set.

Student Learning Outcomes

Technical Objectives

1. Describe the world events and resulting legislation that led to the creation of the Department of Homeland Security (DHS).
2. Identify the mission and vision statements for DHS; describe the mission sets that support these statements.
3. Identify the 22 agencies that were combined to create DHS; describe their historical missions, employee populations and budgets.
4. Describe the agencies that were abolished, combined or created to form DHS.
5. Describe the mission focus and key contributions of the major DHS components. This includes, but is not limited to:
 - Customs and Border Protection (CBP)
 - Immigration and Customs Enforcement (ICE)
 - Transportation Security Administration (TSA)
 - U.S. Coast Guard (USCG)
 - U.S. Secret Service (USSS)
 - Federal Emergency Management Agency (FEMA)
6. Identify current key leaders for DHS and its core components.
7. Describe and discuss major controversies and inter-governmental conflicts arising from the creation of DHS.
8. Describe and apply the concepts of prevention, preparedness, mitigation, response and recovery as they pertain to crisis management.

Work Place Objectives

1. Develop the ability to match mission requirement with the proper DHS component.
2. Articulate key characteristics that pertain to major DHS mission sets.
3. Competently discuss DHS approaches in responding to various homeland crises (including man-made and natural disasters).
4. Develop problem-solving skills by evaluating current events impacting the various DHS missions.
5. Write effectively using the APA format.
6. Create and present a topical PowerPoint presentation.

CJUS 2520. Law Enforcement Supervision – Command Level

Course Description

This course covers the principles of supervision for law enforcement mid-level supervisors. It includes the role of a manager in running the current operations of a law enforcement agency, as well as the management skills necessary to prepare the agency to meet future commitments.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe in written form organizational theories and management systems.
2. Analyze and design the implementation of community policing.
3. Solve scenarios provided by the instructor involving performance appraisals, training and recruitment of employees.
4. Identify and differentiate various manners, modes and barriers to communication.
5. Analyze and compare police organizational environments and political, government interaction.

6. Complete as part of a team, a plan to guide a department's transition from one that follows the "professional model" of police work to one that adheres to the 'community policing model.'

CJUS 2525. Law Enforcement Supervision- Command Level

Course Description

This course is designed for executive-level managers of law enforcement or those that desire to work in an executive manager's position. The course will cover accreditation practices, ethics, policies and procedures, internal affairs, budget practices and new technology.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe in written form values and ethics in a police department.
2. Recognize and illustrate leadership in management and high quality police services.
3. Solve scenarios provided by the instructor involving political relationships and the news media.
4. Identify and discuss municipal budgets, the five budget types, presenting and controlling a budget.
5. Identify and discuss problem employees both internal and external relations.

CJUS 2530. Management for Criminal Justice Professionals

Course Description

Presents management methods in a criminal justice environment to include law enforcement, corrections and security. Covers basic management theory, leadership, assertiveness, time management, performance evaluation, legal issues, ethics and supervision.

Student Learning Outcomes

The student will be able to:

1. Explain the primary elements of management
2. Explain organizational design from the outside in
3. Describe the legal and ethical issues of criminal justice managers
4. Understand the role of leadership, management and coaching
5. Describe the role of manager in organizational communications
6. Explain the issues of employee development and performance evaluation
7. Understand time management problems for managers
8. Establish written goals and objectives
9. Listen and translate verbal directions into action
10. Lead others to meet established goals and work objectives
11. Evaluate performance
12. Translate verbal information into written reports
13. Use the SARA model of problem solving in criminal justice
14. Plan, organize, coordinate, direct and establish accountability
15. Manage time
16. Solve employee problems.

CJUS 2540. First Responder for Law Enforcement

Course Description

Provides instruction on the completion of the American Red Cross courses in standard first aid, C.P.R., emergency childbirth and care and handling of injured persons.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. The student will be able to identify persons in need of medical assistance and be able to provide basic care during emergency situations.
2. The student will be able to identify basic hazards of hazardous materials and respond in a safe manner as recommended by the Emergency Response Guidebook.
3. The student will be able to apply a structured Incident Command System during a critical incident.
4. The student will be able to apply the basic skills and knowledge necessary to respond to a crime/incident in a calm, objective, and professional manner in order to complete a thorough investigation.

CJUS 2550. Police Proficiency I

Course Description

Encompasses a portion of the police officer training standards mandated by the New Mexico Law Enforcement Academy for basic police officer training. This course includes instruction in the area of Emergency Vehicle Operations.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. The student will be able to gain a comprehensive understanding of the components of an emergency vehicle, vehicle dynamics, equipment maintenance, design and function of braking systems, and principles of defensive driving.
2. The student will be able to identify risks of police pursuits, evaluate dangers, discuss responsibilities of officers involved in pursuits, apply sound driving tactics during pursuits up to the conclusion of the pursuit and apprehension of suspects.
3. The student will demonstrate competencies in the operations of a patrol vehicle during emergency and non-emergency situations through practical application.

CJUS 2560. The Law and the Professional Investigator

Course Description

Explores the scope and role of the investigator within the legal system. Students learn how to apply investigative skills to a range of legal matters, including civil, domestic, and criminal actions. The course examines how investigative civil and criminal cases proceed, as well as legal strategies, terminology, and laws pertaining to investigative practices.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify issues related to investigation of crimes
2. Apply civil and criminal procedural laws to investigations
3. Interpret factual situations, recognize and apply the appropriate law.

CJUS 2570. Crime and the Media

Course Description

This course examines the interrelationships between crime, criminal justice, and mass media. It will explore the history of these linkages, the social science research, and the current issues relative to crime and mass media. The course examines the depictions of victims, offenders, and the criminal justice system in the media. The evolution of these depictions in print media, popular literature, films, television, and popular music will be discussed. The possible impact of media images of crime and violence on individuals, groups, and public policy will be considered. This class will also cover the representations of crime and the criminal justice system in the media. Television, film, newspaper, and electronic/internet media intersects with crime and the criminal justice system in a number of important ways. The point of this course is to examine how the media represents, distorts, and/or filters crime and justice issues. Also, the media is used as a mechanism to explore issues (e.g., political ideology, corrections policy, causes of crime) that are central to the study of crime. Issues regarding the future of crime, criminal justice, and mass media also will be discussed.

Student Learning Outcomes

Upon completing this class, students will:

1. Have the skills to critically interpret media and recognize the construction of crime and justice (e.g., cops, courts, prisons).
2. Understand how images of crime and justice vary across different forms of media.
3. Understand the role of political ideology in criminology and criminal justice and recognize ideological viewpoints in the media.
4. Aware of the social science research in this area and be able to critique it.
5. Determine how media coverage varies across different types of crime (e.g., white collar crime vs. street crime, violent vs. property crime).

CJUS 2575. Multicultural Law Enforcement

Course Description

This course provides an understanding of our justice system in America as it pertains to police and community relations. An increasing number of leaders in law enforcement agencies and their employees have accepted the premise that greater cross-cultural competency and improved cross-racial/ethnic relations must be a key objective of all management and professional development. Demographic changes have had a tremendous impact not only on the types of crimes committed, but also on the composition of the law enforcement workforce and the people with whom officers make contact. To be effective, police executives must understand and be responsive to the diversity in their work forces and in their changing communities. Professionalism today includes the need for greater consideration across cultures and improved communication with members of diverse groups. This course will prepare the student to be familiar with those considerations and the diversity in which law enforcement professionals work. Each week we will focus on different chapters, writing situations, issues, or problems encountered in the justice system through our writing assignments.

Student Learning Outcomes

Upon completion of the course, students should:

1. Understand the challenges for law enforcement in multicultural communities.
2. Understand the ever-changing law enforcement agency.
3. Expand your understanding of multicultural representation in law enforcement.
4. Expand your understanding of cross-cultural communication for law enforcement.
5. Understand how law enforcement contacts various culture groups within a community.
6. Understand the multicultural law enforcement elements in terrorism and disaster preparedness.
7. Understand the response strategies for crimes motivated by hate/bias and racial profiling.
8. Understand the cultural effectiveness for peace officers.

CJUS 2580 Leadership Principles for Public Safety

Course Description

This course will cover introductory principles of leadership. Specifically, the course outlines principles of personal leadership, followed by consideration of principles related to organizational leadership, including the execution of the most important priorities found in the public safety realm. It concludes with a self-assessment as well as a presentation on how each leader can improve his/her team's engagement.

Student Learning Outcomes

1. List and describe each of the 7 habits of highly effective people and how it relates to the success for the public safety professional.
2. Contrast abundance and scarcity mentalities and explain how each either benefits or hinders a leader in the public safety profession.
3. Identify Franklin Covey's 4 disciplines of execution.
4. Complete a personal effectiveness quotient to inform personal and professional leadership strengths and opportunities.
5. Identify 2 wildly important goals (WIGs) within your current assignment.

6. Identify 2 lead measures related to the two above WIGs.

CJUS 2990. Practicum**Course Description**

Supervised practical field experience in a Criminal Justice agency. A minimum of six (6) hours per week will be in direct service or contact. One (1) hour per week supervision and critique of activities.

Dance (DANC)**DANC 1110. Dance Appreciation**

Course Description

This course introduces the student to the diverse elements that make up the world of dance, including a broad historic overview, roles of the dancer, choreographer and audience, and the evolution of the major genres. Students will learn the fundamentals of dance technique, dance history, and a variety of dance aesthetics.

Student Learning Outcomes

1. Explain a range of ideas about the place of dance in our society.
2. Identify and apply critical analysis while looking at significant dance works in a range of styles.
3. Identify dance as an aesthetic and social practice and compare/contrast dances across a range of historical periods and locations.
4. Recognize dance as an embodied historical and cultural artifact, as well as a mode of nonverbal expression, within the human experience across historical periods and cultures.
5. Use dance to consider contemporary issues and modes of thought.

DANC 1120. African Dance I

Course Description

African Dance I introduces the student to the aesthetics of African dance technique and develops knowledge and appreciation of its fundamental movements, music, and culture. Students will gain perspectives of African culture through discussion of how music, rhythm, and dance are used in African societies.

Student Learning Outcomes

1. Experience and perform a variety of African dance forms.
2. Demonstrate movements and combinations and the relationship to the body through weight release and grounding.
3. Identify rhythm, polyrhythm, and other musical concepts as they relate to dances taught.
4. Describe the meaning, background, and history of dances learned.
5. Develop greater aesthetic and cultural awareness and understanding through music and dance.

DANC 1130. Ballet I

Course Description

This course is the beginning level of ballet technique. Students learn the basic fundamentals and performance skills of ballet technique, which may include flexibility, strength, body alignment, coordination, range of motion, vocabulary, and musicality.

Student Learning Outcomes

1. Apply fundamental movements of ballet techniques.
2. Enhance flexibility, strength, body alignment, coordination, balance, kinesthetic awareness, range of motion, and musicality.
3. Employ basic theories of classical ballet placement and proper alignment.
4. Develop basic ballet terminology, variations in timing and changes of facing, and barre and center combinations.

DANC 1131. Introduction to Ballroom Dance

Course Description

An introduction to ballroom dance at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, and will be introduced to steps and dances from the Bronze Syllabus of American Smooth and International Standard dances.

Student Learning Outcomes

1. Execute the basic figures of various Ballroom dances in American and International styles
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow
3. Develop the skills of style and performance quality within the dance

4. Demonstrate improved overall physical capability, musicality, and movement memory
5. Appreciate Ballroom dancing as an artform and a discipline

DANC 1135. Argentine Tango

Course Description

An introduction to Argentine Tango at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, as well as the history and culture of the form. May be repeated once for a maximum of 2 credits. Offered Spring of even years.

Student Learning Outcomes

In this course students will:

1. Execute the basic figures of Tango and Argentine Tango.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Articulate the cultural and historical underpinnings of these forms as World dances.
5. Demonstrate improved overall physical capability, musicality, and movement memory.
6. Appreciate Tango as an artform and a discipline.

DANC 1140. Flamenco I

Course Description

This course introduces the student to the art of flamenco and its cultural features and significance. Students will learn the fundamentals of this art form and introductory techniques and skills, which may include handwork, footwork, postures, and specific dances.

Student Learning Outcomes

1. Demonstrate a basic level of competency in the principles of alignment, anatomy, coordination, mobility, stability, and stamina.
2. Demonstrate fundamental flamenco techniques relative to spatial awareness, rhythm, phrasing, and sequencing.
3. Demonstrate competency with basic flamenco movement vocabulary.
4. Perform a variety of flamenco dances, poses, steps, hand movements, and combinations.

DANC 1145. Flamenco Technique

Course Description

Students will focus on flamenco rhythm, technique, and the structure of flamenco dance. Includes an introduction to the rich culture of flamenco.

Student Learning Outcomes

1. As an element of Spanish culture, this course will help students coordinate their movements and familiarize them with their body better with tips for correct body placement of the arms, hips, turns and the dodge movement. Rhythm and expressing feelings are two most important aspects of this type of dance for correct execution.
2. Detail on stretching muscles before and after each exercise session leads the students to achieve good sound, strength, speed and stamina.
3. Students will learn the terminology of various dance types and the corresponding movements in consistence with flamenco characteristics.

DANC 1150. Modern Dance I

Course Description

Modern Dance techniques and styles. Students are introduced to proper warm-up techniques, body alignment, control and flexibility. Students work with various rhythms and combinations of movements. The course emphasizes dance technique and creative experience. The history, terminology and philosophy of Modern Dance are also discussed.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use a more developed sense of muscle control and strength, stretch and balance, coordination.
2. Demonstrate and verbalize an increased awareness of Modern Dance techniques
3. Execute dance phrases, combining several movements and in more than one rhythm.
4. Demonstrate an increased awareness of musicality while dancing and use Modern Dance Techniques creatively.

DANC 1151. Modern Dance

Course Description

Introduction and development of basic modern dance technique and its history approached through academic study and participation.

Student Learning Outcomes

Not Available

DANC 1155. Hip-Hop Dance

Course Description

This course provides an engaging and energetic introduction to the foundational elements and cultural history of hip-hop dance. Students will learn basic techniques, rhythms, and movements inspired by various hip-hop styles, including breaking, popping, locking, and social dances. The course emphasizes musicality, body awareness, self-expression, and an understanding of hip-hop as a global cultural phenomenon. No prior dance experience is required.

Student Learning Outcomes

1. Identify and execute fundamental hip-hop dance movements and techniques.
2. Understand the historical context and cultural significance of hip-hop dance.
3. Develop a basic sense of rhythm, musicality, and timing in relation to hip-hop music.
4. Explore personal style and self-expression through freestyle and choreography.
5. Demonstrate improved body awareness, coordination, and spatial understanding.
6. Engage respectfully with the diverse origins and evolution of hip-hop culture.

DANC 1156 Hip Hop and Jazz I

Course Description

This course explores the music and culture of Hip-Hop, focusing on dance techniques and styles of African dance, jazz, and hip-hop. As students learn the hip-hop dance movement, they will strengthen their ability to choreograph and execute a group performance.

Student Learning Outcomes

1. Identify and analyze the formal elements of Hip Hop and Jazz using appropriate vocabulary.
2. Understand Hip Hop dance history through the exploration of musical and cultural traditions.
3. Acquiring increased body awareness and improved alignment.
4. View live and recorded dance performances and articulate a personal aesthetic.
5. Analyze performances using standards appropriate to the form and cultural context.

DANC 1160. Jazz I

Course Description

This course is for students with a basic knowledge of dance technique. They work to attain muscle control and strength as well as increased flexibility. Further awareness of proper body alignment for injury prevention is emphasized. Jazz choreography, style and terminology are taught at a secondary level.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Execute jazz steps at a secondary level.
2. Apply corrections and improve accordingly.
3. Apply musical rhythm and dynamics to jazz choreography.
4. Expand and project dance vocabulary.

DANC 1161. Tap Dance I

Course Description

The theory and practice of tap dance technique at the beginning level. No previous dance experience is expected. Coursework includes vocabulary and movement exercises in both Buck & Wing and Rhythm styles.

Student Learning Outcomes

1. Recognize and articulate the fundamentals of tap technique, vocabulary, and history.
2. Exhibit improved timing, dexterity, and style through the experience of various schools of tap dance technique, including Buck and Wing and Rhythm.
3. Define proper body alignment and control and understand basic mechanical concepts essential to efficient movement.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate tap dance as an artform and a discipline.

DANC 1165. Beginning Belly Dance

Course Description

Introduction to Middle Eastern (Belly) Dance or Raks Sharqi, using basic steps, movements and rhythms of Turkish, Egyptian, and pan-North African dance forms. The choreography in this class includes any basic steps and arm movements and experimentation with taksim or solo improvisation. Emphasis is on posture and presence, strength in technique, confidence in performance and improvisation. Simple zils or finger cymbal, and veil dancing will also be introduced. Identification of basic rhythms and styles of the music and dance will be discussed. Each class period will include both technical and personal work, encouraging each dancer to find individual style and internal connection within this form of dance.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Perform with correct posture and technique
2. Perform beginning level arm and hand technique and movements
3. Combine steps with variation and improvisation
4. Perform basic cymbal patterns
5. Perform a complete choreography
6. Demonstrate an introductory level of understanding of the cultural context for Middle Eastern dance

DANC 1170. Hip Hop I

Course Description

An introduction to Hip Hop, its movement, style and culture.

Student Learning Outcomes

As a result of completing the course, students will be able to:

1. Demonstrate appropriate skeletal alignment

2. Demonstrate a wide range of movement qualities and dynamics
3. Critique their own work and their peers' work in a constructive manner
4. Work collaboratively with their peers to create choreography
5. Perform a series of short choreographed pieces

DANC 1180. Folklorico Dance I

Course Description

This course studies the historical and cultural roots, traditions, and basic techniques and styles of various regional dances: Mexican Folk, Spanish Colonial, and contemporary dances of the Chicano/Latino experience. This course will challenge you to expand your cultural understanding through movement.

Student Learning Outcomes

1. Demonstrate comprehensive mastery of terminology, technique and performance skills associated with the dance form.
2. Explore ways in which basic improvisation skills and techniques are used in generating movement for choreography and creating original dances.
3. Analyze primary sources and use these sources as evidence to support their understanding of historical events as well as cultural ideas, values and beliefs in a specific dance form.
4. Understand and effectively express the ways in which dance creates and communicates meaning.
5. Demonstrate knowledge of choreographic principles, processes and structure to create coherent, aesthetically unified culminating performance.

DANC 1181. Ballet Folklorico I

Course Description

Introductory course in folklorico dances of New Mexico and Mexico. May be repeated for a maximum of 2 credits.

Student Learning Outcomes

*This course is being submitted to be deleted from CCN because it is inactive.

DANC 1185. Introduction to Country Western Dance

Course Description

An introduction to Country Western Dance at the beginning level. Students will learn the fundamentals of technique and several dances, including Country Western Two-Step, Nightclub Two-Step, Polka, and Line Dance.

Student Learning Outcomes

In this course students will:

1. Execute the basic figures of various Country Western social dances
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow
3. Develop the skills of style and performance quality within the dance
4. Demonstrate improved overall physical capability, musicality, and movement memory
5. Appreciate Country Western dancing as an artform and a discipline

DANC 1210. Master Works

Course Description

This course investigates the work of master choreographers in contemporary, Spanish, and social dance styles. Students will engage in exploring concepts in dance appreciation, themes and purposes of dance by analyzing dance works using principles, elements, and process of compositional design. This course will require students to communicate their opinions through verbal discussions, group projects, and written assignments. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. Successful writing of dance critiques and dance essays.
2. An appreciation for dance works that transcend time.
3. Dance as a tool to see the past, present, and possibly future.
4. History of the different dance genres.
5. Understanding dance through writing.

DANC. 1220. Introduction to Latin Social Dance

Course Description

An introduction to Latin social dance at the beginning level. Students will learn the fundamentals of technique including carriage, common movement vocabulary, and partnering, and will be introduced to steps and dances from the Bronze Syllabus of American Rhythm and International Latin dances.

Student Learning Outcomes

1. Execute the basic figures of various Latin dances in American and International styles.
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow.
3. Develop the skills of style and performance quality within the dance.
4. Demonstrate improved overall physical capability, musicality, and movement memory.
5. Appreciate Latin dancing as an artform and a discipline.

DANC 1221. Latin Club Dance

Course Description

Introduction to the most popular Latin Club Dances to include the Salsa, Merengue, and Bachata. May be repeated up to 2 credits. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. Learn to dance figures from Salsa, Merengue and Bachata.
2. Develop a "style" in all three.
3. Gain deeper understanding of the Elements of Dance & Technique
4. Develop rhythmic accuracy in movement, ability to dance on time & discover phrasing
5. Further lead & follow skills that will enable you to dance at more advanced levels
6. Learn & practice performance dance skills
7. Understand and appreciate the process of creating original amalgamations
8. Expand your knowledge of other dance forms by attending required (2) NMSU Dance Department performances and writing a critique of one (1) performance
9. Enjoy the process!

DANC 1225. Ballroom Dance

Course Description

In this course, you will learn Bronze Level figures in the American Style Ballroom Dances: Foxtrot, Waltz and Tango as well as develop the proper posture, footwork and dance etiquette needed to be successful on the Social dance floor. A brief historical background of each dance form will be presented. Skill development will be sequential and cumulative. Review of previous instruction will generally precede introduction of new material. Students will practice with partners on a rotational basis, affording everyone the opportunity to experience new partners and dancing styles.

Student Learning Outcomes

In this course, students will:

1. learn to dance Figures 1-7 in 3 American Style Ballroom dances
2. develop rhythmic accuracy in movement
3. develop the skills to adapt to a variety of dance partners

4. develop adequate social and recreational dance skills
5. develop proper carriage, poise, and grace that pertain to Ballroom dance
6. learn to recognize Ballroom music and its application for the appropriate dances
7. understand different possibilities for dance variations and their applications to a variety of Ballroom dances
8. understand and appreciate the process of creating original patterns and variations
9. expand his/her knowledge of dance forms through attending two (2) NMSU Dance Department performances and writing a critique on one of the performances
10. enjoy the process

DANC 1230. Beginning Salsa and Swing

Course Description

This class for beginners starts with the fundamentals of salsa and swing styles of dance.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate basic knowledge of Salsa and Swing styles. -
2. Apply appropriate partnering techniques, i.e. leading and following.
3. Recall dance terminology and patterns.
4. Organize dance patterns into complete routines

DANC 1235. Introduction to West Coast Swing Dance

Course Description

An introduction to West Coast Swing dancing at the beginning level. Students will learn the fundamentals of technique of several Swing forms and the Hustle, including basic steps, partnering, and musical forms.

Student Learning Outcomes

1. Execute the basic figures of both West Coast Swing and the Hustle
2. Demonstrate an understanding of the elements of technique of these forms, including posture, use of the hips and legs, and lead and follow
3. Develop the skills of style and performance quality within the dance
4. Demonstrate improved overall physical capability, musicality, and movement memory
5. Appreciate Swing dancing as an artform and a discipline

DANC 1310. Fitness for Dancers

Course Description

This course is an aerobic dance class that integrates stretching, conditioning, and various types of dance styles, that may include Zumba®, into an exercise form for optimal performance for dancers.

Student Learning Outcomes

1. Develop competency in overall fitness and wellness to pursue careers in education, health and fitness, professional arenas, or to further their academic dance pursuits.
2. Attain an understanding of theoretical and practical scientific concepts of movement to
3. Become knowledgeable in dance terminology and components of fitness.

DANC 1460. Dance for Musical Theater I

Course Description

This course provides students with an understanding of the Tap and Jazz Dance technique for use in Musical Theater and other performance genres at the beginning level. This course is designed for students to gain knowledge and understanding of Tap and Jazz Dance as art forms

Student Learning Outcomes

The students will successfully accomplish the following:

1. An understanding of traditional styles of dance used for musical theater.
2. An understanding of anatomy, kinesiology, and development of movement principles
3. Improvement of muscular strength, flexibility, and elasticity
4. An understanding of motion awareness and movement vocabulary

DANC 1990. Dance Practicum

Course Description

Varies.

Student Learning Outcomes

Varies

DANC 2001. Crew Practicum

Course Description

Participation in University theatre and dance season through assignment on a production crew. To be completed in one semester.

Student Learning Outcomes

1. Gain an appreciation of performance production work
2. Learn how to produce theatre and dance productions
3. Be introduced to the non-performance needs of a production
4. Receive hands-on experience in producing theatre and dance

DANC 2040. Stretching, Strengthening and Conditioning for the Performing Arts

Course Description

Specialized floor work training using principles of the Pilates Methodology and the basic movement concepts of Core Dynamics™. For preparing and maintaining a uniformly developed body for dance and movement.

Student Learning Outcomes

1. Demonstrate a working knowledge of the principles of Pilates mat work.
2. Demonstrate improvement in strength and flexibility.
3. Demonstrate written understanding of Pilates mat exercises.

DANC 2111. Dance Pedagogy: Educational Theory

Course Description

This course will examine how people learn cognitively, physically, and emotionally so that students can become better at self-teaching and self-assessment. Students will study several educational theories and how they relate to dance. May be repeated up to 1 credits. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. Describe their learning styles/intelligences/Myers Briggs, etc. and how to use them to their best advantage
2. Contrast and compare transmission, transactional, and transformational learning theory and what they mean in a classroom
3. Describe and apply movement principles for more efficient and effective dancing
4. Apply visualization techniques to improve performance.

DANC 2112. Dance Ensemble

Course Description

Participation in Sol y Arena. This course will include learning dance repertory from faculty and guest choreographers performing in NMSU dance program sponsored performances and creating dances that can be adjudicated for any NMSU dance program sponsored performances under faculty supervision.

Student Learning Outcomes

At the successful completion of the course the student will demonstrate:

Performance

1. An understanding of the artistry of the dancer
2. An understanding of the art and interpretation of choreography
3. An improvement of movement performance skill
4. An understanding of various dance movement vocabulary
5. An increased awareness of stage presence and projection
6. An understanding of technical stage production

Production

1. An understanding of behind the scene workings of a dance performance
2. An understanding of the marketing and promotional aspects of performance
3. An understanding of costume design and construction

DANC 2113. Dance Production I

Course Description

Students will provide production and marketing support for all performances and/or activities sponsored by the NMSU Dance Program. Over the semester students will experience the promotional and technical aspects necessary for the production of successful dance performances and special projects of a dance program.

Student Learning Outcomes

Not Available

DANC 2114. Dance Sport I

Course Description

Performance-based, team formation dance in a variety of Latin and ballroom dances.

Student Learning Outcomes

1. Practice a variety of Ballroom and Latin dances to be expressed socially, competitively, and on stage
2. Adapt and communicate with a variety of dance partners
3. Learn skills for successful partnership
4. Practice advanced level technique in all styles of DanceSport
5. Develop awareness of "what is good dancing"
6. Create original choreography for both stage and competition
7. Self-assess -learn to be your own best teacher
8. Self-coach -learn to coach self through four stages of development
9. Develop musicality skills, including rhythmic accuracy and timing
10. Work as a team to make sure that no one is left behind while furthering your leadership abilities
11. Promote DanceSport in the community and in the world as a healthy and fun lifestyle alternative
12. Develop valuable life skills such as enrollment, registration & teamwork
13. Enhance cognitive thinking as described by Robert J. Sternberg's triarchic theory of intelligence
14. Learn to act and perform as a "professional" dancer
15. Produce creative spring dance concert
16. Have fun

DANC 2120. Improvisation

Course Description

Introduction to improvisational skills in movement and the principles of choreography as applied to dance/theater composition. Investigation of structured improvisation within the fundamental elements of dance: energy, space, and time.

Student Learning Outcomes

Students will develop a basic understanding and application of

1. Choreography as a way to engage with ideas
2. Creating and developing movement vocabulary to express ideas
3. How to use energy, space, and time for choreography
4. Formal structure and experimental approaches in choreography

DANC 2130. Ballet II**Course Description**

Intermediate level of ballet technique; Introduction of more advanced Ballet vocabulary at barre/center work; increase flexibility, strength, body alignment, and coordination for practice of steps/combinations with variations in timing and changes of facing.

Student Learning Outcomes

A successful student will be able to understand and execute with accuracy all the steps presented on the take home quizzes and are encouraged and expected to attend at least two semesters of each level in order to advance to the next level of ballet technique.

DANC 2130L. Ballet II Lab**Course Description**

This course is designed for the acquisition of intermediate-level ballet technique and skill development.

Student Learning Outcomes

1. An increased level of technical proficiency in ballet at the intermediate level
2. Increased flexibility and range of motion
3. Increased awareness of body alignment
4. Increased rhythmic accuracy

DANC 2140. Flamenco II**Course Description**

The structure of flamenco through choreographies that represent the basic flamenco dance forms: Fandangos de Huelva, Alegrias, Solea par Bulerias, and Tientos/Tangos. The course will also cover intermediate flamenco technique including footwork, palm as (hand claps), braceo (movement of the arms), and floreo (movement of the hands)

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate the ability to dance a short Fandangos de Huelva
2. Demonstrate the ability to dance a short Alegrias or So lea por Bulerias
3. Demonstrate the ability to dance a short Tientos /Tangos
4. Demonstrate an intermediate level of Pal mas, Brazeo, Floreo, Taconeo

DANC 2140L. Flamenco II Lab**Course Description**

This course is designed for the acquisition of intermediate level Flamenco dance technique and skill development.

Student Learning Outcomes

1. Learn the advanced hand and arm movements of Flamenco dance.
2. Develop correct & artful postures for the dance.

3. Continue rhythmic footwork development to add to the various combinations.
4. Develop practical & useful Spanish dance vocabulary.

DANC 2141. Flamenco Choreography I

Course Description

Students develop and perform solo studies with an emphasis placed on the development of personal movement vocabulary, phrase building, and the exploration of choreographic tools for Flamenco on stage. Discussion, critiquing, and descriptive writing about their choreographic processes will supplement direct physical work. May be repeated up to 6 credits. Consent of Instructor required. Restricted to Las Cruces campus only.

Student Learning Outcomes

1. While engaging the entire body through hand, arm and footwork technique.
2. Student will create full-length choreographies emphasizing style and classicism.
3. Be able to give brief descriptions of the history of the art form and its expressive content.

DANC 2142. Classical Spanish Dance

Course Description

The study of theory, techniques, and practice of Classical Spanish at the intermediate level. Includes historical and cultural contexts of this art form. May be repeated up to 8 credits. Consent of Instructor required. Restricted to Las Cruces campus only.

Student Learning Outcomes

At the successful completion of this course the student will demonstrate:

1. Knowledge of basic Classical Spanish vocabulary
2. Understanding of the basic differences between Classical Spanish dance and Ballet techniques
3. Increased coordination and rhythmic accuracy
4. Knowledge of the onomatopoeia of castanets
5. Ability to perform a Classical Spanish Dance piece with castanets

DANC 2142L. Classic Spanish Dance Lab

Course Description

This course is designed for the acquisition of intermediate level Spanish dance technique and skill development.

Student Learning Outcomes

1. Students will demonstrate in studio classes and performances with an intermediate to advanced foundation of technique with castanets through a cross range of exercises, folk and classical Spanish forms of dance.

DANC 2150. Modern Dance II

Course Description

Modern II is designed to further the student's abilities in modern dance technique, to enhance efficient use of weight and momentum, to release held patterns in the body's mechanics, to enrich spatial awareness, and to begin work on performance techniques.

Student Learning Outcomes

1. Improve accuracy in alignment and shape
2. Improve precision in space, in timing and rhythm, and in focus/intent
3. Learn combinations and movement dynamics quickly
4. Begin to integrate performance techniques while working in the classroom setting
5. Use a concentrated attitude and an open, creative mind to approach the work in an artistic manner unique to your abilities
6. Listen, see and apply all the information given within one class period and over the semester

7. Self-awareness and mindfulness: how much space do you take in the class and why? How aware are you of those around you, and those you are dancing with?
8. Release of weight to create controlled momentum
9. Locating center and moving from there

DANC 2150L. Modern Dance II Lab

Course Description

This course is designed for the acquisition of intermediate level modern dance technique and skill development.

Student Learning Outcomes

1. Increase and improve his/her dance artistry
2. Enhance his/her awareness and skill of movement initiation and movement motivation
3. Improve his/her muscular strength, flexibility, and elasticity
4. Improve his/her static and dynamic balance
5. Expand his/her temporal, spatial, effort and motion awareness

DANC 2156. Hip Hop and Jazz II

Course Description

In this continuation of Hip Hop and Jazz I, students will be exposed to more advanced dance movements and choreography for group performances.

Student Learning Outcomes

1. Identify and analyze the formal elements of Hip Hop and Jazz using appropriate vocabulary.
2. Understand Hip Hop dance history through the exploration of musical and cultural traditions.
3. Acquire increased body awareness and improved alignment.
4. View live and recorded dance performances and articulate a personal aesthetic.
5. Analyze performances using standards appropriate to the form and cultural context.

DANC 2157. Hip-Hop Dance

Course Description

An introduction to hip hop dance and its relationship to other aspects of hip-hop culture, music, and media, with an emphasis on creativity, individuality, and expression. Coursework may include street styles, breaking, and various regional forms.

Student Learning Outcomes

1. Recognize and articulate the fundamentals of various styles of hip hop dance technique and vocabulary
2. Contextualize the history and cultural aspects of hip hop
3. Examine the relationship between dance and other aspects of hip hop culture such as music and media representation
4. Demonstrate improvement in overall physical capability, musicality, and movement memory
5. Appreciate hip hop dance as an artform and a discipline

DANC 2160. Jazz II

Course Description

Jazz II is a course geared for intermediate/advanced dancers familiar with the basics of Jazz dance technique. Students are expected to enter the class with a skill set and understanding of beginning level technique (i.e. spotting while turning, pirouettes, chaîné turns, pas de bourre, chassé, battement, and grand jeté). From this point, students will work to further their ability in Jazz technique, gain performance skills within the classroom setting, and explore different styles of Jazz choreography.

Student Learning Outcomes

Throughout the semester, students will be working to:

1. Develop and Improve intermediate/advanced Skills of Jazz dance technique
2. Increase strength, flexibility, and stamina
3. Refine kinesthetic awareness, spatial awareness, timing, and coordination while dancing alone and in a group
4. Demonstrate dynamic range, performance quality, and musicality through a Jazz dance vocabulary
5. Investigate and make intentional stylistic choices in performance through a Jazz dance vocabulary
6. Identify major choreographers and works in Jazz history
7. Increase their appreciation for the art and discipline of dance
8. Create and perform a 2-3 minute Jazz dance “movement study” based on the style of a major Jazz dance choreographer

DANC 2161. Tap Dance II

Course Description

Continued study of skills and techniques of tap dance at the advanced level

Student Learning Outcomes

1. An understanding of Tap Dance
2. An understanding of anatomy, kinesiology and development of movement principles
3. An improvement of muscular strength, flexibility and elasticity
4. An understanding of motion awareness and movement vocabulary

DANC 2165. Intermediate Belly

Course Description

An opportunity to focus, sharpen, and expand the technical skills, dance vocabulary and personal presence of each dancer in this dance form. Primary attention is paid to arms, hands, body placement, fluidity and movement. Students continue to develop their work with finger cymbals, and with taksim, (solo improvisation), veil dancing and some basic music structure. Cultural and stylistic differences of this dance as it manifests in various countries and cultures will be introduced.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate intermediate level arm and hand techniques and movements
2. Confidently improvise, alone or with a group, combinations of steps and layering of movements
3. Demonstrate the ability to identify a variety of dance taksim
4. Accompany the dance with intermediate level finger cymbal patterns
5. Perform a complete choreography, alone or with a group with correct posture and technique
6. Discuss the cultural context of this Middle Eastern dance

DANC 2170. Commercial Dance

Course Description

This course delves into the dynamic world of commercial dance, focusing on the foundational techniques, stylistic nuances, and performance demands of commercial jazz and hip-hop. Students will explore the historical evolution, influential choreographers, and current trends within these vibrant dance forms as they apply to the entertainment industry (music videos, live concerts, film, television, and touring). Emphasis will be placed on developing versatility, adaptability, stage presence, and the ability to quickly learn and execute complex choreography.

Student Learning Outcomes

1. Demonstrate proficiency in core techniques and stylistic elements of commercial jazz and various hip-hop styles (breaking, popping, locking, house, new school).
2. Execute complex choreographic phrases with musicality, dynamics, and performance quality.
3. Analyze and articulate the historical and cultural contexts of commercial jazz and hip-hop.

- 4 Identify and apply strategies for quick retention and execution of choreography.
- 5 Develop a heightened sense of stage presence, adaptability, and versatility in performance.
- 6 Understand the professional expectations and demands of the commercial dance industry.
- 7 Work collaboratively in a studio setting, demonstrating professionalism and respect.

DANC 2235. West Coast Swing II

Students will take their West Coast Swing & Hustle to the next level. Learn Intermediate and Advanced figures and techniques in both dances. Students will also enjoy advanced study on musicality and blending to create new amalgamations as well as practice in advanced leading & following techniques. May be repeated up to 8 credits. Consent of Instructor required. Restricted to Las Cruces campus only.

Student Learning Outcomes

*This course is being submitted to be deleted from CCN because it is inactive.

DANC 2250. Contemporary Dance Ensemble I

Course Description

Performance-based instruction for students pursuing a career in contemporary dance. Instruction includes contemporary dance repertory and choreography for stage, outdoor arenas, and site-specific areas.

Student Learning Outcomes

At the successful completion of the course, the student will demonstrate:

Performance

1. An understanding of the artistry of the dancer
2. An understanding of the art and interpretation of choreography
3. An improvement of movement performance skill
4. An understanding of various dance movement vocabulary
5. An increased awareness of stage presence and projection
6. An understanding of technical stage production

Production

1. An understanding of costume design and construction
2. An understanding of behind the scene workings of a dance performance

DANC 2251. Spanish Dance Ensembles I

Course Description

Performance-based instruction for students pursuing a career in dance with an emphasis in Spanish Dance. Instruction includes dance repertory and choreography for stage, outdoor arenas, and site-specific areas

Student Learning Outcome

1. An understanding of the artistry of the dancer
2. An understanding of the art and interpretation of choreography
3. An improvement of movement performance skill
4. An understanding of various dance movement vocabulary
5. An increased awareness of stage presence and projection
6. An understanding of technical stage production

Production

7. An understanding of behind the scene workings of a dance performance
8. An understanding of the marketing and promotional aspects of performance
9. An understanding of costume design and construction

DANC 2270. Dance Improvisation I

Course Description

An introduction to the practice of dance improvisation focusing on play and discovery as methods for generating movement and exploring the full potential of the communicative, authentic body in motion. Course content includes concepts in Body, Effort, Shape, Space, Kinesthetic Response, Scoring, and Contact.

Student Learning Outcomes

1. Understand the core concepts of exploration and authenticity and the importance of these ideas to a modern dancer and choreographer^[SEP]
2. Demonstrate immediacy of presence, both physically and mentally, in the way that they responding to both choices and instincts in the moment^[SEP]
3. Connect the concepts learned in Modern dance technique to the study of dance improvisation and the concepts of this class to outside work as dancers, students and citizens
4. Access the constantly expanding movement vocabulary which will inform their work moving forward in dance technique and composition. An understanding of temporal, spatial, effort and motion awareness
5. Improvise confidently both individually and as part of a group

DANC 2310. Bronze American Rhythm

Course Description

Bronze level American Rhythm patterns, techniques, and partnering with emphasis on elements of dance.

Student Learning Outcomes

In this course, you will:

1. Learn to dance the Full Bronze syllabus figures in 5 American Style Rhythm dances
2. Develop Bronze level dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop rhythmic accuracy in movement, ability to dance on time & discover phrasing
5. Develop Cuban Motion, proper carriage, poise, and grace that pertain to Rhythm dances
6. Further lead & follow skills that will enable you to dance at more advanced levels
7. Master your ability to recognize the music associated with each dance
8. Learn & practice social & performance dance skills
9. Understand and appreciate the process of creating original amalgamations
10. Expand your knowledge of the history of the Rhythm dances through research outside of class and provide information through video, written and oral form.
11. Expand his/her knowledge of dance forms through attending two (2) NMSU Dance Department performances and writing a critique on ONE of the performances.
12. Will be able to demonstrate the Full Bronze Figures in the American Style Rhythm

DANC 2311. Bronze American Smooth

Course Description

Bronze level American Smooth patterns, technique, and partnering with an emphasis on the elements of dance.

Student Learning Outcomes

The student will...

1. Learn to dance the Bronze DIVIDA Manual in 4 American Smooth Style Dances.
2. Develop Bronze level dance technique.
3. Gain a deeper understanding of the Elements of Dance.
4. Develop rhythmic accuracy in movement, ability to dance on time & discover phrasing.
5. Further develop lead & follow skills that will enable you to dance at more advanced levels.
6. Master your ability to recognize the music associated with each dance.
7. Learn & practice social & performance dance skills.

8. Understand and appreciate the process of creating original amalgamations.
9. Further your knowledge of the four dances by doing research, writing a report and giving an oral presentation to the class.
10. Expand your knowledge of other dance forms by attending two (2) NMSU Dance Department performances & writing a critique on one performance.
11. Enjoy the process!

DANC 2320. Bronze International Latin

Course Description

This is the style of Latin dance that is danced around the globe and is featured in the World DanceSport Championships. Students will learn the Bronze Level figures and techniques in four (4) International Style dances: Rumba, Cha, Samba & Jive.

Student Learning Outcomes

1. Learn to dance the Bronze DIVIDA Material for the International Latin Syllabus Develop Bronze level dance technique.
2. Gain deeper understanding of the Elements of Dance Develop Smooth accuracy in movement, ability to dance on time discover phrasing.
3. Further develop lead follow skills that will enable you to dance more advanced levels.

DANC 2321. Bronze International Standard

Course Description

This is the style of Ballroom dance that is performed around the globe and is featured in the World DanceSport Championships. Learn the Bronze Level figures and techniques in five (5) International Style dances: Waltz, Tango, Viennese Waltz, Foxtrot & Quickstep. Students will focus on understanding technical elements of dance, memorizing and performing routines.

Student Learning Outcomes

In this course students will:

1. Learn to dance the Bronze Syllabus figures in the five (5) International Standard Ballroom Dances
2. Develop Bronze International Style dance technique
3. Gain deeper understanding of the Elements of Dance
4. Develop rhythmic accuracy in movement, ability to dance on time & discover phrasing
5. Further lead & follow skills that will enable you to dance at more advanced levels
6. Learn & practice performance dance skills
7. Understand and appreciate the process of creating original amalgamations
8. Expand your knowledge of other dance forms by attending required (2) NMSU Dance
9. Department performances and writing a critique of one performance
10. Enjoy the process!

DANC 2325. Contemporary African Dance

Course Description

Contemporary African Dance is designed to further the student's abilities in the aesthetics of African dance technique in a more advanced and fast paced format. We will utilize the language of African dance as a basis for movement development while incorporating other dance forms that influence contemporary African artists today. This class will develop the knowledge and appreciation of contemporary African movements, music, and culture. Class will be approached from a contemporary perspective with an emphasis on the marriage between rhythm and dance. This class will help enhance efficient use of relaxed, heavy weight, grounding, weight-shifting, release, and movement.

Student Learning Outcomes

Not Available

DANC 2360. Dance Studio Management

Course Description

Visualization, management and leadership for a dance studio.

Student Learning Outcomes:

At the successful completion of the course, the student will demonstrate:

1. The ability to create a vision, mission statement a, business plan which will include both short and long-term goals.
2. The procedure to develop a financial budget, forecasting revenues and identifying operating cost.
3. Evaluating methods for determining facility acquisition and affordability.
4. Exposing the student to staffing requirements and the processes of employee benefits, policies and procedures, hiring and firing.
5. The student will develop an understanding of customer service, marketing and sales techniques.
6. The class will culminate with the student having in their possession a manual for the creation of a dance studio. 26

DANC 2400. Music Essentials for Contemporary Dance

Course Description

Overview of fundamental elements of music and historically significant collaborations between choreographers and composers in contemporary dance.

Student Learning Outcomes:

Students who earn a passing grade in the course will demonstrate the following:

1. General comprehension and knowledge of the historical periods, and stylistic trends in the history of western music from Antiquity to the present
2. general knowledge of the cultural and geopolitical context surrounding these trends and styles
3. Aural and conceptual recognition of common musical forms, and structures, i.e.. ABA, song form, waltzes, and other smaller forms
4. Basic knowledge of rhythm, simple meters, and simple rhythmic notation, i.e.. short and long note values, and dotted values
5. General knowledge of essential music terminology (melody, harmony, counterpoint etc.) - Basic understanding of harmony, i.e.. "The Phrase Model", and melodic phrasing in musical works for the concert hall
6. Scholarly research in the fields of music and dance, and/or collaborative skills through composition of a final project

DANC 2420. Music Essentials for Flamenco

Course Description

Overview of fundamental elements of music and historically significant collaborations between choreographers and composers in contemporary dance.

Student Learning Outcomes:

Students who earn a passing grade in the course will demonstrate the following:

1. Ability to define Flamenco song forms for styles and elements.
2. Knowledge of wide variety of Flamenco song forms and the leading interpreters/innovators/composers of these styles.
3. Basic knowledge of the history of Flamenco music and the lives and music of representative interpreters/innovators/composers.
4. Ability to apply listening skills to a variety of musical examples.
5. Demonstrate basic music/rhythmic notation skills and apply these skills specifically in contexts of Flamenco Dance (i.e. palomas patterns).

DANC 2460. Dance for Musical Theatre

Course Description

This course will supplement the dance technique curriculum specifically in support of the study of Musical Theatre. Students will practice various social, world, and theatrical dance forms, learn selections from iconic choreography, experience mock dance auditions, and explore the skill of dance composition for musical theatre repertory.

Student Learning Outcomes

1. Participate successfully in dance techniques and styles outside of the basic tap, jazz, ballet, and modern dance curriculum
2. Recognize and contextualize musical theatre history and repertory through exposure to significant historical choreography and choreographers
3. Understand and excel at the skill of taking part in a musical theatre dance audition
4. Demonstrate improvement in overall physical capability, musicality, and movement memory
5. Appreciate the practice of musical theatre dance as an artform and a discipline

DANC 2690. Flamenco II

Course Description

Flamenco techniques and styles at the intermediate level.

Student Learning Outcomes

Students will develop an intermediate understanding and application of:

1. alignment, anatomy and kinesiology in flamenco dance
2. strength, stamina, flexibility, and coordination within flamenco dance vocabulary
3. fundamental concepts of space, time, and effort utilized in flamenco dance

DANC 2993. Workshop in Dance

Dental Assisting (DAST)

DAST 1110. Dental Science I

Course Description

This is an introduction course that will introduce the student to dental assisting and prepare them for the dental assisting program. The focus will be on the history of dentistry, ethics and code of conduct in dentistry, prevention, anatomical basics of the head and neck, and anatomy and physiology of body systems as they relate to dentistry. The laboratory component will include simulation software and in-person observation of dental procedures. Students will receive basic training in HIPAA and Bloodborne Pathogens.

Student Learning Outcomes

1. Pronounce, define, and spell all key terms relevant to assigned chapters.
2. Analyze historical individuals and their significant contribution(s) to today's dentistry.
3. Associate the concept of professionalism and differentiate each professional and their role in dentistry.
4. Summarize the fundamental principles of ethics for a dental professional.
5. Explain HIPAA, Patient Safety Act, and Patients' Bill of Rights.
6. Describe the purpose and limitations of disinfection, methods of disease transmission, significance of PPE and barrier techniques, sterilizing and protecting against BBP.
7. Summarize the difference between anatomy and physiology to interpret the 10 body systems.
8. Identify the basic anatomy of head and neck regions in preparation for clinical dental assisting.
9. Apply the components of a preventative dentistry program to create an individualized plan assessing oral hygiene products, dietary analysis, and fluoride needs assessment.
10. Examine the role of a dental assistant by live observation and completing specific simulation assignments.

DAST 1111. Dental Materials Theory**Course Description**

Covers the composition, properties, classifications, uses, and manipulation of materials commonly used in dentistry. Topics also include legal, ethical, and safety issues related to the use of dental materials.

Student Learning Outcomes

1. Explain the properties, composition, handling, storage, dispensing and disposal of dental materials used chairside and in the laboratory.
2. Describe the legal and ethical considerations for using dental materials in a safe and responsible manner.
3. Describe the role of the dental auxiliary in the selection, preparation, and placement of dental materials.

DAST 1111L. Dental Materials Laboratory**Dental Materials Laboratory****Course Description**

The laboratory emphasizes first-hand observations and hands-on performance of skill competencies that support the concepts taught in the theory course.

Student Learning Outcomes

1. Demonstrate the handling, storage, dispensing and disposal of dental materials used chairside and in the laboratory.
2. Demonstrate the role of the dental auxiliary in the legal, ethical, and safe use of dental materials.

DAST 1117. Principles and Techniques of Dental Radiology I**Course Description**

Provides an introduction to the study of the science of x-radiation as it pertains to dentistry. Includes topics such as radiation protection, infection control, image characteristics, dental image production, dental x-radiation equipment, radiation physics and radiation biology.

Student Learning Outcomes

1. Determine, categorize and apply the appropriate radiation health protection techniques used in dentistry.
2. Recognize the fundamental concepts of radiation physics and radiation biology.
3. Recall radiation exposure guidelines, units used to measure exposure, radiation safety legislation and regulation.
4. Outline the infection control procedures necessary before, during and after x-ray exposure.

5. Identify the component parts of both intraoral and extraoral dental x-ray machines.
6. Determine how milliamperage, kilovoltage peak and exposure time all influence the quality of the x-ray beam
7. Differentiate between the factors that influence radiation characteristics and image characteristics.
8. Compare direct digital imaging and indirect digital imaging and explain how each image is captured and retrieved.
9. State the basic principles of both the paralleling technique and bitewing technique.
10. Illustrate the placement of a receptor, beam alignment device, position-indicating device (PID) and the central ray for both the paralleling and bitewing technique.
11. Distinguish between radiolucent and radiopaque areas on a dental radiograph.
12. Explain and identify the general diagnostic criteria for intraoral images.
13. Describe the step-by-step procedures for image mounting, viewing and interpretation of radiographs.
14. Identify anatomical landmarks and dental anatomy found on intraoral images.

DAST 1119. Fundamentals of Dental Assisting

Course Description

This introductory course provides students with foundational knowledge and skills essential for a career in dental assisting including infection control and safety protocols, OSHA regulations and the management of hazardous materials.

Additionally, this course includes ergonomics, patient communication, and ethical considerations.

Student Learning Outcomes

1. Describe the importance of ergonomics and safe work practices in the dental setting.
2. Explain the principles of office organization and workflow.
3. Describe patient care and infection control protocols.
4. Describe disease transmission, disinfection, sterilization, hazardous materials according to State and Federal guidelines.
5. Describe methods to reduce bacterial contamination in dental unit waterlines.
6. Interpret dental ethics and jurisprudence.
7. Utilize effective patient communication skills.
8. Understand and utilize dental terminology

DAST 1123. Dental Radiology

Course Description

This course focuses on the principles and techniques of dental radiography. Students will study radiation physics, hygiene, and safety protocols. Emphasis is placed on the fundamentals of intraoral and extraoral radiographic techniques, including exposure, quality assurance, and interpretation of radiographs. The course also covers patient selection criteria and explores other ancillary radiographic techniques.

Student Learning Outcomes

1. Explain the principles of radiation physics in the production of x-rays.
2. Discuss the effects of ionizing radiation on living tissues and implement appropriate safety measures.
3. Recognize appropriate receptors and exposure factors.
4. Differentiate intraoral and extraoral radiographic techniques including landmarks and interpretation.
5. Explain infection control protocols during all radiographic procedures.
6. Recognize legal and ethical considerations related to dental radiography.
7. Develop communication strategies as related to dental radiology.

DAST 1123L. Dental Radiology Laboratory

Course Description

The laboratory emphasizes first-hand observations and hands-on performance of skill competencies that support the concepts taught in the theory course.

Student Learning Outcomes

1. Produce high-quality dental radiographs in a safe, legal and ethical manner.
2. Effectively communicate with and manage patients during radiographic procedure.

DAST 1140. Bio Dental Science I**Course Description**

This introductory course provides students with a foundational understanding of dental sciences. Students will study human anatomy and physiology, with a specific emphasis on the head, neck, and relevant body systems.

Furthermore, the course delves into oral biology, including the anatomy, histology, and physiology of the oral cavity, teeth, gums, and supporting structures. Students will acquire and utilize dental terminology related to tooth morphology, dentition, oral embryology, oral pathology, oral anatomy, and histology.

Student Learning Outcomes

1. Demonstrate knowledge of general and dental anatomy and physiology.
2. Identify dental numbering systems and tooth identification.
3. Explain the development and structure of teeth and associated structures.
4. Identify common medical and dental diseases and treatments.
5. Describe tooth morphology, histology, and embryology.

DAST 1141. Dental Education Issues**Course Description**

An orientation to Dental Clinical Practicum II, which includes familiarization with various dental specialty settings, operations, and evaluation procedures. Students review chairside procedures, share their experiences, and discuss national and state credentials, current concepts in dental and medical health technology and trends, dental careers, employment opportunities, personality types, emotional intelligence, cultural diversity, and the New Mexico Dental Practice Act.

Student Learning Outcomes

1. Analyze best practices in clinical experiences.
2. Explain current concepts and trends in dental and medical technology.
3. Describe career goals and prepare a cover letter, resume, and job application.
4. Describe the procedures needed for a job interview, contract signing, salary negotiations, and job termination.
5. Explore personality types and emotional intelligence as they relate to dental profession.
6. Demonstrate compassion, empathy, and sensitivity to patients of different cultural backgrounds.
7. Describe the scope of duties for a dental auxiliary in the state of New Mexico.

DAST 1193L. Principles and Techniques of Dental Radiology I Laboratory**Course Description**

This course provides the application of hands on instruction in radiation protection for the operator and patient, infection control, image characteristics, dental film exposure, processing and mounting, operation and care of digital x-ray equipment.

Student Learning Outcomes

1. Understand radiation safety for both operator and patient.
2. Be proficient in patient and operator radiation safety.
3. Identify dental radiographic film and phosphoric plates.

4. Use an xcp holding device.
5. Perform various radiation exposures on mannequins using paralleling techniques.
6. Build skill level with individual film exposures.
7. Perform a full mouth series of radiographs using the paralleling technique.
8. Perform a full-mouth series of radiographs with limited errors within a designated time frame.
9. Process radiographs using a Scan-X processor using Eaglesoft software.
10. Appropriately mount all radiographs using dental landmarks.

DAST 1240. Preventative Dentistry/Oral Health Care

Course Description

The goal of the dental profession is to protect and preserve the oral health of the public. Each dental assistant is a member of a team of healthcare workers combatting diseases that jeopardize the oral health of community members. This course will emphasize proper brushing techniques, nutrition, and overall healthcare for the dental patient. After learning preventative dentistry concepts, students serve the local community by providing oral health care and preventative education. Some classes are held at Luna Community College dental facility; students will also travel to district schools. These experiences will enhance the knowledge of the participating student in preventative dental care and enrich his or her communication skills.

Student Learning Outcomes

1. Recognize states of intraoral health and disease.
2. Demonstrate oral hygiene techniques to promote optimal oral health.
3. Identify characteristics of each age group in order to effectively communicate oral hygiene education.
4. Relate the relationship of nutrition to general and oral health.
5. Provide preventative dental education to individuals and groups in community settings.
6. Differentiate the variety of preventive oral health procedures and when they're indicated.
7. Explore the impact of fluoride on oral health.

DAST 1292L. Fundamentals of Chairside Assisting I Laboratory

Course Description

This course provides the clinical application of hands-on instruction in the use and sterilization of all dental instruments and basic fundamentals of chairside assisting. Subject areas are arranged in a clinical competency program, which is a method of study that helps the student master each skill before advancing to the next level.

Student Learning Outcomes

1. Identify the parts, function and care of dental equipment in the operatory.
2. Demonstrate stated dress code and professionalism in all laboratory and/or clinical areas.
3. Demonstrate correct hand hygiene procedures and placement of PPEs.
4. Demonstrate the correct grasps and body mechanics utilizing the various dental instruments.
5. Demonstrate the correct seating position for a patient and the dental team member while maintaining ergonomics.
6. Demonstrate preparation for seating and dismissing patients.
7. Obtain vital signs and document the findings consistent with instructor findings.
8. Identify the anatomical structures and landmarks of the face and oral vestibule and describe their basic function.
9. Demonstrate the disinfection and preparation of the dental operatory and prepare the acceptable disinfection and sterilization solutions.
10. Demonstrate patient education, including oral hygiene instructions by selecting the appropriate toothbrushing method and various auxiliary aids for patients with various needs.

11. Demonstrate various techniques for isolation and retraction.
12. Demonstrate the correct selection/positioning of the evacuator tips for various areas in the oral cavity.
13. State and apply the principles of four-handed dentistry including: correct methods for instrument transfer, various techniques for isolation, indirect vision and retraction, the correct grasps and fulcrum used with dental instruments as well as correct positioning of the evacuator tip for various areas in the oral cavity.
14. Demonstrate CDC recommendations for dental unit water quality.
15. Identify instruments used for examination, restorative and accessory dentistry and placement of instruments on a tray in accordance to their use.
16. Identify burs used in each handpiece and explain the type and appropriate number series and size and demonstrate correct method of clean-up and care.
17. Assembly of matrix band and universal retainer.
18. Demonstrate the placement of topical anesthetic identified by injection type and/or procedure.
19. Identification the parts and assemble an anesthetic syringe.

DAST 1310. Clinical Experience I

Course Description

Introduces clinical practice through student preceptorships utilizing four-handed dentistry at chair-side including expanded function in general dentistry delegated to the dental assistant as designated by the State Dental Practice Act and as part of the Commission on Dental Accreditation's requirement of minimum clinical hours.

Student Learning Outcomes

1. Demonstrate competence in all laboratory, clinical, and office-management skills in general dentistry.
2. Demonstrate competence in community dental health education.
3. Maintain a record of required activities in each clinical assignment.
4. Discuss clinical experiences during scheduled seminars.
5. Complete required skills and clinical hours by the specified deadline.

DAST 1512. Bio Dental Science II

Course Description

This course builds upon foundational knowledge, focusing on advanced concepts crucial for successful dental auxiliary. This course includes microbiology related to infection control and disease prevention, oral pathology and nutrition, pharmacology, patient care, medical and dental emergencies and preventive dentistry.

Student Learning Outcomes

1. Explain microbiology and its role in infection control.
2. Identify oral diseases and their impact on patient health.
3. Describe pharmacology principles and the use of medications in dentistry.
4. Develop strong communication and patient care skills.
5. Implement preventive measures such as patient education and plaque control programs.
6. Analyze the relationship between nutrition and oral health.
7. Recognize and respond to medical and dental emergencies.

DAST 1512L. Bio Dental Science II Laboratory

Course Description

Lab and pre-clinical experience for DAST 1512. The lab emphasizes hands-on practice to support concepts learned in DAST 1512.

Student Learning Outcomes

1. Perform and assist in caries detection and caries risk assessment.
2. Perform and assist in periodontal charting.
3. Demonstrate bacterial growth on agar in relationship with the action of a variety of mouthwashes on plaque.
4. Identify oral bacterial flora using Gram staining.
5. Perform and assist in preventive dental procedures.
6. Demonstrate how to interpret food labels and perform dietary analysis.
7. Demonstrate the relationship between salivary pH and diet.
8. Identify common oral pathologies.
9. Demonstrate skills needed in documenting patient records.
10. Take and record vital signs.
11. Assist, perform, and chart intra-oral and extra-oral examination.
12. Demonstrate understanding of types of treatment plans.
13. Perform extra-oral and intra-oral photography.
14. Demonstrate an understanding of Health Insurance Portability and Accountability Act (HIPAA).
15. Demonstrate an understanding of dental prescriptions and abbreviations.
16. Demonstrate the skills needed to deal with physically and mentally compromised patients.
17. Assist in dental and medical emergencies and perform basic life-support and cardiopulmonary resuscitation (CPR)

DAST 1515. Bio-Dental Science III

Course Description

An introduction to biomedical and dental sciences with emphasis on head and neck anatomy and tooth morphology. Includes microbiology, general anatomy and physiology, histology and embryology of the oral cavity, pathology and pharmacology as they relate to dentistry.

Student Learning Outcomes

1. Demonstrate the ability to express the history of dentistry, important contributions of historical figures to dentistry, and the importance of professional organizations.
2. Discuss how the study of microbiology relates to dentistry.
3. Utilize and demonstrate the ability to use basic anatomic terms to describe and identify structures of general human anatomy and physiology.
4. Identify and describe the structures associated with head and neck anatomy.
5. Identify, locate, and describe bones muscles, and major vessels of head and neck.
6. Summarize function and location of bones, muscles, and major vessels of the head and neck.
7. Differentiate between primary and permanent dentition by nomenclature, development, eruption patterns, and crown/root morphology.
8. Explain location, function, and dysfunctions of major salivary glands.
9. Summarize normal and abnormal actions of the temporomandibular joint.
10. Identify major areas and function of lymph nodes in the head and neck region.
11. Differentiate extra oral and intra oral landmarks.
12. Describe normal prenatal, embryonic and histological development with emphasis on face, neck, oro-facial structures and dentition.
13. Demonstrate the ability to be able to distinguish between normal and pathological abnormalities of the oral structures.
14. Describe the use/effect of pharmacological agents in dentistry.

DAST 1517. Principles and Techniques of Dental Radiology II

Course Description

This course builds on the comparison and contrast between the bisecting and paralleling techniques used for exposing intra oral radiographic films. Topics to be covered include paralleling technique, bitewing technique, introduction to radiographic examination, bisecting technique, occlusal and localization technique, digital radiography, normal anatomy, and identification of restorations in a radiograph.

Student Learning Outcomes

1. State the basic principle of the paralleling technique and illustrate the placement of the film, film holder, position indicating device (PID), and central ray.
2. Identify and describe the radiographic appearance of various restorations, materials, and foreign objects often found in the oral cavity.
3. State the basic principles of the bisecting technique and illustrate the location of the film, tooth, imaginary bisector, central ray, and position indicating device.
4. List the three types of intraoral radiographic examinations.
5. List and describe two methods of film mounting and identify the preferred method.
6. State the basic principles of the bite wing technique.
7. Describe the use and purpose of the occlusal examination.
8. Describe the purpose, use and fundamentals of panoramic radiography.
9. Describe the patient preparations, equipment preparations, and patient positioning procedures needed before exposing a panoramic film.
10. Identify and describe the normal anatomic landmarks of the maxilla and mandible on dental radiographs.
11. Describe what information is placed on the film mount.
12. Describe how the identification dot is used to determine film orientation.
13. Identify and describe film exposing errors.
14. Discuss the fundamentals of digital radiography.
15. Describe common physical and developmental disabilities and what modifications in technique may be necessary during the radiographic examination.
16. Describe how to control the gag reflex using operator attitude, patient and equipment preparations, exposure sequencing, film placement and technique, and helpful hints.

DAST 1519. Clinical Procedures I

Course Description

This foundational course introduces essential chairside assisting skills and knowledge including patient care, infection control, safety, legal and ethical considerations.

Student Learning Outcomes

1. Describe essential chairside assisting skills.
2. Explain patient care procedures while considering infection control and safety protocols.
3. Outline the legal and ethical implications of expanded functions.
4. Interpret the ethical and professional standards of conduct.

DAST 1519L. Clinical Procedures I Laboratory

Course Description

Application of essential chairside assisting skills and knowledge including patient care, infection control, safety, legal and ethical considerations.

Student Learning Outcomes

1. Perform essential chairside assisting skills.
2. Demonstrate patient care procedures while considering infection control and safety protocols.
3. Apply the legal and ethical implications of expanded functions.

DAST 1593L. Principles and Techniques of Dental Radiology II Laboratory

Course Description

This course provides the application of principals with hands on instruction in bisecting and paralleling techniques used during exposure of intra oral radiographic films. Instruction will include occlusal and localization technique, digital radiography, identification of anatomical landmarks, and identification of restorations in a radiograph. Students will expose radiographs on human subjects.

Student Learning Outcomes

1. Perform radiographs utilizing several different techniques.
2. Maintain patient and operator radiation safety.
3. Expose both horizontal and vertical bite wing x-rays.
4. Take occlusal films on adults and children.
5. Use a snap a ray holding device.
6. Take a full-mouth series of radiographs using the bisecting technique.
7. Process radiographs using a Scan-X processor using Eaglesoft software.
8. Appropriately mount all radiographs using dental and anatomical landmarks.
9. Perform 4 Patient full mouth surveys and send copy of diagnostic films with patient.

DAST 2220. Dental Practice Management

Course Description

This course equips students with essential skills for success in a dental office setting. Core areas of study includes front office operations and practice management.

Student Learning Outcomes

1. Identify and practice dental office operations.
2. Demonstrate effective verbal and nonverbal communication skills accommodating diverse populations.
3. Compare and contrast business principles as they pertain to the dental industry.
4. Utilize professional customer service skills.

DAST 2222. Community Dental Health

Course Description

This course introduces the principles and practices of dental public health. Students will explore epidemiology and biostatistics, disease prevention and control, health promotion, and healthcare delivery.

Student Learning Outcomes

1. Define the purpose and scope of dental public health.
2. Discuss the epidemiology and biostatistics of oral diseases.
3. Identify and analyze factors influencing oral health within communities.
4. Develop and implement community-based oral health education programs.
5. Provide Oral Health Education and Counseling.

6. Analyze and apply principles of research as related to public health.

DAST 2310. Clinical Experience II

Course Description

Continuation of clinical practice through student preceptorships utilizing four-handed dentistry at chair-side including expanded function in general and specialty dentistry delegated to the dental assistant as designated by the State Dental Practice Act and as part of the Commission on Dental Accreditation's requirement of minimum clinical hours.

Student Learning Outcomes

1. Demonstrate competence in all laboratory, clinical, and office-management skills in general and specialty dentistry.
2. Demonstrate competence in community dental health education.
3. Maintain a record of required activities in each clinical assignment.
4. Discuss clinical experiences during scheduled seminars.
5. Complete required skills and clinical hours by the specified deadline.

DAST 2513. Clinical Procedures II

Course Description

This course builds upon foundational skills, focusing on specialized procedures and expanded functions within various dental specialties following legal, ethical and safety guidelines.

Student Learning Outcomes

1. Describe different types of restorative and cosmetic dental procedures.
2. Describe different types of dental implants and the surgical procedures involved.
3. Describe various endodontic procedures, including root canal therapy.
4. Describe the goals and techniques of nonsurgical and surgical periodontal therapy.
5. Describe the role of the oral and maxillofacial surgery assistant during surgical procedures by maintaining asepsis.
6. Describe the unique dental needs of pediatric and special needs patients.
7. Describe different types of malocclusion and orthodontic treatment options.
8. Describe the components, construction, and home care for fixed and removable prosthodontics.

DAST 2513L. Clinical Procedures II Laboratory

Course Description

Application of foundational skills, focusing on specialized procedures and expanded functions within various dental specialties following legal, ethical and safety guidelines.

Student Learning Outcomes

1. Perform different types of restorative and cosmetic dental procedures.
2. Assist with different types of dental implants and the surgical procedures involved.
3. Assist with various endodontic procedures, including root canal therapy.
4. Assist with the techniques of nonsurgical and surgical periodontal therapy.
5. Maintain asepsis while assisting with oral and maxillofacial surgery.
6. Accommodate the unique dental needs of pediatric and special needs patients.
7. Assist with orthodontic treatment options and various types of malocclusion.
8. Assist with fixed and removable prosthodontic procedures.

DAST 2990. Dental Assisting Practicum

Course Description

This course is the clinical component of the program that combines general practice and experiences in the work place. Seminar topics focus on the practicum experiences and critique of performance

Student Learning Outcomes

1. Assist the dentist chairside in general and specialty practices with procedures such as oral evacuation, instrument transfer, dental material preparation, various infection control procedures, and charting.
2. Perform various chairside, laboratory, and front office duties.
3. Work independently, but with direct supervision from licensed/certified dental assistant, hygienist or dentist in placement of rubber dam, coronal polishing, pit and fissure sealants, and topical fluoride. Receive dental/medical information and take vital signs.
4. Expose, process, and duplicate radiographs in accordance with New Mexico Dental Regulations.
5. Educate patients about dental disease, plaque control, oral hygiene and the role of proper nutrition in managing dental disease. Organize and participate a community project included in this objective.
6. Identify and manage medical emergencies in the dental environment.
7. Create study models, temporary crowns, custom trays, and mix a wide variety of dental materials.
8. Maintain aseptic and safe environment through proper disinfection and sterilization techniques with adherence to safety and OSHA guidelines.
9. Recognize and Adhere to HIPAA.
10. Manage the business/financial aspects of a dental practice (i.e. preparing insurance forms, appointment scheduling, answering telephone, bookkeeping, and inventory control).
11. Demonstrate ethical and professional behavior in the clinical setting.
12. Demonstrate competency in skills needed to function as a dental assistant. To include confidence in patient management, positive attitude about self, members of the dental team, and the dental profession.
13. Display professional dependability and ability to promote teamwork.
14. Demonstrate ethical decision making processes.
15. Define oral pathology and identify the dental assistant's role in this specialty.

Dental Hygiene (DHYG)

DHYG 1240. Preventative Dentistry

Course Description

Student Learning Outcomes

DHYG 2205. Introduction to Dental Hygiene

Course Description

This course is an overview of topics and issues germane to the practice of dental hygiene.

Student Learning Outcomes

1. Describe the science and practice of dental hygiene.
2. Assess the current issues in dental hygiene.
3. List the basic principles of dental hygiene practice.
4. Describe the policies and procedures of the Dental Hygiene Program.
5. Defend the need for professional socialization of dental hygienists.

DHYG 2210. Preclinical Dental Hygiene Seminar

Course Description

This foundational course provides dental hygiene students with the introductory knowledge, skills, and attitudes essential for success in the clinical setting emphasizing scientific principles, current theory, prevention of disease transmission, ethical and professional patient treatment and clinical preparation for comprehensive patient care.

Student Learning Outcomes

1. Describe infection control protocols for safe dental hygiene practice.
2. Identify equipment and materials for sterilization and disinfection.
3. Explain ergonomics and positioning strategies for safe patient and operator interaction.
4. Discuss time and motion management principles for clinical efficiency.
5. Describe protocols for medical emergency prevention and management.
6. Demonstrate the ability to obtain and record a comprehensive health history.
7. Identify key anatomical landmarks for patient assessment and charting.
8. Describe the properties and applications of preventive pharmacological agents.
9. List diagnostic and screening tools used in clinical examinations.
10. Recognize the importance of consistent patient assessment based on professional standards.

DHYG 2212. Preclinical Dental Hygiene Seminar

Course Description

This foundational course provides dental hygiene students with the introductory knowledge, skills, and attitudes essential for success in the clinical setting emphasizing scientific principles, current theory, prevention of disease transmission, ethical and professional patient treatment and clinical preparation for comprehensive patient care.

Student Learning Outcomes

1. Describe infection control protocols for safe dental hygiene practice.
2. Identify equipment and materials for sterilization and disinfection.
3. Explain ergonomics and positioning strategies for safe patient and operator interaction.
4. Discuss time and motion management principles for clinical efficiency.
5. Describe protocols for medical emergency prevention and management.
6. Demonstrate the ability to obtain and record a comprehensive health history.
7. Identify key anatomical landmarks for patient assessment and charting.
8. Describe the properties and applications of preventive pharmacological agents.
9. List diagnostic and screening tools used in clinical examinations.
10. Recognize the importance of consistent patient assessment based on professional standards.

DHYG 2213. Oral Histology and Embryology

Course Description

This course provides a comprehensive introduction to the microscopic structures of the oral tissues and their embryological formation.

Student Learning Outcomes

1. Define and explain the concepts of dental histology and embryology.
2. Describe the embryological development, morphology, and histology of the human dentition and its associated structures.

DHYG 2214. Head and Neck Anatomy

Course Description

This course provides a comprehensive study of the anatomy and physiology of the head and neck regions with a specific emphasis on oral structures and their functions.

Student Learning Outcomes

1. Discuss the clinical applications of the study of head and neck anatomy by dental professionals.
2. Identify the anatomical structures of the head and neck.
3. Discuss normal anatomic variation and how it applies to different structures of the head and neck.
4. Identify deviations from normal, and how it applies to different structures of the head and neck.
5. Integrate the knowledge of head and neck anatomy into clinical practice of patient examination, dental radiology, and the future use of local anesthetics.

DHYG 2215. Tooth Anatomy and Morphology

Course Description

This course provides a comprehensive study of human dentition, including their development and relationships within the oral cavity. Key areas of focus include universal charting, numbering systems, cavity classification, and laboratory activities enhance observational and clinical skills.

Student Learning Outcomes

1. Describe the anatomy, physiology and stages of the human dentitions.
2. Explain the concept of occlusion and malocclusion.
3. Describe dental numbering systems and tooth identification.
4. Explain the eruption process and the eruption schedule for primary and permanent dentitions.

DHYG 2216. Dental Radiology

Course Description

This course focuses on the principles and techniques of dental radiography. Students will study radiation physics, hygiene, and safety protocols. Emphasis is placed on the fundamentals of intraoral and extraoral radiographic techniques, including exposure, quality assurance, and interpretation of radiographs. The course also covers patient selection criteria and explores other ancillary radiographic techniques.

Student Learning Outcomes

1. Explain the principles of radiation physics in the production of x-rays.
2. Discuss the effects of ionizing radiation on living tissues and implement appropriate safety measures.
3. Recognize appropriate receptors and exposure factors.
4. Differentiate intraoral and extraoral radiographic techniques including landmarks and interpretation.
5. Explain infection control protocols during all radiographic procedures.

6. Recognize legal and ethical considerations related to dental radiography.
7. Develop communication strategies as related to dental radiology.

DHYG 2216L. Dental Radiology Laboratory

Course Description

The laboratory emphasizes first-hand observations and hands-on performance of skill competencies that support the concepts taught in the theory course.

Student Learning Outcomes

1. Produce high-quality dental radiographs in a safe, legal and ethical manner.
2. Effectively communicate with and manage patients during radiographic procedure.

DHYG 2220. Clinical Dental Hygiene Seminar I

Course Description

A continuation of clinical skills, patient assessment, treatment, scheduling, preventive techniques and application of dental hygiene procedures at the intermediate level. Work-based instruction that helps students synthesize new knowledge, apply previous knowledge or gain experience managing the workflow. Practical experience is simultaneously related to theory. Direct supervision is provided by the clinical faculty.

Student Learning Outcomes

1. Explain fundamental principles of infection control and patient safety.
2. Describe methods for assessing oral health conditions.
3. Discuss strategies for ensuring efficiency and safety in clinical practice.
4. Analyze techniques used in preventive dental care.
5. Identify factors that influence patient health and treatment considerations.
6. Interpret patient assessment data for informed decision-making.
7. Discuss protocols for referrals and emergency management.
8. Evaluate approaches to patient education and communication.
9. Examine ethical and professional responsibilities in dental care.
10. Integrate evidence-based concepts into dental hygiene practice.

DHGY 2222. Clinical Dental Hygiene I

Course Description

Building upon the foundational skills acquired in Preclinical Dental Hygiene, this course transitions students into the clinical setting where they begin providing care to patients. Emphasis is placed on applying infection control protocols, conducting comprehensive assessments, and implementing basic treatment plans with close faculty supervision. Specific clinical requirements are set for this program and may not be transferrable to other programs.

Student Learning Outcomes

1. Apply universal precautions in clinical care.
2. Perform effective sterilization and disinfection procedures.
3. Show proper patient/operator positioning during treatment.
4. Demonstrate emergency prevention strategies in patient care.
5. Conduct thorough patient assessments.
6. Implement treatment plans based on patient assessment.
7. Apply instrumentation techniques to remove deposits effectively.
8. Demonstrate ethical reasoning in clinical decision-making.

DHYG 2223. General and Oral Pathology**Course Description**

Introduction to general pathology with focused study of diseases and disorders of the oral cavity and their interrelationship with body systems; developmental anomalies of the teeth and jaws; manifestations of disease in the oral cavity, head and neck.

Student Learning Outcomes

1. Describe pathological processes and their effects on the immune system and body organ systems.
2. Differentiate oral conditions based on clinical and radiographic characteristics for accurate diagnosis.
3. Assess oral lesions to determine their significance and the need for referral.
4. Communicate effectively about oral disease manifestations with healthcare professionals and patients.
5. Integrate oral pathology knowledge into treatment planning, patient education, and evidence-based care.

DHYG 2224. Periodontology**Course Description**

Study of normal and diseased periodontium to include the structural, functional and environmental factors. Emphasis on etiology, pathology, evaluation of disease, treatment modalities, and therapeutic and preventative periodontics relative to the hygienist's role as a co-therapist in a contemporary practice setting.

Student Learning Outcomes

1. Describe the characteristics of healthy and diseased periodontium to support accurate diagnosis.
2. Classify periodontal diseases to guide treatment planning.
3. Explain the causes and progression of periodontal diseases and their impact on the periodontium.
4. Identify key considerations for periodontal surgical and nonsurgical treatments.
5. Discuss the influence of systemic health factors on periodontal disease progression and management.

DHYG 2225. Dental Materials**Course Description**

Covers the composition, properties, classifications, uses, and manipulation of materials commonly used in dentistry. Topics also include legal, ethical, and safety issues related to the use of dental materials.

Student Learning Outcomes

1. Explain the properties, composition, handling, storage, dispensing and disposal of dental materials used chairside and in the laboratory.
2. Describe the legal and ethical considerations for using dental materials in a safe and responsible manner.
3. Describe the role of the dental auxiliary in the selection, preparation, and placement of dental materials.

DHYG 2225L. Dental Materials Laboratory**Course Description**

The laboratory emphasizes first-hand observations and hands-on performance of skill competencies that support the concepts taught in the theory course.

Student Learning Outcomes

1. Demonstrate the handling, storage, dispensing and disposal of dental materials used chairside and in the laboratory.
2. Demonstrate the role of the dental auxiliary in the legal, ethical, and safe use of dental materials.

DHYG 2226. Medical and Dental Emergencies

Course Description

This course provides an overview of medical and dental emergencies encountered most frequently in the dental setting. The course also focuses on the recognition, prevention, preparation and management of these emergencies. It also provides the student with knowledge and techniques on how to address those emergencies should they occur.

Student Learning Outcomes

1. Describe the components and purpose of an emergency kit in managing medical emergencies in a dental setting.
2. Apply treatment protocols for managing medical emergencies during dental care.
3. Recognize abnormal vital signs and their implications for emergency intervention.
4. Explain the key steps in preparing a dental office for effective emergency management.
5. Demonstrate techniques for managing airway obstructions and foreign body aspirations in emergencies.

DHYG 2227. Clinical Dental Hygiene II

Course Description

Clinic II advances students' clinical competencies by refining their instrumentation techniques, treatment planning, and patient management skills. With increased independence, students will provide care for patients with varying oral health needs while learning to evaluate treatment effectiveness and make appropriate modifications. Specific clinical requirements are set for this program and may not be transferrable to other programs.

Student Learning Outcomes

1. Maintain universal precautions in all patient interactions.
2. Demonstrate adherence to sterilization and disinfection standards.
3. Apply patient/operator positioning to optimize clinical efficiency.
4. Assess patient risk factors to prevent medical emergencies.
5. Perform individualized treatment procedures.
6. Demonstrate precision in instrumentation techniques.
7. Evaluate patient responses and adjust treatment accordingly.
8. Apply ethical and professional standards to clinical practice.

DHYG 2228. Pain and Anxiety Management

Course Description

Study of the application of various physical, chemical, and psychological modalities to the prevention and treatment of preoperative and postoperative patient anxiety and pain. Emphasis on administration of local anesthesia and nitrous oxide.

Student Learning Outcomes

1. Explain the anatomy and physiology of nerve conduction, including pain transmission mechanisms and how they are influenced by local anesthetics.
2. Discuss the pharmacological properties, actions, contraindications, and potential adverse reactions of local anesthetic agents, vasoconstrictors, and nitrous oxide.
3. Evaluate the effects of local anesthetics on the central nervous system (CNS) and cardiovascular system (CVS), including recognition and management of adverse reactions.
4. Describe the biotransformation processes of esters and amides, the concept of drug half-life, and the clinical relevance of pKa and pH in anesthesia.
5. Identify clinical signs and symptoms of adverse reactions to local anesthetics and vasoconstrictors, and describe appropriate management protocols for these reactions.
6. List and explain the maximum recommended doses for local anesthetics and vasoconstrictors, and discuss dose modifications for children, adults, and patients with compromised health.

7. Describe the steps to recognize and manage medical emergencies related to anesthesia administration, including syncope, allergic reactions, and cardiovascular complications.
8. Evaluate patient medical and dental histories to identify risk factors that may influence the selection of anesthetic agents and necessitate medical consultation.
9. Discuss proper protocols for handling sharps, preventing cross-contamination, and managing equipment used in local anesthesia.
10. Explain the importance of emergency preparedness in the dental office, including recognizing symptoms of undiagnosed medical conditions, responding to adverse drug reactions, and implementing emergency protocols to ensure patient safety.

DHYG 2228L. Pain and Anxiety Management Clinical

Course Description

Clinical application of concepts learned in Pain and Anxiety Management. Emphasis on the administration and techniques of local anesthesia and monitoring nitrous oxide.

Student Learning Outcomes

1. Demonstrate the proper technique for administering local anesthetic injections, including infiltrations and nerve blocks, to ensure effective pain control and patient comfort.
2. Apply knowledge of intraoral landmarks to accurately and safely perform various local anesthetic injections, such as the ASA, PSA, IA, and mental nerve blocks.
3. Evaluate a patient's medical and dental history to identify contraindications and determine the appropriate anesthetic agents, vasoconstrictors, and techniques for treatment.
4. Administer nitrous oxide-oxygen sedation safely and effectively, monitoring the patient's physiological and psychological responses throughout the procedure.
5. Identify and manage adverse reactions or medical emergencies associated with the administration of local anesthetics, vasoconstrictors, or nitrous oxide, including syncope, allergic reactions, or toxicity.
6. Calculate and adjust dosages of local anesthetics, vasoconstrictors, and nitrous oxide based on patient factors such as age, weight, medical history, and health status.
7. Ensure proper handling and disposal of sharps and other equipment to maintain infection control and safety during anesthetic administration.
8. Educate patients about the procedure, expected outcomes, dosage safety, and post-operative considerations associated with local anesthesia and nitrous oxide sedation.

DHYG 2229. Clinical Dental Hygiene Seminar II

Course Description

Continuing development of a theoretical framework of dental hygiene treatment with advancement of dental hygiene proficiency in all areas of dental hygiene treatment. Presentation and discussion of case histories from patients and preventive measures employed against disease concurrent with clinical practice with emphasis on adjunctive therapies and treating the older adult population.

Student Learning Outcomes

1. Describe stimuli and pain characteristics specific to hypersensitivity and explain how this relates to differential diagnosis. Describe the factors that contribute to dentin exposure and behavioral changes that could decrease hypersensitivity.
2. Describe two mechanisms of desensitization and their associated treatment interventions for managing dentin hypersensitivity.

3. Analyze the mechanisms, safety, and efficacy of tooth bleaching agents, including patient-specific conditions, expected stain responses, potential side effects, and appropriate management interventions.
4. Evaluate the physiological, cognitive, systemic, and oral changes associated with aging, and apply best practices in communication and the dental hygiene process of care to effectively manage the older adult patient.
5. Demonstrate competency in extraoral and intraoral dental photography by selecting appropriate equipment, explaining its purpose to patients, and utilizing photographic records for patient education, treatment planning, lesion documentation, and integration into the patient chart.

DHYG 2230. Clinical Dental Hygiene Seminar III

Course Description

Continuing development of a theoretical framework of dental hygiene treatment with advancement of dental hygiene proficiency in all areas of dental hygiene treatment. Presentation and discussion of case histories from patients and preventive measures employed against disease concurrent with clinical practice with emphasis on special needs patients.

Student Learning Outcomes

1. Discuss advanced concepts in periodontal therapy and patient care.
2. Apply pharmacological principles to dental hygiene treatment.
3. Evaluate patient outcomes to guide treatment decisions.
4. Explore interdisciplinary approaches to comprehensive patient care.
5. Develop strategies for managing medical emergencies in a clinical setting.
6. Assess risk factors affecting oral and systemic health.
7. Discuss approaches to patient education and disease prevention.
8. Analyze patient documentation and follow-up care planning.
9. Examine strategies for long-term patient management and referrals.
10. Recognize the importance of self-assessment and ongoing professional development.

DHYG 2232. Clinical Dental Hygiene III

Course Description

Clinic III, students manage more complex cases, requiring advanced critical thinking and problem-solving skills. They will integrate diagnostic tools, adapt treatment strategies, and demonstrate greater autonomy in decision-making. Emphasis is placed on professional judgment, ethical considerations, and comprehensive patient care. Specific clinical requirements are set for this program and may not be transferrable to other programs.

Student Learning Outcomes

1. Implement universal precautions.
2. Evaluate sterilization and disinfection protocols for effectiveness.
3. Demonstrate advanced patient/operator positioning techniques.
4. Develop strategies for managing medical emergencies.
5. Integrate diagnostic and assessment techniques into treatment planning.
6. Demonstrate critical thinking in managing complex patient cases.
7. Assess the effectiveness of treatment outcomes.
8. Apply ethical reasoning and professionalism in clinical decision-making.

DHYG 2233. Pharmacology

Course Description

Study of the pharmacologic aspects of drugs and drug groups with which the dentist and dental hygienist are directly and indirectly concerned. Emphasis is placed on nomenclature, origin, physical and chemical properties, preparation, modes of administration and effects of drugs upon the body systems.

Student Learning Outcomes

1. Identify the effects of commonly used drugs on dental treatment.
2. Describe strategies for managing drug interactions, medical emergencies, and oral manifestations related to drug use in dental practice.
3. Apply pharmacological principles to the management of patient care in a clinical dental setting.
4. Explain approaches to ensuring safe dental care for patients with complex medical histories.
5. Incorporate pharmacological knowledge and ethical considerations into dental care practices.

DHYG 2234. Research Methodology

Course Description

This course provides an introduction to the principles and application of research methods in social, behavioral and medical research.

Student Learning Outcomes

1. Explain how oral health research and the process of scientific inquiry knowledge development and daily practice.
2. Explain how an evidence-based decision-making approach enhances critical thinking and professional decision-making regarding patient care.
3. Describe the scientific method and research process.
4. Use the Internet and electronic resources in research and understand how they relate to dental hygiene education, practice and research.
5. Conduct an effective literature search using electronic databases (such as PubMed, MEDLINE, and CINAHL), professional journals, government documents, product literature and other print publications, video and other forms of multimedia.
6. Develop a PICO (or equivalent) research question to address an identified practice problem.
7. Discuss different research designs and when each is appropriate to use.
8. Explain the elements necessary to obtain valid and reliable results for observational, exploratory and experimental research.
9. Evaluate oral health research articles applying concepts of research design and methodology.
10. Interpret oral health data by proper application of statistical principles and tests.
11. Critically analyze different print and electronic information sources and apply to the practice of dental hygiene.
12. Gain an appreciation for the role of research in evidence-based dental hygiene practice.

DHYG 2240. Clinical Dental Hygiene Seminar IV

Course Description

A continuation of information to prepare the student for advanced clinical practice. Provides an in-depth study of dental hygiene care for diverse patient populations and provides a forum for evaluation of the service project from Dental Public Health, and synthesis of all dental hygiene knowledge, skills and attitudes into a case presentation.

Student Learning Outcomes

1. Explore advanced concepts in dental hygiene care and patient management.
2. Discuss strategies for handling medical emergencies in a clinical setting.
3. Analyze patient assessment data to support interdisciplinary treatment planning.
4. Evaluate the effectiveness of dental hygiene interventions for long-term patient outcomes.

5. Examine professional responsibilities in mentoring and education within the field.
6. Develop strategies for addressing barriers to oral health care in diverse populations.
7. Explore approaches to collaborative, patient-centered care in dental hygiene practice.
8. Assess clinical practices using evidence-based research to support continuous improvement.
9. Discuss the legal, ethical, and professional considerations in patient documentation.
10. Recognize the role of dental hygienists in leadership, research, and advocacy for oral health.

DHYG 2242. Clinical Dental Hygiene IV

Course Description

As the final clinical course, Clinic 4 prepares students for professional practice by refining their ability to manage diverse and complex patient cases with confidence and competence. Students will demonstrate mastery of clinical skills, collaborate with healthcare professionals, and develop strategies for lifelong learning and ethical practice in dental hygiene. Specific clinical requirements are set for this program and may not be transferrable to other programs.

Student Learning Outcomes

1. Implement universal precautions across all clinical settings.
2. Develop an evidence-based approach to sterilization and disinfection.
3. Demonstrate mastery of patient/operator positioning.
4. Create a risk management plan for emergency prevention and response.
5. Synthesize patient data to develop comprehensive treatment plans.
6. Lead interprofessional collaboration to enhance patient care.
7. Design a system for evaluating treatment effectiveness.
8. Advocate for ethical and professional excellence in clinical practice.

DHYG 2243. Principles of Practice

Course Description

Examination of the dental hygienist's role in both traditional and non-traditional employment settings. Career planning, resume preparation and interviewing are practices. An understanding of the law, professional ethics of dental hygiene and the need for lifelong learning are emphasized. Future roles of the dental hygienist and emerging issues in dental hygiene will be explored.

Student Learning Outcomes

1. Analyze the core values found in the Codes of Ethics of professional dental organizations and their application to dental hygiene practice.
2. Compare the ethical theories.
3. Demonstrate an ethical decision-making framework by applying it to case-based scenarios and defending the chosen course of action.
4. Evaluate the differences between different legal frameworks for the licensing and practice of dental hygienists.
5. Create a protocol for addressing cultural competence and sensitivity in patient care delivery, including strategies to overcome health literacy challenges.

DHYG 2244. Dental Public Health Education

Course Description

Study of principles and concepts of community public health and dental health education. Emphasis on dental epidemiology and statistical methods, community assessment, educational planning, implementation, and evaluation, scientific review of literature, and classroom presentation.

Student Learning Outcomes

1. Participate in community programs to prevent oral diseases and promote health.
2. Deliver evidence-based oral health care and education to diverse populations.
3. Develop strategies for implementing and evaluating oral health programs.
4. Advocate for oral health promotion through collaboration with various stakeholders.
5. Apply scientific research to evaluate dental products, techniques, and policies for informed decision-making.

DHYG 2320. Preclinical Dental Hygiene

Course Description

Clinical application of basic theories and procedures used in dental hygiene practice. The emphasis is on the techniques of instrumentation used in performing diagnostic| preventive and therapeutic services utilized in providing comprehensive patient care. The dental hygiene student will have an opportunity to practice techniques on manikins and student partners in the clinic.

Student Learning Outcomes

1. Demonstrate basic dental hygiene skills as evidenced by a 75% or higher accuracy on learning assessments.
2. Demonstrate the principles and procedures required for comprehensive dental hygiene patient care that are based on scientific evidence.
3. Integrate the knowledge of head and neck anatomy, tooth morphology, and dental radiology into clinical examination and instrumentation.
4. Demonstrate professional communication styles that will be used to help interview and educate patients and work as a productive team member.
5. Develop critical thinking, problem solving skills, and ethical decision-making skills which will help integrate theory into practice in both pre-clinical and clinical settings and will be applied to case studies and to case management.
6. Model professional behavior at all times.
7. Explain the importance of infection control and asepsis, OSHA Standards for infection control and hazard communications, SJC policies and procedures and utilize methods of prevention of disease transmission including:
 - a. use of personal protective equipment.
 - b. use of universal/standard precautions and procedures for general asepsis.
 - c. proper unit and operator maintenance.
 - d. use of sterilization equipment.
8. Discuss the importance of patient's personal, medical and dental health histories and develop appropriate interviewing techniques that involve the patient and lead to consent for treatment.
9. Demonstrate record keeping skills that meet medico-legal requirements including signatures of supervising clinicians and apply this knowledge when presented with case scenarios reflecting comprehensive patient care.
10. Demonstrate the principles of operator positioning to avoid occupational injuries.
11. Demonstrate the procedures of the following patient assessments and explain their relationship to providing comprehensive patient care.
 - a. medical/dental/social history
 - b. vital signs.
 - c. extra/oral and intraoral examinations including common pathological conditions.
 - d. dental examination including clinical recognition of dental caries.
 - e. periodontal examination including gingival description and periodontal charting.
12. Demonstrate an understanding of basic instrument fundamentals including the use of:
 - a. mouth mirror

- b. dental explorers
 - c. periodontal probes
 - d. sickle scalers
 - e. universal and area specific curets
 - f. dental handpiece and prophylaxis angles.
 - g. ultra-sonic scalers / air powder polishers
13. Discuss oral infection control and demonstrate personal oral hygiene techniques and aids.
 14. Demonstrate selective polishing and the application of topical fluorides.
 15. Demonstrate the use of all clinic forms, references, and an understanding of all institution/s Dental Hygiene Policies and Procedures in the application of clinical procedures

DHYG 2321. Preclinical Dental Hygiene Seminar

Course Description

Introductory knowledge, skills and attitudes to function in the clinical setting and be able to continue in clinical dental hygiene courses. Emphasis on scientific principles and current theory, prevention of disease transmission, ethical and professional treatment of patients, clinical preparation and comprehensive care of the patient.

Student Learning Outcomes

1. Explain the application of basic theoretical background necessary to ensure a safe and effective clinical environment for both clinician and patient.
2. Develop a theoretical framework for comprehensive patient care that is evidence-based and can be applied in the preclinical and clinical settings throughout the course of this professional program.
3. Develop critical thinking and problem-solving skills which will help integrate theory into practice in preclinical and clinical settings and will be applied to case studies.
4. Model professional behavior at all times.
5. Discuss the role of the professional dental hygienist, the dental hygiene process of care and factors that influence clinical practice.
6. Discuss the importance of the patient's personal, medical and dental health history and develop appropriate interviewing techniques that involve the patient and lead to consent for treatment.
7. Demonstrate record keeping skills that meet medico-legal requirements including signatures of supervising clinicians and apply this knowledge when presented with case scenarios reflecting comprehensive patient care.
8. Discuss caries, gingivitis and periodontal disease development and identify contributing factors to this development and basic oral self-care strategies designed to eliminate or control these conditions.
9. Provide rationale for the use of fluoride and chemotherapeutic agents for oral hygiene care.
10. Recognize dental deposits including plaque, calculus and stains and describe their origin and influence on oral health.
11. Explain the procedure of developing a dental hygiene care plan and provide rationale for its use in comprehensive patient care.
12. Describe the fundamental procedures associated with ethical and professional treatment of patients in the SJC clinic.
13. Discuss behavior management techniques for patients in the SJC clinic.

DHYG 2322. Clinical Dental Hygiene I

Course Description

Introduction to the clinic and patient clinical skills, patient assessment, treatment and appointment scheduling, preventive techniques and application of dental hygiene procedures in the clinical setting. Practical experience is simultaneously related to theory. Direct supervision is provided by the clinical faculty.

Student Learning Outcomes

1. Provide introductory level comprehensive dental hygiene care within recommended time limits at competency levels of 75% or higher.

DHYG 2323. Dental Hygiene Seminar I

Course Description

Continuing development of a theoretical framework of dental hygiene treatment with advancement of dental hygiene proficiency in all areas of dental hygiene treatment. Presentation and discussion of case histories from patients and preventive measures employed against disease concurrent with clinical practice with emphasis on special needs patients.

Student Learning Outcomes

1. Evaluate scientific research, and integrate the research into evidence-based dentistry.
2. Develop individualized patient assessment protocols based on theoretical framework for comprehensive patient care, taking into account patient's cultural background, psychosocial status and risk factors for oral disease
3. Develop appropriate dental hygiene diagnoses for patients based on detailed dental hygiene assessments including: medical/dental history, extra/intra-oral exams, radiographs, dental exams, periodontal and gingival assessments, plaque maps and other oral health risk assessments.
4. Design health promotion/ disease prevention plans which meet identified patient needs and incorporate appropriate patient self-care strategies using established educational principles.
5. Develop dental hygiene treatment plans with appropriate, evidenced-based therapy and evaluations for children, adolescents, and adults presenting with gingivitis and slight to moderate periodontal disease and other common health problems.
6. Evaluate common oral physiotherapy aids, dentifrice, mouth rinses and other oral self-care products and select appropriate items for individual patients.
7. Discuss bottled water and fluoridation.
8. Discuss dental sealants, their benefits, risks and techniques for application.
9. Explain the rationale and technique for sharpening dental hygiene instruments.
10. Discuss the signs of abuse and how dental health care providers can document and report.
11. Discuss various types of oral prosthetic appliances and their care.
12. Describe cultural differences and how they may affect the dental hygiene process of care
13. Discuss psychological and physiological aspects of addiction with specific attention to tobacco, alcohol and methamphetamines.
14. Develop patient intervention strategies appropriate for addictions listed above.
15. Demonstrate critical thinking, problem solving and ethical decision-making skills within the front office management to include; patient scheduling, patient billing, fee collection and deposits and data entry.
16. Plan, implement and evaluate intervention strategies that will promote and maintain oral health and overall health including oral self-care behaviors.
 - a. understanding of patient motivation and behavior and help the student plan and implement strategies that enhance student-patient interaction.

DHGY 2324. Clinical Dental Hygiene II

Course Description

A continuation of clinical skills, patient assessment, treatment, scheduling, preventive techniques and application of dental hygiene procedures at the intermediate level. Work-based instruction that helps students synthesize new knowledge, apply previous knowledge or gain experience managing the workflow. Practical experience is simultaneously related to theory. Direct supervision is provided by the clinical faculty.

Student Learning Outcomes

1. Apply the theory, concepts, and skills involving comprehensive patient care at an intermediate level to patients with AAP Class I, II and III with a clinical competency average of 75% or higher.

DHYG 2325. Dental Hygiene Seminar II

Course Description

Continuing development of a theoretical framework of dental hygiene treatment with advancement of dental hygiene proficiency in all areas of dental hygiene treatment. Presentation and discussion of case histories from patients and preventive measures employed against disease concurrent with clinical practice with emphasis on adjunctive therapies and treating the older adult population.

Student Learning Outcomes

1. Describe stimuli and pain characteristics specific to hypersensitivity and explain how this relates to differential diagnosis. Describe the factors that contribute to dentin exposure and behavioral changes that could decrease hypersensitivity.
2. Describe two mechanisms of desensitization and their associated treatment interventions for managing dentin hypersensitivity.
3. Analyze the mechanisms, safety, and efficacy of tooth bleaching agents, including patient-specific conditions, expected stain responses, potential side effects, and appropriate management interventions.
4. Evaluate the physiological, cognitive, systemic, and oral changes associated with aging, and apply best practices in communication and the dental hygiene process of care to effectively manage the older adult patient.
5. Demonstrate competency in extraoral and intraoral dental photography by selecting appropriate equipment, explaining its purpose to patients, and utilizing photographic records for patient education, treatment planning, lesion documentation, and integration into the patient chart.

DHYG 2326. Clinical Dental Hygiene III

Course Description

A continuation of clinical skills, patient assessments, treatment and appointment scheduling, preventive techniques and application of dental hygiene procedures at the intermediate to advanced level. Work-based instruction that helps students synthesize new knowledge, apply previous knowledge or gain experience managing the workflow. Practical experience is simultaneously related to theory. Direct supervision is provided by the clinical faculty.

Student Learning Outcomes

1. Communicate patients' awareness of relationship between systemic and oral health.

DHYG 2327. Dental Hygiene Seminar III

Course Description

Continuing development of a theoretical framework of dental hygiene treatment with advancement of dental hygiene proficiency in all areas of dental hygiene treatment. Presentation and discussion of case histories from patients and preventive measures employed against disease concurrent with clinical practice with emphasis on special needs patients.

Student learning outcomes

1. Integrate the knowledge of multifaceted, advanced patient care into the Dental Hygiene care plan.

2. Assess, evaluate, demonstrate a broad understanding of a complicated, comprehensive case presentation and be able to answer questions using critical thinking skills.
3. Understand root morphology in preparation for advanced instrumentation.
4. Discuss the role of advanced instrumentation in non-surgical periodontal treatment as it relates to technique, instrument selection, aims and expected outcomes.
5. Explain the rationale for maintenance appointments and describe the criteria to consider in selecting appointment intervals.
6. List and describe local delivery agents a dental hygienist can utilize as supplemental care procedures following non-surgical periodontal therapy.
7. Assemble a nutritional analysis of the Case Documentation/ Presentation patient that integrates cultural preferences.
8. Integrate a nutritional analysis into comprehensive patient care, understand how nutrition relates to caries risk assessment. Recognize eating disorders as component of nutritional analysis.
9. Demonstrate the ability to assess nutritional needs as they relate to oral health care.
10. Understand rationale and timing of dental hygiene patient education. Collaborate with patient to identify and demonstrate preventive aid plans that are personalized and demonstrate cultural awareness.
11. Describe emergency situations and protocol in the clinical setting.
12. Identify the HIPAA regulations as they pertain to the dental setting.
13. Explain the role of the dental hygienist in the care of the patient with disabilities. Define and understand palliative care, evidence based dental hygiene interventions, and the hygienist's role as part of the palliative team.
 - a. Suggest adaptations and dental hygiene care factors to consider for patients with hearing or visual problems
14. Explain mechanisms of action of Fluoride in caries prevention. Explain the role of community water fluoridation. Incorporate F therapy into patient prevention plans. Perform a CAMBRA on case doc. patient.
15. Integrate the practice of dental hygiene into a case presentation that demonstrates the application of a more advanced level of dental hygiene knowledge, skills, and attitudes.
16. Demonstrate critical thinking and clinical reasoning skills while examining several case studies.
17. Explain the role of the dental hygienist in the care of patients with nicotine use. Assess and develop a dental hygiene care plan for the patient who uses nicotine.
18. Recognize the protocols for developing a nicotine cessation program.
19. Describe the signs of abuse, neglect, and human trafficking. Explain the role of the dental hygienist in reporting and documenting suspected abuse.

DHYG 2328. Clinical Dental Hygiene IV

Course Description

The clinical sessions combine both basic and advanced dental hygiene skills with time management techniques essential for private practice. Comprehensive patient care to include assessment, dental hygiene diagnosis, treatment planning, implementation and evaluation of dental hygiene care, nonsurgical periodontal therapy, adjunct clinical procedures, ultrasonic instrumentation, patient management, sealants, and comprehensive programs for control of dental diseases will be emphasized. Practical experience is simultaneously related to theory. Course consists of faculty supervised patient treatment in the clinic.

Student Learning Outcomes

1. Apply the theory, concepts, and skills involving comprehensive patient care at an advanced level to patients with various complexities of oral disease. Clinical competency will be demonstrated at 85% or higher.

2. Demonstrate legal and ethical behavior, safety practices, interpersonal and teamwork skills, and appropriate written and verbal communication skills using the terminology of the occupation as evidenced by an 85% or higher accuracy on learning assessments.
3. Expand patients' awareness of relationship between systemic and oral health.
4. Encourage patients' responsibility for oral health and role in successful therapy.
5. Recognize and respond to patients' psycho/social issues.
6. Effectively communicate with peers, patients, faculty and other health care providers.
7. Demonstrate critical thinking, problem solving and ethical decision-making skills.
8. Demonstrate effective team partnerships.
9. Develop collaborative treatment modalities with partner, patient, dentist and other health professionals.
10. Select and use appropriate indices and assessments for initial, outcomes/ re-evaluation and health maintenance visits; i.e.: general health evaluation, intra-oral and extra-oral assessment, periodontal and dental evaluation, radiographic evaluation, functional occlusion, nutritional assessment.
11. Evaluate the needs of patients, analyze the impact of assessment findings on treatment and prognosis and develop treatment plans and case presentations that recognize and incorporate the complexity of all patient needs.
12. Provide individualized treatment, education and patient care i.e., debridement, root planing, improved effectivity and efficiency with ultrasonic, margination, antimicrobial therapy, sealants, desensitization, and nutritional counseling, referral for general or oral health concerns, pain and anxiety control, education, patient skill enhancement and appliance care.
13. Provide individualized dental hygiene services to promote patient health for a variety of patients including children, adolescents, adults, geriatric, low income, edentulous/partially edentulous.
14. Provide individualized dental hygiene services to promote health for special needs patients.

Patients with Special Needs are defined as those patients whose medical, physical, psychological, or social conditions make it necessary to modify normal dental routines in order to provide dental treatment for that individual. These individuals include, but are not limited to, people with intellectual and/or developmental disabilities, complex medical problems, and significant physical limitations.

15. Increase production while maintaining quality.

16. Complete Internal Rotations:

- a. Radiology and Sterilization: Anticipate and manage needs of multiple clinicians, critically evaluate and troubleshoot processing errors, adhere to OSHA guidelines. Use proper PPE's, manage the clinic supply system, operate and maintain sterilization equipment.
- b. Assistant: Employ team work necessary for efficient clinic operation, independently evaluate, determine and meet the needs of other clinicians, operate and maintain clinic equipment.
- c. Office: Adhere to HIPPA regulations, operate and maintain office equipment, utilize practice management software, provide excellent customer service, manage data entry, critically evaluate and audit charts, maintain a clean and organized office space. Demonstrate critical thinking, problem solving and ethical decision-making skills within front office management to include: patient scheduling, patient billing, fee collection, deposits and data entry.

DHYG 2329. Dental Hygiene Seminar IV

Course Description

A continuation of information to prepare the student for advanced clinical practice. Provides an in-depth study of dental hygiene care for patients with special needs and provides a forum for evaluation of the service project from Community Dental Health, and synthesis of all dental hygiene knowledge, skills and attitudes.

Student Learning Outcomes

1. Analyze theoretical basis for clinical activities including topics regarding special needs patients.
2. Accurately describe safety procedures and universal precautions.
3. Plan treatment and predict outcomes based on patient history and clinical evidence
4. Demonstrate critical thinking, problem solving and ethical decision-making skills
5. Analyze advanced instrument design, functions and applications
6. Identify dental hygiene care procedures to be considered when providing care to patients who are physically or mentally compromised.
7. Explain the types of care necessary and adaptations that must be made by the patient and dental hygienist relating to dental care of the patient with physical impairments and disabilities.
8. Explain the role of the dental hygienist in providing care for the oral and maxillofacial surgery patient.
9. Identify key nutritional concepts and the relationship to dental disease.
10. Develop a plan for dental hygiene care for a patient with cancer before, during, and after therapy and describe the purposes of each step of the plan.
11. Explain the importance of assessment, dental hygiene care, and emergency care of the patient with a seizure disorder.
12. Differentiate between the classifications of epileptic syndromes and describe dental hygiene care and emergency care services that may be required for this patient.
13. Describe the expected capabilities of the patient with mental disabilities and describe alternate methods of teaching basic oral care procedures.
14. Describe frequently encountered psychiatric disorders and relate this knowledge to an understanding of the patient's needs and behaviors.
15. Describe the oral conditions associated with a patient with an alcohol and/or drug related disorder.
16. Describe the role of the dental hygienist in caring for the patient with diabetes and differentiate between Type I and Type II diabetes.
17. Describe modification in dental hygiene care for the following special population groups and give examples of oral health conditions that might be evident with these patients:
 - a. Preadolescent to Postmenopausal Patients
 - b. Pregnant Patients
18. Differentiate between the various cardiovascular diseases. Identify signs, symptoms, and dental management of patients with CV diseases.
19. Integrate the practice of dental hygiene into a Literature Review and PowerPoint presentation that demonstrates the application of an advanced level of dental hygiene knowledge, skills and attitudes.

Student Learning Outcomes

Varies

Diagnostic Medical Sonography (DMSO)

DMSO 1110. Introduction to Clinical Practicum

Course Description

Introduction to working in the medical environment. Includes preparation for clinical internship and observation hours in the ultrasound department.

Student Learning Outcomes

1. Recognize sonographic anatomy on observed sonographic procedures.
2. Identify and adhere to clinical site practices and policies.
3. Describe aspects of the clinical experience.
4. Demonstrate effective communication skills with patients and healthcare team members.

DMSO 1111. Introduction Sonography/Patient Care

Course Description

Introduction to the careers in sonography, terminology, medical ethics, scanning planes, applications of ultrasound, professional standards and patient care.

Student Learning Outcomes

1. Describe essential functions of the sonographer in the health care setting.
2. Distinguish key patient care differences based on patient demographics.
3. Develop and apply professional ethics in line with industry standards.
4. Describe best practices for infection control in the medical setting.

DMSO 111L. Introduction Sonography/Patient Care Laboratory

Introduction to working in the medical environment. Includes safety procedures for interactions with patients, including but not limited to transfer, moving and positioning techniques. Patient assessment methods and procedures. Protection of drains, tubes, intravenous lines, and infusion pumps. Gloving gowning, and sterile procedures. Safe use and application of sonography equipment. Professional behavior and responsibility of the sonographer in the diagnostic imaging lab

STUDENT LEARNING OUTCOMES:

1. Demonstrate safe patient interaction techniques in a simulated clinical environment, including proper communication, transfers, moving, and positioning.
2. Perform basic patient assessments (e.g., verification, mobility status, comfort, and safety considerations) to support appropriate sonographic procedures.
3. Operate introductory sonography equipment safely and appropriately, including power-up, basic controls (knobology), and probe handling, in accordance with lab protocols.
4. Integrate infection control principles into all lab activities to minimize the risk of contamination and maintain a safe clinical environment.
5. Respond appropriately to common lab-based clinical scenarios, identifying hazards and implementing corrective actions to promote patient and operator safety.

DMSO 1114. Introduction to Clinical Practicum II**Course Description**

Development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at the developmental level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under direct supervision.

Student Learning Outcomes

1. Demonstrate proficiency in patient care skills.
2. Recognize sonographic anatomy.
3. Assist with basic sonographic procedures in the clinical setting.
4. Describe aspects of the clinical experience.

DMSO 1115. Sonographic Cross-Sectional Anatomy**Course Description****Sonographic Cross-Sectional Anatomy**

A study of sectional anatomy of the transverse, longitudinal, and coronal planes are included with an emphasis on the organs of sonographic interest. Correlation with other imaging procedures will be emphasized.

Student Learning Outcomes

1. Demonstrate knowledge of human gross anatomy and sectional anatomy as it applies to diagnostic medical sonography.
2. Demonstrate knowledge of correlation of sonographic anatomy with other imaging procedures such as computerized tomography, radiologic imaging, or MRI.
3. Demonstrate knowledge of the body planes as they apply to sonographic sections.

DMSO 1116. Vascular Technology I**Course Description**

Review of basic ultrasound physics and principles, peripheral vascular anatomy, hemodynamics, Doppler evaluation, peripheral vascular scanning techniques, physiologic testing and the carotid arteries and the peripheral vascular system.

Student Learning Outcomes

1. Describe peripheral and cerebrovascular anatomy and physiology.
2. Identify normal anatomy and waveforms on sonographic images and correlative imaging procedures.
3. Correlate Doppler waveforms to hemodynamic principles.
4. Differentiate venous and arterial hemodynamic principles.

DMSO 1116L. Vascular Technology I Laboratory**Course Description**

Includes protocol development, scanning techniques, recognition of anatomical relationships and the normal ultrasound appearance of the carotid arteries and peripheral vasculature utilizing real-time sonographic equipment including Doppler.

Student Learning Outcomes

1. Recognize and document peripheral and cerebrovascular anatomy on sonographic examinations.
2. Develop protocols for thorough imaging of peripheral and cerebrovascular sonographic imaging.
3. Describe Doppler waveforms and correlate findings with hemodynamic principles.

DMSO 1120. Abdominal Sonography

Course Description

Emphasis is placed on recognizing the anatomy, physiology and pathology of the peritoneal organs, prevertebral vessels and abdominal wall. Laboratory tests, signs and symptoms of disease of the peritoneal abdominal organs will be discussed. Scanning techniques and protocols will be included.

Student Learning Outcomes

1. Recognize and identify the sonographic appearance of normal anatomic structures, including anatomic variants and normal Doppler patterns of the peritoneal organs prevertebral vessels and abdominal wall.
2. Recognize and identify the abnormal sonographic and Doppler patterns of disease processes, pathology, and pathophysiology of the peritoneal organs, prevertebral vessels and abdominal wall.
3. Demonstrate knowledge of related imaging, laboratory, functional testing procedures and differential diagnosis.
4. Demonstrate knowledge of the role of the sonographer in performing interventional/invasive procedures.

DMSO 1125. Gynecological Sonography

Course Description

Emphasis is placed on recognizing gynecological anatomy, physiology and pathology. Laboratory tests, signs and symptoms of gynecologic disease will be discussed. Scanning techniques and protocols will be included.

Student Learning Outcomes

1. Recognize and identify the sonographic appearance of normal anatomic structures of the female pelvis, including anatomic variants and normal Doppler patterns.
2. Recognize and identify the abnormal sonographic and Doppler patterns of disease processes, pathology, and pathophysiology of the female pelvis.
3. Demonstrate knowledge of related imaging, laboratory, functional testing procedures and differential diagnosis.
4. Demonstrate knowledge of Scanning techniques and protocols.
5. Demonstrate knowledge of the role of the sonographer in performing interventional/invasive procedures.

DMSO 1130. Sonographic Physics I

Course Description

Introduces the basic principles of acoustical physics including sound production, propagation, interactive properties of ultrasound with human tissues, basic ultrasound instrument operation, quality assurance testing, bioeffects and acoustic artifacts.

Student Learning Outcomes

1. Apply and solve problems using mathematics it applies to acoustic parameters.
2. Demonstrate knowledge basic concepts of acoustic physics.
3. Demonstrate knowledge of transducer parameters and selection.
4. Demonstrate knowledge acoustical artifacts.

DMSO 1131. Pelvic Sonography

Course Description

Includes the anatomy, sectional anatomy and normal physiology of the pelvic structures; including the uterus, ovaries, prostate, pelvic muscles, lower GI, appendix and vessels as well as scanning techniques, sonographic appearance and Doppler evaluation of the pelvis.

Student Learning Outcomes

1. Describe the relational anatomy of the pelvic organs.
2. Distinguish the sonographic appearance of male and female pelvic anatomy.

3. Discuss the physiology of pelvic organ systems.
4. Correlate the physiologic cycles of pelvic organs with the appropriate sonographic appearances.

DMSO 1131L. Pelvic Sonography Laboratory

Course Description

Includes protocol development, scanning techniques, recognition of anatomical relationships and the normal ultrasound appearance of the pelvic structures including the uterus, ovaries, prostate, lower gastrointestinal system, appendix and pelvic muscles utilizing real-time sonographic equipment including Doppler.

Student Learning Outcomes

1. Identify normal anatomy of the male and female pelvis on sonographic images.
2. Produce diagnostic sonographic images of pelvic organs.
3. Develop protocols for thorough sonographic evaluation of the pelvic organs.
4. Correlate sonographic findings with the normal physiologic processes of the female pelvic organs.

DMSO 1140. Abdominal Sonography

Course Description

Includes the anatomy, sectional anatomy and normal physiology of prevertebral vessels, liver, biliary system, pancreas, upper gastrointestinal system, kidneys, adrenals, and spleen as well as scanning techniques, sonographic appearance and Doppler evaluation of the deep abdominal organs.

Student Learning Outcomes

1. Identify the normal anatomy of the abdominal organs.
2. Describe the physiology of abdominal organs and how it relates to sonographic appearances.
3. Describe the relational anatomy of abdominal organ systems.

DMSO 1140L. Abdominal Sonography Laboratory

Course Description

Includes protocol development, scanning techniques, recognition of anatomical relationships and the normal ultrasound appearance of prevertebral vessels, liver, biliary system, pancreas, upper gastrointestinal system, kidneys and spleen utilizing real-time sonographic equipment including Doppler.

Student Learning Outcomes

1. Identify the abdominal organs on sonographic images.
2. Produce diagnostic quality sonographic images of the abdominal organs.
3. Correlate sonographic appearances with the normal physiology of abdominal organs.
4. Develop protocols for thorough and efficient imaging of the abdominal organs.

DMSO 1150. Sonographic Principles and Instrumentation I

Course Description

Includes the fundamental properties and mathematical relationships between variables of wave parameters, acoustic variables, attenuation, pulsed wave operation, transducers, system operation, Doppler, and artifacts utilizing real-time sonographic equipment.

Student Learning Outcomes

1. Describe the physics principles related to sonographic imaging.
2. Correlate physics principles to technical factor adjustments on sonographic equipment.
3. Solve mathematical equations related to sonographic physics principles.

DMSO 1170. Clinical Practicum I**Course Description**

Development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at the developmental level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under direct supervision.

Student Learning Outcomes

1. Develop professional skills necessary in the clinical environment.
2. Perform basic sonographic procedures with minimal assistance from preceptors.
3. Assist with complex/advanced sonographic procedures under the guidance of preceptors.

DMSO 1180. Clinical Practicum II**Course Description**

Development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at the beginner level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continue observation, assistance and performance of patient care and sonographic duties under direct supervision.

Student Learning Outcomes

1. Demonstrate general and sonographic knowledge to function as a member of the healthcare team.
2. Identify and interpret data from patient charts.
3. Perform a broad range of general sonographic examinations with minimal to moderate assistance.
4. Demonstrate effective oral and written communication skills.

DMSO 1193. Sonographic Concepts Laboratory I**Course Description**

Basic general and vascular sonographic concepts and anatomy lab. Laboratory sessions will introduce students to basic scanning techniques, sonographic anatomy and imaging protocols.

Student Learning Outcomes

1. Demonstrate knowledge of human gross anatomy and sectional anatomy as it applies to diagnostic medical sonography.
2. Recognize and identify the sonographic appearance of normal anatomic structures, including anatomic variants and normal Doppler patterns.
3. Demonstrate knowledge of the body planes as they apply to sonographic sections.
4. Demonstrate knowledge of image optimization techniques.
5. Demonstrate basic knowledge of imaging protocols.

DMSO 1520. Abdominal Sonography II**Course Description**

The emphasis of this course is on recognizing the anatomy, physiology and pathology of the following as they relate to sonographic imaging: breast, musculoskeletal system, gastrointestinal system, non-cardiac chest, superficial and retroperitoneal structures, abdominal wall, cavities and vasculature. The sonographer's role in ultrasound-guided procedures as well as pre- and post-organ transplant imaging will also be presented. Laboratory tests, signs and symptoms of disease will be discussed. Scanning techniques and protocols will be included.

Student Learning Outcomes

1. Demonstrate knowledge of the physiology, pathophysiology, sonographic technique, measurements, sonographic appearances, and Doppler patterns, where applicable, in both normal and abnormal structures including: breast, musculoskeletal system, gastrointestinal system, non-cardiac chest, superficial and retroperitoneal structures, abdominal wall, cavities and vasculature.
2. Demonstrate knowledge of related imaging, laboratory, functional testing procedures and differential diagnosis.

DMSO 1525. Obstetrical Sonography

Course Description

Emphasis is placed on recognizing obstetrical anatomy, physiology and pathology. Laboratory tests, signs and symptoms of obstetrical and fetal disease will be discussed. Scanning techniques and protocols will be included.

Student Learning Outcomes

1. Demonstrate knowledge of the sonographic appearance of normal maternal gynecological structures during the first, second, and third trimesters.
2. Demonstrate knowledge of the sonographic appearance of normal embryonic, and fetal anatomic structures during the first, second, and third trimesters.
3. Demonstrate knowledge of the sonographic appearance of normal fetal growth parameters.
4. Demonstrate knowledge of the sonographic appearance of obstetric abnormalities, disease, pathology, and pathophysiology.
5. Demonstrate knowledge of the role of the sonographer in performing interventional/invasive procedures.

DMSO 1526. 1st Trimester Obstetric Sonography

Course Description

Includes the embryology, anatomy, sectional anatomy, normal physiology, biometrics, assessment, and sonographic appearance of the 1st trimester fetus, placenta, uterus and adnexa as well as scanning techniques according to recognized protocols.

Student Learning Outcomes

1. Describe the embryology and normal development of the 1st trimester pregnancy.
2. Recognize the sonographic anatomy of normal 1st trimester pregnancy.
3. Relate the gestational age with sonographic findings to recognize normal development of the 1st trimester pregnancy.

DMSO 1527. 2nd/3rd Trimester Obstetric Sonography

Course Description

Includes the anatomy, sectional anatomy, normal physiology, biometrics, assessment, and sonographic appearance of the 2nd and 3rd trimester fetus, placenta, uterus, and adnexa as well as scanning techniques according to recognized protocols.

Student Learning Outcomes

1. Describe the normal anatomy and physiology of the 2nd and 3rd trimester pregnancy.
2. Correlate the sonographic appearance of the pregnancy with the gestational age to identify appropriate growth and development of the fetus.
3. Develop protocols for efficient and thorough scanning of the pregnancy.
4. Describe best practices for imaging the pregnancy in accordance with ALARA principles.

DMSO 1528. High Risk Obstetric Sonography

Course Description

Includes congenital malformations of the developing fetus, high risk pregnancies, multiple gestation, maternal conditions and invasive procedures.

Student Learning Outcomes

1. Describe the sonographic signs of fetal anomalies.
2. Identify the risk factors for congenital anomalies to correlate with clinical history.
3. Describe the process for imaging multiple gestations.
4. Identify best practices for safe imaging in the high risk pregnancy.

DMSO 1530. Sonographic Physics II

Course Description

This course presents concepts of transducer parameters and functions, detail resolution, imaging instrumentation design and function, bio-effects, and emerging technologies in sonographic imaging.

Student Learning Outcomes

1. Demonstrate knowledge of transducer construction, how a transducer generates pulses and receives echoes.
2. Demonstrate knowledge of how sound beams are focused and scanned through anatomy.
3. Demonstrate knowledge of spatial detail resolution and the factors that determine spatial detail resolution.
4. Compare linear, convex, phased, and vector arrays and relate the technical needs and developments that have driven advancement in ultrasound imaging.
5. Demonstrate knowledge of image production and optimization through application of concepts of transducer selection, principles of instrumentation and modes of operation, operator control options, image storage devices and emerging technologies.

DMSO 1590. Clinical Sonography I

Course Description

Supervised clinical experience in area hospitals and health care facilities to develop the student's general ultrasonic skills in a diagnostic environment.

Student Learning Outcomes

1. Obtain, review, and integrate pertinent patient history and supporting clinical data to facilitate optimum diagnostic results.
2. Perform appropriate procedures and record anatomic, pathologic, and/or physiologic data for interpretation by a physician.
3. Record, analyze, and process diagnostic data and other pertinent observations made during the procedure for presentation to the interpreting physician.
4. Exercise discretion and judgment in the performance of sonographic and/or other diagnostic services.
5. Demonstrate appropriate communication skills with patients and colleagues.
6. Act in a professional and ethical manner.
7. Provide patient education related to medical ultrasound and/or other diagnostic vascular techniques and promote principles of good health.

DMSO 2020. Pediatric Sonography

Course Description

Ultrasound evaluation relating to the pediatric population. Includes scanning techniques, transducer selection, and scanning protocols relating to normal and pathologic conditions that affect the premature infant, newborn and pediatric population across a variety of body systems.

Student Learning Outcomes

1. Identify anatomy, relational anatomy, anatomic variants, and sonographic appearances of normal anatomical structures related to the pediatric population.
2. Demonstrate knowledge of the physiology, pathophysiology, sonographic technique, measurements, sonographic appearances, and Doppler patterns, where applicable, in both normal and abnormal pediatric structures.
3. Demonstrate knowledge in scanning technique, protocol and modifications based on sonographic findings.
4. Demonstrate knowledge and application of patient care as it pertains to the pediatric population.

DMSO 2030. Sonographic Physics III**Course Description**

Presents concepts of advanced physics, principles of Doppler techniques, hemodynamics, flow analysis, quality control procedures and research statistics and design. This course also includes a review of all Sonographic Physics concepts in preparation for the Sonographic Principles and Instrumentation board exam.

Student Learning Outcomes

1. Explain principles of normal adult cardiovascular physiology and hemodynamics.
2. Explain the laws and principles that govern hemodynamics and their clinical significance in normal and diseased states.
3. Evaluate spectral Doppler data to assess flow dynamics for disease.
4. Describe the qualitative and quantitative methods used to determine vascular function and patency in common disease states.
5. Identify the primary components of imaging instruments involved in performing Doppler interrogation of the vascular system.
6. Identify and explain image optimization techniques.

DMSO 2090. Clinical Sonography II**Course Description**

Supervised clinical experience in area hospitals and health care facilities to develop the student's general ultrasonic skills in a diagnostic environment.

Student Learning Outcomes

1. Obtain, review, and integrate pertinent patient history and supporting clinical data to facilitate optimum diagnostic results.
2. Perform appropriate procedures and record anatomic, pathologic, and/or physiologic data for interpretation by a physician.
3. Record, analyze, and process diagnostic data and other pertinent observations made during the procedure for presentation to the interpreting physician.
4. Exercise discretion and judgment in the performance of sonographic and/or other diagnostic services.
5. Demonstrate appropriate communication skills with patients and colleagues.
6. Act in a professional and ethical manner.
7. Provide patient education related to medical ultrasound and/or other diagnostic vascular techniques, and promote principles of good health.

DMSO 2093. Sonographic Concepts Lab III**Course Description**

Advanced general, and introductory vascular, sonographic concepts lab. Laboratory sessions will build upon students' clinical experience of scanning techniques, sonographic anatomy and imaging protocols. Students will develop proficiency in image acquisition, implementing technical quality, imaging protocols, interpretation and case analysis. B-Mode imaging, color flow image interpretation, and spectral Doppler waveform analysis will be practiced.

Student Learning Outcomes

1. Demonstrate knowledge of human gross anatomy and sectional anatomy as it applies to diagnostic medical sonography.
2. Recognize and identify the sonographic appearance of normal anatomic structures including anatomic variants.
3. Demonstrate knowledge of the body planes as they apply to sonographic sections.
4. Perform complete sonographic exams of specified organs utilizing standard protocols within a specified time frame.
5. Apply Doppler principles.
6. Recognize normal Doppler patterns.
7. Identify and measure specified anatomical structures.
8. Demonstrate knowledge of imaging instruments.
9. Apply advanced image optimization techniques.

DMSO 2110. Introduction to Vascular Sonography

Course Description

Course includes arterial and venous anatomy, vascular anatomy, vascular imaging protocols, basic scanning techniques, and transducer manipulation. Two dimensional B-Mode imaging, color flow image interpretation, and spectral Doppler waveform analysis will be discussed. Vascular disease and its effect on blood flow will be covered.

Student Learning Outcomes

1. Demonstrate knowledge of vascular pathology and pathophysiology.
2. Explain mechanisms of normal vascular hemodynamics.
3. Apply knowledge of vascular anatomy and physiology to evaluate sonographic findings for disease in the vascular system.
4. Apply knowledge of sonographic appearances, sonographic techniques, measurements, and Doppler flow characteristics to assess both normal and abnormal vascular structures.

DMSO 2216. Vascular Technology II

Course Description

Includes the pathology and pathophysiology of the vascular system, scanning techniques, clinical presentation, ultrasound appearance and Doppler evaluation seen with pathological conditions of the carotid arteries, deep and peripheral vascular systems.

Student Learning Outcomes

1. Describe risk factors for vascular pathology.
2. Correlate Doppler waveforms with hemodynamic principles in the presence of pathology.
3. Describe the sonographic appearance of pathology in peripheral and cerebrovascular systems.
4. Identify modifications to sonographic techniques when pathology is identified.

DMSO 2230. Gynecologic Pathology

Course Description

Includes the pathology and pathophysiology of the female reproductive system, scanning techniques, clinical presentation, ultrasound appearance and Doppler evaluation seen with pathological conditions of the uterus, ovaries, and adnexa.

Student Learning Outcomes

1. Recall the normal gynecological anatomy to identify variations or the presence of pathology.
2. Describe risk factors, clinical findings, and the sonographic appearance of gynecological pathologies.
3. Identify diagnostic differentials based on the sonographic appearance of gynecological pathologies.

DMSO 2240. Abdominal Pathology I**Course Description**

Includes the pathology and pathophysiology of abdominal structures of the prevertebral vessels, liver, biliary system, pancreas, spleen and gastrointestinal system; scanning techniques, ultrasound appearance, clinical presentation and Doppler evaluation seen with pathological conditions.

Student Learning Outcomes

1. Recall the normal anatomy and physiology of the abdominal organs to recognize variations on sonographic images.
2. Describe modifications to the sonographic technique based when pathology is identified.
3. Correlate sonographic findings with clinical information to identify diagnostic differentials.

DMSO 2245. Abdominal Pathology II**Course Description**

Includes the pathology and pathophysiology of abdominal structures of the genitourinary system, spleen, retroperitoneum, adrenal glands, abdominal wall and prostate; scanning techniques, ultrasound appearance, clinical presentation and Doppler evaluation seen with pathological conditions.

Student Learning Outcomes

1. Recall the normal anatomy and physiology of the abdominal organs to recognize variations on sonographic images.
2. Describe modifications to the sonographic technique when pathology is identified.
3. Correlate sonographic findings with clinical information to identify diagnostic differentials.

DMSO 2250. Sonographic Principles and Instrumentation II**Course Description**

Includes properties of sound and its use in diagnostic imaging, artifacts, system operation, Doppler, basic hemodynamics, image optimization, bio effects, quality assurance, and new technologies in ultrasound imaging.

Student Learning Outcomes

1. Explain the physics principles associated with sonographic imaging.
2. Describe how physics principles modify the sonographic image.
3. Relate ultrasound physics to bio effects and best practices for safe sonographic imaging.

DMSO 2270. Clinical Practicum III**Course Description**

Continued development of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at an intermediate level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under limited supervision.

Student Learning Outcomes

1. Consistently demonstrate professional skills and etiquette in the clinical setting.
2. Perform basic and advanced sonographic procedures with minimal assistance from preceptors.
3. Perform complex sonographic procedures with guidance from preceptors.
4. Analyze clinical experiences to broaden patient care skills.

DMSO 2280. Clinical Practicum IV

Course Description

Application of technical and professional aspects of diagnostic ultrasound in a hospital or clinical setting at a proficient level. Ongoing reinforcement and broadening of knowledge base related to hospital procedures and policies. Continued observation, assistance and performance of patient care and sonographic duties under limited supervision.

Student Learning Outcomes

1. Demonstrate professional communication with patients and healthcare team members.
2. Perform basic and advanced sonographic procedures with minimal assistance from preceptors.
3. Perform complex sonographic procedures with guidance from preceptors.
4. Analyze clinical experiences to broaden patient care skills.

DMSO 2290. Clinical Sonography III

Course Description

Supervised clinical experience in area hospitals and health care facilities to develop the student's ultrasonic skills in a diagnostic environment. May include vascular sonography opportunities.

Student Learning Outcomes

1. Obtain, review, and integrate pertinent patient history and supporting clinical data to facilitate optimum diagnostic results.
2. Perform appropriate procedures and record anatomic, pathologic, and/or physiologic data for interpretation by a physician.
3. Record, analyze, and process diagnostic data and other pertinent observations made during the procedure for presentation to the interpreting physician.
4. Exercise discretion and judgment in the performance of sonographic and/or other diagnostic services.
5. Demonstrate appropriate communication skills with patients and colleagues.
6. Provide patient education related to medical ultrasound and/or other diagnostic vascular techniques, and promote principles of good health.

DMSO 2291. Registry Preparation: OB/GYN

Course Description

Registry preparation mock examinations over materials covered in Obstetric and Gynecological ultrasound. Students must pass this course with a 74% or better OR pass national certification in OB/GYN Sonography.

Student Learning Outcomes

1. Recall knowledge of normal anatomy, physiology, and pathology of obstetric and gynecological structures.
2. Evaluate sonographic images and patient history to identify likely pathologies.
3. Self-reflect on tested concepts to identify concepts that require further studying.

DMSO 2292. Registry Preparation: Abdomen

Course Description

Registry preparation mock examinations over materials covered in abdominal ultrasound including small parts and superficial structures. Students must pass this course with a 74% or better OR pass ARDMS national certification exam in Abdominal Sonography.

Student Learning Outcomes

1. Recall knowledge of normal anatomy, physiology, and pathology of abdominal and superficial structures.

2. Evaluate sonographic images and patient history to identify likely pathologies.
3. Self-reflect on tested concepts to identify concepts that require further studying.

DMSO 2293. Registry Preparation: Vascular

Course Description

Registry preparation mock examinations over materials covered in vascular ultrasound. Students must pass this course with a 74% or better OR pass national certification in Vascular Technology.

Student Learning Outcomes

1. Identify and describe vascular anatomy.
2. Recognize vascular pathology based on sonographic images.
3. Describe hemodynamic changes associated with vascular pathology.
4. Demonstrate understanding of patient care, exam protocols, and department procedures.

DMSO 2295. Small Parts and Superficial Structures

Course Description

Includes anatomy, pathology and pathophysiology, protocol development, scanning techniques, recognition of anatomical structures and the normal and pathological ultrasound appearance of the breast, thyroid, neck, scrotum, non-cardiac chest and musculoskeletal ultrasound.

Student Learning Outcomes

1. Describe the anatomy and physiology of small parts and superficial structures.
2. Identify normal anatomy, anatomical variants, and pathology on sonographic images of superficial structures.
3. Correlate sonographic appearances of pathologies with clinical history to develop diagnostic differentials of superficial structures.

DMSO 2996. Diagnostic Medical Sonography Topics

Digital Studies (DGST)

DGST 1110. Introduction to Digital Studies

Course Description

Introduces an interdisciplinary approach to the interactions between the digital and material worlds. Includes the analysis of digital cultures and history, development of digital identity, and creative work with digital tools.

Student Learning Outcomes

1. Demonstrate effective use of digital tools for constructing knowledge and producing cultural objects.

2. Explain and critique elements of digital cultures and communities.
3. Describe how digital culture reproduces elements of material culture, such as power dynamics, biases, and systems of privilege.
4. Construct and curate a digital identity or identities.

DGST 1120. Introduction to Digital Humanities

Course Description

This course introduces students to the methods and inquiries of the humanities fields generally, but with special attention to the use of digital tools to analyze traditional texts and traditional methods analyzing digital texts. Also uses digital tools in the production and demonstration of knowledge in the course.

Student Learning Outcomes

1. Compare and contrast humanities methods and inquiry from those of other disciplines.
2. Analyze traditional texts with a variety of digital tools.
3. Create hypotheses or theses about traditional or digital texts and test them with digital tools.
4. Create multi-modal texts to demonstrate understanding of humanistic ideas, questions, and texts.

Early Childhood Education (ECED)

ECED 1110. Child Growth Development, and Learning

Course Description

This basic course in the growth, development, and learning of young children, prenatal through age eight, provides students with the theoretical foundation for becoming competent early childhood professionals. The course includes knowledge of how young children grow, develop and learn. Major theories of child development are integrated with all domains of development, including biological-physical, social, cultural, emotional, cognitive and language. The adult's role in supporting each child's growth, development and learning is emphasized.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Incorporate understanding of developmental stages, processes, and theories of growth, development, and learning into developmentally appropriate practice. A.1
2. Demonstrate knowledge of the interaction between maturation and environmental factors that influence physical, social, emotional, cognitive, and cultural domains in the healthy development of each child. A.2
3. Demonstrate knowledge of the significance of individual differences in development and learning.
4. Demonstrate knowledge of how certain differences may be associated with rate of development and developmental patterns associated with developmental delays and/or specific disabilities. A.3
5. Demonstrate knowledge of the similarities between children who are developing typically and those with diverse abilities. A.4
6. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.7
7. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A.8
8. Demonstrate knowledge of how children acquire and use verbal, non-verbal, and alternative means of communication. A.9
9. Demonstrate knowledge of the relationship among emotions, behaviors, and communication skills to assist children in identifying and expressing their feelings in appropriate ways. A.10

10. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.11

ECED 1115. Health, Safety, and Nutrition

Course Description

This course provides information related to standards and practices that promote children's physical and mental well-being sound nutritional practices, and maintenance of safe learning environments. It includes information for developing sound health and safety management procedures for indoor and outdoor learning environments for young children. The course examines the many scheduling factors that are important for children's total development, healthy nutrition, physical activity, and rest.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Recognize and respond to each child's physical health, intellectual and emotional well-being, and nutritional and safety needs. B.1
2. Articulate an understanding of indoor and outdoor learning environments that provide opportunities for children to put into practice healthy behaviors (physically, socially and emotionally). B.2
3. Use appropriate health appraisal and management procedures and makes referrals when necessary. B.3
4. Recognize signs of emotional distress, child abuse, and neglect in young children and use procedures appropriate to the situation, such as initiating discussions with families, referring to appropriate professionals, and, in cases of suspected abuse or neglect, reporting to designated authorities. B.4
5. Establish an environment that provides opportunities and reinforcement for children's practice of healthy behaviors that promote appropriate nutrition and physical and psychological well-being. B.5
6. Provide a consistent daily schedule for rest/sleep, as developmentally appropriate. B.6
7. Implement health care and educational activities for children and families based on health and nutritional information that is responsive to diverse cultures. B.7
8. Assist young children and their families, as individually appropriate, in developing decision-making and interpersonal skills that enable them to make healthy choices and establish health-promoting behaviors. B.8

ECED 1120. Guiding Young Children

Course Description

This course explores various theories of child guidance and the practical applications of each. It provides developmentally appropriate methods for guiding children and effective strategies and suggestions for facilitating positive social interactions. Strategies for preventing challenging behaviors through the use of environment, routines and schedule will be presented. Emphasis is placed on helping children become self-responsible, competent, independent, and cooperative learners and including families as part of the guidance approach.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Apply knowledge of cultural and linguistic diversity and the significance of socio-cultural and political contexts for development and learning and recognize that children are best understood in the contexts of family, culture and society. A.6

2. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.7
3. Demonstrate knowledge of the relationship among emotions, behaviors, and communication skills to assist children in identifying and expressing their feelings in appropriate ways. A.10
4. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.11
5. Recognize and respond to each child's physical health, intellectual and emotional well-being, and nutritional and safety needs. B.1
6. Demonstrate knowledge and skill in building positive, reciprocal relationships with families. C.1
7. Demonstrate knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and child-rearing practices. C.4
8. Demonstrate the ability to incorporate the families' desires and goals for their children into classroom or intervention strategies. C.7
9. Demonstrate knowledge and skills in developmentally appropriate guidance techniques and strategies that provide opportunities to assist children in developing positive thoughts and feelings about themselves and others through cooperative interaction with peers and adults. E.3
10. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.7
11. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this

ECED 1125. Assessment of Children and Evaluation of Programs

Course Description

This basic course familiarizes students with a variety of culturally appropriate assessment methods and instruments, including systematic observation of typically and non-typically developing children. The course addresses the development and use of formative and summative assessment and evaluation instruments to ensure comprehensive quality of the total environment for children, families, and the community. Students will develop skills for evaluating the assessment process and involving other teachers, professionals and families in the process.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Demonstrate ability to choose valid tools that are developmentally, culturally, and linguistically appropriate; use the tools correctly; make appropriate referrals; and interpret assessment results, with the goal of obtaining valid, useful information to inform practice and decision making. F.1
2. Demonstrate knowledge of maintaining appropriate records of children's development and behavior that safeguard confidentiality and privacy. F.2 3.
3. Demonstrate knowledge of the educator's role as a participating member of the assessment process as described and mandated by state and federal regulations for Individual family service plans (IFSP) and individual education plans (IEP). F.3
4. Demonstrate understanding of the influences of environmental factors, cultural/linguistic differences, and diverse ways of learning on assessment outcomes. F.4 5.
5. Involve the family and, as appropriate, other team members in assessing the child's development, strengths, and needs in order to set goals for the child. F.5 6.
6. Articulate an understanding of the distinctions and definitions of assessment concepts (e.g., screening, diagnostic assessment, standardized, testing, accountability assessment). F.6 7.

7. Apply understanding of assessment concepts toward selection of appropriate formal assessment measures, critiquing the limitations of inappropriate measures, and discussing assessment issues as part of interdisciplinary teams. F.7
8. Articulate an understanding that responsible assessment is legally and ethically grounded and guided by sound professional standards that is collaborative and open with the goal of supporting diverse children and families. F.8
9. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the Application of this data to curriculum development and/or intervention planning. F.9
10. Demonstrate knowledge of a variety of techniques and procedures to evaluate and modify program goals for young children and their families. F.10.
11. Demonstrate knowledge and use of program evaluation to ensure comprehensive quality of the total Environment for children, families, and the community. F.11
12. Use both self and collaborative evaluations as part of ongoing program evaluations. F.12

ECED 1130. Family and Community Collaboration

Course Description

This beginning course examines the involvement of families and communities from diverse cultural and linguistic backgrounds in early childhood programs. Ways to establish collaborative relationships with families in early childhood settings is discussed. Families' goals and desires for their children will be supported through culturally responsive strategies.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Demonstrate knowledge and skill in building positive, reciprocal relationships with families. C.1
2. Articulate an understanding of a safe and welcoming environment for families and community members. C.2
3. Develop and maintain ongoing contact with families through a variety of communication strategies. C.3
4. Demonstrate knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and child-rearing practices. C.4
5. Articulate understanding of the complexity and dynamics of family systems. C.5
6. Demonstrate understanding of the importance of families as the primary educator of their child. C.6
7. Involve families and community members in contributing to the learning environment. C.9
8. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.11
9. Apply knowledge of family theory and research to understand family and community characteristics including socioeconomic conditions; family structures, relationships, stressors, and supports (including the impact of having a child with diverse abilities); home language and ethnicity. C.12
10. Demonstrate knowledge of and skill to access community resources that assist families and contribute directly or indirectly to children's positive development such as mental health services, health care, adult education, English language instruction, and economic assistance. C.13
11. Demonstrate effective written and oral communication skills when working with children, families, and early care, education, and family support professionals. E.14
12. Demonstrate a commitment to leadership and advocacy for Excel[®]lence in programs and services for young children and their families. G.6

ECED 1135. 45 Hour Early Entrance Level Course

Course Description

The 45-Hour early Entrance Level Course is designed to give the student an introduction to the field of early care, education, and family support. Developmentally appropriate expectation and practices and the New Mexico Competencies provide the foundation for this course.

Student Learning Outcomes

Not Available

ECED 1140. Foundations of Early Childhood

Course Description

An introduction for entry-level professionals to the field of early care, education and family support. This course meets New Mexico licensing standards for entry level curriculum and address the seven competency areas for early childhood education. The 45-hour entry level course may be used as part of the 120 clock hours of child study required by the CDA.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Discuss and observe the growth, development and learning of children from birth through age 8.
2. Identify and Implement basic physical health, emotional well-being, nutritional and safety practices that meet the needs of children from birth through age 8.
3. Identify ways to establish a collaborative relationships with each child's family in order to promote family centered practices in early childhood settings.
4. Define developmentally appropriate ways of teaching that support the learning of relevant curriculum content.
5. Define and observe how the learning environment supports children's growth, development and learning.
6. Define ways in which early childhood professionals can learn about each child's growth, development and learning through the use of appropriate assessment procedures.
7. Discuss appropriate procedures for sharing assessment results with families.
8. Discuss and define the meaning of professionalism.

ECED 1145. Literacy through Play

Course Description

Play provides a meaningful context in which children can construct literacy knowledge. This course addresses methods in which literacy learning is embedded in play situations. Students will investigate integrated, content-focused activities and examine the design of literacy-rich play settings. Students are introduced to the teacher's role in providing children with countless opportunities to practice reading, writing, speaking and listening.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe, in general terms, the role of play in young children's emergent literacy development
2. Demonstrate how literacy play is integrated into learning activities.
3. Identify ways in which teachers can support literacy development
4. Discuss how elements of a literacy enriched learning environment supports children's literacy development.

ECED 1150. Guided Discovery - Science in the Early Childhood Classroom

Course Description

This basic course examines science curriculum for children between the ages of three and five years of age. Students will study how the early childhood teacher creates a scientific environment for the child that enables him/her to develop an understanding of self and the world through Investigation and active exploration. Teacher behaviors that facilitate discovery will be explored.

Student Learning Outcomes

1. Identify the components of a science curriculum that best contribute to children's understanding of the world.
2. Identify appropriate science content, the "what" of science, in the early childhood classroom.

3. Explain how science can be Integrated In a classroom for young children between the ages of three and five.
4. Describe the teacher's role in science and learning.

ECED 1155. Working with Challenging Behaviors

Course Description

An introductory course in working with children from birth through 8 years who are difficult to raise or teach because of their different temperaments. Students learn how to deal with children who are fidgety and unable to be still, who are easily overstimulated and impulsive, and who exhibit aggressive, highly distractible and unpredictable behaviors.

Student Learning Outcomes

1. Identify and describe the difficult child.
2. Describe the most common behaviors of the difficult child.
3. Identify and describe the successful techniques used in managing the behavior of difficult children.
4. Identify protective and risk factors in raising and working with difficult children

ECED 1160. Introduction to Observing & Recording Young Children

Course Description

A course covering techniques for observing and recording behaviors of young children for the purpose of understanding child development, assisting in achieving goals, providing for individual needs, and developing a daily curriculum based on Identified needs. The course does not use standardized testing procedures but focuses on information in a functional assessment format to determine what a child can and cannot yet do from a developmental perspective.

Student Learning Outcomes

1. Observe young children in an objective manner;
2. Integrate observation information into daily curriculum planning;
3. Write Individual Education Plans on individual children

ECED 1240. Principles and Practices in Infant Family Studies

Course Description

Intended to assist students to understand infant and toddler development in the context of relationships. This course defines and implements basic elements of quality programming for all infants and toddlers in safe, healthy, responsive caring environments, including the child's home. The experiences in identified settings will support strong nurturing relationships, cultural competence, diverse learning needs and styles of every child, appropriate guidance techniques and partnership with the families, cultures, and community represented. Students are assisted through the course in gaining the ability to observe, discuss, and implement basic elements of quality programming for infants and toddlers in home, small-group, or whole-group care situations. *Competencies for this degree pathway are defined by NM Department of Health/FIT and the New Mexico Infant Mental Health Association

Student Learning Outcomes

1. Demonstrate ability to define and apply caregiving practices and programming that support the optimal development of all infants and toddlers using a team approach
 - a. Form responsive affectionate relationships with infants and toddlers (*1.2., 4.1, ** Level 1, Direct Service Skills, and IVa.A.)
 - b. Promote mutually satisfying, growth-promoting interactions between parents/caregivers and children (*4.1, 4.2, **Level 1, Direct Service Skills, IV.a A, C)
 - c. Provide trust and security for infants and toddlers (*4.1, 4.4, ** Level 1, Direct Service Skills, and IV.a.
 - d. Help toddlers learn to control their impulses while giving them space to work through their emotions (*4.4, ** Level 1, Direct Service Skills, and IVb.B, D)
 - e. Be aware of and provide for experiences that allow both child and parent to adjust to the program (*5.1. 5.2, ** Level 1, Systems Expertise, and IV. G; IV. b. B.

- f. Understand how play supports infant/toddler learning (*4.2, 4.3, 4.4, 4.5, 5.1I, ** Level 1, Direct Service Skills, and IV.a. B.)
- g. Provide an environment that encourages self-regulation (*5.2, ** Level 1, Direct Service Skills, and IV.b. A. F)
- h. Take advantage of unplanned encounters that allow toddlers to show competence (*4.2, 4.3, 4.4, 4.5, 5.1, 5.2, ** Level 1, Direct Service Skills, and IV. b. C)
- i. Allow toddlers to make choices where appropriate (*4.2, 4.3, 4.4, 4.5, 5.1, 5.2, ** Level 1, Direct Service Skills, and IV.b. B)
- j. Provide and, as necessary, adapt challenging toys and materials that ensure success (*4.2, 4.3, 4.4, 4.5, 5.1, 5.2, ** Level 1, Direct Service Skills, and IV. b. G, H, L)
- k. Select and use age-appropriate books that represent children's home and cultural environment (*4.2, 4.3, 4.4, 4.5, 5.1, 5.2, ** Level 1, Direct Service Skills, and IV.I, J, K)
- l. Offer, and as necessary, adapt a variety of activities and experiences that promote creativity and creative expression, including music, art, and sand and water play (*4.2, 4.3, 4.4, 4.5, 5.1, 5.2, ** Level 1, Direct Service Skills, and IV.b. E 13. Allow infants and toddlers to develop relationships with one or two main adults and support involvement of families. (*4.2, 4.4, ** Level 1, Direct Service Skills, Level 1, Systems Expertise, and IV.M, N)

ECED 1898. Internship in Early Childhood Education

Course Description

This is a field experience course under the direction of a faculty supervisor and cooperating professional in an approved program serving children from birth to age eight. Programs may include the WNMU Early Childhood Programs, Head Start, Foy Child Care Center, an Accredited Public School, or family or center childcare programs that have documented, formal early care and education training of supervising staff, NM State Star Level Three Certification or higher and/or program accreditation.

ECED 1998. Childhood Development Field Experience

Course Description

Field experience that meets the requirements of the Child Development Certificate issued by the New Mexico Children Youth and Families Department (CYFD). Students apply developmentally appropriate practices, establish partnerships with families, and design programs/curriculum that are culturally and linguistically appropriate.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and describe best practices for programs for children based on the age of the child
2. Demonstrate an understanding of regulations of health, safety, and nutrition as they relate to young children
3. Apply best practices in a field experience through an observation

ECED 2110. Professionalism

Course Description

This course provides a broad-based orientation to the field of early care and education. Early childhood history, philosophy, ethics and advocacy are introduced. Basic principles of early childhood systems are explored. Multiple perspectives on early care and education are introduced. Professional responsibilities such as cultural responsiveness and reflective practice are examined.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Recognize signs of emotional distress, child abuse, and neglect in young children and use procedures appropriate to the situation, such as initiating discussions with families, referring to appropriate professionals, and, in cases of suspected abuse or neglect, reporting to designated authorities. B.4
2. Demonstrate ability to communicate to families the program's policies, procedures, and those procedural safeguards that are mandated by state and federal regulations. C.11
3. Use both self and collaborative evaluations as part of ongoing program evaluations. F.12
4. Demonstrate ability to adhere to early childhood professional codes of ethical conduct and issues of confidentiality. G.1
5. Demonstrate awareness of federal, state, and local regulations, and public policies regarding programs and services for children birth through eight years of age. G.2
6. Demonstrate understanding of conditions of children, families, and professionals; the historical and current issues and trends; legal issues; and legislation and other public policies affecting children, families, and programs for young children and the early childhood profession. G.3
7. Demonstrate critical reflection of one's own professional and educational practices from community, state, national, and global perspectives. G.4
8. Demonstrate understanding of the early childhood profession, its multiple historical, philosophical, and social foundations, and how these foundations influence current thought and practice. G.5
9. Demonstrate knowledge in technology resources to engage in ongoing professional development. G.7

ECED 2115. Introduction to Language, Literacy, and Reading

Course Description

This course is designed to prepare early childhood professionals for promoting children's emergent literacy and reading development. Through a developmental approach, the course addresses ways in which early childhood professionals can foster young children's oral language development, phonemic awareness, and literacy problem solving skills, fluency, vocabulary, and comprehension. This course provides the foundation for early childhood professionals to become knowledgeable about literacy development in young children. Instructional approaches and theory-based and research-based strategies to support the emergent literacy and reading skills of native speakers and English language learners will be presented.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Demonstrate knowledge of the many functions that language serves in the cognitive, social, and emotional aspects of development in the formative years. A.7
2. Demonstrate knowledge of the developmental sequence of language and literacy, including the influence of culture and home factors. A.8

3. Demonstrate knowledge of how children acquire and use verbal, non-verbal, and alternative means of communication. A.9
4. Develop partnerships with family members to promote early literacy in the home. C.8
5. Establish partnerships with community members in promoting literacy. C.10
6. Demonstrate knowledge of the reading and writing components of emergent literacy at each developmental level. D.4
7. Provide and use anti-bias materials/literature and experiences in all content areas of the curriculum. D.7
8. Create and manage a literacy-rich environment that is responsive to each child's unique path of development. E.9
9. Use a variety of strategies during adult-child and child-child interactions and facilitate communication and dialogue of expressive language and thought. E.10
10. Demonstrate a variety of developmentally appropriate instructional strategies that facilitate the development of literacy skills. E.11

ECED 2120. Curriculum Development through Play Birth through Age 4 (PreK)

Course Description

The beginning curriculum course places play at the center of curriculum in developmentally appropriate early childhood programs. It addresses content that is relevant for children birth through age four in developmentally and culturally sensitive ways of integrating content into teaching and learning experiences. Information on adapting content areas to meet the needs of children with special needs and the development of IFSPs is included. Curriculum development in all areas, including literacy, numeracy, the arts, health, science, social skills, and adaptive learning for children, birth through age four, is emphasized.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.11
2. Demonstrate knowledge of relevant content for young children and developmentally appropriate ways of integrating content into teaching and learning experiences for children from birth to four (0-4) years of age. D.1
3. Demonstrate the integration of knowledge of how young children develop and learn with knowledge of the concepts, inquiry tools, and structure of content areas appropriate for different developmental levels. D.2
4. Adapt content to meet the needs of each child, including the development of individualized family service plans (IFSP) or individualized education plans (IEP) for children with diverse abilities through the team process with families and other team members. D.6
5. Demonstrate knowledge of varying program models and learning environments that meet the individual needs of all young children, including those with diverse abilities. E.1
6. Create environments that encourage active involvement, initiative, responsibility, and a growing sense of autonomy through the selection and use of materials and equipment that are suitable to individual learning, developmental levels, diverse abilities, and the language and cultures in New Mexico. E.2
7. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.4
8. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.5
9. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.6
10. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.7

11. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.8
12. Demonstrate a variety of developmentally appropriate instructional strategies that facilitate the development of emergent literacy skills. E.11
13. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this data to curriculum development of intervention planning. F.9

ECED 2121. Curriculum Development through Play Birth through Age 4 (PreK) Practicum

Course Description

The beginning practicum course is a co-requisite with the course Curriculum Development through Play – Birth through Age 4. The field-based component of this course will provide experiences that address curriculum content that is relevant for children birth through age four in developmentally and culturally sensitive ways of integrating content into teaching and learning experiences. Information on adapting content areas to meet the needs of children with special needs and the development of IFSPs is included. Curriculum development in all areas, including literacy, numeracy, the arts, health, science, social skills, and adaptive learning for children, birth through age four, is emphasized.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Provide a variety of activities that facilitate development of the whole child in the following areas: Physical/motor, social/emotional, language/cognitive and adaptive/living skills. A.5
2. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.5
3. Provides and uses anti-bias materials and literature, and experiences in all content areas of the curriculum. D.7
4. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.4
5. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.5
6. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.6
7. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.7
8. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.8

ECED 2130. Curriculum Development and Implementation Age 3 (PreK) through Grade 3

Course Description

The curriculum course focuses on developmentally appropriate curriculum content in early childhood programs, age 3 through third grade. Development and implementation of curriculum in all content areas, including literacy, numeracy, the arts, health and emotional wellness, science, motor and social skills, is emphasized. Information on adapting content areas to meet the needs of children with special needs and the development of IEP's is included.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the

State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Use appropriate guidance to support the development of self-regulatory capacities in young children. A.11
2. Demonstrate the integration of knowledge of how young children develop and learn with knowledge of the concepts, inquiry tools, and structure of content areas appropriate for different developmental levels. D.2
3. Demonstrate knowledge of what is important in each content area, why it is of value, and how it links with early and later understandings within and across areas. D.3
4. Demonstrate knowledge of the language, reading and writing components of emergent literacy at each developmental level. D.4
5. Adapt content to meet the needs of each child, including the development of individualized family service plans (IFSP) or individualized education plans (IEP) for children with diverse abilities through the team process with families and other team members. D.6
6. Demonstrate knowledge of varying program models and learning environments that meet the individual needs of all young children, including those with diverse abilities. E.1
7. Create environments that encourage active involvement, initiative, responsibility, and a growing sense of autonomy through the selection and use of materials and equipment that are suitable to individual learning, developmental levels, diverse abilities, and the language and cultures in New Mexico. E.2
8. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.4
9. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.5
10. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.6
11. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.7
12. Demonstrate knowledge of developmentally appropriate uses of technology, including assistive technology. E.12
13. Demonstrate knowledge of assessment techniques, interpretation of assessment information in the application of this data to curriculum development of intervention planning. F.9

ECED 2131. Curriculum Development and Implementation Age 3 (PreK) through Grade 3 Practicum

Course Description

The beginning practicum course is a co-requisite with the course Curriculum Development and Implementation: Age 3 through Grade 3. The field-based component of this course will provide experiences that address developmentally appropriate curriculum content in early childhood programs, age 3 through third grade. Development and implementation of curriculum in all content areas, including literacy, numeracy, the arts, health and emotional wellness, science, motor and social skills is emphasized. Information on adapting content areas to meet the needs of children with special needs and the development of IEPs is included.

Course Competencies

This course is part of the articulated Universal Catalogue of Courses for Early Childhood Education in the State of New Mexico. The following objectives are taken from the New Mexico State Department of Education's Common Core Competencies for early childhood professionals (see Common Core Content manual). Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

1. Provide a variety of activities that facilitate the development of the whole child in the following areas: Physical/motor, social/emotional, language/cognitive and adaptive/living skills. A.5
2. Develop, implement and evaluate an integrated curriculum that focuses on children's development and interests, using their language, home experiences, and cultural values. D.5

3. Provides and uses anti-bias materials and literature, and experiences in all content areas of the curriculum. D.7
4. Create and manage inclusive learning environments that provide individual and cooperative opportunities for children to construct their own knowledge through various strategies that include decision-making, problem solving, and inquiry experiences. E.4
5. Demonstrate understanding that each child's creative expression is unique and can be encouraged through diverse ways, including creative play. E.5
6. Plan blocks of uninterrupted time for children to persist at self-chosen activities, both indoors and outdoors. E.6
7. Demonstrate understanding of the influence of the physical setting, schedule, routines, and transitions on children and use these experiences to promote children's development and learning. E.7
8. Use and explain the rationale for developmentally appropriate methods that include play, small group projects, open-ended questioning, group discussion, problem solving, cooperative learning and inquiry experiences to help young children develop intellectual curiosity, solve problems, and make decisions. E.8

ECED 2140. Effective Program Development for Diverse Learners and their Families

Course Description

This course addresses the role of a director/ administrator in the implementation of family-centered programming that includes individually appropriate and culturally responsive curriculum in a healthy and safe learning environment for all children and their families.

Student Learning Outcomes

1. Describe important aspects of leadership that an administrator in an early childhood setting must demonstrate.
2. Identify and describe ways in which classrooms can have a multicultural environment.
3. Observe a classroom and identify, using photographs, good practice with classroom environment.
4. Describe important aspects of a good early childhood curriculum.
5. Describe how culture and socioeconomic factors influence classroom environment.

ECED 2141. Effective Program Development for Diverse Learners and their Families Practicum

Course Description

Provides opportunities for students to apply knowledge gained from Curriculum for Diverse Learners and their Families in a practicum setting.

Student Learning Outcomes

1. Describe the requirements to maintain and enhance the physical and mental health, safety, and nutrition components of a program.
2. Demonstrate knowledge of facility management to include evaluation, maintenance, security, and meeting applicable codes.
3. Demonstrate knowledge of planning for appropriate indoor and outdoor environments; Identify ways to support early childhood educators in the selection of appropriate materials and equipment for the environment.
4. Demonstrate knowledge of the impact of the environment on children's learning and development.
5. Demonstrate knowledge of early care and education curriculum that is individually, culturally linguistically, and developmentally responsive.
6. Describe a variety of curriculum goals and teaching strategies.
7. Describe the importance of ongoing curriculum assessment and planning, and collaboration with teachers, families and community entities; Identify ways to support early childhood educators in curriculum assessment and planning.
8. Demonstrate knowledge of family/community involvement in effective program development.

9. Describe the importance of supporting families as partners in early care and education program development.
10. Describe both informal and formal communication systems with families that encourage information sharing and joint decision making.
11. Identify strategies for resolving conflicts and supporting families with diverse backgrounds and parenting expectations.
12. Identify the range of family needs including transitional periods.
13. Identify within the community the network to support families with their special need.;
14. Describe a “family friendly” inclusive philosophy.
15. Demonstrate knowledge of a director’s role as an educational leader in an inclusive setting:
16. Describe what a director does in supporting the instructional component of the program for children, staff, and families.
17. Identify resources that a director might use to keep current with information relating to the instructional component of the program.
18. Describe ways to involve teachers in instructional decision making.

ECED 2150. Relationships and Reflective Practice in Infant Family Studies

Course Description

This course is intended to develop a philosophical and ethical base for the Family, Infant, Toddler entry-level practitioner. Students will develop professional skills in advocacy, policy, family and collegial relationship- building, and reflective practice. Students are required to complete a field experience of 45 hours. Students must complete the practicum hours to pass this course.

Student Learning Outcomes

Students will:

1. Identify and describe differences in cultural practice in child-rearing that will enable the caregiver to work effectively with families of diverse cultural backgrounds.
2. Identify and describe ethical and professional considerations to be followed in working with families.
3. Identify and describe key behaviors in caregiver and infant relationships.

Competencies	
Demonstrate knowledge of child development in the context of primary relationships and in the domains of perceptual, motor, social, emotional, communication, adaptive, and cognitive growth for typically and atypically developing infants and toddlers.	
* when citing the FIT Competencies ** when citing the New Mexico Infant Mental Health Association	
*1.1 ** Level 1, Theoretical Foundations, and I. A, I. G.	1. Demonstrate understanding of infant and toddler development theories including the ability to critically examine these theories.
*1.1. ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I. I., I. J.	3. Understand possible meanings of infant states of consciousness, behaviors and cues.
* 1.1 ** Level 1, Theoretical Foundations, and I. D.	4. Demonstrate knowledge of brain development and the fundamentals of early attachment.

*1.1 ** Level 1, Theoretical Foundations, and I. B.	5. Demonstrate understanding of how infant's biological predispositions and environmental experiences (including cultural experience) interact to influence development.
Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics which place the infant and toddler at risk for delayed development (e.g., biological, environmental and/or medical).	
*1.1 ** Level 1, Theoretical Foundations, and I. C.	1. Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics that place the infant or toddler at risk for delayed development (e.g., biological, environmental and/or medical).
Knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and childrearing practices as they influence an infant's development and learning.	
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and I.F.	1. Demonstrate an awareness that there are various cultural differences in childrearing practices (e.g., feeding, sleep routines, health and nutrition, guidance and nurturing).
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. H.	2. Demonstrate basic knowledge of cultural practices specific to the infant or toddler's health, including health conditions and developmental delays.
*2.1, 2.2 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. G.	3. Show awareness that families' health practices may be culturally appropriate and not indicative of child abuse or neglect.
*1.2, 2.1, 2.2 ** Level 1, Theoretical Foundations, Systems Expertise and Direct Service Skills and II. A.	4. Demonstrate basic knowledge of infant mental health. a. Demonstrate understanding of processes to support building positive parent-child relationships within the context of individual development of the infant and toddler and frameworks of family, community and culture. b. Understand the dynamics for families' capacity for change within cultural contexts to support infant toddler mental health.
Demonstrate ability to promote good health, nutrition and a safe environment for infants and toddlers, including those with or at-risk for developmental delay.	
*2.3 ** Level 1, Direct Service Skills, and II. C., II. D.	1. Demonstrate ability to identify possible child abuse, neglect, and emotional distress, and know legal requirements and agency procedures for reporting suspected abuse or neglect.

ECED 2151. Relationships and Reflective Practice in Infant Family Studies Practicum

Course Description

This course provides application of knowledge gained from Relationships and Reflective Practice in Infant Family Studies. Students must pass a background check to successfully complete the course requirements. Students are required to complete a practicum of 45 hours.

Student Learning Outcomes

1. Demonstrate basic understanding of the impact of the staff-parent relationship as it relates to positive, mutually satisfying and growth-promoting parent-child interactions.
2. Use basic understanding of and respect for the family's role in the development of their infant and toddler within diversity of culture, community and ability.
3. Develop the ability to work collaboratively with the community toward promoting the health, welfare, and development of infants and toddlers, including those with or at-risk for developmental delay.
4. Demonstrate ability to carry out responsibilities with infants and families in a professional manner and engage as a professional.

Competencies	
Demonstrate knowledge of child development in the context of primary relationships and in the domains of perceptual, motor, social, emotional, communication, adaptive, and cognitive growth for typically and atypically developing infants and toddlers.	
* when citing the FIT Competencies ** when citing the New Mexico Infant Mental Health Association	
*1.1 ** Level 1, Theoretical Foundations, and I. A, I. G.	1. Demonstrate understanding of infant and toddler development theories including the ability to critically examine these theories.
*1.1. ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I. I., I. J.	3. Understand possible meanings of infant states of consciousness, behaviors and cues.
* 1.1 ** Level 1, Theoretical Foundations, and I. D.	4. Demonstrate knowledge of brain development and the fundamentals of early attachment.
*1.1 ** Level 1, Theoretical Foundations, and I. B.	5. Demonstrate understanding of how infant's biological predispositions and environmental experiences (including cultural experience) interact to influence development.
Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics which place the infant and toddler at risk for delayed development (e.g., biological, environmental and/or medical).	
*1.1 ** Level 1, Theoretical Foundations, and I. C.	1. Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics that place the infant or toddler at risk for delayed development (e.g., biological, environmental and/or medical).
Knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and childrearing practices as they influence an infant's development and learning.	
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and I.F.	5. Demonstrate an awareness that there are various cultural differences in childrearing practices (e.g., feeding, sleep routines, health and nutrition, guidance and nurturing).
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. H.	6. Demonstrate basic knowledge of cultural practices specific to the infant or toddler's health, including health conditions and developmental delays.
*2.1, 2.2	7. Show awareness that families' health practices may be culturally appropriate and not indicative of child abuse or neglect.

** Level 1, Theoretical Foundations and Direct Service Skills, and II. G.	
*1.2, 2.1, 2.2 ** Level 1, Theoretical Foundations, Systems Expertise and Direct Service Skills and II. A.	8. Demonstrate basic knowledge of infant mental health. a. Demonstrate understanding of processes to support building positive parent-child relationships within the context of individual development of the infant and toddler and frameworks of family, community and culture. c. Understand the dynamics for families' capacity for change within cultural contexts to support infant toddler mental health.
Demonstrate ability to promote good health, nutrition and a safe environment for infants and toddlers, including those with or at-risk for developmental delay.	
*2.3 ** Level 1, Direct Service Skills, and II. C., II. D.	2. Demonstrate ability to identify possible child abuse, neglect, and emotional distress, and know legal requirements and agency procedures for reporting suspected abuse or neglect.

ECED 2210. Foundations in Early Childhood Education

Course Description

This course provides students with knowledge of the historical, philosophical and social foundations of the early childhood education profession and how these foundations influence current thought and practices. A particular emphasis will be placed on developmental issues for children, birth through the age of eight. Topics include a survey of the history of early childhood education and professionalism, ethical codes of conduct, and issues of advocacy in the field. Upon completion of the course, students will articulate a well-designed personal early childhood education philosophy that supports practices of inclusion and cultural and linguistic diversity in early education. This course requires 10 hours of fieldwork in an early childhood program

Student Learning Outcomes

1. Articulate a well-designed personal philosophy that includes both support of practices of inclusion and cultural and linguistic diversity in early education and knowledge of the profession.
2. Articulate a multicultural perspective responsive to culturally diverse communities in New Mexico.
3. Define early childhood theories and practices that advocate for Excel[®]lence in early childhood programs.
4. Identify issues, legislation and other public policies that affect children, families, and the early childhood profession.

ECED 2215. Program Management

Course Description

This course emphasizes the technical knowledge necessary to develop and maintain an effective early care and education program. It focuses on sound financial management and vision, the laws and legal issues that affect programs, and state and national standards such as accreditation.

Student Learning Outcomes

1. Develop a comprehensive program philosophy.
2. Demonstrate the ability to develop systems that are effective for quality program operation.
3. Create a program budget and understand the Income and Expense sides and what affects each part.
4. Model best practices that integrate various leadership styles.

ECED 2220. Teaching Children Games and Fitness

Course Description

An introductory course in teaching games and physical activities for Pre K and elementary age children. The course teaches students how to develop and implement an elementary school physical education curriculum. The course explores

developmental stages, motor skill assessment, games, and fitness activities for youngsters. Incorporating methods of effective teaching, enhancing student learning, and managing students effectively are emphasized.

Student Learning Outcomes

1. Understand the need for physical fitness.
2. Be able to discuss the benefits of physical fitness, nutrition and health.
3. Be able to develop and apply appropriate physical fitness programs.
4. Understand the importance of proper nutrition and weight control programs.
5. Demonstrate knowledge of the basic principles of movement.
6. Be able to create lead-up, small, and large group games and activities.
7. Be able to develop and present a lesson plan appropriate for children.
8. Demonstrate a basic understanding of ways one can modify physical activities so that ALL children may participate safely.
9. Display effective teaching techniques during teaching practicum.
10. Be able to incorporate health and fitness activities into their daily lives.
11. Demonstrate an understanding of body mechanics as related to the developmental stages of childhood.
12. Be able to discuss and offer solutions to contemporary physical education problems and to identify the place of physical education in the elementary school program.
13. Be able to list the needs and interests of different age groups in physical education programming.

ECED 2225. Playful Relationships

Course Description

This course is designed to teach the techniques of Playful Parenting based on Therapeutic Play Therapy. This instruction builds on techniques that allow caregivers and teachers to develop or strengthen relationships with young children (ages 3-10). The class will use a format of experiential learning activities, lecture, small and large discussion groups and videotaping with critique.

Student Learning Outcomes

Not Available

ECED 2230. Confident Parenting

Course Description

This course is designed to enhance the skills and knowledge of parents and other childcare givers. Topics for discussion will address the physical, social/emotional, and cognitive development of the child. Issues will include such things as typical child development, positive guidance, communication, self-esteem and the role of the parent in meeting children's needs.

Student Learning Outcomes

Not Available

ECED 2240. Infant Toddler Growth and Development (Prenatal to Age 3)

Course Description

Provides both basic knowledge of typically and atypically developing young children from the prenatal period to 36 months and a foundational understanding for the promotion of the health, well-being and development of all infants and toddlers within the context of family, community and cultural environments. The course examines infancy and toddlerhood with an emphasis on the interrelationship of cognitive, physical, social and emotional development, mental health and early parent-child relationships. Students must complete the practicum hours to pass this course.

Student Learning Outcomes

1. Demonstrate understanding of significant theories of child development.
2. Identify and describe significant milestones in child development.
3. Identify and describe major stages in infant brain development.

4. Apply understanding of how delayed development will affect the different domains: physical-motor, perception, cognition, learning, language, personality, emotional, and social behavior.
5. Explore and describe cultural differences in child development.

Demonstrate knowledge of child development in the context of primary relationships and in the domains of perceptual, motor, social, emotional, communication, adaptive, and cognitive growth for typically and atypically developing infants and toddlers.	
* when citing the FIT Competencies ** when citing the New Mexico Infant Mental Health Association	
*1.1 ** Level 1, Theoretical Foundations, and I. A, I. G.	1. Demonstrate understanding of infant and toddler development theories including the ability to critically examine these theories.
*1.1 ** Level 1, Theoretical Foundations, and I. A., I. D.	2. Be able to describe milestones, characteristic trends and individual variation in the normal development of physical-motor capacities, perception, cognition, learning, language, personality, emotional and social behavior.
*1.1. ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I. I., I. J.	3. Understand possible meanings of infant states of consciousness, behaviors and cues.
* 1.1 ** Level 1, Theoretical Foundations, and I. D.	4. Demonstrate knowledge of brain development and the fundamentals of early attachment.
*1.1 ** Level 1, Theoretical Foundations, and I. B.	5. Demonstrate understanding of how infant's biological predispositions and environmental experiences (including cultural experience) interact to influence development.
*1.1 ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I.C.	6. Identify how delays or risk factors may affect different domains of development, including attachment and socio-emotional development; sensory, perceptual and motor development; and cognitive development (i.e., knowledge, understanding, communication and language
*1.1. ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I.C.	7. Demonstrate understanding of how infant/toddler personality, behavior, strengths, delay, or risk factors may affect child-caregiver interactions.
*1.2 ** Level 1, Theoretical Foundations, and I.H.	8. Demonstrate knowledge of the developmental sequence of language and literacy of infants and toddlers in the context of family and culture.
Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics which place the infant and toddler at risk for delayed development (e.g., biological, environmental and/or medical).	
*1.1 ** Level 1, Theoretical Foundations, and I. C.	1. Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics that place the infant or toddler at risk for delayed development (e.g., biological, environmental and/or medical).
*1.1 ** Level 1, Theoretical Foundations, and I. D.	2. Identify how delays or risk factors may affect different domains of development, including attachment and socio-emotional development;

	sensory, perceptual and motor development; and cognitive development (knowledge, understanding, communication, and language).
*1.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. G.	3. Demonstrate basic knowledge of how health problems, chronic disorders, or communicable diseases impact the infant or toddler and his or her family.
*1.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. E.	4. Know basic hygiene practices, including universal precautions and health checks.
Knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and childrearing practices as they influence an infant's development and learning.	
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and I.F.	9. Demonstrate an awareness that there are various cultural differences in childrearing practices (e.g., feeding, sleep routines, health and nutrition, guidance and nurturing).
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. H.	10. Demonstrate basic knowledge of cultural practices specific to the infant or toddler's health, including health conditions and developmental delays.
*2.1, 2.2 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. G.	11. Show awareness that families' health practices may be culturally appropriate and not indicative of child abuse or neglect.
*1.2, 2.1, 2.2 ** Level 1, Theoretical Foundations, Systems Expertise and Direct Service Skills and II. A.	12. Demonstrate basic knowledge of infant mental health. 13. Demonstrate understanding of processes to support building positive parent-child relationships within the context of individual development of the infant and toddler and frameworks of family, community and culture. 14. Understand the dynamics for families' capacity for change within cultural contexts to support infant toddler mental health.
Demonstrate ability to promote good health, nutrition and a safe environment for infants and toddlers, including those with or at-risk for developmental delay.	
*2.1 ** Level 1, Theoretical Foundations, and II. C.	1. Demonstrate basic knowledge of the health problems common in infants and toddlers, including those with, or at risk for developmental delay, with chronic disorders, or with communicable diseases.
*2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. C.	2. Demonstrate basic knowledge of aspects of medical care of infants and toddlers, including premature and low birth-weight infants (e.g., basic knowledge of the methods for maintaining technology dependent infants and toddlers).
*2.1, 2.2 ** Level 1, Direct Service Skills	3. Demonstrate basic knowledge of the nutrition, rest/sleep, and feeding needs specific to infants and toddlers, including those with physical impairments.

Course Description

This course provides application of knowledge gained from Infant Toddler Growth and Development. Students must pass a background check to successfully complete the course requirements. Students are required to complete a practicum of 45 hours.

Student Learning Outcomes

1. Demonstrate basic understanding of the impact of the staff-parent relationship as it relates to positive, mutually satisfying and growth-promoting parent-child interactions.
2. Use basic understanding of and respect for the family's role in the development of their infant and toddler within diversity of culture, community and ability.
3. Develop a basic level of ability to work collaboratively with the community toward promoting the health, welfare, and development of infants and toddlers, including those with or at-risk for developmental delay. Demonstrate ability to carry out responsibilities with infants and families in a professional manner and engage as a professional.

Course Competencies

This course is part of the required program of study for an Associate of Arts degree in early childhood education/family infant toddler studies in New Mexico. It will assist students in recognizing that children are best understood in the context of family, culture, community, and society. Upon completion of this course, students will be able to demonstrate the following competencies at the established level of proficiency:

Demonstrate knowledge of child development in the context of primary relationships and in the domains of perceptual, motor, social, emotional, communication, adaptive, and cognitive growth for typically and atypically developing infants and toddlers.	
* when citing the FIT Competencies ** when citing the New Mexico Infant Mental Health Association	
*1.1 ** Level 1, Theoretical Foundations, and I. A, I. G.	1. Demonstrate understanding of infant and toddler development theories including the ability to critically examine these theories.
*1.1 ** Level 1, Theoretical Foundations, and I. A., I. D.	2. Be able to describe milestones, characteristic trends and individual variation in the normal development of physical-motor capacities, perception, cognition, learning, language, personality, emotional and social behavior.
*1.1. ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I. I., I. J.	3. Understand possible meanings of infant states of consciousness, behaviors and cues.
* 1.1 ** Level 1, Theoretical Foundations, and I. D.	4. Demonstrate knowledge of brain development and the fundamentals of early attachment.
*1.1 ** Level 1, Theoretical Foundations, and I. B.	5. Demonstrate understanding of how infant's biological predispositions and environmental experiences (including cultural experience) interact to influence development.
*1.1 ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I.C.	6. Identify how delays or risk factors may affect different domains of development, including attachment and socio-emotional development; sensory, perceptual and motor development; and cognitive development (i.e., knowledge, understanding, communication and language
*1.1. ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I.C.	7. Demonstrate understanding of how infant/toddler personality, behavior, strengths, delay, or risk factors may affect child-caregiver interactions.

*1.2 ** Level 1, Theoretical Foundations, and I. H.	8. Demonstrate knowledge of the developmental sequence of language and literacy of infants and toddlers in the context of family and culture.
Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics which place the infant and toddler at risk for delayed development (e.g., biological, environmental and/or medical).	
*1.1 ** Level 1, Theoretical Foundations, and I. C.	1. Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics that place the infant or toddler at risk for delayed development (e.g., biological, environmental and/or medical).
*1.1 ** Level 1, Theoretical Foundations, and I. D.	2. Identify how delays or risk factors may affect different domains of development, including attachment and socio-emotional development; sensory, perceptual and motor development; and cognitive development (knowledge, understanding, communication, and language).
*1.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. G.	3. Demonstrate basic knowledge of how health problems, chronic disorders, or communicable diseases impact the infant or toddler and his or her family.
*1.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. E.	4. Know basic hygiene practices, including universal precautions and health checks.
Knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and childrearing practices as they influence an infant’s development and learning.	
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and I.F.	15. Demonstrate an awareness that there are various cultural differences in childrearing practices (e.g., feeding, sleep routines, health and nutrition, guidance and nurturing).
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. H.	16. Demonstrate basic knowledge of cultural practices specific to the infant or toddler’s health, including health conditions and developmental delays.
*2.1, 2.2 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. G.	17. Show awareness that families’ health practices may be culturally appropriate and not indicative of child abuse or neglect.
*1.2, 2.1, 2.2 ** Level 1, Theoretical Foundations, Systems Expertise and Direct Service Skills and II. A.	18. Demonstrate basic knowledge of infant mental health. 19. Demonstrate understanding of processes to support building positive parent-child relationships within the context of individual development of the infant and toddler and frameworks of family, community and culture. 20. Understand the dynamics for families’ capacity for change within cultural contexts to support infant toddler mental health.
Demonstrate ability to promote good health, nutrition and a safe environment for infants and toddlers, including those with or at-risk for developmental delay.	

*2.1 ** Level 1, Theoretical Foundations, and II. C.	1. Demonstrate basic knowledge of the health problems common in infants and toddlers, including those with, or at risk for developmental delay, with chronic disorders, or with communicable diseases.
*2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. C.	2. Demonstrate basic knowledge of aspects of medical care of infants and toddlers, including premature and low birth-weight infants (e.g., basic knowledge of the methods for maintaining technology dependent infants and toddlers).
*2.1, 2.2 ** Level 1, Direct Service Skills	3. Demonstrate basic knowledge of the nutrition, rest/sleep, and feeding needs specific to infants and toddlers, including those with physical impairments.

ECED 2245. Effective Principles and Practices in Infant Family Studies

Course Description

This course is intended to assist students in developing strong nurturing relationships with infants/toddlers in partnership with caregivers. Students will gain an understanding of how children learn in the context of the relationships with their primary caregivers, how to meet the needs of very young children (birth to three years of age) in a variety of care giving settings, and how to meet the needs of adults who are addressing the needs of very young children and their families through relationship-based practices.

Student Learning Outcomes

1. Develop a theoretical understanding of infant and toddler development in the context of the close relationship with the caregiver.
2. Observe an experienced infant caregiver and reflect on the physical, social, emotional practices that create relationships with young children.
3. Describe the team approach to working with young children

Competencies	
Demonstrate knowledge of child development in the context of primary relationships and in the domains of perceptual, motor, social, emotional, communication, adaptive, and cognitive growth for typically and atypically developing infants and toddlers.	
* when citing the FIT Competencies ** when citing the New Mexico Infant Mental Health Association	
*1.1 ** Level 1, Theoretical Foundations, and I. A., I. D.	2. Be able to describe milestones, characteristic trends and individual variation in the normal development of physical-motor capacities, perception, cognition, learning, language, personality, emotional and social behavior.
* 1.1 ** Level 1, Theoretical Foundations, and I. D.	4. Demonstrate knowledge of brain development and the fundamentals of early attachment.
*1.1. ** Level 1, Theoretical Foundations, Thinking, and Reflection, and I.C.	7. Demonstrate understanding of how infant/toddler personality, behavior, strengths, delay, or risk factors may affect child-caregiver interactions.
*1.2 ** Level 1, Theoretical Foundations, and I.H.	8. Demonstrate knowledge of the developmental sequence of language and literacy of infants and toddlers in the context of family and culture.

Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics which place the infant and toddler at risk for delayed development (e.g., biological, environmental and/or medical).	
*1.1 ** Level 1, Theoretical Foundations, and I. C.	1. Demonstrate basic knowledge of the characteristics of the conditions associated with developmental delay (e.g., biological, environmental, medical factors) as well as those characteristics that place the infant or toddler at risk for delayed development (e.g., biological, environmental and/or medical).
*1.1 ** Level 1, Theoretical Foundations, and I. D.	2. Identify how delays or risk factors may affect different domains of development, including attachment and socio-emotional development; sensory, perceptual and motor development; and cognitive development (knowledge, understanding, communication, and language).
*1.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. E.	4. Know basic hygiene practices, including universal precautions and health checks.
Knowledge of and respect for variations across cultures, in terms of family strengths, expectations, values, and childrearing practices as they influence an infant's development and learning.	
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and I.F.	1. Demonstrate an awareness that there are various cultural differences in childrearing practices (e.g., feeding, sleep routines, health and nutrition, guidance and nurturing).
*1.2, 2.1 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. H.	2. Demonstrate basic knowledge of cultural practices specific to the infant or toddler's health, including health conditions and developmental delays.
*2.1, 2.2 ** Level 1, Theoretical Foundations and Direct Service Skills, and II. G.	3. Show awareness that families' health practices may be culturally appropriate and not indicative of child abuse or neglect.
*1.2, 2.1, 2.2 ** Level 1, Theoretical Foundations, Systems Expertise and Direct Service Skills and II. A.	4. Demonstrate basic knowledge of infant mental health. 5. Demonstrate understanding of processes to support building positive parent-child relationships within the context of individual development of the infant and toddler and frameworks of family, community and culture. 6. Understand the dynamics for families' capacity for change within cultural contexts to support infant toddler mental health.
Demonstrate ability to promote good health, nutrition and a safe environment for infants and toddlers, including those with or at-risk for developmental delay.	
*2.3 ** Level 1, Direct Service Skills, and II. C., II. D.	1. Demonstrate ability to identify possible child abuse, neglect, and emotional distress, and know legal requirements and agency procedures for reporting suspected abuse or neglect.

ECED 2250. Early Childhood Education Profession in New Mexico

Course Description

An introduction to the early childhood profession in New Mexico. Students develop a definition of advocacy for Excel®lence in state early childhood programs and discuss the diverse communities of New Mexico. Students examine state and national

professional codes of ethics and conduct as well as federal, state and local regulations and legislation regarding programs of service for young children. Critical reflection of one's own professional and educational practices is emphasized along with professional development opportunities that would enhance knowledge and skills in working with young children.

Student Learning Outcomes

1. Write an emerging personal teaching philosophy statement. (Professionalism 1Sc; Communication 10Sd, 10Sf)
2. Examine and reflect on the teacher candidate proficiencies and dispositions as outlined in the SFCC Teacher Academy conceptual framework. (All areas)
3. Describe the New Mexico 3-tiered teacher licensure requirements and competencies. (Professionalism 1Ka)
4. Summarize the professional and ethical responsibilities of teachers. (Professionalism 1 Ka)
5. List characteristics of effective teachers and effective teaching. (Professionalism 1Sc)

ECED 2255. Curriculum Development-Learning Environment in Early Childhood Education

Course Description

An integration of knowledge of child development and learning theory with early childhood curriculum content for young children from age three to grade three. Students study the principles of designing and evaluating curriculum that is developmentally appropriate for young children. Content includes arts, literacy, mathematics, physical education, health, social studies, science and technology. Integrated curriculum that is supportive of language, home experiences and cultural values will be emphasized. This course requires 10 hours of fieldwork in an early childhood classroom approved by the instructor.

Student Learning Outcomes

1. Define, examine, and reflect on young children's approaches to learning. (Instructional Planning & Implementation 2Ka, 2Se; Classroom Management 3Ka, 3Sc; Diversity 6Kb, 6Sd; Development of the Student 8Sd; Family & Community 9Sd)
2. Identify principles of designing and evaluating developmentally appropriate curriculum. (Professionalism 1Sd; Classroom Management 3Sc; Technology 5Ka; Diversity SSe, 6Sd)
3. Define and reflect on the importance of "intentional teaching". (Professionalism 1Sc; Instructional Planning & Implementation 2Ka, 2Se, 2Sf)
4. List content Standards for the various content areas and be able to integrate them in developmentally centered practices. (Instructional Planning & Implementation 2Sd, 2Se, 2Sf; Diversity 6Sd; Development of the Student SSe)
5. Describe the benefits of technology in planning, implementation, and assessment of lessons. (Technology 5Ka, 5Kb)

ECED 2260. Assessment and Evaluation in Early Childhood Education

Course Description

Provides students with the ability to use a variety of assessment methods to determine the developmental levels and needs of young children age three to grade three. Learners are introduced to the meaning and uses of authentic assessment as well as various tools and assessment strategies. The course teaches students to interpret observational and assessment data to monitor young children's progress, guide instructional practice, and identify and refer at-risk children. This course requires 10 hours of fieldwork in an early childhood classroom approved by the instructor.

Student Learning Outcomes

1. Explain the value of assessment and its usefulness for early childhood teaching professionals. (Professionalism 1 Sc; Assessment 4Ka)
2. Conduct observations of children and the learning environment, record data objectively, and interpret the findings. (Instructional Planning & Implementation 2Kb, 2Sf; Assessment 4Sb, 4Sc, 4Sd)
3. Apply knowledge of child development in the interpretation and use of observational skills. (Assessment 4Sb; Development of the Student 8Ka, 8Kb)
4. Examine ethical behavior in assessment procedures. (Professionalism 1 Ka; Assessment 4Sd)

5. Develop an educational plan based on multiple observations across multiple domains. (Instructional Planning & Implementation 2Se, 2Sf; Assessment 4Sb)
6. Identify special education regulations and be able to describe the individual education plans (IEPC, IFPS) plans. (Inclusion 7Ka, 7Kb, 7Kc)

ECED 2270. Early Literacy I - Introduction to Theory & Models

Course Description

Focuses on theories and approaches to reading instruction for young children. Major topics in the course include early and emergent reading theories, stages of reading and emergent literacy at each developmental sequence of language and literacy, which includes the influence of culture and home factors. Reading assessment practices require documentation of multiple sources including cultural and linguistic differences and diverse ways of learning. This course requires 10 hours of fieldwork in an early childhood classroom approved by the instructor.

Student Learning Outcomes

1. Articulate, verbally and in writing, the major theories and approaches to reading and writing instruction for young children. (Instructional Planning & Implementation 2Ka; Communication 10Kb, 10Kc)
2. Explain the role of language in emergent literacy development. (Communication 10Ka, 10Kb)
3. Identify the various stages of literacy development. (Instructional Planning & Implementation 2Ka; Development of the Student 8Kb)
4. Explore and analyze current research relating to the interaction between environment and literacy skills. (Professionalism 1Sd; Family & Community 9Kb, 9Kc; Communication 10Ka)

ECED 2275. Early Literacy II - Development and Implementation

Course Description

An exploration of principles that enhance the development and implementation of emergent literacy practices with young children. These principles include direct instruction, experiential learning, listening to and sharing stories, and book readings. Students also learn how to modify the literacy environment and to encourage family participation. Literacy principles and best practices become the basis for the discussion and activities supporting effective instructional strategies. This course requires 10 hours of fieldwork in an early childhood classroom approved by the instructor.

Student Learning Outcomes

1. Identify and apply best practices for different components of literacy for various developmental levels. (Instructional Planning & Implementation 2Sd, 2Se, 2Sf; Development of the Student BSc, BScl; Family & Community 9Sh)
2. Develop, implement, and evaluate a literacy rich environment within the classroom. (Family & Community 9Sd, 9Sf, 9Sg)
3. Evaluate student progress over time. (Instructional Planning & Implementation 2Sf; Assessment 4Sd, 4Se)
4. Articulate a personal philosophy of literacy instruction. (Professionalism 1Sc; Family & Community 9Se; Communication 10Kb, 10Kc)

ECED 2280. Professional Relationships

Course Description

This course addresses staff relations that will foster diverse professional relationships with families, communities and boards. Topics of staff recruitment, retention, support and supervision will lay the foundation for positive personnel, family and community relationships.

Student Learning Outcomes

1. Interview an administrator and write a paper describing personnel management, staff support, supervision, and professional development.

2. Identify and describe ethical and legal requirements in maintaining a professional relationship with subordinates, the community, clients, and fellow administrators.
3. Identify and describe technologies which may be used in an early childhood setting.
4. Identify and describe legal and ethical considerations in the employment of others.

ECED 2281. Professional Relationships Practicum

Course Description

Practical experience in the development of staff relationships that will foster professional relationships with families, communities and boards. Issues of staff recruitment, retention, support and supervision will lay a foundation for positive personnel management. Consent of instructor required. Restricted to ECED majors.

Economics (ECON)

ECON 1110. Survey of Economics

Course Description

This course will develop students' economics literacy and teach students how economics relates to the everyday life of individuals, businesses and society in general. The course will also introduce students to the roles different levels of governments play in influencing the economy. At the conclusion of the course, students will be able to identify economic causes for various political and social problems at national and international levels and have a better understanding of everyday economic issues that are reported in media and public forums.

Student Learning Outcomes

1. Gain and demonstrate a contextual understanding of economic terms and concepts.
2. Recognize and analyze common economic issues which relate to individual markets and the aggregate economy.
3. Learn basic economic principles that influence global trading and challenges relating to globalization.
4. Outline the implications of various economic policies on individuals and on economies.
5. Demonstrate ability to use diagrams and graphs to explain economic principles, policies and their applications.

6. Appreciate and understand how individual decisions and actions, as a member of society, affect economies locally, nationally and internationally.
7. Explain the roles of governments in influencing buyer and seller behavior in the market and how government failure occurs when intervention fails to improve or actually worsens economic outcomes.
8. Be able to apply course concepts to interpret, evaluate and think critically about economic events and policies, especially as regularly reported in the media and other public forums.

ECON 1996. Topics in Economics

Course Description

Student Learning Outcomes

Varies

ECON 2110. Macroeconomic Principles

Course Description

Macroeconomics is the study of national and global economies. Topics include output, unemployment and inflation; and how they are affected by financial systems, fiscal and monetary policies.

Student Learning Outcomes

Students should be able to:

1. Explain the concepts of opportunity cost, comparative advantage and exchange.
2. Demonstrate knowledge of the laws of supply and demand and equilibrium and use supply and demand curves to analyze responses of markets to external events.
3. Explain the circular flow model and use the concepts of aggregate demand and aggregate supply to analyze the response of the economy to disturbances.
4. Explain the concepts of gross domestic product, inflation and unemployment and how they are measured.
5. Describe the determinants of the demand for money, the supply of money and interest rates and the role of financial institutions in the economy.
6. Define fiscal policy and monetary policies and how these affect the economy.
7. Students will be able to identify the causes of prosperity, growth, and economic change over time and explain the mechanisms through which these causes operate in the economy.

ECON 2120. Microeconomic Principles

Course Description

This course will provide a broad overview of microeconomics. Microeconomics is the study of issues specific to households, firms, or industries with an emphasis on the role of markets. Topics discussed will include household and firm behavior, demand and supply, government intervention, market structures, and the efficient allocation of resources.

Student Learning Outcomes

Students should be able to:

1. Explain the concept of opportunity cost.
2. Demonstrate knowledge of the laws of supply and demand and equilibrium.
3. Use supply and demand curves to analyze responses of markets to external events.
4. Use supply and demand analysis to examine the impact of government intervention.
5. Explain and calculate price elasticity of demand and other elasticities.
6. Demonstrate an understanding of producer choice, including cost and break-even analysis.
7. Compare and contrast the following market structures: perfect competition, monopoly, monopolistic competition, and oligopoly.

ECON 2125. Society & Environment

Course Description

Introduces students to environmental and natural resource issues of both global and local scale. No prior economics coursework is required; basic economic tools will be introduced and then applied to a variety of environmental problems. This course will cover a variety of topics, including water & energy conservation, pollution taxes, tradable pollution permits and global warming.

Student Learning Outcomes

By the end of the course, students should be able to:

1. Describe historical patterns and trends of resource use and pollution creation for the US and the world.
2. Apply the concept of environmental externalities to a variety of real-world situations.
3. Use cost-benefit analysis to analyze policies to reduce pollution and discuss shortcomings of this approach.
4. Compare and contrast different policies for pollution reduction, including taxes, tradable permit systems, and direct regulatory approaches, with respect to both costs and effectiveness.
5. Identify common property resources and use information on extraction costs and market demand to predict outcomes and devise policies to improve outcomes.
6. Study one environmental issue in depth and apply a variety of the tools developed in this class to the issue. Produce a written research paper.
7. Describe the scientific evidence of climate change, summarize current global and national climate change policies and evaluate proposed policies with respect to effectiveness and cost.

ECON 2130. Personal Investing

Course Description

Personal investing should be considered introductory; however, it offers a wide-ranging overview of personal finance and the role financial assets can play in achieving personal financial goals. This course won't make you a millionaire, nor will it prepare you for a career as a hedge-fund manager. The goal is to increase your understanding of how financial markets work, and how to use financial assets as part of a life-long financial strategy. Your understanding of financial markets will be enhanced by learning the tools of economics, incorporating knowledge of human behavior, and becoming familiar with particular aspects of financial markets and assets.

Student Learning Outcomes

1. Identify and define the Life-Cycle model of personal finance, elements of the simple market model and extensions of the model in order to use the market model as a tool to understand behavior.
2. Appreciate the goal of retirement within the Life-Cycle model and understand the simple theory of taxes.
3. Understand fundamental principles that underlie corporate finance and become familiar with different types of assets and derivatives to comprehend the benefits of asset allocation and portfolio diversification.
4. Define risk and uncertainty to evaluate the Risk-Return tradeoff: opportunities available for return and risk.
5. Participate in discussions on particular aspects of financial markets.

ECON 2210. International Economics

Course Description

This course explores the prominent forces and core concepts of international economics and the relationships of nations and economic policy. It offers fresh perspectives on major world events of the last 40 years and recent economic milestones, such as the European Economic Community and the economic transformation of Russia and Eastern Europe.

Student Learning Outcomes

1. Students will be able to define and understand economic terms like the trade deficit, deregulation, import quotas, and balance of payments as evidenced by scoring 70% or better on a faculty prepared examination.

2. Students will be able to discuss and write about the global economy and its impact on business, industry, and the daily lives of citizens around the world by scoring in the 70th percentile on a faculty prepared examination.

ECON 2220. Economics of Race & Gender

Course Description

The aim of this course is to introduce you to how economics studies some of the main issues affecting men and women of different ethnic or racial backgrounds. Using economic theory as our framework for analysis, our discussions will include analysis of evidence and policies that address the issues at hand. Among the questions we will be addressing in this class are: why do women earn less than men, and blacks less than whites? Why has the labor force participation of women increased over the past half century, while black men's has decreased? How does marriage affect women's decision to work? How has the American family changed over the past century, among others.

Student Learning Outcomes

1. Demonstrate an understanding of introductory level economic models.
2. Gain an understanding of the historical evolution of family structure and analyze the dynamics of economic well-being associated with marriage and divorce.
3. Understand economic methods of analysis and complete/present an original research paper.
4. Assess the roles of race and gender in labor market models and evaluate its impact on labor market participation decision making.
5. Articulate some of the main issues affecting men and women of different ethnic or racial backgrounds.
6. Identify and evaluate the key models of discrimination, human capital, crime, and immigration.

Education (EDUC)

EDUC 1110. Freshman Orientation

Course Description

Introduction to the University and the College of Education. Discussion of planning for individualized education program and field experience.

Student Learning Outcomes

1. Demonstrates knowledge of and uses theories, approaches, methods, and techniques for teaching, reading, writing, and other academic skills in English and the native language.
2. Demonstrates knowledge of and applies management techniques appropriate to classrooms containing students who have varying levels of proficiency and academic experience in both languages.

Community/Family Involvement

The bilingual teacher:

1. Recognizes the importance of parental and community involvement for facilitating the learner's successful integration to his/her school environment.

2. Demonstrates knowledge of the teaching and learning patterns of the students' home environment and incorporates these into the instructional areas of program.

Assessment

The bilingual teacher:

1. Assesses oral and written language proficiency in academic areas in both languages utilizing the results for instructional placement, prescription, and evaluation.
2. Evaluates the growth of the learner's native and second language in the context of the curriculum.
3. Continuously assesses and adjusts her or his own language use in the classroom in order to maximize learner comprehension and verbal participation

EDUC 1120. Introduction to Education

Course Description

Introduction to the historical, philosophical, sociological foundations of education, current trends, and issues in education; especially as it relates to a multicultural environment. Students will use those foundations to develop effective strategies related to problems, issues and responsibilities in the field of education.

Student Learning Outcomes

1. Describe the teaching and learning of various American education settings including early childhood, elementary, middle school, high school, and special education.
2. Describe how teachers use educational theory and the results of research of students' learning.
3. Explain the techniques for establishing a positive and supportive environment in the classroom
4. Identify and describe instructional strategies supported by current research to promote thinking skills of all learners.
5. Recognize the teachers' role and responsibilities in an increasingly diverse, multicultural society.

EDUC 1125. Introduction to Education in New Mexico

Course Description

An exploration of contemporary issues around diversity, culture, and education in New Mexico. The course is of special interest to students considering a teaching career. Projects in schools and/or community sites are part of requirements. Each Student Learning Objective (SLO) is coded to the College of Education Understandings, Practices, and Identities, along with the Level I New Mexico Teacher Competencies (NMTC), and the Interstate Teacher Assessment and Support Consortium (InTASC) Standards.

Student Learning Outcomes	Core Values	Understandings	Practices	Identities	NM-PED Entry-Level Competencies	NM Level 1 Teacher Competencies	InTASC	NM TEACH Domains
1. Through a 30-hour field experience in an educational setting, students will identify and respond to issues related to social, political, cultural, ethical, and technological dimensions in schools	2, 3, 6, 8	1, 2, 4, 5, 6	1, 2, 4, 5	1-7	A (1-8), B (6-8), C (1-11), D (9-14), E (1-3), F(1-7,10) G (1-8) H (2,7-11),	6-9	1-5, 9, 10	1A-F 2A-E 3A-E 4A-E

					J (1-5) K (1-6, 9-12, 14)			
2. Students will be able to identify and describe positive interdependent relationships between families, educational settings, and community, resulting in effective learning experiences.	1-6, 8	1, 2,6	1, 2, 4, 5	1-7	A (1-8), B (6), C (8), D (9-14), E (2, 3), F (1, 3,6,7,10), G (1-8), H (2,7,9-11), K (2,4, 6, 9-11)	6-9	1, 2, 9, 10	1B,D,E 2A,C,D,E 3B 4A-F

EDUC 1140. Math for Paraprofessionals

Course Description

Applied math skills for paraprofessionals working with children.

Student Learning Outcomes

1. Students will plan developmentally appropriate math activities for young children.
2. Students will plan adaptations to math activities for children with diverse abilities.
3. Students will demonstrate understanding of recent research in methods of teaching mathematics.
4. Students will demonstrate understanding of early childhood theories as they relate to the teaching of mathematics.
5. Students will demonstrate understanding of unique needs of children from diverse economic or cultural backgrounds.

EDUC 1150. Math for Paraprofessionals II

Course Description

Applied math skills for paraprofessionals working under the direction of a teacher.

Student Learning Outcomes

1. Students will plan developmentally appropriate math activities for young children.
2. Students will plan adaptations to math activities for children with diverse abilities.
3. Students will demonstrate understanding of recent research in methods of teaching mathematics.
4. Students will demonstrate an understanding of early childhood theories as they relate to the teaching of mathematics.
5. Students will demonstrate understanding of unique needs of children from diverse economic or cultural backgrounds.

EDUC 1185. Introduction to Secondary Education and Youth

Course Description

Introductory course for students considering a career in secondary education. Includes historical, philosophical, and sociological foundations, program organization, critical dispositions, and understanding the context of schools and youth. Practicum required.

Student Learning Outcomes

1. Articulate the attributes of an education professional entering the field.
2. Differentiate and summarize the major educational philosophies and historical events that have influenced the progression of educational practice.
3. Describe the role of law in education with emphasis on the rights and responsibilities of teachers and learners.
4. Develop a preliminary personal philosophy of teaching and learning.
5. Discuss the characteristics and roles of the teacher, the student, and the school in today's education.
6. Identify effective teaching methods, instructional strategies and learning styles.
7. Evaluate the Lesson Planning Process using various lesson planning templates, formats, and rubrics.
8. Explain classroom management techniques.
9. Identify different types of diversity in the classroom environment.
10. Describe how learning differences are manifested in schools.
11. Describe how teachers use multiple methods of assessment to engage learners in their own growth, to monitor learner progress
12. Describe how teachers use multiple methods of assessment to modify instruction and inform decision making.
13. Identify the role of Standards and High Stakes Testing in the life of an educational professional
14. Complete 24 hours internship in a classroom, preferably a bilingual classroom.
15. Document and reflect on your observations throughout your internship.
16. Construct an individualized map to teacher licensure in the State of New Mexico.

EDUC 1190. Introduction to Education Practicum

Course Description

Applies understanding of the field of teacher education in a field-based 45-hour practicum in a K-12 school-based setting in general or special education. Students will observe and apply understanding of educational theory to classroom practice. Students must successfully pass a background check to complete the course requirements.

Student Learning Outcomes

1. Observe teaching and learning to identify the skills and dispositions of effective teachers.
2. Demonstrate an understanding of personal attitudes and motivations for entering the field of education.
3. Students will explore the development of curriculum as it relates to student understanding and develop an original lesson that emphasizes transfer.
4. Identify effective teaching strategies that enhance Student Learning Outcomes.
5. Identify classroom management techniques and learning styles.

EDUC 1198. Internship in Bilingual Education

Course Description

Supervised experience in bilingual education/ESL elementary or secondary classroom settings for prospective bilingual education/ESL teachers.

Student Learning Outcomes

1. Demonstrate an understanding of personal attitudes and motivations for entering the field of education.
2. Identify effective teaching strategies that enhance Student Learning Outcomes.
3. Identify classroom management techniques and learning styles.
4. Develop observational skills and reflective thinking skills.
5. Evaluate instructional methods that enhance upper level thinking skills in children.

EDUC 1210. Reading Literacy

Course Description

This course will focus on the learners working with both children and parents. The learners will attend a scheduled class for the academic theoretical base of knowledge and will work at a public school with children and parents for the application phase.

Student Learning Outcomes

1. Recognize the importance of literacy as a mechanism for personal and social growth.
2. Recognize and is sensitive to the needs and rights of individual learners.
3. Understands and accepts the importance of reading as a means to learn, to access information, and to enhance the quality of life.
4. Understands and is sensitive to differences among learners and how these differences influence reading.
5. Understands the importance of making reading relevant to the learners' lives.
6. Recognizes the importance of using reading in positive ways in the classroom.
7. Understands that language is a symbolic system.
8. Recognizes dialect variations and respects linguistic differences.
9. Has knowledge of developmentally appropriate practices that support emergent literacy, particularly of diverse learners.
10. Is able to explain and model the various word recognition, vocabulary, and comprehension strategies used by fluent readers.
11. Understands the relationship of phonemic, morphemic and semantic, syntactic systems of language to the reading process.
12. Promotes the development of a literate environment that fosters interest and growth in all aspects of literacy.
13. Models and discusses reading as a valuable activity.
14. Engages students in activities that develop their image of themselves as literate.
15. Promotes feelings of pride and ownership for the process and content of reading.

EDUC 1995. Field Experience I

Course Description

Introduction to public school teaching, school visits, classroom observations and discussion seminar.

Student Learning Outcomes

1. Demonstrate an understanding of personal attitudes and motivations for entering the field of education.
2. Identify effective teaching strategies that enhance Student Learning Outcomes.
3. Identify classroom management techniques and learning styles.
4. Develop observational skills and reflective thinking skills.
5. Evaluate instructional methods that enhance upper level thinking skills in children.

EDUC 1996. Special Topics in Education

Course Description

Varies

Student Learning Outcomes

Varies

EDUC 1998. Internship in Education

Course Description

Supervised experience in elementary or secondary education settings.

Student Learning Outcomes

Varies

EDUC 2105. Orientation to the Teaching Profession

Course Description

An orientation to the teaching profession and to the conceptual framework for the Teacher Academy Teacher Certification Program. Students reflect on their individual dispositions and on their experiences as learners in order to examine perceptions and assumptions they hold about teaching and learning. In addition, students examine the ways in which teacher beliefs influence learning. Additional topics include Teacher Academy conceptual framework, core values, teacher candidate competencies and proficiencies, demands of the profession, leadership, teacher reflection, and aspects of education. This course includes a structured 5 hour field component.

Student Learning Outcomes

1. Identify and examine Teacher Academy core values, perceptions, and assumptions about teaching and learning through various frameworks. (Professionalism 1 Sc)
2. Practice teacher reflection and its significance to effective teaching. (Professionalism 1Sc)
3. Examine and reflect on teacher candidate proficiencies and dispositions as outlined in the Teacher Academy Conceptual Framework. (Professionalism 1Ka)
4. Describe literacy, historical foundations and contemporary frameworks of understanding. (Professionalism 1Sf)
5. Discuss the concept of teachers as leaders. (Professionalism 1 Sd)

EDUC 2110. Foundations of Education

Course Description

This course is designed to assist future teachers in gaining an understanding of the purposes and framework of schools. Topics covered in this course include, but are not limited to ethics, legal issues, and leadership relative to education. The dynamic role of teachers is also explored.

Student Learning Outcomes

This course should provide students with an overview of the teaching profession. Students should be able to discuss and analyze various aspects of education and the teaching field, from historical and theoretical points of view to up-to-date policies and standards. Students should also understand some classroom management strategies and various philosophies of education.

The student should be able to:

1. Identify and describe the reasons and realities of teaching.
2. Analyze essential knowledge needed to teach.
3. Describe how reforms in teacher education affect teachers.
4. Define educational philosophy, discuss various philosophies and create their own initial educational philosophy.
5. Identify factors that affect schools and place students at risk.
6. Identify, describe, and discuss the various parties who are involved in the struggle for control of schools.
7. List and discuss the states' power and influence in governing schools.
8. Explain the role of the federal government in education.
9. Explain why a professional code of ethics is needed.
10. Describe the legal rights and responsibilities of teachers, students, parents and school districts.
11. Identify how diversity is embedded in the American way of life.
12. Define equal educational opportunity.
13. Describe how students vary in intelligence.
14. Define special education, mainstreaming, and inclusion.
15. Describe how to teach all learners in an inclusive classroom.
16. Describe how to create a positive learning environment.
List keys to successful classroom management.
17. Identify and discuss effective teaching methods used by teachers.

18. List characteristics of effective teaching.
19. Describe what role standards play in the classroom.
20. Identify methods that can be used to assess student learning.
21. Describe how educational technologies influence schools.
22. Define and discuss professionalism in teaching list and describe professional organizations that teachers belong to.
23. Summarize how teachers contribute to educational research.
24. Enumerate how teachers are providing leadership for school restructuring and curriculum reform.
25. Discuss how to become certified or licensed to teach.

EDUC 2115. Foundations of Early Childhood

Course Description

Focuses on historical, philosophical and social foundations of the early childhood education profession and how these foundations influence current thought and practices. A particular emphasis will be placed on developmental issues for children, birth through the age of eight. Topics include a survey of the history of early childhood education and professionalism, ethical codes of conduct, and issues of advocacy in the field. Upon completion of the course, students will articulate a well-designed personal early childhood education philosophy that supports practices of inclusion and cultural and linguistic diversity in early education. This course requires 10 hours of fieldwork in an early childhood program approved by the instructor.

Student Learning Outcomes

1. Describe the historical, philosophical, and social foundations of the early childhood education profession and how these foundations influence current thought and practices. (Professionalism 1Sf; Diversity 6Ka; Family & Community 9Ka, 9Kb, 9Kc)
2. Define "developmentally appropriate practices". (Instructional Planning & Implementation 2Ka;
3. Diversity 6Ka, 6Kb; Development of the Student BKa, KBk; Family & Community 9Kb, 9Sd)
4. Define "critical reflection" and "teacher expectations" and reflect on their significance to effective teaching. (Professionalism 1Sc, 1Sd, 1Se, 1Sf)

EDUC 2116. Structured Observations of Teaching and Learning

Course Description

Introduction to the study and practice of teaching and learning. For students interested in pursuing a career in teaching and learning. Required for advancement in the teacher education program.

Student Learning Outcomes

Class discussions, assignments, and observation exercises are designed to provide students with the opportunities to meet the following objectives, which are aligned with the Interstate Teacher Assessment and Support Consortium (InTASC) standards as indicated in parentheses at the end of each objective.

1. Identify, analyze, and discuss educational issues, theories, and research (InTASC 1-8)
2. Enhance oral and written communication skills (InTASC 9),
3. Examine and evaluate effective teaching strategies and techniques, effective planning approaches, assessment, motivation strategies, and classroom management (InTASC 1-8),
4. Observe, create, and execute a lesson using current research strategies (InTASC 7 & 8),
5. Discuss students' diversities and individual learning differences by participating in large and small group discussions (InTASC 2),
6. Determine how the proper integration of technology facilitates student learning by experiencing firsthand how technology is used in the classroom and planning for future learning experiences (InTASC 8),
7. Identify the demands and rewards of teaching a diverse student population (InTASC 1 & 9), and
8. Reflect and analyze ones' own qualifications and commitment to becoming a teacher (InTASC 9 & 10).

EDUC 2116L. Structured Observations of Teaching and Learning

Course Description

Introduction to the study and practice of teaching and learning. For students interested in pursuing a career in teaching and learning. Required for advancement in the teacher education program.

Student Learning Outcomes

Class discussions, assignments, and observation exercises are designed to provide students with the opportunities to meet the following objectives, which are aligned with the Interstate Teacher Assessment and Support Consortium (InTASC) standards as indicated in parentheses at the end of each objective.

1. Identify, analyze, and discuss educational issues, theories, and research (InTASC 1-8)
2. Enhance oral and written communication skills (InTASC 9),
3. Examine and evaluate effective teaching strategies and techniques, effective planning approaches, assessment, motivation strategies, and classroom management (InTASC 1-8),
4. Observe, create, and execute a lesson using current research strategies (InTASC 7 & 8),
5. Discuss students' diversities and individual learning differences by participating in large and small group discussions (InTASC 2),
6. Determine how the proper integration of technology facilitates student learning by experiencing firsthand how technology is used in the classroom and planning for future learning experiences (InTASC 8),
7. Identify the demands and rewards of teaching a diverse student population (InTASC 1 & 9), and
8. Reflect and analyze ones' own qualifications and commitment to becoming a teacher (InTASC 9 & 10).

EDUC 2116C. Structured Observations of Teaching and Learning

Course Description

Introduction to the study and practice of teaching. For students interested in pursuing a career in teaching. Required for advancement in the teacher education program. Concurrent enrollment: EDF 222L.

Student Learning Outcomes

Class discussions, assignments, and observation exercises are designed to provide students with the opportunities to meet the following objectives, which are aligned with the Interstate Teacher Assessment and Support Consortium (InTASC) standards as indicated in parentheses at the end of each objective.

1. Discover, analyze and discuss educational issues, theories, and research (In T ASC 1-8)
2. Enhance their oral and written communication skills (InTASC 9),
3. Examine and evaluate effective teaching strategies and techniques, effective planning approaches, assessment, motivation strategies, and classroom management (InTASC 1-8),
4. Observe, create, and execute a lesson using current research strategies (InTASC 7 & 8),
5. Discuss students' diversities and individual learning differences (InTASC 2),
6. Discover how the proper integration of technology facilitates student learning (InTASC 8),
7. Appreciate the demands and rewards of teaching a diverse student population (InTASC 1 & 9), and
8. Reflect and analyze ones' own qualifications and commitment to becoming a teacher (InTASC 9 & 10).

EDUC 2220. Families, Schools & Community Cultures

Course Description

Required for Elementary and Secondary. Focuses on the relationship of schools, families, and community and on how schools are structured at the local, state, and national level. Covers legal, ethical, and professional responsibilities of teachers, diversity in the classroom, and strategies for encouraging parental involvement. Assists students in identifying community resources to enrich curricula and in developing the agency to work with various public entities that interact with schools.

Student Learning Outcomes

1. Identify primary legal requirements and ethical conduct for teachers and schools.

2. Explain how local schools are affected by state and national educational systems and regulations.
3. Recognize community diversity, occasions of cultural significance, stakeholder biases, and local political issues that a responsive school culture would address.
4. Appreciate the value of collaboration with community members and parents.
5. Connect classroom activities to real-world learning opportunities within the local community and beyond.

EDUC 2221. Educational Psychology

Course Description

Introduces you to psychological principles as they apply to teaching and learning. You will examine the relationships between theory, research, and practice in learning, memory, child development, motivation, and educational assessment for the school setting. You will address cognitive, linguistic, affective, and social development, with particular attention to the K-8 learner. Emphasis is on the integration of theory and practice, with numerous classroom applications of psychological theories and principles.

Student Learning Outcomes

1. Define learning and compare and contrast the factors that cognitive, behavioral, and humanistic theories believe influence the learning process, giving specific examples of how these principles could be used in the classroom.
2. Apply psychological principles and theories within actual or simulated educational contexts.
3. Use major concepts of child and adolescent development, human learning, and social and cultural influences in planning and implementing classroom instruction, strategies, and management.
4. Identify and analyze the implications of the various developmental and learning theories for models of instruction, decisions about teaching strategies and the selection of materials, and the role of the teacher in the learning process.

EDUC 2222. Literacy/Language Instruction for ESL Learners

Course Description

Provides an understanding of second language acquisition and develops a strong basis for instruction of literacy/language to English as Second Language learners in K-12 classrooms.

Student Learning Outcomes

By the end of this course, students will be able to:

1. Evaluate current theories, research and pedagogical practices for teaching linguistic skills related to oral and written language development for second language learners.
2. Demonstrate a strong understanding of foundational literacy skills and language acquisition in first and second language students.
3. Practice how to modify teaching strategies and materials for students for whom English is a second language in lesson planning and instruction.
4. Develop Common Core instructional plans that demonstrate effective literacy instruction for English Language Learners (ELLs).
5. Access and use multiple formative and summative assessment tools to enrich and extend an individual student's oral, reading and writing needs.
6. Examine specific linguistic and cultural issues as they relate to second language students in the southwest.

EDUC 2224. ESL Across Content Areas

Course Description

Provides an understanding of the goals, strategies and teaching techniques for effectively teaching content to ESL students in K-12 classrooms.

Student Learning Outcomes

By the end of this course, students will be able to:

1. Use current theories on second language acquisition to modify and support instruction for diverse of learners.
2. Implement strategies and teaching techniques for distinct learning styles and developmental levels across all content areas to support content knowledge acquisition.
3. Incorporate instructional technologies to support language acquisition in the content areas for culturally and linguistically diverse students.
4. Develop content area unit and lesson plans based on the Common Core with specific modifications for English Language Learners.
5. Describe how culture and background impact individual learning and teaching.
6. Develop a resource plan for communicating with families for whom English is a Second Language.

EDUC 2243. Children's Literature

Course Description

This course focuses on the building familiarity with high quality, culturally responsive, and authentic children's literature with the purpose of supporting literacy instruction in K-8 classrooms. Students will be introduced to a range of literature and strategies for incorporating this literature into their instruction.

Student Learning Outcomes

1. Students will evaluate children's literature.
2. Students will identify ways in which children's literature leads to effective literacy instruction.
3. Students will participate in a collaborative learning community to discuss literature and connect to instruction that is anchored by children's literature as mentor texts across subjects.

EDUC 2260. Emergent Literacy for Diverse Learners

Course Description

Examines the fundamentals of literacy development for emergent readers and writers. Course competencies are built upon national and state standards for literacy and focus on the development and assessment of oral language, print awareness, letter knowledge, phonological and phonemic awareness, phonics, sight words, fluency, spelling, vocabulary, comprehension, and writing. The course utilizes theoretical frameworks aligned with Structured Literacy principles and practices. Students will learn evidence-based methods focusing on diverse learners, including students with disabilities and multilingual learners, and develop skills in assessment, differentiation, and intervention strategies.

Student Learning Outcomes

(Core Values: Critically Reflective Practice & Professionalism)

1. Engage in critical reflection as a means to developing a personal theory of literacy instruction.
2. Participate in an on-going process of researching current educational issues and practices (NMPED Entry Level Teacher Competencies: A-3, F-6, J-a).
3. Identify and evaluate the major research-based approaches to reading instruction.
4. Reflect upon individual teaching strategies and their effects on student literacy development and use findings to improve upon overall instruction (NMPED Entry Level Teacher Competencies: D-5, J) (Core Values: Diversity & Multicultural Perspectives).
5. Develop an understanding of the fundamentals of literacy development and instruction to better support the diversity of student needs in literacy development and instruction (NMPED Entry Level Teaching Competencies: F-6, J-a, J-c,).
6. Identify the phonemic, morphemic, semantic, syntactic, and pragmatic systems of language and their relation to the reading process characterize the role of metacognition in reading and writing.
7. Describe the patterns of child growth and development and their relation to the teaching of reading.

8. Define emergent literacy and identify research-based methods for supporting early literacy development.
 9. Identify the role of oral language in the development of literacy.
 10. Identify the stages of second language acquisition and the theories that underscore ESL methodology.
 11. Identify the competencies and benchmarks necessary for appropriate language and reading development.
 12. Identify integrated language/reading activities that support student achievement and interest in all phases of language development.
 13. Develop an understanding of the principles of effective reading instruction to support the literacy learning of diverse students (NMPED Teacher Competencies: H-4, H-5, H-6, F-6, F-7).
 14. Identify effective methods, strategies and materials that support the literacy development of all students.
 15. Address literacy differences among students through a literature-based approach to instruction, which focuses on the cognitive, social, emotional and cultural factors that underlie these literacy differences.
 16. Identify the unique cultural aspects of New Mexico students as they relate to literacy development and instruction.
 17. Identify the major approaches to literacy instruction as it pertains to Second Language Learners (a.k.a. ESL/TESOL) describe modification of methodologies, techniques, and materials for teaching reading to children with special needs.
 18. Implement developmental, corrective and remedial instructional strategies in the teaching of reading.
 19. Identify the state standards and benchmarks that guide reading instruction in New Mexico.
 20. Develop an understanding of the continuous assessment process in reading instruction (NMPED Entry Level Teaching Competencies: B-5, B-9).
 21. Identify assessments that are appropriate to the developmental levels and unique cultural aspects of students.
 22. Assess students reading abilities using formal and informal reading assessments.
- (Core Values: Collaboration).
23. Recognize that family and community can be used as teaching resources to enhance learning and children's self-value (NMPED Entry Level Teaching Competency: G-5).

EDUC 2262. Intermediate Literacy for Diverse Learners

Course Description

Examines the essential components of intermediate literacy instruction for students. Course competencies are built upon national and state standards for elementary and middle school reading and writing and focus on the development and assessment of student vocabulary, academic language, background knowledge, reading comprehension, fluency, student analysis of narrative and expository texts, and writing. Demonstrates evidence-based methods, materials, and strategies for diverse learners, including differentiation and interventions for struggling readers, students with disabilities, and multilingual learners.

Student Learning Outcomes

1. Teacher candidates will evaluate assessment data and develop/implement universally designed, differentiated, standards-aligned, and age-appropriate reading instruction based upon the needs and abilities of diverse students.

EDUC 2264. Reading and Writing in Secondary Education for Diverse Learners

Course Description

Examines the essential components of content area literacy instruction for students in grades 6-12. Course competencies are built upon national and state standards for secondary literacy instruction and content area and focus on the design and integration of explicit reading and writing instruction using differentiated materials and evidence-based strategies. Students will learn about evidence-based methods, materials, and strategies for a diverse student population, including struggling readers, students with disabilities, and multilingual learners.

Student Learning Outcomes

1. Teacher candidates will teach content area literacy lessons that accommodate and support the diverse needs and abilities of all* adolescent learners using differentiated materials and evidence-based strategies.
2. Teacher candidates will facilitate and apply professional learning about literacy instruction using reflection and peer collaboration.

*Note: Reference to all learners includes culturally and linguistically diverse, English learners, and students with learning disabilities.

EDUC 2296. Education Seminar**Course Description**

Covers selected topics, theories, methods and strategies for the professional development of educators. Students will engage in self-assessment activities related to the selected topic. Topics vary from semester to semester.

Student Learning Outcomes

1. Identify and explain the major components of the professional development topic
2. Identify effective and practical classroom techniques related to the professional development topic.
3. Summarize the recent research findings and/or literature on the topic covered.
4. Summarize the recent research findings and/or literature on the topic covered.

EDUC 2315. Educating Linguistically and Culturally Diverse Students**Course Description**

Course familiarizes students with history, theory, practice, culture and politics of second language pedagogy and culturally relevant teaching. Examines theoretical and practical issues related to diversity of culture, race, gender, language, socioeconomic, and ability level in the classroom. Students will be introduced to effective teaching methods for linguistically and culturally diverse learners, including critical teaching behaviors and essential best practices for diverse students.

Student Learning Outcomes

1. Describe the needs, abilities, and strengths of linguistically and culturally diverse students, including factors that affect student access to learning
2. Describe key concepts and models of bilingual education, including theories of first and second language acquisition
3. Design a K-12 curriculum unit using culturally relevant materials and practices for anti-bias education
4. Develop critical dispositions for becoming a culturally inclusive educator, including self-reflection

EDUC 2320. Educational Community**Course Description**

This course is designed to prepare future teachers with the necessary classroom management skills needed for student success by providing instruction on classroom processes, techniques, and procedures. Systematic motivational strategies for a diverse student body are covered. The impact on student learning due to emotional, social, physical, and cognitive development from birth through adolescence is explored. Also covered are educational strategies to assist students with exceptional needs.

Student Learning Outcomes

1. The student will identify and describe the characteristics of an effective teacher as demonstrated by scoring 70% or higher on a faculty administered exam.
2. The student will describe the importance of the first days of school as demonstrated by scoring 70% or higher on a faculty administered exam.
3. The student will outline the role of student self-evaluation as demonstrated by scoring 70% or higher on a faculty assigned class project.

EDUC 2325. Student Outcomes Assessment

Course Description

This course is designed to help future teachers plan and prepare effective instruction based on measurable and useful assessments. The assessments will fulfill district and state standards while meeting the needs of students. Instruction on the use of assessment data to assist teachers in designing curriculum and improving teaching methodologies is also covered. This course also provides instruction on teaching reading and diagnosing reading skills at the elementary and secondary levels.

Student Learning Outcomes

1. The student will learn to plan assessment strategies as demonstrated by scoring 70% or higher on a faculty administered exam.
2. The student will develop an assessment project through a faculty assigned class exercise and score 70% or higher by faculty evaluation

EDUC 2327. Student Growth and Development

Course Description

With primary emphasis on K-12 learners, the Student Growth and Development course explains the cognitive, linguistic, personal, social, and moral development of individuals as well as individual and group differences for students studying to be teachers and educational leaders. This course describes behaviorist and social cognitive view of learning, intrinsic and extrinsic motivation, and informal and formal assessments that prepare teachers and educational leaders for the classrooms and schools.

Student Learning Outcomes

1. Describe the key principles and theories that guide teachers in their efforts to adapt instruction to students' cognitive abilities and promote their further cognitive development.
2. Explain how students differ from one another in their cognitive and linguistic development, and how teachers can accommodate such differences.
3. Explain how self-concept and self-esteem affect the classroom performance of students
4. Identify the strategies most likely to promote good relationships among diverse students
5. Explain how students' moral reasoning and behavior change over time, and what teachers can do to promote moral and pro-social development
6. Compare and contrast the ways in which students from various cultural and ethnic groups are apt to be alike and different from one another and identify the implications of these differences for classroom practice.
7. Compare and contrast the ways in which males and females are alike and different and identify what can be done to provide equitable educational opportunities for both genders.
8. Define learning and identify the general theoretical perspectives that can be used to describe and explain it.
9. Summarize the basic assumptions of social cognitive theory
10. Describe the role played by self-efficacy in learning and identify how teachers can enhance self-efficacy in students.
11. Identify the components of self-regulation and explain how teachers can promote this behavior in their students.
12. Identify the components of metacognition and explain how teachers can promote this behavior in their students.
13. Define motivation and explain its role in learning.
14. Compare and contrast intrinsic and extrinsic motivation.

15. Compare and contrast the main types of expository instruction, including lectures, mastery learning, and direct instruction.
16. Understand how to include cooperative and collaborative learning strategies into daily instruction.
17. Explain discovery learning and identify instructional situations for which it is best suited.
18. Define authentic activity and provide several examples.
19. Compare and contrast cooperative learning with other forms of learning and identify the situations for which cooperative learning is best suited.
20. Compare and contrast the different forms assessment can take in classroom settings.
21. Demonstrate an understanding of formal and informal assessment techniques.
22. Define the four characteristics of “good” assessment.
23. Explain the importance of knowledge of mental models, domain content, and problem construction in the design of quality assessment.

EDUC 2330. The Effective Classroom

Course Description

This course is designed to prepare future teachers with the necessary classroom management skills needed for student success by providing instruction on classroom processes, techniques, and procedures. Systematic motivational strategies for a diverse student body are covered. The impact on student learning due to emotional, social, physical, and cognitive development from birth through adolescence is explored. Also covered are educational strategies to assist students with exceptional needs.

Student Learning Outcomes

1. The student will identify and describe the characteristics of an effective teacher as demonstrated by scoring 70% or higher on a faculty administered exam.
2. The student will describe the importance of the first days of school as demonstrated by scoring 70% or higher on a faculty administered exam.
3. The student will outline the role of student self-evaluation as demonstrated by scoring 70% or higher on a faculty assigned class project.

EDUC 2335. Reading Assessment

Course Description

This course is designed to address the requirements of Public Schools Act, 2001 N.M. Laws Ch. 261, amending §22-2-8.7 N.M.S.A. 1978 and 2001 N.M. Laws Ch. 299, amending §22-2-2 N.M.S.A. 1978. The intent of this course is to prepare future teachers to recognize and assess reading difficulties across content areas. Topics covered in this course include word identification skills and strategies, reading comprehension skills, and vocabulary skills.

Student Learning Outcomes

1. The student will learn to plan lessons for reading and writing as demonstrated by scoring 70% or higher on a faculty developed project.
2. The student will develop an understanding of content area literacy planning as demonstrated by scoring 70% or higher on a faculty developed project.

EDUC 2340. Multicultural Education

Course Description

This course offers a study of educational trends, issues, and teaching methods and strategies necessary to teach respect and tolerance in diverse settings.

Student Learning Outcomes

Course Objective: This course is an approved elective in the program of study in New Mexico for an Associates of Arts degree in Teacher Education. The following objectives are taken from the New Mexico State department of Education's Common core Competencies for early childhood professionals. Upon completion of this course, students will:

1. Demonstrate a clear understanding of the goals of multicultural education.
2. Describe strategies and teaching techniques for use in a multicultural classroom.
3. Describe how culture and background impact individual learning and teaching.
4. Develop activities that are responsive to diverse populations through planned activities and apply differing approaches to learning opportunities. (OBJ 3)

EDUC 2344. Strategies for Successful Classroom Practicum

Course Description

This course is designed to supplement EDUC 2345. As assigned by the instructor, you will be engaged in specific responsibilities for 37.5 hours in the field and/or lab experiences. You must have a favorable background check on file with the College of Education.

Student Learning Outcomes

1. Understand models of classroom management and observe these in the classroom.
2. Be able to provide a safe classroom environment for optimal learning and students' success.
3. Seek student understanding and input for classroom procedures, rules, and consequences.
4. Be able to manage time and materials effectively to minimize distractions and disruptions in the classroom.
5. Be able to develop behavioral management and discipline systems that are respectful of the students.

EDUC 2345. Strategies for Successful Classrooms

Course Description

In this class you will learn basic classroom processes, techniques and procedures to help you manage your classroom for high levels of student success. You will learn practical strategies for increasing student motivation and learning in a diverse classroom. You will also learn practical strategies for managing student behavior and discipline in your future classroom. This class consists of a Practicum connected with the lecture class. You will spend 37.5 hours in a classroom observing classroom procedures, routines, discipline of students, etc. You will be expected to write a reflective journal of your observations, interview your mentor teacher and keep a log of all the hours you spent observing in the classroom. For this class you should focus on Standard C of the NM entry level teacher competencies: Classroom Management.

Student Learning Outcomes

1. Understand models of classroom management and observe these in the classroom.
2. Develop and implement a classroom management plan.
3. Be able to provide a safe classroom environment for optimal learning and students' success.
4. Seek student understanding and input for classroom procedures, rules, and consequences.
5. Be able to manage time and materials effectively to minimize distractions and disruptions in the classroom.
6. Be able to develop behavioral management and discipline systems that are respectful of the students.

EDUC 2350. The Critically Reflective Teacher

Course Description

Exploration of the role of critically reflective teachers in diverse educational settings. Students demonstrate a commitment to the development and practice of self-directed reflection as applied to teaching and learning. Students explore how reflection-in-action and reflection-on-action guide instructional decision-making. This course includes a 10 hour field component.

Student Learning Outcomes

1. Identify personal experiences, biases, and beliefs and identify how these impact teaching practices. (Diversity 6Kb; Development of the Student 8Sd; Family & Community 9Ka)

2. Articulate the importance of critical reflection as pedagogical practice. (Professionalism 1 Sc)
3. Assess their own development as related to Teacher Academy core values and teacher candidate dispositions. (Professionalism 1Sc)
4. Describe a range of methodologies that support an ongoing practice of reflection (Communication 10Ka, 10Sd, 10Se, 10Sf)
5. Document and analyze learning opportunities that support multiple ways of constructing meaning (Development of the Student 8Sd)

EDUC 2355. Theories of Teaching and Learning

Course Description

Examine the teaching and learning process in relation to historical, theoretical, philosophical, and social foundations of education. Students develop an awareness of expected developmental progressions and ranges of individual variation within the physical, social, emotional, moral, and cognitive domains. Students learn how to apply instructional strategies that promote learning. This course includes a structured 10-hour field component.

Student Learning Outcomes

1. Identify learning theories and their applications (Development of the Student BKa, SSe; Professionalism 1Sd)
2. Identify differences in approaches to learning and performance including different learning styles, multiple intelligence and the importance of individualizing instruction to meet the needs of a diverse group of students. (Instructional Planning & Implementation 2Ka; Diversity 6Kb, 6Sd)
3. Determine the influences on the teaching and learning process (Development of the Student 8Ka)
4. Define diversity and apply instructional strategies that incorporate cultures and community resources to instruction (Diversity 6Kb; Instructional Planning & Implementation 2Se)
5. Demonstrate an understanding of the reciprocal relationship between school, cultures and community (Family & Community 9Kb, 9Kc)

Other proficiencies addressed in this course: Family & Community 9Sd

EDUC 2360. Curriculum and Assessment

Course Description

Planning effective instruction, designing and analyzing meaningful assessment based on students' needs and on district and state standards. Specific strategies focus on differentiating instruction, designing a conceptually based curriculum, and analyzing standards for alignment with curriculum content and outcomes. Students learn how to use assessment data to direct their teaching practices and curriculum development. This course includes a structured 10-hour field component.

Student Learning Outcomes

1. Align the development of curriculum and instruction with state and district standards. (Instructional Planning & Implementation 2Kc; Inclusion 7Ka, 7Kb)
 2. Develop and analyze assessments based on both students' needs and state and district standards. (Assessment 4Ka; Instructional Planning & Implementation 2Kb)
 3. Apply awareness of learning styles and differentiation to curriculum. (Instructional Planning & Implementation 2Ka, 2Sd; Diversity 6Sd)
 4. Develop a conceptual framework for curriculum scope and sequence. (Instructional Planning & Implementation 2Se, 2Sf; Diversity 6Kb)
 5. Sequence effective instructional strategies. (Instructional Planning & Implementation 2Sd; Inclusion 7Sf)
- Other proficiencies addressed: Assessment 4Sb, 4Sd, 4Se

EDUC 2365. Effective Teaching

Course Description

Effective instructional processes, techniques and procedures to help teachers lead their classrooms toward high levels of student success. Students learn practical keys and strategies for increased student motivation and learning in a diverse classroom. The processes of social, emotional, physical and cognitive development from birth through adolescence and their implications for student learning are reviewed. Students examine a variety of classroom management models for understanding classroom behaviors and educational strategies that are effective in helping all students succeed. This course includes a structured 10 hour field component.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Develop several strategies and techniques to manage classroom context in order to create an effective learning environment for all students. (Classroom Management 3Ka)
2. Identify and implement teaching strategies that increase student motivation and learning. (Instructional Planning & Implementation 2Sd; Professionalism 1Sd; Development of the Student BKa)
3. Design and evaluate effective classroom procedures, routines and management plans aligned to social, emotional, physical and cognitive development level of the students. (Classroom Management 3Ka, 3Sb; Development of the Student SSe, BSd)
4. Demonstrate understanding of theory translated into practice in the context of effective teaching. (Professionalism 1Ka, 1Sc, 1Sd; Classroom Management 3Se) Other proficiencies addressed: Classroom Management 3Sd

EDUC 2370. Reading in the Content Area

Course Description

An exploration of developmentally, culturally and linguistically appropriate, formal and informal research- based assessments and teaching strategies in the teaching of reading at the secondary level. Students learn teaching strategies that emphasize the construction of meaning in texts, reading and study skills, and reading and writing and information literacy across the curriculum. This course includes a structured 10-hour field component.

Student Learning Outcomes

1. Research and implement reading strategies to support reading comprehension across the curriculum. (Communication 10Kb; Instructional Planning & Implementation 2Sd, 2Se)
2. Implement research-based techniques and strategies for teaching reading at the secondary level. (Communication 10Kb; Development of the Student BSc; Professionalism 1Sc, 1Sd)
3. Incorporate writing and reading and information literacy into all content areas. (Communication 1 OKa, 10Sd, 10Sf; Development of the Student BSd; Technology 5Sc)
4. Include formal and informal assessments in lesson plans using New Mexico content standards and curriculum development. (Instructional Planning & Implementation 2Kc, Assessment 4Sb, 4Sc)

EDUC 2375. Technology Integration in the Classroom

Course Description

Students apply knowledge of learning theory to explore how to incorporate educational technology as a classroom tool in the K-12 learning environment. Students will use classroom technology to enhance curriculum development and application to the classroom. Examines the impact of technology on the changing role of the teacher.

Student Learning Outcomes

Students will:

1. Use technology tools and information resources to facilitate academic learning for the 21st century classroom.
2. Use content area standards that reflect best practices in teaching and learning with technology in the K-12 classroom.
3. Use technology to support learner-centered strategies that increase access and address the diverse needs of all students, including second language learners and student receiving special education services.

EDUC 2380. Introduction to Online Course Design

Course Description

Introduction to learning management systems, course design, and online teaching and learning. Includes structure and organization of online courses, design and implementation of online activities and assessments, and creation and moderation of effective online discussion.

Student Learning Outcomes

Upon successful completion students will be able to:

1. Identify and discuss best practices in the design and development of an online course.
2. Discuss the importance of facilitator presence and creating a sense of community in an online learning environment.
3. Discuss the importance of timely, ongoing communication and constructive feedback to support student learning.
4. Demonstrate the ability to adopt and develop course content, learning activities, and assessments suitable for the online environment.
5. Develop course materials that meet Quality Matters Standards.
6. Apply the Quality Matters Rubric to self-assess and peer review online course content and learning activities.

EDUC 2410. Early Literacy & Young Children

Course Description

This course is designed to help students gain knowledge and skills needed to assist children in the areas of reading and writing development in the early elementary grades. Emphasis will be placed on phonemic awareness, phonics, fluency, vocabulary development, and comprehension. Informal assessment tools will be introduced to students as the basis for designing curriculum to meet children's individual needs.

Student Learning Outcomes

1. Describe methods to promote a child's development of effective reading strategies related to phonemic awareness, phonics, fluency, vocabulary, and comprehension J2(c);
2. Discuss the foundations of reading and language arts development, including but not limited to:
 - a. Research on reading;
 - b. Characteristics of proficient and non-proficient readers;
 - c. Children's developmental processes;
 - d. Cultural, linguistic, environmental, and physiological factors in reading and language arts development;
 - e. How children learn to speak, read, write, and listen;
 - f. Language structure including graphophonics, semantics, syntax, and pragmatics systems J2a;
 - g. Relationship between oral and written language;
3. Describe the use of classroom reading assessment to diagnose students' instructional needs and modify instruction appropriately J2b(i);
4. Link assessment and instruction to New Mexico language arts content standards, benchmarks and performance standards J2b (ii);
5. Differentiate methods of instruction based on needs of students and design instruction based on reading and language arts components J2(c);
6. Use observation skills for informal assessment D7;
7. Adjust lessons and strategies for students with exceptionalities with regard to academic levels, physical environment, and emotional needs H8;
8. Explain communications theories, language development, and the role of language in student learning K3;
9. Apply a variety of strategies to facilitate language acquisition and development K4;
10. Plan experiences that demonstrate recognition that the conventions and skills of language need to be taught in meaningful and authentic contexts rather than in isolation K5;
11. Explain how writing is critical to other areas of language acquisition, cognitive growth, and expression K6;

12. Recognize that the focus of reading is communication of meaning through interaction between the reader and the text K7;
13. Use a variety of reading materials, including children's literature, non-fiction, technological media, stories, poems, biographies, texts from various subject areas J2-D (v); and,
14. Apply a variety of verbal and non-verbal sign systems in order to expose students to multiple expressive modes across the curriculum K8;
15. Select materials and tools for measuring and evaluating student progress, and uses the information to plan appropriate instruction D2, 3, 4, 5;
16. Critically review, select, and adapt materials, resources, and technologies and analyze them for (A)
 - a. age appropriateness;
 - b. biases and stereotypes;
 - c. content appropriateness in regard to curriculum;
 - d. cultural and linguistic background;
 - e. developmental level;
 - f. exceptionalities:
 - g. reading level;
 - h. relevance to students.
17. Use learning theory, knowledge of the subject matter, and curriculum development in planning instruction to meet curriculum goals. (B.1)
18. Support the physical, social, emotional, cognitive, and linguistic development of students when planning instruction. (B.2)
19. Plan learning opportunities, recognizing the various learning styles of individuals/groups, according to the nature of the content being taught. (B.3)
20. Create short- and long-term plans that are linked to student needs, performance, learning styles, family, culture, and community (B.4, 5)
21. Develop lessons that provide for the success of students with exceptionalities, including learning disabilities, visual and perceptual difficulties, and physical or mental challenges. (B.6)
22. Use assessment strategies and instruments appropriate to the Student Learning Outcomes being evaluated. (B.9)
23. Develop sequential lessons that include knowledge of the discipline, student diversity, the local community, and the district/state curriculum goals. (B.11)
24. Construct activities and transitions that guide students to be focused and reflect positive classroom management. (C.11)
25. Recognize developmental levels of student knowledge and skills including typical and atypical
26. Recognize developmental levels of student knowledge and skills including typical and atypical patterns (D.9)
27. Articulate effective communication methods when discussing assessment results with students, parents, lay audiences, and other educators (D.14)
28. Create instructional opportunities that show sensitivity to differing approaches to learning and may be adapted to diverse learners (F.1)

EDUC 2415. Elementary Curriculum & Teaching Methods

Course Description

This course will emphasize effective teaching methods and lesson design for the elementary level (Kindergarten – 8th grade) that promotes hands on learning and encompasses state standards. Strategies for leading a class in small and large group settings as well as maintaining a classroom environment that is conducive to learning will be emphasized. Practicum assignments allow students the opportunities to evaluate the effectiveness of their curriculum activities and teaching methods.

Student Learning Outcomes

1. Critically review, select, and adapt materials, resources, and technologies and analyze them for (A.8)
 - a. age appropriateness;
 - b. developmental level;
 - c. cultural and linguistic background;
 - d. exceptionalities;
 - e. biases and stereotypes;
 - f. content appropriateness in regard to curriculum;
 - g. reading level;
 - h. relevance to students.
2. Use learning theory, knowledge of the subject matter, and curriculum development in planning instruction to meet curriculum goals. (B.1)
3. Support the physical, social, emotional, cognitive, and linguistic development of students when planning instruction. (B.2)
4. Plan learning opportunities, recognizing the various learning styles of individuals/groups, according to the nature of the content being taught. (B.3)
5. Create short and long term plans that are linked to student needs, performance, learning styles, family, culture, and community (B.4, 5)
6. Develop lessons that provide for the success of students with exceptionalities, including learning disabilities, visual and perceptual difficulties, and physical or mental challenges. (B.6)
7. Use assessment strategies and instruments appropriate to the Student Learning Outcomes being evaluated. (B.9)
8. Develop sequential lessons that include knowledge of the discipline, student diversity, the local community, and the district/state curriculum goals. (B.11)
9. Construct activities and transitions that guide students to be focused and reflect positive classroom management. (C.11)
10. Select materials and tools for measuring and evaluating student progress, and uses the information to plan appropriate instruction. (D.2, 3, 4, 5)
11. Interpret and use results of standardized instruments, including and understanding of percentiles, means, stanines, grade equivalence, and item analysis (D.6)
12. Recognize developmental levels of student knowledge and skills including typical and atypical patterns (D.9)
13. Articulate effective communication methods when discussing assessment results with students, parents, lay audiences, and other educators (D.14)
14. Create instructional opportunities that show sensitivity to differing approaches to learning and may be adapted to diverse learners (F.1)
15. Compare the various cultures, history, and values of the community in which he or she plans to teach (G.1)
16. Explain how special education regulations affect education and students with differing levels of abilities (H.1, 2, 3, 4)
17. Demonstrate how lessons and strategies may be adjusted to meet the needs of students with exceptionalities, with regard to academic levels, the physical environment, and emotional needs (H.8)
18. Compare the various theories of cognitive, social, aesthetic, emotional, and physical development (I.1)
19. Demonstrate knowledge of mathematical concepts through a variety of teaching techniques, and can link assessment and instruction to the New Mexico standards and benchmarks for mathematics (J.1:a, b, c, d, g, h)
20. Construct opportunities for elementary aged students to develop a variety of mathematical skills and concepts, including reasoning, logic, and tools such as technology and manipulatives in problem solving (J.1:e, f)
21. Use open ended problems and activities to allow elementary students to expand creatively on the material learned in classrooms (J.1:i)
22. Demonstrate strategies to increase elementary students' language arts abilities in phonemic awareness, phonics, word recognition, vocabulary development, fluency, comprehension, and writing (J.2:c, d)

23. Use the scientific method to help develop young students' abilities to identify and communicate a problem, and to design, implement, and evaluate a solution (J.3:b)
24. Create activities and describe instructional methods that would promote full participation in an elementary science program, in a way that responds to student diversity (J.3:c, d, e)
25. Demonstrate understanding of the principles of teaching and learning process that underlie social studies concepts and can translate into meaningful learning activities focusing on inquiry, authenticity, and collaboration (J.4:a)
26. Communicate the concept that social studies encompass history, geography, anthropology, archeology, economics, political science, psychology, and sociology and the interconnected relationship with other disciplines (J.4:b, d)
27. Demonstrate strategies for helping students use multiple resources including documents, artifacts/regalia, direct observation, human resources, and personal background as part of the inquiry/research process. (J.4:f)
28. Construct experiences that provide opportunities for students to appreciate the historical development of democratic values, institutions, nations, and cultures. (J.4:g)
29. Describe ways to engage elementary students in activities that require them to formulate, analyze, synthesize, and critique issues by using well-reasoned, clearly supported arguments, policies, and positions. (J.4:h)
30. Construct activities that encourage elementary students to present social studies knowledge using a variety of sign systems including writing, charts, graphs, maps, art, music, drama, dance, and technology. (J.4:i)
31. Implement components of art such as history, art making, appreciation, and criticism through dance, music, theater, and the visual arts, appropriate to students' developmental levels. (J.5:a)
32. Uses the arts as interdisciplinary units and themes. (J.5:b)
33. Explains distinctions and connections between arts disciplines and arts experiences, and encourages study and active participation that leads to skill development and appreciation. (J.5:c)
34. Provides opportunities for elementary students to communicate at a basic level in the four art disciplines of dance, music, theater, and visual arts, including knowledge and skills in the use of basic vocabularies, materials, tools, techniques, and thinking processes of each discipline. (J.5:d)
35. Explain how to enable elementary students to develop and present basic analyses of works of art from structural, historical, and cultural perspectives. (J.5:e)
36. Expose children to exemplary works of art from a variety of cultures and historical periods and provides opportunities for students to discuss and respond to them. (J.5:f)
37. Relate basic types of arts knowledge and skills within and across the arts disciplines and makes connections with other disciplines. (J.5:g)

EDUC 2420. Teaching Reading for the Elementary Classroom

Course Description

An exploration of developmentally, culturally and linguistically appropriate, formal and informal research-based assessments and teaching strategies in the teaching of reading in grades K-8. This course includes a structured 10-hour field component.

Student Learning Outcomes

1. Implement developmentally, culturally and linguistically appropriate research-based assessments to guide reading instruction for all students. (Diversity 6Sd; Instructional Planning & Implementation 2Ka, 2Sd, 2Se, 2Sf)
2. Implement research-based techniques and strategies for teaching reading at the elementary level phonics, phonemic awareness, fluency, vocabulary and comprehension. (Professionalism 1Sd, Instructional Planning & Implementation 2Se)
3. Demonstrate an understanding of the role of phonological awareness, letter learning and phonics in learning to read. (Instructional Planning & Implementation 2Ka, 2Se)
4. Analyze texts for challenges and opportunities to learn. (Diversity 6Ka, 6Kb, 6Sc)
5. Identify the connections between reading, writing, and oral language in all instructional contexts. (Professionalism 1Sc; Communication 10Ka, 10Kb, 10Kc)

EDUC 2430. Fundamentals of Reading Instruction

Course Description

Prepares students to apply research-based techniques in the development and implementation of a literacy program including phonics, phonemic awareness, fluency, vocabulary and comprehension. Students are introduced to a literature-based curriculum and explore developmentally appropriate reading techniques as applied to the reading process. Students explore and understand theory and research on the effective teaching of reading and writing, the components of language and the cognitive characteristics of readers. This course includes a structured 10 hour field component.

Student Learning Outcomes

1. Discuss theory and research on the teaching of reading- phonics, phonemic awareness, fluency, vocabulary and comprehension. (Communication 10Kb)
2. Apply the science of reading instruction in the development and implementation of a literacy program (Diversity 6Sd, Communication 10Kb, 10Kc)
3. Define and categorize the reading process (how students learn to read, write and spell). (Communication 10Ka)
4. Develop tools to create a supportive reading classroom environment. (Communication 10Kb; Assessment 4Ka)
5. Identify the linguistic, environmental, physiological and cultural factors of reading and writing development. (Instructional Planning & Implementation 2Ka)
6. Utilize the New Mexico content standards and benchmarks to design lesson plans. (Instructional Planning & Implementation 2Kb; Professionalism 1Sc, 1Sd)
7. Identify the functions oral language serves in the cognitive, social, and emotional domains of development. (Communication 10Sd, 10Se)

EDUC 2435. The Teaching of Reading

Course Description

Exploration of specialized techniques and materials for the teaching of reading in the elementary school provides an understanding of the nature of the developmental reading process; has a field experience.

Student Learning Outcomes

Upon completion of this course, student will:

1. Describe the nature of the developmental reading process. R. Ch. 1, Ch. 11
2. Articulate the importance of teaching reading to every child. R. Ch. 1, Ch. 11
3. Develop projects and lesson plans that will reflect content standards and benchmarks and appropriate processes for teaching of reading. Field Placement Visits 1-7
4. Apply critical analyses to readings. R. Ch. 7
5. Evaluate methods for teaching reading Cunningham Ch. 1-4, R. Ch 11
6. Participate in weekly discussions that relate to the teaching of reading. Wk. 1-16 discussions

Standard #1: Learner Development

The teacher understands how learners grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas, and designs and implements developmentally appropriate and challenging learning experiences.

Standard #2: Learning Differences

The teacher uses understanding of individual differences and diverse cultures and communities to ensure inclusive learning environments that enable each learner to meet high standards.

Standard #3: Learning Environments

The teacher works with others to create environments that support individual and collaborative learning, and that encourage positive social interaction, active engagement in learning, and self-motivation.

Standard #6: Assessment

The teacher understands and uses multiple methods of assessment to engage learners in their own growth, to monitor learner progress, and to guide the teacher's and learner's decision making.

Standard #7: Planning for Instruction

The teacher plans instruction that supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of learners and the community context.

Standard #8: Instructional Strategies

The teacher understands and uses a variety of instructional strategies to encourage learners to develop deep understanding of content areas and their connections, and to build skills to apply knowledge in meaningful ways.

Standard #9: Professional Learning and Ethical Practice

The teacher engages in ongoing professional learning and uses evidence to continually evaluate his/her practice, particularly the effects of his/her choices and actions on others (learners, families, other professionals, and the community), and adapts practice to meet the needs of each learner.

Standard #10: Leadership and Collaboration

The teacher seeks appropriate leadership roles and opportunities to take responsibility for student learning, to collaborate with learners, families, colleagues, other school professionals, and community members to ensure learner growth, and to advance the profession.

EDUC 2440. Teaching Elementary School Math

Course Description

This course offers methods, materials, and curriculum of modern mathematics in the elementary school. Observation and laboratory periods are required.

Student Learning Outcomes

1. Identify and apply a sound problem solving process to a variety of mathematical problems involving elementary arithmetic operations.
2. Describe and apply a variety of problem-solving strategies to individual problems.
3. Identify and apply instructional algorithms to basic arithmetic operations.
4. Demonstrate elementary arithmetic algorithms using manipulative that include: mats, strips, units, sets, blocks, and bars.
5. Demonstrate an understanding of elementary number theory.
6. Demonstrate the ability to work with integers.
7. Demonstrate the ability to work with rational numbers.
8. Demonstrate the ability to work with real numbers.

EDUC 2445. Science and Math

Course Description

This is part of a two-semester series (EDU 313 and EDU 423) that prepares teacher credential candidates to use best practices in science and math teaching for K-8 students.

Student Learning Outcomes

All Education classes at NNM College are competency-based, meaning that students complete assignments that align to the New Mexico State Competencies for Entry-Level Teachers. With this in mind, upon completion of the course we expect that you will:

1. Understand the nature and purpose of teaching constructivist, inquiry-based science and math in the elementary school curriculum; especially FOSS and STC lessons used in northern NM school districts.
2. Be able to understand the importance of visual literacy and how they relate to process thinking skills in science.
3. Make connections between the teaching of science and math in the classroom and why science and math should matter to people in northern New Mexico.

4. Explore best methods in teaching science and math to children of diverse ethnic, cultural and linguistic backgrounds.
5. Become knowledgeable of the current National Science Education Standards and Benchmarks (Next Generation Science Standards).
6. Become knowledgeable of the current Math Standards for New Mexico.
7. Increase your confidence as a teacher and learner of math and science.

EDUC 2460. Secondary Teaching Methods

Course Description

Required for Secondary/option for Special Education. Emphasizes methods and materials for teaching at the secondary level. Examines issues specific to the secondary teacher including adolescent motivation, communication, and appropriate classroom management. Provides analysis of secondary content standards in relation to instructional approaches, integration of technology, and alternative assessments. Students develop lesson plans using a variety of media and internet technology.

Student Learning Outcomes

1. Identify multiple learning styles and apply a variety of multi-modal and differentiation strategies at the secondary level.
2. Analyze how technology influences curricula, instructional design, assessment, and educational standards at the secondary level.
3. Use a variety of media and technologies to prepare secondary teaching materials and to deliver instruction.
4. Construct lesson plans for secondary content that address different learning styles and align to pacing
5. Guides/curricula/ standards, etc.
6. Analyze issues at the secondary level, including classroom management and strategies for addressing at-risk behaviors and school safety issues.
7. Demonstrate successful strategies for teaching secondary content, having conducted observations of effective teachers at local sites and reflected upon the effectiveness of various practices.

EDUC 2510. Introduction to Gifted Education

Course Description

Explores issues encountered in developing the abilities of gifted and talented students. Topics include the nature of exceptional abilities, student characteristics, the history of special provisions in gifted and talented education; strategies for curriculum compacting; study guide development; the use of cooperative learning groups, and lesson plan development. Effective teacher dispositions for working with the GATE student will be addressed.

Student Learning Outcomes

1. Describe the characteristics of gifted students including those who are twice exceptional.
2. Describe compacting and differentiating curriculum in skill areas and in content areas for gifted students.
3. Demonstrate the ability to assist with screening and child find in relation to gifted students.
4. Develop curriculum options for gifted students that are challenging and meaningful to the students individual learning capabilities.
5. Identify some of the most common social emotional concerns found among gifted populations.

EDUC 2515. Curriculum Models in Gifted Education

Course Description

Focuses on the development of exemplary curricula frameworks and units of study applicable to various populations of gifted/ exceptional students in the classroom. Topics studied include curriculum models; issues of acceleration; program enrichment; academic opportunities for exceptional students; characteristics of the gifted student; interdisciplinary concepts; and issues and themes of team teaching.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to....

1. Recognize and assess the effectiveness of gifted education models in the public-school setting.
2. Communicate the merits, benefits of, and rationales for the use of particular curriculum models with particular gifted students.
3. Identify students who could benefit from curriculum acceleration and enrichment.
4. Implement appropriate academic enrichment opportunities based on individual student needs and documented goals.
5. Explore and investigate opportunities for academic enrichment at various levels including service learning.
6. Develop a repertoire of resources for meeting the needs of various gifted learners based on characteristics.
7. Design hypothetical settings that balance team taught, inclusion and small group models of gifted service delivery for all learners.
8. Understand the philosophy of gifted education (Renzulli & Rice) to interpret modern research, data and
9. Understand contemporary issues in Gifted education.

EDUC 2520. Social Emotional Needs of Gifted Students

Course Description

Provides an overview of the social, affective and personal characteristics experienced by gifted and talented children. Topics include perfectionism, over-excitability, gender issues, underachievement, and special populations. Support and guidance of the gifted student and the implications for developing classroom, school, district, family and community support systems will be addressed.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to....

1. Describe theoretical and empirical foundations of social-emotional characteristics of gifted learners
2. Describe social-emotional characteristics of gifted learners
3. Describe implications of counseling and support of gifted learners
4. Describe characteristics of supportive environments with respect to the social-emotional characteristics of gifted learners in various settings (school; family/home; community)
5. Identify relevant professional resources with respect to the social-emotional characteristics of gifted learners
6. Understand the interactive relationship of cognitive, affective and social influences on gifted learners
7. Understand the need to engage school and family/community support for the social-emotional needs of gifted learners
8. Understand the potential influences of culture on the social-emotional well-being of gifted learners. SKILLS: Upon successful completion of the course, the student will be able to....
9. Apply theoretical and empirical findings about social-emotional characteristics of gifted learners with
10. Respect to counseling and other support activities
11. Apply theoretical and empirical findings about social-emotional characteristics of gifted learners to develop and maintain classroom, school and district supports of gifted learners
12. Apply theoretical and empirical findings about social-emotional characteristics of gifted learners to
13. Develop and maintain family/community support of gifted learners.

EDUC 2525. Identification & Assessment of Gifted & Twice-Exceptional Students

Course Description

Addresses the processes and procedures for the identification and assessment of gifted and twice exceptional learners including screening, referral evaluation and eligibility. Topics include considerations of specific criteria, screening and screening tools, working with students from diverse backgrounds, eligibility determination teams, IEP teams, and IEP implementation.

Student Learning Outcomes

1. Understand the issues in definitions, theories and identification of gifted and talented students, including students from diverse backgrounds
2. Recognize the learning differences, developmental milestones, and cognitive/affective characteristics of gifted and talented students, including those from diverse backgrounds and identify their related academic and social-emotional needs.
3. Understand plan and implement a range of evidenced-based strategies to assess gifted and talented students, to differentiate instruction, content, and assignments for them (including the use of higher order critical and creative thinking skills), and to nominate them for advanced programs or acceleration as needed.
4. Describe processes and procedures for the identification of gifted learners including screening, referral, evaluation, and eligibility procedures.
5. Identify appropriate instructional strategies to differentiate needs for twice exceptional and other special populations of gifted students.
6. Identify disciplinary procedures consistent with State and Federal rules and regulations to develop functional behavior assessments and appropriate behavioral intervention plans, twice exceptional, and special populations of gifted students.

EDUC 2530. IEP Implementation & Service Options for Gifted Students**Course Description**

Through the lens of the Least Restrictive Environment, will assist teachers in the development of annual goals, timelines and the procedural steps in IEP implementation. An overview of services and programs that operate efficiently will provide a model to plan, write and implement an Individualized Education Plan for gifted students based on the unique needs of each student, not solely on the student's classification. The course will also cover acceleration or enrichment program options most appropriate for the student's intellectual and academic abilities and needs. Course participants will also benefit from a field experience component by working with professionals in the field throughout the semester.

Student Learning Outcomes

1. Write an IEP with respect to the identified needs of diverse gifted learners, using an individual, collective and site-based paradigm
2. Collaborate and comply with the curricular needs of the IEP team, state mandates, and with the families of gifted students. Understand limitations, interpret multiple assessments, and develop strategies for success with gifted learners across curriculum and multiple service levels.
3. Integrate academic and career guidance experiences, transition steps, resources, and the promotion of character education. Involve IEP team in cross-curricular decisions, placement and environments conducive to the needs of gifted students
4. Observe, journal and explore field-based opportunities with diverse gifted learners. Consult with professionals in various capacities in the field of gifted instruction and case management.
5. Develop a functional and supportive understanding of the placement of gifted learners within strengths-based paradigms. Document gifted learners' needs and goals with respect to their unique differences and circumstances. Integrate stakeholder views in decision-making and collaborate effectively with professionals in a public school.

EDUC 2535. Paradigms, Systems & Models of Gifted Education**Course Description**

Course participants will examine and apply research-based educational models and instructional strategies currently advocated for use with gifted learners. Course participants should develop an understanding of both theoretical and practical implications of the methods and strategies and learn how appropriate instructional approaches can contribute to developing learning environments that promote academic challenge and learner independence. This course will provide

foundational information on proven models and strategies to course participants equipping them to structure and refine gifted programs based on solid, proven instructional models and procedures.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to:

KNOW:

1. Models of historical significance to the field of gifted education and the key contributors associated with them.
2. Factors to look for in a quality model for the gifted.

UNDERSTAND:

3. The theoretical and practical implications of a wide variety of models for gifted learners.
4. No one program or curricular model is sufficient to meet the needs of every gifted student.
5. The effectiveness of a particular model depends on a number of factors, such as the specific population of the school, available resources, identification procedures, etc.

BE ABLE TO:

6. Identify key models commonly associated with gifted education.
7. Apply principles from a variety of models in a classroom environment.
8. Modify models to create challenging and engaging learning experiences for gifted learners.
9. Identify criteria by which to evaluate the appropriateness of models for gifted learners.
10. Analyze and evaluate models according to criteria that reflect an understanding of appropriate instruction for gifted learners.

EDUC 2540. Instructional Methods in Gifted Education

Course Description

Focuses on various models and strategies for academic enrichment options; delivery models proven effective through research and data to service higher and more advanced learning needs, System wide decision-making regarding academic services will be addressed. Designed as an overview of program options and school or district wide instructional strategies. Includes a minimum 20 clock hour field experience to provide the student with opportunities to engage with the school system administrative staff responsible for gifted education programs.

Student Learning Outcomes

1. Articulate and defend various instructional models for use with a student or a group of students who benefit from enrichment.
2. Articulate and defend various classroom-applicable models to use with a student or group of students who benefit from acceleration and how that effects education programmatically and students socially.
3. Recognize and assess the effectiveness of curriculum with particular populations of gifted learners.
4. Explore opportunities for academic enrichment at various levels including service-learning.
5. Develop a repertoire of resources for the inclusion, instruction and assessment and progression of students with gifted/exceptional learning styles and needs.
6. Understand and articulate the philosophy of gifted education and its application in the context of students, families, school programs and the greater community.

EDUC 2545. Exceptionalities and Placement

Course Description

Focuses on the meanings and concepts of disabilities that affect learning. Students gain an understanding of each of the exceptionalities and the developmental stages involved in motor, language, social-emotional, sensory and cognitive domains. Students learn components of identification, assessment, educational planning and implementation of instruction for students with disabilities within the context of public schools. This course includes a structured 10-hour field component.

Student Learning Outcomes

1. Identify each of the exceptionalities and the associated developmental stages. {Instructional Planning & Implementation 2Kc; Diversity 6Kb; Inclusion 7Ka, 7Kc, 7Ke)
2. Recognize the various perspective and roles of parents, family, students and other educators in serving students with disabilities. (Professionalism 1Se, 1Sf; Instructional Planning & Implementation 2Kc; Diversity 6Kb, 6Sd; Inclusion 7Ka, 7Kc)
3. Reflect on, analyze and evaluate the least restrictive environment as it relates to Individual students with disabilities. (Professionalism 1 Kb; Diversity 6Kb; Inclusion 7Ka, 7Kb, 7Ke)
4. Investigate the media portrayal of citizens with disabilities and relate findings with current research and professional literature. (Diversity 6Kb; Inclusion 7Kb)

EDUC 2550. Evaluation and IEP

Course Description

The screening evaluation, eligibility and re-evaluation process for students with special needs. There is special emphasis on the Process of Special Education in the public schools, including referral, assessment, determining eligibility, instructional interventions and evaluation of student progress. Students learn about developing Individual Education Plans, writing goals and objectives, and the legal mandates for serving students with disabilities. A primary focus of the course is considering special education in the context of inclusive schooling. This course includes a structured 10-hour field component.

Student Learning Outcomes

1. Identify screening, referral, evaluation, re-evaluation, and eligibility procedures and apply this knowledge to enhance learning for all students. (Assessment 4Sb; Diversity 6Kb; Inclusion 7Ka, 7Kb, 7Kc, 7Kd, 7Ke)
2. Develop and utilize various types of student assessments including informal and non-standardized tests, norm referenced tests, and criterion-referenced tests. (Assessment 4Ka, 4Sb, 4Sc; Diversity 6Kb)
3. Design and evaluate successful timelines and procedures for IEP implementation. (Professionalism 1Sd; Diversity 6Kb; Inclusion 7Ka, 7Kb, 7Sf, 7Sg)
4. Articulate the importance of collaboration between the special education teacher and the classroom teacher. (Inclusion 7Kc)

EDUC 2560. Children with Special Needs

Course Description

Not Available

Student Learning Outcomes

Not Available

EDUC 2565. Reading for Special Learners

Course Description

This course provides an understanding of concepts and procedures for teaching reading to students with special needs. Emphasis is placed on formal and informal reading assessments; effective reading practices, research-based reading programs, direct instruction, and differentiated teaching applications. Components of the class include oral language, decoding strategies, phonemic awareness, vocabulary acquisition, fluency, comprehension skills, and writing/literacy skills. The inclusion of students with special needs into general education reading curriculum will also be addressed with a focus on instruction and various forms of assessment.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to...

1. Diagnosing and analyzing reading difficulties.
2. Thorough understanding of the reading (literacy) process.
3. Implement and evaluate research-based reading programs.

4. Understand the components of a balanced literacy approach, including multiple strategies to teach writing across the curriculum.
5. Incorporate inclusion strategies for reading instruction.
6. Understand formal and informal reading assessments.

EDUC 2610. Intercultural Communication for Educators

Course Description

In this course, participants explore the role culture plays in shaping one's worldview and in dictating how one interacts with others. By examining different cultures, participants develop an articulate understanding of the four facets of culture (Knowledge, Attitude, Skills and Awareness) and how they may support or disrupt one's learning experience. Participants also identify how diversity and multiculturalism have shaped the evolution of the state of New Mexico. Through the exploration of cultural traits, participants develop greater cultural sensitivity and strong intercultural skills. Participants learn how to create a classroom environment that supports intercultural communication, celebrates diversity, and teaches cultural sensitivity.

Student Learning Outcomes

1. Understand how culture influences language, learning, and one's world view.
2. Understand one's own culture and one's own intercultural biases.
3. Compare and contrast different cultures based on the K.A.S.A. of each culture.
4. Identify factors that help/hinder intercultural communication.
5. Articulate the cultural influences that have affected New Mexico from past to present.
6. Summarize the legal and historical evolution (past- present) of the education of culturally and linguistically diverse students in New Mexico and in the United States.
7. Recognize the value in diversity in the classroom and community.
8. Develop strategies and techniques to teach intercultural communication skills.
9. Create a classroom environment that is accepting and celebratory of cultural differences.
10. Demonstrate knowledge of how to use students, their families, and the community to promote intercultural understanding in and outside of school

EDUC 2615. Introduction to Bilingual Education

Course Description

A historical overview of bilingual education with a focus on current trends and practices. Special attention is given to programs in New Mexico. Designed for teachers and other education professionals.

Student Learning Outcomes

1. Understand the competencies for bilingual teachers as required by the New Mexico State Board of Education.
2. Understand and appreciate "cultural diversity" and its ramifications.
3. Have the instructional strategies to incorporate multi-cultural educational approaches.
4. Have knowledge of the monumental (art, literature, architecture, history, civilization, and literary history) and fundamental (food, folklore, customs, and traditions) aspects of Hispanic culture.
5. Demonstrate knowledge of the basic nature of language, language acquisition, language variation, and language change.

EDUC 2620. Language Learning and Teaching

Course Description

In this course, participants explore how first and second languages are learned. Through a linguistic lens, participants compare first and second language acquisition traits. In doing so, participants uncover the fundamental principles of language learning, the factors that influence language acquisition, and practical classroom applications of this knowledge. Participants study the evolution of language teaching methodologies, identify effective language teaching strategies and

techniques, and determine how to use them in their specific contexts. Additionally, participants direct this knowledge to understand the population of students served in the state of New Mexico and to create a classroom that supports the success of the English Language Learner (ELL).

Student Learning Outcomes

1. Comprehend general language policy and the politics of language teaching and learning,
2. Summarize the stages of first and second language literacy and their attributes,
3. Articulate the similarities and differences in first and second language acquisition,
4. Summarize the evolution of second language acquisition theories and methods,
5. Demonstrate the knowledge of current trends in second language acquisition,
6. Distinguish characteristics of current models of instruction including bilingual, dual language, and immersion programs,
7. Communicate the characteristics New Mexico bilingual models and their ESL components,
8. Employ practical, communicative-based strategies and techniques in the K-12 classroom to augment language acquisition,
9. Identify cognitive, affective, linguistic and socio-factors that help and hinder language acquisition,
10. Apply this knowledge base to understand and support all students in New Mexico Public Schools,
11. Create a classroom environment that supports all language learners

EDUC 2625. Teaching English to Speakers of Other Languages

Course Description

In this course, participants focus on the practical classroom applications of second language acquisition theories. Participants explore how each of the four skills (speaking, listening, reading, and writing) develops within second language learners. In addition to examining how receptive and productive skills should be taught, participants acquire a variety of effective teaching strategies they can use in their classrooms. Emphasis is placed on strategies and techniques teachers can use to support every English Language Learner (ELL) in building fluency and accuracy 204 in each of the four skills. Furthermore, participants study English language syntax and acquire strategies to teach the form, meaning, and use of English language grammar. One common thread throughout the course is an attention to strategies that help promote literacy in all of the skills

Student Learning Outcomes

1. Understand how culture influences language, learning, and one's world view.
2. Understand one's own culture and one's own intercultural biases.
3. Compare and contrast different cultures based on the K.A.S.A. of each culture.
4. Identify factors that help/hinder intercultural communication.
5. Articulate the cultural influences that have affected New Mexico from past to present.
6. Summarize the legal and historical evolution (past- present) of the education of culturally and linguistically diverse students in New Mexico and in the United States.
7. Recognize the value in diversity in the classroom and community.
8. Develop strategies and techniques to teach intercultural communication skills.
9. Create a classroom environment that is accepting and celebratory of cultural differences.
10. Demonstrate knowledge of how to use students, their families, and the community to promote intercultural understanding in and outside of school.

EDUC 2630. Bilingual Methods

Course Description

This course covers the applicability of numerous theories of first and second language acquisition, including the various methods, approaches, techniques, and strategies for teaching. Emphasis is given to utilizing teaching methods that are

appropriate to diverse populations of students in diverse classroom settings, sheltered instruction techniques and differentiated instructional practices, and current vocabulary acquisition theories and their practical classroom applications.

Student Learning Outcomes

1. Compare, analyze, and apply methods appropriate to various language groups, distinct learning styles, and different developmental levels for teaching English as a second language
2. Define theories of first and second language acquisition
3. Identify and apply a variety of approaches, methods, and techniques for teaching listening, speaking, reading, and writing in two or more languages in the development of literacy and all other content areas
4. Involve families in teaching, curriculum development, classroom management and materials development and discuss how school environment is impacted by family and community cultures
5. Develop strategies for helping students acquire appropriate academic language as well as connections between language and content
6. Compare, analyze, and apply methods appropriate to various language groups, distinct learning styles, and different developmental levels for teaching English as a second language.

EDUC 2650. Connecting Content and Language

Course Description

In this course, participants focus on the theories and practical strategies used to encourage second language development in the inclusive, content-area classroom. Special attention is paid to sheltered instructional techniques and differentiating instructional practices. Participants learn how to modify content, context, and procedures to meet the individual needs of non-native English speakers in the English-speaking classroom. Participants explore current vocabulary acquisition theories along with their practical classroom applications. Participants acquire a variety of vocabulary teaching strategies and techniques.

Student Learning Outcomes

1. Articulate the factors involved in creating a safe, inclusive environment for all students
2. Understand how sheltered instructional techniques can set all English language learners up for success
3. Identify appropriate strategies to help students connect with the language and content of the inclusive classroom
4. Acquire effective strategies to support the learning and literacy of second language learners in the classroom.
5. Adapt content, context, and procedures to meet all levels of learners
6. Explain factors that help/hinder vocabulary acquisition
7. Develop strategies for helping students acquire academic vocabulary.

EDUC 2710. Pre-Teacher Preparation

Course Description

Assists students in developing the necessary competencies needed for acceptance to the Teacher Education Program. Course content includes basic skill development, test taking skills, and completion of teacher preparation packet.

Student Learning Outcomes

1. Investigate the process and requirements of the Teacher Education Program
2. Read critically about teacher's experiences and write brief reactions
3. Discuss philosophies of education and draft a written personal philosophy of education
4. Discuss the nature of education for students with diverse languages, cultures and abilities
5. Draft personal position statements concerning education for students with disabilities and diverse cultures

EDUC 2994. Professional Development Dossier

Course Description

This course is designed to provide guidelines and direction for local elementary and secondary teachers in the creation of their professional development dossier. The dossier process is required for teachers to advance in licensure levels as part of the NM Public Education Department (PED) three-tier licensure system. This course provides the guidelines and background information necessary for the successful completion of the Professional Development Dossier PDD for the Strands A-E.

Student Learning Outcomes

1. Define the Professional Development Dossier (PDD).
2. Determine similarities and differences between prior and new evaluation/licensure systems.
3. Determine guidelines for licensure advancement.
4. Determine the Public Education Department's requirements for a PDD.
5. Determine individual components for the PDD.
6. Have access to the required forms for the PDD.
7. Determine resources that a teacher can access for direction related to PDD.
8. Effectively use PDD criteria for success.
9. Effectively use peer reviewers and mentors to evaluate the final product.
10. Acquire skills and strategies to lead a teacher/administrator conference related to the teacher's PDD and self-evaluation.
11. Know the procedures to submit the PDD for evaluation.

Educational Leadership (ELAD)

ELAD 2340. Multicultural Leadership in Education**Course Description**

Introduction to the social and cultural constructions of gender, class, and race. Students will critically apply theoretical constructs to everyday life and discuss the intersection of gender and race with class inequality in national and global contexts. Using a social justice framework, readings, and assignments integrate a variety of racial/ethnic groups while considering the effects of historically uneven resource distribution, unearned privilege, forms of domination and subordination, immigration status, and cultural representation and ideologies. Participants will learn how to apply the change theories and concepts introduced in the course to practice through course readings, online discussions with the instructor and colleagues, group work, active examination of daily practice in schools, and personal reflection.

Student Learning Outcomes

1. Develop awareness of their own social identities.
2. Students will recognize differences among various communities, perspectives, and world-views.
3. Describe how privilege and biases impact our communities and systems.
4. Create meaningful peer-to-peer relationships.
5. Understand the impact of their actions on community members.
6. Identify their leadership skills to shape social change on and off campus.
7. Act on opportunities to promote social change.
8. Students will use academic resources including advising, computers, printing, library, and space.

ELAD 2810. Leadership and Change in Education**Course Description**

This course will introduce students to the challenges and key strategies in initiating, implementing, and sustaining educational change and reform. In the first part of the course, participants will learn about the challenges of educational change in the United States and the role that they as school leaders play in facilitating change and reform. The course continues with an examination of how culture, micro-politics, and power structures support or impede national and global change initiatives. The last part of the course offers suggestions for change agents including community organizing, culture building, and embracing sustainable leadership practices. Participants will learn how to apply

the change theories and concepts introduced in the course to practice through course readings, online discussions with the instructor and colleagues, group work, active examination of daily practice in schools, and personal reflection.

Student Learning Outcomes

1. Students will gain insight into how the structure of schools in the United States impacts the success or failure of educational change and reform.
2. Students will understand the role of the principal and teachers in initiating, implementing or resisting educational change efforts.
3. Students will be aware of the role of culture, politics, and power structures in implementing and sustaining educational change and reform.
4. Students will learn some of the key strategies of the change process in educational institutions and systems.
5. Students will understand, analyze, and apply the various theories and concepts of educational change introduced in this course and know how to apply knowledge of change processes to their own work and contexts.

ELAD 2996. Special Topics in Educational Leadership

Change in **Course Number** to 2996

Course Description:

Special topics course in education for undergraduate students. Course will be identified by a subtitle.

Student Learning Outcomes

1. Students will be able to engage in systems thinking which aids in seeing how individual situations are shaped by a broader contexts
2. Students will be able to understand how to apply theoretical frameworks for understanding social problems.
3. Students will be able to help develop leadership capacity in others.
4. Students will be able to gain an understanding of cultural competence, which recognizes that diverse perspectives strengthen the dialogue and approaches to solving social problems.

Educational Technology (EDLT)

EDLT 2110. Integrating Technology with Teaching

Course Description

Considers impact of technology on communication and knowledge development; engages students in the design of technology-integrated lessons with a constructivist approach.

Student Learning Outcomes

1. Demonstrate a sound understanding of technology operations and concepts.
2. Plan and design effective learning environments and experiences supported by technology.
3. Implement curriculum plans that include methods and strategies for applying technology to maximize learning.
4. Apply technology to facilitate a variety of effective assessment and evaluation strategies.
5. Use technology to enhance their productivity and professional practice.
6. Better understand the social, ethical, legal, and human issues surrounding the use of technology in PreK-12 schools and apply that knowledge into future practice.

Electrical (ELTR)

ELTR 1015. Electrical Math I

Course Description

Applies basic arithmetic functions, electrical formulas, calculations of material and circuit load requirements, rules for series, parallel and combination circuits and mechanical work and power.

Student Learning Outcomes

1. Demonstrate the ability to calculate complex mathematical formulas such as algebraic formulas and units of measure, whole numbers, common and decimal fraction operations, Ohm's Law for series and parallel circuits, and mathematics involving Kirchoff's Law.
2. Select and solve complex mathematical formulas commonly used in the electrical industry such as mathematics involving power formulas, calculations for solving combination series-parallel circuits, Pythagorean Theorem geometry, and trigonometry.
3. Select and solve complex mathematical formulas commonly used in the electrical industry such as calculations of phase angles, calculations of period, frequency, and wavelength, calculation of RMS, peak, and instantaneous voltage, and calculations electrical values such as impedance, voltage, current in series-parallel resistive, capacitive, and inductive circuits.
4. Apply basic arithmetic functions, electrical formulas, calculations of material and circuit load requirements, rules for series, parallel and combination circuits and mechanical work and power.

ELTR 1110. Basic Electricity and Controls

Course Description

The course presents the basic principles of electricity, measurements, safety, wiring procedures, schematics, components of basic circuits, and principles and practices in electricity.

Student Learning Outcomes

1. Use Ohm's Law to solve circuit problems and calculate circuit loads.
2. Identify types of electrical loads (capacitive, inductive and resistive).
3. Explain environmental safety practices as applied to electricity.
4. Demonstrate the use of lockout/tagout equipment.
5. Define amps, volts, ohms and watts and demonstrate safe use of tools for the basic types of electrical measurement.
6. Follow electrical schematics to determine sequence of operation and troubleshooting.

ELTR 1113. Electrical Repairs

Course Description

This course outlines for students the types of problems that occur in electrical machinery and systems. The course covers trouble-shooting and diagnosis, preventative maintenance, and how to make necessary repairs.

Student Learning Outcomes

1. Demonstrate how to make an electrical repair.
2. Explain how to diagnose a typical electrical occurrence in need of repair.
3. Describe some of the most common breakdowns in electrical equipment.

ELTR 1115. National Electric Code

Course Description

Provides students with a basic understanding of the National Electrical Codes and how they apply to residential, commercial, and renewable energy systems such as photovoltaic electrical generating systems. How the NEC Codes apply to a Industrial Setting

Student Learning Outcomes

1. Be able to navigate and interpret the various Sections and Articles found within the National Electric Code.
2. Demonstrate the NEC in the system design of the code.
3. Demonstrate how to apply the NEC Code to Solar Installations.
4. Demonstrate how to load wiring calculations to comply with NEC regulations for both Commercial and Residential.

5. Apply knowledge of the NEC Codes to commercial and industrial applications

ELTR 1120. Electrical Theory I

Course Description

Covers the basic concepts of DC and AC theory with emphasis on electron theory, units of electrical measurement, NEC terminology, and selection of branch circuit conductors.

Upon successful completion of this course the student will define the following concepts and demonstrate her/his ability to apply them to the electrical trade by means of written examinations and assignments, with a minimum accuracy of 71%.

Student Learning Outcomes

1. Describe the components of an electrical circuit, electron theory, structure of an atom, properties of conductors, semiconductors, and insulators, sources of electricity, and the conversion of electrical energy.
2. Demonstrate and identify the characteristics of DC circuits, units of electrical measurement, characteristics of current, resistance, and voltage in a circuit, characteristics of a combination circuit, electrical components.
3. Apply the National Electrical Code, definitions and division of articles in the NEC.
4. Interpret NEC applications to residential wiring and the NEC enforcement on electrical codes, selection and calculation of conductor maximum ampacity including correction for ambient temperature of Branch circuit conductors, production of a sinusoidal wave.
5. Know key differences between AC and DC current, applications and theory of electrical components such as inductors, capacitors and transformers.

ELTR 1125. Electrical AC/DC Laboratory

Course Description

Emphasis is placed on safety. Covers electrical circuitry, meters, power sources, conductors, insulators, reactive circuits and application of the National Electrical Code.

Student Learning Outcomes

1. Demonstrate and describe the functions of safety as it applies to the lab procedures and occupational safety, electrical symbols, series-parallel circuits and testing for electrical units of measure such as voltage, current, resistance using analog and digital voltmeters, ohmmeters and ammeters, conductors and insulators, magnetism and electromagnetism, trades tools and electrical materials used in the electrical industry.
2. Design and wire series resistive, parallel resistive, and series-parallel combination circuits on the laboratory circuit boards using correct materials.
3. Demonstrate on the laboratory analog or digital multimeters the ability to measure resistance, current, and voltage on selected DC resistive circuits.
4. Demonstrate on their personally owned digital multimeter the ability to measure resistance, current, and voltage on selected DC resistive circuits.

ELTR 1130. Introduction to Electrical Power Systems

Course Description

An overview of electrical power systems, equipment, safety practices, first aid and CPR. Students must be accepted into the electrical lineworker program before enrolling in this course. Restricted to: OEET majors.

Student Learning Outcomes

1. List and discuss the major components of the electrical power grid and their operating functions.
2. Work as a team member with strong work ethics and a commitment to quality.
3. Adhere to OSHA & ANSI working safety standards.

ELTR 1140. Basic Motor Controls

Course Description

Developing schematics and wiring simple manual and electromechanical control devices.

Student Learning Outcomes

1. Describe the results of problems solving either orally or in writing. (DMP 3)
2. Memorize and recall facts, procedures, and vocabulary pertaining to a motor and its characteristics. (CLO 1)
3. Solve application problems using the appropriate design approach as a tool.
4. Express symbols and schematics designs as quantities in meaningful circuit analysis.
5. Evaluate current flow from a variety of electrical systems, utilizing rules for ladder diagrams.
6. Estimate the circuit response; compare estimated and actual responses for consistency.
7. Simplify, solve, evaluate and design various circuits and utilize needed learned interpretations.
8. Describe the results of problems solving either orally or in writing.
9. Explain sequential logic processes.
10. Simplify, solve, evaluate and graph various types of AC/DC electrical motor design circuits.
11. Simplify, solve, evaluate and programs various electrical installations.
12. Describe the results of problems solving either orally or in writing.
13. Explain sequential analysis processes as they relate to electrical systems and installation of motors.
14. Integrate various strategies and techniques from different areas of motor controls to application problems.
15. Express ladder diagrams in meaningful design interpretation.

ELTR 1145 AC Circ Motors Gen

Course Description

Covers combination circuit analysis, RLC circuitry, DC/AC motors, generators, solid-state components, wiring methods for single pole and three-way switches and application of the National Electrical Code. Stresses safety.

Student Learning Outcomes

1. Demonstrate and describe the functions of magnetism and electromagnetism, sinusoidal waveforms as it relates to AC voltage, generation of AC waveforms, conductors and insulators, series and parallel circuits, transformers and transformer ratios, Inductance and inductive reactance in electrical circuits, capacitance and capacitive reactance in electrical circuits, RLC electrical circuits, Trade tools and electrical materials used in the electrical industry.
2. Demonstrate the ability to construct and measure AC series and parallel resistive circuits, combination series-parallel AC circuits, and AC inductive-resistive circuits using the standard lab kits and digital or analog multimeters.
3. Design and construct electrical circuits such as single-pole switch control of lighting, single-pole control of receptacles, single-pole control of split-wired receptacles, single-pole control of receptacle/lighting combinations, three-way switch control of lighting and receptacles, and four-way switch control for lighting, in the residential laboratory using correct trade materials.

ELTR 1146. Electrical Sys & Motor Ctrls

Course Description

Basic Controls: basic principles of motor control – lockout/tagout procedure – control devices – manual starters – contactors and control relays – circuit layout and specifications – basic control circuits – Jogging control circuits – reduced ac voltage starters – time relay circuits – hands on control trainer

Student Learning Outcomes

1. Read and understand electrical control diagrams.
2. Understand and design common types of motor controls.
3. Install motor control circuits.

ELTR 1147. Electrical System Fundamentals

Course Description

AC and DC Electrical Systems: a/c circuits – a/c capacitors – d/c and a/c inductors – transformers – ac relays and contactors – electrical distribution – troubleshooting methods – hands on a/c d/c trainer – Enclosures and Conduit Systems : installing metal struts – installing enclosures and boxes – installing flex metal and liquidtight nonmetallic conduit – conduit bending – installing electrical metallic tubing – cutting reaming – threading and installing ridge metal conduit – feed conductor into conduit and using a pulling point – hands on industrial trainer.

Student Learning Outcomes

1. Basic characteristics of electricity and electric circuits.
2. How various generation types are used to serve load curves.
3. Components of the transmission system and the way in which the system is designed and operated.
4. Components of the distribution system and the way in which the system is designed and delivers power.
5. Components that link the distribution system to the member, as well as various options for configuring services.
6. Types of meters and how each is used to collect data.

ELTR 1148. Motors and Controls

Course Description

This course introduces common types of electric motors and includes motor theory, magnetism and motor rotation, motor starting components, and protective devices. Heat dissipation, motor slippage, wiring, speeds, and capacitors in motor circuits are included.

Student Learning Outcomes

1. Demonstrate safe practices and procedures.
2. Identify motors used in commercial and residential applications.
3. Identify and describe methods for controlling motor speeds.
4. Appropriately select and install motors.
5. Demonstrate methods of starting motors utilized in industrial applications.
6. Identify various types of motor protective devices used in industry.
7. Analyze ladder diagrams for motor circuits.
8. Diagnose and troubleshoot motors.
9. Identify various types of three-phase motor designs and applications.
10. Demonstrate methods for reversing AC and DC motors.
11. Explain the methods for accelerating and braking motors.
12. Demonstrate ability to read and interpret technical documents.
13. Demonstrate ability to use various types of software applicable to course.

ELTR 1150. Applied Industrial Electricity I

Course Description

Electrical safety, AC and DC circuits, use and care of common measuring instrumentation, schematic and wiring diagrams, electromagnetism, National Electric Code branch circuits.

Student Learning Outcomes

1. Describe applications of preventive and corrective maintenance on automated industrial production machines.
2. Explain troubleshooting procedures using systems block.
3. Define the various types of electromechanical systems and equipment and how they operate.

ELTR 1155. Applied Industrial Electricity II

Course Description

Relationship between motor power, speed, and torque, basic application of relay circuits, motor control circuits, inductance and capacitance factors, transformers, solid state devices circuits and applications.

Student Learning Outcomes

1. Demonstrate the use of labeling and color coding.
2. Explain the need and purpose of interpreting electrical prints.
3. Define the purpose of wiring control for motor control circuits.

ELTR 1160. Electrical Lineworker Lab I

Course Description

Climbing and work on utility poles using ropes and rigging, pole setting and an introduction to transmission and distribution line construction. Maintenance and troubleshooting to include the use of hot sticks. May be repeated up to 6 credits.

Corequisite(s): OEET 110, OEET 130. Students must be accepted into the electrical lineworker program before enrolling in this course. Restricted to: OEET majors. Restricted to Community Colleges campuses only.

Student Learning Outcomes

1. List and discuss the major components of the electrical power grid and their operating functions.
2. Work as a team member with strong work ethics and a commitment to quality.
3. Adhere to OSHA & ANSI working safety standards.

ELTR 1165. Electrical Lineworker II

Course Description

Practice in the installation of electrical power lines including transformers, voltage regulators, and surge arrestors. Also advanced hot sticking procedures, troubleshooting, underground systems procedures, and pole-top rescue. May be repeated up to 6 credits. Corequisite(s): OEET 140. Students must be accepted into the electrical lineworker program before enrolling in this course. Restricted to: OEET majors. Restricted to Community Colleges campuses only.

Student Learning Outcomes

1. Professionally communicate in oral and written forms. Work effectively in a team-based environment.
2. Accurately perform electrical related calculations and interpret results for the purpose of repair or installation of electrical power systems.
3. Demonstrate the use of current industry techniques and equipment to diagnose electrical power systems and perform appropriate repairs.
4. Demonstrate the use of current industry techniques and equipment to perform the service and maintenance of electrical power and systems.
5. Demonstrate the use of current industry techniques and equipment in the installation of electrical power lines and associated equipment.
6. Demonstrate understanding of basic electrical principals as they relate to the installation and maintenance of electrical power systems.
7. Determine the appropriate ethical action that should occur in a given circumstance.
8. Demonstrate the ability to perform lineworker duties in a safe manner.

ELTR 1210. Electrical Theory II

Course Description

Covers the application of the National Electrical Code, local codes and regulations for installation of branch circuits, services, feeders, temporary services and associated materials and equipment for residential and light commercial applications.

Student Learning Outcomes

1. Demonstrate knowledge of safety and lockout procedures.
2. Define trade terms and conductor identification and identify electrical equipment, tools and conductors.
3. Determine and calculate branch circuits, standard calculations, baseboard heaters for a single-family dwellings, boxfill, conduit fill, range conductor sizes, and ampacity adjustments.
4. Determine 100A overhead service requirements, find motor sizes and protection using the NEC, find code articles using code searches, calculate conduit bending problems.
5. Interpret state and national electrical codes.
6. Determine overhead and underground service requirements as required by state and national electrical codes.
7. Design and illustrate electrical drawings and diagrams.

ELTR 1215. Blueprint Reading I

Course Description

Provides instruction in reading and interpreting blueprints and specifications. Emphasizes terminology, symbols, notations, scaling, dimensioning and basic blueprint drawing techniques.

Student Learning Outcomes

1. Describe and explain how electrical wiring is conveyed to the electrician through the use of electrical symbols and notations on electrical drawings.
2. Draw electrical circuits on a residential floor plan.
3. Evaluate and complete an electrical material take-off for a residence.
4. Identify and illustrate electrical symbols used in residential and commercial construction.
5. Calculate square footage and locate position of electrical devices using a tape measure and an architect's scale.

ELTR 1220. Introduction to Wiring Lab

Course Description

Covers safety, tools, materials, single pole switches, receptacles, overcurrent protection, three- and four-way switches, pilot switches, door chimes, dryer and range receptacles and swamp coolers. Analyze Blueprint applications as it applies to electrical installations. NEC requirements for light commercial applications.

Student Learning Outcomes

1. Demonstrate and describe jobsite safety procedures.
2. Demonstrate the ability to install electrical circuits such as single-pole, three and four way lighting circuits, heating and cooling system circuits, door chime circuits, and residential and light commercial branch-circuits.
3. Demonstrate and/or describe the function of Overcurrent Protection in an electrical system.
4. Demonstrate the ability to analyze blueprint applications as it applies to electrical installations.
5. Demonstrate the ability to analyze the National Electrical Code as it applies to electrical installations.

ELTR 1230. Residential Wiring II

Course Description

Introduction to electrical raceways and fittings; electrical conductors and cables; basic electrical construction drawings, residential electrical services, and electrical test equipment.

Student Learning Outcomes

1. Demonstrate Hand Bending.

2. Demonstrate Raceway and fittings.
3. Identify Conductors and Cables.
4. Interpret Basic Electrical Construction Drawings.
5. Define Residential Electrical Services.
6. Demonstrate Electrical Test Equipment.

ELTR 1240. Industrial Wiring

Course Description

This course provides a systematic and realistic means of learning how to install and wire industrial electrical equipment in accordance with National Electric Code (NEC).

Student Learning Outcomes

1. Identify and describe various cable routing methods.
2. Identify and describe various conduit and enclosure types/ratings/classifications per National Electric Code (NEC).
3. Identify control and power wiring for motor controls.

ELTR 1891. Electrical Apprenticeship I

Course Description

Apprenticeship responsibilities and benefits as well as first aid and CPR will be covered. Hand tools, electrical theory, and the regulations imposed by national codes and OSHA. Students will apply theory taught in their jobs. Prerequisite: consent of instructor.

Student Learning Outcomes

Varies

ELTR 1892. Apprenticeship II

Course Description

OHM s law circuit sizing and service panel sizing will be covered in detail. Other topics include low voltage systems, heating and air conditioning circuits, alarm systems and smoke detectors.

Student Learning Outcomes

Varies

ELTR 1893. Electrical Apprenticeship III

Course Description

Various electrical measuring devices will be covered in detail. Inductance, transformers, capacitance, and simple motors will be studied.

Student Learning Outcomes

Varies

ELTR 1894. Electrical Apprenticeship IV

Course Description

Theory and application of three-phase transformers and autotransformers. Electrical distribution using switchboards, panelboards, and circuit breakers.

Student Learning Outcomes

Varies

ELTR 1995. Electrical Co-Op Experience**Course Description**

Varies

Student Learning Outcomes

Varies

ELTR 1996. Topics in Electricity**Course Description**

Varies

Student Learning Outcomes

Varies

ELTR 2020. Industrial Motor Control Laboratory**Course Description**

Covers safety, electromechanical relay-type motor control, momentary push button switches, limit switches, proximity switches, pneumatic timers, forward/reverse starters, three-phase motors and National Electrical Code requirements.

Student Learning Outcomes

1. Demonstrate proper safety procedures while working in the lab including operating proper lockout/tagout procedures.
2. Design and install various electro-mechanical motor controls circuits including basic two wire control circuits, basic three wire control circuit, jog circuits, sequential control circuits, forward and reversing circuits, braking and plugging circuit, time delay control circuits, and phase protection circuits.
3. Demonstrate the ability to correctly make the proper wiring connections for 230V/460V, three-phase wye motors, and 230V/460V, three-phase delta motors.
4. Demonstrate the ability to design and troubleshoot a motor control circuit using motor control software on the computer.

ELTR 2110. Electrical Theory III**Course Description**

Introduces commercial/industrial aspects of electrical safety, tools, materials, power distribution systems, services, hazardous locations and blueprint reading in accordance with the National Electrical Code.

Student Learning Outcomes

1. Demonstrate the basic safety rules and locout/tagout when working on electrical systems.
2. Demonstrate the ability to use various formulas used in conduit bending and select proper raceway size dependent up on the conductor sizes and number.
3. Demonstrate the ability to read and interpret electrical drawings.
4. Demonstrate the ability to calculate branch and feeder circuits conductor sizes and over current protection and boxfill on junction boxes, according to the National Electrical Code and State of New Mexico electrical code.
5. Demonstrate the ability to correctly size and draw connections for single phase and three phase transformers.
6. Identify various types of hazardous or classified locations.
7. Explain grounding requirements for electrical systems.

ELTR 2111C. Programmable Logic Controllers and Applications with Laboratory**Course Description**

This course introduces the principles of programmable logic controllers (PLCs), logical operations, and applications. Students develop an understanding of data types, logical operations, and the application of industrial process control through a combination of theoretical concepts, problem-solving exercises, and hands-on laboratory activities. Emphasis is placed on applying fundamental control logic principles to practical and industrially relevant examples. Laboratory exercises using Festo training systems reinforce safe work practices, control techniques, and troubleshooting skills commonly used in industrial and technical environments.

1. Demonstrate knowledge of integrated I/O and basic logic operations
2. Demonstrate knowledge of timers, counters, and comparison instructions
3. Demonstrate knowledge of logical operations applied to modern industrial process control

ELTR 2115. Electrical Motor Control Theory

Course Description

Introduces students to the symbology and method of interpreting and drawing electromechanical motor control circuitry. NEMA standards are studied in detail.

Student Learning Outcomes

1. List safety precautions used when working on an electrical circuit.
2. Identify and describe applications for devices and equipment used in motor control circuits.
3. Explain the principles of operation of manual motor starters.
4. Read, draw, and interpret line diagrams for motor control circuits such as basic two wire control circuits, basic three wire control circuits, jog circuits, sequential control circuits, timing circuits, forward and reversing circuits, braking and plugging circuits.
5. Select proper protection for motors and motor control circuits in accordance with the National Electrical Code.
6. Identify connections for various single and three phase motors.

ELTR 2120. Electrical Power Systems II

Course Description

Theory of power generation and distribution with emphasis on three phase systems to include transformers, voltage regulators, surge arrestors. Includes troubleshooting. May be repeated up to 3 credits. Corequisite(s): OEET 141. Students must be accepted into the electrical lineworker program before enrolling in this course. Restricted to: OEET majors. Restricted to Community Colleges campuses only.

Student Learning Outcomes

1. Professionally communicate in oral and written forms.
2. Work effectively in a team-based environment.
3. Accurately perform electrical related calculations and interpret results for the purpose of repair or installation of electrical power systems.
4. Demonstrate the use of current industry techniques and equipment to diagnose electrical power systems and perform appropriate repairs.
5. Demonstrate the use of current industry techniques and equipment to perform the service and maintenance of electrical power and systems.
6. Demonstrate the use of current industry techniques and equipment in the installation of electrical power lines and associated equipment.
7. Demonstrate understanding of basic electrical principals as they relate to the installation and maintenance of electrical power systems.
8. Determine the appropriate ethical action that should occur in a given circumstance.

9. Demonstrate the ability to perform lineworker duties in a safe manner.

ELTR 2130. Industrial Power Distribution

Course Description

Covers safety, use of mechanical and hydraulic benders, use of power threaders, knock-out punches, hammer drills and power actuated fasteners, cable installation, wire pulling and the application of the NEC.

Student Learning Outcomes

1. Demonstrate the ability to perform typical operations with hand tools and power tools when performing electrical installations such as cutting and threading conduit using power tools, using hand, ratchet, and hydraulic knockout punches when installing electrical conduit, using power actuated tool and fastening devices, bending conduit using hand, mechanical, and hydraulic bending methods.
2. Demonstrate the ability to pull wire through electrical conduit by hand using a fish tape and vacuum systems and mechanical pullers.
3. Demonstrate the ability to interpret and layout electrical installations as per blueprint drawings.
4. Demonstrate the ability to correctly wire a transformer and three phase panel boards based on the given and needed voltage and connect them in an electrical system.
5. Demonstrate the ability to correctly install various splicing devices on electrical conductors.

ELTR 2147. Programmable Controllers I

Course Description

This course introduces the basic theory, operation, and programming of programmable logic controllers (PLC). Students will demonstrate programming examples, set-up examples and troubleshoot, as well as study PLC timing, counting, arithmetic, logic, and sequences. (UNM Valencia Prerequisite: CNST 120.)

Student Learning Outcomes

1. Review basic computer operations.
2. Program from relay logic to ladder logic diagrams.
3. Design timer circuits and logic circuits.
4. Describe logic circuits.
5. Describe the common parts of programmable controllers.
6. Program a start/stop circuit using a PLC.
7. Program counters and timers using a programmable controller.
8. Install and troubleshoot a simple programmable controller system.
9. Discuss input and output analog signals to/ from the PLC.
10. Discuss sequencers.
11. Demonstrate ability to read and interpret technical documents.
12. Demonstrate ability to use various types of software applicable to course.

ELTR 2210. Programmable Logic Control

Course Description

Introduces the principles of operation of a programmable controller, the numbering systems used by controllers, logic fundamentals and basics of programming.

Student Learning Outcomes

1. List the safety requirements as per OSHA and the electrical lab safety policies for electrical work performed in the work place.

2. List and define the purpose of the components for setting up a master control, emergency stop safety circuit for PLC installation.
3. Diagram and label the correct wiring and components for PLC operation according to NEC, OSHA, and NEMA standards.
4. Design programs and program programmable controllers which implement safety measures for equipment and personnel.
5. Troubleshoot and correct problems with control wiring and program errors.
6. Design PLC programs that perform given criteria for industrial processes such as timer instructions for PLCs, PLC installation and troubleshooting, developing PLC diagrams and programs, PLC sequencer instructions, MCR and SCL instructions, and Data manipulation instructions.

ELTR 2211C. Programmable Logic Control with Laboratory

Course Description

This course introduces the principles of programmable logic controllers (PLCs), logical operations, and applications. Students develop an understanding of data types, logical operations, and the application of industrial process control through a combination of theoretical concepts, problem-solving exercises, and hands-on laboratory activities. Emphasis is placed on applying fundamental control logic principles to practical and industrially relevant examples. Laboratory exercises using Festo training systems reinforce safe work practices, control techniques, and troubleshooting skills commonly used in industrial and technical environments.

Student Learning Outcomes

1. Demonstrate knowledge of integrated I/O and basic logic operations.
2. Demonstrate knowledge of timers, counters, and comparison instructions.
3. Demonstrate knowledge of logical operations applied to modern industrial process control.

ELTR 2220. Install & Operation of Logic Controls

Course Description

Covers installation and programming of programmable logic controllers in accordance with manufacturer's specifications and NEC requirements. Covers stimulating fundamental industrial control processes with various input and output devices.

Student Learning Outcomes

1. List and apply safety requirements as per OSHA guidelines for all electrical work including lockout/tagout procedures and MSDS sheets.
2. Demonstrate the ability to set up and hard wire motor controls circuits such as stop/start motor control relays with indicator lights, stop/start/jog motor control relays with indicator lights, and a master safety circuit for PLC's.
3. Demonstrate the ability to set up, define, and wire input and output device for PLC modules.
4. Identify the main components of a PLC, common operating modes, and describe their functions.
5. Evaluate, troubleshoot, and correct problems with control wiring and programming errors.

ELTR 2230. PLC System Operation/Troubleshooting

Course Description

Covers intricate industrial wiring, motor controls and motor troubleshooting, programmable controller timer, counter and sequence program operations and the troubleshooting techniques involved.

Student Learning Outcomes

1. Identify, wire, and describe the functions and components of a PLC system.
2. Describe the functions of I/O modules and demonstrate the ability to explain I/O addressing on advanced systems.

3. Define and apply numbering systems such as binary, decimal, hexadecimal, and convert them from one system to another.
4. Develop gate logic and convert relay ladder to a relay logic program.
5. Develop timer instructions, counter instructions and compare their functions.
6. Identify data tables, memory tables, and develop sequencing.
7. List and apply safety requirements as per OSHA guidelines and Lab Safety policies for all electrical work including lockout/tagout procedures and MSDS sheets.

ELTR 2240C. Advanced Programmable Logic Controllers and HMIS w/Lab

Course Description

This course builds on the principles of programmable logic controllers (PLCs), progressing to more advanced logical operations and applications, while also introducing the basics of human-machine interfaces (HMIs). Students develop an understanding of advanced control operations by applying modern industrial process control through a combination of theoretical concepts, problem-solving exercises, and hands-on laboratory activities. Emphasis is placed on applying advanced control logic principles to practical and industrially relevant examples. Additionally, students will apply industrial communication protocols to scenario-based examples of PLC-PLC and PLC-HMI communication. Laboratory exercises using Festo training systems reinforce safe work practices, control techniques, and troubleshooting skills commonly used in industrial and technical environments.

Student Learning Outcomes

1. Demonstrate knowledge of advanced logic operations.
2. Demonstrate knowledge of alarming and shutdown instructions.
3. Demonstrate knowledge of advanced logical operations applied to modern industrial process control.
4. Demonstrate application of industrial communications protocols between PLCs and HMIs.

ELTR 2605. Photovoltaic Fund/Applications

Course Description

Photovoltaic (PV) is electrical energy from the sun. This course is an introduction to the fundamentals associated with Photovoltaic systems. Topics cover PV market analysis, the solar resource, electrical PV principles, solar module fundamentals, system components, types of systems, site assessment, system applications, energy production analysis, and best practice code compliant practices including mounting, wiring, and interconnecting systems to the utility. Anyone interested in knowing more about the solar industry or anyone working in fields associated with solar energy will benefit from this course.

Student Learning Outcomes

1. Compare the advantages and disadvantages of installing a PV system.
2. Identify the principal components in PV systems and their uses.
3. Demonstrate knowledge of principal types and configurations of PV systems and their uses.
4. Describe the relationship of energy efficiency to PV installations and identify opportunities for conservation and energy efficiency.
5. Identify the factors affecting the quantity and composition of solar energy received on Earth's surface and the apparent position and path through the sky.
7. Evaluate how array orientation affects solar energy received by modules and identify methods for determining and diagramming shading patterns.
9. Demonstrate knowledge of the process for determining potential array locations and how solar radiation data is used in sizing and estimating PV system performance.

11. Identify considerations in determining the suitability and condition of existing roofing, structural systems, and electrical systems and equipment.
12. Evaluate the design priorities for PV systems in different types of applications.
13. Identify factors to consider in preliminary assessment such as solar resource, environmental conditions, building code and utility requirements.
14. Practice sizing grid direct systems.
15. Identify common procedures used to sell PV systems.
16. Describe customer motivations, policies, and economics that influence systems sales.
17. Demonstrate knowledge of code compliant, safe, best industry practices for installations.
18. Demonstrate knowledge of procedures required for ongoing operation and maintenance of PV systems.

ELTR 2615. Photovoltaic Code Compliant Systems

Course Description

PV Code Compliant Systems is a comprehensive course on the electrical and structural code requirements for photovoltaic system installations with and without battery systems. Topics include the major sections of the National Electric Code (NEC) that relate to PV installations including General Requirements, Wiring and Protection, Wiring Methods and Equipment Use, PV Equipment Special Conditions, and Utility Interconnection Special Conditions. Integrity and compliance of structural mounting for roof top and ground mount systems are also discussed.

Student Learning Outcomes

1. Demonstrate knowledge of navigating, finding, and understanding sections of the NEC that are critical to installing and inspecting photovoltaic systems.
2. Recognize and identify code-compliant, safe selection of components and code-compliant, safe installation layouts, and documentation required for photovoltaic systems that are utility interactive with and without energy storage.
3. Identify and verify code-compliant, safe sizing of conductors and overcurrent protection for DC and AC circuits.
4. Identify and verify code-compliant, safe use of wiring methods and selecting the appropriate materials for specific sites and installations.
5. Identify and verify code-compliant, safe use of general electrical equipment used in PV systems.
6. Demonstrate knowledge of special conditions applicable to PV Systems.
7. Verify code-compliant utility interconnections of PV systems
8. Demonstrate knowledge of compliance and structural integrity for mounting rooftop and ground-mounted systems

ELTR 2630. Advanced Photovoltaics

Course Description

Photovoltaic installation topics and aspects of: Safety, electrical lock out tag out, maximum system voltage, disconnects, series fusing, service panel connections, inverters, layout and mounting, grounding and ground fault/surge protection, system sizing, NEC considerations, commissioning and production analysis, maintenance and troubleshooting are covered in this course.

Student Learning Outcomes

1. Identify electrical codes, regulations, and practices applicable to PV systems.
2. Evaluate the design priorities for PV systems in different applications and calculate the size and configurations of necessary PV components.
3. Describe the steps involved with commissioning a PV system.
4. Identify the maintenance tasks involved with maximizing array output, battery health, and other equipment operation.

ELTR 2692. Photovoltaic Installation Lab**Course Description**

Photovoltaic installation practices and safety are emphasized covering lockout tag out, testing high voltage, hazards, safety equipment, site safety, first aid, PV panel layout, pitch roof mounting systems, flat roof mounting systems, pole mount systems, disconnect installation, wiring sizing and installation, inverter installation, commissioning checklist.

Student Learning Outcomes

1. Demonstrate proper PV jobsite safety considerations including proper use of PPE, tools and electrical meters, fall protection, ladders, and other equipment.
2. Assemble various PV array and electrical system lab projects.
3. Demonstrate proper application of local building codes and practices when installing a PV system.

ELTR 2891. Electrical Apprenticeship V**Course Description**

Commercial/industrial applications for electricians. Blueprint interpretation, commercial construction types and processes, wiring methods, wiring materials, and motor controls.

Student Learning Outcomes

Varies

ELTR 2892. Electrical Apprenticeship VI**Course Description**

In-depth commercial applications to include commercial/industrial service calculations, mobile home parks, multi-family dwellings, and commercial fire/security systems.

Student Learning Outcomes

Varies

ELTR 2893. Electrical Apprenticeship VII**Course Description**

Control devices in commercial/industrial applications; emphasis on logic in-line diagrams, time delay starters, reversing starters, and manual/magnetic solenoids.

Student Learning Outcomes

Varies

ELTR 2894. Electrical Apprenticeship VIII**Course Description**

Miscellaneous topics for the journeyman electrician to include power distribution/transmission, solid state controls and relays, photoelectric and proximity controls and programmable controllers.

Student Learning Outcomes

Varies

ELTR 2995. Electrical Co-Op Experience**Course Description**

Varies

Electroneuodiagnostic Technology (ENDT)

ENDT 1010. Introduction to Neurodiagnostic Technology

Course Description

Provides an introduction and overview of the basic concepts and foundational theory of Neurodiagnostic Technology. Topics include scope of practice, standards of care, testing procedures, recording techniques, and an introduction to medical and EEG terminology. Information on career fields in ENDT is also covered, including duties and responsibilities, possible work settings and available certifications.

Student Learning Outcomes

1. Define and use common terminology neurology, Neurodiagnostic, EEG, and seizures.
2. Recall Standard Precautions and Transmission-Based Precautions.
3. Execute a patient history.
4. Identify the basic seizure types.
5. Identify common components of medical terminology, including roots and suffixes.
6. Compose a Basic patient history & physical.

ENDT 1020. EEG I

Course Description

This course provides instruction on the process of accurately measuring and applying electrodes according to the International 10-20 System. Topics include the history and development of the EEG field, electrode composition and care and the proper steps for the best practice in EEG methodology. An emphasis is placed on professional competence in patient interactions, patient care, patient safety, privacy standards and taking history.

Student Learning Outcomes

1. Explain the process of electrode measurement and application according to the 10-20 system.
2. Identify the basic EEG Montages (LB, TB and referential).
3. Recognize patient privacy regulations, safety standards, and ethical responsibilities.

ENDT 1040. Neuroanatomy and Neurophysiology

Course Description

This course provides instruction on the basic anatomical structures and functional correlates of the human nervous system. Emphasis will be placed on neuronal function, action potentials, cranial nerves, major cerebral blood supply, and an introduction to neurobiological disorders. Localization of EEG electrodes over specific neuroanatomical structures will be addressed.

Student Learning Outcomes

1. Recognize and implement correct anatomical terminology.
2. Recognize essential neural anatomical and physiological structures and functions.

3. Interpret location of EEG electrodes over neural structures and the correlated functional measurements.

ENDT 1090. Neurodiagnostic Clinical I

Course Description

This clinical course provides practical EEG experience in the outpatient setting. With supervision, students will assist and, skills-permitting, perform routine electroencephalographic recordings with all appropriate modifications, activations, and recording notations. Emphasis will be placed on active application of theoretical knowledge, exceptional patient care, collaborative interaction with other healthcare professionals, and EEG pattern recognition. Attendance and participation in weekly Neurology Department Grand Rounds and departmental EEG Seminars will be required.

Student Learning Outcomes

1. Implement collodion electrode application for long-term monitoring.
2. Perform competent long-term EEG disconnections, disinfection, and documentation.
3. Obtaining a standard EEG that includes EO/EC, mental stimulation, photic, hyperventilation, drowsiness, electrode impedance, settings and observed behavior.
4. Differentiating artifacts from cerebral waveforms.
5. Accurately recognizing normal/normal variant awake and asleep patterns for each age range.

ENDT 1092L. Neurodiagnostic Technology Skills Laboratory I

Course Description

This laboratory provides practical hands-on experience in the process of accurately measuring, applying, and removing electrodes according to the International 10-20 System. The focus of this laboratory will be on symmetrical and accurate measurement, routine electrode application, and the fundamentals of patient care in EEG. Practice will include mannequin or volunteer heads with an introduction of basic application modifications, as well as electrode removal and disinfection. Students will receive a departmental orientation to the clinical site with emphasis on hospital guidelines, policies, and procedures. All practical opportunities will be supervised and graded by laboratory-approved preceptors.

Student Learning Outcomes

1. Perform a complete head measurement on mannequin or volunteer head within 1 cm accuracy.
2. Demonstrate familiarity with electrode names and scalp locations.
3. Demonstrate familiarity with electrode application methods and best practice techniques.

ENDT 1510. EEG IT-Essentials

Course Description

This course provides a comprehensive overview of software and hardware components of the EEG System. The course will cover PC hardware, networking and troubleshooting hardware and network connectivity issues. The basics of EEG software technologies are introduced with common features and functionality of known operating systems, system management and file management.

Student Learning Outcomes

1. Providing a safe recording environment by maintaining instrument/equipment in good working order.
2. Maintaining instrument/equipment in good working order.
3. Evaluating each testing situation.
4. Taking appropriate precautions to ensure electrical safety.
5. Correcting or reporting deviations as appropriate.

ENDT 1520. EEG II

Course Description

This course provides a comprehensive overview of the normal routine adult EEG recording in wake and sleep. Instruction will cover the entire routine EEG recording from start to finish, including all appropriate technologist notations, activation procedures, and normal waveform variants. Emphasis will be on accurate EEG description using proper terminology, normal pattern recognition, and the integration of patient history in EEG analysis. Basic electrocardiogram (EKG) will be addressed.

Student Learning Outcomes

1. Classify the patient's physical, mental, and emotional condition.
2. Organize and prepare basic patient history for EEG.
3. Implement a standard EEG that includes at least 20 minutes recording, eye opening and closing, activations, mental assessment, electrode impedance, drowsiness and/or sleep, noting montage, filters, sensitivity and documentation of behavior, clinical seizure, etc.
4. Differentiating artifacts from cerebral waveforms.
5. Recognizing normal/normal variant awake and asleep patterns for each age range.

ENDT 1530. Electrical Concepts in Neurodiagnostic Technology I

Course Description

This course provides the foundation of electrical concepts related to Neurodiagnostic Technology and instrumentation. These concepts include electrical safety, grounding, analog to digital conversion, and physiological data collection and analysis. Digital measurement and modifications to the EEG recording will be addressed in depth, with particular attention to impedance, calibration, filters, sensitivity, montage, and differential amplifiers.

Student Learning Outcomes

1. Summarize the necessity of electrical safety and recall the steps to achieve it in the clinical setting.
2. Explain and execute digital EEG instrumentation settings and terminology.
3. Explain the mechanism of differential signal amplifiers.
4. Recognize potential modifications to recordings to ensure best quality EEGs in different settings.

ENDT 1540. Neurological Disorders

Course Description

This course provides a comprehensive overview of abnormal adult EEGs associated with neurological disorders. Emphasis will be placed on the etiology, evolution, and electroencephalographic correlates of cerebral disorders. The relationship between the underlying nature of disorders and their clinical manifestations will be addressed, with particular emphasis on the recognition of resultant EEG patterns. Diagnosis, prevention, and treatment options will be included.

Student Learning Outcomes

1. Demonstrating knowledge of EEG clinical correlations by defining signs and symptoms for adult neurological disorders.
2. Demonstrating knowledge of EEG clinical correlations by explaining functional neuroanatomy and neurophysiology.
3. Demonstrating knowledge of EEG clinical correlations by recognizing and using medical terminology and accepted abbreviations.

ENDT 1550. Introduction to Long Term Monitoring

Course Description

This course provides an overview of theories, concepts, and practice of long-term EEG monitoring. Emphasis will be placed on conditions requiring long-term monitoring, technical aspects of applying and maintaining long-term studies, and the

basics of trending and qualitative monitoring. Topics in Persyst software will be addressed with an introduction to record review.

Student Learning Outcomes

1. Explain indications for Long-term monitoring for epilepsy and basic LTM procedures, including ambulatory, monitoring with surface leads and intracerebral leads using video/EEG and continuous EEG intensive care monitoring.
2. Recognizing and explaining instrumentation for long-term monitoring.
3. Explaining treatment options for epilepsy.
4. Identifying common seizure patterns.

ENDT 1592L. Neurodiagnostic Technology Skills Laboratory II

Course Description

This laboratory provides a continuation of practical hands-on experience in skills required for higher-complexity EEGs. Skill work will continue in EEG application with emphasis on the use of collodion glue and EC2 adherent paste for long-term video EEG recordings. Instruction will also be provided in electrode removal with acetone or collodion remover in EEG long-term recording discontinuation. All practical opportunities will be supervised and graded by laboratory-approved preceptors.

Student Learning Outcomes

1. Implement collodion electrode application for long-term monitoring.
2. Perform competent long-term EEG disconnections, disinfection, and documentation.
3. Obtaining a standard EEG that includes EO/EC, mental stimulation, photic, hyperventilation, drowsiness, electrode impedance, settings and observed behavior.
4. Differentiating artifacts from cerebral waveforms.
5. Accurately recognizing normal/normal variant awake and asleep patterns for each age range.

ENDT 2010. Advanced Topics in Neurodiagnostic Technology

Course Description

This course provides an introduction to additional procedures within the Neurodiagnostic profession including Visual Evoked Potentials (VEP), Somatosensory Evoked Potentials (SSEP), Nerve Conduction Studies (NCS), Magnetoencephalography (MEG), Polysomnography (PSG), and Intraoperative Monitoring (IONM). An overview will be provided of varying modalities and a range of instrumentation. Diagnosis, treatment, and the role of the technologist will be addressed.

Student Learning Outcomes

1. Demonstrate a basic understanding of varying expanded NDT procedures and their application.
2. Identify conditions and diagnoses indicating the use of expanded NDT procedures.
3. Indicate basic understanding of normal and abnormal results in expanded NDT procedures.

ENDT 2020. EEG III

Course Description

This course provides a comprehensive overview of abnormal adult EEG recordings associated with seizures and epilepsy. Emphasis will be placed on the etiology, evolution, and electroencephalographic correlates of seizure disorders. The relationship between the underlying nature of disorders and their clinical manifestations will be addressed, with particular emphasis on the recognition of resultant EEG patterns. Diagnosis, prevention, and treatment options will be discussed.

Student Learning Outcomes

1. Accurately recognize clinical seizure patterns.
2. Identify common seizure patterns in long term monitoring.

3. Accurately recognizing EEG patterns for levels of consciousness.
4. Summarizing EEG clinical correlations by characterizing seizure manifestations and classifications.

ENDT 2030. Electrical Concepts in Neurodiagnostic Technology II

Course Description

This course further explores topics of instrumentation, waveform analysis, parameter adjustment for optimal recording quality, and activation procedures. Particular emphasis is placed on electrical polarity and localization of waveforms. Electrocerebral inactivity (ECI) recordings are addressed.

Student Learning Outcomes

1. Identify waveform polarity in routine EEG recordings and additional monitors such as EOG.
2. Demonstrate proficiency in the frequency response curve and all mathematical calculations.
3. Identify special recording parameters in ECI recordings.
4. Providing a safe environment complying with hazardous material handling procedures.

ENDT 2040. Evoked Potentials

Course Description

Introduction to evoked potential recording techniques. Emphasis on equipment, principles of operation, associated waves related to normal and abnormal waveforms, placement and calibration, obtaining clearly resolved and replicated obligated waveforms of brainstem auditory, visual, and somatosensory evoked potentials in adults and pediatric subjects.

Student Learning Outcomes

1. Describe the clinical correlations of evoked potential abnormalities.
2. Describe common indications for auditory, visual, and somatosensory evoked potential.
3. Describe the generators and principles of measuring waveforms and distance used in evoked potential studies.

ENDT 2080. Pediatric and Neonatal Neurodiagnostic Technology

Course Description

This course provides an overview of the application and recording of routine and long-term EEGs in pediatric and neonatal patient populations. Particular focus will be placed on development and associated EEG waveforms, pediatric-specific neurological conditions and EEG correlates, and both normal and abnormal pattern recognition. Modified neonate electrode application, specific terminology, and additional monitors will be addressed in greater depth.

Student Learning Outcomes

1. Identify normal and abnormal waveforms at each stage of development for EEG in neonate patients.
2. Identify normal and abnormal waveforms at each stage of development for EEG in pediatric patients.
3. Describe conditions necessary for modified neonate hookup and/or additional monitors.

ENDT 2090. Neurodiagnostic Clinical II

Course Description

This clinical course provides practical EEG experience in the inpatient and intensive care setting. With supervision, students will assist and, skills-permitting, perform intermediate EEG recordings with all appropriate modifications, activations, and recording notations. Emphasis will be placed on active application of theoretical knowledge, exceptional patient care, infection control procedures, and collaborative interaction with other healthcare professionals. Students will assist in record review with preceptors and attendings for ongoing pattern recognition experience. Attendance and participation in weekly Neurology Department Grand Rounds and departmental EEG Seminars will be required.

Student Learning Outcomes

1. Customizing the recording procedure by: utilizing techniques to bring out or enhance clinical symptoms, applying additional electrodes to localize abnormal activity, Monitoring respiration if appropriate, Monitoring ECG rhythms for abnormality.
2. Following appropriate technical criteria when recording in intensive care or cardiac units.
3. Demonstrating knowledge of EEG clinical correlations by defining signs and symptoms for adult neurological disorders; characterizing seizure manifestations and classifications; and, identifying psychiatric and psychological disorders.

ENDT 2092L. Neurodiagnostic Technology Skills Laboratory III

Course Description

This laboratory provides an overview of practical hands-on experience in skills required for EEGs in pediatric and neonate populations. Emphasis will be placed on special issues in patient care, strong interpersonal and communication skills with family members, and age-appropriate language. Additionally, students will learn the process of video file clipping and archiving. All practical opportunities will be supervised and graded by laboratory-approved preceptors.

Student Learning Outcomes

1. Describing clinically significant behavior witnessed.
2. Documenting sedation used, dosage, and effects (if applicable).
3. Reviewing EEG for appropriate documentation of amplifier settings and montage changes.

ENDT 2120. EEG IV

Course Description

This course provides instruction in the nature of chemical operations in the brain and the role of pharmaceutical interventions in the prevention and treatment of neurological and seizure disorders. Emphasis will be on the mechanism of action of anti-seizure and anti-epileptic medications, contraindications to medications and treatments, and medication effects on EEG waveforms and analysis. A comprehensive overview of EEG artifact and troubleshooting methods will also be provided.

Student Learning Outcomes

1. Identify major anti-epileptic medications by name and mechanism.
2. Identify medications that impact EEG recording quality.
3. Understand the contraindications

ENDT 2150. Introduction to Advanced Modalities

Course Description

Introduction to nerve conduction studies and polysomnography. Emphasis on equipment, placement of stimulation sites, troubleshooting, electronics, pathology and waveform identification.

Student Learning Outcomes

1. Describe the anatomy and physiology of selected muscles and nerves.
2. Have knowledge of neuromuscular disorders.
3. Explain the principles of stimulation and accurate placement of recording electrodes.
4. Explain the principles of measuring waveforms and distances used in routine nerve conduction studies.
5. Recognize sleep stages.
6. Understand the montages used in polysomnography.
7. Initiate a technically adequate PSG by
 - a. preparing the patient,

- b. calibrating the patient and instrumentation,
- c. obtaining a ten minute baseline recording,
- 8. Obtain a basic understanding of common sleep disorders and treatment options.
- 9. Perform the multiple sleep latency test (MSLT) and the maintenance of wakefulness test (MWT).

ENDT 2190. Neurodiagnostic Clinical III

Course Description

This clinical course provides advanced practical EEG experience in outpatient and inpatient settings. With minimal supervision, students will perform routine and long-term electroencephalographic recordings on all patient populations. Students will participate in a rotation schedule to observe and assist in available NDT testing modalities (as scheduling permits), including Ambulatory, MEG, IONM, PCS, EP, NCS, Moberg combined studies, and EEG during WADA and before PET scans. Students will assist in record review with preceptors and attendings for ongoing pattern recognition experience. Attendance and participation in weekly Neurology Department Grand Rounds and departmental EEG Seminars is required.

Student Learning Outcomes

- 1. Document sedation used, dosage, and effects (if applicable).
- 2. Identify medications that impact EEG recording quality.
- 3. Identify normal and abnormal waveforms at each stage of development for EEG in pediatric patients.
- 4. Identify normal and abnormal waveforms at each stage of development for EEG in neonate patients.
- 5. Describe conditions necessary for modified neonate hookup and/or additional monitors.

ENDT 2250. Intraoperative Neuromonitoring (IONM)

Course Description

Introduction to intraoperative monitoring of CNS (brain, brainstem, spinal cord) function during surgical procedures. Types of recordings, the technologist's role, recording parameters, reason for surgical monitoring, variables affecting monitoring, and outcome of surgery.

Student Learning Outcomes

- 1. Identify the effects of common anesthetic agents and physiological variables on monitoring results.
- 2. Identify the common indicators for intraoperative neurophysiological EEG, evoked potential and neuromuscular monitoring.
- 3. Describe the criteria for significant changes during intraoperative monitoring.

ENDT 2999. Neurodiagnostic Technology Capstone

Electronic Health Record (ELHR)

ELHR 1010. Introduction to Electronic Health Record

Course Description:

Emergency Medical Services (EMSS)

EMSS 1110. Emergency Medical Responder

Course Description

An entry level course which prepares students to respond to and provide care for ill or injured patients. It includes an overview of the human body, specified basic life support, airway management, trauma, medical and environmental emergencies, medical/legal, emergency operations and other related topics.

Student Learning Outcomes

1. Successfully pass the National Registry EMR certification exam and obtain New Mexico First Responder licensure.
2. Demonstrate competence as an entry-level EMR in the cognitive and affective domains.
3. Demonstrate competence as an entry-level EMR in airway management.
4. Demonstrate competence as an entry-level EMR in medical emergencies.
5. Demonstrate competence as an entry-level EMR in cardiac emergencies.
6. Demonstrate competence as an entry-level EMR in trauma emergencies.
7. Demonstrate competence as an entry level EMR in EMS operations.

EMSS 1110L. Emergency Medical Responder Laboratory

Course Description

An entry level course which focuses on EMR and NM First Responder skills development through simulations and scenarios with an emphasis on assessment, hands-on skills and team work in the patient care environment.

Corequisite: EMR Lecture

Student Learning Outcomes

1. Successfully pass a NM JOE approved psychomotor exam.
2. Demonstrate competence as an entry-level EMR in the psychomotor and affective domains.
3. Demonstrate competence as an entry-level EMR in airway management.
4. Demonstrate competence as an entry-level EMR in medical emergencies.
5. Demonstrate competence as an entry-level EMR in cardiac emergencies.
6. Demonstrate competence as an entry-level EMR in trauma emergencies.
7. Demonstrate competence as an entry-level EMR in EMS operations.

EMSS 1113. CPR for the Health Care Provider

Course Description

Provides instruction of Basic Cardiac Life Support/ Cardiopulmonary Resuscitation for the Healthcare Provider which includes: one- and two-person rescuer for CPR and management of foreign body obstruction of the airway in adults, children and infants. Instruction also provides for recognition of signs and symptoms requiring AED intervention, safe administration of AED, and common actions that can be utilized for survival, and prevention of risk factors for heart attack and stroke. Certification according to the standards of the American Heart Association (AHA) is issued upon successful completion of course which requires passing of a written examination and practical demonstration. The course satisfies the CPR requirement for EMS students and for most other Health Care programs. Students will be issued an American Heart Association BLS for the HealthCare Provider card.

Students Learning Outcomes

1. Understand and apply critical concepts of high-quality CPR
2. Demonstrate knowledge of the American Heart Association Chain of Survival
3. Demonstrate and perform proper 1-Rescuer CPR and AED for adult, child and infant
4. Demonstrate and perform 2-Rescuer CPR and AED for adult, child and infant

5. Demonstrate knowledge of the differences between adult, child and infant rescue techniques
6. Demonstrate proper bag-mask techniques for adult, child and infant
7. Demonstrate proper rescue breathing for adult, child and infant
8. Demonstrate proper techniques and knowledge to relieve choking for adult, child and infant
9. Demonstrate knowledge and proper technique of CPR with an advanced airway*
10. Demonstrate cognitive mastery through written exam
11. Demonstrate psychomotor mastery through skills exam

EMSS 1114. Introduction to Emergency Medical Services

Course Description

Introduction to EMS. Three credit hours. A course that introduces students to the philosophies and practice of prehospital medicine, research, medical/legal issues, and well-being of the provider. Introduces foundational EMS knowledge and the NM EMT Scope of Practice. Emphasizes EMT operations within the healthcare system.

Student Learning Outcomes

1. Recognizing the seriousness of a patient's condition and assessing the need for emergency medical intervention.
2. Performing basic life support procedures and other emergency medical care based on patient assessment.
3. Safe patient handling including lifting, moving, and positioning to minimize discomfort and prevent further injury.
4. Demonstrating professional behavior within the healthcare setting, including cultural sensitivity and effective communication.
5. Understand the EMS System to include all levels of care, medical direction, scope of practice, radio communication and its functionalities (repeaters, types of radios and etc.).
6. Know and understand the different types of ambulances and the required equipment.
7. Know and understand USDOT and NMDOT required training and equipment and its functions and uses.
8. Documentation: understand and demonstrate how to properly document patient care reports.

EMSS 1115L. EMT Basic Supplemental Skills Laboratory

Course Description

Provides EMT-Basic students the opportunity for additional supervised learning and practice of EMS skills and patient assessment strategies in the campus laboratory. Reinforces topics in preparation for state licensure and national certification EMS exams.

Student Learning Outcomes

1. Demonstrate the ability to identify areas of weakness in either their laboratory or theory courses.
2. Formulate a plan of study to address the identified areas of weakness.

EMSS 1116. BLS Clinical Preparations

Course Description

Prepares students in health science programs for their clinical and field rotations. This course will provide training in CPR (AHA BLS Healthcare Provider), blood borne pathogens, HIPAA, and fire safety.

Student Learning Outcomes

1. CPR Techniques: You will learn principles and techniques of basic cardiac life support (BLS), including CPR.
2. Airway and Breathing Management: Training includes the use of adjuncts for airway management and breathing support.
3. Defibrillator Use: You will be trained to use an automatic external defibrillator (AED), essential for cardiac emergencies.

4. Initial Trauma Response: The course prepares students to handle life-threatening situations at a basic level, equipping them with the skills needed for initial patient management.
5. NIMS (National Incident Management System) classes 100,200,700,800 are included in this class. The student will understand Incident Management for emergency scenes and be able to effectively manage a scene as a first responder until higher trained personnel arrive. This will include recognizing hazards, mitigating some hazardous situations, managing other personnel, requesting additional and specialized resources and more.
6. Fire Extinguisher Safety: Students will learn how to safely operate a fire extinguisher in the case of a fire.
7. HIPPA Training (Health Insurance Portability and Accountability Act): Students will understand the importance of this act to include: patient privacy and confidentiality, penalties and other federal regulations that protect health information.
8. Blood Borne Pathogens: Students will learn and demonstrate how to safely handle all situations involving blood and contaminated items.

EMSS 1120. Emergency Medical Technician Lecture

Course Description

An entry level course which prepares students to respond to and provide care for ill or injured patients. It includes an overview of the human body, basic life support, airway management, trauma, medical and environmental emergencies, medical/legal, emergency operations and other related topics.

Student Learning Outcomes

1. Successfully pass the National Registry EMT certification exam and obtain New Mexico EMT licensure.
2. Demonstrate competence as an entry-level EMT in the cognitive and affective domains.
3. Demonstrate competence as an entry-level EMT in airway management.
4. Demonstrate competence as an entry-level EMT in medical emergencies.
5. Demonstrate competence as an entry-level EMT in cardiac emergencies.
6. Demonstrate competence as an entry-level EMT in trauma emergencies.
7. Demonstrate competence as an entry-level EMT in EMS operations.

EMSS 1120L. Emergency Medical Technician Laboratory

Course Description

An entry level course which focuses on EMT and NM EMT-Basic skills development through simulations and scenarios with an emphasis on assessment, hands-on skills and team work in the patient care environment.

Student Learning Outcomes

1. Successfully pass a NM JOE approved EMT psychomotor exam.
2. Demonstrate competence as an entry-level EMT in the psychomotor and affective domains.
3. Demonstrate competence as an entry-level EMT in airway management.
4. Demonstrate competence as an entry-level EMT in medical emergencies.
5. Demonstrate competence as an entry-level EMT in cardiac emergencies.
6. Demonstrate competence as an entry-level EMT in trauma emergencies.
7. Demonstrate competence as an entry-level EMT in EMS operations.

EMSS 1121. Emergency Medical Technician Clinical

Course Description

A course for EMT students to complete patient contact and clinical care requirements. Students rotate through various healthcare settings, refining clinical competencies required as an entry-level EMT.

Student Learning Outcomes

1. Function as an entry-level EMT as part of a healthcare team.
2. Demonstrate professionalism and cultural sensitivity healthcare settings.
3. Demonstrate appropriate documentation and record keeping.
4. Function as an entry-level EMT, providing emergency care to the sick and injured.
5. Perform an appropriate patient assessment.

EMSS 1125. Introduction to EMS Systems**Course Description**

This course covers the history of emergency medical services and the development of EMS systems as well as current trends and issues in EMS. It is Ideal for students considering a career in EMS or those interested in learning system infrastructure and origin whom already work in EMS. Introduction to EMS Systems is an overview course of EMS and EMS systems. We will cover the role of EMS in healthcare, EMS management, and the clinical, educational and administrative responsibilities of the EMS provider.

Student Learning Outcomes

1. Define EMS Systems.
2. List the 15 components of EMS systems and the 14 attributes.
3. Recall important milestones in the evolution of EMS.
4. Describe the levels of pre-hospital care providers.
5. Describe medical oversight.
6. Identify various configurations of EMS delivery systems.
7. Summarize the recommendations and findings in “EMS Education Agenda for the Future”.
8. State the role of public education and prevention in EMS.
9. Describe the role of EMS in disasters.
10. State role of communications and communications technology in EMS.
11. Identify the fundamentals of emergency medical dispatching.
12. Describe the role of information systems and evaluation in EMS.

EMSS 1153. Introduction to Anatomy and Physiology for the EMS Provider**Course Description**

To properly assess and manage a patient, a prehospital provider must have a solid foundation in human anatomy and physiology. This course provides a systematic approach to building this foundation.

Student Learning Outcomes

1. Apply anatomical and medical terms and abbreviations in written and oral communication.
2. Use simple knowledge of the anatomy and function of the upper airway, heart, vessels, blood, lungs, skin, muscles, and bones as the foundation of emergency care.
3. Apply fundamental knowledge of the anatomy and function of all human systems to the practice of EMS.
4. Integrate complex knowledge of the anatomy and physiology of the airway, respiratory and circulatory systems to the practice of EMS.
5. Integrate a complex depth and comprehensive breadth of knowledge of the anatomy and physiology of all human systems.

EMSS 1996. Emergency Medical Services Topics**Course Description**

Varies

Student Learning Outcomes

Varies

EMSS 2015. EMS Combo BLS/ILS/ALS Refresher

Course Description

This is a combination refresher course for licensed EMT Basic, EMT Intermediate /AEMT and EMT-Paramedic Providers. This includes online work, quizzes as well as in class homework. This is an online course with 2 days of in class laboratory instruction. Total contact time is 60 hours. This refresher meets the NREMT and NM EMS Bureau requirements.

Student Learning Outcomes

1. Demonstrate competence in the National and NM state scopes of practice by obtaining a score of 70% or higher on an online written exam.
2. Demonstrate competence in all EMS skills within the scope of practice for a providers licensure level.
3. Demonstrate the ability to be both an effective team leader and team member during simulated patient care evolutions.
4. Demonstrate professional conduct at all time during online and in person class activities.
5. Demonstrate appropriate etiquette in all written and verbal communications with faculty and fellow students.
6. Demonstrate the ability to receive constructive criticism and implement feedback into future evolutions.

EMSS 2092L. EMS Advanced Supplemental Skills Laboratory

Course Description

Provides EMT-Intermediate and Paramedic students opportunity for additional learning and practice of advanced EMS skills and patient assessment strategies in the campus laboratory before going into the clinical setting. Additional IV skills practice may be required. Reinforces topics in preparation for state licensure and national certification EMS exams. Current EMT-B (or higher) New Mexico State License or NREMT certification required.

Student Learning Outcomes

1. Demonstrate the ability to identify weakness in core content or skills.
2. Demonstrate the ability to formulate a study plan to address either identified weaknesses in core content or skills.

EMSS 2120. Advanced EMT Lecture

Course Description

A course which prepares students to respond to and provide specified advanced emergency care for ill or injured patients. It includes an overview of the human body, advanced life support, airway management, trauma, medical and environmental emergencies, medical legal issues, emergency operations, intravenous therapy, vascular access, advanced pharmacology and other related topics.

Student Learning Outcomes

1. Successfully pass the National Registry AEMT certification exam and obtain New Mexico AEMT licensure.
2. Demonstrate competence as an entry-level AEMT in the cognitive and affective domains.
3. Demonstrate competence as an entry-level AEMT in airway management.
4. Demonstrate competence as an entry-level AEMT in medical emergencies.
5. Demonstrate competence as an entry-level AEMT in cardiac emergencies.
6. Demonstrate competence as an entry-level AEMT in trauma emergencies.
7. Demonstrate competence as an entry-level AEMT in EMS operations.

EMSS 2120L. Advanced EMT Laboratory

Course Description

An advanced laboratory course which focuses on AEMT and NM EMT-Intermediate skills development through simulations and scenarios with an emphasis on assessment, hands-on skills and team work in the patient care environment.

Student Learning Outcomes

1. Successfully pass a National Registry AEMT psychomotor exam.
2. Demonstrate competence as an entry-level AEMT in the psychomotor and affective domains.
3. Demonstrate competence as an entry-level AEMT in airway management.
4. Demonstrate competence as an entry-level AEMT in medical emergencies.
5. Demonstrate competence as an entry-level AEMT in cardiac emergencies.
6. Demonstrate competence as an entry-level AEMT in trauma emergencies.
7. Demonstrate competence as an entry-level AEMT in EMS operations.

EMSS 2121. Advanced EMT Clinical

Course Description

A course for AEMT students to complete patient contact and clinical care requirements. Students rotate through various healthcare settings, refining clinical competencies required as an entry-level AEMT.

Student Learning Outcomes

1. Function as an entry-level AEMT as part of a healthcare team.
2. Demonstrate team leadership on an emergency call.
3. Demonstrate professionalism and cultural sensitivity healthcare settings.
4. Demonstrate appropriate documentation and record keeping.
5. Function as an entry-level AEMT, providing emergency care to the sick and injured.
6. Perform an appropriate patient assessment.

EMSS 2202. Intro to Paramedic Practice

Course Description

Introduction to Paramedic. A course, which introduces students to the advanced practice of prehospital medicine, research, medical/legal issues, and the well-being of the provider. Reviews foundational EMS knowledge and the NM Paramedic Scope of Practice. Emphasizes paramedic operations within the healthcare system.

Student Learning Outcomes

1. Exhibit Professional Behavior: Demonstrate exemplary conduct in a professional setting, reflecting the standards expected in emergency medical services.
2. Perform Patient Assessments: Conduct comprehensive patient assessments that are appropriate for all age groups and demographics.
3. Develop Treatment Plans: Analyze assessment findings to create suitable treatment plans tailored to various patient needs.
4. Integrate Decision-Making and Leadership: Apply paramedic-level decision-making and leadership skills in managing general medical and trauma care, as well as EMS operations.
5. Demonstrate Clinical Proficiency: Execute paramedic skills and procedures effectively across a range of emergency medical situations.

EMSS 2203. Introduction to Human Systems/Pathophysiology

Course Description

Intro to Human Systems/Pathophysiology

Student Learning Outcomes

1. Understand Human Anatomy and Physiology: Grasp the basic structure and function of human organ systems.
2. Analyze Pathophysiological Conditions: Identify and describe various pathological processes affecting human systems.
3. Assess Homeostasis: Understand how different diseases or injuries affect the balance of bodily functions.
4. Develop Critical Thinking Skills: Apply knowledge of human systems and pathophysiology to make informed decisions in emergency medical situations.

EMSS 2240. Introduction to Paramedic Practice**Course Description**

A course which introduces students to the advanced practice of prehospital medicine, research, medical legal issues, the wellbeing of the provider. Reviews foundational EMS knowledge and the NM Paramedic Scope of Practice. Emphasizes paramedic operations within the healthcare system.

Student Learning Outcomes

1. Understand paramedic roles and responsibilities within an EMS system.
2. Understand and interpret research and how to integrate findings into evidence based practice.
3. Demonstrate understanding of health and safety principles to maintain provider, crew and situational awareness, safety, and wellbeing.
4. Uses appropriate written or electronic tools to effectively document the essential elements of patient care and transport.
5. Understand the components of the EMS communications systems and the importance of Quality Assurance/Quality Improvement.
6. Understand the appropriate techniques of therapeutic communication with patients, families and other healthcare team members.
7. Understand relevant laws and ethical issues which impact decisions made in healthcare settings.

EMSS 2242. Anatomy and Physiology for EMS**Course Description**

The study of structure and function of the human body in a pre-hospital setting along with exploration of pathology are emphasized. Admission to paramedic program required.

Student Learning Outcomes

1. Identify the structures of the human body.
2. Explain the functions of each organ and system in the human body.
3. Apply the knowledge of human anatomy and physiology in a pre-hospital setting.
4. Be able to correlate disease to chronic vs. acute presentation.

EMSS 2245. Human Systems, Pathophysiology and Development**Course Description**

A course which provides a survey of human anatomy and physiology, pathological processes, and life span development. Emphasis is placed on interrelationships among organ systems and deviation from homeostasis.

Student Learning Outcomes

1. Understand the general terminology, anatomy, and physiology of the human body.

2. Apply principles of normal anatomy and physiology of the human body to the pathophysiologic processes of common health problems.
3. Associate pathophysiology to patient assessment and treatment.
4. Describe key physiologic and psychosocial changes that occur in different age groups.

EMSS 2246. Cardiac Rhythm Interpretation

Course Description

Cardiac conduction system: electrophysiology, electrocardiogram, monitor, atrial, sinus, ventricular and junctional dysrhythmias, multiple lead EKG and 12 lead EKG interpretation. Requires a "C" or better to pass.

Student Learning Outcomes

1. Demonstrate the ability to assess the common rhythms of the heart on an EKG.
2. Demonstrate the ability to identify the distinct emergency rhythms of the 12-lead EKG.
3. Demonstrate the ability to develop a treatment plan for patients needing management of cardiovascular emergencies.
4. Demonstrate the ability to explain the pharmacological actions of cardiac medications.
5. Demonstrate the ability to show a substantial understanding of cardiac pathophysiology.

EMSS 2250. Introduction to Advanced Patient Assessment and Clinical Decision Making

Course Description

A course which introduces the concepts of advanced patient assessment and clinical decision making, including history taking, physical exam techniques, and therapeutic communication with patients.

Student Learning Outcomes

1. Integrate scene and patient assessment findings with knowledge of epidemiology and pathophysiology to form a field impression.
2. Develop a list of differential diagnoses through clinical reasoning to modify the assessment and formulate a treatment or referral plan.

EMSS 2255 Emergency Pharmacology

Course Description

A course which integrates comprehensive knowledge of pharmacology to formulate a treatment plan intended to mitigate emergencies and improve the overall health of the patient. Discusses physiologic actions, pharmacodynamics, pharmacokinetics, therapeutic effects, medication administration, dosages and interactions.

Student Learning Outcomes

1. Demonstrate an understanding of relevant terms, processes and definitions relating to pharmacology.
2. Demonstrate an understanding of safety, storage and security, legislation, naming, classification and scheduling of medications.
3. Demonstrate appropriate decision making regarding medication administration to mitigate emergencies and improve overall health of the patient.
4. Demonstrate an understanding of the dosages, routes, indications, contraindications, mechanism of actions, side effects of medications in the National and NM Paramedic Scope of Practice.
5. Demonstrate an understanding of ethical, legal, communication and documentation aspects of emergency pharmacology.

EMSS 2255L. Emergency Pharmacology Laboratory

Course Description

A course which integrates comprehensive knowledge of pharmacology to formulate a treatment plan intended to mitigate emergencies and improve the overall health of the patient. Students will practice medication administration, calculate medication dosages, vascular access, fluid administration and other related skills.

Student Learning Outcomes

1. Demonstrate an ability to safely administer medications in the national and NM Paramedic Scope of Practice.
2. Calculate the correct volume, flow rate and amount of medication to be administered in a given situation.
3. Demonstrate an ability to administer medications as appropriate based on patient presentations.

EMSS 2270. Teaching in EMS

Course Description

Teaching in EMS course at Eastern New Mexico University - Roswell focuses on developing the skills and knowledge necessary for effective instruction within emergency medical services. EMS 270 compliments and integrates the NAEMT (National Association of Emergency Medical Technicians) Instructor course and focuses on enhancing the teaching skills of EMS professionals.

Student Learning Outcomes

1. Professional Behavior: Exhibiting exemplary professional behavior in educational settings.
2. Patient Assessment Skills: Performing comprehensive patient assessments and developing appropriate treatment plans.
3. Decision Making and Leadership: Integrating decision-making skills and leadership in emergency medical scenarios.
4. Proficiency in Procedures: Demonstrating proficiency in paramedic-level skills and procedures across various demographics.
5. Understanding Adult Learning Principles: Participants will be able to apply adult learning principles to develop effective teaching strategies for various learner types.
6. Curriculum Development: Participants will demonstrate the ability to develop and evaluate EMS course curricula, ensuring alignment with educational standards and objectives.
7. Instructional Techniques: Learners will be able to utilize various instructional techniques, including lectures, discussions, and practical skills demonstrations, to engage students effectively.
8. Assessment and Evaluation: Participants will understand how to design, administer, and evaluate assessments that measure student learning outcomes.
9. Feedback and Improvement: Learners will be able to provide constructive feedback to students and use evaluation results to improve instructional methods and course delivery.
10. Facilitation of Learning Environments: Participants will demonstrate skills in managing classroom dynamics and creating inclusive learning environments that promote active participation.
11. Application of Evidence-Based Practices: Learners will be able to integrate evidence-based practices into their teaching and training to enhance the quality of EMS education.
12. Legal and Ethical Considerations: Participants will understand the legal and ethical responsibilities of an EMS instructor and how they impact teaching practices.
13. Emergency Medical Services Trends: Learners will be able to discuss current trends in EMS and their implications for teaching and learning in the field.
14. Professional Development: Participants will identify opportunities for ongoing professional development and continuing education as an EMS instructor.

EMSS 2281. Pediatric Advanced Life Support

Course Description

This course instructs health care providers in the management and care of pediatric emergencies. Current health care provider and CPR certifications required.

Student Learning Outcomes

1. Assess pediatric cardiac and respiratory emergencies.
2. Utilize algorithms appropriately.
3. Deliver effective and appropriate treatment modalities.

EMSS 2284. Advanced Cardiac Life Support**Course Description**

This course is for the currently certified health care provider who has mastered Advanced Cardiac Life Support (ACLS). Knowledge and skills required to evaluate and manage the first ten minutes of an adult ventricular fibrillation and tachycardia (VF/VT) arrest are introduced and practiced. The management of the ten core ACLS cases is incorporated and tested.

Student Learning Outcomes

1. Accurately identify and assess cardiac emergencies.
2. Demonstrate appropriate use of algorithms.
3. Identify effective delivery of appropriate treatment modalities.

EMSS 2288. Critical Care Paramedic**Course Description**

Prepares currently licensed paramedics for advancement into critical care roles. The curriculum covers the current best practices in out-of-hospital critical care and retrieval medicine. Students participate in high fidelity simulations and lecture sessions preparing them to take the International Board of Specialty Certifications Critical Care Paramedic Certification (IBSC CCP-C) or Flight Paramedic Certification (IBSC FP-C) examination. Current licensure and employment as a New Mexico Paramedic or equivalent required (licensed and employed in another state).

Student Learning Outcomes

1. Demonstrate the ability to perform safely during flight and ground patient transport.
2. Demonstrate an understanding of patient care considerations during flight.
3. Perform the assessment, diagnostics and management of medical emergencies.
4. Perform the assessment, diagnostics and management of traumatic and burn-related emergencies.
5. Demonstrate an understanding of airway management and mechanical ventilation strategies
6. Demonstrate the ability to safely perform advanced surgical procedures within the scope of practice of a critical care paramedic.

EMSS 2310. Airway and Respiratory Emergencies**Course Description**

A course which focuses on the anatomy, physiology, and pathophysiology of the respiratory system. Integrates the knowledge to develop and implement a comprehensive treatment plan, with the goal of assuring a patent airway, adequate mechanical ventilation and respiration for patients of all ages.

Student Learning Outcomes

1. Demonstrate an understanding of the mechanics, neurological control and diseases impacting respiration and ventilation.

2. Demonstrates an understanding of various methods, tools and techniques to assure a patent airway, ventilation and respiration.
3. Integrate assessment findings with emergency pharmacology and relevant tools to create and implement treatment plans for patients with medical or trauma related respiratory complaints.

EMSS 2310L. Airway and Respiratory Emergencies Laboratory

Course Description

A course which focuses on diseases impacting the respiratory system. Students will demonstrate the knowledge to develop and implement a comprehensive treatment plan, with the goal of assuring a patent airway, adequate mechanical ventilation and respiration for patients of all ages. Students will utilize basic and advanced airway management and ventilation tools and techniques.

Student Learning Outcomes

1. Appropriately utilizes various methods, tools and techniques to assure a patent airway, ventilation and respiration.
2. Integrate assessment findings with emergency pharmacology and relevant tools to implement treatment plans for patients with medical or trauma related respiratory complaints.
3. Act as an entry-level Paramedic team leader in an airway management, ventilation or respiratory simulation.

EMSS 2410. Cardiac Emergencies

Course Description

Focuses on advanced patient assessment, management, and development of a treatment plan, with extensive discussion of cardiac anatomy, physiology, pathophysiology, pharmacology and pathology. Discusses EKG and 12 lead EKG acquisition and interpretation, and cardiac rhythms. There is an emphasis on advanced prehospital assessment and management of cardiac patients.

Student Learning Outcomes

1. Demonstrate knowledge of anatomy and physiology, assessment findings, principles of epidemiology and pathophysiology to formulate a field impression and choose a comprehensive treatment/disposition plan for a patient with a cardiac complaint.
2. Integrate comprehensive knowledge of causes, pathophysiology, and management of the following cardiovascular conditions.
 - a. Acute coronary syndrome
 - b. Heart failure
 - c. Nontraumatic cardiac tamponade
 - d. Cardiogenic shock
 - e. Vascular disorders
 - f. Cardiac rhythm disturbances
 - g. Infectious diseases of the heart
 - h. Congenital abnormalities
3. Demonstrate an understanding of the acquisition, interpretation and integration of EKG findings into patient assessment, management and disposition.

EMSS 2410L. Cardiac Emergencies Laboratory

Course Description

Focuses on the performance of advanced patient assessment, management, and development of a treatment plan, with extensive integration of an understanding of cardiac pathophysiology and pharmacology. Integrates EKG and 12 lead EKG

acquisition and interpretation with patient management. There is an emphasis on the application of advanced assessment and management of cardiac patients.

Student Learning Outcomes

1. Applies knowledge of anatomy and physiology, assessment findings, principles of epidemiology and pathophysiology to formulate a field impression and implement a comprehensive treatment/disposition plan for a patient with a cardiac complaint.
2. Demonstrates safe, appropriate and effective management of the following cardiovascular conditions:
 - a. Acute coronary syndrome
 - b. Heart failure
 - c. Nontraumatic cardiac tamponade
 - d. Cardiogenic shock
 - e. Vascular disorders
 - f. Cardiac rhythm disturbances
 - g. Infectious diseases of the heart
 - h. Congenital abnormalities
3. Demonstrates the appropriate application and interpretation of EKG findings into patient assessment, management and disposition.
4. Safely and effectively perform all psychomotor skills within the National EMS Scope of Practice Model and NM Paramedic Scope of Practice.

EMSS 2510. Medical Emergencies

Course Description

A course which covers patient assessment, Anatomy & Physiology, pathology of non-cardiac, non-OB/Peds, special populations medical emergencies. Includes environmental, chemical, poisoning, infectious diseases, endocrine/digestive, renal system and psychiatric illnesses.

Student Learning Outcomes

1. Integrate assessment findings with principles of epidemiology and pathophysiology to formulate a field impression and implement a comprehensive treatment/disposition plan for a patient with a medical complaint.
2. Understand epidemiology, disease pathologies and how they impact transport and destination decisions.
3. Construct assessment and treatment plans for vulnerable patient populations including the cognitively impaired, pregnant, pediatrics, technology dependant, congenital diseases and geriatrics.
4. Understand the pathophysiology, assessment, management and treatment of the medical patient with multiple comorbidities.
5. Understand how to safely and effectively communicate with, assess, and manage patients with psychiatric illnesses.

EMSS 2510L. Medical Emergencies Laboratory

Course Description

Performs advanced assessments, formulates diagnoses, implements treatment plans and manages common medical and behavioral emergencies.

Student Learning Outcomes

1. Demonstrate the integration of assessment findings with principles of epidemiology and pathophysiology to formulate a field impression and implement a comprehensive treatment/disposition plan for a patient with a medical complaint.
2. Integrate knowledge of epidemiology and disease pathologies into transport and destination decisions.

3. Implement assessment and treatment plans for vulnerable patient populations including the cognitively impaired, pregnant, pediatrics, technology dependant, congenital diseases and geriatrics.
4. Appropriately assess, manages and treats patients with multiple comorbidities.
5. Demonstrate how to safely and effectively communicate with, assess, and manage patients with psychiatric illnesses.

EMSS 2515. Medical Emergencies I

Course Description

The course covers pathophysiology, assessment, and management of common medical emergencies in the areas of pulmonology, neurology, and cardiology.

Student Learning Outcomes

1. Demonstrate an understanding of respiratory, neurological, and cardiac emergencies based on patient history, and physical examination.
2. Demonstrate appropriate prehospital management for respiratory, neurological, and cardiac emergencies with practices.
3. Application of evidence-based medicine and practices to respiratory, neurological and cardiac emergencies.
4. Demonstrate professional communication and documentation when managing patients with accurate patient reports and handoff to receiving facilities.
5. Integrate assessment findings with emergency pharmacology and relevant tools to create and implement treatment plans for patients with medical complaints.

EMSS 2520. Emergency Medicine II

Course Description

Theory course covering the pathophysiology, assessment, and management of common medical emergencies in the areas of allergies and anaphylaxis, gastroenterology, urology, toxicology, hematology, environmental exposures, infectious and communicable diseases, behavioral medicine, gynecology, obstetrics, orthopedics, and HEENT.

Student Learning Outcomes

1. Demonstrate an understanding of medical emergencies based on patient history, and physical examination.
2. Demonstrate appropriate prehospital management for medical patients with current practices.
3. Application of evidence-based medicine and various medical conditions.
4. Demonstrate professional communication and documentation when managing patients with accurate patient reports and handoff to receiving facilities.
5. Integrate assessment findings with emergency pharmacology and relevant tools to create and implement treatment plans for patients with medical complaints.

EMSS 2610. Paramedic Trauma Care

Course Description

A course which covers the mechanism of injury, pathophysiology, diagnosis, assessment, treatment and care of the trauma and environmental emergency patient.

Student Learning Outcomes

1. Understands epidemiology, trauma scoring and destination decisions.
2. Formulates comprehensive and focused assessment strategies for minor, moderate and critically ill patients with bleeding; chest, abdominal, genitourinary, orthopedic, soft tissue, head, face, neck, spine, nervous system trauma.

3. Construct assessment and treatment plans for vulnerable trauma patient populations including the cognitively impaired, pregnant, pediatrics and geriatrics.
4. Understand the pathophysiology, assessment, management and treatment of environmental emergencies.
5. Understand the pathophysiology, assessment, management and treatment of the multisystems trauma patient.

EMSS 2610L. Paramedic Trauma Care Laboratory

Course Description

A practical course which covers the mechanism of injury, pathophysiology, diagnosis, assessment, treatment and care of the trauma and environmental patient.

Student Learning Outcomes

1. Applies an understanding of epidemiology, trauma scoring and destination decisions.
2. Implement comprehensive and focused assessment strategies for minor, moderate and critically ill patients with bleeding; chest, abdominal, genitourinary, orthopedic, soft tissue, head, face, neck, spine, nervous system trauma.
3. Construct and applies assessment and treatment plans for vulnerable trauma patient populations including the cognitively impaired, pregnant, pediatrics and geriatrics.
4. Applies an understanding of the pathophysiology, assessment, management and treatment of environmental emergencies.
5. Applies an understanding of the pathophysiology, assessment, management and treatment of the multisystems trauma patient.
6. Safely and effectively perform all psychomotor skills within the National EMS Scope of Practice Model and the New Mexico Scope of Practice at the Paramedic level.
7. Demonstrate professional behavior including, but not limited to, integrity, empathy, self-motivation, appearance/personal hygiene, self-confidence, communication, time management, teamwork/diplomacy, respect, patient advocacy and careful delivery of service.

EMSS 2650. Advanced EMS Operations

Course Description

Theory course covering the operational aspects of paramedic practice including discussions on the Incident Command System, hazardous materials, rescue, crime scene awareness, mass casualty incidents, bioterrorism/WMD, aeromedical transport, ambulance operations and extrication.

Student Learning Outcomes

1. Identify risks and responsibilities associated with:
 - a. ambulance and air medical transportation
 - b. multiple-casualty incidents
 - c. gaining access to and extricating patients
 - d. hazardous materials incidents
 - e. responding to situations involving weapons of mass destruction
2. Knowledge of operational roles and responsibilities to ensure patient, public, and personnel safety.
3. Establish and work within the incident management system.

EMSS 2710. Advanced Care of Special Populations

Course Description

Comprehend assessment findings with principles of pathophysiology and knowledge of psychosocial needs to formulate a field impression and identify a comprehensive treatment/disposition plan for patients with special challenges and neonates, pediatrics, geriatrics, obstetrics.

Student Learning Outcomes

1. Demonstrate comprehensive knowledge of the pathophysiology, assessment and treatment of the following patient types:
 - a. neonatal
 - b. obstetric
 - c. pediatric
 - d. patients identified as having special challenges
 - e. geriatric
2. Recognize the unique psychosocial needs of these patients and demonstrate knowledge of relevant community resources.

EMSS 2710L. Advanced Care of Special Populations Laboratory

Course Description

Integrates assessment findings with principles of pathophysiology and knowledge of psychosocial needs to formulate a field impression and implement a comprehensive treatment/disposition plan for patients with special challenges and neonates, pediatrics, geriatrics, obstetrics.

Student Learning Outcomes

1. Understands and implements comprehensive knowledge of the pathophysiology, assessment and treatment of the following patient types:
 - a. neonatal
 - b. obstetric
 - c. pediatric
 - d. patients identified as having special challenges
 - e. geriatric
2. Demonstrate an awareness of the unique psychosocial needs of these patients and an ability to connect them to relevant community resources.

EMSS 2790. Development of the Professional Paramedic

Course Description

Summative and developmental course providing a comprehensive review of all prior paramedic coursework to prepare students for New Mexico and National Registry testing, presentation of student research projects, and debriefing of field internship experiences. The course also involves comprehensive written and psychomotor exams that will serve as a final for the entire program.

Student Learning Outcomes

1. Demonstrate competency in all cognitive and critical thinking domains by successfully completing comprehensive final written exams.
2. Demonstrate competency in all psychomotor skills by successfully completing comprehensive practical skill final exams.
3. Demonstrate competency in all criteria for affective behavior of the professional paramedic.

EMSS 2850. Paramedic Lab I

Course Description

During this course students' progress through skill demonstration, skill practice, skill mastery evaluation, patient care scenarios, and scripted simulations. Demonstration of Competency is evaluated in the following topic areas: leadership and participation, assessment and response, patient assessment skills, airway skills, medication administration skills, and Cardiac skills.

Assessment is completed through both peer and faculty evaluation. Skill and patient encounter documentation is continued in the clinical phases of the Program. The laboratory phase requires application of knowledge gained in the classroom and independent learning to the psychomotor and affective behavior domains.

Student Learning Outcomes

1. Integrates knowledge of epidemiology and disease pathologies into treatment and transport decisions.
2. Demonstrates an ability to administer medications as appropriately based on patient presentations.
3. Utilizes various methods, tools and techniques to assure a patient has patent airway ventilations and respirations.
4. Demonstrates the appropriate applications and interpretations of EKG findings into patient assessment management and dispositions.
5. Demonstrate safe and effective communications in assessment and management of patients **with medical illnesses**.

EMSS 2855. Paramedic Lab II

Course Description

Reinforce paramedic theory coursework through practical labs and simulated patient care scenarios. Topics covered include medical emergencies, trauma, special populations, operations, and current issues.

Student Learning Outcomes

1. Applies an understanding of pathophysiology, assessment, management and treatment of medical patients.
2. Applies an understanding of pathophysiology, assessment, management and treatment of multi system trauma patients.
3. Applies an understanding of the pathophysiology assessment, management and treatment of Pediatrics and Geriatrics.
4. Demonstrates the ability to administer and treat patients based on their presentations.
5. Utilizes various methods, tools and techniques to ensure treatment plan is appropriate for condition in lab and simulation.
6. Demonstrate safe and effective communications in assessment and management through critical thinking and prehospital management strategies.

EMSS 2890. Paramedic Clinical I

Course Description

A course which provides students with clinical opportunities which may include hospitals, clinics, field rotations and other healthcare settings to administer medications, perform approved skills, and assess and manage patients of all age groups with various medical or traumatic conditions. Provides students an opportunity to apply their knowledge in real patient care situations, under direct supervision. Students may be required to travel to complete this course.

Student Learning Outcomes

With supervision, the student will be able to:

1. Perform a comprehensive assessment, formulate and implement a treatment plan for all patient types across all age groups.
2. Safely and appropriately administer allowed medications.

3. Safely and appropriately perform allowed skills.
4. Work effectively as part of a healthcare team.
5. Demonstrate appropriate affect.

EMSS 2895. Paramedic Clinical II

Course Description

A continuation of Paramedic Clinical I which provides students with clinical opportunities which may include hospitals, clinics, field rotations and other healthcare settings to administer medications, perform approved skills, and assess and manage patients of all age groups with various medical or traumatic conditions. Provides students an opportunity to apply their knowledge in real patient care situations, under direct supervision. Students may be required to travel to complete this course.

Student Learning Outcomes

With supervision, the student will be able to:

1. Perform a comprehensive assessment, formulate and implement a treatment plan for all patient types across all age groups.
2. Safely and appropriately administer allowed medications.
3. Safely and appropriately perform allowed skills.
4. Work effectively as part of a healthcare team.
5. Demonstrate appropriate affect.

Environmental Engineering (ENVE)

ENVE 1110. Environmental Engineering Seminar

Course Description:

Environmental Science Engineering (ENSC)

ENSC 1110. Introduction to Engineering Design

Course Description:

Students will be introduced to the profession of engineering and gain fundamental engineering skills with an emphasis on engineering design and problem solving. Topics include problem definition, presentation of a solution, the engineering design process, working in a team environment, engineering graphics by hand and in SolidWorks, graphical solutions, and simple

modeling in Microsoft Excel. Students will learn the process of designing, building, modeling, and optimizing a system through a semester-long project.

Student Learning Outcomes

By the end of this course, students will be able to:

1. Apply the engineering design process.
2. Define engineering problems, identify constraints and criteria, generate and evaluate design alternatives, and justify a final solution.
3. Solve introductory engineering problems using analytical and graphical methods.
4. Apply basic mathematics, graphical techniques, and logical reasoning to analyze engineering systems and support design decisions.
5. Communicate engineering ideas and solutions effectively.
6. Convey technical information through written reports, oral presentations, sketches, engineering drawings, and graphical representations.
7. Use modern engineering tools for modeling and design.
8. Create and interpret engineering graphics using freehand sketching and SolidWorks, and develop simple computational models using Microsoft Excel.
9. Work effectively as a member of an engineering team.
10. Collaborate in a team environment to plan tasks, share responsibilities, and contribute to a semester-long engineering design project.
11. Demonstrate professional, ethical, and responsible engineering behavior.
12. Recognize ethical responsibilities, practice safe and responsible conduct, and understand the broader impact of engineering solutions.

ENSC 1011. Computer Programming for Engineers

Course Description

Engineering computer problem solving using a high-level programming language. Algorithms and program development and documentation. Emphasis is placed on programming logical and concise solutions to a variety of problems drawing from engineering disciplines of mechanics, civil, electrical, industrial, and economics.

Student Learning Outcomes

1. Understand basic programming principles/syntax/structure.
2. Understand how to debug computer code.
3. Establish a working knowledge of programming solutions in Matlab.
4. Use Matlab to solve various types of problems in engineering and applied math.
5. Use Matlab to solve a complex, in-depth problem from the student's discipline.

ENSC 2201. Statics

Course Description

Forces and moments acting on rigid bodies in equilibrium, distributed forces including hydrostatic forces, friction, moment of inertia, and problem solutions by computer.

Student Learning Outcomes

1. Students will recognize:
 - a. Their individual role of professionalism and ethical responsibility.
 - b. The need for clear, neat, and logical solutions to problems.
2. Students will understand Newton's First and Third laws.

3. Students will be able to:
 - a. Draw and apply free body diagrams.
 - b. Quantitatively analyze forces acting on a rigid body.
 - c. Perform entry-level professional work in engineering.
4. Students will continue developing a cognitive reasoning (problem solving) skill set.

ENSC 2216. Engineering Fluid Mechanics

Fundamentals of fluid mechanics including fluid statics, velocity of continuous media, continuity, and momentum balance. Introduction of laminar and turbulent flows, similitude, dimensionless analysis, Bernoulli's equation, friction factor, introduction to pump and compressor selection.

Student Learning Outcomes

1. Acquire fundamentals related to fluid, including concepts of mass, momentum, and energy conservation.
2. Recognize equations governing fluid motions, i.e., Navier-Stokes equations.
3. Classify and distinguish flow problems.
4. Apply the Bernoulli equation to solve flow problems.
5. Apply dimensional analysis for problems in fluid mechanics.
6. Recognize laminar and turbulent flows.
7. Associate fundamentals of fluid mechanics to real-world applications."

English (ENGL)

ENGL 1105. Introduction to Academic Writing for Multilingual Students

Course Description:

This course is offered to international and domestic multilingual students. The purpose of this course is to provide students with review and practice opportunities to develop writing fluency and coherence, grammar awareness, and academic vocabulary necessary to be successful in ENGL 1110.

Student Learning Outcomes:

1. Create well-organized, coherent paragraphs alone or in essay format.
2. Integrate a variety of sentence structures in connected discourse.
3. Portray, with general mastery, basic grammatical forms with very few errors.
4. Summarize or paraphrase information from source readings correctly.
5. Analyze readings for meaning and main ideas through annotation.
6. Integrate APA style format for in-text citations and references into their writing.

ENGL 1110. Composition I

Course Description

In this course, students will read, write, and think about a variety of issues and texts. They will develop reading and writing skills that will help with the writing required in their fields of study and other personal and professional contexts. Students will learn to analyze rhetorical situations in terms of audience, contexts, purpose, mediums, and technologies and apply this knowledge to their reading and writing. They will also gain an understanding of how writing and other modes of communication work together for rhetorical purposes. Students will learn to analyze the rhetorical context of any writing task and compose with purpose, audience, and genre in mind. Students will reflect on their own writing processes, learn to workshop drafts with other writers, and practice techniques for writing, revising, and editing.

Student Learning Outcomes

1. Analyze communication through reading and writing skills.

2. Employ writing processes such as planning, organizing, composing, and revising.
3. Express a primary purpose and organize supporting points logically.
4. Use and document research evidence appropriate for college-level writing.
5. Employ academic writing styles appropriate for different genres and audiences.
6. Identify and correct grammatical and mechanical errors in their writing.

ENGL 1120. Composition II

Course Description

In this course, students will explore argument in multiple genres. Research and writing practices emphasize summary, analysis, evaluation, and integration of secondary sources. Students will analyze rhetorical situations in terms of audience, contexts, purpose, mediums, and technologies and apply this knowledge to their reading, writing, and research. Students will sharpen their understanding of how writing and other modes of communication work together for rhetorical purposes. The emphasis of this course will be on research methods.

Student Learning Outcomes

1. Analyze the rhetorical situation for purpose, main ideas, support, audience, and organizational strategies in a variety of genres.
2. Employ writing processes such as planning, organizing, composing, and revising.
3. Use a variety of research methods to gather appropriate, credible information.
4. Evaluate sources, claims, and evidence for their relevance, credibility, and purpose.
5. Quote, paraphrase, and summarize sources ethically, citing and documenting them appropriately.
6. Integrate information from sources to effectively support claims as well as other purposes (to provide background information, evidence/examples, illustrate an alternative view, etc.).
7. Use an appropriate voice (including syntax and word choice).

ENGL 1130. Editing and Style

Course Description

Examines the elements of good creative writing and the methodologies of evaluating and editing students' own writing and that of others. Includes style and usage, diction and sentence variety, imagery and figurative language, and how to write concisely and with expression.

Student Learning Outcomes

Upon successful completion of the course, the student will be able ...

1. To learn the elements of editing and style that contribute to good writing and the attributes that an effective creative writer needs to be successful.
 - a. Study and understand the components and methodology that editors use to improve and re-focus creative works.
 - b. Learn and demonstrate mastery of the various attributes of an individual who is both a creative writer and a careful editor.
2. To think creatively and analytically about selected pieces of writing with the purpose of improving them through focused and careful editing.
 - a. Read selected pieces of writing and identify ways to improve them through holistic and detailed analytical editing.
 - b. Make connections with editing the work of others and applying them to his/her own writing.
 - c. Understand the editing process in detail—from sentence level issues such as punctuation and word choice to matters of organization and logic.
3. To understand and learn to incorporate elements such as diction, sentence variety, and figurative language into essays and other works generated for the course

- a. Write essays and other works in various genres that reflect an understanding of the elements of creative writing.
- b. Write essays and other works that demonstrate the ability to incorporate imagery and figurative language appropriately as well as use sentences that effectively communicate the writer's purpose.
- c. Demonstrate the ability to edit the works of others with the above elements in mind.
- 4. To learn to integrate the concepts of imagination and creativity with the precepts of succinct stylistic writing so that the author's intent is clearly communicated.
 - a. Demonstrate in essays and other works an understanding of the importance of clear, concise and succinct writing.
 - b. Understand that clarity of purpose and meaning is essential in all forms of creative writing.

ENGL 1160. Introduction to Digital Storytelling

Course Description

Provides a comprehensive overview of the genre of digital storytelling. Digital stories are narratives that combine elements such as text, audio, photography, film, and graphics.

Student Learning Outcomes

- 1. Describe the history of the development of linear and interactive digital stories.
- 2. Explain how interactive digital stories build upon narrative techniques to include ludological (gameplay) elements.
- 3. Explain the significance of digital stories as cultural productions.
- 4. Analyze the use narrative and gameplay techniques in linear and interactive digital stories.

ENGL 1210. Technical Communications

Course Description

This is an introductory study of written and verbal communications used in the technical professions with emphasis in the planning, execution, and editing of professional and technical documents and other communication media.

Student Learning Outcomes

- 1. Define the purpose, audience and objective for a given technical document analyze the primary audience for that communication.
- 2. Design/format the pages and visuals for a document prepare and present oral presentations and briefings.
- 3. Correctly use the format for several technical documents, including procedures, proposals, and job application materials

ENGL 1220. Introduction to Mass Communications

Course Description

Course covers the functions and organization of the mass media system in the United States; analyzes the cultural, social, and political impact of mass media on US society.

Student Learning Outcomes

- 1. Explain basic concepts of journalism and strategic communication, as well as some of the legal restraints and ethical issues facing media workers.
- 2. Write accurately, fairly, ethically, correctly, and clearly in forms and styles appropriate for communication professionals.
- 3. Recognize news values and the way that professionals critically evaluate information, including an introduction to basic statistics.
- 4. Apply media literacy knowledge and skills.

ENGL 1230. Introductory Academic Communication

Course Description

The course introduces students to the general culture of a US university. It provides opportunities to develop their listening, speaking, reading, and writing skills related to their coursework in science, technology, engineering, and mathematics (e.g., understanding lectures, reading academic texts, communicating with professors and TAs, etc.). Students are also introduced to strategies for drafting and editing academic writing and for preparing and giving academic presentations.

Student Learning Outcomes

1. Communicate effectively in various forms of academic English writing.
2. Listen and comprehend academic English.
3. Read, comprehend and respond to English academic texts.

ENGL 1240. Writing for Mass Media I**Course Description**

This course introduces you to journalistic writing, including conventions of journalism, and the gathering and writing of news articles for print and broadcast media.

Student Learning Outcomes

1. Explain various applications of media literacy knowledge and skills
2. Identify components that guide the creation, distribution and exhibition of media.
3. Describe the goals and methods of various media industries
4. Analyze current mass media issues, including ethical issues.
5. Describe the evolution of media and its cultural, social, geopolitical and economic impact.

ENGL 1310. Introduction to Journalism**Course Description**

This course is intended as an introduction to print and online journalism. The student is introduced to the journalistic style of writing, terms used in journalistic work, editing copy, as well as layout and design. Emphasis is also placed on examining complexities surrounding the media, particularly media ethics.

Student Learning Outcomes

1. Recognize newsworthy events or people.
2. Assess the necessary background research for a story and how to interview sources.
3. Develop basic “hard news” stories and basic feature stories.
4. Recognize the ethical conflicts that can arise in the course of researching and writing stories.
5. Apply principles for layout and design of articles.
6. Use appropriate diction, syntax, grammar, and mechanics.

ENGL 1320. Exploring Creative Writing**Course Description**

An introduction to creative writing including both fiction and poetry. Students will learn to develop characters, story lines, dialogue and point of view, as well as how to use imagery, sounds and poetic forms.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify techniques for writing fiction or poetry
2. Select appropriate modes of communicating their ideas and emotions
3. Identify useful strategies for writing and revising

ENGL 1410. Introduction to Literature**Course Description**

In this course, students will examine a variety of literary genres, including fiction, poetry, and drama. Students will identify common literary elements in each genre, understanding how specific elements influence meaning.

Student Learning Outcomes

1. Identify, define, and understand basic literary conventions and themes in fiction, poetry and drama.
2. Write reasonable, well-supported analyses of literature that ethically integrate evidence from texts.

ENGL 1510. Communication for Multilingual Students**Course Description**

This course allows students to apply the knowledge they have acquired in their field of study to further their development in English language skills. Students work on reading and responding to academic texts in both written and oral formats; crafting and expressing an original argument on an academic topic; and correctly summarizing, paraphrasing, and citing academic texts. Students will write and present on researched topics in their fields of study, provide constructive feedback on each other's work, and practice articulating and answering questions on academic topics.

Student Learning Outcomes

1. Listen and comprehend academic English.
2. Read, comprehend and respond to English academic texts.
3. Write academic English with improved proficiency and confidence.

ENGL 2088 – English Specialty

This course allows students to apply computer information technology elective credit towards an English program requirement. (Currently applicable for CNM only for transfer purposes).

Student Learning Outcomes

NA

ENGL 2110. Traditional Grammar**Course Description**

This course surveys traditional grammar, introducing linguistic terminology and methods for identifying and understanding parts of speech, parts of sentences and basic sentence patterns. The course presents terminology and methods designed to increase the student's understanding of the structure of the language.

Student Learning Outcomes

1. Identify and analyze sentence elements, sentence patterns, and usage.

2. Recognize and understand structural relationships involving verb phrases, noun phrases, and adverbial and adjectival modifying phrases and clauses.
3. Recognize parts of speech and explain their functions in phrases, clauses, and sentences.
4. Demonstrate sentence combinations through noun modification, nominalization, and other writing strategies employing knowledge of grammatical forms.
5. Identify differences between spoken and written use of language.
6. Distinguish differences between prescriptive and descriptive grammar.

ENGL 2120. Intermediate Composition

Course Description

This course builds upon and refines the writing skills acquired in previous writing courses, with a focus on non-fiction prose. Research, composition, exposition and presentation abilities will be practiced and developed. Through analysis and revision, students will develop strategies to improve the versatility and impact of their writing. Course topics and emphases may vary by section.

Student Learning Outcomes

1. Use a variety of writing styles and sets of conventions to compose documents for academic, business, technical, scientific, popular publishing or professional settings.
2. Analyze the subjects, purposes, audiences, and constraints that influence and determine document creation.
3. Develop research strategies for writing, gathering information from primary and secondary sources.
4. Use appropriate documentation and document design in writing.
5. Describe and evaluate rhetorical choices.

ENGL 2130. Advanced Composition

Course Description

This course is for students who are striving for fluency, maturity, clarity and significance in their writing. It is an intermediate writing course that builds on and refines writing skills acquired in previous courses. It focuses on non-fiction writing for the professions, business, science, technical fields, academe and/or the popular press. Short works of master writers are studied for ideas, style and structure.

Student Learning Outcomes

1. Students will examine and apply different writing styles and modes used by masters of personal essay and keep a reading response journal of assigned readings as demonstrated by scoring a 70% in faculty designed assignments.
2. Students will develop a sense of audience by discussing their papers with each other in small groups during class or by reading each other's papers and participating in positive, helpful peer reviews as demonstrated by scoring a 70% in faculty designed assignments.

ENGL 2140. Teaching Writing

Course Description

Introduces methods of teaching the writing workshop and the principles of writing to learn. Includes practical as well as theoretical material applicable for teachers at any level. Students develop their own practices and philosophies of teaching writing.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to ...

1. Write for both personal and academic purposes in order to demonstrate understanding of the writing process and insight into the self as writer.
2. Complete a writing-to-learn project in order to explore principles of writing-across-the-curriculum.
3. Articulate how the writing workshop process can function in a classroom at any level.
4. Complete at least one of the course assignments in an online environment.

5. Articulate in written format a beginning philosophy of teaching writing.

ENGL 2210. Professional and Technical Communication

Course Description

Professional and Technical Communication will introduce students to the different types of documents and correspondence that they will create in their professional careers. This course emphasizes the importance of audience, document design, and the use of technology in designing, developing, and delivering documents. This course will provide students with experience in professional correspondence and communicating technical information to a non-technical audience.

Student Learning Outcomes

1. Choose professional communication appropriate for audiences and situations.
2. Write in different genres of professional communication.
3. Identify the purpose of a work-related communication and assess the audiences' informational needs and organizational constraints.
4. Employ appropriate design/visuals to support and enhance various texts.
5. Demonstrate effective collaboration and presentation skills.
6. Integrate research and information from credible sources into professional communication.

ENGL 2215. Advanced Technical and Professional Communication

Course Description

Theory and practice of writing in technical and professional fields, individualized to each students' field. Emphasizes efficient writing processes and effective written products.

Student Learning Outcomes

1. To complicate the definition of "technical and scientific communication" and its relationship(s) to studying and practicing "rhetoric."
2. To complicate our relationship to concepts like "science", "knowledge, "objectivity," neutrality, "clarity," etc.
3. To use a community-based approach to study and practice technical and scientific documents within various discourse communities.
4. To study and practice different genres (i.e. memos, letters, e-mails, reports, proposals, and instruction sets) attending to issues of audience and purpose within discourse communities.
5. To practice some mindful reading strategies that allow you to attend to the use of language and its material and discursive effects in different situations.
6. To examine the material effects of producing, circulating, and consuming technical and scientific texts on the bodies of people within different contexts.
7. To complicate our understanding of "ethics," "responsibility," and "accountability" toward ourselves and others.
8. To work collaboratively and individually to research, to analyze, and to write about public debates regarding the conduct of science and technology.
9. To understand and use basic principles of document design attending to issues of usability and accessibility.
10. To articulate the relationship between technical and scientific communication and issues of inclusion and social justice in the world.

ENGL 2220. Introduction to Professional Writing

Course Description

A beginning course in the professional writing concentration. Study of technical writing, public information and public relations writing and freelance nonfiction writing.

Student Learning Outcomes

1. Students will have a fundamental understanding of writing as a profession.
2. Students will be able to construct a portfolio and explain its significance and proper usage.

3. Students will write for a variety of professional writing genres.

ENGL 2221. Writing in the Humanities and Social Science

Course Description

Theory and practice in interpreting texts from various disciplines in the humanities and social sciences. Strategies for researching, evaluating, constructing, and writing researched arguments. Course subtitled in the Schedule of Classes. May be repeated up to 3 credits.

Student Learning Outcomes

1. Choose professional communication appropriate for audiences and situations.
2. Write in different genres of professional communication.
3. Identify the purpose of a work-related communication and assess the audiences' informational needs and organizational constraints.
4. Employ appropriate design/visuals to support and enhance various texts.
5. Demonstrate effective collaboration and presentation skills.
6. Integrate research and information from credible sources into professional communication.

ENGL 2230. Introduction to Popular Culture

Course Description

The course offers a survey of popular literary genres (horror, science fiction, etc.) as well as film and television. Students will analyze popular culture in the form of popular novels, songs, television shows, movies, comic books, and other cultural productions. Students will analyze this material in the same fashion as literature is analyzed, developing skills of cultural analysis and critique.

Student Learning Outcomes

1. Understand the way popular culture texts reflect larger cultural issues, fears, and desires.
2. Apply the techniques of literary analysis and cultural analysis to a wide variety of popular texts.
3. Discuss the development and evolution of popular culture genres.
4. Practice critically speaking and writing about popular culture.
5. Explore the full range and complexity of popular culture.

ENGL 2240. Introduction to Studies in English

Course Description

This course brings together students majoring in English. It is a required course and must be taken before embarking on the major coursework. Students are introduced to the subfields of rhetoric and professional writing; creative writing; literary studies; and critical theory and cultural studies. Students will be introduced to the life of the department through class visits with faculty members, attendance at departmental events, and a variety of readings and discussions. Some class sessions will include conversations about employment or opportunities for graduate school. The final task will be to craft a letter of intent documenting an intended course of study and future goals.

Student Learning Outcomes

1. Students will be introduced to all the subfields offered by the UNM English Department.
2. Students will be introduced to the life of the department through class visits with faculty members from each of the Department's subfields, attendance at departmental events, and a variety of readings and discussions.

ENGL 2260. Creating Linear Digital Stories

Course Description

In this course, you will craft your own linear digital story! Linear digital stories have a set beginning, middle, and end and can be crafted in any digital subgenre, such as blogs, podcasts, or web videos (just to name a few possibilities). As part of the crafting process, we will engage in a writing circle to give and receive productive feedback for revision. By the end of the

course, you will have drafted, revised, and produced one scene of your own (fictional or nonfictional) digital story. Provides an aesthetic understanding of the elements of linear digital storytelling and provides mentorship and hands-on experience in creating a linear digital story.

Student Learning Outcomes

1. Identify literary elements in linear digital story subgenres.
2. Evaluate the literary elements of linear digital story subgenres.
3. Create a short linear digital story.
4. Improve linear digital stories through feedback.

ENGL 2261. Creating Interactive Digital Stories

Course Description

In this course, you will craft your own interactive digital story! Interactive stories are important to the history of video games. Like video games, what happens in an interactive story changes depending on the choices of your reader. As part of the crafting process, we will engage in a writing circle to give and receive productive feedback for revision. By the end of the course, you will have drafted, revised, and produced your own interactive digital story.

Student Learning Outcomes

1. Identify literary and ludological elements in interactive digital stories.
2. Evaluate the literary and ludological elements of interactive digital stories.
3. Create a short interactive digital story.
4. Improve interactive digital stories through feedback.

ENGL 2271. Writing for the Media II

Course Description

Emphasizes advanced skills and professional journalistic conventions, gathering and writing news for print and broadcast media, including a variety of types of stories and legal and ethical topics.

Student Learning Outcomes

1. Analyze daily print and broadcast news
2. Gather information from print and electronic documents
3. Integrate workbook exercises with actual news-writing assignments
4. Demonstrate interviewing techniques for print, audio, and video journalism
5. Organize and develop news story ideas using basic journalistic conventions
6. Prepare news copy suitable for publishing and/or broadcasting
7. Perform in news and editorial teams

ENGL 2280. History of Argument

Course Description

Investigates the major figures and movements in rhetoric from the classical period to modern rhetorical theory, examining relations between rhetorical teaching and practice, culture, epistemology, and ideology.

Student Learning Outcomes

By or at the end of the course, you should understand what the following mean and, if applicable, be able to demonstrate each in writing.

1. Understand how rhetoric, argument, and persuasion work. Become familiar with the key terms and various contexts in which rhetoric, argument, and persuasion function and the contingencies that influence their use and effectiveness.
2. Be familiar with the broad history and major figures of western rhetoric.

3. Apply a number of approaches used to analyze and construct/deconstruct rhetorical arguments, including (but not limited to) Aristotelian appeals and commonplaces, stasis theory, toulmin analysis, pentadic/dramatistic analysis, fallacy analysis, and rogerian analysis.
4. Complete an analysis as well as design and present a project regarding a contemporary issue or concern about which you feel deep passion and commitment; and
5. Improve general critical thinking and communication skills, both oral and written.

ENGL 2290. Journalistic Practice

Course Description

Journalism 2290 is an internship designed to engage students in a professional media workplace as a means of gaining educational experience, on-the-job training, and marketable skills for careers in professional writing and/or mass media.

Student Learning Outcomes

Varies.

ENGL 2310. Introduction to Creative Writing

Course Description

This course will introduce students to the basic elements of creative writing, including short fiction, poetry, and creative nonfiction. Students will read and study published works as models, but the focus of this "workshop" course is on students revising and reflecting on their own writing. Throughout this course, students will be expected to read poetry, fiction, and non-fiction closely, and analyze the craft features employed. They will be expected to write frequently in each of these genres.

Student Learning Outcomes

1. Participate in a constructive conversation and community about creative writing.
2. Read and critically engage with a variety of texts.
3. Compose creative works in various genres of creative writing.
4. Provide respectful, honest, and critical feedback to peers about their work.
5. Revise creative work based on peer feedback and critique.
6. Develop thoughtful workshop reflection on students' own writing and writing process.
7. Evaluate and engage with publication process.

ENGL 2315. Advanced Creative Writing

Course Description

Provides continued exploration and development for writers with experience in a given genre and emphasizes the practice and techniques of published writers.

Student Learning Outcomes

Upon successful completion of the course, the student will be able

1. To use skillfully various techniques in a given genre of creative writing.
2. To demonstrate mastery of the various attributes of an individual who is a creative writer in a certain genre.
3. To think creatively and analytically about selected pieces of writing with the purpose of improving them through peer editing workshops by
 - a. Reading selected pieces of writing and identify ways to improve them through peer workshop discussions.
 - b. Making connections with editing the work of others and applying them to the student's own writing.
4. To read, recognize, and appreciate the work of published authors who are writing within a given genre.
5. To understand how to present, perform and/or publish in a given genre.

ENGL 2317. Creative Writing Thesis I

Course Description

Not Available

Student Learning Outcomes

Not Available

ENGL 2320. Introduction to Fiction Writing

Course Description This course will introduce students to the basic elements of fiction writing. This course is a reading and “workshop” introduction to the fundamental working modes of fiction. Throughout this course, students will be expected to read classic and contemporary fiction closely and analyze the craft features employed. They will be expected to write frequently in various fiction genres throughout the course.

Student Learning Outcomes

1. Engage in a constructive conversation and community about fiction.
2. Read and critically engage with various works of fiction.
3. Compose creative works of fiction.
4. Provide respectful, honest, and critical feedback to peers about their work.
5. Learn a language that provides groundwork for workshop structure and peer critique.
6. Revise creative work based on peer feedback and critique.
7. Develop thoughtful workshop reflection on students' own writing and writing process.
8. Evaluate and engage with publication process.

ENGL 2330. Introduction to Poetry Writing

Course Description

This course will introduce students to the basic elements of poetry. This course is a reading and workshop introduction to the fundamental working modes of poetry. Students will be expected to read classic and contemporary poetry and analyze the craft features employed. In this course, students will read, write, and respond to poetry and develop their understanding of poetic conventions.

Student Learning Objectives

1. Identify various forms, styles, elements, and conventions of poetry.
2. Write, revise, analyze and present their own poetry and the poetry of others.
3. Respond constructively and respectfully to other writers' poems.
4. Compare and contrast different styles of poetic expression.
5. Articulate how choices in language can impact a poem's meaning.

ENGL 2340. Introduction to Creative Nonfiction Writing

Course Description

This course will introduce students to the basic elements of creative nonfiction. This course is a reading and workshop introduction to the fundamental working modes of creative nonfiction. Throughout this course, students will be expected to read classic and contemporary works in the various genres of creative nonfiction and analyze the craft features employed. They will be expected to write frequently in these genres. Students will explore techniques of nonfiction such as prosody, exposition, descriptive detail, and narrative voice.

Student Learning Outcomes

1. Engage in a constructive conversation and community about creative nonfiction.
2. Read and critically engage with a variety of creative nonfiction works.
3. Compose creative nonfiction.
4. Provide respectful, honest, and critical feedback to peers on their work.
5. Learn a language that provides groundwork for workshop structure and peer critique.
6. Revise creative work based on peer feedback and critique.
7. Develop thoughtful workshop reflection on students' own writing and writing process.

8. Evaluate and engage with the publication process.

ENGL 2345. Intermediate Creative Writing – Fiction

Course Description

Not Available

Student Learning Outcomes

Not Available

ENGL 2350. Introduction to Drama

Course Description

This course introduces students to drama as a literary form. Students will identify elements of the dramatic form, examining how the choices made by the playwright, director, actors, set designer, costume designer, and even the audience influence the performance. Students will also examine different types of plays, such as comedy, historical, and tragedy, and the influence of the historical, social, and political setting.

Student Learning Outcomes

1. Identify, define, and analyze elements of the dramatic form and performance.
2. Demonstrate an understanding of the historical and cultural contexts for plays.
3. Compare and contrast plays of different types and from different periods
4. Identify common dramatic themes.

ENGL 2360. Introduction to Poetry

Course Description

This course is an introduction to reading and thinking about poetry. This course will involve the reading and analysis of poems from a variety of eras. By examining poetic features of tone, speaker, situation, setting, language, sounds, internal structure, and external form, students will build a foundation for complex critical thinking about what poems can do. All poems are born out of particular literary and cultural contexts, which will also be discussed as part of this course's inquiries into the nature of poetry and poetic form.

Student Learning Outcomes

1. Read poetry from a variety of time periods and cultures.
2. Utilize a variety of critical approaches to analyze poetry.
3. Identify poetic forms and terms.
4. Develop a deeper understanding of the elements of poetry, imagery, rhyme, meter, form, symbol, and myth.
5. Recognize dominant literary and cultural contexts for assigned readings.
6. Write and revise reflective essays that engage with assigned readings.
7. Actively engage in discussions regarding critical interpretations of assigned readings.

ENGL 2365. Intermediate Creative Writing – Poetry

Course Description

Not Available

Student Learning Outcomes

Not Available

ENGL 2367. Intermediate Multi-Genre Creative Writing Workshop

Course Description

A multi-genre workshop for experienced creative writers, offering supportive instruction in writing and peer feedback in order for students to grow their craft, explore their roles and responsibilities as artists in society, and pursue next steps in publishing their work.

Major Topics

1. Craft in multiple genres: synergy of technique, creative expression, and content
2. Constructive participation in writers' workshop activities as both writer and reader
3. Completion and refinement of a significant body of creative writing in one or more genres
4. Preparation and submission of polished pieces for publication and advancement
5. Exploration of personal, social, and professional responsibilities as artists across intersectional contexts

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate growth in craft
2. Provide, receive, and synthesize constructive feedback from self, peers, and instructor
3. Revise drafts into polished pieces
4. Demonstrate understanding of publishing modes and opportunities
5. Generate and synthesize values in a personal artist's statement

ENGL 2370. Introduction to the Novel

Course Description

This course is an introduction to the study of long fiction, such as novels and novellas, focusing on the use of critical approaches to analyze the ways that narrative is created. Students will read and analyze a diverse range of texts that may include varying time periods, nationalities, regions, genders, and ethnicity.

Student Learning Outcomes

1. Read a selection of fictional works.
2. Identify literary devices of long fiction, such as plot, character, setting, point of view, and theme.
3. Use critical approaches and engage in discussions to analyze fiction.
4. Define the strengths and limitations of long fiction forms.

ENGL 2380. Introduction to Short Fiction

Course Description

This course is an introduction to the study of short fiction, focusing on the use of critical approaches to analyze the ways that narrative is created. Students will read and analyze a diverse range of texts that may include varying time periods, nationalities, regions, genders, and ethnicity.

Student Learning Outcomes

1. Read a selection of fictional works.
2. Identify literary devices of short fiction, such as plot, character, setting, point of view, and theme.
3. Use critical approaches and engage in discussions to analyze fiction.
4. Define the strengths and limitations of short fiction forms.

ENGL 2381. Script Development and Storyboarding

Course Description

Examines effective writing principles for creating storyboards that communicate the overall picture of a project, timing, scene complexity, emotion and resource requirements.

Student Learning Outcomes

Upon successful completion of this course, you will be able to do the following:

1. Develop a story idea into a complete storyboard
2. Describe and visualize the creative aspects of a media project from conception to completion
3. Write a scene in the professional script format
4. Deliver a professional verbal and visual presentation of a story idea to an audience
5. The ability to conceive, illustrate and plan a visual project

6. Proficiency in oral, written, and visual communication via storyboarding, script writing and verbal presentations

ENGL 2382. Narrative: Principles of Story Across the Media

Course Description

Examines the various strategies of written and visual storytelling, narrative structure and its principal components (plot, theme, character, imagery, symbolism, point of view) with an attempt to connect them to elements of contemporary forms of media expression, including screenwriting, playwriting, writing for documentaries and animation, etc.

Student Learning Outcomes

By the end of this course, students should be able to:

1. Identify & use the building blocks of storytelling: plot, theme, character, imagery,
2. Symbolism and point of view
3. Develop these building blocks into a cohesive narrative within a written document
4. Effectively communicate in different written formats
5. Create design documents for varied genres of media: narrative short, documentary,
6. Animation, commercial/industrial video, computer game
7. Describe how a written narrative can be translated into a visual medium.

Course competencies

1. Demonstrate the ability to identify and use the building blocks of storytelling: Plot, theme, character, imagery, symbolism and point of view
2. Demonstrate how these building blocks work together to create a cohesive narrative within a written document
3. Demonstrate competency in effective written communication
4. Apply the elements of storytelling in creating design documents for varied formats of media: narrative short, documentary, animation, commercial/industrial video, computer game
5. Demonstrate the understanding of how a written narrative can be translated into a visual medium.

ENGL 2390. Introduction to Linguistics

Course Description

An introductory linguistics course dealing with phonology, grammar, semantics, language acquisition, language change, and the relationship between language and thought.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

Apply the differences between prescriptive and descriptive grammar.

1. Recognize the basic elements of phonetics and phonemics and the concepts of phoneme and morpheme.
2. Develop a general understanding of the theories of language origin.
3. Identify how writing originated and developed, and understand the role of semantics in language.
4. Analyze sentences syntactically.
5. Define the basics of transformational-generative grammar and various sociolinguistic aspects of language.
6. Transcribe speech and writing both phonetically and phonemically.
7. Recognize the basics of child language acquisition and how language changes.
8. Define how the brain is specialized for language.
9. Compare human languages to animal systems of communication.

ENGL 2410. Autobiography

Course Description

This course approaches autobiography through both theory and practice. Students will analyze major autobiographies, read critical commentary on the autobiography genre, and finally, produce their own autobiographical work using the course readings as models.

Student Learning Outcomes

1. Read and analyze autobiographical works.
2. Identify literary models commonly used in the autobiography genre.
3. Incorporate/respond to literary models in student's own creative work.
4. Critique objectively student's own work and that of others.
5. Revise and polished drafts of autobiographical work.

ENGL 2420. Children's Literature**Course Description**

Children's Literature is an introductory literature course that will provide an opportunity to explore the children's texts from analytical, pedagogical, and creative perspectives. We will explore literature for children through a lens of critical language arts pedagogy. We will discuss texts and think about ways that we can cultivate book joy for children and young adults, as well as how we can cultivate it for ourselves! Through a concentration on prose and poetry for young adult readers, we will consider various methods for interpreting literature for children with a focus on cultures, languages, and genres in children's literature. Diversity and representation will be the cornerstone of our literary considerations, and through a diverse book list we will consider the importance of positive representations of identity in children's literature as well the importance of providing children access to books. This course will have a SERVICE LEARNING component, meaning that we will work to develop a project that celebrates and supports literacy efforts in our community. Get ready to roll up your sleeves and get ready to read!

Student Learning Outcomes

1. Reflect on your understandings of yourself as a reader and develop your ability to engage in personal and critical response to literature.
2. Develop a broad knowledge of various genres of books for children.
3. Identify literary and artistic elements and analyze how they create effective books for children in order to evaluate the literary quality and appropriateness of specific books.
4. Select literature that reflects and embraces diversity.
5. Examine the role of literature in the lives of children.

ENGL 2430. Fairy Tales**Course Description**

An exploration of fairy and folk tales from a variety of cultures. The course introduces methods of analysis while exploring historical and contemporary roles and interrelationships of the tales.

Student Learning Outcomes

1. To understand Fairy Tales (FT) as a specific cultural expression and genre.
2. To identify the salient features of FT.
3. To locate FT in their historical and cultural context.
4. To describe how FT evolved over time and traveled across media.
5. To explain historical transpositions and cultural contexts of recurrent motives.
6. To identify continuity of social questions addressed in FT.
7. To understand different textual and visual articulations of those questions.

ENGL 2450. Myth and Literature**Course Description**

An introduction to the origin, development and uses of the classical mythologies of ancient Greece and Rome. Mythic themes are explored through both primary and secondary readings and include myths of creation, death and rebirth, fertility, the quest and the hero cycle. The course also addresses elemental archetypes embedded in myth and the importance of classical mythology in the study of literature.

Student Learning Outcomes

1. Recognize significant mythic patterns in literature of ancient Greece and Rome.
2. Recognize these patterns in literature of other countries in later periods.
3. Be familiar with the fundamental archetypes imbedded in classical mythology.
4. Recognize the same basic patterns in mythologies of other regions and times.

ENGL 2505. Introduction to Literacy Studies**Course Description**

The popular understanding of literacy often limits it to reading and writing skills taught in formal educational institutions. Scholars of literacy studies, however, view this model of literacy as overly simplified and devoid of context. In English 252, students will expand the definition of literacy beyond the classroom by interrogating the context within which literacy activities occur, while examining the relationships among community, identity, ideology, and language. This course will explore a number of approaches scholars have taken to theorizing literacy. Prerequisite: ENGL 112

Student Learning Outcomes

Students will be able to:

1. Demonstrate understanding of various theories of literacy studies.
2. Read and discuss modes of literacy from various contexts, communities, and cultures.
3. Compose in multiple modes of literacy.
4. Research and apply theories of literacy to consider literacy needs of the future.

ENGL 2510. Analysis of Literature**Course Description**

This course is an introduction to literary analysis and writing applied to literary techniques, conventions, and themes. Students will learn how to write focused literary analyses, demonstrating their understanding of biographical, critical, cultural, and historical contexts of various writers and genres. Students will also learn proper documentation, as well as other skills, such as quoting, paraphrasing, and integrating sources, both primary and secondary.

Student Learning Outcomes

1. Demonstrate an understanding of biographical, critical, cultural, and historical contexts.
2. Examine how the formal elements of a text create meaning.
3. Identify and apply various critical approaches to analyzing literature.
4. Summarize and evaluate scholarly articles in literary studies.
5. Integrate academic research to produce clear and detailed literary analysis about major texts from the course.

ENGL 2515. Types of Literature II**Course Description**

This course examines selected literary works from one or more genres. The successful students' critical thinking skills are developed through close reading of the genres presented. and exploration into the cultural, social, political, and/or historical influences on the works. Writing assignments may include journaling, a research project, critical commentaries, and/or oral reports.

Student Learning Outcomes

By the end of the semester, students should be able to:

1. Demonstrate continued proficiency in EN 223 Student Learning Outcomes.
2. Analyze literary works for elements, such as theme, character, plot, setting, symbolism, tone, and imagery.
3. Recognize, interpret, analyze, discuss, criticize, and evaluate works of literature created during the period.
4. Identify, distinguish, and evaluate authors of the period.
5. Interpret, organize, and evaluate knowledge of the period and its relationship to the authors and their works.

6. Recognize and use the relevant vocabulary of literary criticism and analysis.

ENGL 2520. Film as Literature

Course Description

The purpose of this course is to teach students how to analyze film as a visual text. Students will learn to analyze films, film techniques, eras, and genres. Students will also identify significant trends and developments in film-making, examining the ways in which film reflects and creates cultural trends and values.

Student Learning Outcomes

1. Develop an understanding of the cultural, historical, and technical contexts for various films.
2. Identify, define, and analyze basic film techniques used in different genres and time periods.
3. Analyze how film uses literature by studying different sources of adaptation.
4. Demonstrate an understanding of film in its various aspects by writing film analysis, reviews, and/or other projects.

ENGL 2521. The Bible as Literature

Course Description

Develops informed readings of Hebrew and Christian scriptures. Emphasizes understanding Biblical literary forms, techniques, themes; historical, cultural contexts for interpretation; authorship, composition, audience for individual books; development of Biblical canon.

Student Learning Outcomes

1. Develop and articulate historically informed and textually supported arguments regarding the form and meaning of biblical texts.
2. Express arguments and explication in clear, organized.
3. Understand the Jewish and Christian scriptures as cultural artifacts, using some fundamental techniques of literary analysis and interpretation, especially: thematic interpretation, stylistic analysis, narrative analysis, poetics, and the rhetorical analysis of figurative language.
4. Use socio-historically informed interpretive methods focused on these fundamental contextual questions : 1) who probably wrote and edited these texts, 2) why and how they most likely did so, 3) how their earliest audiences probably responded to them, and 4) why and how they were later combined to form the canonical Jewish and Christian bibles read today.
5. Know in detail substantial selections of representative, influential, and historically informative biblical texts.
6. Distinguish literary critical and historical analysis of the Bible from those based on faith, tradition, authority, and theology.
7. Recognize, understand, and analyze the forms, genres, and techniques used by biblical authors.
8. Become familiar with and be able to use essential knowledge of the historical, cultural, and geographical contexts of Biblical writing.
9. Learn how evaluate texts as historical documents, as well as how doing so relates to and differs from literary critical analysis and interpretation.
10. Become familiar with common and influential scholarly, critical, and aesthetic ways of reading Biblical texts from a contemporary perspective.
11. Understand the cultural influence of the Bible and its relevance for other areas of scholarly and artistic work.

ENGL 2530. Introduction to Latino/a Literature

Course Description

This course examines a variety of literary genres to explore the historical development of Latino/a social and literary identities. This survey offers an overview of the history of Latino/a literature, introducing the major trends and placing them into an historical framework.

Student Learning Outcomes

1. Read and analyze material: To be successful writers and thinkers, students will consider a number of perspectives, read critically, summarize accurately, and analyze insightfully. These tasks require that students demonstrate an ability to view issues from multiple perspectives as well as analyze, evaluate, and interpret one's own history and position in contemporary society.
2. Engage in critical thinking: Given the range of texts and topics covering Latino/a identity, students should consider ethics pertaining to the dynamics of diversity and inclusion by race, gender, class, sexual orientation, ethnicity, religion and disability in the U.S. and/or global context.
3. Explore marginalized perspectives: Through class discussions and written assignments, students should demonstrate an understanding of how the treatment of groups by race, ethnicity, disability, religion, sexual orientation, and/or gender inequality is socially constructed and maintained.

ENGL 2540. Introduction to Chicanx Literature

Course Description

This course examines a variety of literary genres to explore the historical development of Chicanx social and literary identities. This survey offers an overview of the history of Chicanx literature, introducing the major trends and placing them into an historical framework.

Student Learning Outcomes

1. Read and analyze material: Students will consider a number of different genres, including fiction, poetry, plays, and essays, and be taught to read them critically; summarize them accurately; and analyze them insightfully.
2. Engage in critical thinking: Given the range of texts and topics covering Chicano/a identity, students should consider ethics pertaining to the dynamics of diversity and inclusion by race, gender, class, sexual orientation, ethnicity, religion and disability in the U.S. and/or global context.
3. Explore marginalized perspectives: Through class discussions and written assignments, students should demonstrate an understanding of how the treatment of groups by race, ethnicity, disability, religion, sexual orientation, and/or gender inequality is socially constructed and maintained.

ENGL 2550. Introduction to Southwest Literature

Course Description

New Mexico and the greater Southwest has long been a contested region. Through novels, poetry, and drama, the course focuses on the social, historical, and political issues that create complex portrayals of the beauty, borders, and violence that give the Southwest such a unique history. By the end of the course, students will have a broader appreciation for the many voices that make up literature from the American Southwest.

Student Learning Outcomes

1. Analyze representative texts from the American Southwest literary canon.
2. Identify literary elements and common themes.
3. Examine the historical and cultural forces that have influenced the writings of Southwest authors.

ENGL 2560. Introduction to Native American Literature

Course Description

This course will introduce students to the literature produced by Native American authors as well as explore issues relevant to the study of Native American literature. The course will also introduce the basic elements of literary analysis.

Student Learning Outcomes

1. Read representative texts by Native American authors from various indigenous cultures and historical backgrounds.
2. Identify the historical and cultural forces that have shaped Native American literature.
3. Demonstrate an understanding of the diversity of oral traditions, written texts, and other media used in Native American literature.

ENGL 2566. Native Literature II: Literatures of Global Indigeneity

Course Description

Indigenous peoples are the descendants of the original habitants of a region prior to colonization. Indigenous peoples have survived and maintained tribal languages, cultures and community structures in the face of violent colonization. They are societies distinct from the settler societies that currently govern their territories. Because of historical and on-going struggles to coexist with settler societies, indigenous peoples continue to work for sovereignty and self-determination in their homelands. As part of the effort to persist, indigenous people “transform” colonial languages through multiple and new genres of literature. In this course, we will read multiple texts and watch films that “take back [the] power over [indigenous peoples] that is constantly imposed on us from the outside” (bird, “writing as witness).

Student Learning Outcomes

Not Available

ENGL 2567. Contemporary Navajo Literature

Course Description

While the Navajo people have always had a deep appreciation for the power and beauty of language, as reflected in the songs, prayers and stories that have sustained them through untold generations, it is not until recently that a number of Navajos have begun to write and publish widely in a number of different genres. Some of those writers are now attracting critical attention and winning prestigious literary prizes. This course will introduce students to some of those Navajo writers and their works. Some of the major themes, issues, and concerns that these writers share as a focus of their work will be discussed, as well as the new and still-evolving role of the writer in contemporary Navajo culture.

Student Learning Outcomes

The online Navajo writers course is a freshman level college course and provides students with the opportunity to hone their reading and writing skills as a part of the process of familiarizing themselves with and understanding the role of literature in contemporary Navajo communities.

Every student will:

1. Gain knowledge about the still-evolving role of writers and a written literature in contemporary Navajo culture.
2. Become familiar with some of the contemporary Navajo writers and their works.
3. Identify and discuss some of the major themes and issues in the writings of those writers.
4. Become familiar with some basic literary terms in order to facilitate discussion.
5. Engage in a discussion about these writers and works.
6. Contribute to online discussions and other writing assignments including journals and blogs.
7. Prepare and submit at least one formal response which uses the writing process, especially revisions.

ENGL 2570. Modern Latin American Literature

Course Description

Students survey this important world literature, which began to emerge in the early 19th century as new world nations strove to achieve independence from Spain and, later, Portugal. The nature of the historical evolution of these nations had an immediate and powerful effect on the developing literature and other cultural forms, and the history of the region has continued to shape the cultural production of all Latin American countries. We will study and discuss, in the light of the region's particular history, the major literary forms: poetry, drama, essays, short stories, and novels. We will place special emphasis on the importance of the literature as the embodiment of a tradition of emergent, multicultural voices speaking through history.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Distinguish among the diverse forms and voices in modern Latin American literature.
2. Analyze about vital relationships between literature and culture.
3. Synthesize the historical growth and development of a major multicultural literature.

4. Describe the value of reading a major world literature in translation.

ENGL 2580. Science Fiction

Course Description

Close reading and analysis of major science fiction works. Explores science fiction as cultural metaphor and modern myth.

Student Learning Outcomes

Students will be able:

1. To understand the way science fiction texts reflect larger culture issues, fears, and desires.
2. To apply the techniques of literary analysis and cultural analysis to a wide variety of science fiction texts.
3. To discuss the development and evolution of science fiction.
4. To practice critically speaking and writing about science fiction.
5. To explore the full range and complexity of science fiction.

ENGL 2585. Horror Literature

Course Description

A study of the folk origins of the horror story and its manifestations in mainstream and genre fiction and film.

Student Learning Outcomes

Students will be able:

1. To understand the way horror literature texts reflect larger culture issues, fears, and desires.
2. To apply the techniques of literary analysis and cultural analysis to a wide variety of horror literature texts.
3. To discuss the development and evolution of horror literature.
4. To practice critically speaking and writing about horror literature.
5. To explore the full range and complexity of horror literature.

ENGL 2610. American Literature I

Course Description

This course surveys American literature from the colonial period to the mid-nineteenth century. This course provides students with the contexts and documents necessary to understand the origins of American Literature and the aesthetic, cultural, and ideological debates central to early American culture.

Student Learning Outcomes

1. Recognize the traditions of American literature and their connection to issues of culture, race, class, and gender.
2. Demonstrate familiarity with a variety of major works by American authors.
3. Explore the various influences and sources of American literature.
4. Apply effective analytic and interpretive strategies to American literary works using academic conventions of citation and style.

ENGL 2620 American Literature II

Course Description

This course surveys American literature from the mid-nineteenth century to the contemporary period. This course provides students with the contexts and documents necessary to understand American Literature and the aesthetic, cultural, and ideological debates central to American culture.

Student Learning Outcomes

1. Recognize the traditions of American literature and their connection to issues of culture, race, class, and gender.
2. Demonstrate familiarity with a variety of major works by American authors.
3. Explore the various influences and sources of American literature.

4. Apply effective analytic and interpretive strategies to American literary works using academic conventions of citation and style.

ENGL 2630. British Literature I

Course Description

This course offers a study of British literature from its origins in Old English to the 18th century. This survey covers specific literary works—essays, short stories, novels, poems, and plays—as well as the social, cultural, and intellectual currents that influenced the literature.

Student Learning Outcomes

1. Read and discuss representative works of British writers from its origins in Old English to the 18th century to understand cultural and historical movements which influenced those writers and their works.
2. Identify the characteristics of various British literary genres, such as the essay, novel, short story, poetry, and dramatic literature.
3. Apply effective analytic and interpretive strategies to British literary works using academic conventions of citation and style.

ENGL 2640. British Literature II

Course Description

This course offers a study of British literature from the 18th century to the present. This survey covers specific literary works—short stories, novels, poems, and plays—as well as the social, cultural, and intellectual currents that influenced the literature.

Student Learning Outcomes

1. Read and discuss representative works of British writers from the 18th century to the present to understand cultural and historical movements, which influenced those writers, and their works.
2. Identify the characteristics of various British literary genres, such as the essay, novel, short story, poetry, and dramatic literature.
3. Apply effective analytic and interpretive strategies to British literary works using academic conventions of citation and style.

ENGL 2650. World Literature I

Course Description

In this course, students will read representative world masterpieces from ancient, medieval, and Renaissance literature. Students will broaden their understanding of literature and their knowledge of other cultures through exploration of how literature represents individuals, ideas and customs of world cultures. The course focuses strongly on examining the ways literature and culture intersect and define each other.

Student Learning Outcomes

1. Identify and comprehend key authors and literary works from ancient periods to the Enlightenment.
2. Understand each text's historical and cultural context.
3. Identify and analyze a variety of literary forms, including poetry, plays, and philosophical and religious texts.
4. Compare works from different cultures and historical periods examining genre, style, and content or theme.
5. Analyze how literary works reflect historical, national, cultural, and ethnic differences.

ENGL 2660. World Literature II

Course Description

In this course, students will read representative world masterpieces from the 1600s to the present. Students will broaden their understanding of literature and their knowledge of other cultures through exploration of how literature represents

individuals, ideas and customs of world cultures. The course focuses strongly on examining the ways literature and culture intersect and define each other.

Student Learning Outcomes

1. Identify and comprehend key authors and literary works from the 1600s to the present.
2. Understand each text's historical and cultural context.
3. Identify and analyze a variety of literary forms, including poetry, plays, and philosophical and religious texts.
4. Compare works from different cultures and historical periods examining genre, style, and content or theme.
5. Analyze how literary works reflect historical, national, cultural, and ethnic differences

ENGL 2670. African American Literature

Course Description

ENGL 2675. Transatlantic Literatures

Course Description

This course tracks the production, circulation, and reception of literary works in transatlantic contexts over at least 150 years. Students examine a variety of documents to map transformations in form, genre, and medium across historical and geographic contexts. Students consider how colonization, exile, displacement, and migration have track the production, circulation, and reception of literary works in transatlantic contexts over at least 150 years reinforced or contested national literary traditions.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Track the production, circulation, and reception of literary works in transatlantic contexts over at least 150 years.
2. Identify and analyze a variety of documents to map transformations in form, genre, and medium across historical and geographic contexts.
3. Explain how colonization, exile, displacement, and migration have reinforced or contested national literary traditions.

ENGL 2680. Women's Literature

Course Description

Surveys women writers from the English-speaking tradition. Includes various genres that represent the diversity of women's experiences.

Student Learning Outcomes

Upon successful completion of the course, the student will be able to

1. Read and think critically about each text, analyzing literary elements and interpreting meaning: Read representative texts by women from the literary canon, identifying literary elements and common themes. Make connections, draw conclusions, and interact with ideas presented in reading selections. Examine some of the historical and cultural forces that have influenced the writings of women. Gain an appreciation for the many voices that make up literature from the American Southwest.
2. Generate reflective and academic writing about literature using primary and secondary sources: Generate academic papers focusing on literary texts and using MLA documentation. Generate essays and answers to exam questions with significant analysis and treatment of topic. Generate essays and answers to exam questions that draw connections amongst texts written by women, identifying cultural and historical forces that influenced those texts. Generate research, writings, and answers to exam questions that demonstrate understanding of diversity of

literature written by women. Understand and apply standard conventions of writing (spelling, grammar, punctuation, usage, diction, syntax).

3. Interact collaboratively as a means of sharing ideas and extending experience: Contribute and respond with respect and honesty in group discussions. Demonstrate understanding of how cultural, social, and historical forces having influenced women's writing, making connections amongst texts, and showing appreciation of diversity of texts through class discussions.

ENGL 2685. Twentieth-Century Literature

Course Description

A study of modern sensibility as manifested in contemporary works written in English and English translation.

Student Learning Outcomes

Students will be able to:

1. Display a working knowledge of the cultural and historical contexts of 20th-century literature
2. Identify and describe distinct literary characteristics of 20th-century literature
3. Analyze literary works for their structure and meaning, using correct terminology
4. Write analytically about 20th-century literature using MLA guidelines
5. Effectively communicate ideas related to the literary works during class and group activities

ENGL 2690. Introduction to Shakespeare

Course Description

Student Learning Outcomes

Not Available

ENGL 2710. Classical Mythology

Course Description

Not Available

Student Learning Outcomes

Not Available

ENGL 2720. Mythology

Course Description

This course is an introduction to the nature and function of mythology. In this class we will study and compare mythologies of different cultures, keeping an eye on the ways in which myths expresses the inexpressible.

If one aspect of myth is that it tends to speak in the indigenous layer of the psyche (what Freud called "primary thinking"), then the fascination with myth can be understood, at least partly, as a fascination with the archaic (or archetypal) aspect of life. From that perspective, the study of myth is partly the study of inner life, the life of the imagination, which is why myth has been central to so many other disciplines.

Although we will study myths analytically, the primary aim of the course is to learn to see and think mythically--that is, to learn how to enter the mythic world.

In addition we will

1. explore ways both individuals and cultures use myth, ritual, and ceremony;
2. learn to read and interpret symbolic material;
3. master the basic theoretical issues involved in mythological studies;
4. recognize basic patterns and mythological motifs in both myths and in the presentation of everyday culture.

ENGL 2730. Celtic Mythology**Course Description**

Not Available

Student Learning Outcomes

ENGL 2780. Writing Portfolio**Course Description**

An individual or small group tutorial in creative writing which will focus on the revision and completion of a manuscript length project in poetry, fiction, or literary nonfiction. Students will be required to complete a minimum five literary essays/short stories or fifty pages of a memoir, novel, or poetry collection. Students will revise work to a finished, polished draft. There will also be an introduction to the business of writing, including market research and the mechanics of submission.

Student Learning Outcomes

1. Develop and complete at least 40 pages of a novel, short story collection, or poetry manuscript.
2. Understand and utilize the elements of the craft.
3. Critique objectively the student's own work and that of others.

ENGL 2790. Programmatic Capstone**Course Description**

Varies

Student Learning Outcomes

Varies

ENGL 2980. Topics and Problems in Literature in English**Course Description**

Investigation into topics and problems informing literature in English from Beowulf to the present. Assigned texts will illuminate the moral, social, and political dilemmas that modern individuals inevitably confront. Course topics might include but are not limited to: love and betrayal; the causes and costs of prejudice (racial, religious, gender); conformity and rebellion; the family and its discontents; civilization and barbarity.

Student Learning Outcomes

Not Available

ENGL 2983. Topics and Problems in World Literature**Course Description**

Investigation into topics and problems informing world literature. Assigned texts will illuminate the moral, social, and political dilemmas that modern individuals inevitably confront. Course topics might include but are not limited to: love and betrayal; the causes and costs of prejudice (racial, religious, gender); conformity and rebellion; the family and its discontents; civilization and barbarity.

Student Learning Outcomes

1. Read, comprehend, and analyze works of world literature across a wide variety of genres: poetry, short stories, memoir/creative non-fiction, dramatic works, and novel.

1. Write clear and well-supported interpretations of literary works in discussions, essays, and projects.
2. Compare and contrast works across genres and time periods.
3. Examine significant themes in each period and across time periods.
4. Explain how specific themes in world literature apply to our daily lives.

ENLG 2985. Topics and Problems in Literature of the Americas

Course Description

Investigation into topics and problems informing literature of the Americas from pre-European contact to the present. Assigned texts will illuminate the moral, social, and political dilemmas that modern individuals inevitably confront. Course topics might include but are not limited to love and betrayal; the causes and costs of prejudice (racial, religious, gender); conformity and rebellion; the family and its discontents; civilization and barbarity.

Student Learning Outcomes

In this course, students will:

1. Read, comprehend, and analyze works of American literature across a wide variety of genres: primary historical documents, poetry, pamphlets, essays, short stories, and novel.
2. Write clear and well-supported interpretations of literary works in discussions, essays, and projects.
3. Compare and contrast works across genres and time periods.
4. Examine significant themes in each period and across time periods.
5. Explain how specific themes in early American literature apply to present literature, art, and culture across the Americas.

ENGL 2990. Practicum

Course Description

Practicum hours may be designated for a variety of activities that offer students the opportunity to use their English language skills in such areas as tutoring, editing, public relations, and feature writing.

For every 1 hour of practicum credit, students must complete 4 work hours per week. Students meet on a regular basis with the practicum director/faculty advisor (preferably once a week) to verify progress, address problems and map further avenues of activity.

ENGL 2993. Writing Workshop

Course Description

Varies.

Student Learning Outcomes

Varies

ENGL 2994. Experiential Learning Portfolio

Course Description

The primary objective of the course is to identify, articulate, and document Experiential learning experiences in the form of a portfolio that can be evaluated for possible college credit towards a degree. Students may be granted credit for Work experience, and coursework or training completed outside the traditional College setting, so long as such work or experience covers similar material and concepts.

Student Learning Outcomes

1. Philosophy of experiential learning students will create a portfolio and score 70% or better on the following concepts:
 - a. Define experiential learning and contrast how it differs from traditional classroom-based instruction.
 - b. Explain why experience does not always constitute learning.
2. Identifying experiential learning activities students will score 70% or better on a portfolio which includes the following:
 - a. List non-collegiate activities that may result in experiential learning.
 - b. Recognize other activities or accomplishments that may be evidence of experiential learning.
 - c. Discuss criteria for assessing validity of experiential learning.
 - d. Identify and document the student's own experiential learning experiences.
3. Learning outcome statements students will score 70% or better on a portfolio which includes the following :
 - a. Demonstrate the ability to construct a concise narrative.
 - b. Documenting life experiences, incorporating correct grammar and Syntax.
4. Express life experiences and identify specific learning that has
 - a. Resulted from those experiences.
5. Portfolio construction students will score 70% or better on a portfolio which includes the following:
 - a. Demonstrate the use of proper formatting in constructing a portfolio.
 - b. Organize and present life experiences in a manner that effectively portrays one's skills and background.
 - c. Document life experiences in an orderly and systematic manner.

ENGL 2999. Capstone in English

Course Description

This capstone course will utilize the college's rubrics to assess the general education competency (writing, oral communication, information technology, critical thinking, scientific and mathematical reasoning) attainment using student artifacts. A portfolio reflecting best practices will be submitted to a faculty committee for review and evaluation. This course must be completed during the student's last semester prior to graduation.

Student Learning Outcomes

1. Identify artifacts that demonstrate attainment of the six general education competencies:
 - a. Writing

- b. Oral communication
 - c. Information technology
 - d. Critical thinking
 - e. Scientific reasoning
 - f. Mathematical reasoning
2. Briefly describe each artifact in a reflective essay.
3. Describe in a reflective essay how each artifact successfully meets each criteria identified in the rubrics.
4. Summarize in a reflective essay how the general education competency will impact you in the future and why it is important to your future success.

Entrepreneurship (ENTR)

ENTR 1110. Entrepreneurship

Course Description

Introduces students to the concept of entrepreneurship and to the process of business startups.

Student Learning Outcomes

Students should be able to:

1. Identify the unique characteristics of an entrepreneur.
2. Identify opportunities and conduct needs analysis.
3. Develop value proposition/market fit for proposed products and services.
4. Develop an appropriate business model.
5. Identify availability of necessary resources.

ENTR 1120. Creativity, Innovation and Entrepreneurship

Course Description

Learn how to develop your creative ideas into opportunities working with faculty and guest speakers who will share their hands-on experience and insight into creating and commercializing innovative products and services.

Student Learning Outcomes

Students should be able to:

1. Identify the unique characteristics of an entrepreneur.
2. Identify opportunities and conduct needs analysis.
3. Develop value proposition/market fit for proposed products and services.
4. Develop an appropriate business model.
5. Identify availability of necessary resources.

ENTR 2110. Small Business Management

Course Description

This course is designed to acquaint the student with the opportunities encountered in the management and operations of a small business enterprise.

Student Learning Outcomes

Students should be able to:

1. Contrast the legal forms of business ownership.
2. Prepare a feasible business plan.
3. Describe the impact of internal and external environmental factors on management decision-making.
4. Explain typical government regulations, registrations, and reporting and compliance requirements impacting business.
5. Project financial resources and statements to identify problems and timing of cash infusion.
6. Develop a customer relationship management system.

ENTR 2120. Business Models

Course Description

Business Models are created, edited, destroyed, resurrected, abandoned and made important again every day in boardrooms and basements all over the world. Business models are living things that evolve over time and should never be stuck in a desk drawer.

Student Learning Outcomes

Not Available

ENTR 2130. Finance and Funding for Start-Ups

Course Description

A continuing course in the entrepreneurship series addressing the financial concepts and tools needed by an entrepreneur to make sound business decisions throughout the start-up process. Topics include financial statements, financial ratio analysis, financial proforma, funding sources, exit strategy and financial plans.

Student Learning Outcomes

Students should be able to:

1. Read and interpret financial statements.
2. Determine the health of a business through performance analysis.
3. Create a cash flow proforma.
4. Identify the funding mix (debt, equity, grants, revenue and/or crowdfunding) for a business.
5. Explain how to exit a business.
6. Create a financial plan.

ENTR 2140. Pitching your Start-Up

Course Description

A capstone course in the entrepreneurship certificate. Students will have the opportunity to pitch their start-up idea and receive feedback from potential investors and select community members.

Student Learning Outcomes

1. Analyze a sample pitch deck.
2. Create a pitch deck.
3. Generate the pitch.
4. Practice the pitch.
5. Deliver a pitch to potential investors and/or select community members.
6. Accept feedback.

ENTR 2150. E-Commerce Crowdfunding and Marketing

Course Description

A continuing course in the entrepreneurship series examining e-commerce, crowdfunding and social media as sustainable marketing strategies for a new entrepreneurial venture. Topics include target markets, current and pending regulations, equity, reward and debt-based options and culminate in the creation of a viable marketing plan.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify a target market and assess its potential
2. Compare and contrast marketing strategies
3. Define and apply various e-commerce options
4. Describe how to price a crowdfunding campaign
5. Create a marketing plan

ENTR 2996. Topics in Entrepreneurship

Course Description

This course is related to a special topic in the field of business. The topic will be identified in the course schedule.

Student Learning Outcomes

Varies

Entomology, Plant Pathology and Weed Science (EPWS)

EPWS 1110. Applied Biology**Course Description**

Introduction to applied biology and ecology focusing on insects, plants and pathogens in natural areas, crops and urban settings.

Student Learning Outcomes

1. Students will learn about the Department of Entomology Plant Pathology and Weed Science and will have the opportunity to meet the in the department.
2. By the end of this course students will have gained a broad understanding of the pests in a wide range of systems, their interactions with other organisms, and the methods available to minimize the influence of pests on target commodities.

EPWS 1110L. Applied Biology Lab**Course Description**

Study of applied biology and ecology of insects, plants and pathogens in natural areas, crops, and urban settings. EPWS 1110 strongly recommended to take in the same semester

Student Learning Outcomes

1. Students will learn about the Department of Entomology Plant Pathology and Weed Science and will have the opportunity to meet the Las Cruces-based faculty in the department.
2. By the end of this course students will have gained a broad understanding of the pests in a wide range of systems, their interactions with other organisms, and the methods available to minimize the influence of pests on target commodities.

EPWS 2996. Topics in Entomology, Plant Pathology and Weed Science**Course Description**

Specific subjects and credits to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

Environmental Engineering (ENVE)

ENVE 1110. Environmental Engineering Seminar**Course Description:**

Seminars by faculty, guest speakers from industry, consulting, and government provide a brief overview of environmental engineering topics, including air pollution, water quality, and solid and hazardous waste.

Student Learning Outcomes

Students upon completion of this course will have:

1. Knowledge of the campus library resources as a research tool.
2. Performed a literature review and written a research paper on a field related topic.
3. Learned about licensure and professional and ethical responsibility.
4. Learned about engineering elements needed to bring a specific project to completion.
5. Recognized the general need for understanding basic sciences to solve problems.

6. An appreciation for the challenges faced by engineers in today's world.
7. Interacted with working engineers during guest lecture questions and answer sessions.

ENVE 2201. Introduction to Environmental Science and Engineering

The fundamentals of physics, chemistry, biology, and geology applied to problem solving in science and engineering. A study of environmental phenomena and strategies to control pollution of water, air, and land. Definition of basics for water quality engineering, water treatment, wastewater treatment, solid and hazardous waste management, radioactive waste management, and air pollution. Environmental impact statements and environmental ethics.

Student Learning Outcomes

Upon completion of this course, students will:

1. Have mastery of the fundamental physical, chemical and biological principles of environmental engineering.
2. Understand the scientific knowledge underpinning the major contemporary problems in the field.
3. Have a working knowledge of the full range of sub-disciplines in environmental engineering including water and wastewater, air quality and climate change, solid and hazardous waste, and others.
4. Will have developed problem-solving abilities as related to technical environmental issues.
5. Be capable of engineering design calculations related to pollution control devices.
6. Will have enhanced both numeracy and literacy as it relates to the science and engineering of the environment.

ENVE 2201. Introduction to Environmental Science and Engineering

The fundamentals of physics, chemistry, biology, and geology applied to problem solving in science and engineering. A study of environmental phenomena and strategies to control pollution of water, air, and land. Definition of basics for water quality engineering, water treatment, wastewater treatment, solid and hazardous waste management, radioactive waste management, and air pollution. Environmental impact statements and environmental ethics.

Student Learning Outcomes

Upon completion of this course, students will:

1. Have mastery of the fundamental physical, chemical and biological principles of environmental engineering.
2. Understand the scientific knowledge underpinning the major contemporary problems in the field.
3. Have a working knowledge of the full range of sub-disciplines in environmental engineering including water and wastewater, air quality and climate change, solid and hazardous waste, and others.
4. Will have developed problem-solving abilities as related to technical environmental issues.
5. Be capable of engineering design calculations related to pollution control devices.
6. Will have enhanced both numeracy and literacy as it relates to the science and engineering of the environment.

Environmental Science (ENVS)

ENVS 1110. Environmental Science I

Course Description

Introduction to environmental science as related to the protection, remediation, and sustainability of land, air, water, and food resources. Emphasis on the use of the scientific method and critical thinking skills in understanding environmental issues.

Student Learning Outcomes

1. Students will learn to critically analyze cause-and-effect relationships in the environment.
2. Students will integrate and synthesize knowledge and draw appropriate conclusions based on the scientific method.

ENVS 1110L. Environmental Science I Laboratory

Course Description

Covers general principles and theory relating to environmental science and management. Focal areas for the course include water management, climate, pollution and waste management. Students taking this course will come away with a basic understanding of the main issues faced by technicians and managers of environmental science departments.

Student Learning Outcomes

1. Students will exercise and develop communication skills in public speaking, technical writing, and research documentation.
2. Students will be relating current environmental issues to their personal, economic, and cultural circumstances.
3. Students will garner assessment and problem-solving skills in areas relevant to health, quality of life, economic development, and cultural preservation.

ENVS 1120. Environmental Science II

Course Description

Provides a continuation of general principles and theory relating to environmental science and management. Focal areas for the course include mining, energy production, mitigation of environmental problems, and topical matters relating to tribal communities. Students taking this course will build upon prior learning to develop an intermediate understanding of the main issues faced by technicians and managers of environmental science departments.

Student Learning Outcomes

1. Students exercise and develop communication skills in public speaking, technical writing, and research documentation.
2. Students expand their abilities to relate current environmental issues to general economic, social, and legal circumstances.
3. Students identify the political and legal contexts of environmental policies, and to be able to articulate the relative importance of each.
4. Students understand linkages between environmental issues at Tribal, State, National, and International contexts.

ENVS 1120L. Environmental Science II Laboratory

Course Description

Complementary laboratory section to ENVS 1120. Continues coverage of general principles and theory relating to environmental science with a focus on environmental testing. Focal areas for the course include weather and climate, food production, ethics, and risk assessment. Students taking this course will come away with a basic understanding of the skills required of technicians and environmental science practitioners.

Student Learning Outcomes

1. Students gain experience and understanding of Environmental Science as a discipline, including scientific reasoning, key concepts, terminology, and social context.
2. Students acquire vocabulary and technical understanding of climate, weather, biogeography and ecological principles.
3. Students appropriately interpret risk assessment results, discussing the implications and limitations of methods for governing contemporary environmental challenges.
4. Students independently design and execute a laboratory experiment utilizing discipline standard procedures.

ENVS 1130. The Blue Planet

Course Description

To understand global change and environmental concerns, this course weaves together an understanding of Earth's systems, including the lithosphere, atmosphere hydrosphere, and biosphere. We will look at scientific approaches to understanding

human interactions and impacts on Earth systems. Students are encouraged, but not required, to enroll concurrently in ENVS 1130L.

Student Learning Outcomes

1. Define what science is and describe the process of scientific inquiry using examples from Environmental Science.
 - a. You will be able to explain and construct hypotheses and hypothesis tests for Environmental science problems, and you will know the difference between a hypothesis and a theory.
 - b. You be able to evaluate observations about the physical world.
 - c. You will be able to describe the importance of scientific inquiry, and you will be able to describe the importance of peer review and doubt in science.
 - d. You will be able to describe questions that science can answer and those that science cannot answer.
2. You will gain a basis for scientific evaluation of environmental issues that are encounter. Students will be able to read and report on popular scientific papers (e.g., National Geographic, Nature, the IPCC report for policymakers) and identify the hypotheses that scientists are testing, observations they use to test these hypotheses, and results of their work. Through this, students will be able to evaluate newspaper and other reports of environmental science issues.
3. You will be able to explain basic diagrams, graphs, equations, and writing used in Environmental sciences.
 - a. You will be able to evaluate rate problems in environmental science (e.g., rate of flow in channels or aquifers, rate of energy exchange in the atmosphere, rate of tectonic plate motion).
 - b. You will be able to draw and/or interpret diagrams related to Environmental science concepts (e.g., population structure diagrams, contour maps of aquifers, systems diagrams of the carbon cycle, water cycle, rock cycle).
 - c. You will be able to represent Earth systems on maps (e.g., atmospheric circulation patterns; earthquake and volcano locations from plate tectonics).
 - d. You will be able to construct, read, and interpret common graphs used in Environmental sciences (e.g., hydrographs, rainfall vs. time, temperature/ CO_2 change through time).
4. You will be able to briefly describe scientific issues related to resource availability and global climate and environmental change.
 - a. You will be able to discuss hypotheses related to global warming and describe scientific evidence for global warming.
 - b. You will be able to explain mechanisms of climate change (e.g., greenhouse effect).
 - c. You will be able to define basic concepts in water resources (e.g., stream discharge, aquifer recharge/discharge, water table).
 - d. You will be able to explain how energy moves around the Earth systems and the link between energy resource use and environmental impact in a scientific manner.
 - e. You will be able to describe connections and feedback loops in Earth systems (e.g., biosphere, atmosphere, geosphere and hydrosphere) and how these may be evaluated and studied through the lens of science.

ENVS 1130L. The Blue Planet Laboratory

Course Description

Laboratory course for The Blue Planet. In our Blue Planet labs, students will often work together to collect data and students are encouraged to discuss their observations and ideas, but students are expected to write their own answers in their own words on their worksheets.

Student Learning Outcomes

1. Students will be able to construct a hypothesis, propose a test, and then complete the test using quantitative and spatial data [e.g. weathering and erosion processes in the Albuquerque area from the Sandia Mountains to the Rio Grande or similar but site-specific at other locations statewide].

2. Students will be able to make hydrologic measurements in the field (e.g., pH and dissolved oxygen) and make calculations using those measurements that lead to graphical display and interpretation of data.
3. Students will be able to make and use observational data determined from the relationships between Earth systems (e.g., biosphere, geosphere, hydrosphere, atmosphere) to infer geologic/Earth system processes.
4. Students will be able to analyze graphical data and use graphs from global environmental data to assess interactions between different Earth systems (e.g., rainfall, vegetation, cloud cover).
5. Students will be able to effectively communicate (written and/or oral) an interpretation of quantitative and graphical data to evaluate a societally relevant environmental science problem (e.g., the relationship between hydraulic fracking and earthquakes, evaluating various energy resources, evaluating liquefaction risks and ground water contaminant risks).
6. Students will learn the basics of functioning successfully in a field setting, including use of some basic equipment and techniques, and putting into practice the basic steps of collecting field data.
7. Students will be able to interpret scales, elevations and use of contours in both topographic contour and groundwater contour maps.
8. Students will be able to use observational/collected data from experimentation and apply this information to Earth system processes (e.g. ocean circulation processes).

ENVS 1140C. Introduction to Produced Water Lecture and Laboratory

Course Description

This course introduces the science, management, and environmental challenges of produced water, a byproduct of oil and gas operations. Students will examine the composition of produced water, treatment technologies, regulatory requirements, and beneficial reuse strategies (e.g., agriculture, industrial, geothermal applications.) Case studies highlight regional issues, with a focus on New Mexico and other major oil-producing basins. Hands-on labs include water sampling, chemical analysis, and evaluation of treatment methods.

Student Learning Outcomes

1. Define produced water and describe its origins in oil and gas operations.
2. Analyze produced water composition (salinity, hydrocarbons, metals, radionuclides, organics).
3. Explain regulatory frameworks governing produced water handling and disposal.
4. Compare treatment technologies (filtration, membrane, evaporation, chemical, biological).
5. Evaluate reuse applications and environmental risks.
6. Apply sampling and testing methods for produced water quality.

ENVS 1210C. Field Methods in Environmental Science Lecture and Laboratory

An applied course in methodologies commonly employed by environmental managers for sampling, mitigation evaluation, and planning. Students will come away with a solid foundation in applied management techniques for air, water, solid waste, climate and mineralogical/geological resources management.

Student Learning Outcomes

1. Gain experience and understanding of different types of environmental testing, methodology, and equipment use.
2. Develop and exercise scientific sample handling and documentation skills.
3. Identify quality testing appropriate to a variety of different scientific, professional, and social scenarios.
4. Critique different types of environmental testing.
5. Improve their abilities to measure risk in environmentally oriented contexts.
6. Demonstrate the ability to follow QA/QC procedures, including chain of custody documentation.
7. Demonstrate the ability to operate environmental monitoring equipment (pumps, meters, samplers).

ENVS 1210 Field Methods in Environmental Science.

Catalog Description

An applied course in methodologies commonly employed by environmental managers for sampling, mitigation evaluation, and planning. Students will come away with a solid foundation in applied management techniques for air, water, solid waste, climate and mineralogical/geological resources management.

Student Learning Outcomes

1. Gain experience and understanding of different types of environmental testing, methodology, and equipment use.
2. Develop and exercise scientific sample handling and documentation skills.
3. Identify quality testing appropriate to a variety of different scientific, professional, and social scenarios.
4. Critique different types of environmental testing.
5. Improve their abilities to measure risk in environmentally oriented contexts.

ENVS 1310. Environmental Regulations

Course Description

An overview of current federal regulations in environmental science, including, but not limited to the Clean Air Act, the Clean Water Act, EPA guidelines, state and basic Tribal regulations. The curriculum provides an understanding of the regulations, how they are interpreted and enforced, and where they are applicable.

Student Learning Outcomes

1. Students gain experience and understanding of environmental regulations, including administrative and legislative traditions, key concepts, and terminology.
2. Students are able to differentiate general policy, administrative rule, and law. Students will understand the constitutional origins and limitations of each.
3. Students gain familiarity with key natural and cultural resource management law, including treaties, conventions, the National Environmental Policy Act.
4. Students garner analytic skills through reading of legal cases and legal scholarship and writing critical responses.
5. Students can articulate linkages between environmental issues at tribal, state, national, and international contexts.
6. Students can explain tribal and U.S. legal systems in the context of resource management.

ENVS 2110. Contemporary Issues in Environmental Science

Course Description

As a contemporary issues course, this class applies environmental science management and planning techniques to current 'hot topics' in the field. Participating students will engage in round table discussions, applied problem solving and media research to develop management and remediation strategies for real-world environmental problems.

Student Learning Outcomes

1. Students identify and appropriately summarize popular media and academic literature sources as they pertain to relevant environmental issues.
2. Students distinguish key stakeholders and management issues for current environmental issues.
3. Students demonstrate proficiency in conducting a problem-oriented case study analysis with the goal of constructing and defending a management solution.
4. Students develop written communication skills to examine and explain management issues associated with key contemporary environmental issues.
5. Students develop oral communication skills to support and defend a proposed management solution.

ENVS 2111. Environmental Engineering and Science

Course Description

Principles in environmental engineering and science: physical chemical systems and biological processes as applied to pollution control.

Student Learning Outcomes

1. To understand the nature of water quality parameters in the context of Civil Engineering and Environmental Science (Water Treatment/Wastewater Treatment/Environmental Science).
2. To learn to apply engineering and scientific solutions to water quality problems.
3. To understand environmental regulations and their consequences on the design of pollution control systems.

ENVS 2111L. Environmental Engineering and Science Laboratory

Course Description

Laboratory experiments associated with the material presented in ENVS 2111.

Student Learning Outcomes

1. List typical analyses commonly performed to evaluate physical, chemical, and microbiological parameters used to describe water quality.
2. Follow experimental procedures listed in the class laboratory manual, or other publications such as Standards Methods, to perform common water quality analyses.
3. Evaluate, analyze, and discuss experimental results and present the conclusions in the form of a professional report.

ENVS 2120. Tribal Environmental Management and Planning

Course Description

This course addresses specific issues related to tribal environmental management, including mechanisms for tribal decision-making about environmental issues, jurisdiction in relation to other government agencies like state environment department and the EPA, and past precedents for successful Tribal implementation of environmental management programs.

Student Learning Outcomes

1. Students gain experience and understanding of tiered and multi-jurisdictional governance.
2. Students exercise and develop communication skills in public speaking, technical writing, and legal documentation.
3. Students are able to link current environmental issues to the appropriate governmental or tribal management agencies.
4. Students can articulate the functionality and administration of promulgated laws and regulations at tribal and agency levels.
5. Students understand linkages between environmental issues at Tribal, State, National, and International contexts.

ENVS 2130. Critical Thinking in Science

Course Description

Critical Thinking in Science will improve and/or develop student's proficiencies in thinking and problem solving ultimately resulting in improved decision-making abilities. This course will examine the process through which thought and problem-solving take place and to expand upon the critical thinking skills that will lead to optimizing the student's ability to succeed in all fields of science. Many problems students will face as science professionals do not have obvious answers; therefore, the goal this course is to enable students to rely upon skills taught to address the problem aided by a proven method leading to greater creativity in problem solving, decision making and science leadership.

Student Learning Outcomes

1. Understanding the process of critical thinking and problem solving.
2. Learning tools that can aid in problem solving and decision making.
3. Learn to evaluate available information with the understanding of bias and perception.
4. Learn to recognize and challenge assumptions and presuppositions.
5. Learn to make a reasoned argument and to defend and/or see error in the argument (art of debate).
6. Be able to identify and manage the risks associated with making and implementing decisions.
7. Learn to analyze and assess the strength of an argument and the implications for a course of action.
8. Learn to identify and explain and/or rectify logical errors in an argument or scientific result.

9. Be able to generate critical scientific questions and develop a course of action to address the questions.
10. Building self confidence in critical thinking, problem solving, decision making and leadership in Science.

ENVS 2140. Introduction to GIS/GPS and Cartography

Course Description

You will evaluate the characteristics, uses, and limitations of computer applications in natural resource management including application programs in statistical analysis, computer modeling, geographic information systems (GIS), global positioning systems (GPS), and database management systems (DBMS).

Student Learning Outcomes

1. Have a basic understanding of the history of nature of cartography.
2. Understand and remember major principles of good cartographic design (symbolization, map elements, generalization, map projection, color use, visualization, etc.).
3. Understand and remember major techniques for data classification.
4. Understand and remember characteristics of the major types of thematic maps (qualitative, choropleth, proportional symbol, dot, cartogram, etc.).
5. The student will demonstrate basic proficiency in map creation and design principles, including thematic map display, employment of map projections and cartographic design.
6. Know about sources of data for cartography (census, data depositories, collecting one's own data, etc.) and become independent cartographers.
7. The student will describe the fundamental concepts of Geographic Information Science and Technology and demonstrate proficiency in the basic functions of geospatial software and hardware.
8. The student will demonstrate awareness of fundamental remote sensing and spatial analysis techniques.
9. The student will demonstrate proficiency in the creation and acquisition of spatial data including the use of the Global Position System.
10. The student will learn to evaluate diverse information in maps for analysis of data relevant to the biological and physical sciences especially in natural resource management.
11. The student will demonstrate how to access different sources of data, demonstrate the process of creating data, and discuss the fundamental concepts of data quality.
12. Be able to use computer illustration and GIS software to construct maps or other graphics both professionally (for a publication, presentation, or research project, etc.).

ENVS 2150. OSHA Health and Safety

Course Description

Overview of the accepted technologies to protect the health and safety of personnel handling hazardous waste. Meets OSHA 29 CFR 1910.120 requirements for Hazardous Waste Operations.

Student Learning Outcomes

1. Understand the purpose of OSHA and its role in regulating occupational safety.
2. Use Site Characterization to establish problems that may exist in your workplace and measures that can be implemented to eliminate hazards.
3. Identify hazardous materials existent in the workplace and the possible methods, symptoms and preventative measures of exposure.
4. Encourage the use of Material Safety Data sheets (MSDS) to identify and properly handle hazardous materials.
5. Familiarize yourself with materials, compounds and mixtures that may present flammable, explosive, chemical or radiological hazards.
6. Emphasize the importance of personal protective equipment in limiting hazardous exposure.
7. Establish an effective Site Control Program to limit the risk of exposure to only those working in the hazardous work zone.

8. Implement procedures for treating workers in the event of hazardous exposure.

ENVS 2160. Principles of Agriculture Ecology

Course Description

You will be introduced to ecology in the analysis of agriculture and sustainable alternatives, with an emphasis on the fundamentals of agriculture: soils, seeds, and water, and the geographical and cultural context of farming systems. You will study topics in traditional agriculture, farm development and design, and sustainable farm practices.

Student Learning Outcomes

1. To gain an understanding of principles of ecology and its application toward agricultural systems.
2. To understand different methods of food production and to be able to contrast systems from an ecological framework regarding the management of seeds, soils, and water resources.
3. To understand the application of Permaculture principles to sustainable and traditional agriculture.
4. To understand impacts of agriculture on natural systems and the use of agriculture in restoration.

ENVS 2170C. Environmental Microbiology Lecture and Laboratory

Course Description

This course introduces the role of microorganisms in natural and engineered environments. Emphasis is placed on microbial diversity, biogeochemical cycles, and the roles of microbes in water quality, soil health, waste treatment and contaminant degradation. Students will gain laboratory experience in sampling, culturing, and identifying microorganisms relevant to environmental systems.

Student Learning Outcomes

1. Describe microbial diversity and physiology relevant to environmental systems.
2. Explain the role of microbes in carbon, nitrogen, and sulfur cycles.
3. Identify pathogens of concern in water, soil, and air.
4. Perform standard microbiological sampling and culturing techniques.
5. Evaluate microbial processes in remediation, wastewater treatment, and soil regeneration.

ENVS 2190C. Contaminate Fate & Transport (Modeling) Lecture and Laboratory

Course Description

This course introduces the physical, chemical, and biological processes that control the fate and movement of contaminants in soil, water, and air. Students will learn to use conceptual and computational models to predict contaminant transport and assess risks to human health and the environment. Emphasis is placed on hydrologic and geochemical modeling, as well as real-world case studies of contamination incidents.

Upon completion of the course students will:

1. Explain the physical, chemical, and biological processes affecting contaminant fate (sorption, dispersion, degradation, volatilization).
2. Develop conceptual site models for contaminant transport.
3. Apply modeling tools (e.g., MODFLOW, MT3D, HYDRUS, EPA SCREENS3) for contaminant transport.
4. Evaluate uncertainty and limitations in contaminant fate models.
5. Interpret model outputs to inform remediation and risk assessment decisions.

ENVS 2210C. Environmental Site Assessment (ESA) Lecture & Laboratory

Course Description

This course introduces the principles and practices of conducting environmental site assessments (ESAs) in compliance with ASTM and EPA standards. Students will learn how to perform Phase I and Phase II ESAs, evaluate environmental risks, and document findings in technical reports. Practical emphasis is placed on historical research, site reconnaissance, sampling strategies, and communicating results to clients, regulators, and stakeholders.

Student Learning Outcomes

1. Describe the purpose and scope of Phase I and Phase II ESAs.
2. Collect and evaluate environmental records and historical data.
3. Conduct site reconnaissance to identify potential Recognized Environmental Conditions (RECs).
4. Design and implement sampling strategies for Phase II investigations.
5. Prepare ESA reports that comply with ASTM E 1527 and regulatory requirements.

Exercise Science (EXSC)

EXSC 1110. IM Youth Fitness**Course Description**

This course exposes students to the principles and techniques of teaching fitness to children and young adults.

Student Learning Outcomes

1. Describe the importance of health-related components of youth fitness.
2. Demonstrate various assessment tools and interpret results.
3. Design age-appropriate exercise prescriptions.
4. Describe safe and effective exercise techniques.
5. Describe the importance of lifelong fitness activities.

EXSC 1120. IM Pilates**Course Description**

A course designed to prepare fitness and exercise professionals to teach Pilates mat classes at varying skill levels to generally healthy adults.

Student Learning Outcomes

1. Demonstrate verbal and physical teaching techniques related to Pilates mat movements.
2. Demonstrate verbal and physical teaching techniques related to modifications of each Pilates exercise.
3. Demonstrate knowledge of anatomy and kinesiology as related to Pilates mat movement.
4. Design and teach a variety of Pilates mat class choreography with emphasis on muscular balance and flow of movements.

EXSC 1130. IM Fitness Cycling

Course Description

Students learn the fundamentals of designing indoor fitness cycling classes. Emphasis is placed on equipment safety, riding techniques, music selection, exercise class formats.

Student Learning Outcomes

1. Demonstrate teaching fitness cycling students through a sound and safe exercise class.
2. Demonstrate teaching students' participants proper riding form and bike setup.
3. Select appropriate music for the format of the workout.
4. Conduct a segment of an indoor cycling format.

EXSC 1140. IM Senior Fitness

Course Description

Students learn the fundamentals of exercise leadership, prescription and design for senior fitness programs.

Student Learning Outcomes

1. Develop exercise programs for senior populations.
2. Demonstrate modifying exercise prescription based on individualized needs.
3. Demonstrate teaching seniors on proper form of various exercises.
4. Demonstrate teaching seniors through a sound and safe exercise program.

EXSC 1150. IM Personal Training

Course Description

This course gives students instructional methods of personal fitness training. Instructional techniques for fitness development and methods for leading an exercise session, including design, instruction and evaluation, are the foundation of the class.

Student Learning Outcomes

1. Describe current trends in the industry.
2. Develop programs for various populations.
3. Demonstrate the use of assessment results as the guideline for exercise prescription development.
4. Describe lifetime fitness and wellness concepts.

EXSC 1160. IM Group Exercise

Course Description

This course covers the theoretical bases underlying physical fitness and instruction techniques for fitness development in group classes. Emphasis is on hands-on learning of methods for leading a group exercise class, including visual and auditory cues, dance routines and patterns. Students learn to design and teach fitness classes in bench step, aerobics, kickboxing, resistance training and core strengthening. This class also covers adherence and motivation to exercise. Current trends in exercise class modes and formats are examined. Safety and injury prevention are emphasized.

Student Learning Outcomes

1. Demonstrate knowledge of the theoretical bases underlying physical fitness
2. Demonstrate ability to plan, organize and instruct group exercise classes with positive effect on the various components of fitness.
3. Organize and instruct fitness classes with an emphasis on efficacy, safety and injury prevention, as well as motivation and adherence.
4. Describe the physiological mechanisms underlying improvement in physical fitness.
5. Identify modes of activity for the development of physical fitness
6. Describe the exercise intensity, frequency, duration and progression required to elicit a positive training effect.

7. Design and teach fitness classes such as: step aerobics, kickboxing, resistance training and core strengthening.

EXSC 1170. IM Alternative Strength Training

Course Description

This course will cover the fundamentals, theories and application of alternative strength training methods such as: stability ball, medicine ball, resistance band and functional training. This course will also cover efficient use of these exercises and methods to target needs and goals of individualized exercise programs. Emphasis is placed on actual experience, exercise safety, progression and proper technique of alternative training modalities.

Student Learning Outcomes

1. Demonstrate an understanding of alternative strength training modalities and concepts.
2. Demonstrate the ability to plan safe alternative training methods into a strengthening program.

EXSC 1180. IM Training Techniques Review

Course Description

This course reviews essential personal training and group fitness techniques relevant to national personal training certification exams and practical application. Topics include postural alignment, biomechanics, proper spotting techniques, and exercise recommendations/modification.

Student Learning Outcomes

1. Demonstrate safe and proper exercise and spotting techniques.
2. Demonstrate an understanding of the muscle groups utilized relative to the exercises performed.
3. Demonstrate an understanding of basic principles of biomechanics and how they apply to exercise and postural alignment.
4. Recommend and/or modify a safe and effective exercise program for individual clients.

EXSC 1190. IM Outdoor Application

Course Description

This course examines methods and components of athletic training and outdoor leadership in an experiential based environment. Topics include risk-management, group facilitation, exposure, and conditional outdoor leadership theories.

Student Learning Outcomes

1. Develop exercise programs for outdoor applications.
2. Identify and describe various conditional outdoor leadership theories.
3. Demonstrate effective leadership in an experiential outdoor setting based on individual needs.
4. Demonstrate an ability to instruct an exercise group outdoors with an awareness of appropriate risk-management, overall safety, and environmental impact.

EXSC 1210. Fitness Instructor Training I

Course Description

Designed for students who want to pursue the American Council on Exercise (ACE) personal fitness trainer certification and/or the SFCC Fitness Instructor Training (FIT) Certificate. This course focuses on facilitating rapport with clients, exercise adherence, self-efficacy and behavior change. Human anatomy, kinesiology, exercise physiology and nutrition will be introduced, as they pertain to the personal fitness trainer scope of practice.

Student Learning Outcomes

1. Describe the role and scope of practice for the personal trainer.
2. Explain exercise motivation and adherence.
3. Practice clear communication and teaching technique.
4. Define principles of behavior change and health psychology.
5. Demonstrate an understanding of human anatomy, exercise physiology and applied kinesiology.

6. Describe basic nutritional principles.
7. Describe the integrated fitness training model.

EXSC 1220. Fitness Instructor Training II

Course Description

Designed for students who want to pursue the American Council on Exercise (ACE) personal fitness trainer certification and/or the SFCC Fitness Instructor Training (FIT) Certificate. This course focuses on applying the integrated fitness model to program design, functional and physiological assessments, mind-body exercises and different training modalities. This course also addresses adaptations for common injuries, legal and professional guidelines and responsibilities, business fundamentals, and ACE certification review.

Student Learning Outcomes

1. Perform functional and physiological assessments.
2. Develop programs for stability, mobility and movement.
3. Describe resistance and cardiorespiratory training.
4. Describe mind-body exercises.
5. Adapt exercise routines for special populations and people with injuries.
6. Recall legal and professional guidelines and responsibilities.
7. Demonstrate an understanding of personal trainer business fundamentals.
8. Demonstrate the ability to pass the ACE personal trainer certification.

EXSC 1990. Exercise Science Practicum I

Course Description

Varies

Student Learning Outcomes

Varies

EXSC 2110. Exercise Physiology

Course Description

A survey of scientific principles, methodologies, and research as applied to exercise and physical fitness. The emphasis is on physiological responses and adaptations to exercise. Basic elements of anatomy and physiology are also included.

Student Learning Outcomes

1. Describe the basic anatomy and physiology of the muscular, nervous, endocrine, cardiovascular, and respiratory systems.
2. Differentiate between the aerobic and anaerobic energy systems and the effects of acute and chronic exercise on each.
3. Explain how to measure energy expenditure and what causes fatigue during exercise.
4. Identify expected cardiorespiratory responses associated with postural changes, acute physical exercise, and adaptations resulting from long-term exercise training.
5. Identify the normal chronic physiological adaptations associated with cardiovascular exercise and resistance training.
6. Explain general principles of exercise training.
7. Describe physiological responses to exercising in hot and cold environments.
9. Describe physiological responses to exercising at altitude.
10. Identify ways to optimize training and minimize overtraining.

EXSC 2115C. Anatomy & Physiology I

Course Description

Not Available

Student Learning Outcomes

Not Available

EXSC 2120. Structural Kinesiology

Course Description

Students learn about anatomy, kinesiology and biomechanics as they relate to sport and exercise. Special attention is focused on the practical implications of human movement and how they relate to developing scientifically based exercise programs.

Student Learning Outcomes

1. Demonstrate knowledge of the theoretical and applied principles underlying human movement
2. Design scientifically founded training programs.
3. Demonstrate knowledge of muscles, including insertion and origin
4. Describe different types of muscle contractions.

EXSC 2130. IM Lifestyle Change

Course Description

Health-risk appraisals and their application to lifestyle change. Topics include weight control, stress management, smoking cessation and the principles of exercise adherence. Emphasis is on techniques in behavior modification, motivation, teaching and counseling, and behavior changes as lifestyle change.

Student Learning Outcomes

1. Instruct an individual using behavior modification.
2. Devise strategies to promote exercise initiation and exercise adherence.
3. Apply behavior modification techniques and motivational strategies to instruction in lifestyle change.
5. Demonstrate instructional and counseling techniques appropriate for use in the lifestyle change programs.

EXSC 2140. Nutrition for Fitness and Sport 203

Course Description

An introduction to the basic principles of nutrition, including functions, interactions, and human requirements of nutrients and their roles in maintaining optimum health in the exercising adult. The effects of exercise on nutritional requirements and guidelines for their use are emphasized. The efficacy and potential risks of various ergogenic aids are reviewed.

Student Learning Outcomes

1. Demonstrate understanding of the functions of major nutrients.
2. Describe the basic process of digestion and absorption of nutrients.
3. Identify food sources of major nutrients.
4. Identify credible, reliable resources for information on nutrition and sports nutrition.
5. Demonstrate an understanding of the nutritional concerns and requirements of the active adult and athlete.
6. Formulate guidelines for an adequate healthy diet of active persons and athletes.
7. Formulate guidelines for an adequate, healthy diet for weight management purposes.

EXSC 2150. Prevention and Care Exercise Injury

Course Description

Methods for the injury-prevention design of exercise settings and exercise programs. Students explore the use of physical conditioning techniques to prevent injury and discuss current exercise fads and myths that promote injury. The course presents methods for injury recognition and evaluation, the on-site care of exercise injuries, and emergency procedures. May be taken twice for degree or certificate credit. Must have certifications in CPR and first aid.

Student Learning Outcomes

1. Design, implement and evaluate injury-free exercise sessions
2. Recognize and care for common exercise injuries and physical conditions
3. Describe psychological considerations in injury prevention and rehabilitation
4. Recognize challenging environmental conditions

EXSC 2160. Fitness & Exercise Testing

Course Description

Techniques for conducting safe and sound physical fitness assessments. Tests for assessing cardiorespiratory fitness, muscular strength, power and endurance, flexibility, body composition, functional fitness and pulmonary capacity are included. Metabolic calculations and conversions are explained, as well as safety guidelines and equipment use and maintenance.

Student Learning Outcomes

1. Describe and follow the guidelines of the ACSM on exercise testing.
2. Solve metabolic calculations.
3. Structure and conduct tests of cardiorespiratory fitness, muscular strength, muscular power and muscular endurance, flexibility, body composition, functional fitness and pulmonary capacity, as well as interpretation of test results.
4. Communicate effectively with the test subject.
5. Calibrate, maintain exercise testing equipment.
6. Demonstrate appropriate safety procedures.

EXSC 2170. Physical Fitness Programming and Instruction

Course Description

Theoretical bases underlying physical fitness programming and instruction. Methods for leading an exercise class, as well as personal fitness training, including recruitment, adherence and motivation are studied. Current exercise class modes and formats will be examined, as well as trends in personal training. Legal and professional responsibilities of the fitness professional will be studied. Safety and injury prevention are emphasized.

Student Learning Outcomes

1. Describe fitness principles and theories.
2. Design and teach group fitness classes.
3. Design programs for personal training clients.
4. Describe recruitment of clients for personal training and group exercise classes.
5. Apply methods for exercise adherence and motivation.
6. Describe legal and professional responsibilities of the fitness professional.
7. Recommend exercises for special populations.

EXSC 2300. Introduction to Sport Management

Course Description

This course introduces the foundations of sport management, skills and competencies required of sport managers in various sport or sport-related organizations, including strategic management planning process, human resources management, financial management, sport marketing, facility and event management in amateur and professional industry.

Student Learning Outcomes

1. Understand the current structure of sport industry structure as well as the issues facing sport/sport related organizations (Content)
2. Discuss and analyze different theories of and approaches to leadership (Content and Critical Thinking)
3. Develop an understanding of the various roles and functions of a manager in sport industry (Content and communication).

4. Demonstrate an understanding of the unique dimensions and characteristics of sport and how these influence the management of sport (Content, communication, critical thinking, and Technology)
5. Demonstrate an understanding of various budgeting/financial practices utilized in organizations (Content, communication, critical thinking, and Technology)
6. Become knowledgeable of the role of administration in risk management within physical education and athletics, i.e., facility management and event management (Content)
7. Define and utilize the terminology of the sport industry and the process of sport management (Content)
8. Understand key concepts and strategies in sport marketing (Content and Critical Thinking)
9. Demonstrate an understanding of various legal issues pertaining to physical education and athletics (Content)
10. Develop written and oral communication skills by completing various writing assignments and classroom presentations (Content, Critical Thinking, and Communication)

EXSC 2561. Techniques of Team Sports

Course Description

This course prepares teachers to be able to give movement prescription regarding team skills activities. The team skill activities include: dribbling, ball handling, use of implements, catching, throwing, passing manipulation, kicking, striking, dodging and chasing. Class experiences will include analyzing movement and performance techniques including the use of specific performance feedback, and applications to team sport activities.

Student Learning Outcomes

For the team sports played in middle and high schools, learn:

1. The essential rules of each sport (Traits 1&3)
2. The techniques of successful participants (Traits 1&3)
3. The strategies employed for Excel[®]lence (Traits 1,2&3)
4. Create Lesson Plans with accompanying PPT (Traits 2&4).

EXSC 2563. Techniques of Individual Sports

Course Description

This course prepares teachers to be able to give movement prescription regarding individual sports activities, such as racquet sports, golf, and others. Instruction in the techniques inherent to each individual sport will be presented. Class experiences will include analyzing movement and performance techniques, including the use of specific performance feedback, and applications to individual sport activities.

Student Learning Outcomes

For the team sports played in middle and high schools, learn:

1. The essential rules of each sport (Traits 1&3)
2. The techniques of successful participants (Traits 1&3)
3. The strategies employed for Excel[®]lence (Traits 1,2&3)
5. Create Lesson Plans with accompanying PPT (Traits 2&4).

EXSC 2565. Techniques of Innovative Games and Activities

Course Description

This course is designed to prepare teachers to be able to give movement prescription regarding innovative games and activities, such as ultimate, disc golf, flicker-ball, and team handball. Instruction in the techniques inherent to innovative games and activities will be presented. Class experiences will include analyzing movement and performance techniques including the use of specific performance feedback, and applications to regarding innovative games and activities.

Student Learning Outcomes

For the innovative games played in middle and high schools , learn

1. The essential rules of each sport (1)
2. The techniques of successful participants (1,2)
3. Lesson Plan development & implementation (2,3,4).

Expanded Functions Dental Auxiliary (EFDA)

EFDA 2250. Restorative Functions

Course Description

This course covers foundational knowledge in general and dental anatomy and physiology, dental materials, placing and shaping direct restorations, fitting and shaping of stainless steel crowns, dental impressions, Isolation, and occlusion function. These principles will be specifically applied to amalgam and composite restorations. This course will be intense to allow us to begin placing restorations on prepared typodont teeth.

Student Learning Outcomes

1. Describe general and dental anatomy, physiology, oral pathology, and occlusion.
2. Describe the concepts and applications in placing and shaping direct restorative materials in cavity preparations completed by a dentist.
3. Describe taking of impressions for permanent fixed or removable prosthesis, including single crowns or single tooth replacement prosthesis.
4. Describe cementing permanent or provisional restorations with temporary or provisional cement, provided the permanent cementation is completed and monitored by the dentist within six months.
5. Describe placing pit and fissure sealants under supervision as certification or licensure allows
6. Describe placing temporary or sedative restorations in open carious lesions after hand excavation of gross decay and debris.
7. Explain placing temporary or sedative restorative material into unprepared tooth fractures as a palliative measure.
8. Explain removing residual orthodontic bracket or band cement or resin from teeth after the brackets or bands have been removed by the dentist performing the orthodontic treatment, or to prepare the tooth or teeth for re-cementation of a debonded bracket or band.
9. Describe performing preliminary fitting and shaping of stainless steel crowns 10.Explain re-cementing temporary or permanent crowns or bridges using provisional cement under the general supervision of a dentist, under an emergency situation.
10. Demonstrate readiness for placing restorations on prepared typodont teeth.

EFDA 2250L. Restorative Functions Laboratory

Course Description

An introduction to the manipulation and placement of restorative materials, fitting and shaping stainless steel crowns, taking a single tooth final impression and practicing other skills for expanded functions dental auxiliary (EFDA) as approved by the New Mexico Board of Dental Health Care. Students will apply concepts from dental anatomy and materials science to restorative procedures.

Student Learning Outcomes

1. Demonstrate the concepts and applications in placing and shaping direct restorative materials in cavity preparations completed by a dentist.
2. Demonstrate taking of impressions for permanent fixed or removable prosthesis, including single crowns or single tooth replacement prosthesis.
3. Demonstrate cementing permanent or provisional restorations with temporary or provisional cement, provided the permanent cementation is completed and monitored by the dentist within six months.
4. Demonstrate placing pit and fissure sealants under supervision as certification or licensure allows
5. Demonstrate removing residual orthodontic bracket or band cement or resin from teeth after the brackets or bands have been removed by the dentist performing the orthodontic treatment, or to prepare the tooth or teeth for re-cementation of a debonded bracket or band.
6. Demonstrate performing preliminary fitting and shaping of stainless steel crowns.
7. Demonstrate re-cementing temporary or permanent crowns or bridges using provisional cement under the general supervision of a dentist, under an emergency situation.

EFDA 2293. EFDA Clinical Experience

Course Description

A clinical course providing practice in expanded functions dental auxiliary (EFDA) skills. Emphasis is on the placement of amalgam and composite restorations on patients. Clinical experience will be provided in an affiliated clinical site. This course also includes seminars to discuss clinical experiences and measures to take care of any deficiencies.

Student Learning Outcomes

1. Place and shape direct restorative materials in cavity preparations completed by a dentist.
2. Take impressions for permanent fixed or removable prosthesis, including single crowns or single tooth replacement prosthesis.
3. Cement permanent or provisional restorations with temporary or provisional cement, provided the permanent cementation is completed and monitored by the dentist within six months.
4. Place pit and fissure sealants under supervision as certification or licensure allows.
5. Place temporary or sedative restorations in open carious lesions after hand excavation of gross decay and debris.
6. Place temporary or sedative restorative material into unprepared tooth fractures as a palliative measure
7. Remove residual orthodontic bracket or band cement or resin from teeth after the brackets or bands have been removed by the dentist performing the orthodontic treatment, or to prepare the tooth or teeth for re-cementation of a debonded bracket or band.
8. Perform preliminary fitting and shaping of stainless steel crowns
9. Re-cement temporary or permanent crowns or bridges using provisional cement under the general supervision of a dentist, under an emergency situation.

EFDA 2294. Dental Insurance Billing and Coding

Course Description

This self-paced, online course gives administrative dental professionals a strong background in and thorough understanding of how the dental insurance process works. Students gain knowledge and relevant, up-to-date information that enables them to excel as dental insurance billing and coding professionals.

Student Learning Outcomes

1. Analyze basic principles of dental coding.
2. Explain how codes are broken down and when specific codes should be used.
3. Properly complete dental forms using given scenarios.
4. Describe the use of cross coding in medical and dental insurance claims.
5. Describe the risk management aspect of dental coding.

EFDA 2296. Dental Fluoride, Polishing and Sealants Review

Course Description

A review of course content previously learned through attending a program or on-site training. Instructors, in a fast-paced format, review topics in order to present all the information within the scheduled time frame. The student will focus on dental fluoride applications, dental sealants application and coronal polishing. The course will include information on state licensure requirements for dental professionals including the national board examination and continuing education requirements.

Student Learning Outcomes

1. Describe the concept of fluorides used in dentistry.
2. Describe the concept of sealants used in dentistry.
3. Describe the concept of coronal polishing in dentistry.
4. Explain the national and state rules and regulations as they pertain to dental fluorides, coronal polishing and sealants.

EFDA 2297. Dental Radiation Health and Safety Review

Course Description

A review of course content previously learned through attending a program or on-site training. Instructors, in a fast-paced format, review topics in order to present all the information within the scheduled time frame. The student will focus on radiation health and safety. The course will include information on state licensure requirements for dental professionals including the national board examination and continuing education requirements.

Student Learning Outcomes

1. Explain the history of radiation and the use of the Hittorf-Crooks and Coolidge tubes.
2. List the properties of radiation and explain the biological effects of radiation exposure.
3. Explain how a radiograph are produced utilizing various Intra and extra-oral radiographic techniques, equipment and technology.
4. Describe the radiation safety precautions.
5. Explain the national and state rules and regulations as they pertain to dental radiography.
6. Explain radiography infection control

EFDA 2298. Dental Infection Control Review

Course Description

A review of course content previously learned through attending a program or on-site training. Instructors, in a fast-paced format, review topics in order to present all the information within the scheduled time frame. The student will focus on

infection control in dental office. The course will include information on state licensure requirements for dental professionals including the national board examination and continuing education requirements.

Student Learning Outcomes

1. Describe patient and dental healthcare worker education.
2. Explain cross-contamination and disease transmission.
3. Explain maintenance of aseptic conditions and environmental asepsis.
4. Describe sterilization procedures.
5. Describe understanding of occupational safety.
6. Explain the national and state rules and regulations as they pertain to infection control in a dental office.

EFDA 2299. General Chairside Review

Course Description

A review of course content previously learned through attending a program or on-site training. Instructors, in a fast-paced format, review topics in order to present all the information within the scheduled time frame. The student will focus on general chairside procedures in a dental office. The course will include information on state licensure requirements for dental professionals including the national board examination and continuing education requirements.

Student Learning Outcomes

1. Explain collection and recording of clinical data.
2. Describe chairside dental procedures.
3. Describe chairside dental materials.
4. Explain patient education and oral health management procedures.
5. Describe understanding of prevention and management of dental and medical emergencies.
6. Describe dental office operations and practice management.
7. Explain the national and state rules and regulations as they pertain to general chairside.

EFDA 2350. Advanced Allied Dental Skills

Course Description

This course emphasizes experience with current technology and advanced level allied dental health skills needed for employment in today's dental offices.

Student Learning Outcomes

1. Adapt the current methods for infection control following the OSHA and state regulations
2. Discover a variety of advanced allied dental skills
3. Describe the State Dental Practice Act as it relates to advanced allied dental skills
4. Apply the ADA Principles of Ethics and Code of Professional Conduct

CDHC 2998

Community Dental Health Coordinator Internship

Course Description

A clinical course providing practice in Community Dental Health Coordinator (CDHC) skills. Clinical experience will be provided in an affiliated clinical site under the supervision of a licensed dentist or a registered dental hygienist. This course also includes seminars to discuss clinical experiences and measures to take care of any deficiencies. Travel may be required.

Student Learning Outcomes

1. Take and complete health and dental history
2. Expose and develop necessary radiographs as ordered by the supervising dentist or as established in protocol by a supervising dentist

3. Collect and transmit patient data and images through teledentistry means to a dentist
4. Place temporary and sedative restorative materials in unexcavated carious lesions and unprepared tooth fractures
5. Transmit prescription or medication orders on the direct order of a dentist
6. Provide limited palliative procedures for dental emergencies in consultation with a supervising dentist as allowable by the rules
7. Provide community dental education and advocate for patients and the community in accessing dental care
8. Perform other related functions for which the CDHC meets educational standards established by the board and that are not prohibited by statute or rules

Family and Child Studies (FCST)

FCST 1120. Introduction to Family and Child Studies

Course Description

This course is designed to provide students with a broad introduction to primary concepts, theories, and research methods in family studies from an ecological and interdisciplinary perspective (e.g., anthropology, history, human development, psychology, sociology). A related objective is to explore the applications of the concepts of family studies to various child and family programs across communities. Through the use of ecological and cultural approaches, students in this class will develop an understanding of the diversity of family forms, functions, and needs and how children and families function as an essential component to society.

Student Learning Outcomes

1. Recognize similarities and differences among families and the ecology of families.
2. Explore the important external and internal factors that impact family functioning.
3. Analyze advantages and disadvantages of methodological techniques used to study families.
4. Compare the influence of contextual variables on diverse family structures and dynamics across the life cycle.

FCST 1125 Carpe Noctem: Sleep, Health, and the Family

Course Description

Students will learn about issues in sleep research with a focus on the examination of sleep in the family context. The course will emphasize how family processes influence sleep across development and vice versa.

Student Learning Outcomes

1. Gain knowledge of typical and atypical aspects of sleep-in children and adolescents.
2. Develop an understanding of how to measure sleep/wake variables.
3. Develop an understanding of how family functioning affects sleep and vice versa.
4. Develop an understanding of sleep within the context of the broader sociocultural milieu.
5. Understand the bidirectional effects between health functioning and sleep.

FCST 1130. Interpersonal Skills in Intimate Relationships

Course Description

Developing social skills within friendships, dating relationships, marriage, parenting, and families.

Student Learning Outcomes

1. To understand several theories that explain why some people have healthy interpersonal relationships while others do not.
2. To gain insight about oneself.
3. To learn and improve upon selected relationship skills that improve quality of life.
4. To learn skills that improve interpersonal relationships.

FCST 1150. Health, Safety and Nutrition**Course Description**

Not Available

Student Learning Outcomes

Not Available

FCST 1160. Consumer Education**Course Description**

Study of the interaction of consumers, government, and domestic and foreign markets. Evaluation of consumer information and protection. Analysis of economic, social and political factors that influence buying decisions.

Student Learning Outcomes

To give students a new perspective on consumerism and marketing from the perspective of current trends. The objective of this course is to offer a sound understanding of the marketplace and how to function in it as a wise and thoughtful consumer. Topics include: the global economic system, marketing, buying transportation, consumer rights, insurance, credit cards, and fraud risks.

FCST 2110. Infancy Through Middle Childhood in the Family**Course Description**

This course discusses research and theory relevant to prenatal development and the physical, mental, and socio- emotional development of the child from birth through age 12. This developmental period will be examined across different cultures and in real world contexts. Attitudes, knowledge, and skills needed for working with young children and their families will be introduced.

Student Learning Outcomes

1. Evaluate how genes and the environment interact to impact human development from prenatal stages through age 12.
2. Assess the effects of environmental influences on the developing fetus.
3. Discuss the capacities of newborn development through age 12.
4. Evaluate how individuals and couples change during the transition to parenthood.
5. Analyze the physical, cognitive, and social-emotional development of the child from birth through age 12.

FCST 2120. Middle Childhood Development in the Family**Course Description**

Research and theory relevant to the physical, mental, social, and emotional development of the child from age five to age twelve. Attitudes, knowledge, and skills related to working with school-age children in the family system. Observation in a variety of settings may be required. Restricted to Las Cruces campus only.

Student Learning Outcomes

Upon completing this course, students will be able to:

1. Compare strengths and weaknesses of theories of human development
2. Distinguish the advantages and disadvantages of different methods of studying human development.
3. Analyze the physical development of the child from age 6 to 11 years.
4. Evaluate the cognitive development of the child from age 6 to 11 years.
5. Assess the social and emotional development of the child from age 6 to 11 years.
6. Formulate ways that parents and professionals can promote the development of the child from age 6 to 11 years.

FCST 2130. Marriage and Family Relationships**Course Description**

This course provides insights into contemporary marriage and family situations. Focus is on decision-making for better understanding of families and the broader society.

Student Learning Outcomes

Upon completing this course, students will be able to:

1. Analyze myths about contemporary family life.
2. Explore and articulate their understanding of theories, gender roles, sexuality, intimacy, power in relationships, homes and family, parenting, crises.
3. Demonstrate their understanding of diverse family structures in premarital, marital and family relationships.

FCST 2135. Adolescent Development and the Family

Course Description

Research and theory relevant to the physical, mental, social, and emotional development of the children ages 12 to 18. Attitudes, knowledge, and skills related to working with adolescents in the family system. Observation in a variety of settings may be required.

Student Learning Outcomes

Upon completing this course, students will be able to:

1. Compare adolescents of today with adolescents of the past.
2. Describe the physical, cognitive, and psychosocial development of the adolescent in the family system and evaluate individual differences in development.
3. Compare and contrast ways in which culture impacts adolescent development.
4. Assess effective parenting strategies with adolescents.
5. Analyze the influence of family, peers, school, and work on adolescent development.

FCST 2140. Adult Development and Aging

Course Description

Research and theory related to the physical, mental, social, and emotional development of older adults. Attitudes, knowledge, and skills related to working with older adults in the family system, including normative, and nonnormative transitions.

Student Learning Outcomes

Upon completion of this course, students will be able to:

1. Compare and contrast theories of adult development and aging and apply theories to adult behavior.
2. Distinguish the similarities and differences of physical, emotional, cognitive, and psychosocial aspects of adult development.
3. Describe multicultural factors that impact attitudes toward aging and coping with aging family members.
4. Evaluate ways in which special issues (including but limited to Alzheimer's Disease, heart disease, end of life issues) impact aging.
5. Devise a conceptualization of one's own perspective in dealing with aging and aging family members.

FCST 2145. Strengthening Family Structures

Course Description

Examines families from a structural perspective by being exposed to systems thinking. Explores how families are similar to and different from others in society, including biological and social systems. Studies and encourages the practice of a strength-based perspective.

Student Learning Outcomes

Upon successful completion of this course, students will be able to:

1. Analyze the complexity and dynamics of family systems
2. Describe the dynamic nature of families and intimate relationships

3. Examine personal beliefs and assumptions about families
4. Recognize prominent myths about families, and intimate relationships
5. Discuss the interactive relationships of race, class, gender and sexual orientation
6. Evaluate how families and intimate relationships around the world are increasingly affected by global
 - a. events, particularly trade imbalances, etc.
7. Describe key issues facing families in the twenty-first century

FCST 2310. Food Science

Course Description

Food science principles integrated through the study of theoretical and scientific issues, and the practical aspects of food selection, preparation, storage, sanitation and costing.

Student Learning Outcomes

On completion of this course, students will be able to:

1. Explain the scope and the history of food science and technology.
2. Become familiar with basics of human nutrition and food labeling.
3. Understand the basic chemistry and functional properties of food carbohydrates, food lipids and food proteins, and the chemistry of colors and food flavors.
4. Explain the nature and function of food additives and food laws and regulations in United States.
5. Describe the basic principles of food processing operations such as heat, cold and drying.
6. Understand how animal products such as meats, dairy products and fruits are preserved.
7. Explain the most common biological hazards responsible for foodborne illnesses, the factors that contribute to foodborne illnesses and Hazard Analysis Critical Control Points (HACCP)
8. Examine the basics of sensory evaluation and food product development.

FCST 2320. Culinary Nutrition

Course Description

Science of nutrition and current dietary recommendations combined with strategies and techniques used to prepare healthful and appetizing food. Areas of study include the essential nutrients, proper portioning, calculation of meal nutrition, menu development, modification and analysis, and meeting the specialized dietary and health needs of individuals and groups.

Student Learning Outcomes

1. Prepare students to address and solve common nutritional problems through a wholistic dietary plan, targeted at a specific customer base.
2. Demonstrate effective and professional written communication and documentation.
3. Identify methods for accessing a customer's nutrition needs, resources, and education.
4. Examine the needs of an operation's menu using demographics, menu mix and theme, nutritional value, and the capabilities of staff/limitations of the facility.
5. Appraise the balanced nutritional menu created for an operation and evaluate the importance of basic nutrition for restaurants and the food service industry.
6. Design and tailor a marketing or customizing aspect to menu design, by which to satisfy a diverse customer base.

FCST 2993. Workshop in Family and Consumer Sciences

Course Description

Varies

Student Learning Outcomes

Varies

FCST 2996. Topics in Family and Child Studies

Course Description

Student Learning Outcomes

Varies

Family and Consumer Sciences (FCSC)

FCSC 2250. Overview of Family and Consumer Sciences Teaching

Change in **Course Number** to **FCSC 2250** from **FCST 2250**, change in SLOs

Course Description

Overview of planning and teaching skills. Supervised experiences in observing and directing the learning of secondary family and consumer sciences students. Philosophy and history of the profession.

Student Learning Outcomes

At the conclusion of the course, learners will be able to:

1. Explain the foci of FCS—past, present and future.
2. Begin to develop a professional role in FCS.
3. Formulate a personal philosophy of FCS, and of teaching.
4. Explain the teaching process.
5. Give examples of roles, responsibilities and qualities of effective and ethical teachers.
6. Assess the characteristics, backgrounds, and needs of learner audiences.
7. Explain various learning theories/principles.
8. Illustrate how various input factors influence teaching decisions.
9. Plan a researched based student-centered lesson with a learning activity in a FCS content area.
10. Give examples of ways to evaluate learner growth.
11. Present a FCS content-based lesson effectively to learners using PowerPoint presentation software and a selected teaching method.
12. Evaluate one's own teaching and the teaching of others.
13. Exhibit increased confidence in one's abilities as a teacher/educator.
14. Exhibit excitement about assuming the teacher/educator role.

FCSC 2330. Housing and Interior Design

Change in **Course Number** to **FCSC 2330** from **FCST 2330**, change in SLOs, change in course description

Course Description

Investigation of types of housing and factors impacting housing decisions for families. Selection, planning, and arrangement of interior components of homes to meet the needs of the family.

Student Learning Outcomes

At the conclusion of the course, learners will be able to:

1. Differentiate between different architectural designs (i.e., Cape Cod, contemporary, craftsman, ranch, southern colonial, Spanish, Victorian, pueblo, New Mexican territorial, and territorial revival) and be able to identify historical, cultural, demographic, geographical, and environmental influences on style and aesthetics.
2. Analyze the fundamentals of housing for all families and cultures and understand the role housing plays in the ecological model of human ecology.
3. Define elements of design as related to housing and interiors (i.e., color, form, line, space texture).

4. Define principles of design as related to housing and interiors (i.e., balance emphasis, harmony, proportion, unity).
5. Compare and contrast the different periods of interior design from the 20th century to the present.
6. Analyze the influence of historical and cultural factors in the development of current interior trends.
7. Select and arrange interiors that are functional and aesthetically pleasing to designated interior design situations.
8. Identify, describe and make application of textiles as related to various furniture and interior design styles.
9. Design a three-dimensional tiny house or an interior space, using all concepts learned.

Farrier Science (FASC)

FASC 1110. Horseshoeing Theory I

Course Description

This course is classroom oriented and designed to present the principles of horseshoeing. A variety of horseshoeing principles are studied (hoof balance, foot biomechanics, and physiological shoeing), as well as gaits of horses. A study of the types and uses of horses is also reviewed.

Student Learning Outcomes

1. Identify and demonstrate the correct use of horseshoeing tools used for trimming and shoeing horses.
2. Identify and demonstrate the aspects of geometric and functional balance.
3. Identify various shoes and nails and demonstrate their uses on horses.

FASC 1060. Hoof Care for Horse Owners

Course Description

This course is a basic overview of hoof care designed for horse owners. Topics include hoof management involving nutrition, foot care manners, trimming & shoeing, horseshoe selection, and nail selection.

Student Learning Outcomes

1. Basic anatomy students will:
 - a. Describe Foot's purpose.
 - b. Draw & describe hoof growth (age).
 - c. Draw & label parts of hoof.
2. Hoof Management students will:
 - a. Explain the importance of trimming/shoeing 6 to 8 weeks.
 - b. Discuss the nutrition in a horse's diet relating to hoof management.
 - c. Explain the role of horse owners in preventing/understanding foot diseases.
 - d. Discuss the first aid kit.
3. Foot care behavior students will:
 - a. Discuss the role of horse owner involving foot care manners, and horsemanship.
 - b. Explain the handling foals.
 - c. Describe techniques/methods of restraint.
4. Trimming & shoeing students will:
 - a. Balance relating to trimming and shoeing.
 - b. Draw and label the three views showing balance of horses' feet.
 - c. Describe how horses would be trimmed differently versus being shod.
5. Shoe selection students will:
 - a. Understand shoe types and selections.
 - b. Label parts of horseshoe.

6. Farrier selection students will:
 - a. Discuss Farrier expectations/qualifications.
 - b. Explain certification.

FASC 1120. Horseshoeing Theory II

Course Description

This course is designed to present more advanced principles of horseshoeing. Shoeing to change gait faults and the principles of functional hoof balance are covered. Specialty shoeing needs of horses are also presented along with the principles of shoeing various types and uses of horses.

Student Learning Outcomes

1. Illustrate and discuss the principles of functional hoof balance.
 - a. Explain the three dimensions of geometric balance by explaining the X, Y, and Z coordinates.
 - b. Discuss the principles of landing, loading, and break over.
 - c. Discuss the principles of hoof flight.
 - d. Conceptualize the principles of changing hoof balance.
2. Recognize and identify common gaits of horses
 - a. Identify the natural gaits of horses.
 - b. Recognize the learned gaits of horses.
3. Identify and assess gait faults that can be helped through trimming and shoeing.
 - a. View and assess horses for movement.
 - b. Discuss the principles of gait fault correction.
4. Discuss the principles of shoeing performance horses.
 - a. Discuss the principles of western stock horses.
 - b. Discuss the principles of English type horses.
 - c. Discuss the principles of gaited show horses.
 - d. Discuss the principles of race horses.
 - e. Discuss the principles of harness horses.
5. Discuss the principles of shoeing according to conformation.
 - a. Identify foot conformations and how to shoe for them.
 - b. Identify front limb conformations and how to shoe for them.
 - c. Identify hind limb conformations and how to shoe for them.

FASC 1210L. Horseshoeing Laboratory I

Course Description

This course presents the principles and techniques of shoeing sound horses. From trimming feet to shaping shoes to nailing shoes on, students gain experience by working on horses. This laboratory-oriented class takes a field approach with students trimming and shoeing horses at the college and at local ranches.

Student Learning Outcomes

1. Identify and demonstrate the correct use of horseshoeing tools used for trimming and shoeing horses.
 - a. Identify the principles of trimming horses.
 - b. Identify and calculate the aspects of geometric and functional balance.
 - c. Identify various shoes and nails and demonstrate their uses on horses.

FASC 1220L. Horseshoeing Lab II

Course Description

This course covers advanced horseshoeing principles and techniques. Shoeing to correct conformational and gait faults is practiced and learned through hands-on experience. Assessment of horses in various gaits and shoeing to change functional hoof balance are addressed.

Student Learning Outcomes

1. Shoe sound horses that perform in various gaits.
 - a. Shoe horses that perform in natural gaits.
 - b. Shoe horses that perform in learned gaits.
 - c. Apply the principles of changing hoof balance.
2. Shoe to change gait faults that can be helped through trimming and shoeing.
3. Identify and recognize gait faults.
 - a. View and assess horses for movement.
 - b. Apply the principles of gait fault correction.
 - c. Apply the principles of changing hoof flight
 - d. Apply the principles of changing hoof balance.
4. Apply the principles of shoeing performance horses.
 - a. Apply the principles of shoeing western-stock horses.
 - b. Apply the principles of shoeing English type horses.
 - c. Apply the principles of shoeing gaited show horses.
 - d. Apply the principles of shoeing racehorses.
 - e. Apply the principles of shoeing harness horses.
- f. Apply the principles of shoeing Draft horses.
5. Apply the principles of shoeing sport horses.
 - a. Apply the principles of shoeing shoe hunters.
 - b. Apply the principles of shoeing show jumpers.
 - c. Apply the principles of shoeing three-day eventers.
 - d. Apply the principles of shoeing field hunters.

FASC 1310L. Blacksmithing I

Course Description

This course presents to student's concepts, skills and techniques utilized in blacksmithing and forging. Techniques in forging tools and horseshoes with several toe and heel modifications are addressed in this laboratory-oriented class. Students will gain hands-on experience in this course as they learn the art of shaping shoes.

Student Learning Outcomes

1. Operate and utilize coal and gas forges safely.
 - a. Explain how to safely start, operate, and shut down coal and gas forges.
 - b. Describe how to efficiently operate coal and gas forges to heat steel.
2. Utilize an anvil, hammer and tongs to forge shoes.
 - a. Identify the parts of an anvil and their uses.
 - b. Describe how to fluidly use their body to forge iron.
 - c. Identify various types of hammer blows.
 - d. Explain how to efficiently use tongs when forging.
3. Forge modifications on machine made shoes.
 - a. Identify commonly found hoof shapes for which to shape cold shoes.
 - b. Explain how to forge toe modifications on machine made horseshoes.
 - c. Explain how to forge heel modifications on machine made horseshoes.
 - d. Forge weld a bar shoe for a horse.

FASC 1320L. Blacksmithing II

Course Description

This course presents advanced principles and techniques used in blacksmithing. Students forge a variety of projects to learn and enhance blacksmithing skills. The projects involve several advanced techniques that should help students forge tools, shoes, and specialty projects. These techniques are used to forge a variety of specialty shoes for horses.

Student Learning Outcomes

1. Forge shoe modifications to change functional balance and gait faults of horses.
 - a. Forge toe modifications.
 - b. Forge heel modifications.
 - c. Identify modifications which create optical illusions.
2. Forge specialty shoes for performance horses.
 - a. Forge fullered shoes.
 - b. Forge caulks.
 - c. Forge weld and braze.
 - d. Forge aluminum shoes.
3. Forge specialty shoes for mules and draft horses.
 - a. Forge working draft horse shoes.
 - b. Forge show draft horse shoes.
 - c. Forge mule shoes.

FASC 1710L. Specialty Horseshoeing

Course Description

This course is designed for students who are certificate seeking and do not wish to enroll in general education courses. This course will provide additional experience in horseshoeing through hands-on learning. This is a laboratory-oriented course providing students with additional time to practice their horseshoeing skills. Some forging techniques will be utilized in this course.

Student Learning Outcomes

1. Assess a horse pre- and post-shoeing by identifying four out of five areas to address while shoeing and includes:
 - a. Explaining how to trim and balance feet for geometric x, y and z balance.
 - b. Assessing and evaluating horses for functional balance.
2. Forge and fit horseshoe modifications by:
 - a. Identify the five commonly seen hoof shapes.
 - b. Explaining how to shape shoe cold.
 - c. Describing how to fit shoes cold.
 - d. Describe how to fit shoes hot.
3. Make different horseshoeing and forging tools.

FASC 1996L. Special Topics in Farrier Science

Course Description

This is an advanced special topics course for students who desire to gain additional laboratory time. This is a laboratory-oriented course allowing students extra time to practice techniques and build their skills in horseshoeing. Horses will be worked on as available and some forging techniques will be utilized.

Student Learning Outcomes

1. Shoe horses by.
 - a. Demonstrating the five hoof shapes.
 - b. Shaping and fitting cold shoes.

- c. Shaping and fitting hot shoes.
- 2. Shoe horses with special or therapeutic needs.
 - a. Distinguish between sound and therapeutic shoeing.
 - b. Distinguish the level for a specific horse.
 - c. Determine shoe types for a particular need.
- 3. Forge various tools and horseshoe modifications.
 - a. Identify various fore punch structures and uses.
 - b. Successfully forge all shoe board modifications.
 - c. Discuss the differences between normalizing, annealing, hardening and tempering of various metals.

FASC 1998. Internship in Farrier Science I

Course Description

This course is designed to provide on-the-job work experience. Students gain this experience by working under the direct supervision of a practicing Farrier. Exposure to technical skills, business management, and customer relations are realized in this course.

Student Learning Outcomes

- 1. Goal setting students will:
 - a. Set important, measurable, and attainable goals.
 - b. Write those goals for reference.
- 2. Pulling, clinching, and finishing students will:
 - a. Carefully and efficiently pull shoes.
 - b. Efficiently clinch feet.
 - c. Finish feet like a show case window.
- 3. Apprenticing students will:
 - a. Identify the tasks of an apprentice.
 - b. Complete the tasks of an apprentice.
- 4. Business students will:
 - a. Identify the qualities of a professional.
 - b. Calculate and charge a fair price for services.
 - c. Manage time and scheduling.
 - d. Maintain records needed for a Farrier business
 - e. Identify records needed for completing tax documents.
- 5. Communication students will:
 - a. Effectively communicate with peers.
 - b. Demonstrate how to work professionally with clients.
 - c. Demonstrate written communications with clients.
 - d. Explain critical apprenticeship experiences

FASC 2000. Certification Preparation

Course Description

This course is designed to help students prepare for certification examinations of national associations. The written, forging and shoeing exams at each level will be covered according to the level the students are preparing for. This course will utilize both lecture and field approaches to preparation. Both full-time Farrier students and farriers in business would benefit from this course.

Student Learning Outcomes

- 1. Certification Students will:
 - a. Identify the testing structure of national exams.

- b. Identify levels of certification.
 - c. Recall exam requirements.
- 2. Written Exam Students will:
 - a. Identify exam subjects.
 - b. Identify exam format.
 - c. Complete written practice exams.
- 3. Shoeing Exam Students will:
 - a. Identify exam subjects.
 - b. Identify exam format.
 - c. Complete shoeing practice exams.
- 4. Forging Exam Students will:
 - a. Identify exam subjects.
 - b. Identify exam format.
 - c. Complete forging practice exams.

FASC 2230L. Farrier Science Therapeutics

Course Description

This laboratory-oriented course is designed to provide students with the knowledge, skills, and techniques of trimming and shoeing horses with common pathological conditions, including laminitis and navicular syndrome. The assessment of lame horses and application of therapeutic shoes will be discussed, demonstrated, and practiced.

Student Learning Outcomes

- 1. Use hoof testers to detect lameness according to Industry standards.
- 2. Shoe a horse with pads according to Industry standards.
 - a. Develop a method of detection.
 - b. Identify types and uses of pads.
 - c. Identify types and uses of pads.
 - d. Prepare pads for application.
- 3. Shoe a horse with clips according to Industry standards.
- 4. Shoe a chronically foundered horse according to Industry standards.
 - a. Develop a method of detection.
 - b. Identify types and uses of therapeutic shoes.
 - c. Apply therapeutic shoes.
 - d. Measure feet for therapeutic shoes.
- 5. Shoe a horse with navicular syndrome on a horse according to Industry standards.
 - a. Develop a method of detection.
 - b. Identify bar shoes.
 - c. Apply bar shoes.

FASC 2330L. Farrier Craftsmanship Therapeutics

Course Description

This laboratory-oriented course is designed to instruct students in the craftsmanship of forging therapeutic and pathological horseshoes for common lameness. From measuring the feet to choosing the material for construction in building the shoes, students will practice the processes used to make therapeutic horseshoes.

Student Learning Outcomes

- 1. Follow the design and process of forging therapeutic shoes by:
 - a. Identify types of therapeutic shoes.
 - b. Designing and layout therapeutic shoes.

- c. Measuring feet for therapeutic shoes.
- 2. Forge bar shoes by:
 - a. Measuring for bar shoes.
 - b. Forming bar shoes.
 - c. Welding bar shoes.
 - d. Fitting bar shoes.
- 3. Forge heart bar shoes by:
 - a. Placing of heart bars.
 - b. Measuring for the shoes.
 - c. Forming shoes.
 - d. Welding the heart bar.
- 4. Forge wedged heel shoes by:
 - a. Forging elevated shoes from keg shoes.
 - b. Forging handmade wedged shoes.
 - c. Forging aluminum wedges.
- 5. Forge horseshoe modifications and therapeutic shoes by:
 - a. Forging extensions.
 - b. Forging handmade extension shoes.
 - c. Forging aluminum extension shoes.

FASC 2530. Lameness Physiology

Course Description

This course is designed to present a comprehensive approach to biomechanics, pathology, and common lameness of horses. Emphasis is placed on the limb, leg and foot. Dissections of the leg and foot will be conducted by students. Anyone with an interest in doing veterinary referral work should benefit from this class.

Student Learning Outcomes

1. Correctly identify four out of five techniques in a sequence to detect lameness on a faculty administered exam.
2. Develop a method of detection.
3. Practice locating lameness.
4. Recognize the Farrier's role in caring for the lame horse.
5. Recognize the veterinarian's role in caring for the lame horse.
6. Recognize the owner's role in caring for the lame horse.
7. Recognize clinical signs of front limb lameness.
8. Locate the structures involved.
9. Determine causes of lameness.
10. Determine what the Farrier can do for the lameness.
11. Identify common diseases of the hoof.
12. Recognize clinical signs of foot lameness.
13. Locate the structures involved.
14. Determine causes of lameness.
15. Determine what the Farrier can do for the lameness.
16. Discuss hoof diseases and unsoundness with peers and owners.
17. Recognize clinical signs of hind limb lameness.
18. Locate the structures involved.
19. Determine causes of lameness.
20. Determine what the Farrier can do for the lameness.
21. Identify structural and angular deformities.

22. Recognize clinical signs of deformities.
23. Locate the structures involved.
24. Determine causes of deformities.
25. Determine what the Farrier can do for the deformities.

FASC 2997. Independent Study in Farrier Science

Course Description

This course is designed to give students experience in developing, conducting and writing a small research project. Special topics or problems related to horseshoeing will be considered for projects. Students should gain detailed insight into a topic that is of particular interest to them. The requirements for this course are completed on an arranged schedule.

Student Learning Outcomes

1. Develop a research topic and project.
 - a. Identify a topic of interest.
 - b. Identify a topic that needs researched.
 - c. Identify views of the horse.
2. Complete research on the selected research topic.
 - a. Research previous studies.
 - b. Research current theories.
 - c. Identify resources.
3. Demonstrate written skills by successfully completing the research paper.
 - a. Follow the guidelines of the MCC writing rubric.
 - b. Identify resources needed.
 - c. Develop a format for the study.
4. Demonstrate oral communication skills by giving an oral presentation of the project to their peers.
 - a. Develop a time line for the presentation.
 - b. Prepare visual aids for the presentation.
 - c. Give the presentation.

FASC 2998. Internship in Applied Farrier Science II

Course Description

This course is designed to provide on-the-job work experience and allow the student to apply skills and knowledge. Students gain this experience by working under the direct supervision of a practicing farrier. Application of technical skills, business management, and customer relations are realized in this course.

Student Learning Outcomes

1. Goal Setting Students will:
 - a. Set important, measurable, and attainable goals.
 - b. Write those goals for reference.
2. Pulling, Clinching, and Finishing Students will:
 - a. Carefully and efficiently pull shoes.
 - b. Efficiently clinch feet.
 - c. Finish feet like a show case window.
3. Apprenticing Students will:
 - a. Identify the tasks of an apprentice.
 - b. Complete the tasks of an apprentice.
4. Business Students will:
 - a. Identify the qualities of a professional.
 - b. Learn how to charge a fair price for services.

- c. Learn how to manage time and scheduling.
 - d. Keep records needed for a farrier business.
 - e. Identify records needed for completing tax documents.
5. Communication Students will:
- a. Demonstrate the ability to work with peers.
 - b. Demonstrate how to work professionally with clients.
 - c. Identify means to communicate in writing to clients.
 - d. Discuss critical apprenticeship experiences

FASC 2999L. Farrier Science Capstone Course

Course Description

This course is designed to be a capstone course for Farrier Science, focusing on specialty and therapeutic work. Both shoeing and forging will be implemented into this laboratory-oriented course. Preparation for the American Farriers Association advanced certification exams will be a part of this course.

Student Learning Outcomes

1. Identify areas of skills which need further practice.
 - a. Assess their own knowledge and skills.
 - b. Recognize their limitations.
 - c. Build on their strengths.
 - d. Strengthen their weaknesses through demonstrations.
2. Determine the need, forge and apply therapeutic horseshoes.
 - a. Forge all shoe modifications on the A.F.A. practical for a horse.
 - b. Apply all shoe modifications on that horse.
3. Determine the need, forge and apply specialty horseshoes.
 - a. Forge specialty shoes for a given horse.
 - b. Apply specialty shoes for a given horse.
4. Pass the three parts of the certified farrier exams.
 - a. Identify and label all bones, joints, and growth plates.
 - b. Demonstrate knowledge of the construction, function, and location of the elastic and inelastic hoof structures and how they contribute to a sound, healthy foot.
 - c. Demonstrate a fundamental understanding of the suspensory apparatus.
 - d. Correctly identify definitions, functions and origin and insertion of all tendons and ligaments.
 - e. Demonstrate basic knowledge of the circulation system of the lower leg and hoof.
 - f. Recognize definitions, anatomy involved, and possible causes of the following conditions: splints, thrush, laminitis, founder, ringbone, carpalis, corns, osslets, sheared heel, stringhalt, and navicular lameness.
 - g. Identify and discuss all gaits and gait faults (e.g. forging, brushing, speedy cutting, scalping, cross firing, elbow hitting, overreaching, etc.)
 - h. Forge clips, square toes, rocker toes, rolled toes, extended

Film & Digital Media Arts (FDMA)

FDMA 1021. Visual Concepts

An introductory course in visual literacy for both two-and three-dimensional visual arts, including the concepts of unity, emphasis, balance, scale, rhythm, line, texture, space, motion, and color. Design thinking principles will be integrated within an interactive, ideational drawing approach. Students will become acquainted with these fundamental visual concepts through the use of both manual and digital tools.

Student Learning Outcomes

At the conclusion of this class students will be expected to:

1. Define and understand the fundamental concepts that inform visual thinking and communication (Gestalt, unity, emphasis, balance, scale, rhythm, line, texture, space, shape, motion, value and color)
2. Execute various 2- and 3-D visual projects with good craftsmanship and awareness of form from concept to completion (including ideational sketching and presentation methods)
3. Present, critique and articulate their own work and the work of others in the context of assignments and topics.

FDMA 1110. Film History

Course Description

This course surveys the history of cinema - investigating the process by which the original "cinema of attractions" evolved into a globally dominant form of visual storytelling. We will explore the development of cinema both as an art form and as an industry, and consider the technological, economic, cultural factors, and key international movements that shape it.

Student Learning Outcomes

1. Develop appreciation for the history of cinema.
2. Develop knowledge of the key eras in the history of US cinema.
3. Learn the characteristics of major movements in international cinema.
4. Explain technological innovations that were necessary for, and integral to, the advancement of cinema.
5. Recognize the various elements that go into telling a story in cinema.

FDMA 1115. Design History

Course Description

A history of graphic and industrial design and architecture of the western world from 1450 A.D. through to the present. The course will describe the various periods and styles in design as they relate to the historical settings during which the works were created. Emphasis will be placed on the political, social, spiritual, intellectual, and cultural movements that affect the creation and development of design.

Student Learning Outcomes

1. Describe design traditions and works of design from various periods
2. Appraise why and how the designer creates
3. Analyze significant design trends and practitioners
4. Analyze modern and contemporary designs

FDMA 1120. Desktop Publishing I

Course Description

This course is designed to teach introductory skills for designing and creating publications and presentations with layout software. The course will focus on graphics and typographic design, fonts, and other skills for print and web publishing.

Student Learning Outcomes

1. Demonstrate knowledge of fundamental features and navigation of desktop publishing software.
2. Combine text and images for effective communication.
3. Develop a balanced composition through use of color, contrast, and alignment.
4. Place images within a composition and wrap around text.
5. Produce documents with professional layout and typography skills.
6. Create attractive and effective designs.
7. Combine knowledge of typography, images, and design principles to produce professional print and web media.
8. Create or add to a professional design portfolio for future use.

FDMA 1130L. Film Crew I Lab

Course Description

Co-requisite lab for FDMA 2110. Students complete International Alliance of Technical Stage Employees (IATSE 480, OSHA) safety training, a fitness assessment and training in basic nutrition and environmental concerns specific to film set work. Students will complete technical workshops for equipment operation. Students will be responsible for fees required for certification.

Student Learning Outcomes

At the conclusion of this course, the student should be able to;

1. Work safely and effectively on a film set.
2. Describe physical demands of location work.
3. Formulate good personal choices in nutrition using current dietary guidelines and physical health planning.
4. Model professional on set behaviors and safe use of technical equipment

FDMA 1140. Dramatic Analysis

Course Description

We will read representative plays and explore basic elements of the dramatic text, a foundational step for all theatre and film artists. The class format is lecture/discussion. You are expected to contribute to class discussions by way of an informed reading of the assigned material.

Student Learning Outcomes

1. Develop high order of reading skills, learning to read a text closely and attentively; to grasp the larger argument and implications of a dramatic text
2. Develop the ability to think independently
3. Learn to assess textual evidence
4. Learn to deploy textual evidence
5. Develop critical thinking and interpretive skills, learning to think both analytically and imaginatively

FDMA 1150. Introduction to Film Technology

Course Description

Introduction to film technology trades.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Analyze and critically interpret film tech methods: I.E. Safety, Call sheets, Film tools, etc.
2. Demonstrate a firm understanding of working effectively in production crew positions in a group environment.
3. Explain the process of how the artist/designer made the specific piece and or decisions on final submissions.
4. Recognize and articulate specific film production structure, from original concept to final release.
5. Articulate personal ideas and thoughts on various artistic information.

FDMA 1160. Introduction to MAC Office Suite

Course Description

This course will introduce the student to computer terminology, concepts, and applications to focus on Microsoft Office Suite and their integration.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Analyze and critically interpret the Mac operating system: I.E. Tools, Window, Applications, Key commands, etc.
2. Demonstrate a firm understanding of the OSX principles.
3. Recognize and articulate specific OSX terms and definitions.
4. Articulate personal ideas and thoughts on various OSX system information.

FDMA 1170. Scanning Techniques

Course Description

This course develops students' skills with scanning devices and software and correcting scanned content. Topics include scanning film, transparencies, flat work and three-dimensional objects, resolution and file formats and a checklist for purchasing a scanner.

Student Learning Outcomes

1. Use the software appropriately to scan objects and imagery
2. Use the software appropriately to correct scanned imagery for different output formats.

FDMA 1180. Adobe® Lightroom

Course Description

This class presents a thorough overview of Adobe® Lightroom, an application encompassing digital workflow, file management, basic adjustments, and presentation tools. Students will have a hands-on opportunity to work with Lightroom to create an efficient and comprehensive digital workflow.

Student Learning Outcomes

1. Use Adobe® Lightroom to professionally manage, develop, and present digital images.
2. Understand and use Adobe® Lightroom modules and tools.
3. Use Adobe® Lightroom to enhance and streamline the digital workflow.

FDMA 1185. Experimental Cinema

Course Description

Balances practical exercises with a theoretical and historical approach to film that expands and challenges the current views within the independent film industry nationally and internationally. Students experiment with conceptions of filmmaking by creating dialogue and healthy debate while also fostering individual creativity as filmmakers, artists and citizens of the culture.

Student Learning Outcomes

1. Explain the effects of an ever-evolving media landscape within the context of contemporary culture.
2. Identify historical and multicultural art movements and practitioners within the history of experimental filmmaking.
3. Interact with filmmaking and media in ways that expand the notion of what these subjects may be in the future.
4. Create a unique work of art in which it's subject or form is related to the context and history of experimental filmmaking and contemporary art practices.

FDMA 1190. International Documentary Cinema

Course Description

An exploration of the evolution of international documentary cinema focusing on films, directors, themes, issues, and cultures that have led to the most influential non-fiction films since the beginning of the 20th century. Technical, political, and socio-economic influences are explored. Students also examine our current society, the future of documentary films in the context of contemporary society, and how new technologies impact documentary films.

Student Learning Outcomes

1. Describe documentary film production processes and procedures
2. Analyze early 20th century documentaries
3. Evaluate propaganda films of the 20th century
4. Identify the effect of digital technology and 9/11/2001 on documentaries
5. Analyze and discuss sociological trends and the future of documentaries.

FDMA 1210. Digital Video Production 1

Course Description

An introduction to digital video production. Students learn camera operation, lights and audio equipment. Hands-on production is completed in the studio and on location.

Student Learning Outcomes

1. Plan and produce a digital video project
2. Apply post-production workflow
3. Work in team and as individual to complete digital video projects.

FDMA 1215. Introduction to Video Production

Course Description

An introductory course in video production designed for high-school aged students. Students create short video and new media productions that focus on diverse youth and cultural issues in the community. Through peer collaboration, research, and hands-on creation, students learn to pitch and execute stories that are topical and of current interest.

Student Learning Outcomes

1. Demonstrate form, structure, and style of short video productions
2. Identify the importance of the role of new media in society
3. Demonstrate short video production techniques
4. Demonstrate short video editing techniques
5. Identify the basic principles of pitching ideas for video productions.

FDMA 1220. Introduction to Digital Video Editing

Course Description

In this course, students learn the basics of the post-production process for non-linear video editing. Students work with multiple video formats and create short movies for multiple distribution platforms. Skills include media management and professional terminology.

Student Learning Outcomes

1. Define concepts related to digital video editing.
2. Use non-linear video editing software for editing a short film
3. Enhance storytelling through the use of continuity, timing, cutaways, intercutting, compositing, transitioning, jump cutting, montaging and animating.
4. Use text, titles, transitions, video effects, sound effects, dialogue, and visual assets for digital video editing.

FDMA 1255. Introduction to Digital Audio Documentary

Course Description

An introduction to basic digital studio and field production techniques and the procedures necessary for gathering aural history for the production of documentary radio/web broadcast. You will learn how to select and edit excerpts from your interviews to produce radio vignettes. You will study Pro Tools, basic audio field recording with digital technology, the practice of aural history, and the art of sound collage.

Student Learning Outcomes

By the end of the course, students will:

1. Gain experience in the basic techniques of audio recording and editing.
2. Observe the physical and social world with an understanding of how to record it.
3. Be conversant with the concepts of documentation and interpretation.
4. Have worked on a collaborative group project and as part of the class team.

FDMA 1260. Introduction to Digital Media

Course Description

Explores concepts of how text, graphics, sound, images and video come together in a digital media program and researching new trends and current issues related to media applications and design. Students will be involved in teamwork, communication and workplace interaction simulation.

Student Learning Outcomes

Students completing this course should be able to:

1. Describe and identify the principal components and terminology of digital media.
3. Analyze and examine the use of digital media as a communication tool
4. Plan and implement a digital media project
5. Critique professional digital media products.
6. Create projects using a variety of digital media tools
7. Demonstrate a working knowledge of copyright and usage rights
8. Present completed projects in a professional manner for critique.

FDMA 1265. Digital Media Literacy

Course Description

You will create a personal web page, which will serve as the foundation for exploring communication and web publication/syndication in the modern world.

Student Learning Outcomes

By the end of the course, students will:

1. Gain experience in the basic methods of creating and publishing web pages.
2. Develop skills to evaluate bias and meaning in one's own web published content and that of others.
3. Investigate the language of persuasion, as "persuader" and "persuade."
4. Explore issues of ethics in social media.
5. Develop critical thinking.

FDMA 1266. Digital Techniques in Visual Art

Course Description

Studio course introducing fundamental two-dimensional concepts and principles while focusing on processes and methodologies. Concepts, skills, process activities and methods introduced in this course are applicable across all areas of design. This course will utilize visual problem-solving skills to address personal, social, cultural or social justice issues and perspectives. Assignments will enable students to develop critical thinking and the ability to effectively communicate digital art criticism in a collaborative environment.

Student Learning Outcomes:

1. Develop skills in a variety of Adobe® programs through tutorials, research and projects.
2. Develop traditional and digital production understanding for 2-D print and web projects.
3. Develop the ability to think conceptually and critically.
4. Develop the ability to articulate constructive criticism and guidance for suggested rework of the projects.
5. Build and practice using design vocabulary while discussing your own (and others') work.

FDMA 1270. Shooting Your Story

Course Description

This course covers basic filmmaking shot composition and story development for different movie genres. Using straightforward technologies, students will explore the essential movie-making elements: lighting, sound, and set decoration, that support the camera department as they develop their own visual story.

Student Learning Outcomes

1. Conceptualize and write a story suitable for presentation as a short film.
2. Create a short film using a variety of technologies for capturing visual elements and sound.

3. Design and create a visual plan including props to enhance a short film feature.

FDMA 1290. Electronic Color Theory and Practice

Course Description

Students learn about electronic color modes, spaces, device calibration and color management. They learn to match output to input depending on production method, Including Web, print, and video. Topics include additive and subtractive color primaries, defining color space, device gamuts, choosing a color model, calibration and profiles, color management workflow, third party calibration software and hardware and color modes (bitmapped, grayscale, RGB, CMYK and Lab.)

Student Learning Outcomes

1. Understand the uses and applications of additive and subtractive color primaries.
2. Choose a color mode and working space.
3. Manage color calibration from Input to output for all media applications.
4. Make appropriate aesthetic and design choices regarding color.

FDMA 1310. Introduction to Television Production

Course Description

This course will provide students with an introduction to producing programming for television broadcast. Students will learn basic shooting, editing and broadcast live and recorded media. Work is performed on location and in the studio.

Student Learning Outcomes

1. Have a general understanding of how a variety of television programming is created.
2. Gain experience in the basic tasks of television production, including basic competencies in film conceptualization, videography, lighting, sound recording, editing and live switching.
3. Analyze television shows and other media.
4. Apply television production skills in individual and group projects.
5. Identify and analyze effects of television production on society.

FDMA 1320. Beginning Make-up Artistry

Course Description

Production aspects of make-up for film and television. Students learn the basic concepts of foundation, color, glamour and special effects make-up and participate in hands-on practical application of make-up for models and actors.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate beginning level application of make-up for the motion picture, media and fashion industry.
2. Understand and participate in management and organizational roles on a film or fashion set.
3. Utilize appropriate industry standards as they apply to make-up.
4. Demonstrate team working skills as it applies to the make-up industry.

FDMA 1330. Documentary Film Production

Course Description

Documentary Film Production is a comprehensive introduction to the basics of Documentary Film Production. Students will make two short Documentaries.

Student Learning Outcomes

1. Demonstrate introductory level working knowledge and demonstrate proper use of camera, lighting, sound, and any other production equipment used during production and post-production.
2. Students will build a portfolio of their completed documentaries by writing, shooting, and editing footage into a commercial. Students will interview subjects on camera. Students will be able to showcase their works on a variety of platforms.

3. When working on a project a set of rules must be used to properly cover every aspect of shooting and producing. Students will demonstrate their understanding of these rules and concepts.

FDMA 1350. Radio Journalism

Course Description

An introduction to radio journalism offered in partnership with KSFR 101.1 FM Santa Fe public radio station. Students work with professional news journalists to learn the trade and tools used in broadcast and podcast news radio.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Write comprehensive journalistic prose
2. Identify credible news research sources for news reporting
3. Edit and integrate interviews, "natural sound" environments and research materials into a complete newscast for broadcast
4. Collaborate in team environments to deliver radio news in a professional environment.

FDMA 1355. Introduction to Visual Communications

Course Description

Not Available

Student Learning Outcomes

Not Available

FDMA 1360. Web Design I

Course Description

This course provides an introduction to web development techniques, theory, and design. Students will learn HTML, CSS application, and strategies for effective site navigation and design, along with industry standard web editing software to develop various websites.

Student Learning Outcomes

1. Acquire and utilize web design terminology.
2. Create basic web pages using HTML.
3. Demonstrate how to use industry-standard web editing software.
4. Design professional pages that are easy to navigate and quick to load.
5. Develop a basic comprehension of CSS
6. Prepare and export a variety of graphics to be used online.
7. Compare and contrast designing for web media vs. print media.
8. Analyze the importance of web presence in today's business/social climate.

FDMA 1365. UX/UI User Experience/User Interface Design

Course Description

An introduction to creating effective web page designs for yourself or your client. Students learn how a website's interface impacts a user's experience and the techniques to engage and maximize a website's effectiveness. Students explore the process that spans initial research and audience profiling, to content development and information architecture, to wireframing then, finally, to prototyping and style development.

Student Learning Outcomes

1. Demonstrate integration of research
2. Demonstrate understanding of the major components for user experience
3. Demonstrate understanding of user interface techniques
4. Demonstrate style and composition supporting UX/UI Principles

FDMA 1370. Commercial Production

Course Description

Commercial Production is a comprehensive introduction to the basics of Commercial Production. Students will make a commercial for a local business.

Student Learning Outcomes

1. Demonstrate introductory level working knowledge and demonstrate proper use of camera, lighting, sound, and any other production equipment used during production.
2. Students will build a portfolio of their completed commercials by writing, shooting, and editing footage into a commercial. Students will be able to showcase their works on a variety of platforms.
3. When working on a project a set of rules must be used to properly cover every aspect of shooting and producing. Students will demonstrate their understanding of these rules and concepts.

FDMA 1380. Introduction to Protools

Course Description

This hands-on course provides a basic introduction to recording and editing using Digi Design's Pro Tools software. Students have access to their own Pro Tools equipped Mac or Windows workstation as well as to the recording studio. Students record and edit their own final project.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Record audio for use in Pro Tools
2. Edit audio in Pro Tools
3. Create a finished product and burn to CD

FDMA 1390. Introduction to Ableton® Live

Course Description

Students work with Ableton® Live, the most frequently used live music performance and production software, to create and perform music. The features of the software will be studied in depth as well as music production and performance techniques.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Operate Ableton® Live software
2. Create and manipulate computer-based audio
3. Understand audio synthesis
4. Develop creative workflow
5. Create computer-based music for live performance
6. Create different styles of work with computer technology
7. Understand how to integrate third-party software with Ableton® Live

FDMA 1410. Audio Production I

Course Description

Students will learn about and apply essential tools and techniques in analog and digital audio production. Topics include acoustic science, microphones, recording and mixing techniques, analog and digital audio hardware and software, including multi-track, computer-based recording and editing systems.

Student Learning Outcomes

1. Apply tools and techniques in analog and digital audio production.
2. Illustrate the fundamentals of acoustic science.

3. Model professional behavior used in audio recording.

FDMA 1415. Principles of Sound

Course Description

The creation of a professional quality original media soundtrack is possible for relatively low production/post-production costs. This class is designed to give the student an overview of creating sound for a variety of digital media. Topics include acoustic principles, sound design, audio hardware, recording techniques; and editing, processing, and multi-track mixing, using software applications.

Student Learning Outcomes

Upon successful completion of this course, students will be able to do the following:

1. Record and edit wild sound effects and synced dialogue
2. Discover, upload, and edit on-line music, ambience and sound effect loops
3. Implement audio design theories
4. Create an aesthetic soundtrack which incorporates multiple elements and dimensions
5. Design, edit, process, mix and master a synced multi-track soundtrack
6. Demonstrate capable use of digital audio production and post-production workflow
7. Produce short audio projects which meet media industry technical standards.

FDMA 1417. Audio Field Recording

Course Description

Learn to use digital and analog audio recording equipment to produce field recordings from diverse settings. The class is designed as a workshop, incorporating fieldtrips, individualized support, group critiquing and problem solving.

Student Learning Outcomes

1. Identify, connect, and operate a variety of digital and analog recording devices: recorders, microphones, cables, headsets, power adapters, and media
2. Determine appropriate applications of specific microphones and recording devices
3. Plan, prepare, evaluate and execute successful field recordings
4. Effectively employ recording techniques for both environmental recordings and interviews
5. Envision and plan a project from conception to completion, including pre-production, production and post-production design. This includes writing and submitting a formal proposal with goals, project description, target audience, outcomes, evaluation and budget that would incorporate the class field recordings and additional fieldwork.

FDMA 1420. Performance for Film and Media I

Course Description

Introduction to acting skills and techniques unique to film, television and web-based productions. The class includes writing and performing a monologue for the screen, partner scene work, audition preparation and professional filmmaking terminology.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Perform short scene and monologue for the camera
2. Use film terminology appropriately
3. Understand career options
4. Demonstrate understanding of script breakdown and character analysis
5. Apply acting techniques for motion media.

FDMA 1430. Writing for Mass Media and the Web

Course Description

Instruction focuses on writing skills and applications for all forms of mass media, including journalism (news) and persuasive writing (advertising copy) and the web. Topics include basic principles of writing, analysis of factual information, the concept of news and careers in writing for mass media.

Student Learning Outcomes

1. Identify the general writing requirements for mass media
2. Identify the specific writing requirements for specific mass media forms
3. Write to specification several examples of mass media writing
4. Analyze elements of news or advertising copy with regard to their correct use.

FDMA 1450. Girls Make Media**Course Description**

The class focuses on directing, producing, shooting and editing through hands-on workshops. Students in the class will work individually and in teams to create small films. Classes are designed to create media literacy pertaining to female focused subjects and create feminine voice through altruistic behavior. Designed for young women ages 14-21.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and operate digital film production equipment
2. Perform direction and production skills
3. Understand female focus in media and electronic storytelling
4. Participate in a team process
5. Understand editing and compression for video.

FDMA 1460. Women make Media**Course Description**

Designed for women ages 18+. The class focuses on directing, producing, shooting and editing through hands-on workshops. Students in the class will work individually and in teams to create small films. Classes are designed to create media literacy pertaining to female focused subjects and create feminine voice through altruistic behavior.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and operate digital film production equipment, including cameras, lighting and audio equipment
2. Perform production and direction skills
3. Understand female focus in media and electronic storytelling
4. Participate constructively in a supportive and thoughtful team process
5. Understand editing and compression for video.

FDMA 1465. Women of Cinema**Course Description**

A detailed study of the history of women producers and directors in the film industry. This course focuses on women directors and producers of the film industry. from early silent films to current cinema. This course explores the gender bias that has plagued the film industry since its beginning. Students delve into the work of women ground-breakers and mavericks.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify significant women directors and producers and their impact on cinema
2. Demonstrate an understanding of gender bias in the film industry
3. Analyze the impact of women directors and producers from the silent era to present day

4. Identify women ground-breakers and mavericks.

FDMA 1470. Introduction to Social Media Basics

Course Description

Introduces the basics of Facebook, Twitter, Instagram, LinkedIn, and Pinterest. Topics include audience, purpose, demographics, image creation in Canva and Pic Monkey, obtaining and using stock images, review of successful social media campaigns and evaluation tools available, and management tools such as Hootsuite, Sproutsocial, Buffer, and Facebook scheduling.

Student Learning Outcomes

1. Create personal and business social media accounts
2. Capture or create images
3. Explain the function of social media platforms and management tools.

FDMA 1475. Social Media Basics

Course Description

Develops students' skills using the social media platforms of Facebook, Twitter, Instagram, LinkedIn, and Pinterest and introduces blogging. Topics include successful social media campaigning, optimum scheduling, third-party scheduling, advertising, boost posting, Google analytics, and social media integration with websites. Students create and utilize a WordPress site.

Student Learning Outcomes

1. Create personal and business social media accounts
2. Create a social media campaign
3. Produce reports that include data and analytics
4. Apply social media tools within websites.

FDMA 1480. Contemporary and Postmodern Film

Course Description

An examination of the social and political context of the postmodern era of filmmaking. This class explores postmodern filmmaking techniques, aesthetic choices and stylistic devices. Includes the work of Quentin Tarantino, the Coen Brothers, Ridley Scott, Spike Jonze and Charlie Kaufman.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Recognize and distinguish the differences between postmodern filmmaking and other types of filmmaking.
2. Describe the political and social context of contemporary filmmaking.
3. Describe and recognize the use of specific filmmaking techniques, aesthetic choices and stylistic devices.
4. Critique various contemporary films from multiple perspectives, including film studies, cultural theory and sociocultural history.

FDMA 1510. Introduction to 3-D Animation

Course Description

This course provides an overview of 3-D animation production processes. Students will be introduced to basic story development and the creation of computer-generated assets and cinematic sequences. The course will survey specialty areas of digital animation and various software and techniques applied in entertainment and information media. Students will review and critique other's animation, as well as plan and produce original animation for review by classmates and as part of a CGI demo reel.

Student Learning Outcomes

1. Demonstrate a fundamental understanding of 3-D animation history and principles.
2. Analyze animation work of other artists.
3. Appropriately utilize the various media technologies for digital 3-D animation.
4. Demonstrate and apply basic techniques of digital 3-D animation.
5. Demonstrate and apply basic processes of creating CGI for a narrative.
6. Apply some basic strategies for developing and creating a story visually, and create original animations.
7. Present original animations to instructor and classmates for critique.
8. Create a CGI demo reel of work completed during the course.

FDMA 1515. Introduction to Digital Image Editing – Photoshop®

Course Description

In this course, students will learn how to use the tools in Adobe® Photoshop® to create new images and edit existing images. Tools used will include selections, layers, and adjustments, among other pixel editing tools. Basic composition and output will be emphasized in all projects.

Student Learning Outcomes

1. Make and refine selections
2. Adjust color and tone in an image
3. Eliminate unwanted objects in an image
4. Apply layers to organize and create effects
5. Create brushes, styles and vector shapes
6. Prepare image for print and screen output
7. Apply masking and layers to non-destructively edit an image
8. Effectively utilize blending modes and layer styles
9. Apply adjustment layers
9. Apply design principles including typography.

FDMA 1517. Photoshop® Techniques

Course Description

Students will familiarize themselves with image editing using Adobe® Photoshop®. Students will use Adobe® Photoshop® tools for painting, retouching, and enhancing images. Students will learn to work with layers and layer selections.

Student Learning Outcomes

1. Understand what a digital image is – resolution
2. Digital workflow
3. Optimize images in Adobe® Camera Raw
4. Effectively use selections tools: Quick Selection, Color Range, Quick Mask pen tool and refine edge
5. Understand layers and layer masks
6. Add text to images and page layouts
7. Composite images – Smart Filter, Transform.

FDMA 1520. Introduction to Digital Media

Course Description

This course is designed to provide students with a survey of the histories, innovative concepts, and creative possibilities of digital media. Within both the lecture hall and the studio lab, students will consider a wide variety of digital media processes and applications. Additionally, students will learn fundamental skills in teamwork, storytelling, and design.

Student Learning Outcomes

1. Demonstrate their understanding of fundamental key concepts, principles of animation and the moving image, and visual storytelling skills through digital narrative,

2. Demonstrate collaboration and interdisciplinary work through digital media projects,
3. Students will be able to present and analyze creative works and develop strong communication.

FDMA 1525. Introduction to Filmmaking

Course Description

An introduction to the study and practice of filmmaking. Students will study the formal elements of film through close-reading of significant short films and relevant excerpts from feature-length films. Introductory study is enriched through the applied practice of hands-on filmmaking exercises.

Student Learning Outcomes

1. Students will learn the basic elements of film.
2. Students will learn how to effectively use HD cameras and consumer-level filmmaking software applications to demonstrate a basic comprehension of those elements.
3. Students will learn how to better conceive, create and distribute short film projects.

FDMA 1531. Evolution of Electronic Games

Course Description

Focus on the evolution of video games and how they have shaped mainstream entertainment.

Student Learning Outcomes

1. Analyze the historical development of video games from early arcade machines to modern consoles and mobile platforms.
2. Evaluate the impact of technological advancements on video game design, graphics, and gameplay mechanics.
3. Identify key milestones, influential games, creators, and major companies that shaped the video game industry.
4. Examine how video games have influenced and been influenced by other forms of media and popular culture.
5. Assess the social, cultural, and economic impacts of video games as they evolved into a mainstream form of entertainment.
6. Discuss current trends and predict future directions in video game development and the gaming industry.

FDMA 1535. Introduction to Illustrator

Course Description

Students receive instruction on vector graphics creation using vector illustration software. The students will create professional-quality artwork for print publishing and multimedia graphics. Instruction includes creating and manipulating basic shapes, drawing with the pen tool, using various brushes, working with type and preparing graphics for web, print, and digital publication.

Student Learning Outcomes

1. Apply a variety of shape blending options
2. Create and apply new gradients
3. Apply Gradient Meshes and Envelopes
4. Create symbols, brushes and vector shapes
5. Apply Pathfinder® and other effects
6. Effectively utilize the pen tool to draw and edit shapes
7. Effectively utilize Vector tools
8. Prepare image for print and screen output
9. Apply clipping masks.
10. Prepare image for use in another program
11. Apply design principles including typography.

FDMA 1536. Advanced Computer Illustration

Course Description

Advanced techniques in 2-D vector drawing and fundamentals of 3-D illustration for use in print, web, and multimedia applications..

Student Learning Outcomes

1. Demonstrate proficiency in using advanced features of Illustrator.
2. Identify and create different illustrator/art styles using advanced techniques for shading, perspective, light, reflection.
3. Produce high quality digital imagery incorporating basic principles of composition.
4. Create a series of illustrations demonstrating a design competency in layout foundation and illustrative moods or client/project based solutions.
5. Create high quality portfolio pieces that demonstrate an advanced knowledge of design, composition and Illustrator techniques.
6. The students will produce finished printed portfolio pieces demonstrating a comprehensive knowledge of typographical, design, illustrative and layout skills.

FDMA 1540. Introduction to Motion Graphics

Course Description

This course introduces students to digital animation using Adobe® After Effects®. Students will use After Effects to create layers, compositions, typefaces, visual effects, and rendering. Students will also design short animations of their own, and will work through lessons and tutorials.

Student Learning Outcomes

1. Demonstrate a basic understanding of animation history and principles, including traditional and digital animation.
2. Compare and contrast the animation work of other artists.
3. Demonstrate experience in the basic components of digital animation, including layers, compositions, typefaces, effects, and rendering, utilizing professional motion graphics software.
4. Create professional-looking special effects projects.
5. Create professional-looking short animations.
6. Explain the importance of professional animation.

FDMA 1545. Introduction to Photography & Digital Imaging

Course Description

This course is a study of the principles and techniques of photography using digital equipment, and discusses how digital cameras, imaging editing, and technology have changed the world of photography. Students will learn about studies in resolution, lighting, software, editing, printing, and web applications. They will gain fundamental knowledge in the rapidly expanding technology of photography and imaging, and be able to incorporate the knowledge into all areas of digital graphics.

Student Learning Outcomes

1. Exhibit proper usage of the principles and techniques of photography using digital equipment.
2. Utilize features and techniques of a digital camera with proper use of lenses, settings, and flashes.
3. Create photo collections that represent proper use of technical skills.
4. Demonstrate proficiency in planning, lighting, capturing, and distributing photographic projects which show ability to create photographs artistically and to tell a story or express an idea.
5. Utilize appropriate software to create original projects.
7. Demonstrate knowledge in post-production of photos as to sizing, sampling, resolution, and exporting.
8. Produce original projects which respect intellectual property of others.
9. Create a digital portfolio of work completed during the course.

FDMA 1550. Introduction to Post-production Editing

Course Description

A comprehensive introduction to the basics of editing short films, documentaries and commercials. This is the second course of a comprehensive 2 Year Certificate in Film and Television Production.

Student Learning Outcomes

1. Demonstrate introductory level working knowledge and demonstrate proper use of post-production and editing software.
2. Students will demonstrate editing skills by putting together scenes of shot footage.
3. Students will build an editing portfolio of their completed works by shooting scenes and editing them using post-production software.
4. Students will be able to showcase their finished work on a variety of platforms.
5. When working on a project a set of rules must be used to properly cover every aspect of editing. Students will demonstrate their understanding of these rules and concepts.

FDMA 1555. Introduction to the Creative Media Industry

Course Description

This class is an introductory course for students who are beginning their understanding of media and how it affects them and our society. It offers a broad-stroked view of the entire industry including marketing, production, history, jobs, design, architecture, new media literacy, and industry standards. Students will listen to experts in the field, get involved in open discussions about the industry and use new information to complete hands-on individual & group assignments.

Student Learning Outcomes

Students enrolled in this course will leave with:

1. The basic philosophies and methods that guide people working in the Creative Media industry.
2. Knowledge of a wide variety of different jobs, qualifications and paradigms used in the industry.
3. Marketing, Production, Budgets, History, New Media, Inspiration and other aspects of the industry.
4. An accurate view of the Creative Media field.

FDMA 1560. Screenwriting I

Course Description

An introduction to writing scripts for media and film. Students are introduced to narrative film structure and produce a short script.

Student Learning Outcomes

1. Identify components of television and film scripts
2. Perform simple scriptwriting assignments
3. Write a simple screenplay.

FDMA 1570. Game Design Analysis

Course Description

An overview of games past to present and analysis of specific video game genres. Students learn the historical and cultural significance of video games through lecture and research. Students analyze and write about a different genre or video game each week. Topics include game history, game analysis, game mechanics, game design, and game theory.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of the history of video games and their significance in today's culture
2. Effectively dissect and analyze a video game
3. Explain the genres of video games, their mechanics, presentation, and theory
4. Present and analyze topics within video games, including sociological, cultural, and historical perspectives.

FDMA 1580. Game Design Fundamentals**Course Description**

An introduction to the elements of game design and creation. Video games will be dissected and analyzed. Students create traditional (non-video) games to gain hands-on knowledge of the fundamentals of game design. Topics include game design, game play, game balance and game theory.

Student Learning Outcomes

Not Available

FDMA 1610. Co-op Feature Film Production**Course Description**

Co-Op Feature Film Production extends the opportunity to work on a UNM Produced Film in a variety of capacities that include grip work, production assistants, script supervisors, and editors. Students will work closely with each other and the director to successfully shoot a feature film.

Student Learning Outcomes

1. Demonstrate introductory level working knowledge and demonstrate proper use of camera, lighting, sound, and any other production equipment used during production.
2. Students will learn hands on by working on a Feature Film production as it is being produced. Students will be credited for their work on the film and given a copy of the finished product for showcasing.
3. When working on a project a set of rules must be used to properly cover every aspect of shooting and producing. Students will demonstrate their understanding of these rules and concepts.

FDMA 1620. Location Shooting**Course Description**

Issues of coverage and composition for short-form independent location filmmaking with special attention to considerations of post-production. Basic camera usage on location; basic storytelling; assessing/utilizing locations for set, light and sound sources; basic editing and DVD authoring.

Student Learning Outcomes

Upon completing this course, students will demonstrate the following:

1. Understanding of principles of HD video camera operation
2. Ability to use camera and lighting equipment to creatively tell stories.
3. Basic capacity with post-production process.
4. Ability to translate the written word into a visual image.
5. Knowledge of proper set etiquette and ability to collaborate effectively and professionally.

FDMA 1630. Principles of Design**Course Description**

This course will explore how we see and use visuals to communicate information. Students will develop critical thinking skills in applying concepts of basic design principles. Students will apply the concepts with hands-on and analysis assignments. These concepts will then be applied to design for advertising, print, digital media, and web design. The business of design will also be covered with emphasis on client relations and networking. .

Student Learning Outcomes

Students completing this course will:

1. Practice Creativity
2. Plan a Design project
3. Demonstrate the effective use of Emphasis & Contrast
4. Demonstrate the effective use of Balance and Alignment

5. Demonstrate the effective use of Harmony and Repetition
6. Demonstrate the effective use of Flow, Movement, and Rhythm
7. Demonstrate the effective use of Simplicity and Economy
8. Effectively apply basic color theory
9. Demonstrate the effective use of Typography principles
10. Apply design principles to Screen & Print Projects
11. Develop client relations

FDMA 1635. Design Principles

Course Description

Explore the relationships of the forms and principles of the natural world, the processes they perform, and how to intentionally embed universally understood information that communicates deeply and effectively in a global world. This class will include examples of process from nature and their correlates in humanly expressed design-why and how they work. Students will create design projects based on these concepts.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate the ability to recognize patterns of nature
2. Distinguish universal principles in nature and apply them to design
3. Collaborate with a group to create effective design solutions

FDMA 1640. Independent Film

Course Description

An exploration of the form, history and impact of motion pictures as an art form, an economic force and a representative form of communications as observed through the lens of independent film. View examples of various categories of independent films and explore issues related to the social, historical, business and cultural aspects of the medium. Topics include genre studies from road movies to grind house and a focus on auteurs from Cassavetes to VanSant.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify critical elements of film structure, plot and composition.
2. Identify developments in the history of independent filmmaking.
3. Define critical terms related to film production and criticism.
4. Demonstrate critical viewing skills.

FDMA 1650. Short Film Production

Course Description

Short Film Production is a comprehensive course in short film production. Students will prepare for preproduction, write, cast, rehearse, shoot, and edit their own short film throughout the course. Students will demonstrate their understanding of short film production.

Student Learning Outcomes

Upon successful completion of the course student will be able to:

1. Demonstrate introductory level working knowledge and demonstrate proper use of camera, lighting, sound, editing software and any other production equipment used during production.
2. Students will build a portfolio of their work in Short Film Production by shooting and editing their own short film in which they will be able to showcase their finished work on a variety of platforms.
3. When working on a project a set of rules must be used to properly cover every aspect of shooting and producing. Students will demonstrate their understanding of these rules and concepts.

FDMA 1660. SUAVs (Drone) Technology I

Course Description

This course is part one of a two-part six credit hour certificate program in Drone Technology. curriculum includes; pilot operation, FAA Part 107 certification preparation, and commercial deployment of Small Unmanned Aerial Vehicles (SUAVs), more commonly known as drones. Topics covered will be Still and Moving Imagery, Surveying, and Mapping.

Student Learning Outcomes

1. Relevant Laws and Regulations - Students will get an overview of the rules currently governing use of SUAVs. We will provide resources for understanding these policies as well as context about them. A strong emphasis will be placed on preparation for FAA Part 107 certification exam.
2. Current Applications of the Technology - We will present. scenarios in which SUAVs have been used for local research well as other prospective applications of the technology. We will discuss strengths, weaknesses, advantages, and limitations of the quadcopters and related programs we have used so far.
3. Flight Mechanics - Students will learn the basic flight-related terminology describing the actions of the drone while in mid-air, and the logic behind the parts of the vehicle that cause those actions to take place. Pitch, roll, and yaw will be explained in context of a drone.
4. Piloting Skills - Students will have the opportunity to practice operating several different SUAVs in controlled environments under the supervision of our two licensed operators. Safety will be our main priority; but we also want students to enjoy and feel comfortable learning how to pilot high-quality small SUAVs.
5. Creative/Entertainment/Marketing Applications - Through multiple organized creative still and moving image projects. Students will learn to plan and execute image capturing for creative/entertainment (filmmaking), and marketing (Real Estate, Construction) applications.
6. Mission Planning - Students will become familiar with apps such as Drone Deploy that are used as mission planning software for image collection. They will learn the basics of plotting a path and determining the settings that the drone will use to fly its mission autonomously.
7. . Photogrammetry and Image Processing - Students will learn how to convert images taken using a drone into larger composite orthomosaic images using stitching software.
8. Project-Based Inquiry - As part of this exploration of knowledge, students will have three small projects over the duration of the course.
9. Safety - As researchers ourselves, we want to emphasize.

FDMA 1665. SUAVs (Drone) Technology II

Course Description

This course is part two of a two-part six credit hour certificate program in Drone Technology. curriculum includes; pilot operation, FAA Part 107 certification preparation, and commercial deployment of Small Unmanned Aerial Vehicles (SUAVs), more commonly known as drones. Topics covered will be Still and Moving Imagery, Surveying, and Mapping.

Student Learning Outcomes

By the end of the course, students will:

1. Relevant Laws and Regulations - Students will get an overview of the rules currently governing use of SUAVs. We will provide resources for understanding these policies as well as context about them. A strong emphasis will be placed on preparation for FAA Part 107 certification exam.
2. Current Applications of the Technology - We will present scenarios in which SUAVs have been used for local research well as other prospective applications of the technology. We will discuss strengths, weaknesses, advantages, and limitations of the quadcopters and related programs we have used so far.
3. Flight Mechanics - Students will learn the basic flight-related terminology describing the actions of the drone while in mid-air, and the logic behind the parts of the vehicle that cause those actions to take place. Pitch, roll, and yaw will be explained in context of a drone.

4. Piloting Skills - Students will have the opportunity to practice operating several different UAVs in controlled environments under the supervision of our two licensed operators. Safety will be our main priority; but we also want students to enjoy and feel comfortable learning how to pilot high-quality small UAVs.
5. Creative/Entertainment/Marketing Applications - Through multiple organized creative still and moving image projects. Students will learn to plan and execute image capturing for creative/entertainment (filmmaking), and marketing (Real Estate, Construction) applications.
6. Mission Planning - Students will become familiar with apps such as Drone Deploy that are used as mission planning software for image collection. They will learn the basics of plotting a path and determining the settings that the drone will use to fly its mission autonomously.
7. Photogrammetry and Image Processing - Students will learn how to convert images taken using a drone into larger composite orthomosaic images using stitching software.
8. Project-Based Inquiry - As part of final projects or knowledge, students will have three small projects over the duration of the course.
9. Safety - As researchers ourselves, we want to emphasize.

FDMA 1700. Film Theory and Criticism

Course Description

An exploration of the nature of film as a complex cultural, psychological, and political medium through the discussion of key theoretical and critical approaches. Includes realist theory, genre criticism, auteur theory, structuralism, feminist theory, and journalistic criticism. The course combines weekly feature-length viewings with lectures, group discussions, and written assignments. Prerequisite: ENGL 109. Offered: Occasionally. Three lecture hours.

Student Learning Outcomes

1. Identify basic film terminology
2. Discuss major trends in film criticism and theory
3. Analyze films using different critical approaches
4. Articulate individual ideas about film in relation to these trends and types of criticism.

FDMA 1710. 2-D Animation

Course Description

Students will learn the basics of digital 2-D animation by working through a variety of exercises, creating an original storyboard, and animating five or more shots utilizing industry standard software.

Student Learning Outcomes

1. Be able to correctly storyboard an animation scene
2. Define and demonstrate basic animation terminology and principles.
3. Produce a complete hand drawn animation using industry standard software and processes.

FDMA 1715. 2-D Compositing & FX

Course Description

This course will familiarize students with the process of compositing and creating special effects for animation using industry standard software. Students will learn how to assemble an animated scene and use advanced 3-D lighting, spacing, and digital effects to achieve a dynamic, professionally rendered look.

Student Learning Outcomes

1. The goal of this class is for students to learn how to use advanced compositing and effects tools in order to achieve a more dynamic and professional visual look for their animations or motion graphics.
2. By the end of the class, you should be proficient animation compositors that can assemble and synthesize a basic animation into a rendered, visually sophisticated piece.
3. Students who pass this class will have a basic to intermediate knowledge of Adobe® After Effects.

FDMA 1716. 2-D Animation and Sound

Course Description

Students will learn sound editing theory and practice including audio effects and restoration. Students will also learn 2D Animation basics including drawing, tracing and moving assets. Animating characters and text with motion tweening and masks.

Student Learning Outcomes

1. Edit single track audio files.
2. Apply audio effects.
3. Edit multiple tracks.
4. Design sounds.
5. Create animated graphics.
6. Create animated text.
7. Create and animate symbols.
8. Adjust camera angles.
9. Motion tween assets.
10. Build and animate basic characters.

FDMA 1720. 3-D Character Design

Course Description

Focus on designing a character and then taking that design and building it in 3-D using intermediate modeling techniques.

Student Learning Outcomes

Upon completion, with 80% accuracy, 80% of the students who complete this course, will be able to:

1. Translate concept art into a low-and high-resolution 3-D model using proper modeling techniques
2. Use Polygon modeling techniques to create a 3-D character
3. Layout UVs and utilize Adobe® Photoshop® to texture a model.

FDMA 1725. 3-D Shading and Lighting Techniques

Course Description

Study of various global, scene and character lighting techniques, shading and shadowing, and creating atmospheres and reflections that bring computer generated 3-D scenes to life. Examines environmental and studio lighting to bring real life experience into the digital production process.

Student Learning Outcomes

1. Students will demonstrate visual communication skills through critiques, written explanations, and storyboarding.
2. Students will be able to illustrate ideas.
3. Students will be able to storyboard animation and video projects.
4. Students will be able to create complex lighting situations in a 3-D environment.
5. Students will be able to expand expertise in 3-D studio as well as Maya.
6. Students will be able to produce original projects that respect intellectual property of others.

FDMA 1730. 3-D Graphics and Animation II

Course Description

A continuation of 3-D graphics and animation studies, geared towards developing and producing advanced animation projects by expanding and refining skills acquired in MART 148. Topics include advanced techniques and tools for 3-D modeling, texturing, and character rigging.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate an understanding of expressions and behaviors
4. Create realistic textures
4. Create convincing movement
5. Produce 3-D animations with audio tracks

FDMA 1740. Graphic Design: Basics**Course Description**

Introduces principles of good design for visual communication. Terminology, history, and processes in computer generated print media are covered.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Analyze and critically interpret graphic design choices: I.E. Line, Space, Negative Space, Scale, Position, Layout, etc.
2. Demonstrate a firm understanding of the Graphic Design principles.
3. Explain the process of how the artist/designer made the specific piece and or decisions on final submissions.
4. Recognize and articulate specific graphic design terms and definitions.
5. Articulate personal ideas and thoughts on various artistic information.

FDMA 1745. Graphic Design: Computer Illustration**Course Description**

Digital manipulation of images using Bezier curves, points and paths, color blends and fills, and non-linear text.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Analyze and critically interpret graphic design choices: I.E. Line, Space, Negative Space, Scale, Position, Layout, etc.
2. Demonstrate a firm understanding of the Illustrator program and palette(s).
3. Explain the process of how the artist/designer made the specific piece and or decisions on final submissions.
4. Recognize and articulate specific illustrator windows: Layers, Swatches, Color, Brushes, Align, and Pathfinder.
5. Articulate personal ideas and thoughts on various artistic information.

FDMA 1993. Workshop**Course Description**

Varies

Student Learning Outcomes

Varies

FDMA 1996. Topics**Course Description**

Specific titles to be announced in the Schedule of Classes.

Student Learning Outcomes

Varies

FDMA 2110. Introduction to Film Studies**Course Description**

This course introduces students to the fundamentals in film history, criticism, and theory. Through viewing and analysis of a variety of narrative, documentary, and experimental films, students will advance their understanding of key issues in filmic

representation and aesthetics. A range of approaches will be employed in understanding the aesthetic and cultural significance of the medium, including feminism, post-colonialism, critical race theory, and modernism.

Student Learning Outcomes

1. Identify key movements in film history.
2. Demonstrate a basic vocabulary in film production, as well as film studies and criticism.
3. Recognize and identify the specific formal elements that make up a film.
4. Interpret and analyze how formal elements contribute to the implicit meaning of a film.

FDMA 2110L. Introduction to Film Studies Laboratory

Course Description

Most of us watch films for entertainment and enjoyment. We are constantly aware of the "content" of the film: characters, plot, dialogue, etcetera. This class challenges you to become aware of the formal elements of film and to learn to use those elements to "read" a film as a text. Students will be able to argue larger thematic meanings of films, independent of the surface, content-based meaning.

Student Learning Outcomes

Upon successful completion of this course, students will be able to

1. Recognize and Identify the specific formal elements that make up a film.
2. Distinguish between those formal elements and the content of a film.
3. Interpret and Analyze how formal elements contribute to the implicit meaning of a film.
4. Apply these skills to discuss, and write about films with academic rigors.

FDMA 2111. Environmental Scene Design

Course Description

Modeling design techniques used to create environments and scenes for use in animated films and games. Investigation of both natural and architectural environments to be recreated in the virtual world.

Student Learning Outcomes

Not Available

FDMA 2112. Environmental Modeling, Shading and Lighting

Course Description

Modeling design techniques to create natural and architectural environments to be used for animated films and gaming. Study of various lighting techniques, shading and shadowing.

Student Learning Outcomes

1. Understand how to model more efficiently.
2. Understand how UV texturing works.
3. Create seamless textures.
4. Model, texture, shade, and light their own object.

FILM 2113. Fabrication for Film

Course Description

Students will gain construction and fabrication skills utilized by film art departments including design, light construction, sculpture and prototyping, and will contribute to the design and fabrication of sets and costumes for student film projects.

Student Learning Outcomes

1. Work with film production staff to conceptualize the look of a motion picture. Implement proper safety procedures when working in a studio environment.
2. Design and build props and models using various artistic techniques including sculpting, molding and painting.
3. Create props and models in adherence to deadlines established by film director.

FDMA 2120. Film Crew I/Introduction to Film and Media Workflow

Course Description

An introduction to the film industry. This class teaches film production processes, film crew hierarchy, film production set-safety and etiquette and provides hands-on training in industry standard film production equipment. Students complete the semester by participating as a below-the-line crew member on a short film.

Student Learning Outcomes

1. Explain film production processes; Interpret call sheets and deal memos, model basic on-set protocols and professional behavior
2. Assist producers and directors in completing a professional film project
3. Work effectively in production crew positions in a group environment.
4. Recognize and articulate specific film production structure, from original concept to final release.

FDMA 2125. Film Crew II

Course Description

The second of three courses (FDMA 2120, 2125 and 2130) designed to train students to become working members of film crews. It will be taught by working film professionals. Content will be lecture and hands-on. Students complete the semester by working as part of an actual film crew as below-the-line and above-the-line crew members.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Understand film production processes used to produce a film
2. Manage craft area job functions
3. Model on-set protocols and professional behaviors
4. Assist producers and directors in completing a professional film projects

FDMA 2130. Film Crew III

Course Description

This is the third of three courses (FDMA 2120, 2130 and 2135) designed to train students to become working members of film crews. Students work in teams to complete a short motion picture.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate the film production process
2. Direct the motion picture
3. Produce the motion picture
4. Shoot the motion picture
5. Edit the motion picture
6. Distribute the motion pictures

FDMA 2135. Film Crew IV

Course Description

The first of two courses that span a full academic year. In FILM CREW IV students who have been accepted will produce and direct their film and/or media project. Students will work with instructors during this process and have access to equipment, technology and student crew members to complete their production. Students must have completed their pre-production for their project and have followed the submission guidelines published by the college before taking this class.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Utilize appropriate industry standards for job applications
2. Understand and participate in management and organizational roles on a film set

3. Produce and Direct a motion picture
4. Better interpersonal and networking skills.

FDMA 2140. Film Crew V

Course Description

The second of two courses that span a full academic year. In FILM CREW V students who have been accepted will complete the post-production process for their film and/or media project. Students will work with mentors during this process and have access to equipment, technology and student crew members to complete their production. Students will have a deadline for completion set by the instructors. Upon completion all students must participate in the college's end of the year screening program as well as submit to four film festivals statewide.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Utilize appropriate industry standards for job applications
2. Understand and participate in management and organizational roles on a film set
3. Edit a motion picture
4. Implement editing theory and practice
5. Distribute a motion pictures

FDMA 2144. Pre-production Management

Course Description

Pre-production planning paperwork breakdowns, budgeting, and scheduling; taking a project from start to finish from a producer's standpoint.

Student Learning Outcomes

1. Demonstrate proficiency in various areas of pre-production
2. Create a script breakdown, budget, production and post-production schedule, and management plan and timeline that are technically sound.
3. Use features of pre-production and project management software, to foresee and plan the pre-production, production, and post-production stages of a project
4. Demonstrate understanding of the processes of supporting and managing a project, through the pre-production, production, and post-production stages to completion
5. Work collaboratively and communicate effectively with the pre-production and management teams to produce the desired finished project.

FDMA 2145. Postproduction Color Compositing

Course Description

An intermediate course in color grading, color compositing, and post-production using DaVinci Resolve. This course provides hands-on training in the theories, techniques and practice of digital color grading and editing with the DaVinci Resolve post-production editing system. Students explore the core principles of color compositing and color grading to enhance and bring a new layer of story to images and films.

Student Learning Outcomes

1. Describe the basics of color theory
2. Demonstrate the use of color in storytelling
3. Create finished films using Da Vinci Resolve editing system
4. Demonstrate the use of Da Vinci Resolve software tools, secondary corrections, nodes, and tracking
5. Implement proper workflow for final deliveries.

FDMA 2150. Desktop Publishing II

Course Description

This class will enhance and build upon student layout/design skills developed in the Introduction to Desktop Publishing course, incorporating intermediate to advanced concepts in typography and layout design. Upon completion of this course, students will be able to use page layout software to prepare a variety of documents for presentation and critique, including newsletters, instructional flyers, and other complex design/typographic pieces.

Student Learning Outcomes

1. Build upon knowledge of design and design terminology.
2. Exhibit intermediate to advanced design principles using type, layout, and color.
3. Demonstrate skill in intermediate to advanced concepts and features of page layout software.
4. Exhibit knowledge of styles, tables, images and clipping paths and interactive documents as well as printing preparations and procedures.
5. Create layouts for print, web, and other media that demonstrate an intermediate to advanced knowledge in typography and layout design.
6. Format and produce newsletters and instructional flyers, as well as larger, complex projects such as packaging mechanicals, multiple master page documents, and books.
7. Assess works of graphic design for quality and effectiveness.
8. Utilize produced material to create or add to a design portfolio for future use.

FDMA 2153. Introduction to WordPress

Course Description

Instruction in creating blog websites using WordPress, the industry standard content management system CMS). Topics include Word press themes, navigating the dashboard, creating blog posts, adding pages, and creating menus.

Student Learning Outcomes

1. Demonstrate familiarity with Word press themes
2. Demonstrate the ability to navigate the dashboard and manage the site.
3. Create a static page and menu
4. Post a blog.

FDMA 2155. Photoshop® II

Course Description

This is an intermediate-level course in Adobe® Photoshop®, building on skills and concepts learned in Photoshop® I. Topics include layer and channel masks, advanced layers, color management, and presentation tools.

Student Learning Outcomes

1. Demonstrate a thorough understanding of layers and masks
2. Demonstrate competency with Photoshop® tools and adjustments
3. Demonstrate a basic knowledge of color management
5. Analyze tasks and delineate the steps necessary to achieve a finished project

FDMA 2160. Film Crew Seminar

Course Description

Industry specific seminars focused on particular craft areas in the film industry. Seminars are hands-on practical classes.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Articulate understanding of film industry practices.
2. Distinguish between various educational and career choices in New Mexico film industry.
3. Demonstrate application of improved film making skills.

FDMA 2165. Film Crew Internship

Course Description

Internship students work on various film projects from Hollywood films to independent feature to public service announcements. Student must complete 150 internship hours in the course of one semester. All students participating in the internship program must have a B or better in Film Crew Training I and complete a Production Assistant Workshop.

Student Learning Outcomes

1. Internship work on professional films.
2. Work effectively and safely
3. Understand and use technology specific to job application
4. Networking.

FDMA 2170. Advanced Grip Training

Course Description

Advanced course in grip skills for the professional motion picture and television industry. This course covers building and operation of camera dollies, jibs, general rigging techniques, and on-set safety. Students gain practical experience through use of industry standard equipment.

Student Learning Outcomes

1. Identify basic grip equipment
2. Safely build and operate camera dollies
3. Safely build and operate jibs
4. Demonstrate safe rigging techniques
5. Demonstrate on-set safety.

FDMA 2171. Adventure Filmmaking

Course Description

Introduction to the technical skills of Adventure Filmmaking. This 10 Day intensive course will give students an opportunity to use cutting edge camera gear in outdoor settings while working as a team to tell exiting stories and stay safe.

Student Learning Outcomes:

Students will be able to:

1. Manage technical camera gear in challenging outdoor locations
2. Create a risk assessment plan with strategies for safety
3. Work as a team to create a compelling video reel
4. Demonstrate at least three camera moves that add to the visual storytelling process
5. Edit and organize the post-production workflow

FDMA 2175. International Cinema

Course Description

A cinematic exploration of other nations, cultures and ways of perception. Films from around the world provide the basis for such topics as the historical development of a nation's cinema through the eyes of its leading directors; an in-depth focus on the works of a foreign filmmaker; a multi-cultural comparison of films thematically linked; and other subjects related to appreciating international cinema.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Discuss the uniqueness of a foreign culture's way of perception.
2. Recognize and describe the differences between American cinema and that of other nations.
3. Identify the oeuvre of culture or individual filmmaker.

4. Write a critical analysis of film, utilizing the basic vocabulary of film.

FDMA 2180. International Horror Cinema

Course Description

In-depth analysis of international horror cinema in which students explore important contributions from foreign countries to the horror genre. Rare films offer insight into the development of cinema's portrayal of the terrifying from ghosts to homicidal maniacs, from social judgment to repressed sexuality.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Describe the historical development and contributions of foreign films to the horror genre.
2. Describe the social and psychological significance of the horror genre.
3. Compare and contrast different cultural examinations of what constitutes horror.
4. Discuss and demonstrate an appreciation of the horror genre as a medium of social commentary.
5. Critically examine and describe the diverse foundations of the horror genre and their impacts on the field.

FDMA 2190. Social Media and Global Sustainability

Course Description

Not Available

Student Learning Outcomes

Not Available

FDMA 2195. Beyond Hollywood

Course Description

This course concentrates on the representation of children and adolescents in world cinema. The portrayal of children throughout world cinema has a long and rich complex history, which has been primarily shaped by family and national structures. Through film screenings, readings, and discussions class will center on the exploration of what it means to look at children and what cultural baggage are their bodies asked to carry. Also, what impact do national and global politics have on the lives of children? Through the establishment and use of basic vocabulary and analytic methodologies of film studies, larger theoretical and practical questions about how cinema functions as a cultural and ideological force, especially how it helps to construct ideas about the family, the nation, and national identities will be addressed. Class screenings will cover a breadth of children and adolescents in world cinema but readings, discussions, and outside film viewings will provide a more comprehensive overall picture.

Student Learning Outcomes

1. Recognize important and innovative international cinematic works whose focus is on children and adolescents.
2. Interpret and evaluate the significance of cinematic works within their historical, economic, political, cultural, and global contexts.
3. Orally apply theoretical concepts to the critical examination of specific works from international film culture.
4. Analyze and criticize cinematic works through oral and written assignments.
5. Formulate educated interpretations of cinematic works through the use of cultural theory.

FDMA 2210. Digital Video Production II

Course Description

Advanced techniques of the tools and application of professional film making

Student Learning Outcomes

1. Demonstrate the ability to produce and manage a video project.
 - a. Produce a script, storyboard, and production schedule for a video project designed for a specific audience.
2. Demonstrate proficiency in producing quality digital video footage and audio tracks.

- a. Shoot to the script and storyboard using a variety of camera and lighting techniques.
 - b. Produce a finished complex sound track including narration, music, and sound effect.
3. Demonstrate ability to produce and edit a professional quality video project.
 - a. Integrate all production aspects of the project including video, audio, graphics, titles, transitions, and effects. Guide the project through the final production stages.
4. Develop competency in digital video distribution using various formats and techniques.
 - a. Distribute project in various formats which could include DVD and web posting.

FDMA 2215. Digital Cinematography II

Course Description

Teaches professional skills for digital video motion photography. Students use professional camera, lighting, and grip equipment; develop digital acquisition workflow for post-production; work in small film crews; and apply professional cinema techniques to image acquisition.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate proper workflow for digital acquisition in production for successful transfer to post-production.
2. Model job behaviors in the areas of digital image technician, cinematographer, media manager, camera assistant, grip, and electric technician.
3. Create aesthetic compositions as they apply to digital cinematography.

FDMA 2215L. Digital Cinematography Lab

Course Description

A corequisite course for FILM 281, FILM 282, and FILM 283. The focus of the lab is professional preparation of camera, lighting, and sound equipment for digital cinematography classwork. Students work in teams to assemble industry standard film equipment, test operation of equipment, and troubleshoot necessary maintenance and repairs.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Safely operate camera equipment
2. Safely operate lighting and sound equipment
3. Conduct professional standard equipment preparation
4. Solve safety concerns and technical problems.

FDMA 2220. Digital Cinematography III

Course Description

Teaches professional skills for digital video motion photography. Students use professional camera, lighting, and grip equipment; develop digital acquisition workflow for post, production; hire and manage small film crews; and apply professional cinema techniques to image acquisition. Focus is on developing professional skills for camera assisting, media management, and electrical distribution.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Apply proper workflow for digital acquisition in production for successful transfer to post-production
2. Demonstrate job skills in the areas of digital image technician, cinematographer, media manager, camera assistant, grip, and electrical technician
3. Create aesthetic compositions as they apply to digital cinematography
4. Hire and manage student film crews.

FDMA 2225. Digital Cinematography IV

Course Description

Teaches professional skills for digital video motion photography. Students practice professional skills in cinematography within a team-based environment. Classes are held on location throughout Santa Fe County and are designed for students to develop their skills to support directors of photography, key grips, best boys, gaffers, and post-production supervisors while executing small digital video projects. This class is designed for students wishing to work in camera, grip, electrical, or post-production film jobs.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Execute proper workflow for digital acquisition in production for successful transfer to post-production
2. Demonstrate the job skills of digital image technician, cinematographer, media manager, camera assistant, grip, and electric technician
3. Manage crew on remote locations and through extreme weather conditions.

FDMA 2230. Media and the Environment**Course Description**

The study of media and documentary filmmaking in the fields of culture, ecology, anthropology and socio-political journalism. Explore social conscious stories and how filmmakers and scientists interconnect in the field of environmental journalism. The class will focus on forms, structures and styles of documentary filmmaking as well as the historical, social and cultural context of the genre.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Summarize the social impact of the documentary film
2. Assess the human and cultural values associated with documentary filmmaking
3. Evaluate and critique documentary filmmaking techniques
4. Understand the relationship between science, corporations, technology and the media industries.

FDMA 2235. Music Production/Master**Course Description**

Advanced digital audio post production and recording techniques using current entertainment industry-standard software and hardware.

Student Learning Outcomes

Upon successful completion of this course, students will be able to do the following:

1. Demonstrate a fundamental understanding of Analog and Digital Audio production and post-production.
2. Produce short audio projects and recordings with technical expertise.
3. Record and edit audio to sync to most any video format.
4. Compose and edit short recordings for the purpose of playback and syncing in any format such as video or Audio CD
5. Process audio, mix and master for a final professional product.

FDMA 2240. Digital Documentary Film Intensive**Course Description**

In this intensive, workshop format class, students work in teams, learning and utilizing the necessary skills to plan and produce a short digital film. Students will work with documentary film professionals in completing their own documentary film projects.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Produce and direct a documentary film
2. Understand diversity and culture in documentary film production

3. Speak about the process of their work and development of their film
4. Understand the process of distribution for documentary films

FDMA 2241. Advanced Camera Techniques

Course Description

Professional camera techniques and training for electronic news gathering and studio filmmaking. Utilizes high-end handheld shooting techniques, cranes, dollies, and Steadicam training.

Student Learning Outcomes

1. Students knowledge of high-end video camera operation and features.
2. Students must know all the working features of the video production equipment being used during the course in order to achieve the desired footage as required by the instructor.
3. Demonstrate proficiency in producing quality digital video footage.
4. Individuals must acquire the knowledge of different shooting styles in different productions situations and use those acquired skills to produce the appropriate video footage.
5. Using the proper lighting in different on location shooting styles.
6. Skill of each individual utilizing the usage of high-end camera equipment such as dollies, cranes and Steadicam.
7. Each individual must work as a team player to create professional style video footage.

FDMA 2245. Advanced Digital Video Production

Course Description

You will study advanced camera functions from a technical. standpoint including maintaining optimum picture quality while filming, achieving higher caliber sound fidelity, and multi-camera shooting procedures.

Student Learning Outcomes

1. Have a growing understanding of how to make documentary and narrative films.
2. Gain experience in advanced techniques of filmmaking and understand the concepts of: key and fill lighting using natural and studio light; solid interview picture and sound techniques and the use of b-roll and inserts; camera functions of f-stop, shutter speed, ISO and gain, deep and shallow focus, codecs, compression and workflow; basic editing; teamwork, set etiquette and soft skills;
3. Observe the physical and social world and begin to practice the students own ways of documenting and interpreting that world, including in the creation of narrative work.
4. Be able to analyze films and TV shows critically.
5. Have participated as a crew member on a group project.

FDMA 2250. Digital Imaging & Design

Course Description

The creation of a professional quality original media soundtrack is possible for relatively low production/post-production costs. This class is designed to give the student an overview of creating sound for a variety of digital media. Topics include acoustic principles, sound design, audio hardware, recording techniques; and editing, processing, and multi-track mixing, using software applications.

Student Learning Outcomes

Upon successful completion of this course, students will be able to do the following:

1. Record and edit wild sound effects and synced dialogue
2. Discover, upload, and edit on-line music, ambience and sound effect loops
3. Implement audio design theories
4. Create an aesthetic soundtrack which incorporates multiple elements and dimensions
5. Design, edit, process, mix and master a synced multi-track soundtrack
6. Demonstrate capable use of digital audio production and post-production workflow

7. Produce short audio projects which meet media industry technical standards.

FDMA 2253. Advanced WordPress

Course Description

Instruction in working in WordPress's advanced topics, including projects, short codes, custom Cascading Style Sheets (CSS), social media integration, responsive layout design, domain management, among other topics.

Student Learning Outcomes

Upon successful completion of this course, students will be able to do the following:

1. Demonstrate familiarity with portfolio short codes
2. Demonstrate familiarity with post category and tag short codes
3. Demonstrate use and styling of advanced blocks
4. Create custom stylings for WordPress® using CSS.

FDMA 2260. Digital Video Production I

Course Description

This hands-on course focuses on the process required to create video compositions. Students will be studying composition, lighting, recording and sound recording techniques, and various script styles. Student teams will work using electronic field production techniques to create numerous projects. There is an introduction to post-production video effects.

Student Learning Outcomes

1. Introduce video production topics, issues, and possibilities, along with working in a team, field, and studio environment.
 - a. Introduce video production history, terminology, analog vs. digital issues, and creative possibilities.
 - b. Explain differences in field and studio environments regarding shooting, editing, and producing video.
2. Explain and define technical aspects of video production, including pre-production, production and post-production techniques, hardware/software tools and requirements, and capture/exporting techniques, among other video technology topics.
 - a. Describe and define pre-production, production and post-production techniques, including field setup, shooting techniques, camera usage, capture/exporting techniques, editing, and advanced composition techniques.
 - b. Ability to learn and use specific software tools related to audio and video editing.
 - c. Develop and summarize various technical aspects of video production, such as lighting, hardware needs/usage (camera, tripod, and lens), framing, scene movement, and logging video footage.
3. Foundation of script and storyboards in planning a production including different types of storyboard and scripting formats.
 - a. Develop and complete script and storyboard using various styles and formats, as well as emphasizing the importance of writing prior to shooting video.
 - b. Interpret and define aspects of video design schemes, including topics such as layout, color, balance, match-on-action, and depth of field.

FDMA 2265. Digital Media Production II

Course Description

This course covers the theory of visual communication, storytelling, aesthetics, and the production of digital video content. Emphasis will be placed on narrative filmmaking, whether it is fiction or documentary film. Emphasis will also be placed on creative expression, personal vision, and productive collaboration.

Student Learning Outcomes

1. "Hands on" experience in writing, shooting, and editing short films. Students should realize a basic use of video cameras, tripods, lighting, editing and sound recording. .
2. Exploration and development through trial and error of your creative potential and powers of expression. You are urged to take risks in order to find and write/create from your own personal vision and develop your own voice.
3. An introduction to pre-visualization techniques for conceiving, scripting, developing and planning a short project.
4. To deliver and receive effective critiques of the work presented in class, and develop critical and analytical ways of thinking and articulation.
5. To develop your sense of professional discipline by meeting deadlines for assignments in the course.
6. To develop confidence, professionalism and enthusiasm in your ability to express your own creative vision and to communicate it with-an audience.

FDMA 2280. Topics in Videomaking

Course Description

These courses strengthen students' skills in video technology while helping them write, direct, and edit video projects that begin to reflect a personal, artistic vision.

Student Learning Outcomes

Not Available

FDMA 2285. Digital Video Production and Editing II

Course Description

Advanced features of digital video, audio/music, and titling production software. Included are color correction, vector scopes, motion effects, and advanced editing techniques used by filmmakers.

Student Learning Outcomes

Upon successful completion of this course, the student will be able to:

1. Intermediate to advanced video editing
2. Create short films and training videos
3. Create TV quality commercials
4. Direct a news broadcast
5. Work as a mentor to students on digital media equipment.

FDMA 2286. Activating Digital Space

Course Description

This class introduces students to the techniques of dramatic narrative and how those techniques can inform a visual grammar where form follows function.

Student Learning Outcomes

1. Students can demonstrate detailed knowledge of dramatic narrative form for film, television, and other digital media.
2. Students can write a monologue between two characters.
3. Students can storyboard a short story for the screen.

FDMA 2287. Digital Design Studio

Course Description

A design studio environment in which students obtain real-world experience while providing service to college and non-profit associations with faculty supervision using a variety of media. Can be used with permission to fulfill cooperative requirement.

Student Learning Outcomes

Students who successfully complete this course will be able to:

1. Demonstrate competency in the use of InDesign software.
2. Create appropriate visual solutions based on target marketing information.
3. Demonstrate competency in the design and production of advertising and promotional materials.
4. Present ideas and concepts effectively and competently.
5. Visually demonstrate design solutions to be used in a portfolio.

FDMA 2290. Advanced Digital Projects

Course Description

Students work on advanced individual projects using the skills and concepts they learned in intermediate-level MART classes including Photoshop®, Web, Animation, Graphics, and Video. Feedback and instruction is provided by student presentations and interaction, and one-to-one contact with the instructor.

Student Learning Outcomes

1. Successfully present a project
2. Complete a multi-media portfolio
3. Work with and learn from peers.

FDMA 2310. History of Cinema I

Course Description

This course surveys the history of cinema - investigating the process by which the original “cinema of attractions” evolved into a globally dominant form of visual storytelling. We will explore the development of cinema both as an art form and as an industry, and consider the technological, economic, cultural factors, as well as many key international movements that helped shape it.

Student Learning Outcomes

1. Gain a greater appreciation for the history of cinema
2. Develop knowledge of the key eras in the history of U.S. cinema
3. Learn the characteristics of major movements in international cinema
4. Understand the various elements that go into telling a story in cinema: screenplay, narrative devices, director, producer, talent, production design, cinematography, editing, sound design
5. Learn how major genres in U.S. cinema have evolved in the past 100+ years
6. Gain a basic understanding of the operations and organization of the Hollywood film industry, from the studio system until today
7. Gain an awareness of the shifts in the film industry that present new opportunities for independent filmmakers
8. Understand the importance of learning about the history of cinema to the process of becoming a filmmaker
9. Strengthen public speaking skills.

FDMA 2311. History of Animation

Course Description

Explores the history of Animation as an art form and industry through readings, screenings, lecture and periodic guest speakers.

Student Learning Outcomes

1. To expand your knowledge of the history of animation and its evolution to the modern day.
2. To expand your ability to view animation critically and to understand its early connections to cartooning as well as its ongoing cultural presence and relevance.
3. To expand your comfort with accessing information and completing assignments both online and independently. Canvas will be utilized for many of our readings and for some response assignments.

FDMA 2312. History of Media Design

Course Description

An introduction to the principles of design history and theory within a chronological framework of historical and emerging media.

Student Learning Outcomes

1. Introduction to visual communication.
 - a. Defines design media.
 - b. Discuss universal design principles and strengthen student basic design skills.
2. Historical technological development and design.
 - a. Prehistoric communication
 - b. Beginnings of alphabet and written language
 - c. Movable type and the printing press
 - d. Industrial revolution
 - e. Digital Age
 - f. Designers and Trends
3. Personalities and their influence and contributions
4. Identify design styles and discuss the relevance of how design influences:
 - a. Idea generation
 - b. Trend sources
 - c. Influences or appropriation
 - d. Propaganda and advertising

FDMA 2315. Documentary Film Production I

Course Description

An introduction to planning and producing a short documentary film. In this workshop-based class, students work individually and in teams.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and operate digital film production equipment, including cameras, lighting and audio equipment
2. Perform basic production and direction skills
3. Utilize production process model for development and completion of a documentary short
4. Participate constructively in a supportive and thoughtful team process
5. Create and edit a documentary film.

FDMA 2320. Advanced Make-up Artistry

Course Description

Advanced skills for professional application of make-up for film and television. Students learn the advanced concepts of foundation, color, glamour and special effects make-up and participate in hands-on practical application of make-up for models and actors including prosthetic make-up and air brushing.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate advanced level application of make-up for the motion picture, media and fashion industry.
2. Utilize appropriate industry standards as they apply to makeup.
3. Use advanced makeup techniques including air brushing and prosthetic makeup.

FDMA 2325. Advanced Photoshop®

Course Description

This course expands on the Photoshop® skill set to develop proficiency with selections, masking, channels, filters, color correction, painting tools, vector integration, video, special effects, and compositing techniques. The focus is on the core image-editing tools of Photoshop® that can be universally applied to photography, print, film or the web. The material is covered in production-oriented projects and students develop work suitable for portfolios.

Student Learning Outcomes

1. Create effects using advanced blending techniques
2. Effectively utilize advanced masking techniques
3. Refine Selections with advanced techniques
4. Assess & Adjust color in an image
6. Utilize advanced photo enhancement techniques
7. Alter images using Photoshop® painting techniques
8. Create brush presets
9. Create vector elements with paths
9. Add & manipulate type on a path
10. Create advanced special effects
11. Apply vanishing point & warping
12. Create a video clip
13. Apply color adjustments to video

FDMA 2326. Digital Photography and Imaging II

Course Description

Provide understanding and skills needed for advanced digital capture, editing, optimizing and manipulating photographic images for print, web and multimedia applications. The course will prepare students to make more advanced technical and more refined aesthetic decisions relative to specific photographic applications.

Student Learning Outcomes

The students who successfully complete this class will be able to:

1. Apply proper exposure techniques.
2. Practice effective composition techniques.
3. Demonstrate knowledge of working with Camera RAW files.
4. Demonstrate proper image adjustment and correction techniques.
5. Successfully apply the basics of HDR digital photography.
6. Apply techniques for modifying light.

FDMA 2330. Documentary Film Production II

Course Description

A second-level workshop class in which students work individually and in teams learning and utilizing the necessary skills to plan, produce, shoot and edit a short documentary film. Students will learn the business of documentary filmmaking and begin the processes needed for distribution.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Identify and operate digital film production equipment, including cameras, lighting and audio equipment
2. Perform production and direction skills
3. Utilize the production process model for development, completion and distribution of a documentary short film
4. Participate constructively in a team process.

FDMA 2340. Editing II

Course Description

A second level class in non-linear video editing. Training includes various non-linear software tools expanding on concepts learned in Editing I. Students will complete individual short editing projects. Students will provide their own removable hard drive.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Make workflow decisions to shape overall production outcomes
2. Use non-linear editing software to make a short film
3. Apply visual effects, color correction and audio tools to media projects
4. Use professional terms when discussing post-production workflow.

FDMA 2345. Editing III

Course Description

Application of editing theory, story structure and aesthetic techniques needed to create effective short films. Students work as individuals and in teams to improve their visual storytelling techniques and understand effective editing choices. Students must have a working knowledge of Final Cut Pro, Adobe® Premiere Pro or Avid.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Edit a small film using styles and techniques from a genre of their choice
2. Perform editorial choices that advance storytelling structure
3. Use traditional and non-traditional film theory in advancing storytelling
4. Implement classic editing techniques in final film.

FDMA 2350. Editing IV

Course Description

Workshop style class where students demonstrate mastery in editing theory, story structure and aesthetic techniques to create effective short films. Students work as individuals and in teams to master their visual storytelling techniques and understand effective editing choices. Students must have a working knowledge of Final Cut Pro, Premiere Pro or Avid.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Apply traditional and non-traditional editing techniques in short films
2. Create motion picture sound design
3. Recognize master editors and their techniques in world cinema
4. Build a media management workflow for professional work environment

FDMA 2355. Creative Web Design

Course Description

This course covers aspects of creative web design. Topics include graphic design, HTML, site management, typography, theory, e-commerce, and web development tools. Projects will be created by identifying a target audience, addressing accessibility issues and adhering to current web design standards.

Student Learning Outcomes

1. Explain and define web design, including a historical overview of the internet, recent advancements and examine current trends. a. Define (HTML) Hypertext Markup Language, (XHTML) Extensible Hypertext Markup Language, and Cascading Style Sheets. b. Examine the development of the internet and the work of the World Wide Web Consortium (W3C).
2. Analyze techniques for web design based on defining target markets and building sites for the optimum number of end user computer systems. a. Experiment with elements of web design such as graphics, typography, layout,

navigation, and RGB color schemes. b. Integrate and adapt techniques and principles from other areas of digital media (print, video, animation) into web design.

3. Foundation of website design focused on issues of future maintenance. a. Assess overall web site compatibility and accessibility on multiple web browsers and various connection speeds. b. Approach site development by setting goals, measures for assessment, defining target audience, defining technical limitations, and planning for future site expansion.

FDMA 2360. Web Design II

Course Description

In this course, students will refine their skills in coding and web graphic design as well as be introduced to methods in constructing sites that adhere to the standards of responsive web design. Students will expand their knowledge of HTML and CSS using a code editor, and they will both analyze existing websites and also construct an interactive website.

Student Learning Outcomes

1. Plan and produce web design mockups.
2. Demonstrate a proficiency in HTML/CSS coding.
3. Utilize basic web scripts.
4. Integrate animation into web design
5. Create fully functional websites using one or more web editors.
6. Make a website "live."
7. Evaluate web designs for aesthetics and functionality.
8. Demonstrate the utilization of responsive design.

FDMA 2365. Web Design for Small Businesses

Course Description

Create and manage well designed online business, and organized web sites using a Content Management System.

Student Learning Outcomes

1. Learning advanced tools and techniques for creating and maintaining complex Business web sites. We will be using CSS, PHP, HTML, Photoshop®, and WordPress.
2. Design a complete and fully functional online web business.
3. Understand and develop a plan to better manage a web store/business.
4. Review basic design guidelines in preparing a variety of web applications for business.
5. Develop technical skills in using various web-based solutions.
6. Reinforce your knowledge of web design software.
7. Introduce alternate sources of data, communication and financial solutions.

FDMA 2370. Advanced Web Techniques

Course Description

Creating and managing complex web sites using advanced techniques and tools. May be repeated for a maximum of 6 credits. Restricted to: Community Colleges only.

Student Learning Outcomes

By the end of the course, students will be able to:

1. Create webpages using Hypertext Markup Language (HTML) elements and tags
2. Format webpages using Cascading Style Sheets (CSS)
3. Validate webpage code
4. Apply industry-standard webpage design and organization principles
5. Publish a website.

FDMA 2373. Advanced Web Projects

Course Description

An advanced course for those who want to further their knowledge of CSS3 and HTML5 while working in a real-world environment. Students will develop and complete web projects of their choosing, work with classmates designing and managing assigned projects, and create and present demos. Weekly discussions include best practices and current web design topics.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Integrate advanced knowledge of HTML5, CSS3, responsive design, and jQuery
2. Complete a project outline, proposal, and finished website.
3. Collaborate in a team environment.

FDMA 2375. Typography

Course Description

This course introduces students to the history of typography and its emotive, symbolic and communicative aspects. Students learn how to use type in a creative and aesthetic way and develop an understanding of page composition that incorporates concept and design.

1. Understand the history of type.
2. Use type as a communication tool as well as a design element.
3. Understand the relationship between content and format.
4. Make informative decisions in typeface selection.

FDMA 2381. Storyboarding

Course Description

Examines effective writing principles to create storyboards that communicate the overall picture of a project, timing, scene complexity, emotion and resource requirements. Further, the purpose of this course is to introduce students to the principles of visual storytelling—in film—through the use of the storyboard. In other words, to show how storyboards are a critical “architectural component” of the filmmaking process, used as a blueprint (or guide) to communicate the complex elements of a film story.

Student Learning Outcomes

Students will—

1. Learn to conceive and draw original images.
2. Learn to use images to tell a story.
3. Design, develop, and order images (shots) into storyboarded scenes.
4. Understand how storyboarded sequences are a tool in the process of filmmaking.
5. Understand how the storyboard image is translated from the written page.
6. Build scenes from the scripted sequences into a storyboard.

FDMA 2382. Principles of Story Across the Media

Course Description

The purpose of this course is to help students understand the basic elements of narrative structure (e.g. character, dramatic conflict, theme, etc.) and how these elements may be used effectively in media expression.

Student Learning Outcomes

By the end of this course, students should be able to:

1. Identify the elements of storytelling in scripted text or improvised performance
2. Understand how these elements work together across different media
3. Apply these elements of storytelling in original work

4. Appreciate and master these elements for independent or collaborative work.

FDMA 2383. Writing and Storyboarding

Course Description

Learning good writing principles to create storyboards and scripts that communicate the overall picture of the project, timing, scene complexity, emotion, and resource requirements.

Student Learning Outcomes

1. How to create a concept for a CG project.
2. How to visualize a project, including scripting, storyboards and concept drawings.
3. How to manage a project, including scheduling and budgeting.

FDMA 2410. Audio Production II

Course Description

Students will use skills developed in the Audio Production I course to produce audio projects utilizing a variety of analog and digital audio hardware and software, including continued use of multi-track, computer-based recording and editing systems, as well as exploring more advanced audio techniques and concepts.

Student Learning Outcomes

1. Apply analog and digital audio hardware and software in audio recording.
2. Apply common professional set-up practices of audio production facilities.
3. Produce audio projects, sync sound recordings, and audio dialogue replacement (ADR) demonstrating technical expertise.
4. Perform an audio mix and master for a final professional product.
5. Analyze and compare existing audio productions for quality.

FDMA 2415. TV Production II

Course Description

A continuation of TV Production I to allow students to improve their skills in television production. This course requires participation during on campus event to learn more advanced techniques for video control, special effects, camera operation, editing, composition, lighting, staging, directing, on-camera announcing and interviewing.

Student Learning Outcomes

By the end of the course, students will:

1. Have a general understanding of how a variety of TV shows are made.
2. Gain experience in the basic tasks of TV production.
3. Observe the physical and social world with an understanding of how to film and record it.
4. Be able to analyze TV shows and other media.
5. Be conversant with the concepts of documentation and interpretation.

FDMA 2420. Performance for Film and Media II

Course Description

A second level class that reviews on-camera techniques for performers. Students perform in short film scenes directed by student directors, write and perform short monologues.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Demonstrate on-camera technique
2. Exhibit professional behavior when taking direction
3. Perform multiple character roles

4. Display professional acting techniques

FDMA 2430. Copyright and Media

Course Description

This workshop format class is designed to provide students, graphic designers and other content creators with essential information on copyright and fair use concepts as they relate to finding and using Internet and other media.

Student Learning Outcomes

1. Demonstrate a basic understanding of copyright laws and issues
2. Search the Internet for public domain media
3. Locate and understand terms of use
4. Know how to obtain permission

FDMA 2440. Copyright, Media and Society

Course Description

Exploration of national and global socio-economics as they apply to copyright, trademark, creative commons, and ethical considerations in the current world of internet media. Topics include the principles of communications, ethics, law, and the internet. Case studies are discussed to review current judicial decisions and the trends that are affecting the entertainment and news industries in the United States.

Student Learning Outcomes

1. Describe the role that social media plays in the global economy.
2. Apply current legal and ethical standards to media.
3. Use and apply creative commons licensing in personal and professional work.
4. Recognize the relationship of the law, arts and entertainment, and news media.
5. Recognize appropriate writing styles for use in internet communication.

FDMA 2450. Graphic Design: Concept Development

Course Description

Development of presentation techniques, orally and visually, of multiple conceptual solutions for a variety of projects. Analysis of the evaluation process for design concepts. development of individual artistic identity.

Student Learning Outcomes

Upon completion of this course, students should be able to:

1. Analyze and critically interpret graphic design choices: I.E. Line, Space, Negative Space, Scale, Position, Layout, etc.
2. Demonstrate a firm understanding of the Graphic Design principles.
3. Explain the process of how the artist/designer made the specific piece and or decisions on final submissions.
4. Recognize and articulate specific graphic design terms and definitions.
5. Articulate personal ideas and thoughts on various artistic information.

FDMA 2460. Applying Social Media Techniques I

Course Description

Students manage personal and business social media platforms and design campaigns that consider demographics, analytics, and efficiency. Students prepare for industry-recognized exams that test their skills for the job market.

Student Learning Outcomes

1. Build social media accounts for professional application
2. Plan, manage, and monitor a social media campaign
3. Produce a professional report to showcase social media efficiency
4. Successfully complete a practice exam for an industry-recognized certification.

FDMA 2470. Applying Social Media Techniques II

Course Description

A capstone course in social media techniques. Students create professional business social media platforms and design campaigns that consider demographics, analytics, and efficiency. Students build a professional portfolio to prepare for the job market.

Student Learning Outcomes

1. Build social media and web accounts for professional application
2. Create and report on a social media campaign
3. Produce a professional report to showcase social media efficiency in a student-created social media campaign
4. Produce and present a professional portfolio for employment.

FDMA 2510. Introduction to Sound Design for Film

Course Description

This course is an introduction to the principles, techniques and applications of sound design and film scoring. Students learn how sound affects storytelling in a film, examine the role of sound from the script to screen, and the professional process of creating a soundtrack. Students learn how to use sound equipment in a production environment and execute basic techniques used to develop a soundtrack.

Student Learning Outcomes

1. Compare the properties and propagation of sound and importance of sound to the storytelling aspect of filmmaking
2. Learn the process of designing a soundtrack for film and recording live audio dialogue for use in post-production editing.
3. Learn methods of capturing sound including live audio recording, dialogue recording, Foley, orchestration and audio dialogue replacement
4. Design a soundtrack for motion media project.

FDMA 2520. Introduction to Cinematography

Course Description

The Director of Photography (or Cinematographer), in close collaboration with the Director and Production Designer, helps determine the look of a film. This course is designed to introduce students to the technical and aesthetic fundamentals of creating, developing, and collaborating on the visual elements of storytelling, using camera framing, lensing, and lighting fundamentals such as shadows, light and color.

Student Learning Outcomes

1. Define and explain the fundamental concepts of cinematography, such as exposure, lighting solutions, and color temperature.
2. Understand how cinematography brings the Director's vision to reality.
3. Demonstrate proficiency in plotting and executing interior and exterior lighting solutions.

FDMA 2521. Videography

Course Description

The study of the basic production theories of video production with special emphasis in the areas of camera operation, shot composition, shot sequencing, and lighting.

This is an introductory course in video production using standard filmmaking theory and techniques to tell a narrative or documentary story. The course will cover the operation of professional HD video cameras, sound and lighting equipment; principles of framing and composition; storyboarding; and basic video editing. Filmmaking is not a solitary activity so some of the course assignments will require you to work in groups. It is imperative that you show up on time - both to class and to group shoots. Several films will be viewed in class to help you learn the language of filmmaking. You are also encouraged to check out films on DVD from the library.

Student Learning Outcomes

At the end of this course the student will know

1. How to storyboard, set-up, light, shoot and edit basic scenes that communicate an idea.
2. Will have demonstrated a technical proficiency with the software and hardware.

FDMA 2525. Video Production II

Course Description

An in-depth exploration of digital video production, including camera, lighting and sound production techniques for studio and field production. This class will help the filmmaker visualize and execute a digital film in a real-world team environment.

Student Learning Outcomes

At the conclusion of this course, the student should be able to:

1. Use a camera, record audio in the field and studio
2. Gain exposure to alternative, narrative and documentary film structure
3. Acquire production vocabulary and management skills
4. Know film structure (narrative, alternative and documentary)
5. Produce multiple short films.

FDMA 2530. Introduction to 3-D Modeling

Course Description

This course will introduce 3-D modeling methods and current practices. Students will learn preliminary and detailed modeling techniques using industry standard software. Methods will emphasize formal and functional aspects of modeling as they apply to mechanical, organic, and sculpted topology for application in animation, games, and information media.

Student Learning Outcomes

1. Identify the role of a 3-D modeler in a production pipeline within various fields of digital animation.
2. Apply techniques in modeling mechanical and organic objects.
3. Utilize tools available in professional 3-D modeling software.
4. Create simple animations and renders.
5. Present original animations to instructor and classmates for critique.
6. Create a demo reel of work completed during the course.

FDMA 2532. Introduction to 3-D-Printing

Course Description

Introduction to the creation, manipulation and critical interpretation of graphic and photographic artwork. Includes input and output of digital work as it applies to artists. As an entry-level course, it assumes no prior knowledge of the tools and techniques covered.

Student Learning Outcomes

1. To create art using digital imaging tools.
2. To gain an understanding of the context of 3-D printing as it relates to contemporary art practice.
3. To achieve a level of comfort with the tools and techniques needed to create 3-D Prints.
4. To experiment with new ways to connect digital technologies to one's own creative practice.
5. To complete and output a digitally-manipulated artwork for exhibition purposes.

FDMA 2533. Imaging History and Production

Course Description
